DAGENHAM. Urban district of Essex, on the Thames, 3 m. E. of Barking and 11 m. E. of London. Its growth is largely due to the housing estate at Becontree (q.v.). A site near the docks was bought by the Ford Motor Co., and in 1928 the erection of works to turn out 200,000 cars a year was begun. The works include blast furnaces, the first in the south of England. Pop. 65,000.

DAGGER (Welsh *dagr*). Short two-edged weapon early adopted for fighting at close quarters. Ancient Greek soldiers carried a weapon called the belt-companion (parazonion), which the Romans later copied. In fencing, a dagger is a short blunt blade. See Dirk; Poniard; Stiletto; also illus. p. 483.

DAGHESTAN OR DAGESTAN. Autonomous republic of the Russian Socialist Federation of Soviet Republics, bounded E. by the Caspian Sea. The area is 11,470 sq. m., and the capital is Makhach-Kala. Pop. 786,877.

DAGO. Term used by American and British sailors and generally in the U.S.A. for a Spaniard, Portuguese, or Italian. It is a corruption of the Spanish name Diego (James).

DAGO or **HIUMAA**. Island in the Baltic, with Ösel almost shutting in the Gulf of Riga. Having belonged successively to Danes, Swedes, and Russians, it is now included in Estonia. Agriculture, cattle-rearing, fishing, and sealing are carried on. Its area is 370 sq. m. Pop. about 16,500.

DAGON. National god of the Philistines. Identifiable with the early Babylonian Dagan, he represents a primitive Canaanite corn-god. He had temples at Gaza (Judges 16) and Ashdod, with image (1 Sam. 5).

Dagonet, Sir. Fool and jester at King Arthur's court. Dagonet was the pen-name of G. R. Sims (q.v.) in *The Referee*.

DAGUERRE, **LOUIS JACQUES MANDÉ** (1789–1851). French discoverer of photography. Born at Cormeilles, Seine-et-Oise, Nov. 18, 1789, in 1822 he started a panoramic show known as the Diorama. In collaboration with J. Nicéphore Niépce (d. 1833) he succeeded in producing the daguerrotype process, made public in 1839. This was the first process of photography to yield a technically fine result. It consists in exposing in a camera a plate of silvered copper on which a film of silver iodide has been formed by iodine vapour. Daguerre died July 12, 1851.

DAHABIYEH or **DAHABEEAH**. Nile passenger boat. Low and flat, with sharp prow and broad stern, it has either one or two masts and is also propelled by oars or hauled by ropes from the banks. The crew quarters are in front; behind are dining cabins.

DAHLIA. Half-hardy, herbaceous, tuberous-rooted plant, of the order Compositae, named after Andrew Dahl, a Swedish botanist. The plants reach a height of four feet, and the blossoms have colours of every shade except blue. Natives of Central America, they were introduced into England in 1789, and hybridisation has led to many new breaks from the original six-petalled single dahlia. The cactus variety has outward curving petals.

DAHOMÉ or **DAHOMÉY**. French colony in W. Africa. Between Togoland and Nigeria, it extends N. from the Bight of Benin to the colony of the Upper Volta. Formerly a native kingdom, it was annexed by France in 1894. The littoral, 70 m. in length, contains the ports of Porto Novo, the capital, and Kotonu. From the last a rly. runs to Savé, 156 m. Area 38,000 sq. m. Pop. 878,500.

DAIL EIREANN. Gaelic name for an assembly or parliament. It was given by the Sinn Féiners to the one that met in the mansion house, Dublin, early in 1919. Since the establishment of the Irish Free State in 1922 Dail Eireann has been the name of its chamber of deputies. It consists (1930) of 153 members elected by proportional representation, the voters being all citizens of both sexes who are over 21 years of age. The deputies are paid. See Sinn Féin; Irish Free State.

DAIMLER, **GOTTILIEB** (1834–1900). German engineer. Born at Schorndorf, Württemberg, March 19, 1834, he came to England and was employed at the Whitworth works, Manchester. Returning to Germany, with Dr. Otto of Cologne he perfected the Otto gas engine. From 1882 he devoted himself to experimenting with high-power gas and oil engines and petroleum motors. Daimler died March 6, 1900. See Motor Car.

DAIREN (Tairen, Dalny, Talienwan). Treaty port in the Liaotung Peninsula, Manchuria, China, the S. terminus of the S. Manchuria Rly. Leased to Russia in 1898, it was ceded to Japan by the Treaty of Portsmouth, 1905. A Chinese customs station was established here in 1907. The city is the headquarters of the administration of the territory of Kwantung, leased by Japan. Dairen has a good ice-free harbour, protected by a breakwater 1,000 yards long, and has rly. connexion with Port Arthur. Pop. 254,433.

DAIRY. Place where milk is kept and butter and cheese are made, and therefore a necessary adjunct to most farms. The primitive dairy of the farm has to some extent, however, been supplanted by cooperative dairies where butter and cheese are made by modern methods with the aid of modern machinery. Dairy farming is a very important branch of agriculture and a vital industry in Great Britain. Great progress on the technical side has resulted from scientific experiment, as was demonstrated at international dairying congresses at Washington in 1923 and in Paris in 1926. In 1928 arrangements were made to set up a dairy research institute for Scotland. See Butter; Milk.

DAISY (A.S. day's eye). Hardy herbaceous perennial of the order Compositae and genus *Bellis*. Common in Britain and Europe, its height is 3 ins. or 4 ins., and the flowers are white and red. There is also a species, *B. aeneafolia*, with variegated leaves. The tall-growing so-called daisies are single chrysanthemums (q.v.); the Michaelmas daisy and the Christmas daisy are species of aster (q.v.). One species has variegated leaves.

DAK or **DAWK**. Indian term for transport by relays of runners or horses; hence post, post office. Dak hungalows are rest-houses built at intervals along the principal routes.

DAKOTA. Two states of the U.S.A. N. Dakota is largely an undulating prairie, relieved in the N. by the Turtle Mts. and in the S.W. by buttes. In the E. is the Coteau des Prairies, and between the Missouri and James rivers is the Coteau du Missouri, from 2,000 ft. to 2,750 ft. high: W. of the Missouri the Bad Lands intervene. The Red River of the North traces the E. frontier. The Minnewaukin, or Devil's Lake, is saline, and has no outlet. Bismarck is the capital. Dakota was admitted to the Union in 1889. The area is 70,837 sq. m. Pop. 641,000.

In the state of South Dakota the surface is mainly an undulating plain. Bad Lands

extend along the White river, a right bank affluent of the Missouri. The Grand, Moreau, Cheyenne, and Bad in the W., and the James and Big Sioux in the E., are tributary to the Missouri, which divides the state. The mineral products are chiefly gold and silver. There is a university. Pierre (q.v.) is the capital. The area is 77,615 sq. m. Pop. 704,000.

The Dakotas, or Sioux, are a N. American Indian tribe of Siouan stock. The word means allies. They are of a high physical and mental type. See American Indians; also illus. p. 73.

DAKOTIAN. Lowest formation of the upper Cretaceous system in N. America, situated in the W. plains between the Rocky Mts. and the Mississippi. Its fossil fresh-water fauna, reptiles, birds, and flowering plants show that its sandstones, clays, and conglomerates, with lignite and coal seams, were laid down in vast lakes and river-plains.

DALAI LAMA. Title of one of the joint heads of Lamaism, the other being the Tashi or Teshu Lama. The Dalai or Grand Lama lives in seclusion at Lhasa, and the Tashi Lama at Tashi Lunpo. The Lamas claim to be reincarnations of Buddhist saints. See Lamaism; Tibet; also illus. above.

DALBEATTIE. Burgh of Kirkcudbrightshire. It is on the Dalbeattie Burn, near its confluence with the Urr Water, 5 m. E. of Castle Douglas, on the L.M.S. Rly. Its quarries have supplied the material for many important works, including the Thames Embankment. Market day, Sat. Pop. 3,357.

DALCROZE, **EMILE JACQUES** (b. 1865). Swiss composer. Born at Vienna, July 6, 1865, while professor of harmony at the Geneva Conservatoire he became impressed with the value of rhythm and rhythmic motion, and in collaboration with E. Claparède he reduced his practice to a system. In 1910 he established near Dresden a special school of eurythmics. Later, classes were established at Bryn Mawr College, S. Wales, and schools in U.S.A.

DALE, **ROBERT WILLIAM** (1829–95). British Congregational divine. Born in London, Dec. 1, 1829, he became assistant and afterwards sole minister (1859) of Carr's Lane Chapel, Birmingham, where he remained until his death. He was chairman of the Congregational Union, 1869 and 1878, and Yale Lecturer, 1877. His most important work was *The Atonement*, 1875. He died Mar. 13, 1895. His son Sir A. W. W. Dale (1855–1921), who wrote his father's life, was vice-chancellor of Liverpool University, 1909–19.

DALGETY. Township of New South Wales, 296 m. S.S.W. of Sydney. One of the spots first selected for the federal capital, it was discarded in favour of Canberra (q.v.).

Dagger. 1. French. 16th century. 2. Two-edged dagger, Mandingo, Africa. 3 and 4. Old Indian daggers, dug up in London. 5. West African. 6. Japanese. See p. 482.

Dalai Lama. Portrait of Tibetan high priest taken at Lhasa.

Daisy. *Bellis perennis*, the common field daisy.

Dahlia. Some of the chief varieties of the flower. 1. Single Dahlia. 2. Double Dahlia. 3. Cactus Dahlia. 4. Fancy Dahlia.

DALHOUSIE, EARL OF. Scottish title borne since 1633 by the family of Ramsay. Sir George Ramsay was created Lord Ramsay in 1618, and in 1633 his son, 2nd baron, was made earl of Dalhousie. The titles came in 1764 to George Ramsay, 8th earl. His eldest son, George (1770-1838), succeeded as 9th earl in 1787. He was made a peer of the U.K. in 1815, and was succeeded in 1838 by his son, James Andrew Brown Ramsay (1812-60). Born April 22, 1812, in 1847 he was appointed governor-general of India, was created marquess in 1849, and died Dec. 19, 1860.

As the marquess died without sons, the titles of baron, the one of 1815, and marquess became extinct. The earldom passed to his cousin, Fox Maule, 2nd Baron Panmure. In 1874 he died without sons, and his barony became extinct, but a cousin, George Ramsay, became 12th earl of Dalhousie. He was made a peer of the U.K. as Baron Ramsay, in 1875. In 1887 Arthur George Maule Ramsay (1878-1928) became the 14th earl. He died Dec. 23, 1928, and was succeeded by his son, John Gilbert Ramsay (b. 1904).

Dalhousie University, founded at Halifax in 1818 to serve as a university for Nova Scotia, was named after the 9th earl, governor of Nova Scotia and later of Canada.

DALKEITH. Burgh and market town of Midlothian. It stands between the N. and S. Esk rivers, $\frac{1}{2}$ m. S.E. of Edinburgh, by the L.N.E. Rly., in a colliery district, and is noted for its corn market. Dalkeith Palace, built 1770, is a seat of the duko of Buccleuch, whose eldest son is known as earl of Dalkeith. Market day, Mon. Pop. 7,232.

DALLAS. City of Texas, U.S.A. It stands on Trinity river, 230 m. N.W. of Houston, and is an important trading centre for the surrounding cotton-growing district. The annual state fair of Texas is held here. Pop. 211,600.

DALLING AND BULWER, WILLIAM HENRY LYTTON EARLE BULWER, BARON (1801-72). British diplomatist, usually known as Sir Henry Bulwer. Born in London, Feb. 13, 1801, elder brother of the novelist, he was ambassador in 1849 at Washington, where he concluded the Clayton-Bulwer Treaty, and at Constantinople, 1858-65. Made a peer in 1871, he died May 23, 1872.

DALMATIA. Former Austrian province, now a part of Yugoslavia, with the exception of the former capital, Zara, which was assigned to Italy by the Treaty of Rapallo.

Bounded W. by the Adriatic Sea and E. by the Velchit Mts. and the Dinaric Alps, Dalmatia consists of many islands on the E. side of the Adriatic, a comparatively narrow coastal strip populated by hardy fisherfolk, and a wider mountainous area of karst formation. The chief towns are Sebenico (Sibenik) and Spalato (Split). Area, 4,916 sq. m. Pop. 621,429. See Yugoslavia.

DALMATIAN DOG.

Breed of dogs formerly much in favour for following the carriage. It appears to have originated in a cross between a hound and a pointer, and is noticeable for the black or brown spots with which its white coat is besprinkled.

DALMATIC (late Lat. *Cætica*). Ceremonial vest-

formerly deacon in the R.C. Bukovina. It is also now known as Censuble by a 167 m S.E. or Originally of white linen, it is the seat of a of fine wool or silk since has a university. It h from the 13th century paper is manufactured. It as the chasuble of During the Great War Cædmatian origin, hands six times, being first oc. 4th century. Russians in Sept., 1914, and finalyent years in Aug., 1917.

Dalmatian Dog. Example of this handsome breed of carriage-dog

DALMELLINGTON. Village of Ayrshire. It stands on the Doon, 15 m. S.E. of Ayr, on a branch of the L.M.S. Rly. Coal and iron mining are important industries. Pop. 6,155.

DALMENY. Parish and village of Lincathgowshire. It stands at the mouth of the river Forth, at the S. end of the Forth bridge, $\frac{1}{2}$ m. N.W. of Edinburgh, on the L.N.E.R. It has an interesting Norman church, and near is Dalmeny House, a seat of the earl of Rosebery, whose eldest son bears the title of Lord Dalmeny. The ancient Barnboughle Castle is at Dalmeny. Pop. 2,188.

Dalny. Treaty port in Manchuria, better known as Dairen (q.v.).

DALOU, AIME JULES (1838-1902). French sculptor. Born in Paris, Dec. 31, 1838, he first exhibited at the Salon in 1867. Coming to London in 1871, he undertook the mastery of the classes at South Kensington. Dalou's example and enthusiasm profoundly influenced British sculpture. Much of his work may be seen in Paris, notably the immense bronze Triumph of the Republic in the Place de la Nation.

DALRY. Town of Ayrshire, 23 $\frac{1}{2}$ m. S.W. of Glasgow, on the L.M.S. Rly. Worsted and woollens are manufactured. Near are large ironworks as well as coal mines and slate quarries. Pop. 7,243.

DALSERF. Colliery centre of Lanarkshire. It is 7 m. S.E. of Hamilton, on the L.M.S. Rly. The parish contains most of the town of Larkhall. Pop. 18,620.

DALSTON. Suburb of E. London, included in the Hackney met. bor. It has a junction on the L.M.S. and L.N.E. Railways, and a German hospital opened in 1845. There is a place of this name in Cumberland, 4 m. from Carlisle. It has a station on the L.M.S. Rly. and a peel tower.

DALSWINTON. Village of Dumfriesshire, 7 m. N.W. of Dumfries.

On a loch on his estate here Patrick Miller experimented with a steamboat as early as 1788.

DALTON, JOHN (1766-1844). English natural philosopher and chemist. Born at Eaglesfield, near Cocker-mouth, Sept. 6, 1766, after keeping a school for some years he became professor of mathematics and natural philosophy in 1793 at New College, Manchester. He died July 26, 1844. Having discovered that he was colour-blind, Dalton published in 1794 the first scientific paper on the subject. In 1808 Dalton published the first volume of his New System of Chemical Philosophy.

Dalton formulated the atomic theory. His "hypothesis" explains in quantitative form the ways in which chemical combination takes place. Dalton's law of multiple proportions states that where two elements combine to produce two different substances the proportions by weight bear definite relationships. From his experiments with gases Dalton laid down two laws: (1) The pressure exerted by, and the quantity of, a vapour which saturates a given space are the same for the same temperature, whether the space is a vacuum or is filled by a gas. (2) The pressure exerted by a mixture of a gas and a vapour, of two vapours, or of two gases, is

John Dalton, English chemist

equal to the sum of the two pressures which each would exert if it occupied the same space alone. Dalton's laws are only entirely true if the gases are perfect gases.

DALTON-IN-FURNESS. Urban dist. and market town of Lancashire, $\frac{3}{4}$ m. N.E. of Barrow-in-Furness, on the L.M.S. Rly. The town carries on a large malting trade, and there is coal in the vicinity. George Romney was born here. Adjacent are ruins of Furness Abbey (q.v.) and the tower of Dalton Castle. A canal, nearly 4 m. in length, communicates with the sea. Market day, Sat. Pop. 12,303.

DAM. Structure of earth or masonry built across valleys to impound rivers and create storage reservoirs of large capacity for irrigation or town supply purposes. Earth dams are limited in height to 100 ft. A trench is dug along the axis of the dam to an impermeable stratum, such as rock or clay, and the bottom made quite staunch. In the trench is founded a core wall of concrete or puddled clay, or clay mixed with gravel, and this wall is brought up simultaneously with the earthen banks. The slopes of the banks vary generally from 1 in 2 to 1 in 5. The inner slope is protected by a heavy piling of stone or concrete slabs. The earthen dam constructed to impound Gatun Lake, which forms an important part of the Panama Canal, is more than 1 m. long, with a base width of nearly $\frac{1}{2}$ m.

Masonry dams are used for all heights, and are universal for heights exceeding 100 ft. In section a masonry dam has roughly the form of a right-angled triangle, the right angle being at the base on the water side. Masonry dams arched in plan are sometimes used in narrow gorges with very steep sides. Dam foundation sites are prepared with the greatest care. For the interior of the dam, uncoursed rubblework is more generally used, and uncoursed squared ashlar work for the faces. Some masonry dams allow all excess water to pass over the crest and down the lower face. The alternative—which must be adopted for all earthen dams—is a separate masonry spillway, or weir, usually at one end, with a face stepped to break the fall of the water. The Nile dam and barrages have a number of sluice openings, which are controlled by gates, at intervals.

One of the largest dams in the world was opened in 1928 at Bhatgur, Bombay. Called the Lloyd Dam, it is 5,333 ft. long, and the area of the lake is 14 $\frac{1}{2}$ sq. m. It is intended to feed the Nera canal system and so irrigate 2,000,000 acres of the Deccan. See Assnan: Nile; also illus. p. 151.

DAMAGES. In English law, the sum awarded by the judge or jury to a successful plaintiff or petitioner. In actions based on contract the measure of damages is the actual pecuniary loss sustained. In actions of tort it varies; but as a rule is not limited to the pecuniary loss.

Damaraland or **DAMALAND.** Alternative names of the region of South-West African Protectorate also known as Hereroland (q.v.).

DAMASCENING or **DAMASKEENING.** Ornamenting a metal surface with a pattern. The Crusaders brought home swords made and thus adorned at Damascus, whence the name of the process. The pattern was either etched

Damascening. Ewer of brass damascened in silver and inlaid with black composition. Victoria & Albert Museum

in the blade or the steel was engraved and strips of gold, silver, or copper were hammered into the incisions—a process of inlaying metal on metal. The process is widely carried on in Persia and in parts of India, where it is known under the name of Kufi work. See Casque.

DAMASCUS. Capital of Syria. It lies 70 m. S.E. of Beirut, and 180 m. S.W. of Aleppo, with both of which it is connected by railways, on a large and fertile plain, watered by the Barada and its canals. From a distance it is most attractive with

Damascus. 1. View of the city beyond the octagonal minaret of the Omniad Mosque. 2. Part of the "Street called Straight"

Street Called Straight (Acts 9, 11), and a Jewish quarter S. of this, the main body of the town being Moslem.

The most striking feature is the enormous Omniad Mosque, erected on the site of a Christian church. The octagonal minaret which surmounts its S.W. side is one of the most graceful of its kind. The city has a wonderful bazaar and a Syrian university. From remote times it has been a great commercial centre. It has lost its industry of sword-making, for which it once was famous.

Having been held by the Romans and Arabs, Damascus was taken by the Turks in 1516 and was for 100 years the capital of the Caliphate. During the Great War it was entered early on Oct. 1, 1918, by the British and the Arab army of the Hejaz, and its administration was handed over by General Allenby to its Arab notables. In Oct., 1925, serious fighting broke out in Damascus between the French troops and the rebels, when many buildings were damaged. Pop. estimated at 300,000.

DAME (Lat. domina, mistress, lady). Strictly, a word of two meanings in English. (1) It is the legal designation of the wife or widow of a baronet or knight, who strictly is Dame Alice Brown, although by courtesy she is styled Lady Brown. (2) The title conferred upon women appointed to the first or second class of the Order of the British Empire, founded 1917, and prefixed to their Christian name and surname. Dames are either dame grand cross, G.B.E., or dame commander, D.B.E. See British Empire, Order of the.

DAME'S VIOLET

(*Hesperis matronalis*). Perennial herb of the order Cruciferae. A native of Europe and temperate Asia, it has erect downy stems 2 ft. or 3 ft. high, lance-shaped leaves, and lilac four-petalled flowers which are fragrant in the evening.

Dame's Violet, a fragrant herb

DAMIEN, FATHER (1840-88). Belgian missionary priest, whose real name was Joseph de Veuster. Born at Tremeloo, Jan. 3, 1840, he joined a religious order, was sent to Hawaii in 1864, and was ordained priest at Honolulu. In 1873 at his own request he became resident priest to the 600 lepers on the island of Molokai; in 1885 he became infected with leprosy but continued his work, and on March 28, 1888, he died of the disease. He is buried at Molokai.

Father Damien, Belgian missionary
From a drawing by E. Clifford

DAMIETTA. City of Lower Egypt. On a tongue of land between Lake Menzala and the chief E. mouth of the Nile, 113 m. by rly. N.E. of Cairo, it was founded about 1260 near the site of an older city, which was several times captured by the Christians during the Crusades and taken by Louis IX of France in 1249. Owing to the silting-up of the harbour, its export trade is now inconsiderable. Damietta was once famous for a fine cotton cloth called dimity and also for its leather-work. Pop. 34,907.

DAMMAR. Gum-resin obtained from several trees. White dammar is the product of *Vateria indica*, an Indian tree of the order Dipterocarpaceae. The stem is notched to induce the flow of juice, which hardens on exposure to the air. Black dammar is similarly obtained from *Canarium strictum* in Malabar, and a third kind from the Kauri pine (*Dammara australis*) of New Zealand and the Amboyna pine (*Dammara orientalis*), two species of Coniferae.

DAMOCLES. Favourite of Dionysius the Elder, tyrant of Syracuse. Having declared Dionysius to be the happiest man on earth, Damocles was invited by the tyrant to take his place at a banquet, where he saw above his head a sword suspended by a single hair. Terrified, Damocles at once confessed himself mistaken. Pron. Dam-o-kleez.

DAMON AND PYTHIAS. Two Pythagoreans, whose names have become proverbial as types of devoted friends. Pythias, having been condemned to death for conspiring against Dionysius, tyrant of Syracuse, was allowed to visit his friends, and Damon undertook to die in his stead should he fail to return. Pythias kept his word and was pardoned by Dionysius.

DAMPER. In musical instruments, a mechanical means for checking the vibrations of strings. In the pianoforte there is a damper or pad of felt connected with each key which is released from the string as long as the key is held down. The right or "loud" pedal releases the whole set of dampers, and causes all strings struck to continue their sounds as long as the vibrations last or the pedal is depressed.

The term damper is applied also to an iron or steel plate adjustable across the flue of a fire or furnace to regulate the draught of air.

DAMPIER, WILLIAM (1652-1715). English navigator. Born at East Coker, near Yeovil, he went to sea at an early age. In 1699 he went in command of the *Roe-buck* to explore the coasts of Australia and New Guinea. During 1703-7 he was in command of a privateering expedition to the South Seas, and from 1708-11 he served as pilot on another privateering expedition. He pub-

W. Dampier, English navigator
After Sherwin

lished *A New Voyage Round the World, 1697, and Voyages and Descriptions, 1699*. He died May, 1715.

The Dampier Archipelago is a group of high rocky islets off the N.W. coast of Australia, formerly German, now administered by the Australian Commonwealth. Dampier Land is a fertile peninsula on the N.W. of Western Australia. Of the two straits off New Guinea known as Dampier Strait the first, between the N.W. coast of New Guinea and the island of Waigeu, affords the best passage between the Indian and Pacific Oceans. The other is off the N.E. coast of New Guinea, separating it from New Britain.

DAMSON (*Prunus domestica*, var. *damascena*). Fruit-bearing tree of the order Rosaceae, and belonging to the same family as the plum. The fruits are usually purple in colour, though there is a yellow variety. They have a somewhat acid flavour, if eaten raw. See Plum.

DAN. Name of one of the 12 tribes of Israel, descended from Dan the son of Jacob (Gen. 30). From the hill country S.W. of Ephraim they moved to the valleys of Ajalon, but later migrated N. and occupied the country round Laish, which they renamed Dan (Joshua 19; Judges 18). Dan is also the name of a city near the sources of Jordan, formerly called Laish (Judges 18).

DANAË. In Greek mythology, daughter of Acrisius, king of Argos. Her father shut her up in a tower, since an oracle had foretold that he would meet his death at the hands of a son born of Danaë. Zeus visited her in a shower of gold, and a son, Perseus (q.v.), was born. The oracle was ultimately fulfilled when Perseus accidentally killed his grandfather Acrisius with a quoit.

DANAÏDES. In Greek mythology, the fifty daughters of Danaüs, king of Argos. They were promised in marriage to the fifty sons of their uncle Aegyptus, but Danaüs, fearing a plot against his life, bade his daughters murder their husbands on their wedding night. All obeyed except Hyperboë. The guilty Danaïdes were condemned in

Hades for ever to pour water into pitchers with holes in them. Pron. Dan-ā-ideez.

DANBURY. Parish and village of Essex, 41 m. E.S.E. of Chelmsford. Near are Danbury Place, until 1877 a palace of the bishop of Rochester, and Danbury Hill, one of the highest points in Essex, with Danish remains. Pop. 1,181.

DANCE OF DEATH. Allegorical representation of the fact that death comes sooner or later to all. It took the form of a morality play acted in booths, or of pictures, sculptures, and tapestries, or of recitations. Death figured as a skeleton in progress to the grave.

DANCING. Rhythmical physical movements generally performed to a musical accompaniment. It originated as a ceremonial

Damson. Fruit of Farleigh Prolific variety

Danaides. Ancient Greek statue of a Danaid
Vatican, Rome

act in primeval society, in association with the incidents of births, marriage, the seasons, warfare, disease, and death, and plays an important part in the lives of primitive peoples of to-day. It figured in the religious rites of Egypt, Greece, and, to a lesser extent, of Rome, and survives to-day in eastern ritual.

The early Christian Church took over the dance as well as the drama. That dancing was performed in medieval churches is seen from the name choir, coming from the Greek chorus, and in the frequent injunctions against it. Various forms, however, received recognition, such as the dance of the seises in Seville cathedral, authorised in 1439. This dance is still the greatest event of the Corpus Christi festivities.

The art was secularised in the 15th century, when many dances originated in Spain and Italy, and were later developed in France. At this period some of the most popular were the pavane, the sarabande, and the minuet. Later came the gavotte, originally a peasants' dance, and still later the cotillon, while such dances as the schottische, quadrille, polka, and waltz belong to the 19th century. Within recent years a large number of negro dances have been introduced into Europe, chiefly from America.

Most countries have their peasant dances. In Spain two schools of folk dancing can be distinguished, the *Classico* and the *Gypsy*. The English Morris dance dates back to the reign of Edward III, the sailor's hornpipe to the 16th century. Scotland has sword-dances and reels, and Ireland has the jig, reel, and hornpipe dances. The best German peasant dances are to be seen in Bavaria.

Dancing mania was a form of hysteria prevalent in Germany and other European countries in the 14th and 15th centuries. Those affected threw themselves into wild paroxysms of excitement, in which they danced, gesticulated, and screamed. See Ballet; Drama; Duncan, I.

Dandelion. Flowers of *Taraxacum officinale*

flower-heads are borne singly on long, hollow, leafless stalks; all the florets are strap-shaped. The fruits contain one seed each, and are surmounted by a beak from which radiate fine silky hairs, which combine to form the well-known dandelion-clock. The juice is milky and intensely bitter. The leaves of the dandelion, blanched, are used in salads, and from the roots is obtained the laxative medicine taraxacum.

Dandenong. Town of Victoria, Australia. It is an important rly. junction 18 m. S.E. of Melbourne. Pop. 4,300.

DANDIE DINMONT TERRIER. Breed of small dogs formerly known as Border terriers, and called after one of the characters in Scott's *Guy Mannering*. Less than a foot high, it weighs generally about 20 lb., and is of slate-blue or yellow colour.

DANDOLO, ENRICO (c. 1120-1205). Doge of Venice. In 1171 he was ambassador to Constantinople, and twenty years later became doge. In 1203 he took Constantinople and established the Latin

empire. He died there, June 23, 1205, and was buried in S. Sophia.

Three of his descendants became doge: Giovanni, 1280-89; Francesco, 1329-39; and Andrea, 1343-54, who was the historian and friend of Petrarch.

Enrico Dandolo, Doge of Venice Ducal Palace, Venice

skin, the commonest of which is scabiorrhoea, in which the sebaceous or oil glands of the skin are abnormally active.

DANEGLD. Tax on land originally levied in England to buy off the Danes. The first occasion was in 991, when Ethelred the Unready, with the consent of the witan, raised money which he gave to the Danes. The tax was abolished by Edward the Confessor, but in 1034 it was revived by William the Conqueror, although this money was not devoted to the original purpose.

The Danelagh was that part of England conquered by the Danes and handed over to them by the treaty of Wedmore in 878. It was the north and east of the country.

DANEWORT or **DWARF ELDER** (*Sambucus ebulus*). Perennial herb of the order Caprifoliaceae, a native of Europe, N. Africa, and W. Asia. From a creeping root-stock numerous annual stems arise to the height of 3 ft. or 4 ft., with leaves, flowers, and berries similar to those of the elder-tree (*Sambucus nigra*). The danewort is a powerful emetic and purgative.

Danewort, flower and leaves

DANIEL. Daniel is mentioned as an historical personage in Ezek. 14, 14-20, where he is bracketed with Noah and Job, and in Ezek. 28, 3, as a pattern of marvellous wisdom.

The Book of Daniel, written by him, falls into two divisions: (a) the life of Daniel, the interpreter of dreams, and of his three friends, Hananiah, Mishael, and Azariah, in exile in Babylon (Dan. 1-6); (b) the visions of Daniel (Dan. 7-12). The historical allusions suggest that the book, in its present form, can hardly be a record contemporary with the life of Daniel. Many scholars think that it must have arisen in the period of the Maccabean struggle (168-160 B.C.).

DANTE ALIGHIERI (1265-1321). National poet of Italy. Born at Florence in May, 1265, he took part in the government of the city. In October, 1301, he went on an embassy to Boniface VIII to deter him from sending Charles of Valois as peacemaker into Tuscany.

During his absence Charles entered Florence, and Dante's party was proscribed. Dante was banished, and a later decree condemned him to be burned alive if he fell into the power of the Commune.

During the ensuing years Dante wandered, "a pilgrim, almost a beggar," through northern and central Italy. In May, 1315, the Florentine government decreed a general

readmission of exiles: but Dante refused to accept recall, on conditions that did not recognize his innocence. The poet's last years were divided between Verona and Ravenna, which he came his settled abode. He died Sept. 14, 1321.

A few years before his exile Dante had married Gemma Donati, by whom he had four children.

Dante's first book, the *Vita Nuova* (about 1292), is a collection of lyrics set in a prose narrative, telling in mystical fashion the story of his love for Beatrice (probably Bice Portinari). The *Divina*

Commedia was not completed until a few months before Dante's death. It is an allegory of human life in the form of a vision in which Dante is led by Virgil through Hell and Purgatory to the Earthly Paradise, where he is met by Beatrice, who guides him through Paradise to an experience of eternity and the anticipation of the Beatific Vision. To Italy Dante gave a national voice and a national consciousness.

DANTON, GEORGES JACQUES (1759-94). French revolutionary leader. Born Oct. 28, 1759, at Arcis-sur-Aube, he was an advocate in Paris when the Revolution broke out. In 1790 he was commander of the

National Guard in his quarter, and in the following year became administrator of Paris. His oratory and abilities brought him to the front, and in 1792 he was made minister of justice.

In the Convention Danton was a foremost leader of the Mountain, and sat with Marat, Robespierre, and Camille Desmoulins. By 1794 he was satisfied that the military position was safe, and that the Terror might be abated, but Robespierre mistakenly believed the Terror popular and sacrificed Danton, who was guillotined April 5, 1794.

DANUBE (Ger. Donau). River of Europe. If its source is assumed to be at Donaueschingen, in the Black Forest, its course totals 1,780 m.; if at the junction of the Brigach and Breg, it is 20 m. shorter. It becomes navigable at Ulm. The river is computed to have 300 affluents. Those on the right bank comprise the Isar, Inn, Raab, Drave, Save, and Morava; on the left are the Regen, Waag, Theiss, Sareth, and Pruth. Near Orsova are the celebrated Iron Gates, where the river is obstructed by rocks in the river bed. It flows into the Black Sea by five channels. Some important schemes are projected for linking up the Danube with the Rhine, Main, Elbe, Oder, and other rivers.

Two international commissions control the Danube. The European commission set up in 1856, now consisting of Britain, France, Italy, and Rumania, looks after the river from

Dante Alighieri, from a 15th century bronze bust National Museum, Naples

Dante's house in Florence where he was born in 1265

Georges Danton, French revolutionist

Dandie Dinmont. Venns, a Dandie Dinmont owned by King George V Gambier Bolton, F.Z.S.

Braila to its mouth. The international commission created in 1919 controls the river from Ulm to Braila. On it are representatives of the four countries mentioned as well as Czechoslovakia, Austria, Bavaria, Bulgaria, Hungary, Yugoslavia, and Württemberg.

DANZIG (Polish, Gdansk). Former city of Germany, now, with the surrounding territory, a free city under the League of Nations. The city stands on the Vistula, about 4 m. from its mouth, at its junction with the Mottlau, 280 m. N.E. of Berlin. The territory included within the administration of the city has an area of about 754 sq. m. Pop. 390,000.

From early times a prosperous shipping centre, Danzig's importance is due to its position near the Baltic. The older parts of the city largely retain their medieval aspect. The Long Street has many beautiful old buildings. The town hall is a magnificent Gothic building of the 14th century. The finest church is S. Mary's. The trade is largely in timber, corn, and sugar.

Danzig began as a Slavonic settlement called Gdansk. About 1308 it was secured by the Teutonic Order, but after 1450 it became practically independent, for its membership of the Hanseatic League had brought it much wealth. In 1793 it became Prussian.

The Poles desired the port, among other reasons, in order to secure an outlet to the sea. The treaty of Versailles, 1919, laid down the aims of a treaty to be negotiated between Danzig and Poland, and a Danzig-Polish treaty came into force in Nov., 1920, according to which Danzig and Poland constitute a single customs territory. Another treaty was concluded in Oct., 1921, arranging for joint economic administration. The free state is governed by a president, a senate, and a diet of 120 members elected for four years. In 1924 the Bank of Danzig was founded, and a new currency introduced with 25 gulden to the pound sterling. A great new port is being created at Gdynia (q.v.).

Danzig. The Langemarkt, with the beautiful 14th century Town Hall

DAPHNE (Gr. laurel). In Greek mythology, the daughter of a river god. When pursued by Apollo, she prayed for deliverance, and was turned into a laurel tree.

DAPHNIA. Minute crustacean, common in ponds and known as the water-flea. Its body is enclosed in a bivalve shell; it swims with its antennae, and carries its young within the shell.

DARDANELLES. Strait leading from the Aegean Sea to the Sea of Marmora and separating Europe from Asia, called by the

ancients the Hellespont. It is about 48 m. long and its average width is from 3 m. to 4 m. In 1841 the European powers signed an

Danzig. Map indicating the extent of the territory governed by the free city of Danzig under the Treaty of Versailles

agreement permitting Turkey to close the Dardanelles to all ships of war. By the treaty of Lausanne, 1923, it is open to all nations.

The strait was the object of naval attacks in the Great War. On Nov. 3, 1914, British warships bombarded the outer forts at the Dardanelles, and on Dec. 13 a British submarine sank a Turkish battleship. Another attack was made on Feb. 19, 1915, when eight armoured ships engaged the forts at the entrance at long range. Other attacks followed a few days later. On March 18 an attempt to force the Narrows was unsuccessful, resulting in serious loss in ships. See Gallipoli.

The Dardanelles Commission was appointed to inquire into the failure of the expedition sent by Great Britain to Gallipoli in 1915. Lord Cromer was chairman.

DARDANUS. In Greek legend, the son of Zeus and Electra, and the mythical ancestor of the Trojans. The Palladium, the statue of Athena, afterwards removed to Troy, is said to have formed part of his wife Chryse's dowry. Dardanus or Dardania, a town of Mysia in Asia Minor, about 9 m. S.W. of Abydos, was said to have been founded by Dardanus and to have been ruled by Aeneas. At another town of the same

Daphne. Bernini's sculpture, Apollo and Daphne, Rome

S.W. of Abydos, was said to have been founded by Dardanus and to have been ruled by Aeneas. At another town of the same

name, built later near the old site, peace was concluded between Sulla and Mithradates, King of Pontus (84 B.C.).

DAR-ES-SALAAM (the haven of peace). Port and capital of Tanganyika territory, former capital of German East Africa. It was captured by the British on Sept. 4, 1916. It is the terminus of the rly. to Kigoma. There is a wireless station, and also cable connexion with Zanzibar. Pop. 25,000.

DAREWSKI, MAX (1894-1929). British pianist and composer. Born Nov. 3, 1894, at Manchester, when five years old he composed a waltz, *Le Réve*. When only eight he conducted a full orchestra playing his own compositions. He wrote the music for many revues, and composed a number of songs. He died Sept. 26, 1929.

His brother, Herman, who composed many popular songs and revues, was musical director of the Winter Gardens, Blackpool, 1927-9.

DARFIELD. Urban dist. of Yorkshire (W.R.). It is 5 m. S.E. of Barmsley, on the L.M.S. Rly. Coal-mining is the chief occupation. Pop. 5,566.

DARFUR. Province of the Anglo-Egyptian Sudan, to the W. of Kordofan (q.v.). A range of mts., the Jebel Marra, with peaks nearly 5,000 ft. high, runs N. to S. for more than 100 m., and the country contains the watershed separating the basins of Lake Chad and the Nile. El Fasher is the administrative centre. Its area is 153,000 sq. m. Pop. 750,000.

DARIEN. Name formerly applied to the entire isthmus of Panama. "Silent upon a peak in Darien," Vasco Núñez de Balboa first saw the Pacific in 1513. It is now the name of a district of Panama, the Cordillera of Darien fronting the Caribbean Sea in the E. of the republic.

The Gulf of Darien is an opening of the Caribbean Sea, between Panama and Colombia. It is about 200 m. broad at its mouth and penetrates inland for about 155 m. Its S. extension is called the Gulf of Uraba. See Panama.

The Darien Scheme was a project to establish, with headquarters on the isthmus of Darien, a company which should be a counterpart to the East India Company in the E. The experiment failed, largely owing to the unhealthy climate.

DARIUS. Name of three Persian kings (pron. Dar-i-us). Darius I, Hystaspis (522-485 B.C.), belonged to the family of the Achaemenidae, and was the son of Hystaspes. He secured the Persian throne after defeating the usurper Gaumata. Two Babylonian revolts were crushed, and by 519 Darius was undisputed master of the empire. In 513 Thrace and Macedonia were brought under Persian rule. In 501 Darius came into conflict with the Greeks. His first expedition against them under Mardonius in 492 was unsuccessful. A reinforced army penetrated into Attica, but was defeated by Miltiades at Marathon, in 490. Inspired to still greater efforts, Darius set about collecting a vast army, but a rebellion in Egypt checked his plans, and in 485 he died. An able ruler, he greatly improved the organization and internal government of his empire.

Darius II, Ochus (424-404 B.C.), rose against his illegitimate brother, Scyrdianus, murderer of his brother, Xerxes II, and put him to death. He reigned until his death, in 404, and was succeeded by his son, Artaxerxes II. Darius III, Codomannus (336-330 B.C.), was the last of the Achaemenian dynasty.

DARJEELING. District and town of the Bengal Presidency, India, in the Bhagalpur div. It is in the Lower Himalayas, bounded N. by Sikkim, with Nepal on the W. and Bhutan on the N.E. Darjeeling town (alt. 7,346 ft.) was originally purchased as a

Dardanelles. Map of S. extremity of the Gallipoli Peninsula; the figures show number and calibre of guns in Turkish forts in 1915

sanatorium, in 1835. Darjeeling is a great tea centre and the summer headquarters of the governor of Bengal. Pop. district, 282,748.

DARLASTON. Urban dist. of Staffordshire, England. It is on the L.M.S. Rly., 1½ m. N.W. and in the parl. bor. of Wednesbury. It lies in a coal and iron-mining district, and has iron works and blast furnaces. Pop. 18,218.

DARLING. Downs, river, and mtn. ranges of Australia. The Darling Downs are an elevated area on the inland W. side of the Great Dividing Range of S.E. Queensland. They are a great sheep-rearing area, of which Toowoomba and Warwick are the chief centres, and there are mines of cannel coal.

The Darling river, discovered in 1828 by Sturt, is about 1,760 m. in length from its source in Queensland to its junction with the Murray at Wentworth. The river is fed almost entirely by the rains of S. Queensland and N.E. New South Wales.

Lord Darling,
British judge
Russell

DARLING, CHARLES JOHN DARLING, BARON (b. 1849). British judge. B. Dec. 6, 1849, called to the bar in 1874, he was M.P. for Deptford, 1888-97, when he was appointed a judge of the King's Bench Division, retiring in Nov., 1923. A writer of light verse, his works include *Scintillae Juris*, 1877; *Seria Ludo*, 1903; *On the Oxford Circuit*, 1909. He was created a peer, Jan., 1924.

DARLING, GRACE HORSLEY (1815-42). British heroine. Born at Bam borough, Northumberland, Nov. 24, 1815, the daughter of the lighthouse keeper on the Farn Islands, she rowed out with her father on Sept. 7, 1838, to a rock where nine survivors from the wreck of the *Forfarshire* steamboat had found a foothold. She was given a gold medal by the Humane Society. She died Oct. 20, 1842.

Grace Darling. Her tomb in Bam borough churchyard, Northumberland

DARLINGTON. County bor. and market town of Durham, England. It stands on the Skerne, near its junction with the Tees, and

is 230 m. from London and 22 from Durham. It is an important station on the L.N.E. Rly. The chief church is S. Cuthbert's, a cruciform building in the Early English style. There is an old grammar school, public library, technical school and other modern buildings. Standing on the Durham coal-

Darlington. Church of S. Cuthbert, 12th cent., with 14th cent. spire

field near the Cleveland district, Darlington is an important industrial centre. Here the L.N.E. Rly. has large shops, while there are also ironworks, engineering works, woollen mills, etc. Market days, Mon and Sat. Pop. 65,842.

DARMSTADT. City of Germany, capital of the state of Hesse, 21 m. S.E. of Mainz. It consists of an old and a new town, the latter until 1918 the residence of the grand duke, and

containing the offices of the government of Hesse-Darmstadt. The palace, mainly an 18th century building, stands in its gardens at the end of the Rheinstrasse, the chief street. The chief industries are iron foundries, engineering works, and the making of chemicals, machinery, carpets, and beer. The city is an important rly. junction. Darmstadt was occupied for a time by French troops in 1920. Pop. 87,752.

DARNLEY, HENRY STEWART, LORD (1545-67). Second husband and cousin of Mary Queen of Scots. He was born at Temple Newsam, Yorkshire, Dec. 7, 1545. Darnley's marriage with Mary, July 29, 1565, was intended to further political plans, but his incompetence defeated the purpose. He contrived the murder of the queen's secretary, Rizzio, and then betrayed his accomplices. He sought to leave the country, but fell ill at Glasgow, and was brought back to Edinburgh. While lying sick at a house called Kirk o' Field the place was blown up, Feb. 10, 1567. See *Mary Queen of Scots*.

Lord Darnley, husband of Mary Queen of Scots

DART. River of Devon. It consists of the E. Dart and W. Dart, which unite at Dartmeet. It rises in Dartmoor Forest, near Cranmere Pool, and flows S.E. to the English Channel, which it enters below Dartmouth. Navigable to Totnes (10½ m.), it has a length of 46 m.

DARTERS. Group of birds, including four species, closely related to the cormorants. Found in Africa, India, Australia, and S. America, they have remarkably long necks, narrow heads, and long, sharp beaks. They frequent rivers and lakes and dive with great skill after fish.

DARTFORD. Market town and urban district of Kent. It stands on the Dart, 17 m. E.S.E. of London and 7 m. W.N.W. of Gravesend, and has a station on the Southern Rly. The parish church of Holy Trinity was restored in the 19th century, but retains its Norman tower. The chief industries are engineering works, flour mills, etc. Market day, Sat. Pop. 28,190.

DARTMOOR. Lofty tableland of Devonshire. It lies between Brent and Okehampton and measures about 22 m. by 21 m. Of granite formation, its peculiarity consists in the numerous tors of rock weathered to strange shapes. The average elevation is about 1,200 ft., the highest points being High Willhays, 2,039 ft., and Yes Tor, 2,029 ft. Here the two Darts, the Tavy, Okement, Teign, and other rivers have their source. Numbers of ponies run half wild upon the moor.

Dartmoor. View of Princetown and Dartmoor prison
Valentine

Near Princetown on Dartmoor is Dartmoor Prison. It was erected in 1806 for French prisoners of war. In 1850, having been unoccupied for over thirty years, it was turned into a convict prison.

DARTMOUTH. Seaport, market town, and bor. of Devon. It stands near the mouth of the Dart, on the W. side of the river, 27 m. E. of Plymouth, and 30 m. S.E. of Exeter. The river here forms an almost landlocked harbour, affording safe anchorage. The railway station (G.W.R.) is at Kingswear. Dartmouth's chief buildings are the castle, the churches of S. Saviour and S. Petrox, and some old wooden houses. The Butterwalk is a notable feature. The chief industries are shipbuilding and engineering, while the town is a yachting centre. In 1928 it was decided to reclaim land by extending the embankment across Coombe Mud. Pop. 7,201.

On Mt. Boone, to the N. of the town, stands the Royal Naval College, an institution for the training of officers for the navy.

The title of earl of Dartmouth has been borne by the family of Legge since 1711. His seat is Patshull House, Wolverhampton, and he owns much land in Lewisham. His eldest son is called Viscount Lewisham.

DARTMOUTH. City of Nova Scotia, Canada, in Halifax co. It stands on the E. side of Halifax harbour and a ferry connects it with that city. It is a terminus of the C.N. Rly., and has machine shops, boiler works, sawmills, and other industries. Pop. 7,899.

DARTON. Urban dist. of Yorkshire (W.R.). It stands on the Dearne, 3½ m. N.W. of Barnsley, on the L.M.S., in a coal-mining district. Pop. 11,266.

DARWEN. Borough and market town of Lancashire. It stands on the river Darwen, 20 m. from Manchester by the L.M.S. Rly. The chief buildings are the market hall, public library, several churches, schools, etc. Purely an industrial town, it has cotton and paper mills and blast furnaces, while around are coal mines and stone quarries. Market days, Mon. and Sat. Pop. 37,973.

DARWIN. Port of Northern Australia. There are freezing works and an experimental botanical garden. There is a rly. from Darwin to Katherine, and the overland telegraph connects the town with Adelaide. Its former name was Palmerston. Pop. 944.

DARWIN, CHARLES ROBERT (1809-82). British naturalist. The son of Robert Darwin, a physician, and grandson of Erasmus Darwin the botanist, he was born at Shrewsbury, Feb. 12, 1809. In 1831 Darwin became naturalist to the *Beagle*, proceeding on a voyage in the *South Seas* which lasted until Oct., 1836. In 1839 he published his journal of researches into the geology and natural history of the countries which he visited.

Charles Darwin,
British scientist

By 1858 Darwin had formulated his theory of natural selection, but deferred publication until he had made further investigations. Then, learning that Alfred Russel Wallace had arrived at similar conclusions, he read the paper which Wallace had sent him and his own to the Linnean Society in 1858. In 1859 he published his *Origin of Species*, postponing, however, the presentation of his huge accumulation of additional facts until 1868, when he published *The Variation of Plants and Animals under Domestication*. In 1871 he published *The Descent of Man*. He died April 19, 1882. In 1928 Darwin's house at Downe, Kent, was bought and presented to the British Association.

Four of Darwin's sons achieved distinction in different spheres. The second, Sir George Howard Darwin (1845-1912), was professor of astronomy at Cambridge. Sir Francis Darwin

(1848-1925) was reader in botany at Cambridge and president of the British Association in 1908. He was knighted in 1913 and died Sept 19, 1925. Leonard (h. 1850) entered the Royal Engineers and took part in several scientific expeditions. Later he became an

Erasmus Darwin,
British scientist

authority on eugenics, and was M.P. for Lichfield from 1892 to 1895. Sir Horace Darwin (1851-1928), the fifth son, he came a maker of scientific instruments at Cambridge. During the Great War he was chairman of the Air Inventions Committee. He died Sept. 22, 1928.

Darwin's grandfather, Erasmus Darwin (1731-

1802), was a medical man who gave a good deal of time to scientific research. In certain respects he anticipated the theories of Lamarck. He died April 18, 1802. Francis Galton was another of his grandsons.

DASYURE. Small marsupials, commonly called the native or wild cats of Australia, Tasmania, and New Guinea, though they have no affinities with the cat. They are about the size of a domestic cat, and the brown body is profusely spotted with white. They live in trees, feed on small birds and animals, and are a pest to the poultry farmer.

Dasyure, or wild cat of Australia

DATCHET. Village of Buckinghamshire, England. It is picturesquely situated on the Thames, 2 m. E. of Windsor, with a station on Southern Rly. It has a fine church, S. Mary's, and ruins of a priory. Pop. (parish) 2406.

Date Palm, the fruits
of which are edible

DATE PALM (Phoenix daetylifera). Tall tree of the order Palmae. A native of N Africa, it is extensively grown in the Levant and India. The feather-like leaves, upwards of 12 ft. in length, are divided into numerous slender leaflets. The sweet-scented white male flowers are produced in clusters, the females in a long spike. The red-brown fruits have a sweet pulp surrounding the stony seed

and are highly nutritious as food.

DATE PLUM (Diospyros kaki). Small tree of the order Ebenaceae. A native of China, it has downy, elliptical leaves and whitish-green flowers. The yellow fruits are as large as a small orange, filled with edible pulp surrounding the eight seeds. They are exported dried as a dessert fruit.

DAUBIGNY, CHARLES FRANÇOIS (1817-78). French painter. Born in Paris, Feb. 15, 1817, he exhibited regularly at the Salon from 1846, was a prominent representative of the Barbizon (q.v.) school, and won fame chiefly by river scenes and landscape. His *Vintage*, 1863, in the Louvre is typical. He died Feb. 19, 1878.

DAUDET, ALPHONSE (1840-97). French novelist. Born May 13, 1840, at Nîmes, in 1857 he went to Paris, and until 1865 was secretary to the Duc de Morny. In 1866 he published, under the pseudonym Gaston Marie, *Lettres de mon Moulin*, followed in 1868 by *Le Petit Chose*. Then came the

first of the burlesques of the Provençals, *Les Aventures Prodigeuses de Tartarin de Tarascon*. 1872, succeeded by *Tartarin sur les*

Alphonse Daudet,
French novelist

Souvenirs d'un Homme de Lettres, 1888. He died Dec. 17, 1897.

Daudet's son, Léon, was a novelist and journalist. Born in Paris, Nov. 16, 1867, he turned from the study of medicine to that of literature. His works include *L'Astre Noir*, 1893; *Les Morticoles*, 1894; *Le Voyage de Shakespeare*, and *Les Idées en Marche*, 1896; *Suzanne*, 1897; *Sebastien*, 1899; *Les Deux Étreintes*, 1901; *Le Pays des Parlementeurs*, 1901; and *La Lutte*, 1907. He has also published a series of outspoken recollections, *Souvenirs Littéraires et Politiques*. As the editor of the Paris daily newspaper *L'Action Française* he was conspicuous as an advocate of royalism, and when a political prisoner in 1927 he made a dramatic escape. Pron. Do-day.

Léon Daudet,
French novelist
Gerschel

DAUPHIN (Lat. delphinus, dolphin). Title borne by the eldest son of the king of France. At first a proper name, it later became a title borne by the rulers of Auvergne and Vienne about 1280, the latter district being sometimes called Dauphiné. In 1349 the dauphin Humbert sold his lands to Charles, who became king of France in 1364. Charles then handed over Dauphiné to his eldest son, who thus became the dauphin of Vienne, and the custom of calling the king's eldest son the dauphin persisted until 1830. A province of France before the Revolution was called Dauphiné. Its chief town was Grenoble.

DAVENANT, SIR WILLIAM (1606-68). English poet and playwright. A godson of Shakespeare, his first play, *Albion*, was produced in 1629. In 1638 he was appointed poet laureate, being knighted in 1643. Under the Commonwealth he suffered both exile and imprisonment, owing his life to Milton. He was the first to introduce scene-shifting, operatic music, and actresses on the English stage. Davenant is best remembered by his beautiful song, "The lark now leaves his wat'ry nest." He died April 7, 1668.

Daventry. Aerial masts of broadcasting station
and the parish church of the Holy Cross
Dixon Scott

DAVENTRY. Bor. and market town of Northamptonshire, England. It is 74 m. N.W. of London and 12 m. W. of Northampton on the L.M.S. Rly. and the Grand Union

Canal. Its chief industry is the manufacture of boots and shoes. A high-power broadcasting station (5 X X) was built here in 1925, and another (experimental) station (5 G B) in 1927. Together these constitute the twin-wave regional station for the Midlands. Market day, Wed. Pop. 3,516.

DAVID (c. 1030-990 B.C.) Second king of Israel. The youngest of eight sons of Jesse, of Bethlehem and of the tribe of Judah. In his boyhood a shepherd, he was early designated Saul's successor in the kingdom, and anointed by Samuel (1 Sam. 16). His skill on the harp brought him to the notice of Saul, who appointed him his armour-bearer; and his slaying of the Philistine Goliath resulted in his friendship with Saul's eldest son Jonathan.

When Saul killed himself and Jonathan was slain by the Philistines, David was made king by the men of Judah (2 Sam. 2). The early years of his reign were occupied with war waged by the Israelites who followed the dynasty of Saul against David and Judah. Finally the Israelites accepted David; the king moved the capital from Hebron to Jerusalem and founded the holy city (2 Sam. 5). The greater part of his remaining years was occupied with warfare, and the rebellion of his sons Absalom and Adonijah clouded his last days. Many of the O.T. Psalms are David's work.

DAVID or **DEWI** (d. c. 601). Patron saint of Wales. He was bishop of Menevia (S. David's), and presided over two Welsh synods. After a pilgrimage to Jerusalem he was made metropolitan archbishop of Wales. Venerated in Wales from the 7th century, he was canonised in 1120; his festival is on March 1.

DAVID, FÉLICIEN CÉSAR (1810-76). French composer. Born at Cadenet, Vaucluse, April 13, 1810, he was a chorister in the cathedral at Aix, and later a conductor. He studied at the Paris Conservatoire, and later travelled in the East. In 1844 his symphonic ode, *Le Désert*, made his name. He died Aug. 29, 1876.

DAVID, GERARD (c. 1450-1523). Flemish painter. One of the most careful of the early Flemish artists, he is represented in the National Gallery, the Louvre, and some of the galleries of the U.S.A. He died Aug. 13, 1523.

DAVID, JACQUES LOUIS (1748-1825). French painter. Born in Paris, Aug. 30, 1748, he gained the Prix de Rome (1774), and accompanied the painter Vien to Italy to study the antique. On his return to Paris in 1780 he was made an academicien. When Napoleon became emperor David was made first court painter, but was exiled on the return of the Bourbons. He died Dec. 29, 1825. His portraits of Madame Récamier and Madame Vigée Le Brun are noteworthy.

DAVIDSON, JOHN (1857-1909). British poet. Born April 11, 1857, he became a schoolmaster. His first volume of verse, *In a Music Hall and other Poems*, 1891, was followed by *Fleet Street Eclogues*, 1893, 2nd series, 1896; *Ballads and Songs*, 1894; *New*

David, as sculptured

Accad. di Belle
Arti, Florence

John Davidson,
British poet
Elliott & Fry

Ballads, 1897; and *The Last Ballad* and other Poems, 1899. His adaptation of *Coppée's Pour la Couronne* was produced in 1890; and his translation of Victor Hugo's *Ruy Blas*, under the title of *A Queen's Romance*, in 1903. He drowned himself at Ponza, March 23, 1909.

DAVIDSON, RANDALL THOMAS DAVIDSON, BARON (1848-1930). British prelate. B. in Edinburgh, Apr. 7, 1848, he was educated at Harrow and Trinity College, Oxford. Ordained in 1874, he was for three years a curate at Dartford. In 1877 he became domestic chaplain to the archbishop of Canterbury (Tait), whose daughter he married and whose life he partly wrote. In 1883 he was appointed dean of Windsor; in 1891 bishop of Rochester, and in 1895 bishop of Winchester. In 1903, on the death of Temple, he was appointed archbishop of Canterbury, and for 25 difficult years he guided the affairs of the Church. In 1928 he resigned and was made a peer as Baron Davidson of Lambeth. He died May 25, 1930.

Lord Davidson,
British prelate
Russell

DAVIES, BENJAMIN GREY (b. 1858). British singer, better known as Ben Davies. Born at Pontardawe, Glamorganshire, Jan. 6, 1858, he studied at the R.A.M., and made his debut at Birmingham as Thaddeus in *The Bohemian Girl*, 1881. For years he held a leading position in opera and on the concert platform.

DAVIES, SIR HENRY WALFORD (b. 1869). British organist and composer. Born at Oswestry, Sept. 6, 1869, he became chorister at St George's Chapel, Windsor. Having been organist at Christ Church, Hampstead, he was appointed organist of the Temple Church, London, in 1898, remaining there until 1923. In 1927 he became organist of St. George's Chapel, Windsor. His compositions include the cantatas *Everyman*, *Hervé Riel* and *Heaven's Gate*, as well as the *music for songs*; his broadcasting talks on music were noteworthy. Davies was knighted in 1922.

DAVIES, HUBERT HENRY (1869-1917). British playwright. Born at Woodley, Cheshire, March 30, 1869, he wrote many popular social comedies. They include *Fifty Years Ago*, 1901; *Mrs. Gorrings Necklace*, 1903; *Cynthia*, 1904; *The Mollusc*, 1907; *A Single Man*, 1910; *Outcast*, 1914. In Aug., 1917, his coat and stick were found on the cliffs at Robin Hood's Bay. It was presumed he had fallen into the sea.

DAVIES, MARY (b. 1855). British singer. Born in London, Feb. 27, 1855, of Welsh parents, she studied at the Royal Academy of Music. She made her debut at the Crystal Palace in 1876, and for 15 years was the principal soprano at the London ballad concerts. She retired in 1900 in order to devote her time to teaching.

DAVIES, WILLIAM HENRY (b. 1870). British poet. He was born April 20, 1870, at Newport, Mon. After serving an apprenticeship to a picture-frame maker, he went to America, where he passed six years of tramping life, fired thereto, perhaps, by the cousin whom he vividly presents in *The Child and the Mariner*. His poetical contributions to periodicals began to attract attention in the early years of the 20th century. He also wrote several volumes of prose, including the *Autobiography of a Super-tramp*, 1908; *Later Days*, 1925; and *Dancing Mad*, 1927.

William H. Davies,
British poet
Brown

DAVIS, JEFFERSON (1808-89). American statesman. Born in Christian co., Kentucky, June 3, 1808, he entered the army in 1828. In 1845 he entered Congress as Democratic member for Mississippi and the following year took an active part in the Mexican war.

Jefferson Davis,
American statesman

From 1847-51 and 1857-61 Davis was a member of the Senate, acting in the interval as secretary of war. Recognized as the leader of the southern states, he steadily maintained the sovereignty of each state. On the secession of the southern states Davis was elected president of the Confederate Congress, Feb. 9, 1861, and was re-elected Feb., 1862. After the surrender of Lee he was captured at Irvinville, Georgia, imprisoned, and charged with treason. After two years he was admitted to bail and released in 1869. He died Dec. 6, 1889.

DAVIS or DAVYS, JOHN (c. 1555-1605). English navigator. Born in Devon, he went in early life to sea under Adrian Gilbert. In 1585, convinced of the existence of a north-west passage, he set out to find it. He failed, but his name remains in those regions, where a number of lands were discovered and named by him. After this Davis served against the Spanish Armada and made various voyages to America, the discovery of the Falkland Islands in 1592 standing to his credit. His vessel was attacked by Japanese pirates and Davis was killed, Dec. 29 or 30, 1605. Davis invented a quadrant long used by mariners.

DAVIS CUP. Silver trophy for an international lawn tennis championship. It was presented by the American politician, Dwight Davis. Teams of men from the United States, Great Britain, France, Australia, Japan, and other countries compete for it. It was won from 1920 to 1926 inclusive by the U.S.A. and in 1927-28-29 by France.

DAVIS SEA. Part of the Antarctic Ocean touching Queen Mary Land and running N.E. past Shackleton Shelf. It is named after James Davis, a member of the Mawson Expedition, which explored it in 1914.

Davis Strait is the channel connecting Baffin Bay with the North Atlantic Ocean and separating Baffin Island from Greenland. It is nearly 200 m. wide at its narrowest part. It was named after John Davis, the navigator.

DAVISON, WILLIAM (d. 1608). English politician. Of Scottish family, he entered the service of Queen Elizabeth. From 1566-86 he was employed on various diplomatic missions, spending ten years in Scotland at the court of Mary. He was a member of the commission for the trial of Mary Queen of Scots, and delivered the death warrant, signed by Elizabeth, to the privy council. After Mary's execution, Elizabeth declared that he had exceeded his instructions. Davison was arrested, fined, and imprisoned in the Tower for two years. He died at Stepney, where he is buried, Dec. 21, 1608.

DAVITT, MICHAEL (1846-1906). Irish Nationalist. Born in co. Mayo, March 25, 1846, the son of a peasant, he was brought up in Lancashire. He joined the Fenians; and was one of the band that attacked the castle at Chester. In 1870 he was discovered transporting firearms into Ireland and sentenced to 15 years penal servitude, but he was released

Michael Davitt,
Irish nationalist
Elliott & Fry

in 1877. Elected M.P. for Meath, 1882, he was disqualified as a convict. In 1892 he was again elected and again unseated, but in 1895 he was returned unopposed for S. Mayo. He broke with Parnell on the land question in 1885, and assisted to start the United Irish League, 1898. He died in Dublin, May 31, 1906.

Davos, Switzerland. The beautiful Alpine valley in summer. Davos Platz is in the foreground

DAVOS. Alpine valley of Switzerland, in the canton of Grisons. It is 8 m. long by $\frac{1}{2}$ m. broad, and is a favourite winter resort for consumptives. There are two villages, with hotels and sanatoria, Davos Platz, 40 m. by rly. S.E. of Coire, and Davos Dorf.

The villages are the headquarters of skating, tobogganing, and skiing. The Queen Alexandra Sanatorium was opened in 1909.

DAVOUT, LOUIS NICOLAS (1770-1823). French soldier. Born at Annoux, Burgundy, May 10, 1770, he entered the army in 1788. Made a marshal in 1804, he took a conspicuous part in the victories of Austerlitz (1806), Auerstädt (1806), and Eckmühl (1809). He was created duke of Auerstädt by Napoleon, 1808, and prince of Eckmühl, 1811, and appointed governor of Warsaw. After Waterloo, Davout was the last to command the broken French army in Paris. He died in Paris, June 1, 1823.

Sir Humphry Davy,
English chemist
After Sir T. Lawrence

DAVY, SIR HUMPHRY (1778-1829). English chemist. Born at Penzance, Dec. 17, 1778, he was apprenticed to a surgeon and early developed a taste for chemical experiments. In 1798 he was appointed laboratory superintendent of the Pneumatic Institute at Clifton. Here he discovered nitrous oxide or laughing gas. In 1801 he was appointed director of the chemical laboratory at the Royal Institution, London, and in 1802 was made its first professor of chemistry. He remained connected with the institution until 1812, making many useful experiments and inventing the safety lamp. He was knighted in 1812, and in 1820 he was made a baronet. He died at Geneva, May 29, 1829.

The essential feature of the Davy lamp is a hollow cylinder of wire gauze—preferably

Davy Lamp. Left, old style; right, new style with glass around flame

of copper—which surrounds the naked flame from an oil burner or other source. The presence of explosive gas is indicated by the burning of the fire-damp in the interior of the gauze cylinder, the heat from which is conducted away with sufficient rapidity to prevent the flame inside the cylinder from spreading to the gas in the mine.

DAWES, CHARLES GATES (h. 1865). American statesman. Born at Marietta, Ohio, Aug. 27, 1865, son of Rufus Dawes, he practised at the bar in Lincoln, Nebraska, 1887-94. He then devoted himself largely to business, becoming president of the Central Trust Co. of Illinois, Chicago, in 1902. In Sept., 1917, he became chairman of the General Purchasing Board set up for the American Expeditionary Force.

Charles G. Dawes, American statesman

When an inquiry into German reparations was instituted in Dec., 1923, Dawes and Owen Young were chosen U.S.A. representatives, and their plan, familiar as the Dawes scheme, was adopted. In politics a republican, Dawes was elected vice-president of the United States at the presidential election of 1924. In 1929 he came to London as ambassador to Great Britain, and with other U.S.A. delegates, represented his country at the naval conference of 1930.

DAWKINS, SIR WILLIAM BOYD (1837-1929). British geologist. Born in Wales, Dec. 26, 1837, the son of a clergyman, he studied science, and was employed on the geological survey from 1861-70. In 1870 he went to Manchester as curator of the museum and lecturer at Owens College. In 1874 he was made professor of geology there, and he retained the post after the college became a university. He was knighted in 1919, and died Jan. 15, 1929. He wrote *Early Man in Britain*, 1880.

Sir W. B. Dawkins, British geologist

DAWLISH. Watering place and urban dist. of Devonshire. It stands on the S. coast between the mouths of the Exe and the Teign, 3 m. from Teignmouth by the G.W. Rly. and 12 m. from Exeter. Market day, Thurs. Pop. 4,672.

DAWSON, BERTRAND DAWSON, 1ST BARON. British physician. Educated at the London Hospital, he became physician there in 1906. In 1907 he was made physician to the king, and in 1911 he was knighted. After serving through the Great War he was made a peer as Lord Dawson of Penn in 1920, and was called in during King George's illness in 1928-29. A specialist on diabetes and diseases of the stomach, he has written much on these topics. In 1929 he was made a privy councillor.

DAWSON, GEORGE (1821-76). British divine. Born in London, Feb. 24, 1821, he became a Baptist minister at Rickmansworth in 1843. In 1844 he moved to Birmingham, but there his liberal opinions, which made him practically a unitarian, led him to leave the Baptist denomination in 1846, and for the rest of his career he was minister of the Church of the Saviour, which his followers built for him. Dawson died Nov. 30, 1876.

DAWSON CITY. River port of Canada, capital of the Yukon Territory. It stands on the right bank of the Yukon, 1,500 m. from its mouth, where the Klondike flows into it. It was founded in 1896 on the discovery of gold in the Klondike region. The population, at one time over 20,000, fell in 1911 to 3,013, and in 1921 to 975.

DAY, JOHN (1522-84). English printer. Born at Dunwich, Suffolk, he printed the first church music book in English, 1560; the first English edition of the Acts and Monuments, 1563, of Foxe, who seems to have worked in his office as an editor; and introduced Anglo-Saxon type in an edition of Aelfric's Paschal Homily, 1567. One of his devices depicted a sleeper being awakened, with the motto, *Arise, for it is Day*. He died July 23, 1584.

John Day, English printer
From an engraving

DAY, JOHN (c. 1574-1640). English dramatist. Born at Cawston, Norfolk, he collaborated with Chettle, Dekker, and others between 1598 and 1603 in 21 plays. His most famous work is a masque or dramatic allegory, *The Parliament of Bees*.

DAYBROOK. Village of Nottinghamshire. It is 3 m. from Nottingham, and has a station on the L.N.E. Rly. It has a beautiful modern church, built by Sir Charles Sedley, and a number of industries, including brewing and lace-making. Pop. 4,648.

DAYLIGHT SAVING. System of advancing the clock for a definite space of time (usually one hour) on a specified day in spring, and setting back the hands for an equal space of time on a specified day in autumn. The originator of this reform was William Willett, a London builder, who died before it was introduced. The first daylight saving bill was introduced in 1908, but it was some time before the law was changed. The Summer-time Act, as it is called, first came into operation at 2 a.m. on May 21, 1916, and was renewed in succeeding years. It was made permanent by an act of 1925, summer time starting on the third Saturday in April, and ending on the first Saturday in October.

DAYTON. City of Ohio, U.S.A. It stands at the junction of three rivers with the Great Miami, 59 m. N.N.E. of Cincinnati. It is an important rly. centre, served also by the Miami and Erie Canal, has several fine buildings, and is the site of the National Cash Register works. S. Mary's College became the University of Dayton in 1920. The Wilbur Wright Field is the seat of the engineering division of the U.S. air service. Pop. 178,642.

Daytona. Town of Florida, U.S.A. Here is the noted motor-racing beach. See Don, Kaye.

DEACON. Church official. In the Church of England a deacon is an ordained minister who is not yet a priest. He must be at least 23 years old, and is usually ordained priest a year later. He can perform most of the duties of a priest, the chief exceptions being the pronouncement of absolution and the consecration of the sacred elements. In the Roman Catholic Church deacons form the third order of the ministry.

Among Baptists and Congregationalists deacons are laymen elected to manage the affairs of the church.

Deaconesses, like deacons, existed in the early church. They were revived in the 19th century in the Church of England and certain of the free churches, chiefly for charitable work among the poor.

DEADLY NIGHTSHADE (*Atropa belladonna*). Plant, also known as the belladonna, indigenous, but not very common, in Britain. It grows in shady spots to a height of 2 ft. to 3 ft., and bears reddish-purple bell-shaped flowers. The fruit is a black berry resembling a small cherry. An alkaloid known as atropine or belladonna is prepared from its leaves and root. All parts of the plant are highly poisonous. See Belladonna.

DEAD MEN'S FINGERS. Popular name given to a genus (*Aleyonium*) of the Actinozoa, to which belong the sea anemones and some corals. It is common on the rocks around the British coasts, and consists of masses of light-coloured fleshy substance, studded with small tentacled polyps. The name is derived from the appearance when taken out of the water.

Dead Men's Fingers, a common British zoophyte

DEAD - NETTLE (*Lamium*). Genus of annual and perennial herbs of the order Labiatae. Natives of Europe, Asia, and N. Africa, they have square stems, opposite, heart-shaped hairy leaves, and two-lipped tubular flowers arranged in whorls around the stem and branches. Red dead-nettle (*L. purpureum*) is a common weed in all cultivated ground. White dead-nettle (*L. album*) grows more in hedge-rows and waste places.

Red Dead-nettle, *L. purpureum*

DEAD SEA, THE, OR SEA OF SODOM (anc. *Lacus Asphaltites*). Lake of Palestine, called by the Arabs Birkat-Lut, or the Lake of Lot. It is also termed the Salt Sea, the Sea of the Plain, and the East Sea in the Bible. It is 46 m. long, and lies 1,300 ft. below the level of the Mediterranean and 50 m. W. of it. Its N. end is about 25 m. E. of Jerusalem, and its greatest depth is 1,300 ft. Fish are unable to exist in it. The sea has an almost inexhaustible supply of potash, bromide and other salts, and in 1928 steps were taken to develop its resources.

DEAF AND DUMB. Term applied to people who, deprived of hearing from birth or infancy, do not hear, and never acquire normal speech. They become deaf mutes. Usually the defect is only that of hearing, the physical conditions of the organs of speech being normal; these, however, become atrophied from want of use. Owing to modern methods of training many children who would otherwise be dumb are now taught to speak.

The readiness with which the language of gesture or signs is developed has led to the belief that this was the right and only way to educate the deaf, and a certain amount of codification of these signs has been done. But it is now generally conceded that if a deaf child can be taught to speak, every effort should be made to accomplish this. In the ordinary oral method of instruction the child is taught the motions of the mouth, to articulate the phonetic sounds of the language, and to combine these sounds into words and sentences. At the same time the child learns to recognize what is said on the lips of the speaker.

By the Act of 1893 it is the duty of every school authority to provide education for the deaf children in its area, and if necessary to establish and maintain a school. After-care associations in connexion with most of the schools see to the placing of the pupils in employment, and other organizations, such as the Royal Association in Aid of the Deaf and Dumb, minister to the religious and social needs of this class. See illus. p. 492.

DEAFNESS. Any affection of the hearing apparatus from the pinna to the hearing centre in the brain is likely to produce deafness.

It is important to ascertain whether the deafness is due to faulty conduction of sound to the nerve endings, or whether the nerve is affected.

Deafness may result from wax, a foreign body, or from inflammation in the external auditory meatus; the deafness here coming on suddenly as a rule. Disease or injury of the drum of the ear, partly or completely destroying it, causes deafness. When not the result of injury it is due to suppurative disease of the middle ear. Otosclerosis, a distressing form of deafness, is markedly hereditary. It is due to the stirrup bone being fixed immovably in the oval window; the vibrations of sound are therefore unable to act upon the perilymph in the inner ear.

Nerve deafness and inner ear deafness may be slight, but if severe they cause more deafness than any of the above. They may be congenital.

Syphilis or meningitis of any kind occurring in infancy and affecting the nerve of hearing produce similar defects. Acquired syphilis may produce severe nerve deafness. Occupation deafness accounts for many cases of nerve deafness. Toxic deafness is caused by quinine, salicylates, and very occasionally tobacco and alcohol. See Ear.

DEAKIN, ALFRED (1856-1919). Australian statesman. Born at Melbourne, Aug. 3, 1856, he became a barrister. In 1880 he was elected to the legislature as a Liberal, and in 1901 became first attorney-general of the Commonwealth. In 1903 he succeeded Barton as prime minister, but he was defeated in April, 1904, and resigned. In 1905 he made an alliance with the Labour party, which helped to form a government, himself premier. This lasted until 1908, and in 1909 Deakin again became premier, but he resigned in Jan., 1910. Deakin died Oct. 6, 1919.

Alfred Deakin,
Australian statesman
Russell

DEAL (Dan. deel, plank). Trade name for boards made of pine or fir. The Scotch fir (*Pinus sylvestris*), a yellow wood, and *Abies excelsa*, a white fir, are imported from Russia, Norway, and Sweden. See Timber.

DEAL. Seaport, borough, and watering place of Kent. It is 7 m. N.N.E. of Dover, and is served by the Southern Rly. The town is divided into three parts, Old or Upper Deal, which is inland, being the oldest. Buildings are the castle, built in the time of Henry VIII, S. Leonard's Church, and a hospital. The sea is receding hereabouts, and at one time Old Deal was on the coast. Deal became an important port in the reign of Henry VIII,

when ships began to call here. It was at first an outpost of Sandwich, but in 1699 it was made a corporate town. Pop. 12,900.

Deaf and Dumb. Manual alphabet employing both hands with which the speed of 130 words a minute can be attained. See art. p. 491

Wye, the former river separating it from the rest of Gloucestershire. It is about 20 m. from N. to S., and its extreme breadth is about 10 m. Much of it, about 25,000 acres, is crown property, and from the earliest times it has been a royal forest, timber being grown here in former days for the navy. The forest, which is looked after by gavellers and verderers, retains some of its old laws and customs. In the middle of the forest is the Speech House, where the verderers held their courts. There are now extensive mines, especially around Cinderford. Coleford and Cinderford are the chief centres.

DEATH. End of life in the physical sense. The causes of death may be classified as (1) natural; (2) violent, including accident and misadventure, suicide, and homicide.

Natural causes of death vary as regards their relative extent in different parts of the globe. In hot countries, and in countries where civilization is backward and sanitation primitive, high mortality may result from infectious diseases and diseases conveyed by

Deal Castle, Kent. It was built by Henry VIII in 1539, as part of a system of coast defence

parasites. On the other hand, civilization, and particularly the growth of large towns, brings in its train other diseases, the most

important of which is tuberculosis. Deaths from accident, suicide, and homicide are considered under their respective headings.

SIGNS OF DEATH. Cessation of respiration and circulation are signs of death if they can be established with certainty. Progressive cooling is a sure sign of death. Post-mortem hypostases are livid stains which make their appearance upon the dependent parts of the body, usually about five or six hours after death. Rigor mortis is a stiffening of the muscles, which begins in the face about five or six hours after death, and extends over the whole body in about eighteen hours. It is a sure sign of death.

CERTIFICATION AND REGISTRATION. Information of death is given to the doctor, who, if satisfied that the cause of death is natural, must give a certificate under his own hand and without charge. The certificate of death is sent to the local registrar of births, deaths, and marriages, who registers the death and issues a burial certificate. In a death upon which an inquest has been held, the burial certificate is issued by the coroner.

DEATH CUSTOMS. Usages and rites attending human dissolution. In primitive society death is deemed to be unnatural, and where animism prevails it is generally attributed to witchcraft. The human cause is sought out by means of ouens, as in Australia, or the poison ordeal in negro Africa, and then the death penalty is exacted.

DEATH RATE. Number of deaths per thousand of the estimated population, the population at the middle of the year usually being taken. Death rates are also calculated for a week and for a quarter of the year. The annual death rate so obtained is termed the crude death rate, and, in combination with the crude birth rate and the returns for emigration and immigration, helps to determine the increase or decrease of population. In Great Britain and Northern Ireland the death rate, 1922-29, was as follows:

1922	13.1
1923	11.8
1924	12.6
1925	12.4
1926	11.9
1927	12.5
1928	11.7
1929	13.4

DEATH DUTIES. Name given to all the duties payable on property left at death. In the United Kingdom these include the estate duty, introduced in 1894, and the legacy and succession duties. The estimated revenue for 1930-31 was £23,000,000. See Estate Duty.

DEATH'S HEAD. Badge representing a skull surmounted by two crossed bones. It was used during mediæval times as a sign by pirates. It was adopted, with the motto "or glory," as a regimental badge by the 17th (Duke of Cambridge's Own) Lancers.

DEATH'S HEAD MOTH (*Acherontia atropos*). Popular name for the largest British hawk moth. Its wings are from 4 ins. to 5 ins. in expanse, and are mottled with brown, yellow, and black. The thorax bears markings somewhat resembling a human skull.

Death's Head Moth, a large British hawk moth

This moth squeaks when caught, and the caterpillar makes a chirping sound when disturbed. The latter sometimes grows to a length of 5 ins., and is yellowish green with purplish lines. See Hawk Moth.

DEATH WATCH. Popular name for small beetles of the genus *Anobium*. About 1 in. long, they are found in old woodwork,

where they make a ticking sound by striking their head against the wood. The larvæ are very destructive, and are the cause of worm-eaten furniture. Formerly superstition associated the rapping sound with approaching death.

Death Watch, *Anobium tessellatum*

DEAUVILLE. Town and watering place of France, in the dept. of Calvados. It stands on the English Channel, 10 m. S. of Havre. The railway station is near the left bank of the river Touques, which is crossed by a bridge and a ferry. Deauville, a modern place entirely, is famous for its race meeting, held in August. Pop. 3,000.

DEBENTURE (Lat. *debere*, to owe). Form of mortgage by which joint stock companies raise money, the lenders of such money ranking as holders of the mortgage. In case the company is unable to meet its liabilities, the debenture holders have a prior claim for both principal and interest.

Debentures form a charge, usually the first, upon the property of the company, and it is usual for a trust deed to be drawn up vesting certain property in trustees, who hold it for the debenture holders. Debentures bear a fixed rate of interest and may be either redeemable in a fixed number of years or irredeemable. They may also be divided into mortgage or ordinary debentures, into debentures payable to bearer, and debentures payable to a registered holder, and into first and second debentures, the first being the better security. Debentures must be registered. See Company Law.

DEBORAH. Name of two women in the O.T. (1) The nurse of Rebekah (Gen. 24); (2) a prophetess who lived between Ramah and Bethel (Judges 5). The last named stirred up Barak to march against the forces of Sisera, and her song about Israel's victory is one of the oldest Hebrew compositions.

DEBRETT, JOHN (c. 1752-1822). London publisher. He succeeded in 1781 to the business in Piccadilly of John Almon, bookseller and journalist. Improving on Almon's New Peerage, 1754, he inaugurated the Peerage, 1802, and Baronetage, 1808, still called by his name. He died Nov. 15, 1822.

DEBT (Lat. *debitum*, something owed). In English law, a fixed, ascertained, or "liquidated" sum of money due under a contract to pay it. A sum payable under a judgement is called a judgement debt, and a sum payable under a covenant is called a specialty debt. A debt may be due to the crown by record, e.g. where a person has forfeited his bail. The Debtors Act of 1869 abolished imprisonment for debt except in cases of default by solicitors and trustees, and also in cases where the court, satisfied that the debtor has the means to pay, makes an order to this effect which is disregarded. See Bail; Bankruptcy.

DEBUSSY, CLAUDE ACHILLE (1862-1918). French composer. Born at St. Germain-en-Laye, Aug. 22, 1862, his compositions include a large amount of music of a modern type for orchestra and piano. His *Pelléas et Mélisande*, 1902, is one of the most important of modern French operas, and his *L'Après-Midi d'un Faune*, 1892, marked an era in French music. He died March 26, 1918.

DECALOGUE. Term derived from Greek meaning "ten words," and used of the Ten Commandments (lit. Words) of the Pentateuch (Exod. 20). God is said to have written the ten words on two stones on Mt. Sinai and to have given them to Moses (Exod. 24 12, 31 18, 32 15, 16; cf. Deut. 5 22, 9 10, 11).

When Moses broke them, he re-wrote them (Exod. 34 4, 28; Deut. 10 2, 4). The stones were then deposited in the ark (Deut. 10 1-5). There is another recension of the commandments in Deut. 5, both being probably based on an older form.

DECAMERON, THE (Gr. *deka*, ten; *hēmera*, day). Collection of stories by Boccaccio, probably written before 1353. The scheme of the work is a succession of stories told by ten persons on ten successive days at a place to which they had retired during the plague which ravaged Florence in 1348. Few of the stories are original. Some have provided subjects for later writers from Chaucer to Tennyson. See Boccaccio.

DECAPODA (Gr. ten-footed). Sub-order of the Crustacea (q.v.). It includes the larger forms such as crabs, lobsters, and prawns. These always have five pairs of limbs.

DECAPOLIS (Gr. *deka*, ten; *polis*, city). Federation of ten towns, constituted c. 63 B.C., of which Damascus was one of the chief, situated to the N. of Palestine and mainly E. of the Jordan, with a chiefly non-Jewish population. See Damascus.

DECCAN (Skt. southern). Region of S. India. The name is applied to the Indian peninsula S. of the Vindhya mountains. It includes part of Bombay and the Central Provinces, with Madras, Hyderabad, Mysore, and Travancore. It comprises one of the three great geographical divisions of India. Geologists believe that the Deccan is a relic of an ancient continent, Gondwanaland, of which S. Africa also formed a part. The opening of the Lloyd Dam in 1928, and of the Wilson Dam a little earlier, are parts of a great scheme for the irrigation of this district.

DECEASED WIFE'S SISTER. Term chiefly used in connexion with the marriage laws. Ecclesiastical law regards the marriage of a man with the sister of his dead wife as illegal, as such a union comes within the prohibited degrees. This was for long also the law in England and other countries.

In the 19th century Canada, Australia, and other parts of the Empire legalised these unions, and in 1850 a bill to make this change in England passed the House of Commons, but the House of Lords rejected it. After repeated efforts, the law was altered in 1907, and these marriages are now legal.

DECIMAL (Lat. *decimus*, tenth). Fractions with a denominator in some power of ten—that is, 10, 100, 1,000, etc. It is expressed in the Arabic notation by figures which are written to the right of units expressing the integral number after a point which is called a decimal point. Each unit to the right of this decimal point denotes respectively so many tenths, hundredths, thousandths, etc. Thus 0.123 indicates one-tenth, plus two hundredths, plus three thousandths, or 123 thousandths, and would be expressed in a vulgar fraction as $\frac{123}{1000}$.

A method of counting by tens is termed a decimal system. The place value of a figure indicates its relation on the scale of 10, e.g. the 4 in the quantities 487, 41 and 0.047 represents 4 hundreds, 4 tens and 4 hundredths respectively. The metric system of weights and measures is a decimal system.

DECLARATION. In English law, a statutory declaration in writing is solemnly made before a commissioner for oaths, justice of the peace, or other authorised person. In some cases it is a substitute for an oath.

In Scots law a declaration is a decision given by a court of law, the cases having been duly heard, confirming a certain fact. It is also used for the statement which a prisoner may make before a magistrate within 48 hours of his arrest. The term is also used for international agreements, e.g. the Declaration of London.

DECLINATOR. Instrument used for determining the declination or angle of the slope of planes. A declinometer is an instrument used for measuring the declination of the magnetic needle, which varies diurnally, seasonally, as well as locally. Similar astronomical instruments are used for measuring the declination of the heavenly bodies.

DECOMPOSITION. Process of breaking down and disintegration of animal tissues, effected mainly by the agency of bacteria. Signs of decomposition or putrefaction make their appearance from one to three days after death, the period varying with the temperature and other conditions of the environment. Chloride of lime placed round a body tends to preserve it, both by excluding the air and by destroying micro-organisms.

CHEMICAL DECOMPOSITION. This term denotes the breaking of a substance into two or more elements or simpler forms of matter than that from which they are formed. The laws governing chemical change and chemical decomposition are the same. Heat and electricity are the principal means by which chemical decomposition is brought about.

DECORATED PERIOD. Name given to the style of English Gothic architecture which prevailed for the first seven or eight decades of the 14th century. It followed the Early English style and preceded the Perpendicular. It is so named from the profusion of rich ornament that characterises Gothic buildings of this era. Ball-flower (see illus. p. 184) and other naturalistic ornamentation is applied freely to arcades, tombs, screens, etc.; windows, now much larger than heretofore, are decorated with intricate tracery: flying buttresses are of heavier construction, and piers are often an agglomeration of clustered shafts. See Architecture.

DECREE (Lat. *decretum*, decision). Legal term of Roman origin. It was used for a judgement of the Emperor, and was borrowed by the Church and used for the decisions of its councils. In England to-day it is used for the decisions of the divorce court.

DEE. River of England and Wales. It rises in Bala Lake and flowing mainly N. reaches Chester, near where its wide estuary begins. This, however, is not of much use commercially, as its course is blocked almost entirely by sand. The estuary, which is 13 m. long, is over 5 m. wide at the mouth.

DEE. River of Scotland, partly in Kincairdineshire, but mainly in Aberdeenshire. Rising at a height of 4,060 ft. in the Cairngorm Mts., it pursues a N.E. course of 87 m. to the North Sea, which it enters at Aberdeen. Aberdeenshire is divided popularly into Deeside and Donside. The former is a noted tourist centre. Another Dee is a river 45 m. long, of Kirkcudbrightshire.

DEE, JOHN (1527-1608). English astrologer and mathematician. Born July 13, 1527, he became an educated and travelled man. He

John Dee, English astrologer
From an old engraving

experimented in spiritualism, crystal gazing, alchemy, and astrology, and was generally denounced for holding intercourse with the devil. Queen Elizabeth believed in him, and frequently consulted him. His best mathematical work was on the reform of the calendar, but he left many miscellaneous writings, including accounts of the transmutation of gold. Dee died in poverty at Mortlake in Dec., 1608.

DEED. In English law, a writing under seal. It is generally signed, but signature is not necessary. Before a deed can take effect it must be delivered, that is, put out of the

custody of the maker thereof. A deed made between two or more parties is called an indenture, because such deeds used to be drawn up on one skin of parchment, which was then cut across in an indented or wavy manner, so that one part had to fit into the other. A deed made by one party is called a deed poll, because such deeds used to be written on parchment with a polled or straight-cut edge. Deeds should be attested by at least one witness.

A deed of arrangement is the term given to a settlement by which an insolvent person discharges his liabilities without becoming a bankrupt. He does this by executing a deed by which all his property is conveyed to a trustee, who realizes it and divides the proceeds among the creditors in exact proportion to the amount of the debts. See Bankruptcy

DEEMSTER. Name of two judges in the Isle of Man, one for the northern and one for the southern division. The word means a person who pronounces doom or judgement.

Warwick Deeping,
British novelist
Russell

DEEPING, GEORGE WARWICK (b. 1877). British novelist. Born at Southend, Essex, he turned from medicine to devote himself to fiction, and produced in quick succession a series of romantic novels, including *Uther* and *Igraine*, 1903; *Bess of the Woods*, 1906; *Bertrand of Brittany*, 1908; *Joan of the Tower*, 1911; *Martin Valliant*, 1917; *Valour*, 1918; *Second Youth*, 1919; *The Prophetic Marriage*, 1920; *Sorrell and Son*, 1925; *Doomsday*, 1927; *Old Pybus*, 1928; *Roper's Row*, 1929; and *The Exiles*, 1930.

DEER. Name given to all the members of the family Cervidae of the even-toed hoofed mammals. They are distinguished by the possession, in nearly all the species, of solid antlers, shed and renewed annually, generally branched and with rugged surfaces. These are borne only by the male, except in the reindeer, both sexes of which have antlers. The completion of the growth of the new antlers marks the beginning of the pairing season. Deer are found in forest and grassy districts in most parts of the world. About

60 species are recognized.

Great Britain possesses three species of deer living in a wild state, the red deer, the fallow deer, and the roe deer. The

Deer. Stag of the fallow deer.
Above, stag of the red deer

deer found in Scotland and the W. of England is the red deer. A full-grown Scotch stag stands 4 ft. high at the withers and weighs about 18 stone. All deer are game animals, their flesh being a valuable article of food, and the antlers are used in the manufacture of knife handles and other articles. See Antler; Axis Deer; etc.

DEER STALKING. This sport is confined in Great Britain to the Highlands of Scotland.

On discerning deer in the distance the stalker endeavours to approach within shooting range without alarming the quarry. Dogs may be used to bring a slightly wounded stag to bay. In 1928 it was stated that the area of deer forests in Scotland was 3,430,000 acres.

DEER. Name of two villages of Aberdeenshire, known as Old and New. Old Deer is about 11 m. W. of Peterhead. Here are the remains of S. Mary's Abbey, and other antiquities. Pop. Old Deer, 3,741; New Deer, 4,080.

DEERHOUND. Breed of hound of mixed origin, used in stag-hunting. It is supposed to be descended from either the Irish wolfhound or the Scottish greyhound, with perhaps an admixture of other strains. Resembling a large, rough, stoutly-built greyhound, it stands 29 ins. at the shoulder and has a very keen scent.

Deerhound. Champion dog of this breed

DEFENCE. British warship. The most famous Defence in the British navy was a 74-gun ship launched at Pembroke in 1763. She fought in the battle of the glorious First of June, and under Nelson at the Nile, Copenhagen, and Trafalgar, and was wrecked off the Danish coast in 1811. The eighth Defence, an armoured cruiser of the Minotaur class, was launched at Pembroke in 1907, and completed in 1909. In the battle of Jutland (q.v.) she was sunk with all hands by enemy gunfire.

DEFENCE OF THE REALM. During the Great War a considerable amount of legislation was urgently required to deal with the new conditions created by the war and for the general protection of the country. Accordingly, a series of temporary Acts called the Defence of the Realm Acts were passed authorising the ministers of the Crown and the various state departments to make regulations having the force of law. These regulations dealt with questions of importance to the community at that time, such as the control of food, restrictions on the sale of intoxicating liquor, the protection of munitions of war, the prevention of spying, and all matters necessary to the successful conduct of the war.

The Defence of the Realm Acts expired automatically on August 31, 1921, the legal termination of the war, but by an Act of 1920 the Crown was given powers very similar to those which it enjoyed under those Acts of making laws by means of regulations in time of national emergency.

This power of legislating by regulations proved of great value during the general strike of 1926. A royal proclamation was made on April 30, 1926, some days before the commencement of the general strike, declaring that a state of emergency existed. Under the Act, this proclamation expired one month after it was made, but fresh proclamations of emergency were made at monthly intervals until November 20, 1926, and the state of emergency which was declared on April 30, 1926, was continued until December 19, 1926.

DEFENDER OF THE FAITH (Lat. Fidei Defensor). Title conferred on the English King Henry VIII by Pope Leo X in 1521. It was a recognition of the king's reply to Luther, Henry having in a treatise defended the seven sacraments. In 1544 it was confirmed by Parliament, and is borne by all British sovereigns as part of their official designation.

DEFOE, DANIEL (c. 1659-1731). English author. He was born in Fore Street, London, the son of a butcher named James Foe. He adopted the name of Defoe or De Foe in 1702. Although educated for the Nonconformist ministry, he adopted a business life, but with

scant success. Defoe took part in the duke of Monmouth's rebellion, was a volunteer in the army of William III, and helped to promote the union with Scotland. He visited Spain and other parts of the Continent, travelled several times through Britain, was twice in Newgate and thrice in the pillory on account of his writings, championed the cause of Dissent, and turned all his varied experiences into copy for the printers. He died in London, April 26, 1731, and was buried in Bunhill Fields.

From 1697 he attracted notice by a number of vigorous pamphlets, and in 1719 achieved success with *Robinson Crusoe*, founded on the actual experiences of Alexander Selkirk (q.v.), told by himself to Defoe. His realistic romances, mainly of low life, include *Captain Singleton*, 1720; *Moll Flanders*, 1721; *Colonel*

Jacque, 1722, the best; and *Roxana*, 1724. Next to *Robinson Crusoe*, Defoe's most remarkable book was his *Journal of the Plague Year*, 1722, a work which research proves to be founded on ascertained fact and containing no statement for which the author had not authority. His *Tour Through Great Britain*, 1724-26, and *A New Voyage Round the World*, 1725, display his genuine zest for topography.

Daniel Defoe,
English author
After Tavernier

DEGAS, HILAIRE GERMAINE EDGAR (1834-1917). French painter. Born in Paris, July 19, 1834, Degas was a realist and one of the greatest draughtsmen of his time. He is most widely known as the painter of the Paris danseuse. One of his notable works is *Les Blanchisseuses*, while some—for instance, *L'Absinthe*—are repellent in their ugliness. Degas died in Paris, Sept. 27, 1917.

DEGENERATION. In biology, the theory that in certain circumstances of environment there is a tendency in plants and animals to deteriorate as a class to a lower type. In pathology, the term denotes a retrogressive change in the tissues, characterised by the direct transformation of the protoplasm of cells into some definite recognizable compound either useless or harmful to cell life.

DEGREE. Geometrical unit of measurement of angles or of circular arcs. A right angle contains 90 degrees, and is the angle subtended at the centre of a circle by a quarter of the circumference. Thus the circumference of a circle subtends four right angles, or 360 degrees at its centre. Degrees of latitude and longitude, measured by the meridians, on the assumption that the earth is a sphere, are used to indicate points on the earth's surface.

DEGREE. Mark of proficiency granted by universities and other bodies. There are a large number of degrees, from the older ones in arts, law, divinity, and medicine, to newer ones in engineering, commerce, literature, etc.

Ordinary degrees, of which B.A. is the most common, are given in the first instance after examination. In some universities the M.A. degree is also given after examination, but at Oxford and Cambridge it is given after the bachelor candidate has maintained his connexion with the university for a stated time and has paid certain fees. The Scottish universities do not give the B.A., but award the M.A. after examinations corresponding somewhat to those for the B.A. in England.

Another class of degree, the London D.Sc., for instance, is given for research work. Honorary degrees are given to distinguished persons.

DEISM (Lat. Deus, God). Name for a system of belief which recognizes the existence of a God, but denies that He has revealed Himself to the world. It is opposed to atheism, which declares God non-existent, and to theism, which recognizes a God who reveals Himself in active relation with His creatures.

Lord Herbert of Cherbury (1583-1648) is often called the Father of Deism. His five points were (1) a supreme Being exists; (2) He is the object of worship; (3) the chief elements of that worship are virtue and piety; (4) sin calls for repentance and amendment; and (5) a system of rewards and punishments exists both in this world and the next.

DEKKER, THOMAS (c. 1570-1641). English dramatist and poet. Of his plays, remarkable for their deft delineation of female character, the most notable are *The Shoemaker's Holiday*, 1600; *Satiromastix* (a reply to Jonson's *Poetaster*), 1602; *Patient Grissil* (with Houghton and Chettle), 1603; *The Virgin Martyr* (with Massinger), 1622; and *The Witch of Edmonton* (with Ford and Rowley), 1658. His prose works include *The Wonderful Year* (depicting London under the Plague), 1603; and *The Gull's Hornbook* (a satirical guide to the city gallant), 1609.

DELAUROIX, FERDINAND VICTOR EUGÈNE (1798-1863). French painter. Born April 26, 1798, he became leader of the Romanticists in their revolt against the pseudo-classic school. The Massacre of the Bishop of Liège, 1831, is esteemed his finest work. He was elected to the Academy in 1857, and died in Paris, Aug. 13, 1863.

DELAGOA BAY. Inlet of the Indian Ocean in Portuguese East Africa, one of the finest natural harbours in the world. The outer bay is separated from the inner harbour by a bar about half a mile broad. Beyond this inner anchorage lies Lourenço Marques.

The position of Delagoa Bay is of strategic and commercial importance. It forms the natural outlet for a large portion of the Transvaal. It was awarded to Portugal in 1875. The first European settlement on the bay had been made by the Portuguese, but was abandoned early in the 18th century.

DELANE, JOHN THADEUS (1817-79). British journalist. Second son of William F. A. Delane, barrister, of Irish descent, he was born in London, Oct. 11, 1817.

He joined the staff of *The Times* in July, 1840, one of his duties being the summarising of speeches in Parliament. He was called to the bar in 1840, and on the death of Thomas Barnes in 1841 succeeded him in the editorship, which he held until Nov. 8, 1877. He died Nov. 22, 1879.

Under Delane *The Times* became easily the chief organ of the British press. Delane himself wrote little, but he inspired his staff in a remarkable manner. Consult *Life*, E. T. Cook, 1915.

DELAREY, JACOBUS HERKLAAS (1848-1915). Boer soldier. Descended from a Huguenot settler, as a young man he served against the Kaffirs. Under Cronje in the Boer War he had a large share in checking the British advance at Belmont, the Modder, and Magersfontein, and took part in the peace negotiations at Vereeniging. When the Trans-

vaal obtained a legislative assembly in 1907 Delarey was chosen a member, but he refused a post in the Government. When the S. African rebellion broke out in 1915 his name was associated with the rising, but he had taken no definite step when he was accidentally shot, Sept. 15, 1915.

DELAROCHE, HIPPOLYTE, called PAUL (1797-1856). French painter. Born in Paris, July 17, 1797, he developed historical painting in the classic-romantic style, becoming immensely popular. His biggest achievement is the "Hemicycle" decoration of the amphitheatre of the Ecole des Beaux Arts, 1841. Many of his numerous historical and anecdotal paintings are well known through engravings. He died in Paris, Nov. 4, 1856.

DELAWARE. State of the U.S.A., one of the thirteen original states. Its area is 2,370 sq. m. The surface is mainly flat, hills occurring only in the N.; along the bay coast the land is frequently marshy, and swamps are found in the S. The Delaware, entering the Atlantic through Delaware Bay, is the chief river. A canal connects Delaware and Chesapeake Bays. Dover is the capital. Dutch and Swedes first settled here in the first half of the 17th century. Pop. 244,000.

The Delaware Indians are a N. American Indian tribe related to the Algonquins. They are now mostly living in reservations in Oklahoma, and have largely lost their distinctive characteristics.

DE LA WARR OR DELAWARE. English barony. Roger de la Warr, a Sussex landholder, was summoned to Parliament as a baron in 1299. Thomas West, the 12th baron (1577-1618) was the first governor of Virginia and practically the founder of that colony. The state and river of Delaware are named after him. In 1761, John, the 16th baron (1693-1766) was made earl de la Warr, and the title is still held by his descendants. The 5th earl, having married the heiress of the 4th duke of Dorset, took the additional name of Sackville. In 1915 Herbrand Edward (b. 1900) became the 9th earl.

DELCASSÉ, THÉOPHILE (1852-1923). French statesman. Born at Pamiers, Mar. 1, 1852, he was elected deputy for Foix in 1889. He became under-secretary for the colonies in 1893, and colonial minister 1894-95.

In 1898 Delcassé was appointed foreign minister, a position which he held through many crises, including the Fashoda incident and the South African War, the controversy over the Dreyfus case, the campaign against Loubet, and the prolonged struggle of church and state. Transferred to the admiralty, he did much from 1905 to 1913 to make the French navy an efficient fighting force. He helped to bring about the Anglo-French entente, as well as the alliance with Russia, and was ambassador to St. Petersburg, 1913-14. On the outbreak of the Great War he returned to the foreign office, where he remained until Oct., 1915. He died Feb. 21, 1923.

DELESSITE. Dark green earthy mineral. A variety of the silicate of alumina called chlorite, with more iron, it lines cavities and seams in igneous rocks. The cavities are sometimes filled in with chalcedony; when delessite forms dendritic markings thereon, moss-agate results. See Chlorite.

DELFT. Town of Holland. It stands on the Schie, 5 m. from The Hague, in the prov. of S. Holland. The old church, dating, in its present form, from the 15th century, is famous for its monuments. The new church, a Gothic 15th century building dedicated to S. Ursula, was the burial place of the House of Orange, and has a magnificent monument to William the Silent. Modern buildings include a Roman

Catholic church, the polytechnic, and the hospital. The house in which William the Silent was murdered is now the William of Orange Museum. Steam tramways connect with The Hague, and steamers go to Rotterdam. Agneta Park, an attractive industrial quarter, is a notable feature of Delft. The town dates from the 12th century. Pop. 49,407.

DELFT WARE. This choice variety of faience was first made at Delft about 1600, in imitation of the Japanese china imported by the Dutch merchants. Early Delft was decorated in blue, with scenery and crowded figure paintings set off by elaborate borders. Polychrome and gilding came later. Dinner services, large dishes, pots and plaques were among the articles made.

DELHI. Capital of India since 1911. It stands on the right bank of the Jumna, and is an important railway centre, 956 m. from Calcutta.

The main thoroughfare of the old city is the Chandni Chauk, or Silver Street, which runs

Delhi. Main entrance, surmounted by a copper dome, of the Viceroy's House in New Delhi, opened in 1923
"The Times" copyright

E. and W. from the Fort and Palace to the Fatehpuri Mosque, near the Lahore Gate. The Mogul Palace, now known as the Fort, was built by Shah Jehan. The entrance to the Fort by the Lahore Gate is under a vaulted arcade, which has been described as "the noblest entrance known to belong to any palace." To the N.E. of the Fort lies the outwork of Salimgarh, built by Salim Shah in 1546. S.W. of the Fort is the Jama Mosque. Other notable buildings are the Kali Mosque, the Sunahri Mosque of Roshan-ud-Daulah, and the Jain Temple, N.W. of the Jama Mosque. Among modern buildings are the town hall, the former Residency, S. James's Church, and the Northbrook clock tower. The university was founded in 1922.

As an industrial centre Delhi is of considerable prominence. Its native craftsmen are famous for their jewelry, ivory carving, silver, brass and copper work, pottery, cotton spinning, and weaving and embroidery.

The city was built by Shah Jehan in the 17th century, on the site of older ones, and passed under British control in 1803. In 1877 Victoria was proclaimed empress of India at Delhi, and in 1903 Edward VII was likewise proclaimed. On Dec. 12, 1911, George V held a coronation durbar at Delhi, when the transfer of the capital of India from Calcutta was announced. Pop. 304,500.

THE NEW DELHI. New Delhi lies some 5 m. S.W. of the old city. Avenues bearing historic names converge on its focal point, on Raisina Hill. North and south of this point stand the massive twin blocks of the secretariats, enclosing Government Court. To the W. is a raised platform called Viceroy's Court, at the W. end of which is the Viceroy's House, with its copper dome rising 177 ft. above the main entrance. The Durbar Hall of the Viceroy's House consists of a circular marble court, 75 ft. in diameter, supported by clusters of amber

pillars. To the E. of the secretariats is the Great Place, and farther E. is a park known as the Central Vista. The Council of State, Chamber of Princes, and Legislative Assembly are housed in a huge circular building to the

Delhi. Plan of the capital of India and its environs

N. of Kingsway, at the E. end of which is the Memorial Arch. The King Edward VII Memorial statue was unveiled in 1922. See India.

DELLAH. Woman bribed by the lords of the Philistines to entice from Samson the secret of his strength (Judges 16, Ant. of the Jews, Josephus, 5). Described as of the valley of Sorek, she is thought to have been a Philistine. See Samson.

DELIRIUM (Lat. *de*, from, off; *lim*, furrow, track). Condition of mental disorder usually accompanied by hallucinations and delusions. Low muttering delirium is often seen in states of exhaustion following high fever or acute illness. Active delirium may follow severe injuries, particularly when they have led to septic wounds. Acute noisy delirium may

Delhi. 1. Lahore Gate, entrance to the former Mogul Palace. 2. The Council House, New Delhi; the three chambers are connected by a central domed library. 3. Jama Masjid, or Great Mosque

be associated with other indications of insanity, or may be the result of poisoning. The most frequent form leads to delirium tremens. During an acute attack sedative drugs such as chloral and bromide of potassium may be given. Care must be taken to prevent the patient from injuring himself.

DELIUS, FREDERICK (b. 1862). British composer. Born in Bradford, Yorkshire, of German parentage, he studied music in Leipzig. His works include the operas *Koanga* and *A Village Romeo and Juliet*; a requiem and numerous other works for chorus and orchestra; concertos for piano, for violin and for 'cello, and a notable string quartet. In 1929 he was made a Companion of Honour and six Festival Concerts, at which his music was performed, were held in the Queen's Hall, London.

DELIVERY (*de*, from; *liber*, free). In law, a necessary part of a contract. The goods or property transferred must be delivered, and English law contains elaborate provisions as to what constitutes delivery. In early legal systems delivery was often effected by a symbol, and there are vestiges of this custom to-day. See Contract.

DELLA ROBBIA, LUCA (1399-1482). Florentine sculptor. He was born in Florence, and was probably a pupil of Lorenzo Ghiberti. His finest achievement was the marble reliefs of the Cantoria or Singing Gallery executed for the cathedral of Florence, 1431-40, part of which is still preserved in the Museo del Duomo, and he was associated with Donatello in other work for the cathedral. Sculpture in enamelled terra-

cotta was brought to a high state of perfection by him. Typical Della Robbia ware has a blue background; the designs are classic in

style, finely and boldly modelled. Luca died in Florence, Feb. 20, 1482.

His nephew, Andrea della Robbia (1435-

1523), executed some remarkable reliefs. (See illus. p. 187.) Andrea had seven sons, of whom five followed his calling.

DELORME, MARION (1613-50). French courtesan. She was born at Blois, Oct. 3, 1613, and at an early age went to Paris. There she became as famous for her beauty as notorious for the succession of celebrated men who were her lovers, including Richelieu and the duke of Buckingham. She took part in political intrigues, and died suddenly, July 2, 1650. Long afterwards it was said that she had escaped to England, married, and returned to Paris.

Frederick Delius, British composer Elliott & Fry

DELOS. Smallest of the Cyclades Islands (q.v.). According to legend it came into being from a blow of Poseidon's trident, whence the name Delos (visible). Originally a floating island, it was fastened by Zeus with chains to receive Leto (Latona), who there gave birth to Apollo and Artemis. It was the seat of a temple and oracle of Apollo, in whose honour the Delian games were held. After a long period of independence (322-161 B.C.), Delos was placed under the control of Athens.

DELPHI. Town of ancient Greece, on the S. slope of Mt. Parnassus, famous for its oracle of Apollo. The inhabitants were Dorians. The principal seat of the worship of Apollo, Delphi was also associated with that of Dionysus, and it was the scene of the Pythian games. The temple of Apollo was used as a safe deposit for their treasures by many Greek states. The oracular responses were given by a priestess, the Pythia, who sat on a tripod in the temple over a chasm, whence a vapour arose from the river Cassotis below. This vapour was supposed to give inspiration. The oracle was noted for ambiguity. Excavations have revealed the temple site.

Delphinium exaltatum, or giant larkspur

DELPHINIUM OR LARKSPUR. Genus of plants of the order Ranunculaceae, natives of Britain, N. America, and S.E. Europe.

Hardy annuals and perennials, from 1 ft. to 6 ft. in height, with blue, white, or pink flowers, they thrive in any ordinary garden soil. The common European species (*D. ajacis*), to which the name larkspur properly belongs, is an annual. The magnificent garden plants, six feet high, are mostly varieties or hybrids of *D. exaltatum*, a N. American perennial.

DELPHINUS. One of the Ptolemaic constellations. Its first star lies near Pegasus, and the constellation is easily picked out, for its leading four stars, alpha, beta, gamma, and delta, form a lozenge with stars of almost equal brilliance. See Constellation

DELTA. Physical formation occurring at the mouth of certain rivers. When a slow-moving stream, heavily loaded with silt, flows into comparatively still water, the load is deposited more or less evenly to form a flood plain of alluvium just below the level of the water, with a steep, abrupt slope at the seaward edge.

The term delta originates from the shape of the Nile formation like the Greek letter Δ , but it now includes any formation where the river branches into a number of distributaries. The Mississippi delta advances a mile in 15 years, and its area is 12,000 sq. m.

DELTA METAL. Important alloy of copper and zinc, chiefly with small proportions of iron and possibly other metals—phosphorus, manganese, silicon. Technically it is brass, though often described as a bronze. It is made in various qualities, and can be given great tensile strength with great elongation. As it may be made almost incorrodible, it is a valuable metal in engineering.

DELTOID MUSCLE (Gr. *deltoidēs*, delta-shaped). Triangular muscle which covers the point of the shoulder. It is attached above to the collar-bone and to the shoulder-blade, and below to the upper arm bone. Its chief action is to abduct the arm, i.e. raise it outwards from the body.

DELUGE (Lat. *diluvium*, washing away). The O.T. tells of a great flood which swept away all mankind with the exception of Noah and his family (Gen. 6). Noah was saved in an ark, which, on the waters subsiding, rested on the mountains of Ararat (Armenia). To ascertain whether the ground was dry, Noah sent out first a raven and then a dove. The raven did not come back, but the dove returned twice, bringing the second time the leaf of an olive tree.

A strikingly similar story is found in Babylonian literature in the Gilgamesh Epic (c. 3000 B.C.). Traditional tales of a primeval flood, local or general, more or less parallel with the Noah story, are found among peoples in every grade of culture. See Noah.

DELVILLE WOOD. Wood of France, in the dept. of Somme. It lies 10 m. E. by N. of Albert, and is some acres in extent. It was taken from the Germans by a S. African brigade, July 15, 1916, and remained in Allied occupation until its recapture in March, 1918. It was finally retaken by the British, Aug. 27, 1918. The Government of S. Africa purchased the wood from the French Government in July, 1920, for the erection there of a War Memorial. See Somme.

DEMENTIA (Lat. *demens*, out of one's mind). Condition of weak-mindedness or mental degeneration, which may develop from other forms of insanity, or may be the result of physiological decay of the mind in old age. Mania, melancholia, general paralysis, epilepsy, chronic alcoholism, and injury to the brain following fracture of the skull, or apoplexy, may all terminate in dementia. In acute cases, treatment is of little avail. See Insanity.

DEMERARA. River and settlement of British Guiana. The river enters the Atlantic at Georgetown; its length is about 200 m. The settlement lies mostly between the rivers Demerara and Berbice, and fronts the sea for some 65 m. It was originally a Dutch colony. The brown sugar known as demerara was first produced in this colony. Georgetown is sometimes called Demerara.

DEMETER. In Greek mythology, goddess of agriculture, whose Roman counterpart was Ceres. She was the daughter of Cronos and Rhea, and by Zeus became the mother of Persephone (Proserpine), who was carried off by Pluto, the god of the underworld. Demeter set out to look for her daughter, and refused to allow the earth to produce any of its fruits until her daughter was restored to her. Eventually Persephone was allowed to spend six

Demeter, goddess of agriculture
Vatican Museum, Rome

months of the year with her mother.

The story is an allegory of the process of agriculture, Persephone being the seed which remains buried for part of the year. When she returns she is the corn rising from the earth.

DEMISEMIQUAVER. In music, a small note, equal in time-value to half of half a quaver. Its form is that of a quaver with three black strokes on the stem, F . Like quavers, demisequavers may be grouped thus with continuous strokes:—

DEMOCRAT. One of the two fully organized political parties of the U.S.A. It was almost continuously in office from 1801, when Jefferson was elected president, until the Civil War, 1861, but has secured only four presidential terms of office since then—Cleveland 1884 and 1892, and Woodrow Wilson 1912 and 1916. Its candidates for the elections of 1920, 1924, and 1928 were defeated by unprecedented majorities.

DEMOCRITUS (c. 460-357 B.C.). Greek philosopher. Born at Abdera in Thrace, he expounded the atomic theory of the universe

Democritus, Greek philosopher and physicist
Capitol Museum, Rome

revived by modern scientists. The atoms conceived by Democritus differed in size, weight, shape, position, and arrangement. Falling together by force of gravity, impinging one upon another, and flying off in various directions as a result of impact, these produced a rotatory movement. Gradually they found their proper combinations, and the universe was formed. Democritus was known as the laughing philosopher by reason of his optimistic outlook.

DEMONOLOGY (Gr. *daimon*, spirit; *logos*, science). Branch of the study of religion, concerned with supernatural beings, below

the rank of gods, which are regarded as capable of influencing human life. In some phases of primitive culture the physical universe was deemed to be pervaded by such beings. They included the spirits of wind, fire, and water, and legions of others. In process of time the friendly were held to be innately benignant, and the hostile innately malignant. The attribution of many mental and bodily ailments to the objective presence of intrusive demons is widespread in primitive thought.

William De Morgan,
British novelist
Russell

DE MORGAN, WILLIAM FRENCH (1839-1917). British novelist. Born in London, Nov. 16, 1839, he studied at the Royal Academy, afterwards devoting himself to working in pottery and glass. It was not until he reached his 66th year that his first novel, *Joseph Vane*, appeared. It achieved immediate success, and was followed by *Alice for Short*, 1907; *Somehow Good*, 1908; *It Never Can Happen Again*, 1909; *An Affair of Dishonour*, 1910; *A Likely Story*, 1911; *When Ghost Meets Ghost*, 1913; and the unfinished *The Old Madhouse*, published posthumously. William De Morgan died Jan. 13, 1917.

His father, Augustus De Morgan (1806-71), was first professor of mathematics at the newly founded University of London, 1828-66.

DEMOSTHENES (c. 383-322 B.C.). Athenian orator and statesman. Left an orphan at an early age, he studied law and, in spite of natural disabilities, devoted his energies to becoming a good public speaker. By 355 B.C. he had amassed a competence and was free to devote himself to politics. The great ideal of his life was the regeneration of Athens as leader of the Hellenic world, and from 351 onwards Demosthenes delivered a series of masterly speeches of which the most notable are the *Olynthics* and the *Philippics*, in which he vainly endeavoured to awaken his countrymen to the menace of Philip of Macedon. To late the Athenians listened to his pleadings, and the defeat of Athens

and Thes at Chaeronea in 338 was the death-blow of Greek independence. In 336 B.C. Ctesiphon proposed that a golden crown be given to Demosthenes for his public services, the ensuing litigation evoking his oratorical masterpiece. (See *Aeschines*.) Accused in 324 of taking a bribe, Demosthenes was condemned and imprisoned. Escaping, he lived abroad, until the death of Alexander in 323 emboldened the Greeks to make a bid for independence. Demosthenes headed the movement, but Greek hopes were finally shattered at the battle of Crannon in 322, and to avoid falling into the hands of the Macedonians, Demosthenes committed suicide. Another Demosthenes was an Athenian general in the Peloponnesian war.

Demosthenes, Greek orator and statesman
Statue in the Vatican, Rome

DEMOTIC (Gr. *helonging to the people*). Cursive script employed for general purposes in ancient Egypt. It was an abbreviated and

modified form of the hieratic or priestly script, usually written from right to left, mostly in black. Well established by 700 B.C., it finally disappeared soon after the 4th century A.D.

DEMPESEY, JACK (b. 1895). Irish-American boxer. Until 1919 almost unknown, he became the world's heavy-weight champion by beating Jess Willard at Toledo, July 4. He then challenged Georges Carpentier, and a fight between them took place on July 2, 1921, at Jersey City, when Dempsey retained the championship. He was defeated by Gene Tunney (q.v.) on Sept. 23, 1926.

DEMULCENT (Lat. *demulcere*, to soften). Drug used to protect and soothe parts of the body. The principal demulcents are gelatin, glycerine, gum, honey, starch, and white of egg.

DEMY. Size of paper or of bound books. A demy sheet of printing paper measures 22½ ins. by 17½ ins.; of writing or drawing paper, 20 ins. by 15½ ins. Books are sized approximately as follows: Demy folio, 17½ ins. by 11½ ins.; demy quarto or 4to, 11½ ins. by 8½ ins.; demy octavo or 8vo, 8½ ins. by 5½ ins.; demy 16mo, 5½ ins. by 4½ ins.

DENARIUS (Lat. *deni*, ten each). Chief silver coin of ancient Rome. It was equivalent to 10, afterwards to 16, copper asses. About the beginning of the Christian era it was worth about 8d. in English money. It is the "penny" of the New Testament (in the American R. V. "shilling")

DENBIGH. Borough and county and market town of Denbighshire. It is 29 m.W. of Chester on the L.M.S. Rly. On an eminence in the Vale of Clwyd, Denbigh is a centre for trade in timber, poultry, and dairy produce, and near are slate and lime quarries. Here are the N. Wales mental institution, grammar and Blue Coat schools, and the ruins of a Carmelite priory. In Denbigh Castle Charles I sought asylum in 1645. Market days, Wed. and Sat. Pop. 6,783.

EARL OF DENBIGH. This title has been held since 1622 by the family of Feilding. In 1694 it was inherited by the earl of Desmond, and

DENBIGHSHIRE. County of Wales. It has about 10 m. of coast on the Irish sea. Mountains occur in the S., the E. is hilly, and towards the N. the surface becomes flat. The valleys of the Clwyd, Conway, and Dee (Vale of Llangollen) are noted for their scenery. Oats, barley, wheat, and rye are cultivated, dairy farming and pony and sheep rearing are important industries, and coal, lead, zinc, and fireclay are among the mineral products. The G.W.R. and L.M.S. Rly. serve the county. Denbigh is the county town. Colwyn Bay is a holiday resort. Two members are returned to Parliament. Area 665 sq. m. Pop 154,847

The geological formations known as the Denbighshire Series consist of grits and flags in the middle division of the upper Silurian system. They extend from Conway through Pentre Voelas to a point midway between Rhayader and New Radnor. In the N.W. graptolites and other fossils abound.

DENDERA, DANDARA, TENTERIS or Tentyra. Village near the left bank of the Nile, between Kena (Qena) and Luxor. It is celebrated for its temple to the goddess Hathor, the Greek Aphrodite, begun by Ptolemy XIII, father of the great Cleopatra. It is composed of two rectangles, the first with a façade with six sculptured columns, the second containing the sanctuary. There are numerous passages and treasure-hiding places, and the walls bear inscriptions. A small building on the roof was used for the worship of Osiris. Close by is a small temple of Isis, built under the emperor Augustus, and in the neighbourhood is a cemetery, with tombs from the IVth to the XIIIth dynasties. Consult Denderah, Sir W. M. Flinders Petrie, 1900. See illus. p. 419.

DENDRITE or DENDRITIC MARKING (Gr. of or like a tree). Stone or mineral in or on which appear markings of an arborescent form. They occur in the joints or cleavage planes of close-grained rocks such as limestone, and are usually dark earthy oxides of manganese or iron. When they penetrate the matrix they give rise to mocha stone. When the green earth called delessite acts in this way, moss-agate results.

DENE. Name given to a deep, wooded dell or valley. It is common in English place-names, e.g. Tenterden, Marden, Rolvenden, and Biddenden, all in Kent.

Dene Hole (A.S. valley-hole) is the name given to certain ancient excavations, chiefly in Essex, Kent, and the Somme valley. There are 72 within four acres near Grays, Essex. A round shaft, 3 ft. across, was sunk through gravel, sometimes for 60 ft., until chalk was reached. A bell-shaped chamber, 16-22 ft. high, sometimes with trefoil branches, was then formed. The most reasonable theory is that they were chalk quarries, as mentioned by Pliny, or store chambers.

DENGUE, DANDY FEVER or BREAKBONE FEVER. Acute disease of tropical and sub-tropical countries. It appears to be conveyed by mosquitoes, and spreads very rapidly. The symptoms are those of high fever, with usually a rash on the skin, sore throat, headache, severe pain in the muscles, and pain and swelling of the joints. After three or four days the temperature falls and

the patient improves. After another interval the symptoms return and then gradually abate. Pron. Denggay.

DENIKIN, ANTON IVANOVITCH (b. 1872). Russian soldier. Born Dec. 4, 1872, he served in the Russo-Japanese War. He came into prominence in Sept., 1917, when Kerensky made him commander of an army. After the changes of Nov., 1917, he withdrew to Rostov-on-the-Don and took part in the formation of a volunteer army, and in 1919, at the head of this, cooperated with Koltchak against the Bolsheviks. At first he had remarkable success, but early in 1920

his armies collapsed, and in April Denikin went to England.

DENIS, DENYS or DIONYSIUS (d. c. 275). Patron saint of France. He was born in Italy, became bishop of Paris, and built a church on an island in the Seine. He was beheaded with two companions by the Roman governor, about A.D. 275. Four hundred years later a church and an abbey were erected on the site of his martyrdom. His festival is kept on Oct. 9.

Dendera. Isolated pylon of the Temple of Hathor. Behind is the Great Vestibule of the building

DENMAN, THOMAS DENMAN, 1ST BARON (1779-1854). British judge. Born in London, Feb. 23, 1779, he became a barrister in 1806. With Brougham he defended Queen Caroline in 1820. He became lord chief justice in 1832, and was made a peer in 1834. He died Sept. 22, 1854. His great-grandson, the 3rd Lord Denman (b. 1874), was governor-general of Australia, 1911-14.

DENMARK. Country of N. Europe. It comprises the peninsula of Jutland (Danish Jylland), including N. Slesvig (S. Jutland Provinces); an archipelago of which the most important islands are Zealand (Sjælland), Fünen, Langeland, Laaland, Falster, Moen; and the outlying island of Bornholm in the Baltic. Copenhagen is the capital, other important towns including Aarhus, Odense, Aalborg, Horsens, and Randers. Its area is 16,568 sq. m. Pop. 3,434,555.

Denmark is a low-lying level country with little diversity of physical features except in the rocky island of Bornholm. About one-fifth of the country is peat bog, moorland and sandy waste. The W. coast of Jutland is low, unindented, and fringed with sand dunes.

Denmark. Types of country dwellers in national holiday attire

of the country is peat bog, moorland and sandy waste. The W. coast of Jutland is low, unindented, and fringed with sand dunes.

Denbighshire. Map of this maritime county of North Wales

since then the two earldoms have been borne by the same person. The earl's eldest son is called Viscount Feilding.

The state is a limited monarchy, the king and his responsible ministers having the executive power. The Rigsdag or diet embraces two houses, the Folketing or lower house, and the Landsting or senate. The Stratsradet or Cabinet consists of eleven ministers individually and collectively responsible to the Folketing. Military service is compulsory for all males from the age of 20 until 36.

Agriculture is the principal activity. The crops include oats, barley, rye, a little wheat, potatoes, beet-roots, hay, pasture grass, and lucerne. Dairy farming and pig breeding are important occupations. The system of small holdings has done much to foster intensive agriculture. The only colonial possession of Denmark is Greenland. The Faroe islands (Faeroes) are governed as part of the home country, and Iceland is now virtually independent.

In the course of its history Denmark has at various times been intimately associated with Norway and Sweden. It was permanently separated from Sweden in 1523, but it was not deprived of Norway until 1815. Christian I of Oldenburg acquired the succession to Slesvig-Holstein, which remained with the Oldenburg dynasty until the death of Frederick VII in 1863, and the passing of the crown to Christian IX of Glücksburg. Austria and Prussia in 1864 enforced the separation of the duchies from the sovereignty of the new royal house of Denmark. Denmark remained neutral during the Great War, and North Slesvig was officially reunited to the country in July, 1920, as the result of a plebiscite of the inhabitants. Denmark is a member of the League of Nations.

Since the Great War, socialism has made great progress. In 1920 the king, Christian X, by dismissing the government, brought about a political crisis, which, however, was composed. In 1924, after an election, a socialist ministry came into power, and the socialists were still the strongest party in 1930.

DENMARK HILL. London suburb at the extreme W. of the borough of Camberwell. Ruskin and Sir Henry Bessemer, who lived in the mansion now known as Bessemer House, were born here. King's College Hospital was removed here in 1913 from Portugal Street, Lincoln's Inn Fields.

DENSITY (Lat. densus, thick). Amount of matter in a given volume of a substance. Absolute density is the amount of matter in unit volume of a substance; relative density or specific gravity (q.v.) is the ratio of the mass of a given volume of a substance to the mass of the same volume of another substance usually taken as a standard.

DENSTONE. Village of Staffordshire. Near the Uttoxeter Canal, 5½ m. N. of Uttoxeter, it is a station on the L.M.S. Rly. Denstone College was opened in 1873 and has accommodation for about 350 boys. Pop. 857.

DENTIST. Practitioner of the branch of surgery which deals with the conservation and extraction of teeth and the adaptation of artificial teeth. By the Dentists Act, 1878, the titles dentist or dental practitioner were reserved to persons whose names appear on the Dentists' Register, instituted by the Act. In 1921 an Act of Parliament made it necessary for dentists to pass through a course of training before they can be registered. This

training can be obtained at a university or college, or by apprenticeship to a registered dentist. Entrance to the profession is controlled by the General Medical Council, in

It is the centre for the distribution of livestock from the Rockies, and the headquarters for the gold, silver, and coal-mining districts of the state. Pop. 280,911.

DEODAR (Cedrus deodara). Evergreen tree of the order Coniferae, a native of the W. Himalayas. Similar in most points to the cedar of Lebanon, it differs in its more pyramidal outline, in its longer leaves, and the more pendulous habits of its leading shoots and branchlets. It attains a height of from 150 ft. to 200 ft. See illus. below.

DEPARTMENT. Word used in France for the areas in which the country has been divided since the Revolution. There are now 90. Three departments were created when Savoy and Nice were annexed in 1860. Most departments are named after their chief river or rivers, e.g. Seine, Loire, Eure et Loir, and a few after some other physical feature, e.g. Côtes du Nord. Each department is governed by a prefect, assisted by a council. See France.

DEPEW, CHAUNCEY MITCHELL (1834-1928). American lawyer and orator. Born at Peekskill, N.Y., April 23, 1834, he was called to the N.Y. bar, 1858. Member of state assembly, 1861-62, he was secretary of state of N.Y., 1863-65, and from 1866-98 attorney to numerous rlys. From 1898 he was chairman of the whole Vanderbilt system. From 1899-1911 he represented N.Y. in the Senate. He was the chosen orator on many national occasions. He died April 4, 1928.

Chauncey Depew, American lawyer
Elliott & Fry

connexion with which is a Dental Board, 44, Hallam St., London, W.1.

The practice of dentistry is of extremely ancient origin, references to medical treatment of the teeth being found in Egyptian papyri of 4700-1000 B.C. Similar knowledge was possessed by the Greeks, and the Romans practised dentistry extensively. Modern scientific dentistry is based largely upon the work of John Hunter (1728-93).

DENTITION. Arrangement of the teeth in animals. Teeth are present in almost all the divisions of the vertebrates, from the fishes upwards, with the exception of the birds. The invertebrates have no true teeth, the notched jaw processes in some arthropods, which serve the purpose of dividing or grinding food, being structurally quite different. The total number of teeth possible in most mammals is 44, 11 on either side in each jaw, consisting of three incisors, one canine, four premolars, and three molars.

DENTON. Urban dist. and market town of Lancashire. It is 7½ m. S.E. of Manchester, on the L.M.S. Rly. Coal-mining and felt hat making are the chief industries. Two reservoirs form part of Manchester's water supply. Market day, Sat. Pop. 17,150.

DENVER. Capital of Colorado, U.S.A. It stands on the S. Platte river, 14 m. E. of the base of the Rocky Mts. An important rly. and industrial centre, the town is well laid out and contains many handsome buildings, including the Roman Catholic cathedral, the State Capitol, university with medical school, high school, post office, and public library. A chain of mt. parks covers over 10 sq. m. There are several sanatoria near, much frequented by those suffering from chest ailments.

DEPILATORY (Lat. depilare, to pull out hair). Preparation for removing hair in abnormal situations. No drug will destroy hair alone without affecting the skin, and some of the more active preparations may do serious harm, and even result in a more vigorous growth of the hair. One method of destroying superfluous hair is by electric current.

DEPOLARISER.

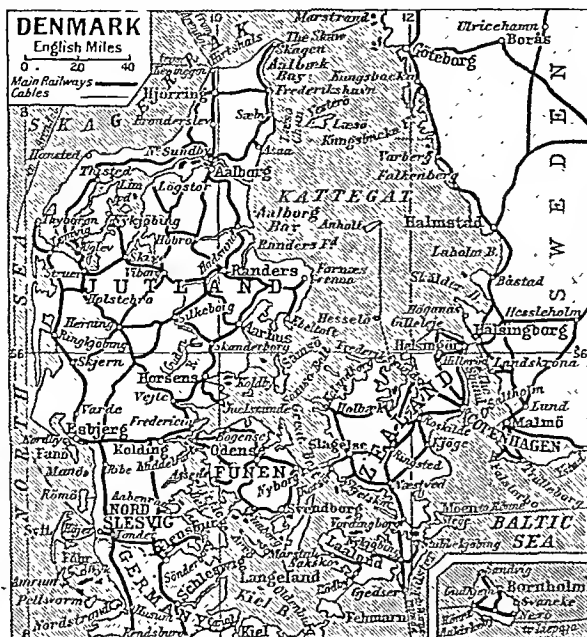

Material added to the solution in a voltaic cell to counteract the effect of polarisation, i.e. of counter-electromotive force due to the accumulation of hydrogen on the negative plates and to other causes. The material consists of an oxidising solution or a solid. Powdered manganese dioxide is used as a rulo for the Leclanché cell.

DEPORTATION

(Lat. de, from; portare, to carry). Term meaning to remove anyone forcibly from a country, used mainly in connexion with aliens (q.v.). On the recommendation of a magistrate or judge an order for deportation is made by the Home Office.

DEPOSIT (Lat. depositum, something put down). In English law, one of the forms of bailment. It arises where goods are deposited with a bailee to be kept for the bailor without payment. Deposit is also used to mean a sum of money paid to a person as security that a contract shall be carried out.

DEPOT (Fr. dépôt). Building or site where the supplies of food, medical stores, ammunition, horses, or vehicles are stored for military purposes, e.g. Supply Depot, Ordnance Depot, Remount Depot. The term is also applied to the barracks where recruits receive their first

Denmark. Map of the kingdom as it was restored after the Great War

Deodar. Example of Cedrus deodara of the Himalayas. See article above

training, where soldiers take their discharges, and where reservists join on mobilisation.

A depot ship is a vessel set apart to attend upon a destroyer flotilla or submarine flotilla; or a ship from which the crews of other vessels are drafted. Sometimes the depot ship is merely a floating barracks.

DEPRETIS, AGOSTINO (1813-87). Italian statesman. Born Jan. 31, 1813, as a young man he fell under the influence of Mazzini. He was sent by Cavour in 1860 to Sicily to counteract the extremist policy of Garibaldi, and entered the Government in 1862 as minister of public works. Leader of the Left in 1873, he became prime minister in 1876, and, with an interval of thirty months, directed the entire policy of Italy until his death, July 29, 1887.

DE PROFUNDIS (Lat. out of the depths). Opening words of Psalm 130. One of the 15 gradual psalms, or "songs of degrees," of the Jewish pilgrims to Jerusalem, it was from the earliest times a penitential psalm throughout the Christian Church.

DEPTFORD. One of the London metropolitan boroughs. It is on the W. side of Greenwich, with which it is closely associated, the older part of Deptford being in Greenwich. New Cross and part of Brockley are within the borough. Formerly it had a dockyard, where Raleigh docked his Golden Hind and Peter the Great studied navigation; and here was Sayes Court, for some time the home of Evelyn, the diarist. Among places of interest are the Royal Army Victualling Yard, the Goldsmiths' College, now part of the university of London, the Haberdashers' Girls' School, and St. Nicholas' Church, where Marlowe, the poet, was buried. There is also a handsome town hall. Pop. 115,700.

DEPTH CHARGE. Weapon used in naval warfare for attacking submerged submarines, the principle being to detonate a large charge of explosive some distance below the surface in order to destroy or disable the enemy. As evolved by the British Admiralty, it consisted of a thin-walled cylindrical container, filled with explosive and provided with a central tube which contained the priming and the firing mechanism. The firing mechanism was actuated by the pressure of the water, a diaphragm giving way at a pre-determined depth and so releasing a spring, which drove a nail into the detonator.

DEPUTY (Lat. depute, to prune, late Lat. to select). Strictly speaking, an authorised agent. A general deputy is empowered to perform the whole of another's office; a special deputy, a particular part. In the United Kingdom recorders, county court judges, and registrars, returning officers, and some other public officials are allowed to appoint deputies. The word is also used of a member of a representative assembly, e.g. the French chamber of deputies. In the City of London each alderman has a deputy.

DE QUINCEY, THOMAS (1786-1859). British author. Born at Manchester, Aug. 15, 1785, in 1801 he ran away from home, eventually reaching London. Reconciled to his relatives in 1803, he spent four years at Oxford, but left the university without taking a degree. Profoundly influenced by Coleridge and Wordsworth, he became an intimate member of the Lake school. For nearly 20 years from 1809, when Wordsworth left it, he made Do. Cottage, Grasmere, his headquarters. In 1811 he married Margaret Simpson, daughter of a physician, by whom he had three daughters and four sons. He died in Edinburgh, Dec. 8, 1859.

Thomas De Quincey.
British author

The fame of De Quincey rests largely upon The Confessions of an English Opium-Eater, which first appeared in The London Magazine in 1821 and was reproduced in volume form, 1822, and almost re-written in 1858. To Blackwood's, Feb., 1827, he contributed the essay On Murder Considered as One of the Fine Arts, to which in 1854 was added a notable postscript. His critical faculty is displayed to advantage in the essay on The Knocking at the Door in Macbeth.

DERATING. Term used for the changes in local rating made by the Local Government Act of 1929. By it agricultural land was relieved entirely from rates from April 1, 1929, and industrial and transport premises of three-quarters of their rates from Oct. 1, 1929. The loss of revenue to the county borough and other councils is made good by Government grants.

DERBY. City and county town of Derbyshire. It stands on the W. side of the Derwent, 129 m. by rly. N.W. of London, and is served by the L.N.E., L.M.S. and G.W. Rlys.

The chief churches are the cathedral of All Saints, with a magnificent tower, S. Peter's, S. Alkmund's, S. Werburgh's, S. Andrew's (by Sir Gilbert Scott), and the Roman Catholic church of S. Mary Magdalen.

The grammar school is one of the oldest in England. There are technical schools and a school of art. The art gallery has a fine collection of old Derby ware. The few old buildings include a 14th century chapel on St. Mary's Bridge. In the Arboretum grounds is the Headless Cross, a memorial of the plague of 1665. Industries include the manufacture of silk, lace, net, and hosiery; also engineering works. In 1715 the first silk mill in England was opened here. In 1927 Derby was made the seat of a bishop, his diocese covering the county. Market day, Fri. Pop. 137,700.

Derby China. Vase with landscape view
Victoria & Albert Mus.

beautifully decorated, and shows great variety. He also produced small enamelled and gilt figures, and others of a larger size in a beautiful soft paste, chalk white biscuit-ware. The works were closed down in 1849, but the tradition is carried on by the Royal Crown Derby Porcelain Co., founded in 1877. See Chinaware.

DERBY, THE. The principal horse race in the United Kingdom, or, in fact, in the world. The race, inaugurated in 1780 by the twelfth earl of Derby, is held annually at Epsom Summer meeting, on a course of 1½ m. The record time (2 min. 34½ sec.) is held by the 1920

winner, Spion Kop, the next being Lemberg's (2 min. 35½ sec.) in 1910. See table p. 531.

DERBY, EARL OF. English title borne since 1485 by the family of Stanley. Thomas, Lord Stanley, was made earl of Derby by Henry VII in 1485. As his second wife he married Margaret Beaufort, the king's mother. Ferdinando, 5th earl (d. 1594), was a poet and friend of Spenser. When James, the 10th earl, died in 1735, the direct line became extinct, and the title passed to Sir Edward Stanley, a descendant of the 1st earl. The earl's eldest son is known as Lord Stanley. The family seat is Knowsley, near Liverpool, which has a park of 2,500 acres.

14th Earl of Derby,
British statesman

DERBY, EDWARD GEOFFREY STANLEY, 14TH EARL OF (1799-1869). British statesman. Born at Knowsley, March 29, 1799, he was the eldest son of the 13th earl, then Lord Stanley. He entered the House of Commons in 1820 as a Whig, and in 1827 was made under-secretary for the colonies and in 1830 chief secretary for Ireland. Derby supported the Reform Bill of 1832. In 1833 he became secretary for war and the colonies, when he carried the bill for freeing the slaves. In 1834, with others, he left the Whig government, but remained a private member until 1841, when he became colonial secretary under Peel. In 1844 he entered the House of Lords, and acted as the leader of the party soon known as the Conservative. In 1851 he succeeded to the earldom. Derby was three times premier: in 1852, in 1853 and in 1866-68. He died at Knowsley, Oct. 23, 1869, having won a great reputation as a scholar and an orator.

DERBY, EDWARD GEORGE VILLIERS STANLEY, 17TH EARL OF (b. 1865). British politician. Born April 4, 1865, he entered the House of Commons in 1892. In 1895, then Lord Stanley, he joined the Conservative government as a lord of the treasury and in 1900 became financial secretary to the War Office, being promoted postmaster-general in 1903. He succeeded to the earldom in 1908. In 1915, as director-general of recruiting, he originated the Derby scheme. In 1916 he became under-secretary for war, and soon after war secretary in succession to Mr. Lloyd George. He remained at the War Office till 1918, when he was appointed ambassador to Paris. From Oct., 1922, to Jan., 1924, he was again war secretary. In 1924 his horse Sansovino won the Derby.

DERBY SCHEME. Under this scheme all men between 18 and 41 were invited to enlist, and recruits were then ranged in 46 age groups, 23 of married and 23 of unmarried men. They were to be called to the colours in groups beginning with the younger men, the unmarried before the married. The number who had offered themselves between Oct. 23 and Dec. 15, 1915, was 2,829,263, of whom 1,679,263 were married. According to the National Register, 2,182,178 remained unattested, of whom 1,152,947 were unmarried. Compulsion was inevitable, and the necessary bill was introduced into Parliament on Jan. 5, 1916.

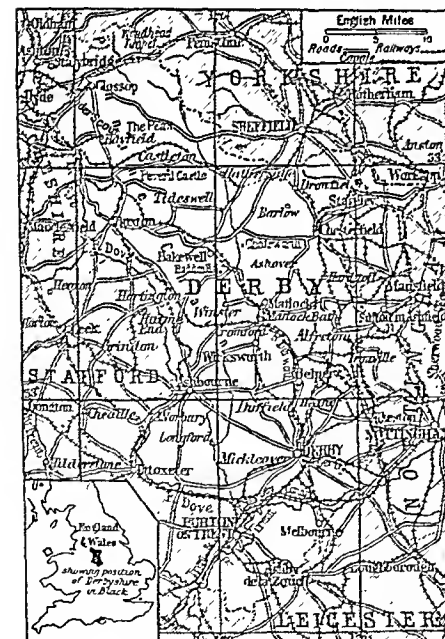

Edward, 17th Earl
of Derby
Russell

DERBY WINNERS AND OWNERS SINCE 1783. (See p. 500.)

1780, <i>Diomed</i> , Bunbury; 1781, <i>Y. Eclipse</i> , O'Kelly; 1782, <i>Assassin</i> , Ld. Egremont; 1783, <i>Saltram</i> , Parker; 1784, <i>Serjeant</i> , O'Kelly; 1785, <i>Aimwell</i> , Ld. Clermont; 1786, <i>Noble</i> , Pantan; 1787, <i>Sir Peter Teazle</i> , Ld. Derby; 1788, <i>Sir Thomas</i> , Prince of Wales; 1789, <i>Skyscraper</i> , D. of Bedford; 1790, <i>Rhadamanthus</i> , Ld. Aga Khan.
--	---	---	--

DERBYSHIRE. Midland county of England, bounded N. by Yorkshire. Its area is 1,016 sq. m. The surface is mainly flat in the S. and rugged towards the middle and E. In the N. the Pennine Chain terminates in the Peak district, the watershed between the rivers Mersey and Trent. The valley scenery of the Derwent and Dove is famous. Much of the county is on a coalfield; other mineral products include limestone, gypsum, ironstone, fireclay, lead and zinc. Permanent pasture

Derbyshire. Map of the midland county of England, famous for its industries and natrnal beauties

makes up four-fifths of the cultivated area. Textile manufactures comprise silks, cottons, worsted, and hosiery; malting and brewing and iron founding are considerable interests. The L.N.E. and L.M.S. Rlys. serve the county, as do the Trent and Mersey, Derby and other canals. Derby is the county town, and others of importance are Buxton, Chesterfield, Ilkeston, and Glossop. Chatsworth and Haddon Hall are in the county. Pop. 714,662.

Jane Austen writes of Chatsworth as Pemberley in *Pride and Prejudice*, while Sir Walter Scott centres his *Peveril of the Peak* in the Peak district. It is the Stonyshire of Adam Bede.

DEREHAM OR EAST DEREHAM. Market town and urb. dist. of Norfolk. It is on the L.N.E. Rly., 122 m. N.N.E. of London and 22 m. W.N.W. of Norwich, and is an agricultural centre, the industries including the manufacture of agricultural implements and malting. The church of S. Nicholas contains the tomb of William Cowper, whose residence here is commemorated by the Cowper Memorial Church of the Congregationalists. Borlrow was born at Dumping Green, 1½ m. away, and Dereham is the "pretty quiet D—" of Lavengro. Market day, Fri. Pop. 5,659.

DERG. Lough or lake of the Irish Free State, in the S. of co. Donegal. On one of its many islands—Station Island—is the cave of S. Patrick's Purgatory, formerly resorted to by pilgrims from Europe. The lake covers 25 sq. m. Another Lough Derg forms part of the boundaries of counties Tipperary, Clare, and Galway. It is 24 m. long, with a greatest depth of 120 ft.

DERMATITIS (Gr. derma, skin). Inflammation of the skin. The more important causes are certain diseases; application of irritant substances such as mustard or croton oil; trade processes, as among persons handling paraffin, tar, dyes, bichromate of potash, etc.; too long exposure to X-rays; irritation from parasites, as in scabies or itch; sunburn, and frost bite. See Skin

DE ROBECK, SIR JOHN MICHAEL (1862-1928). British sailor. The son of the 4th baron de Robeck of Naas, co. Kildare, he was born June 10, 1862. He entered the navy in 1875, and by 1911 was a rear-admiral. In March, 1915, he was appointed commander of the force sent to assist the landing in Gallipoli. In June, 1919, he was made commander-in-chief in the Mediterranean, and from 1922 to 1924 was in command of the Atlantic Fleet. Made a baronet in 1919, he died Jan. 21, 1928.

Sir John de Robeck, British sailor Russell

DE ROUGEMONT, Louis (1847-1921). Name of a Swiss whose real name was Henri Louis Grin. Born at Gressy, Nov. 9, 1847, in 1898 he caused a sensation in London by an account of his enforced exile of 28 years among the blacks of the Cambridge Gulf region. In 1898 before the British Association, at Bristol, he read two papers descriptive of his adventures, which were soon afterwards discredited. He died June 9, 1921.

DERRICK. Term applied to a kind of crane, and-also to the staging erected for oil-drilling. On board ship a derrick is a stout pole swung from a mast for lifting heavy weights. A derrick crane is a fixed crane, usually constructed of timber, consisting of a jib, vertical mast, and two raking timber backstays, weighted or made fast to prevent the crane from overturning. See Crane.

DERVISH (Pers. darwish, poor; Arab. faqir, fakir). Persian, Turkish, or Arab devotee. Some are strict Mahomedans; others combine nominal adherence to the Koran with Hindu mysticism and pantheism. Their devotional exercises include invocations, bodily torture, and a frenzied, whirling dance said to symbolise the eternal existence of the Deity. At the close of the dance they fall into a cataleptic trance.

Derrick. Main derricks on a large liner S. Crabb

DERWENT. River of Yorkshire. It rises on the moors of the E. Riding, and flows mainly S.W. Having passed through the Carrs and by Malton, it joins the Ouse at Barmby-on-the-Marsh, some miles from Selby. Its length is about 70 m., and it is navigable as far as Malton. A canal connects it with Pocklington. The Cumberland Derwent rises near Scafell and flows N. through Borrowdale to Derwentwater, N.W. to Bassenthwaite, thence W. to the Solway Firth at Workington. Its length is about 35 m. The Derbyshire Derwent rises in the High Peak and flows S. for about 60 m. past Matlock and Derby to the Trent. Another Derwent forms part of the boundary between Northumberland and Durham. It flows for 30 m. N.E. to the Tyne.

There is a Derwent River in Tasmania. It rises in Lake St. Clare and flows S. through a deep mt. valley to Hobart. Its length is 130 m.

DERWENTWATER. Lake of Cumberland, an expansion of the Derwent river. Its length is 3 m.; greatest breadth, 1½ m.; and extreme depth, 72 ft. Its wooded islets, the steep crags around its shores, combined with

the surrounding mts., produce a fine scenic effect. At the S. of the lake are the Falls of Lodore, near which occasionally rises to the surface the remarkable Floating Island.

DERWENTWATER, JAMES RADCLIFFE OR RADCLIFFE, 3rd EARL OF (1689-1716) Jacobite hero. Eldest son of the 2nd earl, he

James, 3rd Earl of Derwentwater
After Kneller

was born in London, June 28, 1689. A leader in the rebellion of 1715, he surrendered at Preston, was attainted, and was beheaded on Tower Hill, Feb. 24, 1716. He is a familiar figure in ballads and chap-books.

DESBOROUGH, WILLIAM HENRY GRENFELL, 1ST BARON (b. 1855). British politician and sportsman. Born Oct. 30, 1855, he became famous as an athlete. He ran for Oxford in the 3 miles, 1876, and rowed 1877-78 against Cambridge. He travelled, shooting and climbing in Asia and America; swam across Niagara, and stroked an oight across the Channel. He was Liberal M.P. for Salisbury, 1880-82 and represented Hereford as a Liberal Unionist 1892-3 and the Wycombe division of Buckinghamshire from 1900-5, when he was made Baron Desborough.

One of his sons was Julian Grenfell, the poet.

William Grenfell, 1st Baron Desborough
Elliott & Fry

DESCARTES, RENÉ (1596-1650). French philosopher and mathematician. Born at La Haye in Touraine, March 31, 1596, he travelled extensively, and at the age of 33 withdrew to Holland, where his *Discours de la Méthode plus la dioptrique, les météores et la géométrie*, qui sont les essais de cette méthode (1637) and *Méditations de Priaria Philosophia* (1641) were published. In 1649 he accepted an invitation to Stockholm from Queen Christina of Sweden, but died on the 11th of February, 1650.

René Descartes, French philosopher
After Franz Hals

Descartes stands at the head of the school of mathematicians which linked up the mathematics of the Renaissance with modern mathematical writings. The invention of analytical geometry dates from the publication of his *Géométrie*. The chief interest of his discourse on Optics (*La Dioptrique*) lies in its statement of the law of refraction.

DESCHANEL, PAUL. EUGÈNE LOUIS (1856-1922). French statesman. Born at Haarheck, Brussels, Feb. 13, 1856, he was educated in Paris. Deschanel's political apprenticeship began in 1876, when he became secretary when he became minister of the interior in 1885. Elected a deputy in 1885. Elected a vice-president of the Chamber in 1896 and president 1898-9. He was re-elected president of the Chamber in 1901. His literary talent was recognized by election to the French Academy on Jan. 18, 1899. He was elected president of the republic on Jan. 17, 1920, resigning on account of illness, Sept. 16. He died April 28, 1922.

Paul Deschanel, French statesman

DESERT. Region in which few forms of life can exist owing to exceptional drought or exceptional cold. Desert conditions obtain in

Derwentwater. View of the rocky promontory known as Friar's Crag

most places where the mean annual rainfall is less than 10 ins. The great hot deserts (Sabara, Kalahari, Colorado, Atacama, West Australian) are on the W. of continents. Others are situated in the interior, e.g. the Gobi in Asia, or those that have been discovered in Arctic and Antarctic latitudes.

DESERTION (Lat. *deserere*, to abandon). Term meaning in general to go away secretly and without permission, to abandon someone who has a claim upon one. In a military sense the offence consists in being absent from a unit with the intention of either not returning or of escaping some important duty. Usually the penalty for desertion when on active service is death, but in 1930 a bill removing the death penalty passed the House of Commons.

Desertion of a wife in English law a ground for judicial separation, and if accompanied by adultery, for a divorce. If a man leaves his wife or children chargeable to the parish, he is also guilty of an offence for which he may be fined or imprisoned.

DESMID (Gr. *desmos*, chain). Single-celled microscopic Alga of the family Desmidiaceae. Almost exclusively desmids inhabit fresh water (mostly stagnant), often forming a green scum on the surface. They have the power of independent motion. Some often combine to form thread-like colonies, but there is no real union of the plants. Multiplication takes place by an individual dividing into two plants. There is also a process of conjugation.

DESMOULINS, CAMILLE (1760-94). French Revolutionist. Born March 2, 1760, he became an advocate. On hearing of the dismissal of Necker, July 12, 1789, he harangued a Paris crowd with the exhortation, "To arms!" and his words marked the beginning of the Revolution. By a pamphlet, *La France libre*, and the issue of a weekly journal from Nov., 1789, to July, 1791, he stimulated the revolutionary movement. Later, with Danton, he tried to check its fury, but in vain, and he was guillotined April 5, 1794.

Camille Desmoulins, French Revolutionist

DESTROYER. Abbreviation for torpedo boat destroyer, a warship first designed for the purpose of countering torpedo boats. The first torpedo boat destroyer, the *Havock*, was launched for the British navy in 1893, and the type at once proved so successful that in a very short time the construction of torpedo boats was almost completely abandoned by every Power, their place being taken by destroyers. The original function of the destroyer thus passed away, but the development of the submarine has revived it.

In 1914 the latest British destroyers were 260 ft. long and displaced 965 tons. Their speed was 32 knots. In 1919 the largest were 300 ft. long, displacing 1,320 tons and steaming at 34 knots. In 1928-30 destroyers of the A class were built. The largest of these displaced 1,530 tons. They steamed at 37 knots and carried four 4.7 in. guns. Destroyers are

usually organized into flotillas of 20 boats under a captain or commodore. See Battleship.

DESTRUCTOR. Furnace specially designed for burning refuse, specifically city and house rubbish. The modern destructor has been made very efficient by the employment of forced draught and high temperatures. The combustible material, about 80 p.e. by weight, is easily consumed; while the incombustible constituents are reduced to a clinker which may be used for road-filling, etc.

DETAILLE, JEAN BAPTISTE EDOUARD (1848-1912). French artist. Born in Paris, Oct. 5, 1848, he studied under Meissonier, and took part in the war of 1870. This gave him his opportunity, and he became famous as a painter of military life. *Le Rêve* (The Dream), now in the Luxembourg, is one of his most popular works. He died Dec. 23, 1912.

DETECTIVE. A non-uniformed member of a police force. Plain-clothes detectives, as they are often called, are now an important branch of police organizations of most countries. Their duties are mainly to assist in the detection of the authors of crimes.

In the United Kingdom the organizations of the various detective forces are based very largely upon that of the Criminal Investigation Department, the C.I.D., of New Scotland Yard. The department was first established in 1842, and thoroughly reorganized in 1878 by Sir Howard Vincent. The C.I.D. is in charge of an assistant commissioner with headquarters at New Scotland Yard. In 1920 the organization was modified, four groups of divisions being formed, each under a detective superintendent.

DETECTOR. In wireless telegraphy and telephony, a device for rectifying the high-frequency oscillations received on the aerial, so that they are rendered perceptible in a telephone or like instrument. See Crystal Detector; Thermionic Valve; Wireless.

DETONATION. The explosion of a low explosive is merely accelerated combustion, each grain being consumed layer-by-layer at an extremely rapid rate, while detonation is a distinct phenomenon in which the chemical transformation is induced in every particle of the mass of the explosive at the same instant with consequent greater disruptive effect.

DETROIT. City of Michigan, U.S.A. It extends for many miles along the W. shore of the Detroit river, facing Windsor in Canada, and is 18 m. above Lake Erie, near the S.W. end of Lake St. Clair. The city is the terminus of several rly. lines. Among its buildings are the government offices, city hall, Michigan College of Medicine and Surgery, Detroit College, public library, R.C. cathedral, museum of art, and the Harper Hospital. There is no immense lake and river traffic, and the industries are numerous and various, of which the making of motor cars is the chief. The value of its output is only exceeded by that of three cities in the U.S.A. Owing partly to the increase in the automobile industry, the population of

Detroit, Michigan. Skyscrapers of the city seen from the Canadian shore of the Detroit river

Detroit, where Henry Ford has his works, has grown enormously. In 1920 it was 993,000, and in 1928 it was estimated at 1,378,000.

DETTINGEN. Village of Bavaria. It stands on the Main, 10 m. N.W. of Aschaffenburg, and on the rly. to Frankfort-on-the-Main. Here on June 27, 1743, the British and Hanoverians under George II in person met the French. The result was a complete victory for the former, which was celebrated by a Te Deum composed by Handel.

DEUCALION. In Greek mythology, son of Prometheus and king of Phthia in Thessaly. When Zeus sent a flood which overwhelmed all living creatures, Deucalion and his wife Pyrrha escaped in a vessel which after nine days' tossing stopped on the top of Parnassus. Deucalion and his wife were bidden by an oracle to throw the bones of their mother over their shoulders. They thereupon threw stones behind them, which became men and women. See Deluge.

DEUTERONOMY. The fifth book of the Pentateuch, of rather Hexateuch. The title, taken from the Septuagint (Deut. 17, 18), means "second Law," and is due to a wrong rendering of Hebrew words which really mean "a copy of this law." The Hebrew title is "Words" or "These are the Words." Deuteronomy contains one of the three chief codes of Hebrew law (Deut. 12-26 in particular). This is preceded by a retrospective and hortatory address by Moses (Deut. 1-11), delivered in the land of Moab, and is followed by an account of the last days of Moses (Deut. 27-34).

DEUTSCHLAND. Name by which the Germans call their own country, as in the song Deutschland über Alles.

The Deutschland was a German submarine built for commercial purposes. Her gross tonnage was 791. In 1916 she made a voyage from Europe to the U.S.A. and back. In April, 1917, she was converted to war purposes. Surrendered to Great Britain after the Armistice, she arrived at the Temple Pier, London, on Oct. 7, 1919.

DE VALERA, EAMON (b. 1882). Irish republican. Born in New York, Oct. 14, 1882, his father was a Spaniard and his mother an Irishwoman. In 1917 he was made president of the Gaelic League, and was arrested for his revolutionary activities. While in prison he was returned to Parliament for E. Clare (1918), but he declined to take his seat, and in April he was chosen president of the Irish republic. Opposed to the treaty signed Dec. 6, 1921, he resigned in Jan., 1922, and headed the republican forces. He was imprisoned from Aug., 1923, to Aug., 1924. A little later he took his seat in Dail Eireann, and as the leader of the republicans, called Fianna Fail, put himself at the head of the opposition to the Government.

Eamon De Valera
Irish republican

DEVELOPER. Substance used in photography for rendering visible the invisible effect of the action of light on a sensitive plate or paper. Typical developers are pyrogallol acid and hydroquinone. Each is used in admixture with an alkali, and with other chemicals, e.g. potassium bromide, to restrain the activity of the developer, and soda sulphite to preserve the solution. See Photography.

DEVELOPMENT COMMISSION. Body of persons established in 1909 to promote the economic development of the United Kingdom. It consists of commissioners, two of whom are paid, who assist, by grants and loans, projects which make for the development of the country's resources but fail to attract private enterprise. Their funds are a sum of money voted by Parliament. The offices are at 6a, Dean's Yard, Westminster, S.W.

DEVENTER. Town of Holland, in the prov. of Overijssel. It stands at the junction of the Yssel and the Schipbeek, 66 m. E.S.E. of Amsterdam. An old place, it has several interesting buildings, including the Gothic Groote Kerk, with its 11th century crypt, the Berg Kerk of the early 13th century, and the town hall. The weigh house is a 16th century edifice. Until 1876 Deventer had a famous school, its Athenaeum. Pop. 34,056.

DEVI OR MAHADEVI. Hindu goddess, wife of Siva. She is sometimes represented as a beautiful woman riding on a tiger, sometimes as black-skinned, with a terrible and hideous countenance. Human sacrifices were offered and orgiastic rites performed in her honour.

DEVIL (Gr. diabolos, accuser, slanderer) Name given generally to evil spirits, but more particularly to Satan, the Hebraic prince or chief of the powers of darkness. Among the Jews, the idea of a personal enemy outside the human race appears to have arisen at a very early period. The story of the Creation in the opening chapters of Genesis is free from the traditions of a conflict between good and evil which are to be found in other early cosmogonies; but the idea appears in the story of the Garden of Eden.

The Roman Catholic Church gives the name of devil's advocate to the one appointed to bring forward objections against the character of the person it is proposed to canonise.

Devil's-Bit. Name given to a species of scabious. See Scabious.

DEVIL'S BRIDGE. Hamlet of Cardiganshire, Wales. It is 1½ m. S.E. of Aberystwith, on the Vale of Rheidol Rly. It derives its name from a double bridge spanning the Mynach; the lower bridge was erected by the monks of Strata Florida Abbey in the 11th century, the upper in 1753.

Another Devil's Bridge is in Switzerland. It spans the river Reuss near Andermatt.

Devil's Coach Horse, popular name for the cocktail beetle

DEVIL'S COACH HORSE (*Ocypus olens*). Popular name for the cocktail beetle, common in most parts of Great Britain. It is black, with very short wing-cases, and about 1 in. in length. It has a habit of raising its abdomen over its back in a threatening fashion when alarmed. See Beetle.

DEVIL'S DYKE. Name of several prehistoric entrenchments and natural formations in Great Britain. The best known, 5 m. from Brighton, Sussex, is an early British hill-fort whose name has been transferred to a naturalcombe close by. In 1928 it was bought by the town council of Brighton.

DEVIL'S PUNCHBOWL. Popular name of Higheomb Bottom, a wooded glen near Hindhead, Surrey. It is described in Baring-Gould's novel, The Broom Squire. The name is also given to a dark lough near the summit of Mangerton, co. Kerry, Ireland.

DEVIZES. Mun. bor. and market town of Wiltshire. It stands on the Kennet and Avon Canal, 86 m. W. of London by the G.W. Rly. It is a great agricultural centre. For four centuries before 1750 it was a centre of the cloth manufacture. The chief building is the church of St. John. There is a modern market cross, some old wooden houses, and a museum of antiquities. Devizes became a chartered town in the 12th century, and from 1295 to 1867 sent two members to Parliament. Market day, Thurs. Pop. 6,022.

DEVLIN, JOSEPH (b. 1872). Irish politician. A Belfast man by birth, he became a Nationalist M.P. in 1902 and remained one

until 1922, when the Irish parliaments were set up. Since 1921 he has been a member of the parliament of Northern Ireland, and in 1929 he returned to Westminster as M.P. for Fermanagh and Tyrone.

DEVON. River of Scotland. It rises in the Ochil Hills and traverses parts of four counties—Perth, Kinross, Clackmannan, and Stirling—before entering the Forth at Cambus.

DEVON, EARL OF. English title held intermittently from about 1300 by the old Devon family of Courtenay. The title fell into abeyance in 1556, but in 1831 the Courtenays were allowed to take the title. This earldom must be distinguished from that of Devon-

Devonport. Royal Naval Barracks, which accommodate over 2,000 officers and men. See below

Valentine

shire, held by the Cavendishes, although before the latter existed the Courtenays were called by both titles indifferently. The earl's chief seat is Powderham Castle, near Exeter.

DEVONIAN. System of rocks laid down between the Silurian and the Carboniferous periods. It embraces two types. The Devonian type, abundant in Cornwall and Devon, comprises marine grits, shales, and limestones. Its numerous remains of molluscs and corals give their decorative effect to the hardened limestones called Devonshire marble. The Old Red Sandstone type, well developed in Scotland, S.W. Ireland, and S. Wales, was deposited under fresh-water conditions. It contains fossil fish remains in large numbers, and it also yields for the first time substantial numbers of land plants. The formation extends across Europe and Asia. In N. America Devonian strata are sources of petroleum.

DEVONPORT. Formerly a borough of Devonshire, now part of Plymouth (q.v.). A seaport and naval station on the Tamar estuary, 224 m. S.W. of London, on the G.W. and Southern Rlys., it adjoined Plymouth and was called Plymouth Dock until 1824. It was one of the three towns (Stonchouse and Plymouth being the other two) which were amalgamated Nov. 9, 1914.

The town is one of England's chief naval ports, and its industries are closely associated with the navy. Along the Hamoaze, a fine natural harbour, are barracks, hospitals, and other accommodation for the fleet. At Keyham is the government dockyard, where the largest battleships can be built or repaired; also the R.N. Engineering College. Mount Wise is the residence of the admiral commanding the port. Devonport returned two members to Parliament from 1832 to 1918, and now forms a division of Plymouth, returning one member. See illus. above.

There is a town in Tasmania called East and West Devonport. It stands at the mouth of the Mersey river, 80 m. N.W. of Launceston, and was formerly known as Formby and Torquay.

DEVONPORT, HUDSON EWBANK KEARLEY, 1st Viscount (h. 1856). British politician. Born Sept. 1, 1856, he entered business and became the head of a firm of tea and provision merchants. Liberal M.P. for Devonport 1892-1910, he was made parliamentary

secretary to the Board of Trade in 1905, resigning in 1909 to become first chairman of the new Port of London Authority, from which post he retired in 1925. He was created a baronet 1908, baron 1910, and viscount 1917

class of six cruisers built 1903-05. These displaced 11,000 tons. One of them was the Hampshire. See Hampshire; London.

DEVONSHIRE, EARL AND DUKE OF. English titles borne by the family of Cavendish, the

Liberal Unionists. In 1895, having been duke of Devonshire since 1891, he became lord president of the council. In 1903 he resigned office, owing to his opposition to tariff reform. He died March 24, 1908, leaving no children.

Devonshire Map of the west of England county, the cider, cream and cattle of which are known the world over

DEVONSHIRE OR DEVON. South-western co. of England. It lies between the Bristol and English Channels, its area being 2,610 sq. m. The county contains Dartmoor, and also regions where the climate is remarkably mild and the vegetation unusually rich. Most of the county is hilly and the coastline is irregular. It is dotted with health and pleasure resorts, such as Sidmouth and Teignmouth in the S., and Ilfracombe and Lynton in the N. It includes Lundy Island.

The chief rivers are the Tamar, on the Cornish boundary, the Exe, Teign, Dart, and Tavy, all flowing through lovely valleys, and the Taw and Torridge, falling into the Bristol Channel. The chief towns are Exeter, the capital; Plymouth, which now includes Devonport; Torquay, Barnstaple, Tiverton, and Bideford. The county is pastoral, but some minerals are found, including tin, copper, iron, granite, and china clay. Fishing is important, especially for pilchards, herrings, and mackerel. The county cider, cream, and cattle are celebrated. Devonshire is served by the G.W. and Southern Rlys. Pop. 709,614.

In colour deep red, sometimes flecked with white, the Devon brood of cattle, though not among the largest, is one of the most beautiful and economical breeds. Devon cattle are as profitable a beef-producing breed as any in England, and their milk produces the world-famous clotted cream.

Charles Kingsley, born at Holne, set many scenes of *Westward Ho!* in and about Bideford, and Blackmore's Lorna Doone country passes into Devon at Tiverton. The Wessex of Thomas Hardy's novels extends from Dorset into Devon. S. Baring Gould has written about the county in many of his stories, and Eden Phillpotts has made Dartmoor the scene of a series of his novels.

DEVONSHIRE. British cruiser of the London class. Work was begun on her in 1926, and she was completed in 1929. She displaces 14,000 tons, and carries 8.8 in. guns. An earlier Devonshire was the name ship of a

1737-44. The 4th duke, William Cavendish (1720-64) was made prime minister in 1756-57. The 5th duke (1748-1811) married the beautiful Georgiana Spencer in 1774. Her portrait was painted by Gainsborough, Reynolds, and Angelica Kauffman.

In 1858 the 6th duke died unmarried. He was succeeded by a cousin, William Cavendish, earl of Burlington, whose long life (1808-91) was largely devoted to furthering the application of science to industry. He was succeeded by his son, Spencer Compton Cavendish, who became 8th duke. Devonshire House, Piccadilly, the town residence of seven dukes of Devonshire, was sold in 1919. The site is covered with shops, offices, and blocks of flats.

DEVONSHIRE, SPENCER COMPTON CAVENDISH, 8TH DUKE OF (1833-1908). British statesman. Born July 23, 1833, the eldest son of the 7th duke, he was elected Liberal M.P. for N. Lancashire in 1857, and as marquis of Hartington sat there until 1891. From 1855 he represented the Rossendale division of Lancashire. A lord of the admiralty in 1863, he held in succession the posts of under-secretary for war, war secretary, postmaster-general, and secretary for Ireland. From 1875-80,

Spencer, 8th Duke of Devonshire
Bassano

during Gladstone's retirement, he was leader of the Liberals in the House. He then served under Gladstone as secretary for India and war secretary.

In 1886, when Gladstone turned to Home Rule, Hartington became a leader of the

earldom since 1618 and the dukedom since 1694. It must be distinguished from the older earldom of Devon (q.v.) borne by the family of Courtenay. William, Baron Cavendish, was created an earl in 1618. His son and grandson succeeded in turn to the earldom. William Cavendish (1640-1707), 4th earl, was born Jan. 25, 1640. He succeeded to the earldom in 1684, and in 1687 was one of the seven Whig peers who invited William of Orange to England. Under William and under Anne he was one of the leading men of the realm. In 1694 he was made marquis of Hartington and duke of Devonshire. His grandson, the 3rd duke, was lord-lieutenant of Ireland from

William, 1st Duke of Devonshire
After Bitten

Victor, 9th Duke of Devonshire

DEVONSHIRE REGIMENT. English regiment, formerly the 11th foot. It was raised in 1685. At the battle of Almanza (1707) it suffered severely, and it won distinction at Dettingen and Fontenoy. During the Peninsular War it came out of the engagement at Salamanca with only four officers and 67 men. The 1st battalion showed great gallantry during the Boer attack on Wagon Hill, Jan. 6, 1900. The 2nd battalion served under Buller at Colenso, Spion Kop, and Vaalkrantz. In the Great War the Devons gained special distinction at Neuve Chapelle, Loos, and the Somme. The depot is at Exeter.

Devonshire Regiment badge

DEW. Condensation of atmospheric moisture on solid objects. On a still, clear night the temperature of the earth's surface is lowered by radiation. This causes a cooling of the air in contact with the earth, and if the temperature of the earth falls to, or below, the temperature at which the air is incapable of holding its water vapour without precipitation, i.e. the dew-point, some of the invisible water vapour is changed to liquid, drops of which form on cold, exposed surfaces, whether grass, stones, or the ground itself. The amount of dew deposited depends upon the amount of water vapour in the air.

DEW POND. This is the name applied to ponds, generally on chalk downs, which have no visible means of replenishment other than rain, and maintain their supply of water during hot weather, when ponds at lower levels have dried up. The conclusion has been that they have been fed by dew or mist.

DEWAR, SIR JAMES (1842-1923) British physicist. Born at Kincardine-on-Forth, Sept. 20, 1842, he became Jacksonian professor of experimental philosophy at Cambridge in 1875, and Fullerton professor at the Royal Institution two years later. His brilliant investigations into the liquefaction of gases, dating from 1874, and the properties of matter at extremely low temperatures, have proved of the greatest importance. With Sir Frederick Abel, Dewar in 1889 discovered cordite. Knighted 1904, he died Mar. 27, 1923.

DEWAR, THOMAS ROBERT DEWAR, 1ST BARON (1864-1930). British merchant. Born Jan. 6, 1864, Dewar entered the family business of distillers, and in time became managing director of John Dewar & Sons. From 1900-06 he was a Conservative M.P. In 1917 he was made a baronet and in 1919 a peer. A noted patron of the turf and a witty speaker, he died April 11, 1930.

Sir James Dewar,
British physicist
Lafayette

DEWBERRY. (*Rubus caesius*). Plant resembling the common bramble, but having glaucous stems of a more prostrate habit and larger fruit. See Bramble

DE WET, CHRISTIAN RUDOLF (1854-1922). Boer soldier. Born in the Orange Free State, Oct. 7, 1854, he became a farmer. Noticed for

Christian De Wet.
Boer soldier
Russell

his services in the war of 1880-81, he was from 1885 to 1897 a member of the Volksraad, O.F.S. During the S. African war he commanded the O.F.S. Army. His skill in guerrilla warfare made him the most formidable opponent of Britain in the field. After the peace of 1902, De Wet visited England, Europe and America. From 1907

to 1914 he was minister of agriculture, Orange Free State. In 1914 he joined the rebellion. He was captured, fined, and imprisoned for a year. He died Feb. 3, 1922

DEWEY, GEORGE (1837-1917). American sailor. Born at Montpelier, Vermont, Dec.

George Dewey,
American sailor

26, 1837, he graduated in the U.S. naval academy in 1858. In command of the Asiatic squadron in 1898, he defeated Montojo in Manila Bay on May 1, destroying or capturing the Spanish fleet and all land batteries, without losing a man. He was promoted rear-admiral and thanked by Congress. He died Jan. 16, 1917

DE WINT, PETER (1784-1849). British painter. Born of Dutch descent at Stone, Staffordshire, Jan. 21, 1784, he studied under John Raphael Smith, the engraver, and at the Academy schools. Confining himself mainly to water colour, he first exhibited at the Academy in 1807; and in 1812 became a member of the Water Colour Society. His vigorous and luminous landscapes are painted wholly in "wash". He died Jan. 30, 1849.

DEWSBURY. County borough of Yorkshire (W.R.). It stands on the river Calder, 132 m. from London and 8 m. S. of Leeds, and is served by the L.M.S. and L.N.E. Rlys. By the Aire and Calder navigation there is water communication with Hull. The chief church is All Saints', an Early English building restored and rebuilt in the 18th century and retaining some of its old glass. The chief industries are the making of blankets, shoddy, cloth, and carpets, while around are coal mines. Pop. 54,165

DEXTRIN. White or yellowish-white substance prepared from starch. It is soluble in water, and possesses adhesive properties similar to those of gum arabic. On account of its adhesive properties it is also known as British gum or starch gum. Dextrin is prepared by heating starch previously moistened with an acid, or by subjecting starch to the action of diastase. Dextrin is used in place of gum arabic in industrial processes, and as an adhesive for postage stamps and envelopes.

Dextrose. Name sometimes used as an alternative for glucose (q.v.).

Dhak (*Butea frondosa*). Indian tree of the order Leguminosae, which yields the gum known as butea kino. See Butea.

DHAMNOO (*Grewia elastica*). Tree of the order Tiliaceae. A native of the Himalaya, its strong and elastic wood is used by natives for making bows. It provides admirable shafts for horsed vehicles, and is much used where elasticity is required.

Dhow. Long, fast-sailing Arab vessel, once much used for gun-running and slaving. Dhows are most frequent in the Persian Gulf

DIABASE. Compact crystalline-granular rock. It is a basaltic greenstone, popularly known as whin, and is composed of plagioclase, augite, and other minerals, with or without quartz or olivine. Its dark green colour is due to the presence of a chlorite. Usually distinguished from dolerite by its greater age, it abounds in eruptive and intrusive lavas which are older than the tertiary era. See Basalt.

DIABETES. Disease marked by persistent excess in discharge of urine. It is of two kinds. Diabetes mellitus is characterised by the presence of grape sugar in the blood, from which it passes into the urine. The disease is more common after middle life, and more frequent in men than in women. The condition may be much improved and life prolonged for many years under treatment, which consists either in regulation of the diet so as to reduce to a minimum sugar and starchy foods, or the patient may be treated with an administration of insulin (q.v.).

Diabetes insipidus is a less serious affection characterised by the passage of large quantities of urine of low specific gravity, not containing sugar. It is most common in young persons.

DIABOLO. Game played with a double-coned top spun upon a string stretched between two sticks held one in each hand. The top is repeatedly thrown in the air and caught again on the string while spinning. Its ancestor was a species of top used by Peking and Canton tradesmen to attract customers. During 1906-7 the game of diabolo enjoyed great popularity in England.

DIAGNOSIS (Gr. dia, between; gnōnai, to know). Term in medicine for the act of finding out, by signs and symptoms, from what a patient is suffering. It is done in numerous ways, e.g. taking the temperature, while in more difficult cases a bacteriological examination is made. See Medicine.

DIALA. River and village of Iraq. The river joins the Tigris on its left bank, about 8 m. below Bagdad. It was prominent in the campaign for the conquest of Mesopotamia in the Great War.

DIALLAGA. Variety of the mineral augite. It is grass-green, brown, or grey in colour, with metallic lustre and foliated appearance. It is a characteristic mineral of the gabbro family of rocks, with optical properties like augite (q.v.). Pron. dia-lāje.

DIALYSIS (Gr. separating). In chemistry, the separation of crystalloids from colloids. The chemist Thomas Graham (1805-69) found that if a mixture of colloids and crystalloids, in solution, is placed on one side of a bladder or a piece of parchment paper, and pure water on the other side, virtually the crystalloids alone pass through the semi-permeable membrane into the water. A repetition of the process will completely separate the colloids and the crystalloids. See Osmosis.

DIAMOND. Precious stone, consisting of carbon, and the hardest substance known. Diamonds are almost always found as crystals, whether in the form of microscopic dust, or as giant pebbles such as the S. African Cullinan diamond. A perfect crystal is transparent and colourless: its lustre by reflected light is characterised by flashes of blue, gold, and red fire, the so-called "water." Most stones are tinged with grey, yellow or brown, and diamonds of a red, pink, blue, brown, or green hue are found. Up to 1729 diamonds came from the east, chiefly India. They

Dhow, Arabian gun-running vessel

are found in China, and in the Malay Archipelago. Fine but small stones come from Borneo, and those found in Australia are small and extremely hard. In 1729 the Brazilian mines were opened. Since 1870 S. Africa has provided an increasing proportion of the world's supply.

The brilliant-cut diamond has the appearance of two truncated pyramids united at the girdle, the rose diamond has a flat base, the crown being cut into star-facets surrounded by cross-facets. Diamonds are used in the jewellery of chronometers and scientific instruments, and for glazier's tools. Brown diamonds and bort are used for the boring points of rock-drills. Carbonados are rough aggregates of minute crystals. Diamond dust is used for cutting and polishing gems. In 1927 the value of diamonds exported from S. Africa was £12,392,308. See Crown; Cullinan Diamond.

DIAMOND SCULLS. Race for amateur single scullers rowed annually at Henley Regatta. Instituted in 1844, its full title is the Diamond Challenge Sculls. It was won by L. F. H. Gunther in 1929.

Diabolo. Tautening the cord to throw the top in the air. Above, spinning the top on the cord

Diana. In Roman mythology, an Italian deity identified with the Greek Artemis (q.v.).

DIAPASON (Gr. diapason chordōn, through all chords). (1) Musical term used with reference to pitch. Diapason normal was the standard pitch adopted in France in 1859. It signifies that middle A has 435 vibrations per second. English pitch is slightly sharper, having 439 vibrations. The oboe always gives the A for orchestral tuning. (2) Diapason is also used for a series of organ foundation stops, 8 and 16 ft. See Organ.

DIAPER (late Gr. diaspros, quite white). Term used in architecture for a small, conventional pattern, geometrical or floral in design, employed in decorating plain stone surfaces. It attained its greatest variety and beauty in Mahomedan buildings. In textile fabrics the word is used for cotton or linen material woven with a geometrical design.

Heraldically, diapering is the decoration of a plain surface with a design which cannot be mistaken for a charge.

DIAPHORETIC (Gr. diaphorein, to carry through). Drug which increases perspiration. Diaphoretics are used mainly in the treatment of diseases of the kidney.

DIAPHRAGM. In anatomy, a large transverse, dome-shaped muscle which divides

the body into its two main cavities, the chest or thorax and the abdominal cavity. It is the principal muscle of respiration, its contraction and descent enlarging the vertical measurement of the chest, and thus assisting in the process of inspiration, while its fibres are relaxed during the movement of expiration.

DIARRHOEA (Gr. diarrhoia, flowing through). Passage of fluid or semifluid evacuations from the bowels. The pathological cause of diarrhoea is increased activity of the rhythmic movements of the intestine. This causes the fluid contents of the small intestine to pass rapidly through the system instead of leaving them in the large intestine long enough for the fluid to be absorbed. The commonest cause is eating indigestible or unsound food. Epidemic diarrhoea of infants is probably largely due to infected milk.

DIASTASE (Gr. diastasis, separation). Ferment contained in malt which has the property of converting starch into dextrin and sugar. It is contained in malt extract, and when this is added to starch paste a clear liquid results. A purer form is prepared by adding alcohol to a cold infusion of barley malt, the flocculent precipitate being separated and dried in a vacuum. The power of converting starch is destroyed entirely if diastase is heated to 75° C. for a short time.

Diatom. Highly magnified specimens of the unicellular algae
Photo. J. J. Ward, F.Z.S.

DIATOM (Diatomaceae). Group of microscopic single-celled plants, equally abundant in fresh and salt water. The cell wall contains much silica, and consists of two

transparent valves, each with a rim and one overlapping the other. Each diatom may be attached to another plant or some other body by a gelatinous stalk, or be unattached and free-swimming. As a rule, diatoms are propagated by division. Over 10,000 species are known.

DIATOMACEOUS EARTH or **DIATOMITE**. This is a siliceous deposit, composed chiefly of the frustules of diatoms, formerly called infusorial earth. Laid down in Tertiary lakes and shallow seas, it resembles the diatom ooze of present-day ocean depths. Near Hanover a deposit called kieselguhr is in demand for dynamite manufacture and as a filtering medium. Diatom earth is also employed for rotproof paints and boiler casings, and for polishing.

DIATONIC (Gr. through the tones). In music, the successive notes of any given scale, major or minor, no two notes of the same letter appearing, and the intervals between the various notes being always the same, whatever the keynote.

DIAZ, ARMANDO (1861-1928). Italian soldier. Born at Naples, Dec. 5, 1861, he commanded the 23rd Army Corps in the Carso battles in 1916. In Nov., 1917, following the battle of Caporetto (q.v.), he replaced General Cadorna (q.v.) as generalissimo and held up the Austro-Germans on the line of the Piave and in the mountains. In Oct.-Nov., 1918, he severely defeated the Austrians along their whole front. He was created a duke in 1921, and died Feb. 29, 1928.

Armando Diaz,
Italian soldier
Russell

DIAZ, PORFIRIO (1830-1915). President of Mexico, 1877-80, 1884-1911. Born at Oaxaca, Mexico, of Spanish parentage, Sept. 15, 1830, he had reached the rank of general by 1861. On Lerdo becoming president in 1872 Diaz led the opposition, and entered Mexico City in triumph, Nov., 1876, was made provisional president, and elected president for four years in May, 1877. In 1884 he was again elected president, and re-elected after each term up to 1910.

Porfirio Diaz,
Mexican president

The long rule of Diaz brought order to Mexico. The country became comparatively pacified, foreign capital was invested, education advanced, trade increased, and the resources of the state were considerably developed. Early in 1911 a revolution led by Francisco Madero drove him to resign, and he left Mexico. He died in Paris, July 2, 1915.

DIBDIN, CHARLES (1745-1814). British song writer and entertainer. Born at Southampton, March 4, 1745, his pastoral operetta, *The Shepherd's Artifice*, produced in 1764, was the first of a long series of musical entertainments written by himself, in which he acted. In 1789 he started his "table entertainments," or *The Oddities*, for which he wrote Tom Bowling and other popular sea songs. His total output amounted to more than 70 dramatic sketches and over 600 songs, in addition to other works. He died July 25, 1814.

Charles Dibdin
British song writer
After Drummond

DICE (plural of die). Small cubes made of ivory, bone, or hard wood, marked on each side with dots from one up to six, and so arranged that the one, or ace, is opposite the six, the deuce, or two, opposite the five, and the tray, or three, opposite the four. Dice are said to have been invented by Palamedes, son of Nauplius, king of Euboea, though Herodotus attributes them to the Lydians. One to five dice may be employed, but two are most usual. A favourite mode of dicing is the simple throw of one player against another.

Dice. Cubes used in the game

DICKENS, CHARLES (1812-70). British novelist. Born at Landport, Portsea, Feb. 7, 1812, the son of a clerk in the Navy office, Dickens' early childhood was spent at Chatham. When he was eleven his parents moved to London, where his father was soon in such difficulties that he was lodged for debt in the Marshalsea prison, and the boy was put to work in a hacking factory. At twelve he was sent to school, from which he passed to a solicitor's office. This position he relinquished for journalism, becoming a parliamentary reporter and starting to write the sketches afterwards collected and issued in 1836 under the title of *Sketches by Boz*. He now abandoned reporting for literature.

Charles Dickens,
English novelist

The first monthly number of *Pickwick* appeared on March 31, 1836, and two days

later he married Catherine Hogarth, an unfortunate union which ended in a separation in 1855. *Pickwick* was an unparalleled success, and from 1836-39 Dickens was editor of Bentley's *Miscellany*, in which *Oliver Twist* ran serially. This was followed by *Nicholas Nickleby*, 1838, *The Old Curiosity Shop* and *Barnaby Rudge*, 1840, *Martin Chuzzlewit* and *A Christmas Carol*, 1843, *Dombey and Son*, 1846, *David Copperfield*, 1849, *Bleak House*, 1852, *Little Dorrit*, 1856, *A Tale of Two Cities*, 1859, *Great Expectations*, 1860, *Our Mutual Friend*, 1864, and the unfinished *Edwin Drood*, 1870.

In addition to novel writing, Dickens edited the magazines *Household Words* and *All the Year Round*, and gave public readings of his works both in the United Kingdom and in America. He was the first editor of *The Daily News*, a position which, however, he soon resigned. He died June 9, 1870.

The Dickens Fellowship was founded in 1902 to preserve the memory of the great novelist by encouraging the study of his works and promoting, in his spirit, mutual goodwill. Its headquarters are at 48, Doughty Street, London, W.C.1, where is also the Dickens Museum. Consult *Dickens: A Portrait* in Pencil, Ralph Straus, 1928; *This Side Idolatry*, C. E. Boehmer Roberts, 1928.

DICKSEE, SIR FRANCIS BERNARD (1853-1928). British painter. Born in London, Nov. 27, 1853, he first exhibited at the Academy in 1876, became A.R.A. in 1881 and R.A. in 1891. He was first employed in black and white illustrations for *The Graphic* and other papers, and in designing church windows. His *Harmony* and *Two Crowns* are in the Tate Gallery, London. He became president of the R.A., 1924, and was knighted in 1925. Dicksee

Sir Frank Dicksee,
British painter

died Oct. 17, 1928.

DICTAPHONE. Phonograph of the wax cylinder type, used in offices as a substitute for a stenographer. A stylus makes a record on the cylinder as the dictator speaks into the mouthpiece. The record is transferred to the transcribing machine used by the typist, who hears the dictated message in earphones. A cylinder can be shaved 130-150 times in a special machine before it becomes useless.

Dictaphone. Words spoken into the tube are recorded on the wax cylinder A. This is then transferred to the transcribing dictaphone, which repeats them

Dictaphone Co., Ltd.

DICTATOR. Magistrate in the Roman Republic, appointed in time of exceptional difficulty and danger. The senate determined whether the necessity for a dictator existed, the consul designated the person to be invested. In 44 Antony abolished the office.

Dickens' birthplace 387, Mile End Terrace, Portsmouth

In modern times the word is loosely applied to any person invested with wide powers to achieve some specific purpose. Adventurers who obtained brief leases of power in S. American republics were called dictators.

DIDCOT. Village of Berkshire. It is 7 m. S. of Abingdon and is an important junction on the G.W.R. Here is a depot of the Royal Army Ordnance Corps. Pop. 2,164.

DIDEROT, DENIS (1713-84). French scholar. Born at Langres, in Champagne, Oct. 5, 1713, he worked for many years as a bookseller's hack. For more than 20 years he was mainly occupied, as joint editor with J. d'Alembert, with that immense undertaking, the *Encyclopédie*, published in 17 vols., 1751-65. Later he was befriended by Catherine II of Russia, whom he visited in 1773. After Voltaire and Rousseau, Diderot was the greatest intellectual force in the France of his age.

His best known writings are *Le Paradoxe sur le Comédien*; his satire *Le Neveu de Rameau*; and two works of fiction, *La Religieuse* and *Jacques le Fataliste*. He died July 30, 1784. See Alembert, J. d'.

DIDO or ELISSA. Legendary founder of Carthage. She was the daughter of Utgo or Belus, king of Tyre, and the wife of Sichæus. Sichæus was murdered for his wealth by Pygmalion, successor of Belus, but Dido secured possession of her dead husband's treasures and set sail for Africa. There she purchased some land on which she built a citadel, the nucleus of the city of Carthage. According to Virgil, Dido fell in love with Aeneas (q.v.) when he landed in Africa, and committed suicide after he had deserted her.

DIDYMIUM. Name given to a substance first separated from the cerium group of metals by Mosander in 1841 and then thought to be an element. In 1855 Welshach was able to separate didymium into two elements, praseodymium and neodymium (q.v.).

DIEPPE. Town, sea port, and watering place of France. It stands where the Arques falls into the English Channel, by rly. 105 m.

Dieppe. The harbour, its entrance flanked by chalk cliffs

from Paris and 30 m. N. of Rouen. It has a good harbour, divided into an outer and an inner. From here a regular service is maintained with Newhaven. The chief buildings are the restored church of S. Jacques, the churches of Notre Dame de Bon Secours and S. Remy, and the castle. Other industries, in addition to the shipping, are the making of tobacco, cotton spinning, and shipbuilding. There is a large fish market. Dieppe was an important Allied base in the Great War. Pop. 24,402.

DIESEL ENGINE. Slow speed internal combustion engine in which heavy oil constitutes the fuel. Invented by Rudolf Diesel (1858-1913), it differs from other types in that no definite explosion takes place. The descending piston draws in air, the inlet valve closing at the end of the stroke. On the return stroke the air is compressed to about 500 lb. per sq. in., and its temperature rises to about 1,000° F., which is sufficient to vaporise and ignite a charge of petroleum sprayed into the

cylinder by an air pump at the top of the stroke. The expansion of the ignited charge impels the piston downwards again, an exhaust valve opens, and on its second return stroke the piston expels the products of combustion. This sequence of four movements is repeated as long as the engine is working.

DIET (Lat. dies, a day). In constitutional history, an assembly of those responsible for the government of a country. The word has come to be used for the assemblies known in Germany as Tag, Reichstag, Landtag, and others. The nearest English equivalent is parliament, although diet does not carry necessarily the idea of an elected assembly.

The chief diet was that of the Holy Roman Empire. Another was the Bundestag of the German Empire of 1870-1918. The North German Confederation of 1815-66 had its diet or Bundestag.

DIFFRACTION (Lat. dis, asunder; frangere, to break). Term used in physics. If a narrow slit is placed before a source of light and at some distance a sharp edge is set up, the edge being parallel to the slit, then on a screen placed a little way behind the edge the shadow is not quite sharp, but there are a number of alternate bright and dark bands outside the geometrical shadow, while the light shades off gradually within the geometrical shadow. These effects are said to be due to diffraction of light, and the light and dark bands are called diffraction hands. A diffraction grating consists of a number of equivalent parallel lines ruled on glass or on speculum metal. These fine lines, which are theoretically opaque, split up the light which falls on them and afford a means of measuring the wave length of light. See Light.

Sir Kenelm Digby, author and diplomat After Van Dyck

DIGBY, SIR KENELM (1603-65). English author, naval commander, and diplomat. Born July 11, 1603, the son of Sir Everard Digby, one of the conspirators executed for taking part in the Gunpowder Plot, he was knighted in 1623, and in 1625 he married the celebrated Venetia Stanley. As a Roman Catholic, he incurred the suspicion of the Long Parliament, was imprisoned and exiled to France, where he became chancellor to Henrietta Maria. He died June 11, 1665. Of his scientific and philosophic writings the best known are *Observations* (1643) on Sir Thomas Browne's *Religio Medici*, and *Two Treatises: Of Bodies, and Of Man's Soul*, 1644.

DIGESTION (Lat. digerere, to carry apart, divide). Process of assimilation of food in the stomach and intestines. It begins in the mouth. The saliva contains an active principle called ptyalin, which acts upon the starch, converting it into simpler bodies, dextrin and maltose, a form of sugar. Saliva also lubricates the food, which is then passed into the stomach.

In the stomach the food comes in contact with the gastric juice, which has an acid reaction owing to the presence of free hydrochloric acid. The gastric juice contains several active principles which promote digestion. The most important is an enzyme known as pepsin. From the stomach the partially digested mass is passed on into the intestine, where the food comes in contact with the juice secreted by the pancreas. Digestion in the intestine is partly effected by a secretion known as the succus entericus (intestinal juice), and by the bile, which assists the

pancreatic juice in the digestion of fat. The bacteria in the intestine play an important part in the digestive processes, some forming sugar from starch, others breaking up proteids into peptone, and others splitting up fats.

Broadly speaking, digestive proteins and carbohydrates are absorbed by the blood vessels, and fats by the lacteals, or small lymphatic vessels of the intestines. The food is conveyed by these channels to the tissues throughout the body, where it supplies energy or builds up new material to make good waste.

DIGITALIS (Lat. digitalis, of the finger). Genus of biennial and perennial herbs of the order Scrophulariaceae, of which the foxglove (*D. purpurea*) is a familiar example. Natives of Europe, N. Africa, and W. Asia, they have crowded leaves forming a rosette in their first year, but later develop a tall, flowering stem, with bell-shaped, tubular flowers adapted for fertilisation by bees. The leaves contain several powerful principles which render them highly valuable in certain serious forms of heart disease. See Foxglove.

DIJON. City of France. It is 210 m. by rly. S.E. of Paris and was once the capital of Burgundy. The cathedral of S. Bénigne, once an abbey church, dates from the 13th century. Notre Dame, with its wonderful W. front and an old clock, is noteworthy, as are the churches of S. Michel and S. Jean. The hôtel de ville houses a fine collection of paintings, etc. Other buildings are the palais de justice, and an exchange, once a church. There are remains of the Chartreuse, built by Philip the Bold for a mausoleum. Dijon has a university, a public library, colleges, and schools. It is an important rly. junction and is the centre of the Burgundy wine trade. Its mustard and liqueur are famous. On Mt. Afrique is an air lighthouse, one of a series to mark the air route from Paris to Algiers. Pop. 83,815.

DILAPIDATION (Lat. di, apart, lapis, a stone). Term used in general for the act of allowing a building to fall into decay or ruin. In ecclesiastical law its plural, dilapidations, has a special significance. A rector or other incumbent, being legally a tenant for life, is bound to maintain and keep in proper repair his official residence, all buildings belonging to the house, and also the chancel of the church. Surveys are made periodically, and the clergyman or his executor after his death must make good any dilapidations.

DILIGENCE. Stage coach once much used on the Continent and in America; also in England from the middle of the 18th century. The large diligence was drawn by from four to seven horses. It had three compartments, the coupé in front for three passengers, the middle coach for six, and the rotonde behind for another six. Behind the hench on which the conductor sat, itself behind the driver's seat, was a space for the luggage. The small diligence had two compartments, the coupé and the middle or intérieur. See Carriage; Coach.

Sir Charles and Lady Dilke London Stereoscopic Co

DILKE, SIR CHARLES WENTWORTH (1843-1911). British politician. The son of Sir Charles Wentworth Dilke (1810-1869), he was born in London, Sept. 4, 1843. In 1869 he succeeded his father as 2nd baronet and chief proprietor of *The Athenæum* and *Notes and Queries*. In 1868 he entered parliament as M.P. for Chelsea. Closely associated with Chamberlain, the two entered Gladstone's ministry, Dilke becoming under-secretary for foreign affairs in 1880. In 1882 he entered the Cabinet as president of the Local Government

Board. In 1885 Dilke's official career was ended by his appearance as co-respondent in a divorce case. He protested his innocence, in spite of the verdict, and in 1892 he secured election as M.P. for the Forest of Dean, a seat he retained until his death, Jan. 26, 1911.

In 1885 he married Emilia F. Strong, who was the widow of Mark Pattison. She was art critic to The Academy, and her portrait was drawn by George Eliot in her novel *Middlemarch*.

DILL (*Anethum graveolens*). Annual herb of the order Umbelliferae. It is a native of S. Europe and Asia, with leaves much divided into very slender lobes and minute yellow flowers in umbels. The small flattish fruits are the dill "seed" of commerce, used for distilling oil of dill and for making the carminative dill water.

DILLON, JOHN (1851-1927). Irish politician. A son of John Dillon, M.P., a leader of the Young Ireland party, he became a doctor of medicine. In 1880 he entered the House of Commons as M.P. for Tipperary, and was imprisoned as an ardent Nationalist. In 1885 he was returned for East Mayo, which he represented for over 30 years. In 1896 he was made the official leader of the small band of anti-Parnellites in Parliament. After 1900, when the two sections were united, he was less prominent. In March, 1918, on Redmond's death, he was chosen leader of the Nationalists, but the triumph of Sinn Féin left him almost without a following. He died Aug. 4, 1927.

Dillon's brother, Emil Joseph Dillon (h. 1854), made a reputation as a writer on foreign affairs, especially in *The Daily Telegraph* and *The Fortnightly Review*.

DIMORPHISM (Gr. di, double; morphē, form). Term applied to the phenomenon of a living organism which assumes two very different forms. In certain arthropods male and female are so different in form as to appear to belong to different genera (sexual dimorphism). Some butterflies differ in appearance at different seasons, and some of the individual hydroids in a zoological colony look like entirely different animals. See *Biology*.

DINAN. Town of Brittany, in the dept. of Côtes-du-Nord. It is 15 m. S. of St. Malo mainly on the left bank of the Rance; on the right is the suburb of Lanvallay. The river is navigable, and steamers go to and from St. Malo. Dinan has its town walls partly intact with three gateways; a castle now used as a prison; the cathedral of S. Sauveur, partly Gothic and partly Romanesque, and the church of S. Malo. It has a river harbour. The viaduct over the Rance is notable. The Tour de l'Horloge dates from the 15th century. In the Middle Ages it was a famous Breton stronghold. Pop. 10,161.

DINANT. Town of Belgium, in the prov. of Namur. It is on the right bank of the Meuse with the suburb of St. Medard on the left, 17 m. by rly. S. of Namur. The fine Gothic church of Notre Dame was badly damaged in the Great War. Formerly one of the largest towns in the Netherlands, it began to decay after the destruction of its walls and castle by Charles the Bold of Burgundy in 1466. It belonged then and afterwards to the bishopric of Liège and became Belgian on the foundation of that kingdom in 1830. The name is said to be a corruption of Diana. Pop. 5,907.

Dinant was the scene of fighting between the French and the Germans in Aug., 1914. Later German troops without any sort of investigation fell savagely on the town; they killed 606 civilians, and destroyed 1,263 houses out of a total of 1,375.

DINAR. Yugoslavian silver coin, value about 9½d. It is coined in pieces of 5 and 2 dinars, one, and half-dinar. It is divided into 100 paras.

DINARD. Town and watering place of Brittany. It stands on a headland at the mouth of the Rance, St. Malo being on the other side of the river. Near is the place of St. Enogat. Pop. 6,961.

DINDINGS. Strip of territory on the S.W. coast of the Malay Peninsula, forming part of the Straits Settlements. It is 22 m. long and is included in the Penang Residency. The island of Pangkor (Dinding) is part of it.

Dingey. Smallest ship's boat, used also for purposes of pleasure

These boats are carried mostly by yachts and small vessels, as they are handy and can be dropped or picked up with ease. See *Canoe*.

DINGLE. Seaport and market town of co. Kerry, Irish Free State. On Dingle Harbour, a N. arm of Dingle Bay, 30 m. by rly. S.W. of Tralee, it is a centre of the fisheries, engages in mackerel curing, and exports hutter. Market day, Saturday. Pop. 1,998.

DINGO (Canis dingo). Wild dog of Australia. It varies in colour from greyish red to black, and is a little smaller than the common wolf, the head being blunter and more dog-like. The tail is usually bushy, the limbs fairly long. It is common in the wooded districts of Australia, is nocturnal and shy, and is rarely found in packs. The dingo is a great pest to sheep and poultry. See *illus. above*.

DINGWALL. Burgh and co. town of Ross and Cromarty. It is at the head of Cromarty Firth, 18½ m. N.W. of Inverness by the L.M.S. Rly. There is a weekly corn market (Wed.). Pop. 2,323.

DINOSAUR. Order of extinct land reptiles living in the Mesozoic era. Many of gigantic size with tiny brains, they dominated the world of their time by their bulk. Their skeletal remains are found in every continent, occasionally with impressions of the tuberculated skin, while in the Connecticut valley in N. America they have left a hundred varieties of their footprints. The dinosauiria form four sub-orders: 1 Beast-footed (e.g. megalosaurus); 2 Lizard-footed (atlantosaurus); 3 Armoured (stegosaurus); 4 Bird-footed (iguanodon). See *Brontosaurus*; *Diplodocus*, etc.

Dingo, wild dog of Australia. See below *Gambier Bolton, F.Z.S.*

popular watering

Roman times, when it was applied first to divisions of provinces, and then, under the empire, to a number of provinces, collectively known as a prefecture. The original partition of territories into areas over which the jurisdiction of a bishop extended conformed to the civil divisions of the Roman empire.

Since 1920 the following new dioceses have been created in England: Blackburn, Derby, Guildford, Leicester, and Portsmouth. In Wales the new ones are Swansea and Brecon and Monmouth. The Church of England has now 43 dioceses, 30 being in the province of Canterbury and 13 in the province of York.

In Wales there are six. In England and Wales there are 4 Archbishopric and 14 Episcopal Roman Catholic sees; in Scotland 2 and 4 respectively; in Ireland 4 and 24.

The diocesan court is one of the spiritual courts of the Church of England. It is convened for the trial of ecclesiastical causes

DIOCESE (Gr. diokēsis, administration). Eccles. area under a bishop's jurisdiction. The word derives from Roman times, when it was applied first to divisions of provinces, and then, under the empire, to a number of provinces, collectively known as a prefecture. The original partition of territories into areas over which the jurisdiction of a bishop extended conformed to the civil divisions of the Roman empire.

Since 1920 the following new dioceses have been created in England: Blackburn, Derby, Guildford, Leicester, and Portsmouth. In Wales the new ones are Swansea and Brecon and Monmouth. The Church of England has now 43 dioceses, 30 being in the province of Canterbury and 13 in the province of York.

In Wales there are six. In England and Wales there are 4 Archbishopric and 14 Episcopal Roman Catholic sees; in Scotland 2 and 4 respectively; in Ireland 4 and 24.

The diocesan court is one of the spiritual courts of the Church of England. It is convened for the trial of ecclesiastical causes

Diocese. Map of the ecclesiastical divisions of England and Wales. The dioceses are divided between the provinces of Canterbury and York

land within a diocese, and presided over by the commissary chancellor of the bishop. See *Bishop*; *Church of England*.

DIOCLETIAN (A.D. 245-313). Roman emperor, 284-305. Born in Dioeclea in Dalmatia of humble parentage, he entered the

Diocletian, Roman emperor
Capitol Museum, Rome

army, where he had a distinguished career. On the death of Numerianus he was proclaimed emperor by his soldiers. Owing to the continued pressure of barbarians on the frontiers of the empire, Diocletian thought it wise to appoint Maximian as a colleague, assigning to him the IV. portion of the empire (286). This arrangement was followed by a further division in 292, when Constantius Chlorus and Galerius were appointed Caesars.

The period of his reign was marked by many successes. Britain was regained for the empire in 296, disturbances in Egypt were quelled with great severity, while the Persians and other barbarians were kept well outside its frontiers. The latter years of the reign of Diocletian were marked by a cruel persecution of the Christians. He abdicated on May 1, 305, and died in 313. Under Diocletian the empire became in form what virtually it had long been in fact—an absolute monarchy.

DIODENES, CALLED THE CYNIC (c. 412-323 B.C.). Born at Sinopë on the Euxine, he accompanied his father to Athens and became a pupil of Antisthenes (q.v.). He carried the teaching of his master to extremes, went about slovenly and untidy, and lived in a tub, or more probably a tiny mud hut jokingly called a tub by the Athenians. During a voyage to Aegina he was captured by pirates and taken to Crete, where he was bought as a slave by a rich Corinthian. The rest of his life was spent partly in Athens and partly in Corinth, where he died, 323 B.C.

There were two other philosophers of this name. One, a native of Crete, lived in the 5th century B.C., and taught that air was a living, creative, and thinking substance. The other, who lived in the 2nd century B.C., succeeded Zeno as head of the Stoics.

DIOMEDES OR **DIOMEDE**. In Greek mythology, king of Argos, one of the Greek heroes in the Trojan war. During the war he was under the special protection of Athena, with whose aid he inflicted wounds even on the deities Arès and Aphrodité. Along with Odysseus, Diomedes entered Troy in disguise, and carried off the city's sacred emblem. Diomedes is said to have died at Daunia in Apulia.

Another Diomedes, the reputed son of Arès, was king of the Bistones in Thrace, who possessed a herd of horses which fed on human flesh. He was killed by Hercules. Pron. Di-om-edeec.

DIONYSIA. In ancient Greece, festivals in honour of Dionysus or Bacchus (q.v.). The chief were those held in Attica, the Greater Dionysia at the beginning of spring, the Lesser in December. The main feature of the former was a procession bearing the image of the god from Lenaëum to the Acropolis and back. The festival symbolised the reappearance or coming to life of nature in spring after its disappearance or death during winter. The dithyrambs sung originally had as their theme the adventures of Dionysus in his progress through the world, and were the germ of the drama. See Drama.

DIONYSIUS THE ELDER (430-367 B.C.). Tyrant of Syracuse. He so distinguished himself in the war against Carthage that in 405 he was made commander-in-chief of the Syracusan forces. He then made himself absolute ruler of Syracuse, and before long had extended his rule to other cities of Sicily. Having carried on a war with Carthage, he forced the Greek cities in Italy to acknowledge his authority. Though oppressive and cruel, Dionysius was a notable patron of art and literature and beautified Syracuse.

Dionysius was succeeded in 367 B.C. by his son, Dionysius the Younger, who was driven out by Timoleon in 343, and retired to Corinth.

DIONYSIUS THE AREOPAGITE. A convert of S. Paul when he preached at Athens (Acts 27, 34). He is said to have become the first bishop of Athens, and to have been martyred there under Diocletian.

Dionysus. In Greek mythology, alternative name for Bacehus (q.v.), the god of wine.

DIOPSIDE. Rock-forming mineral: a variety of augite without alumina, used as a gemstone. It forms translucent prismatic crystals varying from greenish-white through greyish-green to greenish-black. Diopside occurs in Italy, Scandinavia, the Urals, and N. America.

DIOPHASE. Emerald copper ore. Composed of a silicate of hydrogen and copper, and crystallising in six-sided prisms, it is sometimes used as a gemstone. It occurs in Siberia, Germany, Chile, and the French Congo region.

DIORITE. Family of crystalline-granular rocks of igneous origin. Composed of plagioclase and iron-magnesia minerals—usually hornblende, which causes their prevailing dark-green colour—they differ from granite in having no mica and little or no quartz. Diorite axes are found in the Swiss lake-dwellings and elsewhere in neolithic Europe. It was quarried in early Egypt for vases and statues, and was used in early Mesopotamia.

Dioscuri (Gr. Dios kouroi, sons of Zeus). In Greek mythology, name often given to the two heroes Castor and Pollux (q.v.).

DIPHThERIA (Gr. diphtera, leather). Acute infectious disease characterised by the formation of a fibrinous exudate or membrane, most often in the throat, larynx, or nose. It may occur in young infants, but is most frequent between the ages of 2 and 5 years; very few cases occur after adolescence. The disease is probably most often conveyed by infected milk and by contact with sick persons. It is also generally believed, although not conclusively proved, that a certain number of healthy persons who habitually harbour the germ—"carriers," as they are termed—may act as centres of infection.

Diphtheria was formerly a very fatal disease, but the mortality among those attacked has been much reduced since the introduction of anti-toxin treatment. All cases of diphtheria must be notified to the local Medical Officer of Health under the Infectious Diseases Act of 1889.

DIPLODOCUS. Genus of extinct gigantic N. American land reptiles. They were herbivorous, lizard-footed dinosaurs, living in Jurassic times. They were long-necked, long-tailed, and walked on all fours. Their small heads had the nostrils on the top.

DIPLOMA. Certificate or other mark of efficiency, akin to a degree. Diplomas are given by institutions not of university rank, and also by universities in subjects in which they are not entitled to give degrees.

The Diploma Gallery is the home of the examples of work which artists, on becoming R.A., are required to present to the Academy within six months of their election. The collection is at the Royal Academy, Burlington House, London.

DIPLOMACY. Art of conducting negotiations between states.

Generally speaking, the business of the diplomatist is not to settle questions of policy, but to negotiate on the lines of a policy which is communicated to him by his ministerial chief. Up to the middle of the 19th century it was often necessary to leave a large measure of discretion to an ambassador at a distant capital. The introduction of the telegraph has given all diplomatic envoys the opportunity of referring to headquarters for instructions even upon the most urgent questions, but in shaping the national policy a foreign minister will always be guided by the information and the suggestions received from diplomats.

Abuses of diplomatic privilege are not unknown even at the present day, but international lawyers are unanimous in holding that the person of a diplomatic envoy ought to be inviolable, however gross his misconduct. It may be permissible, if his conduct constitutes a public danger, to place him under arrest as a temporary measure of precaution. This course was adopted by the government of George I in the case of a Swedish minister in London who was found to be intriguing with the Jacobites in 1717; but as a rule it is considered sufficient to demand the recall of the offending envoy. In this way the U.S.A. took action in 1915 against Dr. Konstantin Dumba, the Austro-Hungarian ambassador, who was endeavouring to promote munition strikes. See Ambassador.

Diplomatic Service is the collective name for the officials authorised to represent their country politically at a foreign court. In Great Britain the service is controlled by the Foreign Office. Candidates must be well recommended to the foreign secretary, approved by a board of selection, and have then to pass a qualifying examination, chiefly in languages. See Civil Service.

DIPLOMATIC. Word used for the critical study of documents, especially historical. This study was first called diplomatic (res diplomatica) in France in the 17th century, doubtless because some of the documents were known as diplomas. Diplomatie is concerned solely with the genuineness or otherwise of the documents, and arose at a time when forgeries of ancient charters, etc., were plentiful and undetected. See Ambassador; Manuscripts; Palaeography.

Dipper. Name sometimes applied to the water ouzel (q.v.).

Dipsomania (Gr. dipsa, thirst; mania, madness). Name given to the uncontrollable desire for alcohol. See Alcoholism.

DIPTERA (Gr. two-winged). One of the orders into which insects are divided. Something like 40,000 species are known in this order, which includes the house fly, crane fly, and the gnats. Only the two fore wings are present, the hind ones being represented by halteres or balancers. The mouth parts are suctorial. The larvae are usually white maggots without legs or well-defined head.

Diplodocus. Prehistoric land reptile weighing about 20 tons

DIPTYCH (Gr. diptychos, folded in two). Hinged, two-leaved tablet of wood, metal, or ivory. Folded together like a book, with its

Diomedes, from a bust by Polycleitos
Louvre Museum

inner surfaces coated with wax, it was used by the Greeks and Romans for writing on with a stylus. Later, the diptych was adopted by artists, the tablets being replaced by panels on which were painted pictures, mostly of a religious character. See Triptych.

DIRCÉ (Gr. Dirke). In Greek mythology, wife of Lycus, king of Thebes. For her cruel persecution of Lycus's former wife, Antiope, the children of the latter, Amphion and Zetbus, when they reached manhood, besieged Thebes, killed Lycus, and tied Dirce to a bull. Pron. Dir-see.

Directoire Style. Simplified form of decoration which preceded the empire style in France. It marked a reaction in taste from the 18th century modes. See Directory.

DIRECTOR (Lat. dirigere, to direct). One who holds a governing administrative position. The name is given to various officials in the War Office, e.g. the Director of Military Operations; to high officials in civil departments, e.g. the Director of Finance in the Ministry of Pensions; and also to some education secretaries.

In English company law a director is a person appointed under the articles of association to manage a company. The directors must act as a body, and the decision of the majority is final. They have power to bind a company in matters not outside its memorandum of association. Usually they must have a financial qualification, and are liable for gross negligence in the discharge of their duties and for breaches of trust. See Company Law.

DIRECTORY, THE (Fr. Le Directoire). Committee of five who governed France from 1795 to 1799. They were chosen by the council of ancients, the upper house of the assembly, from 50 persons elected by the 500 members of the lower house. The directors were Rewbell, Barras, La Révellière-Lépeaux, Carnot, and Letourneur. They divided the various departments between them, their headquarters being in the Luxembourg. Differences soon appeared, and in 1797 Sieyès, now one of the five, was planning to overthrow the constitution of 1795, when Bonaparte arrived in France, and by the coup d'état of 18 Brumaire (Nov. 9, 1799) put an end to the Directory. See French Revolution.

DIRIGIBLE. Term applied to any aerial vessel capable of being steered. It was originally employed to distinguish from the ordinary balloon the lighter-than-air vessel which on being fitted with motive power of its own acquired dirigibility. See Aeronautics; Airship; Balloon.

DIRK (Gael. duire). Dagger or poniard worn by Highlanders. Its triangular blade is pointed, and its length varies from 12 ins. to 20 ins.

It is also the side-arm of a midshipman in the British navy. See Dagger.

DIRT TRACK RACING. Form of motor cycle racing on a dirt or cinder track. Features of the sport are the shortness of the laps, these averaging about 440 yds., and the sharpness of the turns. It was introduced into England in 1928 from Australia and soon became popular. Meetings are held at Lea Bridge,

Stamford Bridge, Crystal Palace, White City, Harringay, and Wembley in the London area, and at Birmingham, Manchester, Liverpool, Leicester, Bolton, Blackpool, and other cities.

Leagues have been formed, each computing team consisting of six riders. Each team competes with every other twice in the season, on the principle of the Football League, the team with the highest points becoming champion.

Dis. In Greek mythology, alternative name for Hades or Pluto (q.v.).

DISCIPLE (Lat. discere, to learn). One who professes to be learning or to have learned something from another and maintains what he has learned. The word is applied to the immediate followers of Jesus Christ. After the Ascension it was used of all who professed teaching. The word occurs once in the O.T. (Isaiah 8), and in the N.T. is applied to Moses (John 9); followers of John the Baptist (Matt. 9); and followers of the Pharisees (Matt. 22). See Apostle.

The religious body known as Disciples of Christ or Churches of Christ arose simultaneously in America and in Britain about 1800, their object being to procure Christian unity by a restoration of New Testament Christianity. Alexander Campbell (q.v.) was the chief leader. The body is orthodox, eschews party names, and practises baptism (immersion) of believers, for remission of sins.

DISCLAIMER. In English law, a renunciation or denial. A person nominated in a will as executor may disclaim before probate. A trustee in bankruptcy may disclaim an onerous property—e.g. a lease—on paying compensation. A tenant of land disclaims his landlord's title if he denies his obligation to payment, or sets up a title to the land in himself, denying his landlord's title.

DISCO OR **DISKO.** Island off the W. coast of Greenland, N. of Davis Strait and separated from the mainland by Waigat Strait. It has stone quarries, lignite coal mines and valuable fisheries. The harbour and town of Godhavn lies on the S. coast. Its area is 3,005 sq. m.

DISCOBOLUS. Name of the bronze statue by Myron (q.v.) representing an athlete "throwing a discus." The British Museum (Townley Marbles) has a copy, and there is another in the Vatican.

DISCOUNT (Lat. dis, off, away; Fr. compter, to count). Financial term for an allowance made when a bill or debt is paid before it is due. It is chiefly used in connexion with bills of exchange. In a looser

sense it means the amount allowed off the prices that buyers pay for goods. The word is also used for the amount by which any investment or security is less than its face value. In this sense discount is the opposite to premium. See Bill of Exchange.

DISCOVERY. British ship. Of the several Discoveries, all used in Polar exploration, the first, commanded by William Baffin, made six voyages to Arctic regions between 1602-16. The second voyaged to Hudson's Bay in 1719. The third took part in Capt. Cook's third voyage; in the fourth Vancouver found the land named after him. The fifth was commanded by Capt. H. F. Stephenson during the Franklin Relief Expedition of 1875. The sixth carried Capt. R. F. Scott's expedition to the Antarctic, in 1901-4. She was 172 ft. long, with a tonnage of 475-485. A later Discovery was the vessel in which Sir D. Mawson went to the Antarctic in 1929.

Discovery. Captain Scott's vessel sailing for the Antarctic in 1901
Eastwood

DISCUS (Gr. diskos). Round or oval piece of stone or metal. Throwing the discus was one of the contests of the Greek Pentathlon (q.v.) and is still a favourite pastime in Greece. The sport was revived at the Olympic Games in 1896. The regulation modern discus consists of a circular piece of wood of about 8½ ins. in diameter surrounded by a rim of iron, a piece of lead being inserted in the centre to bring the weight up to 4½ lb. The world's record was made by C. Hauser, in the U.S.A., 1926, his throw being 103 ft. 6½ ins.

DISEASE. Ill-health due to a recognizable cause. A localised disease is one limited to a definite part of the body, for example, lupus. A constitutional disease is one which affects the whole body, such as scarlet fever. An infectious disease is one due to the action of a micro-organism in the body, or part of the body. An epidemic disease is one which attacks a large number of persons more or less simultaneously. An endemic disease is one which tends to occur in a particular locality. A congenital disease is one present at birth. A tendency to develop a disease may be inherited. Thus the offspring of tuberculous parents are more likely to develop tuberculosis than those from healthier stock.

Certain infectious diseases must be notified to the medical officer of health, who can order infected rooms to be re-papered or drains relaid; and certain forms of poisoning occurring in factories and workshops must be notified at once to the Home Office. See Notification.

The Diseases of Animals Act, 1894, imposes upon anyone who owns or has charge of animals suffering from disease the duty of segregating them from sound animals. This and other Acts also deal with disinfection, importation of animals, declaration of infected places, and slaughter of diseased or suspected animals. See Cattle; Dog; Horse.

DISESTABLISHMENT. Term used for the separation of church and state. It is usually associated with disendowment, but it is possible to disestablish a church and leave it in possession of its property. Church and state were separated in France, Dec. 11, 1906

Diptych in ivory, showing The Virgin and Child and Christ blessing. 14th century; 81 inches high
Victoria & Albert Museum

Discobolus. Vatican copy of the bronze statue by Myron

Dirk. Highlander's dirk and sheath

The Irish Church was disestablished and disendowed from Jan. 1, 1871. After several attempts to disendow and disestablish the English Church in Wales, a bill was passed in 1914 and came into effect in 1920.

The movement for the disestablishment of the English Church started about 1831. The Society for the Liberation of Religion from State Patronage and Control, known as the Liberation Society, was founded in 1844, and the Church Defence Institution in 1860. Some members of the English Church have expressed themselves willing to agree to disestablishment. See Church of England.

DISFRANCHISEMENT. Depriving persons of the franchise or right to vote, and also of the right to be separately represented. A parliamentary constituency is disfranchised when it loses the right to send separately a member or members to the House of Commons. Under the Reform Act of 1832 no fewer than 56 boroughs were wholly disfranchised, others suffered the same fate under the Acts of 1867, 1884, and 1918. The individual voters are not disfranchised; they become voters in the constituency in which the borough is merged.

The second kind of disfranchisement is taking away the right to vote from individuals. Thus in 1782 the vote was taken away from those employed in the excise, customs, and post office, and was not restored until 1867. In 1918 conscientious objectors were disfranchised for a limited period. See Franchise; Vote.

DISINFECTION. Process of destroying disease organisms given off (a) by sufferers from an infectious or communicable disease, and (b) by non-sufferers who are "carriers" of disease organisms; also the destruction of such parasites as fleas, bugs, and lice.

No agent can be regarded as a disinfectant unless it is capable of completely destroying the organisms against which it is employed. Agents which merely check bacterial growth and prevent decomposition are known as antiseptics, while others which oxidise, absorb, or mask odours are termed deodorants. Liquid or gaseous disinfectant agents are preferable to solids, for the former, being in solution, can be much better distributed.

There are various methods of disinfection: (1) By burning or exposure to high temperatures, boiling water, hot air, and steam; (2) by the action of oxidising agents, such as atmospheric air, chlorine, various fluids, etc.; (3) by the action of reducing agents, sulphurous acid, etc.; (4) by agents which enter into combination with albumen, such as perchloride of mercury, sulphate of copper; (5) by agents which exercise a directly poisonous effect on micro-organisms—perchloride of mercury, iodide of mercury, and phenols. See Public Health; Sanitation.

DISLOCATION (late Lat. *dislocare*, to put out of place). Displacement of the head of a bone from its socket in a joint. This is sometimes congenital, when the condition is due to some fault in development. The hip is the joint most frequently affected. More often dislocation is due to violence, such as a fall, particularly if a strong muscular effort is made at the moment of injury. When the skin is broken and communication is made with the external air, the condition is spoken of as compound dislocation, and when associated with fracture

Dislocation of the shoulder, the head of the humerus being forced downwards

of a bone the term fracture-dislocation is employed. See Massage; Surgery.

DISPENSATION (Lat. *dispensare*, to weigh out, distribute). Term denoting (1) a general scheme under which certain laws and regulations are appointed to men, as the Jewish dispensation, the Christian dispensation; (2) a relaxation or suspension of a law granted in a particular case, while the law remains binding on the community.

In the Roman Catholic Church the pope claims as vicar of Christ to grant dispensations from certain impediments in matrimonial cases, from vows and from orders. By delegation the power of dispensation is vested in certain tribunals and congregations, and delegation is further exercised by bishops, vicars-general, and parish priests.

DISPENSER. Person qualified under the Pharmacy Acts to carry on the business of a chemist and druggist, which includes the dispensing of physicians' prescriptions. In Great Britain pharmacists have no monopoly except in so far as the dispensing involves the sale of scheduled poisons. As most prescriptions contain a small amount of poison, dispensing is virtually a monopoly of registered chemists. Dispensers in the army are known as compounders. To become a dispenser it is necessary to dispense for six months before entering for the assistants' examination. Candidates must be 19 years of age before they can enter for the examination. Of recent years a number of women have entered the dispensing profession. See Chemist.

DISPERSION. Name given to a phenomenon in optics. If a narrow pencil of rays of white light, such as sunlight, is allowed to pass obliquely from one medium into another, as from air into water, glass, or crystal, it is found that in the second medium the light is split up into light of several colours. This is the phenomenon referred to as dispersion. See Diffraction; Light; Optics.

Isaac D'Israeli, British author

Displacement. Weight of water displaced by a ship or floating body, and consequently the weight of the body itself.

D'ISRAELI, ISAAC (1766-1848). British author, father of the earl of Beaconsfield (q.v.). Descended from a family of Jews, belonging to the Spanish Sephardim, he was born in London, May 11, 1766, and is famous as the compiler of four entertaining literary miscellanies, *Curiosities of Literature*, 6 vols., 1791-1834; *Calamities of Authors*, 1812-13; *Quarrels of Authors*, 3 vols., 1814; and *Amenities of Literature*, 3 vols., 1841. He died at Bradenham House, Bucks, Jan. 18, 1848.

DISRUPTION. Name given to the secession, on May 18, 1843, of 420 ministers of the Church of Scotland on the question of the patronage of livings. The seceding ministers, who numbered nearly half the church ministers, were followed by their congregations. Under the leadership of Dr. Thomas Chalmers (q.v.), they formed the Free Church of Scotland (q.v.).

DISS. Urban dist. and market town of Norfolk. It is on the river Waveney, 19 m. S.W. of Norwich, on the L.N.E.R. Formerly noted for "Suffolk hempen cloth," it now manufactures brushes and mats. Here are a notably fine church and the picturesque Diss Mere. Market day, Friday. Pop. 3,513.

DISSENTER (Lat. *dissentire*, to disagree). One who dissents from the doctrine or discipline of the established Church of England.

The term came into use soon after 1688.

Dissenting Deputies is the name given to an association of laymen, representing the Presbyterian, Congregationalist, and Baptist denominations. It was formed in 1732, and has the privilege of approaching the sovereign and offering an address. See Non-conformity.

DISTAFF (A.S. *distaeaf* = disc, bunch of flax; staff). Short cleft stick on which was wound wool, carded cotton, or flax to be spun. It was held under the left arm, and the threads drawn from it were twisted by the forefinger and thumb of the right hand. The spun thread was wound on a bobbin suspended from the thread and rotated so as to prevent the spun thread from untwisting.

Distaff. Peasant girl of Normandy with spinning wheel and distaff

The term is also used for the staff or rock of a hand-spinning wheel, upon which flax is suspended.

DISTEMPER. Species of painting in which the colours are mixed with a glutinous binding vehicle soluble in water. It is executed on wood or canvas, the surface of which has been coated with chalk or plaster mixed with gum. It is sometimes known as *tempera*. The word is also used for a kind of paint put on the walls of a house as a substitute for paper.

DISTEMPER. Disease of dogs. It is due to a specific microbe, and is highly infectious. Puppies, from three to nine months old, are more liable to it than older animals. The first symptoms resemble those of cold, with a discharge from the nostrils. Loss of appetite follows, and unless care be taken the after results may be dysentery, gastroenteritis, or pneumonia. The patient should be kept warm, light and digestible food given, and, if necessary, an aperient, such as castor oil mixed with syrup of buckthorn.

DISTHENE. Crystalline mineral composed of silicate of alumina. Differing from andalusite in forming triclinic crystals, its name was given by French mineralogists because it cannot be scratched with a knife except along the large prism face.

DISTILLATION (Lat. *destillare*, to drop down). Physical process by which a substance or constituent of a substance is converted into vapour and then condensed to a liquid state. The condensing apparatus consists in its simplest form of a vessel known as the still, in which the substance is heated; a condenser or vessel for cooling the vapour; and a receiver in which the liquefied vapour is collected. Distillation is employed in the manufacture of alcohol and strong spirits, and in many industrial processes. Potable, i.e. drinkable, spirits are distilled from wine, cider, barley, rye, corn, potatoes, rice, etc., and industrial alcohol is made from sugar-beet, molasses, and sawdust. The latter kinds can be used for potable purposes when rectified (see Alcohol; Still). Where in one operation it is desired to rate two or more volatile liquids having different boiling points, fractional distillation, an arrangement for collecting the distillates according to their volatility, is resorted to.

Destructive or dry distillation is the name given to the process when the substance being distilled is decomposed by the heat employed, e.g. in the manufacture of coal gas. In metallurgy, distillation is a method of extracting metals from ores by heating and subsequent cooling. See Brandy.

The Distillers' Company is one of the London city livery companies. The offices are at the Guildhall, London, E.C.

DISTINGUISHED CONDUCT MEDAL.

British military decoration. It is conferred upon warrant officers, non-commissioned officers and men for "individual acts of distinguished conduct in the field." The obverse of the medal bears the effigy of the reigning king; reverse, inscription, "For Distinguished Conduct in the Field." The ribbon is three stripes equal width, outside red, centre blue.

Distinguished Conduct Medal

DISTINGUISHED FLYING CROSS.

British decoration awarded for gallantry on active service to officers and warrant officers of the Royal Air Force. It was instituted in 1918, and the ribbon is purple and white, striped horizontally.

The Distinguished Flying Medal is awarded to non-commissioned officers and men of the Air Force. Instituted in 1918, it is given only for acts of gallantry when flying against the enemy. The ribbon of this decoration is purple and white, striped horizontally.

Distinguished Flying Cross

DISTINGUISHED SERVICE CROSS.

Silver cross established in Britain in 1901 as the Conspicuous Service Cross, its present title being substituted in Oct., 1914. It is awarded to all naval officers below the rank of lieutenant-commander, and to warrant officers whose services have been noted by special mention in dispatches. The ribbon is three stripes equal width, outside blue, centre white.

Distinguished Service Cross

DISTINGUISHED SERVICE MEDAL.

British medal instituted in Oct., 1914. Its award is confined to chief petty officers and lower ratings in the navy, and to non-commissioned officers and men in the Marines, and it is granted to those "who set an example of bravery and resource under fire, but without performing acts of such pre-eminent bravery as would render them eligible for the Conspicuous Gallantry Medal" (q.v.). The ribbon is three stripes equal width, outside blue, centre white with a thin blue stripe.

Another Distinguished Service Medal is open to the rank and file of the Indian army. The medal bears the sovereign's profile, the reverse having a laurel wreath inscribed "For Distinguished Service." The ribbon is deep violet with borders of blue. This decoration was founded June 25, 1907.

Distinguished Service Medal

DISTINGUISHED SERVICE ORDER.

British naval, military, and R.A.F. order given to officers. It was instituted by Queen Victoria on Nov. 9, 1886, the 50th year of her reign. Recipients are called companions, the reigning monarch being the sovereign of the order.

Distinguished Service Order badge

British officers only are eligible for the companionship. Officers can be nominated only after their names have appeared in dispatches for "meritorious or distinguished service in the field or before the enemy."

The badge of the order is a gold Maltese cross, enamelled white, edged gold, having on one side the imperial crown in gold and on the reverse the imperial and royal cipher; it is suspended from the left breast by a red ribbon, edged blue.

DISTRAINT or **Distress** (Lat. *distragere*, to pull asunder). In English law, the right to seize goods, without process of law, as security for a debt. The most usual case is that of a landlord seizing a tenant's goods for rent. Distress must now be levied by the landlord himself or a bailiff certified by the local county court, and can only be levied between sunrise and sunset. No forcible entry can be made. Under an ancient statute a landlord whose tenant has fraudulently removed his goods to evade distress may follow and distrain upon them within 30 days.

DISTRIBUTION, THREE-WIRE. Method of electrical power transmission devised by Dr. John Hopkinson. The current from two dynamos coupled in series goes to two mains, A and B, which constitute a primary circuit. A third wire, C, receives current from one dynamo only. Thus the potential difference between the third wire, C, and either of the two primary mains is only half the total voltage. Therefore any lamps connected between A and C or A and B will receive only half the voltage in the primary circuit.

DISTRICT COUNCIL. In the United Kingdom, a body elected for local government purposes. There are two types of district council, the urban and the rural, both established in England and Wales by the Local Government Act of 1894. Every urban district has a council. Its members are chosen by the ratepayers in April, and serve for three years. Their duties are to safeguard the public health by looking after the drainage, the water supply, infectious diseases, etc.

Every rural district, which may be either a single parish or a group of parishes, has a council. The number of members is fixed by the county council.

DITCHLING BEACON. Hill of Sussex, one of the highest points of the South Downs. Rising near Hassoeks, about 7 m. from Brighton, it is 813 ft. high, and on its summit are remains of a British camp. In 1928 the beacon was bought by Brighton.

DIURETICS (dia, through; ouron, urine). Drugs employed to increase the quantity of urine. They are used to dilute the urine when it tends to precipitate solid matter, in certain forms of Bright's disease, heart disease, and diseases of the lungs; and in dropsical conditions to diminish the amount of fluid in the body. The more important diuretics are digitalis, caffeine, scoparia, buchu, juniper, pituitary extract, potassium acetate, and potassium nitrate.

DIVER. Great Northern diver. Largest of the group.

Diver. Great Northern diver. Largest of the group.

DIVER (Colymbus). Family of birds with three British species. They have their feet set very far back, which gives them an upright

attitude when standing and an awkward gait when walking. They feed on fish, and spend the winter at sea, visiting inland waters in the nesting season. They can remain under water for more than five minutes. The Great Northern diver (*Colymbus glaucialis*) is found in Western Europe, Ireland, and Canada. It is over 30 ins. long, and has black plumage thickly spotted with white on the upper parts, with white below. The Black-throated diver (*C. arcticus*), found in the Hebrides, Scandinavia, Northern Asia, and America, is somewhat smaller.

DIVES (Lat. rich). The rich man in Jesus's parable of the Rich Man and Lazarus (Luke 16, 19-31) is often designated by the Latin equivalent Dives. His lot in this world and the next is contrasted with that of Lazarus, a beggar; whereas Lazarus is comforted, Dives suffers anguish.

DIVIDE. Word used in America and Australia for a mountain range dividing two valleys, as the Great Divide in Wyoming and the Great Dividing Range in Australia.

DIVIDEND (Lat. *dividendum*, something to be divided). Usually the money distributed from profits to the shareholders in joint stock companies. Dividends are usually of two kinds, those on preference or preferred shares, which are at a fixed rate, and those on the ordinary shares, which vary with the profits. Many companies pay two dividends a year: one an interim dividend and the other a final one, paid after the year's accounts are made up. The Companies Act of 1862 laid down that no dividend must be paid except out of profits. Some few dividends are paid free of income tax, but from the majority the tax is deducted. They are sent by means of dividend warrants, which are stamped to serve as cheques. See Company Law.

DIVI-DIVI (*Caesalpinia coriaria*). Small tree of the order Leguminosae, a native of S. America. The leaves are divided into leaflets, the latter again into slender segments. The white flowers are in branched sprays, and are succeeded by S-shaped flattened pods which are exported for the tannin they contain.

DIVINATION (Lat. *divinare*, to see like a god). Quest or discovery of the unknown by non-rational processes. In the stricter sense divination is subjective or intuitive. It makes use of (1) dreams; (2) autohypnotism; (3) subconscious impression; (4) necromancy. Its highest manifestation is the oracle. Dreams are either involuntary or purposely sought by crystal-gazing and the like.

The objective processes include the observation of (1) living things, as in augury and palmistry; (2) dead things, as in the inspection of entrails and shoulder-blades; (3) physical objects, as in astrology, geomancy, and the behaviour of sand, fire, or water; (4) magical mechanisms, as suspended rings, keys, or sieves; (5) the consultation of hooks at random—Virgil, the Bible; (6) the casting of lots. See Augur.

DIVINE RIGHT. Political theory that all authority has a divine sanction, and that the sovereign power does not exist merely by the will of the people or the consent of the government. This doctrine was most in evidence during the reigns of James I and Charles I, and the clash between it and the ideas held by the parliamentarians was the fundamental cause of the Civil War.

DIVING. Act of plunging into the water. One of the most useful methods, especially for racing purposes, and for diving into shallow water, is the straightforward plunge, in which the body is hurled head foremost from a position almost level with the water, at a very little depth beneath the surface for a distance of some 30 ft. The swallow dive, a jump from a height of 40 ft. to 50 ft., with the

arms outstretched at right angles to the body, is a graceful variety. See Swimming.

Another form of diving is for the recovery of sunken treasure from the sea and like purposes. The diving dress generally used is made of indiarubber, interposed between layers of twill. The only openings are at the wrists, compressed by elastic cuffs, and at the

Diving. Neufeldt and Kuhuke's snit, a rigid case made of an aluminium alloy with jointed limbs

top. The neck of the dress is clipped by bolts and nuts to a copper corselet, on to which the copper helmet screws. The helmet is provided with a removable window in front, a fixed window in each side, a non-return air inlet valve, and an air-escape valve. A telephone may also be fitted. On each side of the helmet is a hook to carry the leaden breast and back weights. A pair of stout boots, weighted with metal, completes the dress. A lifeline is used for raising and lowering the diver, and for signalling. A length of flexible wire-lined rubber tubing connects his helmet with an air-pump.

The air within the dress must be kept at a pressure corresponding to that of the water. Under high pressure a diver's blood vessels and tissues absorb excess nitrogen from the air, and when he ascends he must do so by stages, resting a period at each stage, so that the nitrogen may disperse. The greater the depth the shorter is the period the diver can safely remain, and the longer must be the time taken in his ascent.

For deep-sea diving a type of dress has been devised in which the diver is entirely enclosed in a rigid shell of aluminium or steel, with jointed arms and legs. Oxygen and air are provided, and carbonic acid given off in breathing is absorbed by a mask. By means of pine-needle-like implements operated from within the shell the diver may use a variety of tools. The air in the dress is at normal pressure, and the diver can remain below for long periods even at extreme depths.

The diving bell is a strong rectangular, open-bottomed steel chamber. Its weight is sufficient to allow it to sink when blown empty by air forced in through a valve at the top. It is lowered by a crane mounted on a stage pier or barge. The top has windows of thick glass in it, and the interior is furnished with seats, electric lamps, telephones, and tackle to which heavy objects can be attached. See Caisson; also illus. p. 338.

DIVING ROD. Twig used in "dowsing" or searching for subterranean springs of water or veins of ore. The dowser holds a forked twig in his hands, which on approaching the hidden water or metal twists and sometimes breaks. This practice has been in use from very early times. In the majority of cases which have been tested the results have proved entirely negative.

DIVISION. Word used in several senses. In a political sense it is used in the United Kingdom and other parts of the British empire for an electoral area that sends a member to the House of Commons. In both houses of parliament the act of voting, by passing into the lobbies, is known as a division.

In the military sense a division is a unit, the one between an army corps and a brigade. It consists of from 12,000 to 16,000 men. During the Great War the division was perhaps the most important of all the units, and it became usual to reckon the strengths of the various combatants in divisions.

DIVORCE (Lat. *divertere*, *divortere*, to separate). Formal ending of the legal tie between husband and wife. The present law of divorce in England and Wales was created substantially by the Matrimonial Causes Act, 1857, which first set up the divorce court.

By the Matrimonial Causes Act of July, 1923, a man and woman are placed on equal footing. Under this important enactment a divorce can be obtained for (1) adultery, or (2) desertion for three years and upwards, or (3) cruelty, or (4) incurable insanity of the other spouse if continuously certified as a lunatic for a period of at least five years immediately preceding the petition, or for (5) incurable habitual drunkenness, and where for a period of at least three years the parties have been separated by reason of a temporary separation order made under this proposed bill on the ground of habitual drunkenness. The divorce court can grant four kinds of relief, namely: (1) dissolution of marriage, (2) judicial separation, (3) nullity of marriage, (4) restitution of conjugal rights.

In the Divorce Court the question of the payment of costs is entirely in the discretion of the judge. A wife who has no separate estate, whether petitioner or respondent, can apply to the court to order her husband to give her security for costs. A wife can also petition for alimony (q.v.) pending a decree. After a decree the court has power to make orders of maintenance in favour of a petitioning wife and the children of the marriage. A husband petitioner may claim compensatory damages from a co-respondent.

There are special arrangements by which poor persons can institute proceedings for divorce. The opinion of a barrister that there is reasonable ground for taking action, together with an affidavit stating that the facts are true, must be delivered to the registrar of the Divorce Division of the High Court. With these must be another affidavit; if the husband is applying he must state therein that he is not worth £25 beyond wearing apparel after payment of his debts; if the wife is applying she must state that she has no separate estate worth £25. The court may then order that the expenses shall be paid from public funds.

DIXMUDE. Town of Belgium, in the prov. of W. Flanders. It is on the river Yser, 12 m. N. of Ypres, 42 m. from Ghent. The chief buildings are the church of S. Nicholas, with some valuable works of art, and the town hall.

During the earlier part of the Great War there was much fighting around Dixmude, which was taken and retaken by French and Germans in the autumn of 1914, the latter finally entering it on Nov. 10. The town was recaptured by the Belgians, Sept. 29, 1918. In Jan., 1920, President Poincaré bestowed on it the Croix de Guerre. Pop. 1,113. See Ypres; Yser.

DNIEPER. River of White Russia and Ukraine. It rises in the Valdai plateau, near the source of the Volga, and is navigable almost from its source. It falls into the Black Sea by a large estuary. Its chief tributaries are the Berezhina, Pripiet, and Desna. The Dnieper is of great importance

for the conveyance of corn to Odessa. Its length is 1,340 m.

DNIESTER. River of Poland, Ukraine, and Rumania. Rising in the Carpathians, it falls into the Black Sea, after a course of 750 m., midway between the mouths of the Danube and Dnieper. Like the Dnieper, it is an important waterway for the conveyance of grain and other goods.

DOBELL, SIR CHARLES MACPHERSON (b. 1869). British soldier. Born in Quebec, June 22, 1869, he served in the South African War. In 1913 he became inspector-general of the West African Frontier Force. On the outbreak of the Great War in 1914, Dobell commanded the Allied force which reduced the Cameroons, Sept., 1914. In Sept., 1916, he took command of the force which cleared the Sinai peninsula of the Turks. He was in command of a Division in India, 1917-19, and during the third Afghan War, 1919. In 1916 he was knighted.

DOBELL, SYDNEY THOMPSON (1824-74). British poet. Born at Cranbrook, Kent, April 5, 1824, the son of a wine merchant, he began to write verses when very young. His life, spent mainly in Cheltenham, as a wine merchant, was varied by numerous visits to the Continent in search of health. His chief works are *The Roman*, 1850; *Balder*, 1854; and *England in Time of War*, 1856, which enjoyed remarkable popularity. He died Aug. 22, 1874.

Sydney Dobell, British poet

DÖBERITZ. German prisoner of war camp, near Potsdam. It was established in 1914, on a flat, sandy plain, previously used as a parade ground for the Prussian Guard. It had a reputation for severe treatment.

DOBRUJA, DOBRUDJA OR DOBRUSCHA. District of the Balkans, now part of Rumania. Almost quadrangular, it covers 8,969 sq. m. It is bounded W. and N. by the Danube, E. by the Black Sea, and S. by Bulgaria. It is a great wheat-growing region. The most important town is Constanta, the principal port of export of Rumania. In 1878 most of the Dobruja was ceded to Rumania, and the rest was handed to her by Bulgaria after the second Balkan war in 1913. During the Great War it was conquered by the Germans in 1916. It was given to Bulgaria by the treaty of Bukarest, 1918, but at the final peace treaty restored to Rumania. See Rumania.

DOBSON, HENRY AUSTIN (1840-1921). British poet and essayist. He was born at Plymouth, Jan. 18, 1840. From 1856-1901, when he retired, he served on the Board of Trade, becoming a principal clerk in 1884.

In 1873 Dobson published his first book of verse, *Vignettes in Rhyme*, followed by *Proverbs in Porcelain*, 1877; *Old World Idylls*, 1883; and *At the Sign of the Lyre*, 1885. In prose he wrote *Eighteenth Century Vignettes*, 1892-96; *Sidewalk Studies*, 1902; *A Bookman's Budget*, 1917; and *Lives of Fielding and other 18th century writers*. He also edited the *Diaries of Madame D'Arhlay and Evelyn* and in his own verse echoed every quaint form to be found in the old poets. He died Sept. 2, 1921.

DOCK. Artificial repository for shipping. The purpose is to provide temporary accommodation for vessels when loading and discharging

Austin Dobson, British writer Russell

cargoes or embarking and landing passengers. Docks may be divided into two classes: wet docks and dry docks. Wet docks are water areas enclosed or nearly enclosed by masonry walls or by other artificial means. They may be subdivided into (1) tidal basins, used where the rise and fall of the tide is negligible, and (2) basins provided with watertight entrance gates, by which water may be maintained at a desired level within the dock, independently of tidal variations. By providing entrance gates water is maintained at high-tide level.

Dock. Floating dock, 150 ft. wide at the entrance, built by Cammell Laird & Co., of Birkenhead. It has a lifting capacity of 40,000 tons

Gribb, Southsea

Dry docks are those from which water can be temporarily excluded for the purpose of effecting repairs to the hulls and keels of vessels. They are divisible into graving docks, slip docks, and floating docks. A graving dock consists of a basin with a watertight gate or pair of gates. The vessel is floated into the dock, the gates are closed, and the water removed. The vessel settles down upon keel and bilge blocks, and when the dock is clear of water every portion of the hull and keel is available for examination, and repairs or painting. A slip dock is similar in construction to a graving dock, except that the floor slopes downwards and is continued beyond the entrance gates. Wheeled cradles running on rails are run out under a vessel, which is then drawn up the incline into the dock, where the falling tide leaves her high and dry.

A floating dock serves the same purpose as a graving dock. It consists of a pontoon base or platform with high sides and open ends. Modern floating docks are almost invariably constructed of steel with large water ballast tanks and powerful pumps. Water is admitted to the ballast tanks, causing the structure to submerge sufficiently for a vessel to be floated in between its walls. Water is then pumped out of the ballast tanks, air takes its place, and the dock gradually rises until the vessel is lifted clear of the water, being supported by the pontoon floor of the dock.

DOCKYARD. Government naval establishment containing engineering works, slipways, stores, etc., where ships of war are constructed or repaired, supplied with matériel and personnel, and made ready for sea. The chief dockyards of the British Empire are at Chatham, Devonport, Harwich, Invergordon, Portsmouth, Rosyth, Sheerness, Portland, Gibraltar, Malta, Bermuda, Simonstown, Singapore, Sydney, and Hong-Kong.

DOCK (Rumex). Genus of biennial and perennial herbs of the order Polygonaceae. Natives of all temperate countries, they have tapering rootstocks, alternate leaves, and greenish flowers without petals arranged in whorled clusters.

Dock. Leaves and flowers of great water dock

The leathery red or brown fruits are three-sided. Some species are notorious pests of agriculture; others, owing to their acidity, are esteemed as salads and potherbs, especially the sorrels.

DOCTOR'S COMMONS. Society or College of English lawyers of considerable antiquity. It obtained a charter in 1768 and had its headquarters near St. Paul's Cathedral, London. Its members, who were called fellows, had the sole right of appearing in ecclesiastical (including divorce), probate, and admiralty courts, while proctors, who did the work of solicitors, were attached to it. In 1857 this college was dissolved. The name is now used for the place where the headquarters were situated.

DODD, FRANCIS (b. 1874). British artist. Born at Holyhead, Nov. 29, 1874, he was one of the official war artists during the Great War, and executed a valuable series of portraits of British admirals and generals on active service, published in 1917, as well as other works. In Feb., 1919, he was elected president of the Manchester Academy of Fine Art, and was made a trustee of the National Gallery in 1929. In 1927 he was made A.R.A.

DODDER. Genus of annual, herbaceous, leafless parasites of the natural order Convolvulaceae. The seeds germinate in the ground but the seedlings attach themselves by suckers to young plants such as clover, vetch, thyme.

DODECANESE (mod. Gr. dodeca, twelve; nesia, islands). Name given to twelve islands of the Aegean: Nisyros, Kos (Cos), Kasos, Patmos, Chalki, Leros, Tilos, Symi, Astropalia, Lipso, Karpathos (Scarpanto), and Kalimno. Sometimes Rhodes is included in the term. They lie S. of the islands of Nikaria and Samos, and N. of the E. end of Crete, off the S.W. coast of Asia Minor. The islands were occupied by Italy in 1912, in her war with Turkey over Tripoli, and retained by her in spite of the protests of the inhabitants. In 1920 Italy transferred the islands to Greece, but in 1922 repudiated the cession. They are now under Italian rule. Pop. about 80,000; mostly Greeks.

Dodgson, CHARLES LUTWIDGE. English writer and mathematician, better known as Lewis Carroll (q.v.).

DODMAN, THE. Headland in Cornwall. On the S. coast, at the E. end of Verran Bay, 8 m. S. of St. Austell, it stands 373 ft. high and affords magnificent views. In 1918 it passed to the National Trust. It is the Dead Man's Rock of Quiller-Couch's novel.

DODO (Port. doudo, stupid). Large bird (Didus ineptus) formerly inhabiting Mauritius. It was related to the pigeons, and was rather larger than a swan. The plumage was grey, the tail feathers short and curly. The head bore a massive beak, the legs were exceptionally stout, and the wings rudimentary. It became extinct towards 1700.

DODONA. Oracle of Zeus near Mt. Tomoros or Tmaros in Epirus, ancient Greece. The responses of the god were supposed to be declared by the rustling of the wind in the oak or beech trees. The responses were originally interpreted by priests called Selli, afterwards by old women called Peleades (pigeons). The oracle rivalled that at Delphi (q.v.).

DODS, MARCUS (1843-1909). British theologian. The son of a Presbyterian minister, he was born at Belford, Northumberland.

Educated at Edinburgh academy and university, from 1864 to 1889 he was minister of Renfield Free Church, Glasgow. In 1878 he was charged with holding unorthodox views, and the matter came before the General Assembly. In 1889 Dodds was made professor at New College, Edinburgh, and in 1907 he was chosen principal of the college. He died April 26, 1909.

Marcus Dodds, British theologian Elliott & Fry

DOE, JOHN, AND ROE, RICHARD. Imaginary names used in English legal procedure for purpose of convenience. This

legal fiction was abolished by law in 1852.

DOG. Name applied to a family (Canidae) of flesh-eating mammals, placed between cats and hyaenas on the one hand, and weasels and bears on the other. This family includes all wild and domesticated dogs, as well as the wolf, fox, and jackal. Dogs are digitigrade, i.e. they walk on their toes, and have blunt, non-retractile claws. They have four toes on the hind feet, and, except the Cape hunting dog, five on the fore feet. All have long muzzles and a large number of teeth, usually forty-two. Almost all dogs in the wild state are of dull and inconspicuous coloration.

There is little doubt that the domestic dog has descended from the wolf, with a possible admixture of the jackal. The less specialised breeds closely resemble the wolves of their native lands. Dogs are usually classified as hounds, sheep dogs, terriers, spaniels, mastiffs, and lap dogs. Specific breeds are dealt with under their names, e.g. Airedale; Cairn; Collie, etc. See also illus. page 293.

The owner of a savage dog is liable in damages if it bites anyone, and a dangerous dog may be destroyed on a magistrate's order. By an act passed in 1928 the owners of dogs are liable for damage done by them to poultry. The finder of a stray dog must restore it to its owner or take it to a police station. Setting traps for dogs, injuring, killing, or stealing them are criminal offences.

Dog breeding is now an important industry. The Kennel Club, founded in 1873, virtually controls the dog fancy of the world. All the recognized shows are held under its rules.

DOG LICENCE. Tax of 7s. 6d. per dog, imposed on all dog owners, with few exceptions, such as farmers, shepherds, and blind persons. The number of dogs licensed in Great Britain in 1927-28 was 2,972,434. Puppies under six months old are exempt from the tax.

Dogs' HOME. Establishment where stray dogs are housed for a limited time. In London the "Dogs' temporary home," opened in Hollingsworth Street, N., in 1861, was removed to Battersea in 1871, and is known as the Home for Lost Dogs. There is also a country home at Hackbridge, Surrey. The best of the unclaimed dogs are sold.

DOG. Name given in mechanics to a catch of various kinds. A dog-shore is a prop of timber used to support a vessel until the moment of launching, which is accomplished by knocking the dog-shores away. A timber-dog is a bar of metal with ends turned at right angles to the middle part and sharpened, used to hold large balks together. A dog-clutch is a sliding clutch with jaws which interlock when one part is moved sideways.

DOGCART. High two-wheeled, open, one-horsed vehicle with two transverse seats placed back-to-back, for four passengers. The rear seat folds up, and the back footboard can be fixed up to enclose the body of the cart. See illus. p. 515.

DOG COCKLE. Popular name of a hivalve found round the British coast. It is the Pectunculus glycymeris of the family Arcadæ,

Dodo. Reconstruction of the extinct Didus ineptus

and has almost circular shells, yellowish-white in colour with irregular dark red markings. Large specimens measure as much as 2½ ins. across. The dog cockle is sometimes known as the combsell.

DOG DAYS. Period about the time of the rising of the Dog Star. The ancients attributed the heat and unhealthiness of the season and the highest rising of the Nile in Egypt to the influence of the Dog Star, and the dog days have long been popularly regarded as a period when dogs may go mad. The date of the first dog day ranges from July 3 to Aug. 15, and the duration of the period from 30 to 54 days.

Dogcart. Single-horse dogcart with rubber-tired wheels. See art. p. 514 W. A. Rensch

DOGE (Lat. dux, a leader). Title of the heads of the republics of Venice and Genoa. The office was created in Venice about 700. There were attempts, especially in the 10th century, to make the office hereditary in certain powerful families, but they were defeated, and at various times the laws governing the election were altered. Gradually the powers of the doge were definitely limited, but he remained a splendid figure ceremonially, having in Europe the rank of a sovereign prince, and sailing on Ascension Day in great state to celebrate the union of Venice and the sea. The last doge was Lodovico Manin, who abdicated in 1797. In Genoa the president was a doge from 1339 until the French conquest in the time of Napoleon.

Doge. Cap of Doge of Venice, c. 1300

DOG FISH. Group of fishes belonging to the shark family, but generally smaller in size. They have a cartilaginous skeleton, no spines on the dorsal fin, and most of them have spotted skins. The mouth is on the underside of the head, and is provided with several rows of teeth. Distributed over the tropic and temperate seas, they feed on crustaceans and molluscs. The flesh appears in the market under the name of rock salmon; the dried skin is known as shagreen.

Dog Fish, *Mustelus canis*, an inhabitant of the North Atlantic

DOGGER BANK. Extensive sandbank in the North Sea, almost equidistant from England and Denmark, with a mean depth of from 60 ft. to 120 ft., a length of 150 m., and a breadth of 70 m. It is a noted fishing ground, especially for cod. The term dogger, applied to a Dutch deep-sea fishing boat, denotes a large two-masted, broad, ketch-like smack, with a fish well in the middle, used in the North Sea, particularly on the Dogger Bank.

A battle between the English and Dutch took place here in 1781. On Oct. 21, 1904, during the Russo-Japanese War, a Russian Baltic fleet fired on some British fishing trawlers on the Dogger Bank. The incident was inquired into by an international commission, and compensation was made by the Russian government.

The Dogger Bank gives its name to a naval engagement fought between the British battle-cruiser force under Admiral Beatty and a

German force under Admiral Hipper, Jan. 25, 1915. The enemy left German waters to attack the British coast, and their presence was signalled to Beatty, who at once gave the chase. His flagship *Lion* engaged the German armoured cruiser *Blücher*, which was badly damaged and later torpedoed and sunk by the light cruiser *Aurora*. Of her crew of 885, only 123 were rescued. The British losses were slight, though the *Lion* was hit and compelled to leave the line, and the *Tiger* was damaged. Two of the German ships, *Seydlitz* and *Derfflinger*, suffered severe damage, with a loss of some hundreds of their crew.

Doggett's Coat and Badge, rowing prize

DOGGETT, THOMAS (d. 1721). Irish actor. Born in Castle Street, Dublin, he first appeared in London at Bartholomew Fair. In 1691 he played at Drury Lane, and, with Cibber, Wilks, and Swiney, managed The Haymarket from 1709-14, when, owing to a disagreement, Doggett separated from his partners, and acted intermittently at Drury Lane until his death. In Aug., 1715, he founded the race for the Doggett's Coat and Badge, competed for annually by Thames watermen. The course is from London Bridge to Chelsea, and the money bequeathed by Doggett is now controlled by the Fishmongers' Company.

Dogra. People of Rajput stock in Kashmir, Jammu, and the adjacent valleys. They make excellent soldiers.

DOG ROSE (*Rosa canina*). Shrub of the order Rosaceae. A native of Europe, Siberia, and N. Africa, it is common in hedgerows and thickets. The leaves are broken up into oval leaflets with toothed edges; and the delicately scented pink or white flowers are about two inches across, appearing in June. The fruit is a crimson hip, of which a conserve is made.

DOGS, ISLE OF. District of London, on the Thames, opposite Greenwich. It was originally a peninsula, its insular character being due to the formation of the West India, East India, and Millwall docks, and the Limehouse and Blackwall basins. It constitutes a large portion of the borough of Poplar. The footway tunnel to Greenwich, opened in 1895, starts from the Island Gardens. The name is said to be due to the fact that the kennels connected with the palace at Greenwich were here.

DOG'S BANE (*Apocynum androsaemifolium*). Perennial herb of the order Apocynaceae, native of North America. It has opposite, oval leaves and fragrant, nodding, bell-shaped flowers. These flowers, which are coloured pink, have five sensitive scales, which bend together when touched by a visiting insect and detain it. The plant is acrid and poisonous.

DOG'S MERCURY OR **HERB MERCURY** (*Mercurialis perennis*). Perennial herb of the order Euphorbiaceae. A native of Europe, N. Asia, and N. Africa, it has a creeping root-stock and dark green oval leaves. The flowers are small, green, and inconspicuous, the males on separate plants from the females.

Dog Star OR **SIRIUS**. *Sirius* in *Canis Major* and *Procyon* in *Canis Minor* were formerly called the dogs of Orion. See Constellation.

Dog's Mercury. Leaves and fruits

DOG TOOTH. The name given to a small blunt-pointed ornament used in hollow mouldings. Early English architecture provides many examples of this form of decoration. Some believe that it was brought from the East by the Crusaders, and it was very popular in 13th century buildings. See Moulding.

Dog Tooth ornament, an architectural decoration

DOG WATCH. Two-hour watches on board ship. The one from 4 to 6 p.m. is called the first dog, and the one from 6 to 8 p.m. the second dog. The rest are four-hour watches.

Dogwood leaves and berries

DOGWOOD (*Cornus sanguinea*). Shrub of the order Cornaceae. A native of Europe and N.W. Asia, it has oval leaves and clusters of small cream-white flowers, succeeded by black berries. The latter yield an oil which has been used for lamps and soap-making. The wood is hard and tough, and the tonic and astringent bark provides a substitute for cinchona.

DOHERTY, CHARLES JOSEPH (b. 1855). Canadian politician. Born at Montreal, May 11, 1855, in 1891 he was made a judge. He was on the bench of the Superior Court until 1906, and in 1908 entered the Dominion House of Commons as a Conservative. In 1911 Borden chose him as minister of justice, and he retained his post until 1921. In 1919 Doherty was one of Canada's representatives at the Peace Conference in Paris (1919).

Charles J. Doherty, Canadian politician

DOIRAN. Town and lake of Macedonia, Greece. The former is situated on the S.W. of the lake, close to the S.W. frontier of Bulgaria, about 40 m. N.N.E. of Salonica. Pop. normally about 4,000. Lake Doiran is about 10 m. E. of the Vardar river. It has an area of 15 sq. m. and is 500 ft. above sea level.

Along with the river Struma, Doiran lake was prominent in the Great War. As part of the campaign against Bulgaria a British force held the line Doiran-Struma from 1916-18, in order to cover Salonica. In Sept., 1916, the British crossed the Struma, and after further advances a defensive line was taken up for the winter. Apart from an unsuccessful Bulgarian attack in May, 1917, nothing of importance took place until Sept., 1918, when the Allies launched their final offensive. Doiran was captured on Sept. 18, and on Sept. 30 the Bulgarians surrendered. See Salonica.

DOLCOATH. Copper mine at Camborne, Cornwall. It has been worked since about 1800, and has produced over £6,000,000 of ore. Its workings are 3,000 ft. deep.

DOLDRUMS. Name given to the low-pressure belt of equatorial calms where the N.E. and S.E. trade winds meet. Very heavy rainfall and thunderstorms are often experienced. Owing to the apparent migration of the sun, the position of the Doldrums changes, being farthest N. in the northern summer and farthest S. in the southern summer, although even then it does not completely cross the equator. Its mean position is N. of the equator.

DOLET, ÉTIENNE (1809-46). French scholar-printer. Born at Orleans, he studied in Italy, and became proof reader for a Lyons printer.

In 1538 he opened a press of his own at Lyons, but his views provoked ecclesiastical persecution and his business success commercial rivalry. He was burnt as a heretic in Paris, Aug. 3, 1546. A bronze statue to his memory was erected in Paris in 1889. Pron. Do-lay.

Etienne Dolet. Guilbert's statue of the French printer-martyr, in the Place Maubert, Paris

DOLGELLEY. Market town, county town, and urban district of Merionethshire. It stands under Cader Idris, and is served by the G.W. Rly., being 230 m. from London and 9 from Barmouth. It is visited by tourists for its scenery. There are a grammar school, market hall, and assize hall. Market days, Tues. and Sat. Pop. 2,014.

DOLICHOCEPHALIC.

Term usually denoting human heads and skulls whose breadth is less than three-fourths of their length. The long, narrow-headed form is found among the Nordic and Mediterranean types of the Caucasian race as well as Hamites and Semites. With these the narrowness pertains to the frontal region. It is occipital in most others, including Dravidians, Papuans, Polynesians, Australian aborigines, Eskimos, and a primitive South American type. It prevails also in Negro, Bantu, and Bushman, Africa.

DOLL. Toy representing a human figure. As a plaything the doll is of remote antiquity and universal distribution, though apparently less general in Asia than in the other great continents. Dolls were common in Asia Minor, among the Arabs and in Egypt, where they are known to have been in use in the 18th-17th century B.C., and in Greece and in Rome, where specimens have been found in the catacombs. They are common among all African tribes, among the Australian aborigines, the Red Indians, and, in addition, the Eskimo.

Doll. Ancient Greek doll with castanets
British Museum

several S. American states, where it is now represented by the peso with a value of 4s. 2d. It descends from the Thaler, a standard coin in the 16th century. To-day the standard dollar is the American coin adopted by the U.S.A. in 1792. The currency of Canada and Newfoundland is based on the U.S.A. dollar and similarly divided into 100 cents.

DOLLAR. Burgh of Clackmannanshire. At the base of the Ochil Hills, 6½ m. N.E. of Alloa, on the L.N.E. Rly., it has the Dollar Institution, one of the great schools of Scotland, erected in 1819 and founded by John M'Nabb, and conspicuous above the burgh are the ruins of Castle Campbell, partially destroyed by Montrose in 1645. Coal and sandstone abound. Pop. 1,584.

DOLLING, ROBERT WILLIAM RADCLIFFE (1851-1902). Anglican clergyman and social worker. Born Feb. 10, 1851, at Kilrea, Ballymena, he came into prominence as a social worker in Dublin. Then, as lay assistant in the work of S. Alban's, Holborn, London, he was warden of the S. Martin's League of postmen, 1879-82. After taking orders his chief work was carried out as vicar of S. Agatha's, Landport, 1885-96, in connexion with the Winchester College Mission. From 1898-1901 he was vicar of S. Saviour's, Poplar. He died May 15, 1902. A Dolling Memorial Home for working girls of Landport and Poplar was opened at Worthing in 1903.

R. W. R. Dolling, Anglican clergyman
Elliott & Fry

DOLLIS HILL. Residential suburb of London, between Hendon and Kingsbury-Neasden. Dollis Hill House, owned by the earl of Aberdeen, was constantly visited by Gladstone. Gladstone Park lies to the south.

DOLMEN. Megalithic chamber comprising an uneven capstone upon two or more uprights. In Britain it is frequently called a cromlech, and incorrectly a Druid altar. While in most regions originally covered with earth or stone, many became exposed in early recorded times. Infrequent in England, they are commoner in Wales and rare in Scotland. In Ireland more than 800 dolmens are enumerated.

Dolmen. Sandstone dolmen, centre of the former Ring of Stennes, Orkney
Thos. Kent, Kirkwall

which there are examples in Kit's Coty House, Kent; Wayland Smith's cave, Berks; and King Orry's grave, Isle of Man. There are still 4,458 dolmenic tombs in France; many in Holland, Scandinavia, Portugal, Spain, and the whole Mediterranean basin. Many thousands remain in N. Africa, and eastward they extend over Ammon and Moab to India, the Malay Archipelago, Korea, and Japan.

DOLomite. Crystalline mineral composed of carbonate of lime, 54.4 p.c., and carbonate of magnesia, 45.6 p.c. It is brittle, lustrous, white, or tinted, forming rhombohedral crystals, and differs from calcite in being harder and in effervescing feebly in cold acid. When iron is present dolomite constitutes some forms of pearl-spar, bitter-spar, and brown-spar. Dolomite has both chemical and architectural uses, and is of importance as the raw material for the manufacture of the refractory linings for the Bessemer converters.

A division of the Alps is called the Dolomites. They extend N.E. from Trent and contain some magnificent scenery.

DOLPHIN (Gr. *delpheis*; Lat. *delphinus*). Name applied generally to a group of the smaller cetaceans, including the porpoise, narwhal, white whale, and the killer; but instance, more properly to the genus *Delphinus*. This genus includes those species which have distinctly developed beaks, armed with some 40

to 60 teeth. The head has a bulbous appearance. The skin is black on the back, striped with greyish yellow on the flanks, and white beneath. In length the dolphin varies from 8 ft. to 10 ft. The common dolphin (*Delphinus delphis*) abounds in the English Channel, and does considerable damage to the herring and mackerel fisheries.

DOMe (Lat. *domus*, a house, cf. Ger. *Dom*, and Ital. *duomo*, a cathedral church). Name given to a spherical roof over a circular or polygonal building. The sphere, like that of the cupola, may be one of several varieties, but semicircular, semi-elliptical, and bell-shaped domes are the most common. The dome was a development of the arch principle of construction, and as such was largely employed by the Romans, who applied it exclusively to circular buildings.

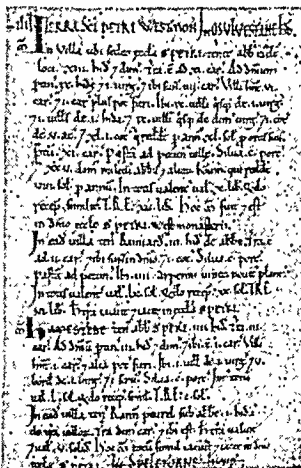

It remained for the Byzantine builders to place a circular dome upon a square or rectangular structure. Most of the domed Christian churches of the Middle Ages are constructed on the Byzantine plan, with the great central dome crowning the middle portion of a Greek or Latin cross. See *Architecture*; *Cathedral*; *Cupola*; also *illus.* p. 192.

DOMENICHINO (1581-1641). Italian painter, whose real name was Domenico Zampieri. He was born at Bologna on Oct. 21, 1581, and studied with Calvaert and the Carracci. Removing to Rome, he assisted Annibale Carracci in the decoration of the Farnese palace, and later painted the Martyrdom of S. Sebastian for S. Peter's. In 1630 he settled in Naples, where he executed the decoration with frescoes of the Capella del Tesoro. Domenichino's reputation rests chiefly on his frescoes.

DOMESDAY BOOK. Survey of the land of England, drawn up in 1086 by order of William the Conqueror. The information was obtained by sending officials into each county. From each village or manor came the priest and four villagers, and after interrogating them the officials noted down the facts. These were entered on rolls, and from these the book itself is compiled. From this important record the four northern counties are excluded, as are London, Winchester, and other towns, but for a different reason.

The book was intended by William to be a record of his rights, i.e. of the income to which he was entitled, and the information collected was all directed to this end. It is of supreme value for the economic conditions and social history of the time. The original book is in the Public Record Office, London. See *Feudalism*; *Manor*.

DOMICILE (Lat. *domus*, a house). Question of private international law. A man's first domicile is that of his origin, which depends on his father. When he attains majority he can make a domicile of choice, and is held to be domiciled where he resides, if he intends to remain there, making it his house. On giving up a domicile of choice a man reverts to his domicile of origin until he has acquired another domicile of choice. A married woman's domicile is that of her husband. Domicile is independent of nationality. Many legal questions, for the right to divorce, turn on the domicile. No court can grant a divorce except that of the husband's domicile. See *Naturalisation*.

Domesday Book. Facsimile of entry relating to Westminster
From the original in the Public Record Office

DOMINIC, SAINT (1170-1221). Founder of the Dominican Order of Friar Preachers. His name was Dominic de Guzman, and he came of an old Castilian family, being born in 1170 at Calahorra, Spain. He was ordained about 1195, and became an Augustinian canon at Osma in Castile. He was charged by Pope Innocent III with a mission to the Albigenses in the S. of France in order to bring them back to Catholicism. In order to continue this work he founded an order of preaching friars, generally known as Dominicans (q.v.). Later S. Dominic was appointed Master of the Sacred Palace at Rome. He died Aug. 6, 1221, and was canonised in 1234.

S. Dominic as portrayed by Fra Angelico in his picture of the Crucifixion in S. Mark's Church, Florence

of preaching friars, generally known as Dominicans (q.v.). Later S. Dominic was appointed Master of the Sacred Palace at Rome. He died Aug. 6, 1221, and was canonised in 1234.

DOMINICA. British West Indian island and presidency, between Guadeloupe and Martinique, the largest of the Leeward Islands. Covering 305 sq. m., the island, of volcanic origin, is very mountainous. There are thermal springs, a boiling lake, and sulphur deposits. The staple industry is the growing of limes, Dominica being the largest producer of lime products in the world. There is a wireless station. The capital is Roseau. The name commemorates its discovery by Columbus on Sunday (Lat. dies Dominica), Nov. 31, 1493. Pop. 41,051.

DOMINICAL LETTER. Called more commonly Sunday Letter, and employed in the construction of the calendar. It must be one of the first seven letters of the alphabet. Beginning with A for Jan. 1, the first 7 days of the year each receives the letter that follows in order. If, therefore, Jan. 1 falls on a Saturday, the Sunday or dominical letter for the year will be B. If Jan. 1 is a Monday, the Sunday letter will be G. See Calendar.

Dominican Republic. Variant name for the republic of Santo Domingo (q.v.) on the island of Haiti, W. Indies.

DOMINICANS. Common name for the religious order of friar preachers instituted at Toulouse in 1215 by S. Dominic. The founder adopted the existing rule of S. Augustine and thus obtained the formal sanction of Pope Honorius III and a bull confirming the foundation of the new order, Dec. 22, 1216.

The name of Black Friars (q.v.) was given to the Dominicans on account of the black cloak which they wear over a white tunic. The aim of the order was to teach truth, and veritas (truth) is its motto. The Dominican family is divided into three branches. The first is composed of men preachers. The second consists of enclosed nuns, consecrated to a life of prayer and contemplation. The third branch—commonly called tertiaries—was divided again into (1) those living in community, and (2) men and women living in the world who desire to adopt a rule of life and to share in the work of the order. S. Catherine of Siena (q.v.) is the most famous of the tertiaries.

DOMINION (Lat. dominus, a lord). Word meaning lordship or authority. It was the name given to the federation of the Canadian provinces carried out in 1867. Celebration of the foundation is held annually on July 1, termed Dominion Day. The term is also applied generally to other self-governing possessions of the British crown.

Dominion Affairs is the name of a secretariat of state, created in 1925. The new department is vested in the same person as the Colonial Secretaryship. See Colonial Office.

DOMINO. Mask, half-mask, or a cloak, worn by masqueraders as a disguise. The term is applied also to the wearer of the garment. A domino was also an ecclesiastical hooded cloak, black on one side, whence the name of the game of dominoes is supposed to have been derived.

DOMINOES. Game invented in Italy in the 18th century. It is played with 28 ohlong pieces, termed cards or stones, marked with indented black spots, on an ivory face divided into two compartments, and having black backs generally made from ebony. The pieces are numbered 6-6 (double-six), 6-5, 6-4, down to 6-0; the same with the 5, 4, 3, 2, and 1 respectively; and 0-0 (double-blank).

In the French or draw game the dominoes are shuffled and each player takes seven, the rest forming the stock which remain on the table unfaced. The leader plays a domino (it is invariably best to lead the highest), and the other follows by matching the number at one end of the card played, from his own hand or by drawing from the stock. This continues until the dominoes, both in hand and in the stock, are exhausted; the one who is first out winning the game by the number of pips contained on the pieces (or cards) still in possession of his adversary. The one left with the smaller number of pips wins.

DOMITIAN. Roman emperor 81-96 A.D. His full name was Titus Flavius Domitianus Augustus. He was the younger son of Vespasian, and succeeded his brother Titus. He took a genuine interest in provincial government, and misrule in the provinces was practically unknown in his reign. Among those who were persecuted by him were the Christians. An expedition against the Chatti, a series of campaigns in Britain under Agricola, and a war with the Dacians, which ended in a humiliating peace, were the military features of his reign. He met his death at the hands of a freedman named Stephanus, instigated by his own wife Domitia.

DON (Lat. dominus, lord). Title prefixed to the Christian name in Spain, formerly confined to men of rank, but now used like "Mr." The feminine is donna. In the United Kingdom fellows or tutors of a college in a university are called dons.

DON. River of Yorkshire (W.R.). It rises in the Pennines near the Cheshire border and flows S.E. through Sheffield, thence N.E. past Rotherham and Doncaster to the Ouse, which it enters at Goole. It is linked by canals with the Trent and the Calder. Its total length is 70 m.

The Don of Aberdeenshire rises near the Banffshire boundary and flows for 78 m. in an E. direction to the North Sea, which it enters a little N. of Old Aberdeen.

DON. River in S. Russia. Rising from Lake Ivan, in the prov. of Tula, it flows through the provs. of Ryazan, Tambov, Voronezh, and the old Don Cossack territory into the sea of Azov. It is navigable, except in the winter,

for half of its 1,160 m., and is one of the chief waterways for cattle and grain from the interior. Its chief tributary is the Donetz.

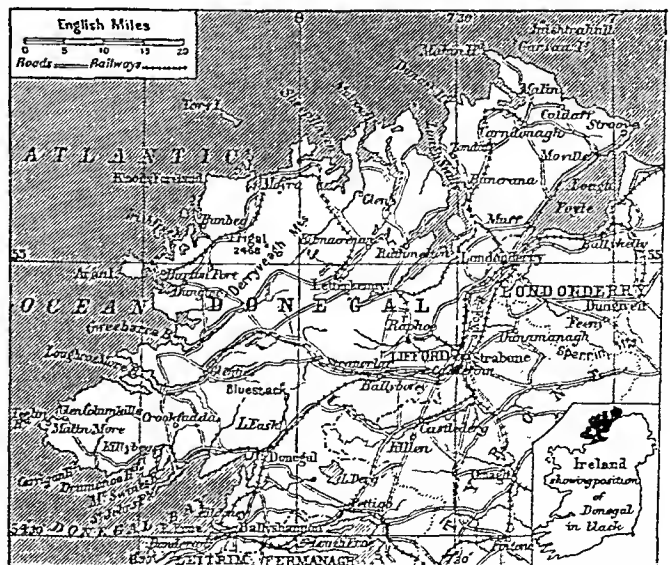

DON, KAYE (h. 1894). British motorist. After serving in the R.A.F. he took up motorcycle racing, and later came into prominence as a racing motorist. He was most successful at Brooklands in 1929, where he established the lap record for the course in his Sunbeam Tiger, though this was broken on April 21, 1930, by Captain H. R. S. Birkin. In 1930 he took his motor car Silver Bullet to Daytona, Florida, and unsuccessfully attempted to break the record of 231 m. an hour set up by Sir Hy. Segrave in 1929.

DONAGHADEE. Watering-place and market town of co. Down, Northern Ireland. It stands on the North Channel, 22½ m. E. of Belfast on the Belfast and County Down Rly. Market day, Wed. Pop. 2,220.

DONATELLO, in full Donato di Niccolò di Betto Bardi (1386-1466). Italian sculptor. Born at Florence, in 1408 he received the commission for the famous statue of St. George in Or S. Michele, Florence, completed in 1415. He went to Padua in 1444, and there produced the noted equestrian statue of Gattamelata—the first horse to be cast in bronze. Other important works were wrought at Ferrara, Venice, and Modena. He died Dec. 13, 1466. Consult Lives, H. Rea, 1900; 10th earl of Crawford, 1903.

DONCASTER. County borough and market town of Yorkshire (W.R.). It stands on the Don, 156 m. by rly. N. of London, and is served by the L.M.S. and L.N.E. Rlys. The chief church is S. George's, rebuilt in the 19th century. There are an old grammar school, a town hall, and a corn exchange.

Doncaster is an important rly. centre. Here are large shops of the L.N.E. Rly. There are manufactures of iron and steel goods, machinery, and artificial silk, and a trade in grain. It is also the centre of a coal-mining area, developed during the 20th century. There is water communication with Goole and Hull. Doncaster is famous for its race meetings, including the St. Leger, run every Sept. on Town Moor, the Doncaster Cup, etc. Market days, Tues. and Sat. Pop. 58,230.

Donegal. Map of the extreme north-western county of Ireland. Its mountains and bays provide some of the most picturesque scenery in Ulster

DONEGAL. Maritime county of the Irish Free State, in the prov. of Ulster. It has about 165 m. of rugged and deeply indented coastline

on the Atlantic ocean. Donegal Bay, in the S., and Lough Swilly and Foyle in the N., are the largest inlets, and the Foyle is the longest stream; Lough Derg is the only lake of any size. Aran, Tory, and smaller islands lie around the coast. The surface is mountainous and frequently boggy. Lifford, the county town, Letterkenny, Ballyshannon, Donegal, and Bundoran are the chief towns. The area is 1,860 sq. m. Pop. 152,508.

The county gives name to the title of Marquess borne by the family of Chichester since 1791. The family seat is Castle Chichester, Co. Antrim.

DONEGAL. Market town of co. Donegal, Irish Free State. It is on Donegal Bay, 46 m. S.W. of Londonderry on the Donegal Rly. The Annals of the Four Masters (1636) were compiled in its Franciscan monastery, remains of which and of a castle of the O'Donnells still exist. Market day, Sat. Pop. 1,272.

DONGOLA. Name of two towns on the Nile in the Anglo-Egyptian Sudan. New Dongola is on the left bank, above the third Cataract, 750 m. S. of Cairo. During the operations against the Mahdi in 1884-85 it formed the British base, but afterwards fell into the hands of the Mahdi. It is now a flourishing town. Pop. 20,000.

Old Dongola, on the right bank of the Nile, 75 m. S.S.E. of New Dongola, was the capital of the kingdom of Dongola, but was destroyed by the Mamluks in 1820.

DONINGTON HALL. County mansion in Leicestershire. Near the town of Castle Donington, on the Trent, 9 m. from Ashby-de-la-Zouch, it was rebuilt in 1795, and was long the property of the earls of Huntingdon. When the 10th earl died in 1789 the estate passed to his sister Elizabeth, mother of the first marquess of Hastings. When Henry, the 4th marquess, died in 1868, it passed to his sister, the countess of Loudoun, and then to her son, the earl. During the Great War, having been untenanted for some years, the hall was used as a place of internment for German officers.

DONIZETTI, GAETANO (1797-1848). Italian composer. Born at Bergamo, Nov. 29, 1797, he was for a time a teacher in Naples, lived after 1837 in Paris, and for a few years was master of the imperial chapel at Vienna. He composed over sixty operas, the most popular being *Luciozia Borgia* (1833), *Lucia di Lammermoor* (1835), *La Fille du Régiment* (1840), and *Linda di Chamounix* (1842). Donizetti also wrote masses and other music for religious purposes, some string quartets, and some songs. He died April 8, 1848.

Gaetano Donizetti, Italian composer

DONNE, JOHN (1573-1631). English poet, courtier and divine. Born in London, of Roman Catholic parentage, he joined the Anglican communion, accompanied Essex to Cadiz in 1596, and to the Azores in 1597. He travelled in Europe, and became private secretary to lord keeper Egerton, whose niece he married clandestinely in 1601. In 1615 Donne was ordained and became in succession curate at Paddington, royal chaplain, vicar of Keyston, Hunts, rector of Sevenoaks, reader in divinity at Lincoln's Inn, dean of S. Paul's, 1621, and vicar of S. Dunstan's in the West. He died March 31, 1631, and was buried in S. Paul's Cathedral.

John Donne, English poet
Contemporary portrait

His verse is deliberately rugged in form, sombre and even gruesome in imagery, but threaded with glowing lines and original thought. The last of the great Elizabethan preachers, Donne's theology was liberal and reasoned. Pron. Dun.

DONNYBROOK. Suburb of Dublin, Irish Free State; formerly a country village. In 1204 King John granted a licence for an annual fair to be held here, and this became, especially in the 18th and 19th centuries, the most disorderly of all the Irish fairs. It was abolished in 1855.

DONOGHUE, STEPHEN (b. 1884). British jockey. Popularly known as Steve Donoghue, his first big success was the winning of the Cambridge-shire Stakes in 1910. From 1911 onward Donoghue was the most popular British jockey, carrying off many famous races. In 1920 he rode 143 winners, and for years in succession he headed the list of successful jockeys. His chief title to fame was the large number of Derby winners ridden by him, in 1915, 1917, 1921-23, and 1925.

Steve Donoghue, British jockey
Bassano

DOOM PALM or **DOUM PALM** (*Hypbaena thebaica*). Tree of the order Palmaceae. A native of Egypt and Nubia, the fan-shaped leaves are produced in clusters, and from the centre of these arise the spikes of flowers, all males on one tree, and all females on another. The fruits, like large quinces, are in clusters of 100 to 200. Beneath a smooth, polished skin there is a thick layer of fibrous material surrounding the large solitary seed, and this substance, which tastes much like gingerbread, is eaten by the natives. The hard wood is made into various domestic utensils.

Doom Palm. Tree found in the oases of Egypt and Nubia

DOON. River and loch of Ayrshire. The river issues from the loch into Glen Ness, and flows N.W. for 36 m. through picturesque country, to the Firth of Clyde below Ayr. It is mentioned in Burns's famous ballad, *Ye Banks and Braes*. The loch (5½ m. long) contains five small islands, on one of which (Castle Island) is a tower ruin, called Balliol's Castle. In 1929 it was proposed to make use of the loch waters for generating electric power.

DOONES, THE. Outlaws who, in the 17th century, inhabited the Badgworthy Valley, Exmoor, England. An outrage at Exford, in which a child was killed and its mother carried off, led to the extermination of the band by moormen and troops. The Doones and the legends surrounding their name provided material for Blackmore's *Lorna Doone*.

Dora. Name given popularly to the Defence of the Realm Act (q.v.), passed at the outbreak of the Great War.

DORCAS SOCIETY. Name formerly much in vogue for societies of ladies who made garments for the poor. The charitable woman at Joppa referred to in Acts 9, 36-42, was so called, hence the use of the word.

DORCHESTER. Borough, county, and market town of Dorset. It is on the Frome, 135 m. from London, on the Southern and G.W. Rlys. The boulevards occupying the line of the old Roman wall are an attractive feature. Notable buildings are the town hall and market house, county gaol, county hospital, grammar school, and museum. There is a statue to William Barnes, the Dorsetshire poet, and the place has associations with Thomas Hardy. Dorchester is noted for its ale. Market days, Wed. and Sat. Pop. 9,554.

The *Durnovaria* of the Romans, Dorchester has many indications of early occupation, among which are remains of an amphitheatre at Maunbury Rings, and Maiden Castle, a British earthwork, the most perfect examples of their kind in England, as well as a beautiful Roman pavement.

DORCHESTER. Village of Oxfordshire. On the Thame, near its confluence with the Thames, 9 m. S.E. of Oxford, it dates from Roman times, and was the see of a bishop from 886 down to its translation to Lincoln in 1050. It has a fine old abbey church with a famous Jesse window. Pop. 804.

DORCHESTER HOUSE. Former mansion in Park Lane, London. Occupying the site of an earlier house belonging to the earls of Dorchester, this magnificent mansion in the Italian Renaissance style was built by Villiam, 1851-53. It was the property of Lt.-Col. Sir George Holford and contained a superb collection of pictures. It was rented by Whitelaw Reid while American ambassador (1905-13), and during the Great War was used as a hospital. In 1928 the earl of Morley, who inherited the property from Sir G. L. Holford (q.v.), sold it to a syndicate, and in 1929 it was sold and, in 1930 an hotel was built on the site. See illus. below.

DORDRECHT or **DORT.** Town of the Netherlands, in the prov. of S. Holland. It is on an island in the Meuse, 12 m. S.E. of Rotterdam, and is cut by the Merwede and other streams and canals. The chief building is the Great Church, a Gothic 14th century structure, with a lofty tower and fine carved choir stalls. There is an old town hall, restored in the 19th century, and the town has several museums, including one of antiquities, housed in one of the gates of the city. Dordrecht is a river port and rly. junction. The river and canals afford communication with the sea and with other Dutch ports. A steam ferry connects with places on the other side of the Merwede. The industries include engineering, saw-milling, shipbuilding and sugar refining.

Dorchester House. Former London mansion in Italian Renaissance style

Dordrecht came into existence about 1000, and its history is linked with that of the rise of the Dutch Republic. In the Middle Ages it was one of the wealthiest cities of Holland. In 1618-19 the synod of Dort, which discussed the points of difference between Calvinists and Arminians, met here. It is typically Dutch in appearance, with waterways, bridges, windmills, and quaint houses. Pop. 55,008.

DORÉ, LOUIS CHRISTOPHE GUSTAVE PAUL (1833-83). French artist. The son of German parents named Dorer, he was born at

Strasbourg, Jan. 6, 1833, and went to Paris in 1848. His Paolo ct Francesca, 1863, first brought him into notice, and was followed by the huge religious compositions popularised through the Doré Gallery in London. His real genius is to be found in his designs for the masterpieces of Dante, Milton, Shakespeare, Balzac, and La Fontaine. Doré was also a sculptor of no mean merit. He died Jan. 23, 1883.

Gustave Doré,
French artist

DORIANS. One of the three great branches into which the ancient Greek race was divided, the other branches being the Aeolians and Ionians. Traditionally the Dorians came from the small district of Doris in N. Greece, lying between Mt. Parnassus and Mt. Oeta, and overran virtually the whole of the Peloponnese somewhere about 1000 B.C. In historical times the Dorians inhabited, in addition to the bulk of the Peloponnese, Megara, Aegina, Crete, Melos, and other islands of the Aegean sea, the S.W. coast of Asia Minor, and colonies in Sicily. Sparta was the pre-eminent Dorian state.

Doric Order is the name given to the first of the three orders of Greek architecture. The Doric capital was generally carved out of a single block, and the drums of which the column was composed were bonded together by wooden dowels. The Parthenon (q.v.) is the best example of the Grecian Doric. See Architecture; Corinthian Order; Ionic Order; also illus. pp. 116, 133.

DORKING. Market town and urb. dist. of Surrey. It stands on the Mole, just below the N. Downs, 25 m. S.W. of London, and is served by the Southern Rly. (two branches). Lime burning is a local industry. It is noted for a breed of fowls. The chief building is S. Martin's church, rebuilt in the 19th century. The former King's Head in North Street is said to have been the Marquess of Granby of Pickwick.

In the vicinity is some of the finest Surrey scenery, including Box Hill, Leith Hill, Betchworth, Abinger, and Ranmore. Near are the mansion and grounds of Deepdene, now an hotel. In 1927 Lord Francis Hope, afterwards duke of Newcastle, presented Glory Woods to Dorking. George Meredith is buried here. Market day, Thurs. Pop. 8,058.

Dorking Fowl. Cock of this
old English breed of fowl

DORKING FOWL. Breed of fowls deriving its name from the town where it was at one time extensively bred and fattened. A peculiar characteristic of the breed is that it possesses a fifth toe. Compact, plump in build, and broad in the breast, it carries more meat in proportion to the size of its bone than any other fowl, while in quality and flavour its flesh is excellent. As a layer the hen compares favourably with any other bird of her size and weight, and excels both as a sitter and a mother. There are three main varieties, viz., dark, silver grey, and white.

DORMER (Lat. dormire, to sleep). In architecture, the name given to a window set in the inclined roof of a house. Its real value as an architectural feature was not discovered much before the 17th century. In Jacobean buildings dormer windows contribute to the balance and symmetry of a façade, and in

combination with the hipped roof they are a conspicuous and valuable feature of Georgian architecture.

DORMOUSE (*Muscardinus avellarius*). Small British rodent about 3 ins. long, exclusive of the tail, which is about the same length. It has a large head with conspicuous ears and prominent eyes. The fur is tawny on the back and yellowish beneath, with a white patch on the chest. It is usually found in small plantations and hedgerows. It feeds at night and spends the day asleep. In autumn it builds a special nest for the winter, and stores it with a supply of nuts and corn. It usually hibernates from Oct. to April.

Dormouse, *Muscardinus avellarius*,
the British species

Dorpat. Alternative name of the Estonian town now known as Tartu (q.v.).

DORSET, EARL, MARQUESS, AND DUKE OF. English titles borne successively by the families of Beaufort, Grey, and Sackville. John Beaufort, earl of Somerset (d. 1410), the eldest son of John of Gaunt, was created marquess of Dorset in 1397. This title became extinct in 1464. Thomas Grey (1451-1501), 8th Earl Ferrars and stepson of Edward IV, was created marquess of Dorset in 1475. His grandson, Henry (1510-54), was made earl of Suffolk and, being implicated in Wyatt's rising, was beheaded in 1554, and the title once more became extinct.

Thomas Sackville was created earl of Dorset in 1604. His descendant Charles, the 6th earl (1633-1706), was a courtier and wit in the reigns of Charles II and William III. He wrote the lyric "To all ye ladies now on land." In his later years Dorset was a generous patron of literary men, as Wycherley and Prior. He died Jan. 29, 1706. His son Lionel, the 7th earl (1688-1761), was made duke of Dorset in 1720, and the title persisted until the death of Charles, the 5th duke, in 1843, when with the earldom it became extinct. See Sackville.

DORSET, THOMAS SACKVILLE, 1ST EARL OF (1536-1608). English statesman and poet. Born at Buckhurst, Sussex, son of Sir Richard

Dormer window in old
chapel, Cleeve, Somerset

In autumn it builds a special nest for the winter, and stores it with a supply of nuts and corn. It usually hibernates from Oct. to April.

DORNOCH. Burgh and county town of Sutherlandshire. It stands near the entrance to Dornoch Firth, a noted fishing ground, 58 m. N.E. of Inverness, is a favourite summer resort with excellent bathing facilities, and has an excellent golf course. The original cathedral (1222-45), of which only the tower survives, was restored in 1837, and became the parish church; it contains the tombs of the Sutherland family. Pop. 768.

Sackville, chancellor of the exchequer, he was called to the bar as a member of the Inner Temple. With Thomas Norton he collaborated in *Gorboduc* (also called *Ferrex and Porrex*), the first English tragedy in blank verse, acted 1561. Sackville, whose work influenced Spenser, was made a peer as Baron Buckhurst in 1567. In 1599 he was appointed lord treasurer, and in 1604 was created earl of Dorset. He died while at the council table in Whitehall, Apl. 19, 1608.

Thomas Sackville,
1st Earl of Dorset

DORSETSHIRE. Southern maritime county of England. It has about 75 m. of hold and picturesque coast on the English Channel, of which the chief features are Chesil Bank, St Alhan's Head (440 ft. high), and Poole Harbour. Chalk downs traverse the central and S. parts, on which are pastured the celebrated Dorset horned sheep. The Frome, flowing to Poole Harbour, Stour, and Puddle are the longest streams. Portland and Purbeck stones are largely quarried. The Southern and G.W. Railways serve the county. Dorchester is the county town; Poole, Weymouth, and Swanage are the chief ports. In the N. is the Vale of Blackmore, with famous pastures. The antiquities include Corfe Castle (q.v.). Area 977 sq. m. Pop. 228,160.

LITERARY ASSOCIATIONS. George Crabbe was rector of Evershot; and William Barnes, the English dialect poet, was born at Rushay.

Sir Thomas Wyatt was buried at Sherborne, Matthew Prior is believed to have been born at Wimborne, and Weymouth was the birthplace of Thomas Love Peacock. The chief modern literary associations centre in the novels of Thomas Hardy, who made Dorset the main part of his Wessex. Consult *The Hardy Country*, C. G. Harper, 2nd ed. 1911.

Dorsetshire Regiment
badge

DORSETSHIRE REGIMENT. Formerly the 39th and 54th Foot, this was raised in 1702, and first saw active service in India. After assisting at the defence of Gibraltar it was in Egypt in 1801. Later the Dorseters took part in the Peninsular, Burmese, Mahratta,

Dorsetshire. Map of one of the principal dairying counties of the south of England. Dorset also produces the Portland and Purbeck stone

DORSET, THOMAS SACKVILLE, 1ST EARL OF (1536-1608). English statesman and poet. Born at Buckhurst, Sussex, son of Sir Richard

Crimean, and South African Wars. In the Great War the 1st battalion distinguished itself at Le Cateau, La Bassée, Ypres, and the

Somme. The 2nd battalion fought magnificently in the early stages of the Mesopotamian campaign. The motto is 'Primus in Indis'. The regimental depot is at Dorchester.

DORTMUND. Town of Prussia, in Westphalia. It stands on the Emschor, 50 m. N.E. of Düsseldorf. There are several beautiful old churches, including S. Reinold's, a 13th century building with later additions, the Romanesque S. Mary's, S. Peter's, and one formerly belonging to the Dominicans. The 13th century town hall was rebuilt in the original style in the 19th: it contains a museum. The town walls have been replaced by promenades. Dortmund was a free city until 1803, and in 1815 became part of Prussia.

Dortmund is the largest town on the Ruhr coalfield. The industries comprise foundries, and there are manufactures of iron goods, including rly. stock and machinery. It is well served by rlys., while the Dortmund-Ems canal takes its products to the sea. The canal is an alternative route to that provided by the Rhine. Pop. 321,743.

DORY OR **JOHN DORY.**

Marine fish, Zeus faber, of the Zeidae family, common in the Mediterranean, the English Channel and St. George's Channel, and valued for the table. It is greatly compressed laterally, and has a very large head. It is yellowish in colour, with metallic reflections, and has a repulsive appearance.

Dory. Fish of the zeidae family

DOST MOHAMMED

(d. 1863). Ruler of Afghanistan. As leader of a revolt he obtained a portion of the country, including Kabul. In 1839, owing to his aggressive policy, the British declared war on him. In 1840 he gave himself up, and in 1842 was released and restored to his throne. Soon he brought the whole country under his rule, and in 1855 made a treaty with Great Britain, the friendly relations being maintained until his death, June 9, 1863.

DOSTOÏEVSKI, FIODOR MIKHAILOVITCH

(1822-81). Russian novelist. He was born, Nov. 11, 1822, at Moscow, son of a military surgeon. In 1846 appeared his first work, Poor Folk, and at once he became a celebrity. In April, 1849, he was arrested for his association with the Petrashevsky political society, and was sent to Siberia, where he spent four miserable years. He gave an account of his prison experiences in *Memoirs of a House of the Dead*, 1861-62.

In 1861 appeared *Downfallen and Oppressed*, and in 1866 his greatest work, *Crime and Punishment*. He continued writing story after story, and in 1873 began a series of miscellaneous papers, entitled *An Author's Diary*. He died February 9, 1881.

Dotterel, a species of plover which breeds in Scotland

black and white markings. It is found on mountain sides, and visits ploughed fields in search of grubs and insects.

DOUAI OR **DOUAY** Town of France, dept. of Nord. It is on the Scarpe, 18 m. S. of Lille. The hôtel de ville is a fine Gothic building. In the palace of justice the parliament of Flanders met. The chief churches are S. Pierre, with its 16th century tower, and Notre Dame, dating from the 12th century. There are a 15th century gateway and the old hall of the parliament of Flanders, since occupied by an appeal court. Douai has a state college of agriculture and a school of mines. Pop. 34,131.

Douai has been in existence since the time of the Gauls. It passed from Flanders to Burgundy, and then to Spain, but became French in 1713. From 1652-1793 there was a Roman Catholic university here, but the town is chiefly known for its English collegio (1568-1903), where priests were trained to work for the conversion of England. The Old Testament of the Douai Bible was issued from here in 1610.

Occupied practically throughout the Great War by the Germans, Douai was awarded the Cross of the Legion of Honour in 1919.

DOUAUMONT. Village, fort, and plateau of France. The village, which stands on the river Meuse, 3 m. N.E. of Verdun, was a noted centre in the battle of Verdun, the Germans capturing the fort on Feb. 25, 1916. The French recaptured it Oct. 24, 1916. The village was captured by the Germans, March 2, 1916, after heavy fighting, and, after changing hands several times, was retaken by the French, Oct. 24, 1916. See Verdun.

DOUBLE BASS, sometimes called the bass. Largest and heaviest toned of the orchestral stringed instruments played with a bow. Double basses have three or four strings. Their sounds come an octave lower than the notes written, so that when the violoncello (q.v.) and the double bass play from the same notes the effect is of octaves instead of unisons.

DOUBLE BASSOON OR **CONTRA FACOTTO**

Largest and deepest toned of the wood-wind instruments, bearing the same relation to the ordinary bassoon as the stringed double bass does to the violoncello, but used more rarely. It is used in military bands and orchestras.

DOUBLET OR **POURPOINT.** Tightly fitting body garment reaching from the neck to a few inches below the belt. Worn from the 14th to the 17th century, it probably took its name from the fact that it was doubled and padded.

Doublet. Front view of the garment as worn in the 16th century

DOUBLOON (Span. doblon, double). Spanish gold coin originally worth two piteles, or 64s. 8d. Another doubloon, the doblon de Isabel, value 20s. 8d., was issued from 1848-68, when its use was discontinued.

DOUGHTY, CHARLES MONTAGU (1843-1926). British author and traveller. Born in Suffolk, August 19, 1843, the son of a clergyman, he was educated at Cambridge. He then began to travel, first in Europe, later in Africa, and finally in Western Asia. In 1876 he left Damascus on a journey which took him through unknown parts of Arabia. This, the most adventurous episode in a wholly adventurous career, is described in his book *Arabia Deserta*, 1888, notable almost as much

for its style as for its matter. Doughty's later years were passed in England, where he wrote *The Dawn in Britain* and other poetry. He died at Sissinghurst, Kent, Jan. 21, 1926

Douglas, Isle of Man. Promontory of Douglas Head, on which stands the lighthouse

DOUGLAS. Borough and watering place of the Isle of Man, capital of the island. It stands on the Douglas Bay, in which is a tower of refuge. Among its attractions are a series of promenades, the Villa Marina, good sands, bathing, and boating. It has piers and a harbour, public baths, and facilities for all kinds of sport. Dancing halls are a feature, and there are several theatres and cinemas.

S. George's is the oldest church; others are S. Thomas's, S. Ninian's, and a fine Roman Catholic church. The government buildings include the legislative buildings and court house; there are also the town hall, public library, and post office. Douglas is connected by steamer with Liverpool, Fleetwood, Barrow, Glasgow, Belfast, and other ports. It was a mere fishing village until its value as a health resort made it popular in the 19th century. Market day, Sat. Pop. 20,326.

Douglas Head is a promontory with a lighthouse at the S. of the bay

DOUGLAS. Famous Scottish family, now represented by the dukes of Hamilton and Buccleuch, the marquess of Queensberry, the earls of Home and Morton, Lord Torphichen, and various baronets and others. The name is taken from Douglas in Lanarkshire, a town 11 m. from Lanark, with a station on the L.M.S. Rly. There are remains of S. Bride's church, the old burial place of the Douglasses. Sir William Douglas was made earl of Douglas in 1358, and his son James, the 2nd earl, is the Douglas of the hall of Chevy Chase. In 1488 the main line died out and the earldom became extinct. In 1663 William, 11th earl of Angus, a descendant of an illegitimate son of the 1st earl of Douglas, was made marquess of Douglas, and in 1703 the 3rd marquess was made duke of Douglas. He died without sons in 1761, when the dukedom became extinct. The marquessate, however, passed to the duke of Hamilton.

Douglas Castle in Lanarkshire is the property of the earl of Home, a Douglas in the female line. See Hamilton.

DOUGLAS, SIR CHARLES WHITTINGHAM HORSLEY (1850-1914). British soldier. Born July 17, 1850, he joined the Gordon Highlanders in 1869.

He saw service during the Afghan War (1879-80) and the S. African War (1880-81). In 1904 Douglas, having served in the S. African War, was made adjutant-general. He was knighted in 1907; in 1909 he was transferred to the southern command, and from 1912-14 was inspector-general. In 1914 he was made chief of the imperial general staff, but on Oct. 25 of that year he died suddenly.

DOUGLAS, STEPHEN ARNOLD (1813-61). American politician. Born at Brandon, Vermont, April 23, 1813, he settled in Illinois, became a lawyer, and had soon a large

Doubloon. Spanish American gold doubloon, dated 1697
One-half actual size

practice. Combining politics with the law, he became a leader among the Democrats; in 1836 he entered the legislature of the state; in 1840 he was its secretary, and in 1843 he was sent to the House of Representatives. He remained there until 1847, and thence until his death he was in the Senate. In 1858 began his duel with Lincoln, by which he is perhaps chiefly known. Both were candidates in Illinois for the Senate, Douglas winning the seat, and in 1860 the two were again pitted, this time for the presidency, when Douglas was badly beaten. He died June 3, 1861.

DOUGLAS PINE (*Pseudotsuga douglasii*). Tall evergreen tree of the order Coniferae. A native of N. America, it attains a height of 100-300 ft. Its needle-like leaves are flat, with two white lines on the lower surface, and are spirally arranged on the twigs. The pendulous, oval cones, which vary in length from 2-4 ins., have scales with three-pronged ends, of which the middle prong is much longer and narrower than the other prongs. See Pine.

Douglas Pine, an evergreen of North America

DOULLENS. Town of France, in the dept. of Somme. It is 17 m. by rly. S.W. of Arras. During the Great War its central position behind the British lines made it of considerable importance, and it was here that, after the retreat of March, 1918, the Allied Powers placed Foch in supreme command, March 26, 1918. A cemetery here contains about 1,700 graves of British soldiers.

DOULTON, SR HENRY (1820-97). British pottery manufacturer. Born in Lamheth, the son of a potter, he joined his father. About 1867 the firm began to make the ware by which his name is known, and later opened branches at Burslem, Paisley, Paris, and elsewhere. Doulton, who was knighted in 1887, did a great deal for the development of artistic pottery. He died Nov. 17, 1897.

DOULTON WARE. In its more limited sense, Doulton ware consisted of salt-glazed stoneware, decorated with applied mouldings or scratched patterns, called sgraffito, filled in with colour. Later, the ornamentation was applied by thin layers of coloured clays, which led to the adoption of the *pâte-sur-pâte* process. A special form called *carrara* ware had a hard, white body, covered with an opaque egg-shell enamel, which takes subdued colours very well. Doulton faience had a terra-cotta or biscuit body, decorated with scenic or floral paintings and fired under a dull glaze.

Gaston Doumergue, French statesman

DOUMERGUE, GASTON (b. 1863). French statesman. Born at Aigues-Vivres, Aug. 1, 1863, he held law appointments in Indo-China and Algeria, 1890-93. Becoming a deputy in 1893, he was minister for the colonies, 1902-5; of commerce and labour, 1906-8; and of education, 1908-10. A senator since 1910, he was president of the council, and minister for foreign affairs, 1913-14, and then

colonial minister again. In 1924 he succeeded Millerand (q.v.) as president of the French Republic. See France.

DOURO (Sp. Dureo; anc. Durius). River of Spain and Portugal. Rising E. of Burgos, it curves E. and S., then flowing S.W. past Soria, Valladolid, and Zamora, enters Portugal, of which it forms the frontier for 65 m. Running W. for most of its length, it enters the Atlantic near Oporto, after a course of 485 m. Much impeded by rapids, it is navigable for about 90 m., but its mouth is partly blocked by a bar.

DOUROCOULI. Group of small nocturnal monkeys common in South America. They are thick and compact in body, with close fur and rather bushy tails, round heads, and large eyes. The eye-sockets occupy almost the entire width of the skull. They feed on insects. See Monkey.

DOUW OR DOW GERARD (1613-75). Dutch painter. He was born at Leiden, April 7, 1613, and studied under Rembrandt, learning much of his master's treatment of light and shade. Later he developed a minuteness in his work that precluded more than a general application of Rembrandt's principles. The Potter's Shop, in the National Gallery, London, is a representative example of his art.

DOVE. Name applied vaguely to various species of pigeon (q.v.). In Great Britain the stock dove, rock dove, and turtle dove are familiar examples.

The dove is the symbolic representation of the Holy Ghost. It was painted white as the emblem of purity, and sometimes a nimbus was placed round its head. Its figure may be seen on many baptismal fonts, and in Roman Catholic churches the pyx, or box which holds the Host, is made in the form of a dove.

DOVE. River of Derbyshire and Staffordshire. It rises on Axe Edge and flows between the two counties in a S. and S.E. direction to join the Trent after a course of 45 m. Dove-dale is a famous beauty spot.

DOVER. Borough, seaport, and market town of Kent. One of the Cinque Ports, it stands on the Strait of Dover, 77 m. E.S.E. of London on the Southern Rly. It is the port of

Dover. Shakespeare's Cliff, pierced by the railway tunnel. Above; Dover Castle; the keep (centre) is Norman

Saxon fortress, and within its precincts are a pharos or light tower and a fortress church. Other buildings are the town hall (1883), adjoining the old Maison Dieu (13th century).

the museum, and the Duke of York's Military School. Near the site of the round church of the Knights Templars stood the Bredenstone, where was held the court of Shepway. The rly. from Folkestone to Dover passes through three tunnels, one in Shakespeare's Cliff (350 ft.). The harbour is partly enclosed by the Admiralty Pier (1,360 yds.); the Prince of Wales Pier was opened in 1903, and a national harbour in 1909. A new station was opened for public traffic in 1919. The bishop of Dover is suffragan to the archbishop of Canterbury. Market days, Tues., Thurs., and Sat. Pop. 43,160. See Channel Tunnel.

The treaty of Dover was a secret treaty signed May 22, 1670, between Louis XIV of France and Charles II. The terms were that the English king should become a Roman Catholic, assist Louis in his war in the Netherlands, and receive an annual payment of money in return for his help.

DOVER PATROL. A section of the British navy, this was a force based on Dover and Dunkirk throughout the Great War. Its exploits included the blocking of Zeebrugge on the night of Apr. 23, 1918, and placing the *Vindictive* in the entrance of Ostend Harbour, May 10, 1918. The patrol kept the ways for merchant vessels passing through the narrow seas, and closed the gate against enemy submarines by maintaining a barrage across the Strait of Dover. In appreciation of its work, the public subscribed for memorials at Leathercote's Point, St. Margaret's Bay, Dover, at Cape Blanc Nez, France, and at the entrance to New York Harbour. The Dover memorial was unveiled in 1921. Consult The Dover Patrol, 1915-17, R. Bacon, 1919.

CHANNEL SWIMMERS. The Strait of Dover, which in its narrowest part is 21 m. across, has attracted the attention of swimmers, Captain Webb swam across it in 1875, and the feat was repeated Sept. 6, 1911, by T. W. Burgess, and by H. Sullivan, 1923; C. Toth, 1923; S. Tirahoschi, 1923; H. Vierkötter, Miss Ederle, Mrs. Corson, G. Michel, N. L. Derham, 1926; E. H. Temme, Miss M. Gleitze, Mrs. Ivy Gill, 1927; Miss Ivy Hawke, Miss Hilda Sharpe, and an Egyptian, J. Helmy, 1928.

Dover is the capital of the state of Delaware, U.S.A., and there is a Dover in New Hampshire, U.S.A., the co. seat of Strafford co.

DOVERCOURT. Seaside resort of Essex. At the entrance to the estuary of the Stour, 70 m. N.E. of London by the L.N.E. Rly., it is included in the borough of Harwich. The church of All Saints has some old and interesting features, and there is a breakwater 1,550 ft. long. Pop. 7,694.

DOVEY OR DYFL. River of N. Wales. It rises on the E. slope of Aran Mawddwy and flows S. and S.W. through Merionethshire and Montgomeryshire, and then between Merionethshire and Cardiganshire to Cardigan Bay, which it enters by an estuary 6 m. long. Its length is 30 m.

DOWDEN, EDWARD (1843-1913). British poet and critic. He was born at Cork, May 3, 1843, and became professor of English literature at Trinity College, Dublin, in 1867. In 1889 he was Taylorian lecturer at Oxford, and from 1893-96 Clark lecturer at Trinity College, Cambridge. He died April 4, 1913.

The chief of his numerous works are *Shakespeare: A Critical Study of his Mind and Art*, 1875; *Life of Shelley*, 1886; *Introduction to Shakespeare*, 1893; *History of French Literature*, 1897; *The French Revolution and English Literature*, 1897. Consult his *Letters*, ed. E. D. and H. M. Dowden, 1914.

DOWNHAM. District of London. It is about 9 m. to the south, being partly in the metropolitan borough of Lewisham and partly

high. At the summit, which can be reached by a rly. from Königswinter, are the ruins of a castle erected by Arnold,

Drachenfels. The castle-crested mountain from across the Rhine

DRACHMA. Greek silver coin, equivalent to the franc in the Latin Monetary Union. The unit of account, it is divided into 100 lepta and coined in 1, 2, and 5 drachmae pieces in silver, and in 5, 10, and 20 drachmae in gold, also nominally in 50 and 100 drachmae. The coins drachmae and lepta are used also in the currency of Crete.

DRACO OR FLYING DRAGON. Genus of so-called flying lizards found in India and Malaysia. All small in size, they are remarkable for the length of the hind ribs, which stretch out the skin and form a pair of wing-like expansions. The lizards live in the trees, and, aided by their "wings," take long flying leaps.

The name Draco is given to a long, winding stream of stars between Ursa Major and Ursa Minor, and almost encircling the Lesser Bear. See Constellation.

DRACO. Archon or magistrate of Athens. He was the first to codify and commit to writing (c. 621 B.C.) the laws of the state as formulated in the decisions of its judges. The severity of this code has made the word "draconian" a synonym for unmerciful, but the Draconian code was no more severe than other early codes of law. Its severity was mitigated by Solon.

DRAFT. Military term for a party of soldiers sent to join some unit of their own corps. The Draft was the name given to the Conscription Act passed by the Congress of the U.S.A., Nov. 3, 1863, which empowered the President to draft into the army all men between the ages of 20 and 45.

DRAGA (d. 1903). Queen consort of Serbia. As Draga Mashiu she was maid-in-waiting to the Serbian queen, Natalie. In July, 1900, she married King Alexander I, and on July 11, 1903, she and her husband were murdered at Belgrade by the supporters of the Karageorgevitch family.

DRAGO, LUIS MARIA (1859-1921). Argentine statesman and author. He was born at Buenos Aires, May 6, 1859, and became a judge at Buenos Aires, and later a member of Congress. He was minister for foreign affairs under President Broca, and as such sent in 1902 to the Argentine minister at Washington the instructions which came to be known as the Drago doctrine. This doctrine asserts the independence of the Spanish-American nationalities and affirms the principle that no power by force of arms may impose itself upon any of them. Drago, who was the author of many books, including *Antropologia Criminal*, died June 9, 1921.

DRAGON. Fabulous monster common to the folk-lore of most nations. It is generally in the form of a gigantic reptile with four legs and a fierce (often fire-breathing) head, and frequently furnished with wings. It is the form often taken by the monster overcome by the hero of folk-tales and legends of many lands. Consult *The Evolution of the Dragon*, G. Elliot Smith, 1919.

In British heraldry the dragon is a monster having a lion-like scaly body, bat-like wings, barbed tail and tongue, and pricked up, pointed ears. It is one of the national badges of Wales.

Dragonet, C. yra. See below

Drachma. Silver drachma, slightly reduced, of Alexander the Great

DRAGON (*Dracunculus vulgaris*). Perennial herb of the order Araceae. A native of S. Europe, it is similar to the eucalyptus, but differs in its taller stem (spotted with purple), its divided leaves, and the more open spathe. The flowers give off an offensive odour.

DRAGONET (*Callionymus*). Group of brilliantly coloured fish, related to the gobies. There are about forty species, one found in deep water off the British coasts. The fore part of the body is flattened, and the pectoral and dorsal fins are large and conspicuously spined. The females are dull-coloured. See illus. above.

DRAGON FISH (*Pegasus*). Genus of small fish found around India, China, and Australia.

The broad, flattened body is completely covered with small bony plates instead of scales, and the gill cover consists of only one plate.

Dragon Fish. *Pegasus draco*, a fish with bony plates instead of scales

DRAGON FLY (*Odonata* or *Lihellulidae*). Family of neuropterous insects comprising about 2,000 species. They are handsome insects with large heads, conspicuous compound eyes, short antennae, and powerful jaws. The thorax is thick, and the abdomen is generally long and slender. The four wings are long, transparent, and beautifully veined. Many species are brilliantly coloured. The earlier stages of life are passed in the water, and the larva breathes by means of gills. There is no distinct pupal stage, but after about a year in the water the nymph crawls up the stem of a

Dragon Fly. Specimen of *Aeschna cyanea*. Above, demoiselle dragon fly, *Calopteryx virgo*

plant, or on the bank of the pond, where presently the skin cracks open down the back and the perfect insect emerges.

DRAGONNADES. Name given to the persecution of the Huguenots in France just before and after the revocation of the edict of Nantes in 1685. It is so called because dragoons were employed to see that the king's orders against the Protestants were enforced.

DRAGON'S BLOOD. Red resinous exudation from the fruits of a number of palms. Dragon's blood is obtained from species of *Daemonorops*, the varieties East Indian, Malay, Sumatra, and Borneo being from different kinds. It was formerly used as an astringent in medicine, and is still employed as a colouring matter for varnishes.

DRAGON TREE (*Dracaena draco*). Tree of the order Liliaceae. A native of the Canary Islands, it has long, slender, lance-shaped leaves in a crowded head at the summit of the stem, giving it a palm-like aspect. The small, greenish-white, bell-

Dragon Tree. A very old specimen of the tree growing in Tenerife

shaped flowers are produced in a large panicle. When of great age, the trunk branches above. There was a great tree of this species at Orotava in Tenerife which was believed to have an antiquity greater than that of the Pyramids. In 1827 a great storm subjected it to much injury, and in 1851 it was entirely destroyed.

DRAGOON. At one time a mounted infantryman. They used horses for marching purposes only, but were trained and organized to fight on foot. They took their name from the short musket, called a dragon, which they carried.

In the British army there are regiments of dragoons and dragoon guards, but the number

2nd Dragoons (Royal Scots Greys) regimental badge

Dragoons. Regimental badges of the 1st Royal Dragoons and those of the 1st, 2nd, 3rd, 4th and 5th Dragoon Guards

of each has been reduced since the Great War. There are now five regiments of dragoon guards instead of seven, as the 6th has become a S. African regiment allied with the 3rd and the 7th amalgamated with the 4th. Of the three regiments of dragoons, the 1st (Royals) and 2nd (Scots Greys) remain, but the 6th (Inniskillings) has been disbanded and the name transferred to the 5th Dragoon Guards.

DRAKE. Nameship of a class of four British cruisers. She was torpedoed off the north coast of Ireland, Oct. 2, 1917, but reached harbour, and there sank in shallow water. She was 520 ft. in length, 71 ft. in

H.M.S. Drake, name-ship of a class of British cruisers. She was sunk Oct. 2, 1917. Cribb, Southsea

beam, displaced 14,100 tons, and had engines of 30,000 horse power, giving a speed of 23 knots. She carried two 9.2-inch, 16 6-inch, 20 smaller guns, and two submerged torpedo tubes. Of the Drake class only the King Alfred and the Leviathan survived the Great War.

DRAKE, Sir Francis (d. 1596). English seaman. Born probably at Crowndale, near Tavistock, he is believed to have served an apprenticeship on a coasting vessel. In command of the fifty-ton craft *Judith*, he sailed with his cousin, John Hawkins, on a trading expedition which barely escaped destruction by the Spaniards at San Juan d'Ulloa, in 1567. In 1572 he sailed with a small but picked force, sacked Nombro do Dios, crossed the Isthmus of Panama until he came in sight of the Pacific, captured a great Spanish mulc-train of treasure, and returned home.

On Nov. 15, 1577, with five ships, he made his way through the Strait of Magellan (Aug., 1578), and then with the one ship that remained to him, the *Pelican* or *Golden Hind*, attacked the Spanish ports on the Pacific, where no hostile ship had been before. After capturing and clearing a great treasure ship, he sailed north, landed in California, where the natives proposed to deify him, and then sailed across the Pacific. He passed the Cape of Good Hope in January, 1580, and sailed into Plymouth Sound on Sept. 26, and was knighted.

In 1585, when the official declaration of war with Spain was imminent, Drake put to sea unofficially with a considerable flotilla, sailed into the port of Vigo, which was put to ransom, crossed the Atlantic to the Spanish Main, fell upon San Domingo and Cartagena, which were also put to ransom, captured a great treasure ship, and returned to England. In 1587 he commanded the expedition which sailed to Cadiz, burnt the shipping, and postponed the sailing of the Armada for twelve months. In 1588 he was second in command and real director of the operations against the Armada (q.v.). He died at sea, Jan. 28, 1596, and his body was committed to the Atlantic Ocean.

DRAKENSBERG or **QUATHLAMBA.** Range of mountains in S. Africa. They form a rampart from Griqualand East to Mont aux Sources in Basutoland, the highest peak, 11,000 ft., and thence in an easterly direction to Majuba Hill, 7,000 ft. The erosion of the lavas has produced remarkable escarpments, as at Maclear, Cape Province.

DRAM or **DRACHM.** Unit of weight, being one-sixteenth of an ounce avoirdupois. Previous to 1864 it formed also the eighth part of 1 oz., apothecaries' weight. The name comes from drachma, and is still used in the Levant, 400 drams making one olea. See *Pound*.

DRAMA (Gr. dran, to do). The art of expression by action. Its beginnings are found in the instinctive pretences, for the mere sake of expression, common to all savage races and many animals. Probably long before the arrival of speech tragedy had taken a set form in the war-dance and comedy in phallic revels, both afterwards merged in the ritual of primitive religions.

The all-important Greek drama is presumed to have developed from the dithyrambs or hymns in honour of Dionysus, god of wild vegetation, fruits, and especially the vine, sung by a chorus dressed as satyrs, who engaged also in mimic dance-stories.

Much as the dramatic revival of the 16th and 17th centuries owed to the plays of the Church and of the people, it would not have come about in the way it did without the stimulus of the New Learning and the re-awakened interest in the classics. The revival of tragedy began in Italy with Galeotto's *Sofonisba* (1502), which was written still under the influence of Seneca, and noticeable for the fact that the unity of place was disregarded.

In England, lay performances in the universities and elsewhere, both of Latin comedies and of translations, were encouraged, partly for anti-papal purposes, by Henry VIII and Edward VI.

In 1551 appeared the first English comedy, Ralph Roister Doister, based by Nicolas Udall upon Plautus's *Miles Gloriosus*; and in 1562 Lord Buckhurst and T. Norton produced the first English tragedy, *Gorboduc*, or *Ferrex and Porrox*, inspired by Seneca's *Thebais*. With these plays, and with John Heywood's *Interludes*, the revival of English secular drama, which reached its highest point in Shakespeare, may be said to have been launched. See *Acting*; *Theatre*.

DRAMA. Town of Macedonia, Greece, the ancient *Drabescus*, 70 m. N.E. of Salonica. It changed hands in the Great War, being recovered by the Greeks, Oct. 8, 1918. Near it was fought the battle of Philippi (q.v.) in 42 B.C.

DRAPER (A.S. from Fr. *drap*, cloth). Originally one who made woollen cloth.

The Drapers' Company is the third of the twelve chief City of London livery companies.

It received the first of its seven charters in 1364, and was granted arms in 1439. The guild first met in S. Mary Bethlem hospital church, Bishopsgate. Its first hall was in St. Swithin's Lane. A new hall was built in 1667, and rebuilt in 1772-74 and 1866-70. The company has large estates and a corporate and trust income of about £78,000, and administers numerous charities, including a number of almshouses.

Drapers' Company arms

DRAUGHT. Term used in various meanings. (1) The least depth of water in which a ship can float without touching bottom. The largest vessels have a draught of about 35 ft. when fully laden. Draught scales in feet are painted on the bow and stern post.

(2) The current of air passing through a furnace to promote combustion. Natural

draught is produced by the column of hot gases rising through a chimney to displace heavier air outside. Forced draught implies the blowing of air through the furnace at a pressure somewhat higher than atmospheric.

DRAUGHTS. Game of skill played with 24 disks or draughtsmen on a chequered board of 64 alternate black and white squares. It is of great antiquity, forms of it being known in ancient Egypt, Greece, and Rome.

The game is played by two players, each having 12 men, one selecting white, the other black; they are set up in three rows at each end of the board, using either the white or the black squares only. The men are moved one square at a time in a diagonal direction, and take an opponent's piece by passing over it whenever there is a vacant square beyond. When a player succeeds in getting one of his pieces across the board into the last row, it is crowned by placing another piece upon it, and becomes a king, thereby acquiring the very advantageous privilege of moving either backwards or forwards.

DRAVE, DRAVA or **DRAU.** River of Central Europe, formerly entirely within Austria-Hungary, now in parts the N. boundary of Yugoslavia. It is one of the chief right-bank tributaries of the Danube. Its length is 450 m.

DRAVIDIAN. Name given to an ancient non-Aryan race in S. India and Ceylon. They are dark, broad-nosed, thick-lipped, curly-haired, and long-headed. The Dravidians are by some held to be related to the Australian aborigines; by others to the Negroid race. A style of architecture often called Dravidian is also designated S. Indian.

Dravidian is the name of a group of languages spoken by the Dravidians in Baluchistan, N. and S. India, the Deccan, and Ceylon. Although the vocabulary contains a considerable Sanskrit element the language has a distinctive grammatical system.

DRAWING. The pictorial or diagrammatical representation of objects seen or imagined. It is the basis of an art, whether architecture, sculpture, or painting, and thus the art student must of necessity begin with simple studies of shape, form, and proportion.

The modern highly specialised world has placed drawing in several categories apart from the purely pictorial, which is commonly meant. Architectural drawing, strictly considered, is an exposition in pure outline of the elevation and details of a building and building design, for technical use alone, for the information of the architectural profession and the builder. It is essentially an affair of measurements. Of a like nature is the drawing of architectural plans and engineering details, although the man who works at these is a draughtsman, not an artist. See *Illustration*; *Perspective*.

DRAYTON, MICHAEL (1563-1631). English poet and dramatist. Born at Hartshill, Warwickshire, a friend of Shakespeare and a shareholder in the Whitefriars Theatre, he is best remembered for two sonnets, "Since there's no help, come, let us kiss and part"; and "Dear, why should you command me to my rest?" He also wrote a *Ballad of Agincourt*, and a charming fairy poem, *Nymphidia*. His *Polyolbion*, a patriotic poetical topography of some 30,000 lines, is packed with allusions of antiquarian interest. He died in Dec., 1631, and was buried in Westminster Abbey.

DREADNOUGHT. Name borne by first-class ships of the British navy almost continuously since 1873. The ninth Dreadnought was the first "all-big-gun" ship of the

Michael Drayton, English poet. Nat. Port. Gall.

modern era. Her principal dimensions were: length, over all, 526 ft.; beam, 82 ft.; and normal displacement, 17,900 tons. She was larger and faster (21 knots) than any earlier British warship, and was the first of any nationality, larger than a light cruiser, to be equipped with turbine machinery. Her principal distinctive characteristic, however, was the elimination of all secondary or intermediate guns from the armament, which comprised nothing between ten 12-inch battle guns and 24 3-inch (12-pounders) for repelling torpedo-craft.

By general consent all vessels subsequently designed on similar principles as to armament are called Dreadnoughts. Vessels built on the all-big-gun principle but having weapons heavier than the 12-in. are popularly known as super-Dreadnoughts, the first of these being H.M.S. Lion, 26,350 tons, launched August 6, 1910. See Battle-ship; also illus. p. 157.

H.M.S. Dreadnought. First of the modern all-big-gun battleships. launched in 1905

DREAM. Involuntary manifestation of the subconscious mind during sleep. Assuming that the deepest sleep is unconscious, and that normal slumber is subconscious, dreams arise mostly in that state between sleeping and waking when the faculty of imagination is regaining the power of exercising itself upon sense-impressions stimulating the subconscious mind. The subject matter of dreams is built up of material already present in the mind, and of that alone.

An interesting theory of the psychology of dreams has been propounded by Sigmund Freud, professor of neuropathology in Vienna. His view is that dreams are the outcome of definite and highly significant psychological processes, that they are a method of satisfying repressed desires, controlled during consciousness by a censor in the mind. The practical application of this theory is seen in the treatment of persons suffering from neurasthenia and allied disorders. See Psychoanalysis.

DREDGING. Operation of excavating material from the bed of a river, harbour, or other water-covered area, in order either to improve navigation by increasing the depth of water, or to form new channels. Dredging machines are classified as hucket or ladder, hydraulic pump or suction, spoon or dipper, and grab. Some dredgers are fitted with buckets and pumps. Self-propelling machines, which are, as a rule, of large size, frequently contain hoppers in which the material dredged is stored for removal into deep water, where it is afterwards dumped.

Dredger. Sectional diagram of a ladder dredger. The steel buckets travel round the ladder, scooping up material and discharging it into a hopper

DRESDEN. City of Germany, capital of Saxony. It stands on both banks of the Elbe, 110 m. S. of Berlin. It is famous as an artistic and educational centre, its museums

and schools (including the technical high school) being especially notable. It is also important as a rly. centre and as a centre for river traffic. The industries include the manufacture of pianos, cycles, sewing-machines, hardware, and chemicals. As a business town it developed greatly in the 19th century, although it had long been noted for its porcelain. Pop. 619,157.

In the museum is the former royal picture gallery, with many Italian and Dutch masterpieces, including Raphael's Sistine Madonna. The royal palace contains a remarkable collection of jewels and other curios. The Japanese museum houses the public library, and the Johanneum has a valuable collection of porcelain. The chief Roman Catholic church, the court church, was built in the 18th century, and is connected structurally with the palace. The principal Protestant church is S. Sophia, dating from about 1400 and restored about 1860. Other churches are those of Our Lady, of the Cross, of the Three Kings, and the Martin Luther Church.

DRESDEN CHINA. In 1709 J. F. Böttger discovered the secret of making this china,

Dresden. Panorama, looking north. Left, the twin spires of the Church of S. Sophia; centre, towers of the palace and of the court church; right, dome of the Church of Our Lady. The course of the Elbe is also seen

and it was produced in the royal factory at Dresden, whence it was transferred in 1710 to Meissen. The china is remarkable for fineness of body and delicacy of colouring. In 1731 Kändler began to model small and large figures and groups, busts and animals. In 1740 the rococo style prevailed and long persisted, while the figures were mostly of Arcadian shepherdesses and swains, cupids, etc. The mark is two crossed swords and a crown. See China Marks; Pottery.

The battle of Dresden was a victory of Napoleon over the allied armies, Aug. 26-27, 1813. Napoleon put 96,000 men into the field, while the allied forces amounted to 200,000. The French lost 10,000 killed, wounded, and prisoners; the allies 38,000. The latter were commanded by the Austrian general Schwarzenberg.

Dresden China. Figure of a flower-seller, c. 1745

DRESDEN. German light cruiser. She was sister ship to the Emden (q.v.), her length being 387 ft., beam 43 ft., and speed 24 knots. Her armament was ten 4-in. and eight 3-pounder guns. On March 14, 1915 the Dresden was put out of action by the British cruisers Kent, Glasgow, and Orama near Juan Fernandez. The Dresden hoisted the white flag, and her crew sank her.

DRESSER. Fixture in a kitchen or pantry. It consists of a base with cupboards and drawers, a flat top, and a superstructure of shelves for holding plates and dishes upright. A development of the sideboard, dressers were originally side tables whereon dishes were dressed for the table.

DRESSINGS. Fabrics employed for the protection of wounds or injuries. Cotton wool, which consists of hair and seeds of various species of gossypium, contains about 10 p.c. of fatty material. When this is removed it is called absorbent cotton wool. Bandages are made of buttercloth, calico, crêpe, domette, flannel, muslin, gauze, elastic rubber webbing, and other materials. Gauze tissue is prepared plain and also medicated with boric acid, iodoform, mercurio-zinc cyanide, and other antiseptics. Lint may be medicated with boric acid or iodoform. Collodion, for painting small wounds, consists of a solution of pyroxylin in alcohol and ether.

A dressing station is a medical post established as near as practicable to the actual fighting line to render first aid to casualties. See Ambulance; Red Cross

DREYFUS CASE. Miscarriage of justice in connexion with Alfred Dreyfus, a captain of artillery in the French army. In Dec., 1894, Dreyfus was sentenced by a court-martial, on the charge of telling French military secrets to the German government, and imprisoned on Devil's Island, in the W. Indies. The published evidence appeared defective, and agitation for a revision of the sentence began. The affair assumed national importance, a newspaper war followed, and France was divided into two camps.

Alfred Dreyfus, French soldier

Emile Zola, the novelist, charged the government officials with having lent themselves to a deliberate conspiracy for the destruction of Dreyfus, and with now refusing justice in order to shield themselves from disgrace. For this Zola was prosecuted and heavily fined. Then a member of the intelligence department, Colonel Henry, confessed that he had himself forged certain leading documents in the case, and committed suicide. Count Esterhazy, a major in the French army, fled from France and made public some contradictory "confessions" of his own guilt.

In 1899 a fresh court-martial was held on Dreyfus. This court again pronounced him guilty, though "with extenuating circumstances," and condemned him to ten years' imprisonment. This further injustice was, however, prevented by a formal pardon. In July, 1906, the Cour de Cassation declared the innocence of Dreyfus, who was thereupon restored to the army. In Sept., 1919, he received the Legion of Honour.

DRIFFIELD OR GREAT DRIFFIELD. Market town and urban district of Yorkshire (E.R.). The principal agricultural centre of the Yorkshire wolds, it is a junction on the L.N.E. Rly., 20 m. N.N.W. of Hull, with which it is connected by canal. Its chief church, All Saints, has a 15th century tower. Oil-enke is manufactured. Market day, Thurs. Pop. 5,674.

DRIFTER. Small vessel about 100 ft. long, used in the herring fisheries, and so called because it drifts its nets and does not pull them. The fine-meshed drift net is made to move through the water parallel with shoals of such fish as herring, mackerel, or pilchards, in such a way that they run into the net and are caught by their gills and suffocated. See Trawler.

DRILL (*Cynocephalus leucophaeus*). Large baboon found in W. Africa. It closely resembles the mandrill, but lacks the red and blue colouring of the face, which in this species is jet black. See Mandrill.

DRILL (Dutch, *drillen*, to bore). Tool used by miners for boring holes in which to place explosives or for obtaining samples. The complete apparatus is generally called a rock drill. In percussive drills, the hole is made by the tool striking against and breaking chips from the substance to be bored, while at the same time the tool is revolved to make a circular hole. The cutting edge is of various forms. Rotary drills cut by rotating. The diamond drill consists of a short steel tube with the circular edge at one end studded with diamonds forming a "crown." As the tool rotates the diamonds cut an annular hole. The efficiency of a drill depends on true shaping of the cutting facets and, in addition, correct tempering of the steel. The name is given to an agricultural machine for sowing seed or manure, or both.

DRINA. River of S.E. Europe, forming part of the boundary between Serbia and Bosnia. It rises among the mountains of E. Montenegro in several headstreams, the chief of which is the Tara, and flows N., N.W., and then N.E. to join the Save, 58 m. W. of Belgrade. Its length is 160 m. During the Great War fighting took place in the Drina district between the Austrians and Serbians, Sept., 1914.

DRINKWATER, JOHN (b. 1882). British poet and critic. He was born June 1, 1882, and published his first volume of verse in 1908.

One of the founders of the Pilgrim Players, he became manager of the Repertory Theatre, Birmingham. His published work includes the plays *Cophtua*, 1911, and *Rebellion*, 1914, both in verse. Other plays are *Abraham Lincoln*, 1918; *Mary Stuart*, 1921; *Oliver Cromwell*, 1921; and *Robert E. Lee*, 1923. He also wrote *Studies of William Morris*, 1912; *Swinburne*, 1913; *The Pilgrims of Eternity*, 1925; *Mr. Charles, King of England*, 1926; *Cromwell*, 1927; an autobiographical volume, *All About Me*, 1928; and many volumes of poetry.

Dripstone. In architecture, the projecting tablet or moulding placed on the crown of an arch, window, or doorway. See Moulding.

John Drinkwater, British poet
Hoppé

DRISCOLL, JIM (1880-1925). Professional boxer. Born at Cardiff, Dec. 15, 1880, he had more than 50 victories to his credit. He secured the feather-weight championship in 1910, and became the winner outright of the Lonsdale belt for that weight. Driscoll retired from boxing after his drawn battle with Owen Moran, Jan. 27, 1913. He died Jan. 30, 1925.

DRIVER, SAMUEL ROLLES (1846-1914). British Biblical scholar. Born at Southampton, Oct. 2, 1846, he was Regius professor of Hebrew and canon of Christ Church, Oxford, from 1883 until his death, Feb. 26, 1914. One of the greatest Hebraic scholars of his time, Driver wrote an *Introduction to the Literature of the Old Testament*, 1891, *Commentaries on various books of the O.T.*, and edited (in collaboration) *A Hebrew and English Lexicon of the Old Testament*, 1906.

DRIVING. Controlling and guiding a horse or horses harnessed to any vehicle. In driving a single horse the reins should be taken in the left hand,

Driving. How reins should be held when driving a four-in-hand. Above, grip for single reins

the left or near side rein being held between the forefinger and thumb, and the off-side, or right-hand one, between the second and third fingers. In driving a pair the reins are held in the same manner.

In Great Britain the left-hand side of the road is always adhered to and retained when passing another vehicle coming in the opposite direction. When overtaking anything going in the same direction, it is necessary to draw towards the middle of the road and pass on the right side. See Horse; Riding.

DROGHEDA. Borough, seaport, and market town of co. Louth, Irish Free State. It stands on the Boyne, 4 m. from Drogheda Bay, and 32 m. N. of Dublin on the G.N.I.R.

It has a good harbour. In 1649 Cromwell entered the town and massacred its defenders. Market day, Sat. Pop. 12,716.

The title of earl of Drogheda has been borne by the Moore family since 1661. Pron. Dro-heda.

Drogheda. S. Lawrence Gate, on the N. side of the town; it is believed to date from the 12th cent.

DROITWICH. Borough and market town of Worcestershire. On the Salwarpe, 5½ m. N.E. of Worcester and 126 m. N.W. of London, it is served by the G.W. and L.M.S. Rlys., while a canal connects it with the Severn. The chief industry is the production of rock salt. It is chiefly known as a watering place. Its brine springs are efficacious for rheumatism, neuritis, gout, etc. There are two old churches, S. Andrew's and S. Peter's. In 1928 almost the whole of the town, long the property of the Corbet family, was sold. Market day, Fri. Pop. 4,538.

DROMEDARY. In zoology, the one-humped camel (*Camelus dromedarius*) of Arabia and N. Africa. In common speech the term dromedary is used for riding camels as distinguished from the heavier baggage animals. See Camel.

DROMORE. Urban dist. and market town of co. Down, Northern Ireland. It stands on the Lagan, 17½ m. S.W. of Belfast, on the G.N.I.R. Dromore was formerly the seat of a bishopric, which was united to Down and Connor in 1842. The cathedral was destroyed during the insurrection of 1641. The church contains the tomb of Jeremy Taylor, its builder. Market day, Monday. Pop. 2,364.

DRONE. Name given to the male of the honey bee. See Bee.

In music the name drone is applied to the pipe or pipes, in instruments of the bagpipe class, on which the sustained and unaltering bass tones are produced. The melody pipe is called the chanter. See Bagpipe.

DROPSY (Gr. *hydrops*, from *hydor*, water). Accumulation of fluid—the watery part of the blood—in the tissues and cavities of the body. The commonest conditions giving rise to general dropsy are disease of the heart, kidneys, and liver. Localised dropsy, or oedema, may result from local weakness of the vessels, as in varicose veins, and from inflammation. Dropsy is generally first noticeable in puffiness of the eyelids, and in swelling of the ankles.

Treatment must be directed towards the cause of the condition, but frequently relief is afforded by measures which drain the body of fluids. In severe cases of accumulation of fluid in the abdomen or pleural cavities, tapping may be adopted.

DROPPWORT (*Spiraea filipendula*). Perennial herb of the order Rosaceae. A native of Europe, N. Africa, and N. Asia, it is a plant of downs and dry pastures. It has a grooved stem, 2 ft. or 3 ft. high. The leaves are chiefly from the rootstock, broken into many pairs of deeply-toothed leaflets. The small but numerous white flowers are rosy on the outside, and borne in panicles.

Droppwort. Perennial herb to be found on downs

DROUAIS, FRANÇOIS HUBERT (1727-75). French painter. Born at Paris, Dec. 14, 1727, he became an academician in 1758; and a little later painter to the court. Notable portraits by him are those of the Pompadour (at Orleans) and the Comte d'Artois (in the Louvre). He died in Paris, Oct. 21, 1775.

His son, Jean Germain (1763-88), also a painter, was born at Paris, Nov. 25, 1763. In 1784 he won the prix de Rome with his *Woman of Canaan at the Feet of Jesus Christ*. He died at Rome, Feb. 13, 1788.

DROWNING. Death from asphyxia owing to submersion of the mouth and nostrils. When the drowning person is struggling the rescuer should leave him for a few seconds until he becomes quiet; then seize him by the hair, turn him on his back, and swim on the back towards the shore, or support him face upwards in this way until a boat arrives.

The most convenient method of performing artificial respiration is that recommended by Schäfer (see illus. p. 135). Meanwhile, the wet clothing should be drawn off, the body wiped dry and covered with hot blankets, and hot bottles may be placed to the feet. Friction of the limbs from below upwards is useful, and

ammonia may be cautiously held to the nostrils. When breathing is established a hot bath is useful for restoring the bodily heat.

DROYLSDEN. Urban dist. and manufacturing town of Lancashire. It is on the Rochdale Canal, 5 m. E. of Manchester on the L.M.S. Ry. There are cotton and print factories, and dye and chemical works. Pop. 14,150.

DRUG. Medicinal substance obtained from the vegetable and mineral kingdoms. The term also includes the substances as prepared for use in the treatment of disease, but these are better distinguished as pharmaceutical preparations.

Continuous taking of certain drugs produces in some persons an irresistible craving for them, despite their injurious effect upon both mind and body. The commonest instances are addiction to alcohol, and smoking. The less frequent drug habits, such as the taking of opium or cocaine, may originate in taking the drug in the first instance under medical orders.

To check the serious growth of the drug habit an act of parliament was passed in 1923 which aimed at the suppression of illicit traffic in cocaine and other dangerous drugs.

Druggist is one of the titles reserved by the Pharmacy Act, 1868, for persons who keep an open shop for the sale of poisons and are registered under the Act. See Chemist.

Druid. The Druid Circle near Keswick, Cumberland. It was vested in the National Trust in 1913

W. F. Taylor

DRUID. Priest among the Celtic people, especially those of Britain and Gaul. The Druids were learned in the natural sciences and astrology. Their worship was carried on in groves, the oak being their sacred tree, and human sacrifices took place at special festivals. The last stand of the Druids in Britain was made at Mona, or Anglesey, when the Romans are said to have exterminated them.

The name Druid Circle is popularly used for a prehistoric stone circle now recognized to be pre-Druidic. Noted examples are at Keswick, Stonehenge (q.v.), Callernish (q.v.), near Stornoway, on Dartmoor, near Chagford, and elsewhere. See illus. p. 341.

The Ancient Order of Druids is a friendly society established on masonic principles in London in 1781, and introduced into the U.S.A. in 1883, where it spread rapidly.

DRUM. Instrument of percussion, consisting of a hollow body over which a membrane is stretched. Drums of cauldron shape, made of metal, with single head of vellum, are known as kettledrums (or timpani). These are struck vertically by pairs of padded sticks, and produce notes of definite musical pitch. Drums of cylindrical shape are made usually of wood with two vellum heads. The pitch of these drums is indefinite. They are played with hard wooden or heavy padded sticks.

The serjeant-major who marches with baton (see illus. p. 207) at the head of a regimental band is called the drum major.

DRUMCLOG. Hamlet of Lanarkshire, Scotland. It is 6 m. S.W. of Strathbaven, near the border of Ayrshire, and was the scene of a victory of the Covenanters over the king's troops under Claverhouse (Viscount Dundee), on Sunday, June 1, 1679. A granite obelisk marks the site of the battle. Drumclog figures in Scott's Old Mortality. See Covenanters.

DRUMMOND, HENRY (1851-1897). Scottish theological writer and scientist. Born at Glenelg, Stirling, Aug. 17, 1851, he was trained for the ministry, but did not adopt the title of minister. From 1873-75 he worked with D. L. Moody and I. D. Sankey, and was appointed in 1877 lecturer on, and in 1884 professor of, natural science at the Free Church College, Glasgow. He held this appointment until his death, March 11, 1897.

Henry Drummond, Scottish theologian
Lafayette

In the intervals of extensive travel he devoted himself to mission work and to the organization of the Boys' Brigade. His published work included Natural Law in the Spiritual World, 1883; The Ascent of Man (Lowell Lectures), 1894, and Tropical Africa, 1888.

DRUMMOND, SIR JAMES ERIC (b. 1876). British diplomatist. He was born Aug. 17, 1876, a younger son of the 14th earl of Perth, and entered the Foreign Office in 1900. In 1912 he became private secretary to Asquith, then prime minister; but in 1915 he returned to the Foreign Office. Knighted in 1916, he became in 1919 the first secretary-general to the League of Nations.

Sir Eric Drummond, British diplomatist

DRUMMOND, WILLIAM (1585-1649). Scottish poet. He was born at Hawthornden, near Edinburgh, Dec. 13, 1585. He studied for the law, but on his father's death in 1610 settled down at Hawthornden to the companionship of his books. His best work is in his sonnets, in which he followed closely Italian models. The best example of his prose is A Cypress Grove, 1623. The outstanding incident of his life is the visit Ben Jonson paid to him in 1618-19, his Notes on which were published in 1842. He died Dec. 4, 1649. Consult Poetical Works and A Cypress Grove, ed. L. E. Kastner, 2 vols, 1913.

William Drummond, of Hawthornden
After Jansen

DRUNKENNESS. State of intoxication, which in certain cases is an offence against the law. In English law it is no excuse for crime. At the same time, when it is a question of quo animo, or with what intention a man did an act, he may escape because he may

Drum. Left, bass drum. Right, above, screw orchestral side drum; below, cavalry kettledrum

have been so drunk as to be incapable of forming any intention at all. Thus, a case of homicide may be manslaughter if committed

by a man so drunk as not to know what he is doing. It is an offence to be drunk in a public place or a licensed house, or to be drunk and

Drury Lane. Interior of Drury Lane Theatre, built in 1812 and reconstructed in 1921-22. See below
Bedford Lemere

disorderly. An habitual drunkard may be ordered to be confined in an inebriates' home by sentence of the magistrate. A contract made by a drunken man is voidable by him when he becomes sober; but only if the other party knew he was drunk when he made it.

DRURY, EDWARD ALFRED BRISCOE. British artist and sculptor. Born in London, his first contribution to the Academy was the Triumph of Silenus, 1885; and in 1896 his bronze S. Agnes was bought for the Chantry collection. He was elected A.R.A. in 1900, and R.A. in 1913. His later works include many war memorial sculptures, King Edward VII memorials for Aberdeen, Sheffield and Birmingham University, exterior decorations of public buildings, and portraits of children.

DRURY LANE. Thoroughfare and district in London, W.C., largely rebuilt in recent years. Extending from the modern crescent of Aldwych to Broad Street, St. Giles's, and High Holborn, its present name derives from Drury Place, a mansion built in the 15th century by a member of the Drury family.

On the W. side of Drury Lane, in Russell Street, is Drury Lane Theatre. The first theatre on the site of the present building was erected in 1661, and opened April 8, 1663, with Beaumont and Fletcher's play, The Humorous Lieutenant. This theatre was burnt down in 1672. Sir Christopher Wren designed its successor, which was replaced in 1794 by a much larger edifice, also destroyed by fire in 1809. Benjamin Wyatt was the architect of the fourth and present theatre, opened Oct. 12, 1812. It was on its boards that Edmund Kean achieved his first great triumph on Jan. 26, 1814. Drury Lane won new prestige from Macready's brief management during 1842-43. Under the respective management of Augustus Harris, Arthur Collins, and Alfred Butt, the huge building was associated with popular pantomimes and musical comedies. See illus. above.

DRUSES. Syrian people inhabiting the W. slope of Lebanon, anti-Lebanon and Hermon, and Hauran (Druz), whose total number is estimated to be from 100,000-200,000. They are probably an admixture of different stocks, with a preponderating Arab element, the language spoken by them being Arabic. The vine, olive, and tobacco plant are cultivated, and silkworms reared. Their religion is a curious mixture of Mahomedanism, Judaism and Christianity, but they pride themselves on being Muwahiddin, believers in one god.

After the Great War Hauran was included in the French mandated territory of Syria. Discontent with this change and with the conduct of the French resident political officer led, in 1925, to a great Syrian rising in which the Druses took the lead. This was not finally suppressed until June, 1926.

DRUSILLA, LIVIA (d. A.D. 29). Wife of the Roman emperor Augustus. She was previously the wife of Tiberius Claudius Nero, whom Augustus compelled to divorce her. Her elder son by the first marriage became the Roman emperor Tiberius, while her second son was Drusus. She is not to be confounded with Drusilla, wife of Felix, procurator of Judaea before whom S. Paul preached; nor with the daughter of Germanicus.

Nero Claudius Drusus, Roman soldier. From a bust in the British Museum.

DRUSUS, NERO CLAUDIUS (38-9 B.C.). Roman soldier. Son of Livia Drusilla by her first husband, Tiberius Claudius Nero, he became one of the most distinguished generals of her second husband, the emperor Augustus, and was the father of the emperor Claudius. This Drusus was called Senior, to distinguish him from his nephew, the son of Tiberius the Roman Emperor.

DRYAD (Gr. drys, oak). In Greek mythology, nymph associated with trees. A dryad was supposed to live only as long as the particular tree with which she was associated. See Nymph.

DRYAS (Dryas octopetala). Perennial dwarf shrub of the order Rosaceae. It is a native of Europe, Asia, and N. America. The short stem is embedded in the soil, and the spreading branches lie along the surface, bearing tufts of oblong, toothed, evergreen leaves. The white flowers are 1½ in. across.

DRYBURGH ABBEY. Monastic ruin in Berwickshire. It stands on the Tweed, 4½ m. S.E. of Melrose. Generally stated to have been founded in 1150, it was destroyed in 1544. The remains include the chapter house, parts of the church, and traces of the monastic buildings. Sir Walter Scott was buried in S. Mary's aisle. In 1918 it was presented to the nation by Lord Glenconner, and a certain amount of restoration work was undertaken.

Dryburgh Abbey. S. Mary's aisle, containing the tomb of Scott.

conner, and a certain amount of restoration work was undertaken.

DRYDEN, JOHN (1631-1700). English poet. Born at Aldwinkle, Northamptonshire, Aug. 9, 1631, he decided upon a literary career, and, to satisfy popular taste, he began to write plays, of which he eventually produced twenty-two. The best known are The Indian Emperor, 1665; The Conquest of Granada, 1670; and Marriage à la Mode, 1672.

John Dryden, English poet. From the painting after Kneller in the Nat. Port. Gall.

Dryden's career in poetry proper began in 1659, when he published some verses on the death of Cromwell. In 1681 and 1682 he published his three great satires Absalom and Achitophel, The Medal, and MacFlecknoe. Dryden's next poems, Religio Laici, 1682, and The Hind and the Panther, 1687, show him in a new light. The first was written in defence of the Church of England, the second in defence of the Church of Rome, to which he had in the meantime become a convert.

During the closing period of Dryden's life appeared his two noble odes, the Ode for S. Cecilia's Day, 1687, and Alexander's Feast, 1697; several verse translations of classical poets, and a number of miscellaneous writings.

In 1670 he was made poet laureate in succession to Davenant, and received several other government appointments, but the accession of William III deprived him of these offices. He died May 1, 1700.

DRYGALSKI. Islet in Davis Sea, Antarctica, off the coast of Queen Mary Land. It is about 9 m. in diameter. It was discovered by Sir Douglas Mawson, of the Australasian Antarctic Expedition, Jan. 21, 1914.

DRY POINT. Process of etching, without the use of acid, closely akin to line engraving. The tool is a steel rod tapering at one or both ends to a strong, fine, sharp point. With this the etcher draws with a firm hand, the point scratching a line of exquisite sensitiveness on the copper plate, and raising, as it goes along, a very distinct hurr on the sides

Dublin. 1. O'Connell (formerly Sackville) Street from O'Connell Bridge. 2. Four Courts, King's Inn Quay, before the bombardment of 1922. 3. S. Patrick's Cathedral from the north-east.

of the furrow, which lends particular value to early prints from the plate.

DRYPTOSAUR. Extinct N. American reptile of the genus Dryptosaurus. It was a carnivorous, beast-footed dinosaur, living in Montana in Upper Cretaceous times. It was 20 ft. long, rapacious and sharp-toothed; it used hind limbs and tail like a kangaroo.

DRY ROT. Diseased condition of timber due to the ravages of certain species of fungi, especially Merulius lacrymans. This fungus rapidly consumes the woody cells and fibres, the affected parts crumbling to a brownish powder upon exposure to a dry atmosphere. A certain degree of moisture is essential to the growth of the fungus. The popular term serves to distinguish this condition from wet rot, a kind of putrefaction occurring in wood exposed to the weather.

Dry rot, it is believed, cannot develop (though it may long remain latent) in wood to which air-currents have free access and from which moisture is excluded. The dry rot of oak-built ships is usually due to another species of fungus, Poria hybrida.

DRYSALTERY. Term applied to the business of a drysalter or the articles sold by him. These consist of heavy chemicals (borax, salt, soda, sulphur, etc.), dye-stuffs (alkaneet, indigo, etc.), gums (arabic, shellac, kauri, resin), oils (paraffin, linseed oil, boiled oil, turpentine), and crude drugs (linseed,

senna, Epsom salt, Glauber's salt, etc.). Drysalters also sell pickles, preserved meat, and sauces.

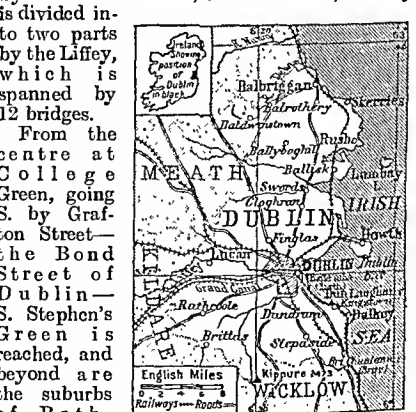

DUALA. Town and district of Cameroons, W. Africa. The town, on the Cameroons river, about 18 m. from the sea, is the chief seaport of Cameroons. Duala proper occupies the site of the former Bell Town. Akwa is a native centre, and Dido the residential quarter for native clerks and workmen. These three towns, known collectively as Duala, represented the headquarters of the three native chiefs at the time of the German occupation in 1884. There is a wireless station Duala was captured by a combined British and French force on Sept. 27, 1914. It is now in the French sphere. Pop., district, 77,000; town, 22,000. See Cameroons.

DUAL MONARCHY. Name given to the empire of Austria-Hungary. Formed in 1867 by the union of Austria and Hungary, for half a century the two countries were joined under the same ruler, emperor of Austria and king of Hungary. After the Great War they became separate countries. See Austria-Hungary; Czechoslovakia.

DUBBO. Town of New South Wales. On the Macquarie river, 278 m. by rly. N.W. of Sydney, it is the trade centre of a pastoral and coal and copper mining area. Pop. 5,560.

DUBLIN. Eastern maritime county of the Irish Free State, in the prov. of Leinster. It has about 72 m. of coastline. Dublin Bay is the largest inlet, the Liffey, which debouches into it, the chief river, and Howth Head the most prominent cape. Lambay and several smaller islands near the coast are included in the county. Mountains occur in the S. The Gt. Southern and Gt. Northern Rlys. afford communication. Dublin (county town) and Kingstown are the most important towns. Its area is 342 sq. m. Pop., exclusive of Dublin city, 188,961.

DUBLIN. City, seaport, and county borough in the prov. of Leinster, capital of the Irish Free State. It is at the mouth of the Liffey, 61 m. W. of Holyhead. Enclosed by the Circular Road, 9 m. in circuit, the city is divided into two parts by the Liffey, which is spanned by 12 bridges.

From the centre at College Green, going S. by Grafton Street—the Bond Street of Dublin—S. Stephen's Green is reached, and beyond are the suburbs of Rathmines, Rathgar, Ranelagh, and Donnybrook. Northwards from College Green another radial cuts the Liffey at O'Connell Bridge, and is continued along O'Connell (formerly Sackville) Street. Eastwards, on both sides of the Liffey, run the quays and docks.

Dublin has two Protestant cathedrals, Christ Church and S. Patrick's, a Roman Catholic one, and many churches. Dublin

or less aquatic, and most are powerful flyers. They are mainly herbivorous, but frogs and worms are also readily eaten. The plumage is dense and compact, so that the water readily runs off it. The male, or drake, has more showy plumage than the female.

Ducks are found all over the world, but are most numerous in the northern regions. They associate in flocks, and the majority migrate farther N. for the nesting season. The numerous breeds of domesticated ducks are believed to have descended from the mallard, or wild duck. The ornamental varieties are mainly different species of British and foreign wild

ing with poison glands. The duck bill has no teeth, but is provided with two pairs of horny plates on each jaw. It is peculiar to Australasia.

DUCKING STOOL. Instrument formerly in use in Great Britain and in certain parts of

Ducking Stool. Example in the Priory Church, Leominster

the U.S.A. for the punishment of scolds. It consisted of a chair fastened to the end of a beam, projecting over a pond or river. The victim was tied in the chair, and

ducked by lowering the beam.

DUCKWEED (Lemna). Genus of minute, scale-like flowering plants of the order Lemnaceae. They are annual aquatic plants, floating on the surface of ponds and ditches, and consisting of a green disk, with or without a simple root or roots.

DUCKWORTH, Sir JOHN THOMAS (1748-1817). British sailor. Born at Leatherhead, Feb. 28, 1748, he entered the Navy when 11 years old, and was promoted commander in 1780. Returning from the W. Indies in 1793, he was appointed to Orion,

Sir J. T. Duckworth, British sailor
From an engraving

Duck Bill. Mammal of Australasia

in which he greatly distinguished himself at Ushant, June 1, 1794. Knighted in 1801, in 1803 he was commander-in-chief of Jamaica, and defeated the French off San Domingo in 1806. He was governor of Newfoundland from 1810-13, and was made a baronet in 1813. He was appointed commander-in-chief of Plymouth in Jan., 1817, and died Aug. 31 of the same year.

DUCTILITY. In metallurgy, the general property of metals which permits them to be drawn into rods or wire. It is closely related to the property of malleability. The measure of ductility is determined by the fineness of the wire down to which a metal can be drawn. The metals rank as follows in order of ductility: 1, gold; 2, silver; 3, platinum; 4, iron; 5, nickel; 6, copper; 7, zinc; 8, tin; 9, lead. The ductility of iron is greatly increased when the iron is converted into steel; and, similarly, many of the copper alloys have greater ductility than copper.

DUDLEY. County borough of Worcestershire. It is 8 m. N.W. of Birmingham and 121 from London, and is served by the L.M.S. and G.W. Rlys. and by a canal. Dudley is in the heart of the Black Country, and iron and steel goods are among its chief products. There are a hospital, founded by Joseph Guest, a grammar school, a technical school, and a geological museum. The grounds of the old castle, around which the town grew up, are

Dublin. Plan of the capital of the Irish Free State, showing the situation of the Castle and other principal buildings

Castle was once the headquarters of the executive. The Four Courts, the legal centre, was damaged in 1922, when the handsome Custom House was destroyed. The Parliament House, until 1800 the seat of the Irish parliament, is now the Bank of Ireland. The city has a National Gallery of Art and a National Portrait Gallery, both with fine collections. Charlemont House, the city's finest example of 18th century domestic architecture, has been bought for an art gallery. The Royal Colleges of Physicians and of Surgeons of Ireland have their headquarters here. To control the docks there is a port and docks board, created in 1898. Phoenix Park is a magnificent open space containing a zoological gardens. Since 1665 the chief magistrate has had the title of lord mayor. Market days, Tues., Wed., and Fri. Pop. 316,693.

Trinity College, Dublin, founded in 1591, has always been the educational headquarters of Protestant Ireland, and its religious tests were only abolished in 1873. The library has a priceless collection of manuscripts. Among the modern buildings are the museum and those for the medical school. At Dunsink (q.v.) is the university observatory.

DUBOIS, GUILLAUME (1656-1723). French statesman and cardinal. Born at Brive, Limousin, Sept. 6, 1656, he entered a religious brotherhood, later becoming tutor to the prince, Philip of Orleans. After 1715, when Philip became regent, Dubois was his chief counsellor. He was strongly hostile to Spain, and brought about an alliance between France and Great Britain and Holland. Dubois secured the archbishopric of Cambrai, and was made a cardinal in 1721. He died at Versailles Aug. 10, 1723.

DUCAT. Name of a medieval coin, generally of gold, value 9s. 4d. It was first coined in silver, by Roger II of Sicily, 1140, deriving its name from his duchy of Apulia, and in gold at Florence, 1252. From Italy the coin and the name went to Hungary, Bohemia, Austria, Germany, and Russia, Spain, Denmark and Holland to Hanover, as late as George III's reign, and in 1837 to England, as a trial decimal gold coin, worth 100 pence.

DUCK. Name of the largest group of birds of the order Anseres, which includes swans, geese, and ducks. There are over 40 genera of ducks and nearly 200 species. They are distinguished by short legs, webbed feet, and a depressed and expanded beak. All are more

ducks maintained in a half-wild state on lakes and in parks. Utility breeds include the Aylesbury, most commonly bred in Gt. Britain, the Rouen, for which France is famous, the Pekin, and the Indian runner duck.

DUCK SHOOTING. This is a sport mostly practised on the E. shores, inlets, estuaries, and broads of Great Britain. It may roughly be divided into (1) shooting with stanchion guns fixed in single or double handled punts; (2) from a punt with an ordinary gun while the birds are in flight; (3) and following on foot by open streams or drains. The British wild ducks principally met with are the mallard, shoveller, gadwall, pochard, teal, and widgeon.

DUCK BILL, DUCK-BILLED PLATYPUS or **DUCKMOLE.** Small web-footed and oviparous mammal (*Ornithorhynchus anatinus*), with a snout like the bill of a duck. It is about 18 in. in length. No ears are visible above the fur,

Duck. 1. Rouen duck, much favoured in France. 2. Pekin, a valuable egg-layer. 3. White Runner duck. 4. Aylesbury, a popular variety 1 and 4, C. Reid; 2 and 3, courtesy of The Agricultural Gazette

though the hearing is acute; the nostrils are near the tip of the bill. The hind feet of the male are armed with hollow spurs, communicat-

mar school, a technical school, and a geological museum. The grounds of the old castle, around which the town grew up, are

used as a public park. Adjacent, but in Staffordshire, are Brierley Hill and Kingswinford, while Netherton is another industrial suburb. In 1928 a new town hall and other civic buildings were opened. They include a clock tower and war memorial. Market day, Sat. Pop. 55,894.

DUDLEY, EARL OF. English title held by the family of Ward since 1860. John Ward was made Viscount Dudley in 1763. John William Ward, the 4th viscount (1771-1833), was foreign secretary in 1827-28, and a prominent figure in his day. In 1827 he was made earl of Dudley, but the title became extinct on his death in 1833. A kinsman, William Ward (1817-85), inherited much of his wealth, and in 1860 was made earl of Dudley. His son, William Humble, 2nd earl (b. May 25, 1867), was lord-lieutenant of Ireland from 1902 to 1906, and governor-general of Australia from 1908 to 1911. In 1924 he married, as his second wife, Gertie Millar, the actress. The earl's eldest son is known as Viscount Ednam.

DUEL (Lat. duellum, old form of hellum, battle, from duo, two). Single combat engaged in by arrangement after challenge, and carried through on a recognized method of procedure, to settle a private quarrel or vindicate personal honour. Historically the duel derives directly from the old legal method of settling disputes by ordeal by battle.

France is the country of origin of the modern duel, and the custom still prevails there, though rarely with serious consequences. In England the practice of duelling continued until the middle of the 19th century, but at the present day in English law duelling is an offence amounting to murder or manslaughter in the event of a death.

DUFFERIN AND AVA, FREDERICK TEMPLE HAMILTON-TEMPLE BLACKWOOD, 1ST MARQUESS OF (1826-1902). British diplomatist and administrator. Born at Florence, June 21, 1826, son of the 4th Baron Dufferin and Helen Selina, granddaughter of Richard Brinsley Sheridan, and herself a poet, he succeeded in 1841 to his father's title, an Irish one, and in 1850 was made a British peer as Baron Clandeboyne. He went as special commissioner to Syria in 1860 to inquire

1st Marquess of Dufferin and Ava, British diplomatist

into the religious massacres, was appointed under-secretary for India in 1864, for war in 1866, and was created an earl in 1871. Governor-general of Canada, 1872-78, and viceroy of India, 1884-88, he became ambassador at Rome in 1888, and in Paris in 1891. In 1888 he was created marquess of Dufferin and Ava. He died Feb. 12, 1902, and was succeeded by his son, Lord Terence Temple-Blackwood (1866-1918), on whose death the title passed to a younger son, Frederick (b. 1875).

DUGDALE, SIR WILLIAM (1605-86). English antiquary. Born at Shustoke, Warwickshire, Sept. 12, 1605, he came to London in 1635 to collect materials for his *Antiquities of Warwickshire* (1656). He was made Garter king-of-arms and knighted in 1677. He published a *History of St. Paul's Cathedral*, 1658; collaborated in a history of religious foundations, *Monasticon Anglicanum*, 1655-73; compiled a *History of Embanking and Draining of Fens and Marshes*, 1662; and *The Baronage of England*, 1675-76. He died Feb. 10, 1686.

Sir William Dugdale, English antiquary
From a portrait in the Bodleian Library

DUGONG (Halicore). Genus of herbivorous aquatic mammals, known as sea-cows, from 8 to 12 ft. long. They are found in the Red Sea and round the E. Indies and Australasia.

Dugong. Sea-cow of the Indian Ocean. It feeds on seaweed

ways and canals. Near the Westphalian coalfield, it has a great variety of industries and a considerable transit trade, for which there are extensive wharves. In the old town are the Gothic church of S. Salvador, the town hall, and other buildings of interest, as well as several of the old gates. In 1905 several populous industrial suburbs were included in the town's area. There was a university here from 1655 to 1802. Pop. 274,200.

DUKE (Lat. dux, leader).

Title of nobility. The word was first applied to military commanders in the early Roman empire. Later a duke was a civil and military official. Gradually all the dukes became territorial. In Great Britain duke is the highest title of nobility. The first was Edward the Black Prince, son of Edward III, created duke of Cornwall in 1337.

Duke's coronet

DUKE OF CORNWALL'S LIGHT INFANTRY. English regiment. Originally of two battalions, the old 32nd and the old 46th Foot, it was raised in 1702. Its war record includes Gibraltar, 1704-5, Dettingen and Fontenoy, Canada (1760), Copenhagen (1807), the Peninsula, Waterloo, second Sikh War, Crimean War, Indian Mutiny (defence of Lucknow), Egyptian Campaigns (1882-84), and the S. African War.

Duke of Cornwall's L.I. badge

and the S. African War. In the Great War the first battalion especially distinguished itself on the Aisne and at Ypres (1914). The second battalion rendered fine service at St. Eloi and Neuve Chapelle (1915).

DUKE OF EDINBURGH. Ship of a class of British cruisers built in 1906. They were two in number, the Duke of Edinburgh and the Black Prince. The Duke of Edinburgh was 480 ft. long, 73½ ft. in beam, had a normal displacement of 13,550 tons, and had engines of 23,000 h.p. giving a speed of 23 knots. Her main armament was six 9.2-in. guns, four 6-in. guns, with strong batteries of lighter weapons, and three torpedo tubes. The Duke of Edinburgh assisted Indian troops in capturing Turkish forts at the S. end of the Red Sea, Nov. 15, 1914. See *Cruiser*.

DUKERIES. District in the N.W. of Nottinghamshire. It covers an area of about 100 sq. m. and stretches from just N. of Mansfield to Worksop. It is usually entered from Edwinstone, where the L.M.S. Rly. crosses the district. Ollerton is another centre. It includes the remains of Sherwood Forest. Coal mines have been opened in the S. part. The name is due to the fact that in the 18th century four dukes resided here. At Welbeck Abbey was the duke of Portland; at Clumber the duke of Newcastle; at Thoresby, now the seat of Earl Manvers, the duke of Kingston; and at Worksop Manor, the duke of Norfolk.

DUKINFIELD. Borough of Cheshire. It stands on the Tame, 6 m. E. of Manchester on the L.N.E. and L.M.S. Rlys. The principal

buildings are the town hall, free library, and technical school. The chief industries are cotton manufacture, calico-printing, iron working and engineering. There are collieries in the neighbourhood. A bridge across the Tame connects Cheshire with Lancashire. Market day, Mon. Pop. 19,509.

DULAC, EDMUND (b. 1882). Franco-British artist. Born at Toulouse, he settled in Great Britain in 1905. In 1907 the first annual exhibition of his drawings at the Leicester Galleries caused a sensation; and his illustrations to fairy tales and other classics enjoy a wide popularity. An exhibition of his caricatures was given in London in 1920.

DULCIMER (Lat. dulcis, sweet; Gr. melos, song). Musical instrument consisting of a trapeze-shaped sounding-board, over which metal strings are stretched. These are struck by two hammers with flexible stems, and heads of which one side is hard and the other padded. The dulcimer, or cimbalom, is an important feature in Magyar bands.

DULSE (*Rhodymenia palmata* and *Dilsea edulis*). Two fleshy, purple seaweeds of the order Rhodophyceae, growing on rocks in shallow water. The name belongs more especially to the first mentioned, which is used as food, e.g. an ingredient in stews, by the Scottish Highlanders and the Irish, who call it *dillisk*.

Dulse. Leaves of this edible seaweed

DULVERTON. Market town of Somerset. On the Barle and near the S. edge of Exmoor, 20 m. W. of Taunton, it has a station on the G.W. Rly. In the midst of lovely scenery, it is a fishing and hunting centre. Near is Pixton Park. Dulverton is referred to in Blackmore's *Lorna Doone*. Pop. 1,298.

DULWICH. London residential suburb. It lies S.E. of the city, in the borough of Camberwell, and has stations on the Southern Rly. The oldest part is known as the Village, and contains the buildings, much restored, of the college, the chapel of which has served as the parish church and as a chapel of ease, the

Dulwich College. Buildings in the Italian style, designed by Sir Charles Barry, and opened in 1870

rest of the quadrangle being offices and almshouses. Dulwich Park was presented to the public by the college trustees in 1890.

Dulwich College or The College of God's Gift was founded and endowed by Edward Alleyn (q.v.) in 1619. In 1857 a new scheme was approved by Parliament and carried out. This provided for two schools, an upper school, Dulwich College proper, and a lower school, known as Alleyn's School. The college contains four sides, classical, modern, science, and engineering. The buildings, of red brick in the Italian style, were from the designs of Sir Charles Barry. They are in College Road and were opened in 1870.

The Dulwich Picture Gallery is housed in a building near old Dulwich College. The collection is notably rich in examples of the Dutch school, Rembrandt and others being represented.

DUMA. Representative state council of the former Russian Empire. The Duma, created Aug. 6, 1905, numbered 442 members, elected indirectly for five years.

The Duma could not touch "the fundamental laws of the Imperial Administration," but within its sphere were the making of new laws, the modification of existing laws, the national budgets, and the construction of state rlys. The chamber could be summoned or dissolved by the ukase of the emperor. With the military revolution of Nov. 7, 1917, the Duma ceased to exist.

DUMAS, ALEXANDRE (1802-70). French novelist and dramatist, whose full name was Alexandre Dumas-Davy de la Pailleterie. He was born at Villers-Cotterets, July 24, 1802, his father being the illegitimate son of a French noble, the Marquis Alexandre Davy de la Pailleterie, who had settled in San Domingo, and of a negress who was named Marie-Cessette Dumas.

Dumas père,
French novelist

About 1822 Dumas went to Paris. His first success was with a play, *Henri III et sa cour*, 1829. He is best known as the author of *The Count of Monte Cristo*, 1844-45. The most familiar of his other works are *The Three Musketeers*, *Twenty Years After*, *Memoirs of a Physician*, *The Queen's Necklace*, *Taking the Bastille*, *Chicot the Jester*, *The Black Tulip*, and other romances. Dumas' masterpiece was *Le Vicomte de Bragelonne* (26 vols., 1848-50) prodigious in extent, and scarcely rivalled in literature as a piece of pure, sparkling, and unflagging narrative. Altogether he set his name to over a thousand

Dumas fils,
French novelist

volumes; dramas, romances, books of travel, historical scraps, compilations on art, crime, and cookery. He died Dec. 5, 1870. His son, Alexandre (1824-95), was only twenty-four when he made a sensation with a novel of passion, *La Dame aux Camélias*. After this he wrote other novels (e.g. *Diane de Lys*, 1851, *L'Affaire Clémenceau*, 1866); but the success of the dramatized versions of *La Dame* and *Diane* turned his energies to the stage, and it is as a playwright rather than as a novelist that he keeps his distinctive place. He died in Paris, Nov. 27, 1895.

DU MAURIER, GEORGE LOUIS PALMIELLA BUSSON (1834-96). British artist and author. Born at Paris, March 6, 1834, he studied chemistry and art. In 1865 he joined the staff of *Punch*, then under Mark Lemon's editorship, and began his famous series of social satires. His sight failing rapidly towards the close of his life, he took to novel-writing, and produced *Peter Ibbetson*, 1892; *Trilby*, 1894; and *The Martian*, published posthumously. These and other volumes illustrated by him included *Thackeray's Esmond* (Lib. ed.), 1869; and *F. C. Philips' As in a Looking-glass*, 1889. He died in London, Oct. 8, 1896.

George Du Maurier,
artist and author

His elder son, Guy Louis Busson Du Maurier (1865-1915), who was killed in France, March 11, 1915, was the author of a play, *An Englishman's Home*, produced in London, 1909.

DU MAURIER, SIR GERALD (h. 1873). British actor. Son of George Du Maurier, he

was born in London, March 26, 1873, and educated at Harrow. He first went on the stage at the Garrick Theatre, London, 1894, and in 1910 became the manager at Wyndham's Theatre. The original Captain Hook in Barrie's *Peter Pan*, he was knighted in 1922.

DUMBARTON. Burgh, seaport, and county town of Dumbartonshire. It stands where the river Leven falls into the Clyde, 15½ m. from Glasgow on the L.M.S. and L.N.E. Rlys. On the other side of the Leven is the suburb of Bridgend. There are large shipbuilding yards, also engineering works, brass foundries, and establishments for making ropes and sails. The chief buildings include the castle, standing on a rock 240 ft. high;

Sir G. Du Maurier,
British actor
Hugh Cecil

Dumbarton. The Rock of Dumbarton, showing the castle where Wallace was imprisoned in 1305

the burgh hall, the county hall, the Denny memorial, the public library, and the academy. Both a Celtic and a Roman settlement,

Dumbarton was known as Alcluith, hill of the Clyde, and was the capital of Strathclyde. Market day, Tues. Pop. 22,933.

Dumbartonshire. Map of this western county of Scotland; a small detached part lies between Stirlingshire and Lanarkshire

DUMBARTONSHIRE. Western county of Scotland. It is almost entirely surrounded by water—E. by Loch Lomond, W. by Loch Long, and S. by the Clyde estuary. A small detached part lies between the shires of Stirling and Lanark. The surface is mountainous in the W. (highest point Ben Vorlich, 3,092 ft.), and generally hilly elsewhere, except in the S. The chief rivers, after the Clyde, are the Leven and Kelvin. Roseneath Castle, on Roseneath peninsula, is a seat of the duke of Argyll. Along the Vale of Leven are bleachfields and dye works. Coal, iron, and slate are the principal mineral products. The L.M.S. and L.N.E. Rlys. and, in addition, the Forth and Clyde Canal serve the county.

Dumbarton, the county town, Clydebank, and Kirkintilloch are the largest towns. Dumbarton was part of the old Scottish territory of Lennox. Many literary associations linger about Loch Lomond, which is partly in this co., notably with Scott's *Rob Roy*. Area 246 sq. m. Pop. 152,300.

DUMB BELL. Short iron or wooden bar with a knob at each end, used as an aid to health and by athletes as part of their training. They are grasped, one in each hand, and a series of exercises are then gone through. It is claimed that their use brings every muscle of the body into play. The first dumb-bells consisted of sticks loaded with lead at the ends, and were so called because these ends were shaped like bells.

DUMBNESS. Inability to articulate, which in the vast majority of cases is congenital. Acquired dumbness, although occasionally a symptom of mental disease or of an apoplectic stroke, is more often a manifestation of hysteria; it may also be due to tumours, organic disease of the vocal chords, or complete paralysis of the chords following diphtheria. General treatment will relieve the hysterical variety. Recovery is usual from dumbness following diphtheria, but tumours require removal by operation.

Congenital dumbness may be due to mental weakness, but much more frequently to deafness, congenital or acquired in infancy. Any middle ear disease or adenoids should be dealt with to improve the bearing up to its maximum. See Deaf and Dumb.

DUMFRIES. Burgh and co. town of Dumfriesshire. It is on the Nith, 82 m. S.E. of Glasgow, on the L.M.S. Rly. In 1929 it amalgamated with Maxwelltown, with which it is connected by three bridges. Dumfries manufactures tweeds, hosiery, bats, and clogs, and has ironworks and tanneries. Among prominent buildings are the new town hall, Crichton institute for the insane, and the county buildings. Robert Burns was buried in S. Michael's churchyard, and his remains were transferred to a mausoleum in the S.E. corner in 1815. There is a marble statue of the poet in front of Greyfriars Church. Market day, Wed. Pop. 15,778.

DUMFRIESSHIRE. Border county of Scotland, with coastline of about 21 m. along Solway Firth. Hills (highest summit, White Coomb, 2,695 ft.) line the N., W., and E. boundaries, whence the surface declines to Lochan Moss, in the S., now largely reclaimed. The county includes three sections—Nithsdale, Annandale, and Eskdale. The rivers are well stocked with salmon and trout. Lochs Skene and Urr and the cluster round Lochmaben are the chief lakes; the first gives rise to the Grey Mare's Tail waterfall. Lead ore underlies the Lowther Hills in the N., and sandstone, limestone, and coal are worked. Cattle

and sheep are reared. Moffat has mineral springs. The L.M.S. and the L.N.E. Rlys. supply communication. Dumfries (the county town), Annan, Langholm, Lockerbie, and Moffat are the largest towns. Gretna Green (q.v.) is on the S. border. Area, 1,072 sq. m. Pop. 74,100. See map p. 532.

Dumfriesshire claims many associations with Scottish and English literature. Its richest poetic memories are associated with Robert Burns. The greatest man of letters who was a native of the county was Thomas Carlyle. Edward Irving was born at Annan.

DUMPING. Originally, the act of throwing down a large quantity of material in a heap, as in shooting rubbish. In economics the term is applied to a practice adopted by some countries, e.g. Germany, of producing goods in vast quantities with the assistance of bounties or tariffs, and then exporting them to other countries, with the object of securing control of the market. In Great Britain

dumping was partially prevented by the Safeguarding of Industries Act, passed by Parliament in 1921. See Safeguarding; Tariff Reform.

1782 he became first lord of the Admiralty, and in the Blenheim took part in the relief of Gibraltar. Promoted

—are the most notable of many churches. Educational institutions include the University College, founded in 1880, and incorporated with the university of St. Andrews in 1897; the technical institute, high school, technical college, and training college. Broughty Ferry is included in the city.

Isadora Duncan,
American dancer

Dundee has a commodious harbour with extensive docks and quays. The city is an important centre of the jute and linen industries. Other industries include shipbuilding and fruit preserving. Dundee being noted for its marmalade. The public parks comprise Baxter Park, Balgay Hill, Loches Park, and Caird Park. Dundee Law, the hill at the back of the town, is a conspicuous landmark. Market days, Tues. and Fri. Pop. 174,800.

DUNDEE, JOHN GRAHAM OF CLAVERHOUSE, VISCOUNT (c. 1649–89). Scottish soldier. The eldest son of Sir William Graham, of Claverhouse, near Dundee, he served in France and Holland, and was sent as a cavalry leader to Scotland, 1678, with orders to enforce conformity to the established church, and by his relentless repression of the Covenanters earned the name of "Bluidy Clavers." In 1688 he was created Viscount Dundee by James II. An ardent supporter of the Stuart cause, he was mortally wounded at the battle of Killiecrankie, July 17, 1689. The title became extinct when his son died in the same year. The use of Bonnie Dundee as an epithet for Graham dates from Sir Walter Scott's song.

Graham of Claverhouse,
Viscount Dundee
After Leith

DUNDONALD, EARL OF. Scottish title borne since 1669 by the family of Cochrane. In 1647 Sir W. Cochrane, a supporter of Charles I, was made a baron, and in 1669 earl of Dundonald. Archibald, the 9th earl, was a noted scientist, while his son Thomas, the 10th earl (1775–1860), was the admiral. As a sailor he was noted for his daring and resource; as an M.P. he was unpopular, for his denunciation of abuses in the Navy. In 1814 he was unjustly condemned and cashiered for fraud on the Stock Exchange, after which he commanded successively the navies of Chile, Brazil, and Greece. In 1832 he was reinstated in the British Navy, his honours were restored to him, and in 1851 he was made full admiral.

In 1885 his grandson Douglas (b. 1852) became the 12th earl. A soldier, he saw service in various campaigns in Egypt and the Sudan, and in 1899–1902 went through the S. African War. His seat is Gwyreth Castle, Abergele, N. Wales. Dundonald is a large parish in Ayrshire, which contains the ruins of a castle, long the residence of the Cochrane.

10th Earl of Dundonald,
British admiral

Dumfriesshire. Map of the south-western border county of Scotland, which has a coastline of 21 miles along the Solway Firth. See art. p. 531

DUNAJETZ. River of W. Galicia, Poland. A tributary of the Vistula, which it joins 40 m. N.E. of Cracow, it gives its name to a series of battles fought between the Austro-Germans and the Russians, April and May, 1915. The Russian lines lay across the east bank of the Dunajetz and the Biala. The fiercest battles took place early in May, resulting in the defeat and retreat of the Russians.

DUNBAR. Burgh and seaport of Haddingtonshire. It stands at the mouth of the Firth of Forth, 29 m. E.N.E. of Edinburgh on the L.N.E.R. A popular health resort, Dunbar has a good golf course and a racecourse near. Of its two harbours the Victoria Harbour is a refuge for ships in distress. There are ruins of the old castle. The battle of Dunbar, in which Cromwell defeated the Covenanters, took place close to the town in 1650. Pop. 3,839.

DUNBAR, WILLIAM (c. 1460–1513). Scottish poet. He travelled as an itinerant friar through Scotland, England, and part of N. France. About 1490 he entered the diplomatic service, and in 1505 he received a pension from King James IV as Court Laureate. Dunbar is not heard of after the battle of Flodden, and it is probable that he fell there. His poetical genius, influenced by Chaucer, was many-sided; the rich allegorical poem *The Thistle and the Rose* is far removed from the grim humour of *The Dance of the Seven Deadly Sins*, or the serious pieces, such as *The Passion of Christ*.

DUNBLANE. Burgh of Perthshire. It stands on Allan Water, 5 m. N.N.W. of Stirling on the L.M.S. and L.N.E. Ry. It has a hydropathic establishment and a mineral spa. Once the seat of a bishopric, its cathedral is one of the few which escaped destruction at the Reformation; restored in 1893, it is now the parish church. Robert Leighton, bishop 1661–70, is commemorated by the Leighton library, Bishop's Walk and Bishop's Well. The Queen Victoria Military School (opened 1908) is near. Market day, Thurs. Pop. 2,942.

DUNCAN (d. 1040). King of the Scots. He succeeded his grandfather Malcolm II as king in 1034. Little is known of him except that he was slain by Macbeth. Shakespeare's version of the tragedy is based on legend.

DUNCAN, ADAM DUNCAN, VISCOUNT (1731–1804). British sailor. Born at Lundie, Forfar, July 1, 1731, he was present at the actions of the Basque Roads (1757), Goree (1758), and the blockade of Brest (1759). In

graphy was published posthumously in 1928.

DUNCANSBY HEAD. Promontory of Caithness, the N.E. extremity (210 ft. high) of the mainland. Off the head are the Stacks, three small rocks, and about 2 m. to the W. is John o' Groat's House.

DUNDALK. Urban dist. and co. town of Louth, Irish Free State. It stands on Castle town river, near Dundalk hay, 54 m. N. of Dublin on the G.N.I. and L.M.S. Ry. An important rly. centre, the G.N.I.R. has its locomotive works here. Market day, Mon. Pop. 13,996.

DUNDEE. City and seaport of Angus (Forfarshire). It stands on the N. shore of the Firth of Tay, 59½ m. by rly. N.N.E. of Edinburgh, on the L.M.S. and L.N.E. Ry., and is the third largest city in Scotland.

Duncansby Head, Stacks and reefs off this bold northern cape

Dundee. The Town Churches: churches of S. Mary, S. Paul and S. Clement under one roof, and the 12th century steeple. Above, Caird Hall, built 1914–23

The Tay Bridge is 3,593 yds. long. Prominent buildings include the town hall (1734), royal exchange (1853–56), custom house (1843), and new City (Caird) Hall. The Albert Institute commemorates the Prince Consort. The Town Churches—three beneath one roof

DUNEDIN. Chief city in South Island, New Zealand. It stands on Otago Harbour, 8 m. S.W. of Port Chalmers. It has good sea communication with other N.Z. ports, Sydney and Melbourne, and is an important rly. junction on the main E. coast line. The town is surrounded by a forest preserve called the Town Belt. Its chief industries are connected with wool and frozen meat. The university (opened 1871) has a school of mines. Dunedin is the seat of Anglican and Roman Catholic bishops. Founded in 1848 by members of the Free Church of Scotland, its commercial prosperity dates from the discovery of gold in Otago in 1861. Pop. 84,990.

Dunedin. General view of the chief city of South Island, New Zealand, taken from Mornington. Beyond is Otago Harbour

DUNEDIN, ANDREW GRAHAM MURRAY, 1st Viscount (b. 1849). British lawyer and politician. Born Nov. 21, 1849, he became an advocate in 1874 and a Q.C. in 1891. In the same year chosen M.P. for Buteshire, he entered the Unionist ministry as solicitor-general for Scotland. In 1896 he was promoted to be lord advocate. From 1903-5 he was secretary for Scotland and a cabinet minister. In 1905 Murray left Parliament to become president of the court of session, and was made a peer as Baron Duncdin. In 1913 he was appointed a lord of appeal, and in 1926 was created a viscount.

DUNFERMLINE. City and burgh of Fifeshire. It stands on the Firth of Forth, 17 m. N.W. of Edinburgh, on the L.N.E.R. Since 1911 the burgh has included the naval base at Rosyth. It was a favourite residence of the Scottish kings, and the Benedictine abbey, founded by Malcolm Canmore in 1072, was their burial place from the 11th to the 14th century. The abbey was partly demolished by Edward I, and, except for the nave, which did duty as the parish church till 1821, was destroyed by the Reformers in 1560.

The Carnegie Dunfermline Trust, founded by Andrew Carnegie in 1903, is devoted to objects beneficial to the community of Dunfermline, Carnegie's birthplace. Among these are the maintenance of the beautiful Pittencrieff Glen, in which are the ruins of Malcolm Canmore's castle and palace. There is a garden city between Dunfermline and Rosyth. The town is celebrated for its table linen. Pop. 39,886.

DUNGANNON. Urban dist. and market town of co. Tyrone, Northern Ireland, 40 m. W. of Belfast on the G.N.I.R. There is a grain trade and linen and muslin manufactures. Market day, Thurs. Pop. 3,830.

DUNGARVAN. Urban dist. and market town of Waterford, Irish Free State. It stands at the mouth of the Colligan on Dungarvan Bay, 28½ m. S.W. of Waterford on the Gt. Southern Rlys. Woollen manufacture and its fisheries are important. There are remains of an abbey and a castle. Market days, Tues. and Sat. Pop. 5,207.

DUNGENESS. Low promontory on the S. coast of Kent. It has a lighthouse, coast-guard station, Lloyd's signalling station, and small fort. The scene of many wrecks, it was off here that Tromp defeated Blake in 1652.

Dungeness, in Queensland, is an important port of entry on Hinchinbrook Channel, 935 m. N. of Brisbane. It handles the traffic of the Herbert river. The chief export is sugar.

DUNKELD. City of Perthshire. It stands on the Tay, here spanned by a seven-arched bridge, 15½ m. N.W. of Perth, on the L.M.S. Rly. The chief object of interest is the ruined cathedral, presented to the nation in 1918 by the duke of Atholl. This was built in the 11th or 12th century, but was partially destroyed at the Reformation. The aisleless choir has been restored to serve as the parish church. Pop. 1,049.

Dunkery Beacon.

Hill on Exmoor, Somersetshire. About 5 m. S. of Porlock, it is 1,707 ft. high, the highest point on the moor. See Exmoor.

DUNKIRK or **DUNKERQUE.** Sea-port of France, on the Strait of Dover. Near the Belgian boundary, in the dept. of Nord, 40 m. N.W. of Lille, it lies in the district called the Wateringues. One of the chief ports of the country, it exports the coal of

Belgium and N.E. France, the manufactures of the industrial region therein, and the agricultural produce of other adjacent areas. Steamers regularly ply between here and London, Hull, and other ports. The old buildings include the church of S. Eloi, with a modern façade and a detached belfry, and the pilgrim chapel of Notre Dame des Dunes. The church of S. Jean-Baptiste dates from the 15th century. Malo-les-Bains is a watering place. An important Allied base in the Great War, Dunkirk was heavily bombarded from sea and land. Pop. 34,748.

DUNLIN or **Ox Bird** (*Tringa alpina*). Species of shore bird belonging to the Sandpiper group. It breeds rather rarely in Great Britain, and is usually seen about estuaries. It is about 8 ins. long.

DUNLOP, JOHN BOYD (1839-1921). Irish inventor. After practising as a veterinary surgeon he evolved the idea of an inflated tire about 1888. This Dunlop tire was placed on the market by the Pneumatic Tyre and Booth's Cycle Agency. A patent for the wire edge attachment expired in 1904. He died Oct. 23, 1921. See Cycling; Tire.

DUNMOW, LITTLE. Village of Essex. It stands on the Chelmer, 1½ m. S.E. of Great Dunmow. It was celebrated for the custom of presenting a fitch of bacon to any married couple who could prove that they had not repented of their marriage for a year and a day after its celebration. The custom now takes place at Ilford (q.v.). Roman remains have been unearthed at Great Dunmow.

DUNNOTTAR. Parish of Kincardineshire, on Carron Water, 1 m. S.W. of Stonehaven. The ruined stronghold, Dunnottar Castle, dates from the 7th century. In one of its dungeons, known as Scotland's Black Hole or Whigs' Vault, in 1685, during the

Dunnottar Castle. Ruins of the ancient stronghold from the N.

Covenanters' rebellion, 167 men, women, and children were incarcerated. The castle was dismantled in 1720.

DUNNOON. Burgh of Argyllshire. On the W. shore of the Firth of Clyde, it is 8 m. W. of Greenock, on the L.M.S. and L.N.E. Rlys. Formerly a small fishing village, it is now one of the most popular watering places on the W. coast. It includes Kilm and Hunter's Quay. Pop. 14,659.

DUNRAVEN, EARL OF. Irish title borne since 1822 by the family of Wyndham-Quin. Valentine R. Quin, an Irish landowner, was made earl of Dunraven and Mountcarl in 1822. Edwin, the 3rd earl (1812-71), who was M.P. for Glamorganshire 1837-51, was made Baron Kenry, a British title, in 1866. A remarkable man, he was an archaeologist, astronomer, and author. In 1871 his son, Windham Thomas (1841-1926) became the 4th earl. In 1885-86 and 1886-87 he was under-secretary for the colonies, but was perhaps better known as a sportsman. The earl's seats are Adare Manor, Limerick, and Dunraven Castle, Glamorganshire, and his eldest son is called Viscount Adare.

4th Earl of Dunraven
Russell

DUNROBIN CASTLE. Seat of the duke of Sutherland, Sutherlandshire. Beautifully situated on Dornoch Firth, it is one of the oldest inhabited mansions in Great Britain, the earliest portion dating from the 13th century. In the grounds are two brochs or circular towers and a museum of antiquities.

DUNS. Burgh, county, and market town of Berwickshire, 55 m. S.E. of Edinburgh, on the L.N.E. Rly. The original town of Duns or Dunse was situated on Duns Law (713 ft.), which has traces of the encampment set up by the Covenanters in 1639. Market day, alternate Mons. Pop. 1,868.

DUNSANY, BARON. Irish title borne since 1439 by the family of Plunkett. The first baron was Sir Christopher Plunkett, a landowner in co. Meath, from whom the title passed to his son and other successors. Edward, the 18th baron (b. 1878), has written a number of novels, a volume called *Fifty Poems*, 1929, and several plays, including *The Glittering Gate*, 1909; *The Gods of the Mountain*, 1911; *A Night at an Inn*, 1916; *If, 1921*; and *Alexander and Other Plays*, 1925. Dunsany is in Meath, 7 m. from Trim.

18th Baron Dunsany,
British writer

DUNSLANE. Peak of the Sidlaw Hills, Scotland, 8½ m. N.E. of Perth. On it are traces of an ancient fort known as Macbeth's Castle. Shakespeare has immortalised the defeat here of Macbeth by Siward, earl of Northumbria, in 1054. See Macbeth.

DUNSINK. Hill and village of co. Dublin, Irish Free State, 4 m. N.W. of the city of Dublin. On the hill (alt. 210 ft.) is Trinity College observatory, founded in 1785.

DUNS SCOTUS (c. 1265-1308). Medieval schoolman. Little but legend exists as to his personal history. He appears to have been professor of theology at Merton College, Oxford, to have joined the Franciscans, and about 1304 to have gone to Paris, where, in contention with the Dominican upholders of the teaching of Thomas Aquinas, his dialectical skill won for him the name of Doctor Subtilis, and where he popularised the theory of the

Immaculate Conception of the Virgin Mary, since 1854 a dogma of the Roman Catholic Church. He died Nov 8, 1908.

From Duns Scotus and Thomas Aquinas arose respectively the schools of Scotists and Thomists, opposed especially in regard to the Immaculate Conception, and generally as to free will, grace, and kindred topics. The Scotist views were adopted by the Jesuits.

DUNSTABLE. Borough and market town of Bedfordshire. It stands at the entrance of a gap of the Chiltern Hills, 37 m. N.W. of London on the L.M.S. and L.N.E. Rlys. The parish church is a part of the priory founded by Henry I in 1131. The grammar school, founded in 1715, was rebuilt in 1888. Straw-plaiting and printing are among the industries. Market day, Wed. Pop. 8,889.

DUNSTAN (d. 988). English saint. He was born at Glastonbury, and became abbot about 945. The chief adviser of King Eadred, he was banished by his successor, Edwy, but recalled by Edgar, who appointed him bishop of Worcester in 957, bishop of London in 959, and archbishop of Canterbury in 961. He died May 19, 988.

DUNSTER. A village of Somersetshire, 23 m. N.W. of Taunton on the G.W.R. It is a quaint old town, containing many interesting buildings. Dunster Castle dates from the 12th century, and the Yarn Market from the beginning of the 17th century. Pop. 705.

DUNSTERVILLE, LIONEL CHARLES (b. 1865). British soldier. Born Nov. 9, 1865, he was educated at Westward Ho College, where he had as a schoolfellow Rudyard Kipling, who made him the hero of *Stalky & Co.* Dunster-ville joined the Indian army, and served in the Waziristan expedition, 1894-95, on the N.W. frontier, 1897-98; and in China, 1900. In the Great War he held various appointments in India, then went to Mesopotamia, where in 1918 he commanded the expedition to Baku (q.v.). He wrote the *Adventures of Dunsterforce*, 1920; and *Stalky's Reminiscences*, 1928.

L. C. Dunsterville
British soldier
Elliott & Fry

where in 1918 he commanded the expedition to Baku (q.v.). He wrote the *Adventures of Dunsterforce*, 1920; and *Stalky's Reminiscences*, 1928.

Dunvegan. Sea-loch on the N.W. coast of the Isle of Skye. On the E. shore is Dunvegan Castle, the ancient seat of the Macleods.

DUNWICH. Village of Suffolk. It stands on the North Sea, 4½ m. S.W. of Southwold. The chief town and harbour and at one time the only see of East Anglia, Dunwich has suffered severely from sea encroachments. Of its ancient churches and monasteries only the ruins of a friary remain. Pop. 189.

DUPLEIX, JOSEPH FRANÇOIS (1697-1763). French administrator. Born at Landrecies, Jan. 1, 1697, he was the son of a merchant. As a youth he went on voyages to India, where, about 1720, he settled. In 1730 he was made governor of Chandernagore, and in 1741 became governor of Pondicherry, and the chief official in French India. In 1744, when war broke out between England and France, Duplex took vigorous action to defend his country's interests. He held on to Madras and defended Pondicherry, and had scored other successes when peace was made in 1748. He then turned his attention to the Carnatic, and there, deposing one ruler after another, he became master of that region and also of the Deccan. His grandiose

Joseph François

administrator
After Sergeant.

plans, however, were spoiled by the appearance of Clive, and after a vain struggle Duplex was recalled in 1754. He lived in poverty in France until his death, Nov. 10, 1763.

DURA. Buried city on the Euphrates. Its site was discovered in 1920, and on it traces of Greek and Roman civilization have been unearthed. In 1928 its exploration was undertaken by an expedition from Yale.

DURALUMIN. Alloy of aluminium. It contains 3½ p.c. of copper and smaller quantities of magnesium and manganese. Its tensile strength is very great, and this quality, in conjunction with its light weight, makes the alloy very suitable for use in aircraft. See Airship.

DURAND, SIR HENRY MORTIMER (1850-1924). British administrator. The second son of Sir Henry Marion Durand (1812-71), he was born Feb. 14, 1850, and in 1873 joined the Bengal Civil Service. From 1880-85 he was in the foreign department of the government of India. From 1894-1900 he was British minister at Teheran; from 1900-03 ambassador and consul-general at Madrid; and from 1903-06 ambassador at Washington. He died June 8, 1924. Durand wrote his father's life.

Sir Mortimer Durand,
British administrator
Elliott & Fry

DURAZZO. Seaport of Albania, on the Adriatic, 60 m. S. of Sentari. Founded 621 B.C. by Corinthian and Corevran colonists under

Durban. Town Hall, built in the Renaissance style in 1906-08.

the name of Epidamnus, it was renamed Dyrrhaeum by the Romans. In 1501 it passed to the Turks. From the end of 1914 until March, 1916, it was occupied by the Italians, and again in 1913 to 1921 it was the capital of Albania. The harbour is much silted up. Pop. 5,100.

DURBAN. Seaport and health resort of Natal, S. Africa. It is situated on the S. shore of a land-locked bay, 812 m. from Cape Town by sea and 1,253 m. by rly. It owes its position as premier port of the Union to the neighbouring coal fields and to its coal bunkering facilities. It is the terminus of the Natal Rly. system, is connected by rail with all the other important cities of the Union, and is the only harbour of any importance between East London and Delagoa Bay. There are a fine town hall (opened in 1910), public gardens and parks, racecourse, and museum. Pop. (whites), 58,085.

DURBAR (Pers. dar, door: har, admittance, court). Term used in India for the

court, council, or council chamber of a native ruler, for an official reception or audience, or for a great state ceremony. Specially magnificent durbars were held at Delhi on the proclamation of Queen Victoria as empress of India in 1877 and of Edward VII and George V as emperors in 1903 and 1911 respectively.

DÜRER, ALBERT OR ALBRECHT (1471-1528). German artist. He was born at Nuremberg, May 20, 1471, the third of eighteen children of a goldsmith. He was brought up to the goldsmith's business, but in 1486 was allowed to enter the school of Michael Wohlgemuth. In 1505 he visited Venice, at the invitation of the Nuremberg merchants established in the city, who desired him to decorate their bourse. Returning to Nuremberg in 1507, he produced single figures of Adam and Eve, 1507; The Massacre of Ten Thousand Christians, 1508; The Virgin of the Iris and The Adoration of the Trinity, 1514. Between 1512-19 he was in the service of the emperor Maximilian. He died April 6, 1528. His house at Nuremberg is now a Dürer museum.

Albert Dürer, German painter and engraver.
Self-portrait in the Pinakothek, Munich.

On the whole, Dürer was less a painter than a designer. His famous woodcuts include the series of The Apocalypse, 1497; the 20 scenes of the Life of the Virgin, 1511; and a number illustrating the writings of Maximilian I. He published Four Books on Human Proportion, 1528. See illus. pp. 390, 409.

DURHAM. County of England. With about 33 m. of coast line, its area is 1,013 sq. m. Branches of the Pennine Chain enclose fertile valleys in the W., whence the surface slopes to the E. The Wear, Don, and Tees are the chief rivers of the county. Immense coal measures occupy its centre and, in addition to coal, large quantities of ironstone, millstone, granite, lead, etc., are obtained. Durham is noted for horses and shorthorn cattle, and sheep rearing.

Durham. Map of the coal-mining county of north-eastern England, notable also for its shipbuilding, ironworks and manufacturing industries.

is carried on. The L.N.E.R. serves the county. Durham is the county town, and besides the ports of Sunderland, Stockton-on-Tees, Jarrow, the Hartlepoons, and S. Shields.

the largest towns are Gateshead and Darlington. Durham formed part of Northumbria. As a county palatine, its ruler, the bishop, had exceptional powers, and retained his own courts until 1836. Pop. 1,479,933.

Literary associations start with the Benedictine monastery at Jarrow, founded by Benedict Biscop, but its greatest name is that of the Venerable Bede (q.v.), who was born near Wearmouth. At Stanhope, in Weardale, Joseph Butler (q.v.), its rector, wrote *The Analogy of Religion*. Elizabeth Barrett Browning was born at Coxhoe Hall, near Durham. Scott's Rokeby has much about Barnard Castle and the upper Tees valley.

DURHAM. City and county town of Durham. It stands on the Wear, 287 m. from London, and has a station on the L.N.E. Rly. The greatest glory of Durham is the cathedral. The present building, which replaced an older one, was begun in the 11th century, and much of it, including the nave and the restored chapter house, is Norman. The Galilee chapel (q.v.) is notable, as are the central tower and the chapel of the nine altars. The cloisters, rebuilt in the 15th cent., and other parts of the monastic buildings still exist.

promoters of the great Reform Act. From 1835-37 he was ambassador to Russia, after which he went to Canada as governor-general.

There he prepared the *Report on the Affairs of N. America* which profoundly influenced the development of Canada. Durham died July 28, 1840. His grandson, John George (1855-1928), who became the 3rd earl in 1879, was a patron of the turf. He died in Oct., 1928, when his twin brother, Hon. F. W. Lambton, became the 4th earl. He died early in 1929, when his son John became the 5th earl. The earl's seat is Lambton Castle, Durham.

DURHAM LIGHT INFANTRY. British regiment, of which the two battalions were formerly the 68th and 106th regiments of light infantry. The former, raised in 1756, was organized as a light infantry regiment in 1808, and called the 1st battalion Durham Light Infantry in 1881. It took part in the ill-fated Walcheren expedition (1809), in the Spanish campaign of 1811, and in the Crimean War. The 2nd battalion served in the Persian War (1856). During the Great War the regiment won further distinction.

DURSLEY. Town of Gloucestershire. It is situated 15 m. S.S.W. of Gloucester by the L.M.S. Rly., at the foot of the scarp of the Cotswolds. Cycles are manufactured and bath-stone is quarried. Pop. 2,792.

DUSE, ELEONORA. (1859-1924). Italian actress. Born near Venice; Oct. 3, 1859, her first success came at Turin, 1879, and in 1882 she was a leading player in Rossi's company, winning at Florence further success as Frou-Frou. Her finest impersonations included Magda, La Tosca, Marguerite Gautier in *La Dame aux Camélias*, Santuzza in *Cavalleria Rusticana*, Mirandolina in *La Locandiera*, Paula in *The Second Mrs. Tanqueray*, Nora in *A Doll's House*, and heroines in D'Annunzio's dramas. She died April 21, 1924.

DÜSSELDORF. City of Prussia. It stands in the centre of a plain, on the right bank of the Rhine, at the junction of several rivers, 24 m. by rly. N. W. of Cologne. Important buildings include the old electoral palace, once the home of the Academy of Art; the Gothic Renaissance Rathaus, 1570-73, extended in 1885; the public library, municipal theatre, palace of justice, and post office. Notable among the

churches are S. Lambert, a Gothic building of the 14th century; S. Andrew, 1629, once the church of the court and of the Jesuits; and S. Roche. The Academy of Art is a famous school of genre painters. The greater part of the old masters in the original picture gallery was removed to Munich in 1805. The Düsseldorf art school flourished 1820-40 under Peter Cornelius and W. Schadow. The municipal art gallery is devoted to modern work. Of recent years Düsseldorf has developed iron, textile, brewing, distilling, printing, dyeing, and other industries, and has become an important banking centre. Here the poet Heine was born. Pop. 432,633.

DUTCH AUCTION. Auction at which the property is offered at a price higher than the seller will accept. The price is lowered until a purchaser bids, when the lot is at once knocked down, or sold, to him at the sum last mentioned by the salesman.

DUTCH METAL. Alloy of copper and zinc, and therefore technically a brass. The proportion of the copper may range from 77.75 to 84.5 p.c. The colour varies from a pleasing pale yellow to a dark yellow, according to the proportions used. It is a very ductile metal and much used in the preparation of Dutch gold leaf, employed instead of gold for gilding purposes.

DUVAL, CLAUDE (1633-70). Highwayman, born at Domfront, in Normandy. He came to England at the Restoration in the train of the duke of Richmond, took to the road, and became notorious for his daring robberies and for his gallantry. He was captured while drunk in a London tavern and executed at Tyburn.

DVINA. Name of two Russian rivers. The northern Dvina, formed by the Sukhona and the Yug, flows past Archangel into the White Sea. It is navigable in the summer, but there are shoals at the mouth. Its length is nearly 500 m. The western Dvina flows into the gulf of Riga, 9 m. below Riga. With a canal it links the Baltic and Black Seas. Its length is 640 m.

Two battles were fought between the Germans and the Russians in the region of the western Dvina. One was in Aug.-Sept., 1915, when the German attempt to capture Riga failed. The other lasted with intervals from Jan. to Aug., 1916.

DVINSK (DAUGAVPILS). Town of Latvia, capital of the E. prov. of Latgale. On the right bank of the Dvina, it is an important rly. centre for the traffic with Russia and Poland. There is considerable trade in grain, flax, and timber. In 1772, having been hitherto Polish, it was added to Russia, remaining part thereof until the collapse of the Russian empire in 1917. During the Great War, after much fighting for its possession, it was occupied by the Germans Feb. 18, 1917. Pop. 40,000.

DVORAK, ANTONIN (1841-1904). Bohemian composer. Born at Mühlhausen, Sept. 8, 1841, he joined the orchestra of the National Theatre, Prague, in 1862, and began to devote himself to composition. A set of Slavonic dances made him

famous. From 1892-95 he was principal of the National Conservatoire of Music at New York, but returned to Bohemia, where he died, May 1, 1904. His works include a Stabat Mater, a cantata, *The Spectre's Bride*, several brilliant symphonies and overtures, and fine examples of chamber music.

Antonin Dvorak. Bohemian composer

Durham. The cathedral, seen from across the river Wear. The lancet and perpendicular work of the two western towers, and that of the central tower, is imposed upon the original Norman architecture

Photocolor

The first castle was built by William the Conqueror, but little remains. The present building is the headquarters of the university. In 1927 it was reported that the castle was in danger of collapsing. The great hall and other parts were closed, and repairs begun.

Interesting also are some of the churches and the bridges across the Wear, especially Framwellgate of the 14th century. Elvet Bridge leads to the suburb of Elvet. The town hall dates from the 16th century. The grammar school is an old foundation; its present buildings at the top of South St. date from 1844. Market day, Sat. Pop. 17,346.

The university of Durham was founded in 1832. In 1908 it was divided into two parts, one at Durham and the other at Newcastle.

DURHAM, EARL OF. British title borne since 1833 by the family of Lambton. The Lambtons had lands in Durham as early as the 12th century, but they remained commoners until the time of John George Lambton (1792-1840), who was made Baron Durham in 1828 and earl of Durham in 1833.

A Whig politician, Lambton was in the Cabinet from 1830 to 1833, being one of the

DWARF. Abnormally short human being. Dwarf races are primitive peoples whose average adult male stature is below 4 ft. 11 ins. There are two main groups: Asiatic negritos, comprising Acta, Andamanese, Semang, Tapiro, and others; African negrillos, including Akka, Batwa, Bambute, and allied tribes. The most satisfactory theory of pygmy origins regards these peoples as representing the early divergence from the main human stock of a tropical hunting type.

From earliest times dwarfs attracted attention and were obtained as attendants by royalty and wealthy persons. They have also been much exploited by showmen, as for example, Tom Thumb.

Dyak. Gala costume of a boy and girl in British N. Borneo

proto-Malayan sea Dyak, preferably called Iban, are the most tattooed Bornean tribe and were the most inveterate head-hunters. See Borneo.

DYER, SIR EDWARD (c. 1540-1607). English courtier and poet. Born at Sharpham Park, Somersetshire, son of Sir Thomas Dyer, he was introduced at court in 1566. A close friend of the Sidneys, and a member of the literary coterie known as the Areopagus, he enjoyed a high reputation as a man of character and a poet. Knighted and made chancellor of the order of the Garter in 1596, he died in 1607. As a poet, he is best remembered by the ballad, *My Mind to Me a Kingdom* is.

DYER, REGINALD EDWARD HARRY (1864-1927). British soldier. Born Oct. 9, 1864, he entered the army and later transferred to the Indian army. In command of a brigade, he was sent in April, 1919, to Amritsar, where his men fired on a mob. Later an inquiry was held and Dyer was censured. He retired from the army, and received £21,000 from sympathisers through the agency of *The Morning Post*. He died at Long Ashton, Bristol, July 23, 1927.

R. E. H. Dyer. British soldier

DYER'S BROOM or **DYER'S GREENWEED** (*Genista tinctoria*). Dwarf shrub of the order Leguminosae. A native of Europe, it extends into N. and W. Asia.

Dyer's Broom, flowers and foliage

The bright yellow flowers are small, and are succeeded by smooth, flat pods, an inch long, containing about five seeds. It yields a yellow dye, which was largely used by dyers in connexion with neutral indigo. Another name for the plant is woad-waxen.

citron and yellow-barked oak, the rough, brown bark being orange-coloured internally. It has variously divided large leaves and small hemispherical acorns. The bark is extensively used in tanning and dyeing.

Dyer's Weed. Variant name for weld (*Reseda luteola*). See Weld.

DYES OR DYESTUFFS.

Substances used for dyeing the various textile fibres, as wool, silk, cotton, artificial silk; also for dyeing leather, paper, etc., and for colouring oils, varnishes, foodstuffs. Mineral dyestuffs comprise Prussian blue, iron buff, chrome yellow, chrome orange, manganese bronze, and metallic oxide khaki. Chiefly used for cotton, they have lost their former importance.

The most important natural dyestuffs are natural indigo, logwood, fustic, cochineal, Persian berries, orchil, cudbear, and eutech. With the exception of indigo and orchil, the natural dyestuffs, applied alone to textile fibres, possess little affinity for them, and are only of use when combined with metals previously applied to the fibres in the form of salts, this process being called mordanting.

The artificial dyestuffs, commonly called coal-tar dyes, comprise a very large number of organic compounds. The first was discovered by Perkin in 1856, and called mauve. Chemically, they are divided into about 15 classes, the dyestuffs in each conforming to a definite structure. Taking the dyeing point of view as a basis for differentiation, the following classes are obtained: (1) acid, (2) basic, (3) direct cotton or salt colours, (4) mordant, (5) sulphide, (6) vat, (7) insoluble colours or colours formed on the fibre. As the name indicates, the dyestuffs of this group are derived from coal tar. From this are obtained such important substances as benzene, toluene, phenol, naphthalene, and anthracene. These are the primary raw materials for the production of all artificial dyestuffs.

THE DYERS' COMPANY. This is a London livery company. Incorporated 1471, it was originally one of the 12 chief companies. With the Vintners it has the right of keeping swans on the Thames, and it administers a number of charities. The hall in Dowgate Hill, E.C., was erected in 1857.

Dyer's Oak, leaf and acorn

DYKE OR DIKE. Defensive earthwork or its adjacent ditch, especially in early Britain. Dykes may be promontory forts, or protective works as used in Holland, and in Great Britain as fenland causeways. Some were made or re-used for national or tribal boundaries.

In geology, dykes are wall-like masses of rock formed in vertical or highly inclined fissures in older formations. The name arose from their resemblance, when the softer enveloping rocks have been weathered away, to the structures made by man. The most typical dykes comprise basalts and similar rocks intruded by igneous action. They often form ribs spreading radially from volcanic craters. Sedimentary dykes have been formed in all geological ages, such as the pre-Cambrian sandstone dykes at Ben Slioch, Scotland.

DYKES, JOHN BACCHUS (1823-76). British musician and churchman. Born at Hull, Mar. 10, 1823, he studied music at Cambridge and became a clergyman. In 1849 he was appointed precentor of Durham Cathedral and vicar of S. Oswald's, Durham. He composed a large amount of church music, includ-

ing many hymn tunes; some—Nearer my God to Thee, and Jesu, Lover of my Soul—had immense popularity. He died Jan. 22, 1876.

DYMOKE. English family in which the ancient office of king's champion is hereditary. Sir John Dymoke (d. 1381) was champion at the coronation of Richard II. Henry Dymoke (d. 1865) was champion at George IV's coronation, after which the ceremony was discontinued, though the office remained. In the reign of George V the champion was Frank Seaman Dymoke. See Champion.

DYNAMICS (Gr. *dynamis*, power). Branch of the science of mechanics which investigates the action of force. It therefore includes the investigation of the conditions of bodies which are in a state of equilibrium owing to the forces acting upon them, although this special branch of the science is often referred to as statics.

DYNAMITE. Name applied to a variety of high explosives of which the essential feature is a high content of nitroglycerine, absorbed in an active or inert porous base. Dynamite was invented by Nobel in 1866. He found that nitroglycerine could be rendered comparatively safe by absorption in kieselguhr (q.v.), which is capable of retaining up to three times its weight of nitroglycerine. About 1 p.c. of magnesium carbonate or chalk is usually added. Dynamite is a powerful high explosive of considerable brisance. If ignited in small quantities it burns fiercely without exploding. It is chiefly used for blasting operations where a powerful shattering effect is required.

DYNAMO. Machine used for converting mechanical energy into electrical energy. Faraday discovered (1831) that if a magnet were passed through a coil of wire a current of electricity was induced in the wire while the magnet was moving. The same effect was produced if the magnet were kept still and the wire moved. This is the essential principle of the dynamo. As the coil of wire moves across the magnetic field the strength of the induced electric current varies. Decreasing the number of lines of force passing through the conductor produces an induced current in one direction, while increasing the number of lines through the conductor produces an induced current in a contrary direction. By a device known as the commutator (q.v.) the alternating current induced in the coil can be changed into a direct or continuous current.

The intensity of the current is increased if a flat coil of many turns of wire be used, but even then a cycle occurs only once per revolution. To increase the number of cycles and so make the current more constant, a large number of coils is arranged in external grooves cut upon the surface of a drum of soft iron plate. An intense magnetic field is obtained by using electric magnets, excited by a current through the coils encircling them. These two chief parts of a dynamo are the armature (q.v.) and the field magnet system, or field.

Dynamo. Diagram showing the essential principle of a dynamo. N and S are the opposite poles of a magnet between which the wire coil is made to revolve

Direct-current dynamos are not adapted to the production of high voltage currents, owing, mainly, to the difficulty in collecting such currents from the commutators, and to the difficulty in insulating the coils on the revolving armature. With alternating-current dynamos, or alternators, these difficulties can be overcome. The high voltage generally associated with alternators has led to a fundamental

change in their design, viz. the moving of the magnetic field in relation to the armature wires, instead of the armature in relation to the

its name from a cave near Dysart House reputed to have been the cell of S. Serf. Once a busy centre of export trade, the harbour was closed in 1928 owing to the shutting down of the adjacent coal pits. Pop. 4,598.

The Scottish title of earl of Dysart has been borne since 1643 by the families of Murray and Tollemahe. The earl's seats are Buckminster Park, Grantham, and Ham House, Petersham, and his eldest son is known as Viscount Huntingtower.

DYSENTERY. Medical term applied to several distinct affections.

These resemble each other in having irritation of the bowel as a prominent symptom, often associated with diarrhoea and blood in the motions.

Amoebic dysentery is caused by a minute organism (amoeba) which enters the body with food or drinking water. The disease is widespread throughout the tropics, and is also met with elsewhere. Emaciation is a marked feature of this disease, while abscess of the liver is a frequent complication. Ipecacuanha, or emetine, has proved of great value.

DYSON, SIR FRANK WATSON (b. 1868). British astronomer. He was born Jan. 8, 1868, the son of a Baptist minister in Yorkshire, and became a fellow of Trinity College, Cambridge. In 1894 he entered the Royal Observatory, Greenwich, as chief assistant. Five years later he became secretary of the Royal Astronomical Society, and in 1901 F.R.S. In 1905 Dyson was made astronomer-royal for Scotland, and in 1910 was transferred to the corresponding position in England. In 1915 he was knighted, and made K.B.E. in 1926.

Sir Frank Dyson,
British astronomer
Russell

DYSPEPSIA OR INDIGESTION. Acute dyspepsia or acute gastric catarrh is most frequently due to errors in diet, but is sometimes an early symptom of many of the infectious fevers. The symptoms are pain in the stomach, nausea, vomiting, headache, and depression. Treatment consists in withholding food for 24 hours, and then giving an easily digested diet. A cathartic should be administered.

Chronic dyspepsia results from chronic gastritis, which may follow the long-continued habit of taking unsuitable food or excess of alcohol, or may be a symptom of many diseases, such as gout, diabetes, Bright's disease, tuberculosis, anaemia, and cancer of the stomach. The symptoms are a sense of fullness after eating, with heartburn, nausea, flatulence, headache, depression, and usually constipation, though sometimes diarrhoea. Treatment consists in taking a light and easily digested diet. Various digestive ferments and bitter tonics, such as quassia and gentian, are often useful. Where the dyspepsia is a symptom of a general disease, that also must be treated.

DYSPROSIUM. Metallic element, symbol Dy; atomic weight 162.5; atomic number 66. It was isolated from oxide of holmium by Lecoq de Boisbaudran in 1886, and occurs chiefly in gadolinite and samarskite.

E. Fifth and most frequently used letter, and the second vowel of the English and Latin alphabets. Its chief sounds are those heard in me, and in men, really the short sound corresponding to a in man. In clerk, serjeant, e has the sound of a. As a rule, e final is itself mute, but its usual effect is to lengthen the preceding vowel; e.g. mat, mate, but give, live.

The combinations of e with other vowels represent various sounds: ea usually ee, as in meat, but at times as in bread. head, great, pear, heart. Ei is a long a or ee, as in weight, deceit, but has a short i-sound in foreign, sovereign, sometimes long, as in height. Eo is a long ee, as in people, but yeoman is an exception. Eu, ew have the sound of iu (yu), as in deuce, new, but of o in sew.

EADIE, DENNIS (1875-1928). British actor. Born at Glasgow, Jan. 14, 1875, in 1899 he toured with the St. James's Repertoire Company, making his first appearance in London under George Alexander at the St. James's Theatre, Feb. 7, 1900, in *The Prisoner of Zenda*. He entered into management of the Royalty with J. E. Vedrenne in 1911. He made a success in *Milestones*, produced in 1912, and in *The Man Who Stayed at Home*, in 1915. In 1928 he was playing in *The House of the Arrow* at the Vaudeville when he died, June 10.

Dennis Eadie,
British actor
Hugh Cecil

EAGLE (Fr. aigle, Lat. aquila). Group of large birds of prey, including some 14 genera and a large number of species, found throughout Europe, Asia, Africa, and N. America. The true eagles belong to the hawk family. All have strong, curved beaks with sharp cutting edges, and the head has usually a flattened and rather snake-like look. The plumage is generally dark, and the wings are long and powerful. All are carnivorous, and most eat carrion. The golden eagle (*Aquila chrysaetos*), is not uncommon in Scotland and in the wilder parts of Ireland. The bird is about a yard in length, with dark brown plumage showing a tawny tinge at the neck. It lives mainly on hares, rabbits, and game birds, and will occasionally attack a lamb or young fawn. Its nest, made of sticks and often of a huge size, is usually built on a ledge of an inaccessible cliff. The white-tailed sea eagle (*Haliaeetus albipectus*) is found in the Hebrides. The spotted eagle (*A. maculata*) is a rare winter visitor.

In heraldry the eagle is almost universally displayed full front, with expanded wings. From a Roman standard-symbol the eagle became the emblem of the rulers of the Eastern Empire, and Charlemagne made it the badge

Eagle. Left, golden eagle found in Scotland; right, white-tailed sea eagle from the Hebrides
W. S. Berridge and Gumbler Bolton

of the medieval empire. From this early form was evolved the later German imperial eagle, and the eagles of the Austrian and

Dynamo. 1. Complete drum armature. 2. Direct current dynamo, showing commutator (right) and brushes. 3. Alternating current dynamo or alternator, showing revolving field magnet system (rotor)
2 & 3. Courtesy of Murray & Place

field. The field magnets are usually included in the revolving parts, whilst the armature forms the stationary part. In this way the current from the armature can be led off without the interposition of any moving collector, while the insulation is not cramped or subjected to mechanical stress.

In another kind of machine (the "inductor" alternator) both field magnets and armature are stationary, but have an annular space between them. The annular space is traversed by bare poles (inductors), attached to a revolving spider. The poles complete the magnetic circuit between field-magnets and armature coils as they pass between them. The revolving portion of an alternator is called the "rotor" and the stationary part the "stator"—names which do not necessarily distinguish between armature and field magnets.

DYNAMOMETER. (Gr. dynamis, power; metron, a measure). Device for measuring force or power. The term is commonly applied to instruments used for measuring the h.p. of engines. They may be divided into three classes: (1) those for measuring the pull of anything; (2) those for measuring the push or thrust; and (3) those for measuring twisting power or torsion. The first type measures such forces as those exerted by railway locomotives, etc., and consists essentially of a powerful spring balance through which the power is applied. The second type measures such forces as the thrust of an aeroplane propeller, and the third the force exerted by a revolving shaft, and both the latter may consist of recording springs or brake attachments.

Dynamometer. Common type of brake dynamometer

DYNE (Gr. dynamis, power). Unit of force which, applied to a mass of one gramme, produces an acceleration of one centimetre per second every second. The erg, the unit of work, is the work done when a body acted on by a force of one dyne moves through a centimetre in the direction of the force. 10,000,000 ergs equal one joule. See Erg.

DYSART (Lat. desertum, solitude). Burgh of Fifeshire. It lies on the Firth of Forth, 28 m. N.E. of Edinburgh on the L.N.E.R. It derives

Russian Empires. The origin of the assumption of the eagle as a national emblem by the United States of America is obscure.

Eagle on standard of Ancient Rome

From the symbol they bore, the military standards employed in ancient Rome and in France under Napoleon I and Napoleon III were known as eagles.

A gold coin of the U.S.A., value ten dollars, is known as an eagle, so named because it bears a representation of the U.S.A. crest.

EALING. Borough of Middlesex. It is 5½ m. W. of Paddington by the G.V., L.M.S., Cen. Lon., and Dist. Rlys., there being stations at Ealing Common, Ealing Broadway, and West Ealing. Its chief buildings are the Victoria Hall and the town hall. Its open spaces include Ealing Common, Walpole Park, and (with Acton) Gunnersbury Park. Perivale has a tiny church, probably 800 years old, restored in 1875. The chief churches are S. Mary's, the parish church, and Christ Church. Ealing became a borough in 1901, and in 1926 was enlarged to include Hanwell and Greenford. Pop. 94,300.

EAR. Organ of hearing. The ear is divided into three parts. (1) The outer ear is composed of (a) the auricle, or pinna, leading into (b) the external auditory meatus, a narrow tube passing inwards to the drum.

(2) The middle ear is a small cavity in the side of the skull separated from the outer ear by the ear drum. It has a chain of minute bones, the hammer, anvil, and stirrup bones, which run across it and carry sound waves

Ear. Diagram showing how sound waves are conveyed to the brain

from the drum to the oval window, a small hole closed by a membrane and leading into the inner ear. The cavity has in front a tube connecting it with the throat, the Eustachian tube, which allows air to pass into the middle ear in order that the pressure of air inside the drum may equalise the atmosphere pressure.

(3) The inner ear is a cavity embedded in the skull deeper than the middle ear, and communicates with it through the oval window. It is filled with fluid, called perilymph, submerged in which are two hollow structures composed of membrane—the cochlea and the semicircular canals. These, again, are filled with fluid, called endolymph. The cochlea is a spiral tube, in which the nerve of hearing terminates. Sound waves are carried through the outer and middle ear and put the membrane closing the oval window in motion, which is communicated to the fluid filling the inner ear, whence it passes to the fluid contained within the cochlea, in which the termination of the nerve of hearing floats, the stimulus thus given to the nerve being perceived in the brain as sound.

The semicircular canals, which are entirely concerned in the balance of the body, are three tubes filled with fluid, having fine hair-

like nerve terminals floating in it. The fluid is set in motion by any change in the position of the body. The stimulus so produced is carried to the brain and enables it to judge of our position in space and automatically to adjust our muscles accordingly.

Infection from the throat can reach the middle ear through the Eustachian tube. This may result in catarrhal inflammation, leading to deafness and possibly to disease of the mastoid process, the bony projection behind the auricle, which lies in very close relationship with the brain. See Audiometer; Audiphone; Deafness; Hearing; Sound.

Earby. Urban dist. of Yorkshire (W.R.). It is situated 6 m. S.W. of Skipton, on the L.M.S. Rly. Pop. 5,898.

EARL. Title in the British peerage, ranking third. The French equivalent is comte, and the German is graf. The wife of an earl is called a countess, a reminder of the days when earl and count were synonymous. His eldest son bears his father's second title; the other sons are known as the Hon., the daughters as Lady So-and-So.

Earl is the oldest title of nobility. At first a mark of office, it gradually became one of rank. The premier earl of England is the earl of Arundel, a title held by the duke of Norfolk. Of those who have no higher title, the earls of Shrewsbury (1442), Derby (1485), and Huntingdon (1529) are the senior. In Scotland the earl of Crawford is the senior earl. See Peerage.

EARL MARSHAL. In England the earl marshal is the eighth great office of state. He is head of the Herald's College and has ceremonial duties. Since 1672 the office has been hereditary in the family of Howard, duke of Norfolk. The office of earl marshal (formerly great marischal) of Scotland was hereditary in the Keith family until 1716, when it was abolished.

EARL'S COURT. District of London in the metropolitan borough of Kensington. It is on the Met., Dist., and L.M.S. Rlys., also the Piccadilly tube. The name is synonymous with exhibitions, which, from that of the Fisheries Exhibition in 1884, down to 1914, delighted millions. The Great Wheel was removed in 1906.

EARLSFIELD. District of London. Within the metropolitan borough of Wandsworth, it is 2 m. S.W. of Clapham Junction, on the Southern Rly. Pop. 18,286.

EARLSTON. Burgh of Berwickshire, formerly called Erskildoune. It stands on Leader Water, 72 m. S.E. of Edinburgh on the L.N.E.R. There are traces of the old tower of Thomas the Rhymer (d. 1299), whose remains lie in the churchyard. Market day, Fri. Pop. 1,643.

EARLY CLOSING. Movement among shopkeepers and others to secure shorter working hours on week days. The Shops Act of 1912, in addition to providing a half holiday for the assistants, ordered all shops to be closed on one afternoon in each week. In 1928 an Act made it compulsory for shops to close not later than 9 p.m. on one evening in the week and not later than 8 p.m. on the others. Exceptions are made in the case of shops where sweets, tobacco, and certain kinds of provisions are sold. This Act does not prevent local authorities from fixing earlier hours of closing. The organization which is mainly responsible

for the movement is the Early Closing Association, founded in 1842. Its offices are at 34-40, Ludgate Hill, London, E.C.4. See Shop.

EARLY ENGLISH. Style of architecture originating in the reign of Henry II, and prevalent throughout the 13th century. It has been called the "lancet" style or period, from the resemblance of the slender pointed arch, its leading characteristic, to a surgeon's lancet. Norman work had retained the round arch of Romanesque pattern, and Early English inaugurated the new era of Gothic architecture by substituting the pointed for the round. Vaulted roofs in stone took the place of the old flat timber roofs. Windows were lengthened and crowned by the lancet arch; piers were formed of clustered columns, each having its own cap, but united under one capital from which sprang the trefoiled pointed arches of the vault; mouldings were deeply undercut, often with dog-tooth ornament; the entire design became more elegant and flexible. The choir of Lincoln Cathedral (12th-13th century) is one of the earliest and most beautiful extant examples of Early English architecture. See Architecture.

EARN. Loch of Perthshire, about 11 m. W. of Crieff. Lying 317 ft. above sea level, it is 6½ m. long. Scott's Legend of Montrose introduces Ardvorlich House, on its shore, as Darnlinvarach. The river Earn issues from Loch Earn and flows E. for 46 m. across Strathmore to the Tay, which it enters 2 m. N.E. of Ahermethy.

EARNEST. Name given to a sum of money paid on account in order to show the good faith of the buyer. Such payments are recognized in English law, and also in other codes, the fact that such has been made being taken as proof that a contract has been entered into.

EARRING. Object attached to the ear, usually by passing it or a subsidiary ring or hook through the lobe. Its purpose may be amuletic, ceremonial, or ornamental. Earrings appear early in the metal age in the form of plain bronze and gold bands or wires. In ancient Egypt the simple hoop

developed complex forms. The development of design is observable in Mycenae, Troy, Etruria, and S. Russia, through the winged sirens of Greece and the pearls and other jingling jewels of imperial Rome to the massive pendants of the Byzantine age.

Dormant during the Middle Ages, the use of earrings revived after the Renaissance. Mediterranean mariners introduced the single plain gold hoop to the seafaring world. In modern India rings may have a hundred pendant pearls, with supporting chains over the top of the ear, or the ear may have 12-13 borings, each with a separate ornament. Garo women sometimes wear 50 brass rings in each ear. Silver is preferred by Syrian women; other materials are the shell of the Hottentots and iron wire of the Dinka.

EARSDON. Urban dist. of Northumberland, 4 m. N.W. of North Shields. The inhabitants are employed in the local collieries. Pop. 11,310.

EARTH. Name given to the planet on which we live. It is also used for the soil and other constituents of the earth's crust. The earth is a planet with the moon as its satellite. Many solar systems form the universe. The earth's rotation causes the rhythmic succession of day and night, and the steady

Earl's coronet

Earl Marshal of England in his robes of office

pulsation of the tides. The direction of rotation from west to east causes the sun to rise in the east. The axis of rotation tilts through an angle of $23\frac{1}{2}^\circ$ from the vertical towards the line joining the centres of the earth and the sun. Consequently the polar regions are tilted now away and later towards the light. The angle of tilt determines the arctic and antarctic circles.

The tilt is responsible for the variations in the length of the day during the year, and also for the seasons.

Like the other planets, the earth rotates upon an axis inclined to the plane through which it revolves round the sun in an elliptical orbit, and receives light and heat from the sun. The earth has a bulging hilt round the equator and a flattening at the poles, so that it is an oblate spheroid. Its diameter is 7,900 m., less than a hundredth part of that of the sun, from which body it is distant 92 $\frac{1}{2}$ million miles. The earth rotates once in 23 hrs. 56 mins., and its revolution round the sun occupies a year.

Earth. Diagram showing the relative sizes of the earth and the other seven planets. The earth is one of the four smaller planets. Note the relatively immense sizes and distances of the four major planets

The earth is a cooling body, and very slowly becoming smaller. Because the earth's crust is attached to a shrinking interior the crust crinkles into folded mountains. The hydrosphere, or water covering of the earth, consequently tends to form four basins: the best marked of these is the Arctic Ocean. Of the total surface of 196 $\frac{1}{2}$ million sq. m., 141 $\frac{1}{2}$ million sq. m. are water. The earth is a magnet, the magnetic poles corresponding approximately to the geographical poles.

In common with the forms of life which provide his sustenance, man exists on the earth because of the atmosphere. The annual revolution causes the seasons and the well-marked differences between the tropical and polar belts, and the tetrahedral conformation produces variations in atmospheric circulation which govern climatic differences. See Planet.

The name earths or earth colours is given to pigments, such as the ochres, umbers, siennas, and terre verte, which were used universally before the introduction of oil colours.

In electricity an earth plate is a metal plate, frequently of copper, buried in the ground to form the earth end of a conductor.

EARTH PILLAR. Pillar of clay capped by stones. In an area consisting of clay or soft rock containing large stones the softer materials are readily washed away by the rains, but the stones protect the soft rock immediately beneath them. In this way pedestals capped by stones are formed.

EARTH HOUSE. Primitive underground structure of the early metallic age, especially in Scotland. Normally it is a round or

rectangular chamber of unhewn masonry, with a beehive roof, beneath an artificial mound. Frequently one or more chambers are approached by stone-lined, stone-paved corridors. Similar structures occur in Ireland and Cornwall. See Broch.

EARTHQUAKE. Sudden movement of the earth's crust. Lines of structural weakness in the outer crust of the earth sometimes give opportunity for earthquakes, which occur when a hidden segment of the crust breaks away from its original location. The shock produced by the sudden fracture sets up vibrations in the solid matter of the earth's crust, and these vibrations, waves, or tremblings travel long distances and produce movements in buildings, bridges, rly. lines, etc.

Earthquakes usually arise at no great depth below the land surface, and are to be expected wherever the slope of the land is very steep. The coast lands of the Pacific are usually tilted very sharply; deep water is close to the sea shore, and high mts. rise close to the coast; consequently Japan is a land of earthquakes, which also occur in New Zealand, near Wellington, while San Francisco was devastated by the convulsion of 1906. This was marked by a vertical displacement which in places amounted to 10 ft. and which extended for over 250 m. Usually the shock lasts for a little longer than a minute, but the tremblings which follow may continue for days or even weeks.

The earthquake at Messina in 1908 cost 77,000 lives. Another in north and central Italy in 1920 resulted in some hundreds of deaths and caused much damage. Perhaps the most disastrous in history was that in Japan in 1923. The number of killed and injured was nearly 200,000.

EARTH STAR (Geaster). Genus of fungi of the order Gastromycetes. They are distinguished from the puff-balls (Lycoperdon) by the two outermost layers splitting from the apex into several pointed segments which expand and give the plant its stellate form.

EARTHWORK. Ancient stronghold defended by earthen mounds. There are several thousands in England and Wales. Promontory forts, utilising natural defences, are either coastal or inland. They developed into cliff castles. Hill-forts are characteristic of neolithic Britain. Plateau forts are on flatter ground. When round or oval they are pre-Roman, but often were used successively by neolithic, Celtic, Roman, Saxon and Norman occupants. See Caesar's Camp; Dyke; Rath.

In engineering an earthwork is the excavation and disposal of materials which can be loosened without blasting.

EARTHWORM. Segmented worm living in the soil. Their rounded shape and the short bristles with which the segments are provided enable the worms to push their way through the soil. They eat their way, also, and derive their food largely from vegetable matter contained in the soil swallowed. When this has been extracted the soil is discharged at the mouth of the burrow. Although without eyes, earthworms dislike light, and usually only emerge from their burrows after dark. Even when they have emerged they usually keep their tail in the hole. They plug the mouth of the burrow with leaves or small stones, and vegetable matter is drawn in for future consumption. Earthworms are hermaphrodite. The eggs are deposited in a kind of horny cocoon, formed by a secretion. See Annelid; also illus. below.

EARWIG. Family (Forficulidae) of orthopterous insects, which vary considerably from other members of the order. The fore wings are modified into elytra, and the hind wings—which are rarely used—are folded like a fan. They are readily recognized by the pincer-like appendages on the abdomen. The female sits on her eggs and watches over her young for some time. It is generally supposed that these insects are garden pests, but this is very doubtful. Recent observers maintain that they are largely carnivorous.

Earwig; it is shown natural size

EASEMENT. Term used in English law for what is called servitude in Scots law and in other legal systems. There must be two pieces of land (tenements), and the owner of the one, called the dominant tenement, has a right over the other, servient tenement. Common easements are right of way, right of light, or the right to prevent obstruction to windows; drainage support for buildings: e.g. where one house leans on another.

EAST. One of the cardinal points. When the observer faces north the east is on the right hand. At an equinox the sun rises due E. and sets due W. As a noun East is used for Asia and the eastern part of the world generally. That part which lies, roughly, east of Germany is known in Britain as the Near East, the Middle East, and the Far East, China and Japan.

EAST, SIR ALFRED (1849-1913). British painter and etcher. Born at Kettering, Dec. 15, 1849, he became a landscape painter of pronounced individuality, though with a strong sympathy with Corot. He was elected A.R.A. in 1899 and R.A. in 1913; was chosen president of the Royal Society of British Artists in 1906, and was knighted in 1910. He is well represented in English municipal art galleries. He died Sept. 28, 1913.

EAST AFRICA. General term for that part of the continent that includes the British colony and protectorate of Kenya, formerly the E. Africa protectorate, the British protectorate of Uganda, and the island of Zanzibar, as well as Portuguese E. Africa, usually called Mozambique. It also includes Tanganyika territory, formerly German E. Africa, which was overrun by British and Indian troops during the Great War and ceded by Germany at the peace of 1919. It is now ruled by Great Britain as mandatory of the League of Nations. In 1929 it was proposed to unite the E. African possessions. See Africa; Kenya; Tanganyika; Uganda, etc.

Earth Pillar. An example at Euseigne, Switzerland

Earthworm, a valuable agent in fertilisation. See article above

an income of £3,070,000, of which £1,512,000 came from estates. In London, the latter are in Paddington and elsewhere, and the revenue is derived from ground rents. The offices are in Millbank, Westminster, London, S.W.

ECCLESIASTICAL LAW. In England this branch of the law relates to the officers, who are the archbishops, bishops and clergy, and the laity, who are persons not in Holy Orders; the government and discipline; the faith, form of worship, rites and ceremonies; the fabric of the church, vicarage house and buildings, and various other forms of church property.

Ecclesiastical law is administered in the civil courts. It includes part of what is called the common law of England, based on custom; it also comprises a considerable body of statute law; while the canon law is binding upon the officers of the church and to some extent upon the laity. See Bishop; Canon; Church of England; Diocese, etc.

ECCLESIASTICUS. Name in the Vulgate of one of the most important of the O.T. Apocrypha. It was originally written in Hebrew, between about 190 and 170 B.C., by Jesus the son of Sirach, and was translated into Greek soon after 130 B.C. by a grandson of the same name. The Hebrew text was lost until 1896, when Mrs. Agnes Lewis discovered a fragment in Palestine. Subsequently other fragments came to light. The author gathers up ethical proverbs, precepts, and wise sayings concerning a great variety of matters in the conduct of life. See Apocrypha.

ECHELON (Fr. round of a ladder). Military term. Troops are said to be in echelon formation when the units are all facing in the same direction, are in parallel rows with intervals between their flanks, and the units to the rear are on the flank of those in front of them. Battleships are in echelon when advancing in V formation, the apex leading.

ECHIDNA OR PORCUPINE ANT-EATER. Genus of ant-eating monotremes of Australia and New Guinea. The back of the head and body is covered with short spines, like porcupine quills, and the head is provided with a slender beak. The female lays a single egg, which is incubated in a pouch on the underside of the body. Three species are distinguished, all having five claws on each foot. In a larger type found in New Guinea there are three claws to the foot. This species is placed in a separate genus, *Proechidna*.

Echidna. An egg-laying mammal of Australia

ECHO. In Greek mythology, a mountain nymph. At one time the companion of Hera, having displeased the goddess, she was punished by being rendered incapable of speaking except when spoken to. Subsequently Echo fell in love with the beautiful Narcissus, but, her love not being returned, she pined away and was changed into a stone which retained the echo or answering voice.

ECKINGTON. Town of Derbyshire. It stands on the Rother, 6½ m. S.E. of Sheffield on the L.N.E. Rly. Agricultural implements are manufactured, and there are coal mines in the neighbourhood. There is a late Norman church. Market day, Friday. Pop. 12,624.

ECLECTICISM (Gr. eklektikos, picking out). In philosophy, a method which, while not excluding independent thought, selects and works up into a whole what is acceptable in other philosophical systems. The most important Greek representative of this practice was Antiochus of Ascalon (1st century B.C.). Among modern eclectics Leibniz and Victor Cousin may be specially mentioned.

ECLIPSE (Gr. ekleipsis, failing). In astronomy, the passing of one celestial body between another and the observer. If the earth, the sun, and the moon moved in the same plane, there would be an eclipse each time the three were in a straight line. Since, however, the moon moves in an orbit inclined to the plane of the ecliptic (q.v.), there can only be an eclipse when the three bodies are in an approximately straight line at the moment the moon is crossing the plane of the ecliptic. The points where the moon crosses the ecliptic are called the nodes, and when new moon happens at one of these nodes there will be an eclipse of the sun. When full moon occurs at one of the nodes there will be an eclipse of the moon by the earth's shadow. Partial eclipses occur when the new moon is not quite at the node; annular or disk-like eclipses when the moon is too far from the earth to hide the sun entirely from the view of an observer on the earth.

ECLIPSE. English racehorse, regarded as the greatest that has ever lived. Foaled April 1, 1764, he ran in his first race May 3, 1769, and from then until Oct., 1770, ran in 18 races, never being beaten. After 1770 he was used for stud purposes. The horse's skeleton is in the Royal Veterinary College, Camden Town, London.

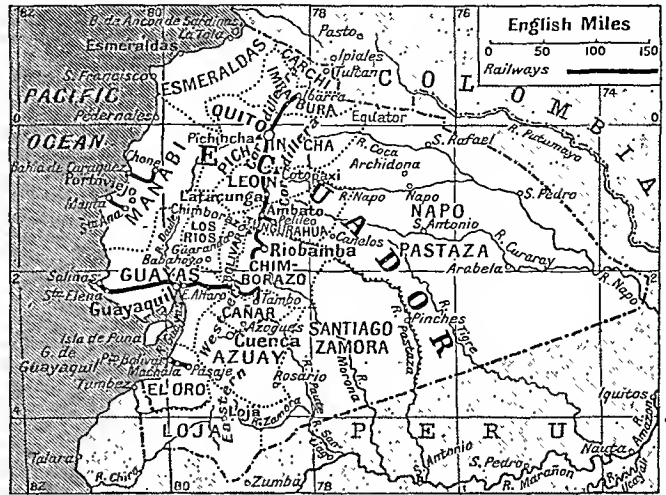

The Eclipse Stakes is a race for horses of three years and upwards run at Sandown Park over a distance of 1½ m. It was inaugurated in 1884 and formed the first of the £10,000 races. Danny Maher rode the winner of this event on five occasions.

ECLIPTIC. Track in the heavens along which the sun appears to perform its annual march; it is the motion of the earth about the sun which produces the appearance of the sun's itinerary. The plane of the ecliptic is the plane of the sun's apparent, and of the earth's real motion. The obliquity of the ecliptic is the angle the ecliptic makes with the celestial equator. The plane of the ecliptic is subject to variation, termed the secular variation of the obliquity of the ecliptic. See Earth; Sun.

ECLOGUE (Gr. eklogē, selection). Pastoral poem relating the lives and loves of shepherds. Properly almost identical with the idyll, the term is generally restricted to pastoral poems in dialogue form, such as the *Bucolics* of Virgil. Spenser set the fashion anew with his *Shepherd's Calendar*.

ECOLOGY. Science dealing with the relations of individual plants to their habitats. In this connexion are recognized vegetation units or plant communities, such as wood, moor, heath, implying particular kinds of soil as well as the plants associated with it, and plant associations, dealing with the characteristic vegetation of each unit. Ecology tries to explain why certain plants are successful in the struggle for existence, which plants are social in their habits, and so forth.

ECONOMICS (Gr. oikos, house; nomos, law). Originally the art of managing a household. To-day the word is used as a synonym for

Ecuador. Map of the South American republic which lies between Colombia and Peru. Its western shores are washed by the Pacific Ocean. See article below

political economy, i.e. the study of the production and distribution of wealth. Economics is sometimes regarded, however, as including certain matters outside the scope of the older science, such as physical welfare

Eclipse. Diagram showing the phases of an eclipse of the moon by the shadow of the earth. Above, eclipse of the sun by the moon. When the moon is too near the sun there is an annular eclipse

The London School of Economics and Political Science is a school of the university of London, and was founded in 1895. It has a very valuable library. The premises are in Houghton St., Aldwych, London, W.C.

ECUADOR. Republic of S. America, between Colombia on the N. and Peru on the S. It is so named because the equatorial line runs through it. The W. shores are washed by the Pacific Ocean. The republic is divided into 17 provs. and one territory, the Galapagos archipelago, in the Pacific, about 600 m. to the W. Quito is the capital, and Guayaquil the chief port, other towns including Cuenca and Riobamba. The Peruvian frontier is still a matter of dispute. Area, approximately 250,000 sq. m.; pop. about 2,000,000

The country may be divided broadly into the coastal area; mountainous district of the Andes; and the montana, a densely wooded region stretching into the interior, traversed by the upper waters of the tributaries of the Amazon. The Eastern and Western Cordillera run parallel to one another, and traverse the country from N. to S.

Cocoa is the staple product, a large proportion of the world's supply coming from Ecuador. Cotton is increasingly grown. Gold is produced, petroleum and sulphur are found, and the country is known to be rich in copper, iron, lead, and coal. The forests yield cinchona as well as many valuable dyewoods. The

weaving of Panama hats is an important industry. There are about 500 m. of rly. Communication in the low-lying districts is chiefly by river, the main artery being the Guayas. A weekly air service is in operation between the ports of Ecuador and Colombia. Quito is connected by telegraph with Guayaquil and with Colombia and Peru and by cable with other parts of the world. There are wireless stations in the chief towns. The population is of mixed origin, descended partly from Spanish settlers, partly from indigenous Indians, and partly from negro slaves. The official language and the speech in general use is Spanish. Ecuador became a separate republic in 1830. Before then it was part of the Inca empire and a possession of Spain.

The president is chosen by direct popular election for four years. The 32 senators and 48 deputies are elected on a limited franchise which is withheld from illiterates. In 1927 the country's finances were put in order. A new tariff was introduced, a central bank established, and the currency established at 5 sucres to the dollar, the gold standard being restored. See map, p. 542.

ECZEMA (Gr. ek, out; zein, to boil). Inflammatory disease of the skin. Certain persons exhibit a marked predisposition to eczema, the exact cause of which is unknown. The immediate exciting cause may be debilitating illness, gout, Bright's disease, diabetes, constipation, dyspepsia, overwork, anxiety, and exposure to damp and cold winds.

The essential characteristics are redness of the skin, formation of small blisters or vesicles, watery discharge, formation of crusts and scales, and usually extreme itching. Various types are recognized. In all cases attention should be paid to the general health. Local treatment with ointments, powders, lotions, etc., varies with the type of the condition and the stage it has reached. Pron. ek-ze-m-a.

EDAM. Town of the Netherlands, on the Zuider Zee, 12 m. N.E. of Amsterdam. The church of S. Nicholas dates from the 14th century and was restored 1602-26. Edam is noted for the round red-rinded cheese which bears its name. Pop. 7,962.

EDDA. Two collections of Icelandic literature, known respectively as the Elder, or poetical, of Saemund, and the Younger, or prose, of Snorri. The former were discovered by Brynjulf Sveinsson, an Icelandic bishop, in 1643. He attributed them to Saemund Sigfusson (1055-1132), but an earlier date is generally assigned by critics. The Prose Edda was compiled by Snorri Sturlason (1178-1241), and is generally ascribed to the 12th century.

EDDINGTON, SIR ARTHUR STANLEY (b. 1882). British astronomer. Born at Kendal, Dec. 28, 1882, he was senior wrangler 1904, and became fellow of Trinity College, Cambridge, in 1907. Eddington was chief assistant at the Royal Observatory, Greenwich, 1906-13, when he was appointed Plumian professor of astronomy at Cambridge, next year becoming director of the university observatory. He wrote *Stellar Movements and the Structure of the Universe*, 1914; *Space, Time and Gravitation*, 1920; *Internal Constitution of the Stars*, 1926; *Stars and Atoms*, 1927; *Science and the Unseen World*, 1929. He was knighted, 1930.

Sir A. S. Eddington,
British astronomer
Russell

1920; *Internal Constitution of the Stars*, 1926; *Stars and Atoms*, 1927; *Science and the Unseen World*, 1929. He was knighted, 1930.

EDDOES. Tuherous stems of several species of colocasia, caladium, etc., of the order Araceae. Though acrid in a raw state, they are used as food when cooked. See Cocco.

EDDY, MARY BAKER (1821-1910). Founder of the religion named Christian Science and the Church of Christ Scientist. She was born at Bow, New Hampshire.

Mary Baker Eddy,
Christian Scientist

July 16, 1821. She published *Science and Health with Key to the Scriptures*, the only textbook of Christian Science. Her other writings include *Miscellaneous Writings*; *Unity of Good*; *No and Yes*; *Rudimental Divine Science*; *Church Manual*; *Pulpit and Press*; *Messages to The Mother Church*; *The First Church of Christ*; *Scientist and Miscellany*; *Christ and Christmas*; *Christian Science versus Pantheism*; and *Poems*. Mrs. Eddy died Dec. 3, 1910. See *Christian Science*.

EDDYSTONE. Lighthouse on the Eddystone Rocks, a dangerous reef 14 m. S.W. of Plymouth. The first, a wooden structure by Winstanley, was destroyed by a hurricane in 1703, three years after its completion. The second was burned down in 1755. The third was dismantled, as the rock formation had become insecure. The present tower, by Sir James Douglass, completed in 1882, is 40 yards from the previous one. Built of granite, it is 168 ft. above low water, and is built in circular sections. The lantern shows a group flashing light of two flashes every thirty seconds and has a range of nearly 18 m. The upper sections of the old lighthouse were rebuilt on the Hoe at Plymouth.

Eddystone Lighthouse, built 1882.
Left, stump of the old lighthouse

EDEA. Town of Cameroons, W. Africa, capital of the district of the same name. On the Sanaga river, it is a station on the line running inland from Duala, being about 50 m. from that port. During the campaign in Cameroons a British and French force took the town, Oct. 26, 1914, the Germans making futile efforts to retake it a little later.

Edelweiss. Specimen of the
plant on a mountain side

round the cluster of terminal yellowish flower-lance-shaped. It occurs locally in the Alps.

EDEN. English river. Rising on the borders of Westmorland and Yorkshire, it flows past Carlisle to the Solway Firth, which it enters at Rockliff. Its length is 65 m.

The river of Fifeshire of the same name rises on the Kinross-shire border and flows past Cupar to the North Sea; total length, 30 m.

EDEN, GARDEN OF. In the earliest Biblical account (the Jahwistic) of Creation (Gen. 2, 8-25) Yahweh Elohim plants a garden eastward (from the Palestinian standpoint) in Eden (Gen. 2, 8) for man to dwell in. In the Septuagint the word for garden, Heb. gan, is represented by paradeisos, a loan-word (Hebraised pardēs) from the Zend pairi-daēza, "enclosure"; hence arises the term Paradise as a description of Eden and of the Christian Heaven. Sayce identifies the garden with the sacred garden of the Babylonian deity Ea at Eridu, the river which watered it (Gen. 2 10) being the Persian Gulf and the four branches (vv. 11-14) being the Pallakopas, Choaspes, Tigris, and Euphrates.

EDENBRIDGE. Market town of Kent. It is on the Eden, 2½ m. S.S.E. of London, on the Southern Railway, and is an agricultural centre. Market day, Mon. Pop. 2,890.

EDENHALL. Village of Cumberland. It is on the Eden, 3 m. from Penrith. At Eden Hall, the seat of the Musgraves, there was an ancient enamelled drinking goblet known as the Luck of Eden Hall, which, according to tradition, was taken from the king of a fairy band feasting near S. Cuthbert's Well in the grounds, who, when departing exclaimed:

If e'er this cup shall break or fall,
Farewell the luck of Eden Hall.

After the sale of the estate in 1920 the cup was sold. The hall is now a girls' school.

EDENTATA (Lat. edentatus, toothless). Order of mammals without front teeth, and in some cases without cheek teeth also. They comprise the sloths, ant-eaters, and armadillos. The pangolins and the aardvark are sometimes also included in the order. Where cheek teeth are present they are of very simple structure, have no enamel, are without roots, and continue to grow throughout life. All the genera are insectivorous except the sloths, which are vegetable feeders.

EDESSA. Ancient city of Mesopotamia. It was founded by Seleucus I, and after the downfall of the Seleucid empire was the capital of an independent kingdom. This lasted from 137 B.C. to A.D. 216. It then became a Roman military colony, under the name of Colonia Marcia Edessanorum. After the division of the Roman Empire into East and West, Edessa became a centre of Christianity. It is the modern Urfa (q.v.).

EDGAR OR EADGAR (944-75). King of the English. The younger son of King Edmund, he became king as the result of a rising against his brother Edwy. His coronation, which did not take place until May, 973, is important in the history of that ceremony. It was after this that the king sailed to Chester, and on the Dec. was rowed by six or eight vassal kings. At this time he assumed a certain vague overlordship, his authority extending to Ireland, and called himself imperator. He fought against the Welsh, but his reign rightly earned for him the title of the peaceful. Edgar died July 8, 975, and was buried at Glastonbury. Two of his sons, Edward, called the Martyr, and Ethelred the Unready, succeeded in turn to the throne.

Another Edgar was an English prince called Edgar Atheling. A grandson of Edmund Ironside, he was proclaimed king in the north after the death of Harold in Oct., 1066. However, he was never really recognized, so he made his peace with William the Conqueror and lived quietly until his death about 1130.

EDGE, SELWYN FRANCIS (b. 1868) British motorist. Born in Sydney, N.S.W., he was brought to England in infancy. Having taken up cycling, he became the best 100-mile cyclist of his time. One of the pioneers of the motor industry in Britain, he founded the Motor Power Company in 1899, and later joined

Edinburgh. 1. John Knox's House, Canongate. 2. National War Memorial in the Castle. 3. W. front of S. Giles's Cathedral. 4. Edinburgh from the air: to the right of the Castle is the spire of the Tolbooth Church
2. F. Caird Engrs: 4. Aircraft Manufacturing Co., Ltd.

other leading firms, including that of Napier, by which name the cars of S. F. Edge, Ltd., were known. He won the Gordon-Bennett International Paris-Vienna race in 1902.

EDGEHILL, BATTLE OF. First battle of the Civil War, fought between Charles I and the parliamentarians, Oct. 23, 1642. The hill is a ridge in Warwickshire, on the borders of Oxfordshire. The king was marching from Shrewsbury to London, and the parliamentarians, under Essex, moved across to intercept him. On both wings the royalist horse, under Prince Rupert and Wilmot respectively, was successful against the opposing cavalry, but in the centre the parliamentarians stood firm. See Civil War.

EDGEWORTH, MARIA (1767-1849). British novelist. Born at Black Bourton, Oxfordshire, Jan. 1, 1767, she was one of the many children of Richard Lovell Edgeworth, and spent most of her life on her father's estate at Edgeworthstown. Visits to London and the Continent between 1803 and 1844 brought her into touch with the best literary and fashionable society of her time, and in 1823 she visited Scott at Abbotsford. Her fame rests on novels dealing with Irish life—Castle Rackrent, 1800; The Absentee, 1812 (in Tales of Fashionable Life, vols. v and vi); and Ormond, 1817. She died May 22, 1849.

Maria Edgeworth, British novelist

EDGWARE. District of Middlesex. It is S. m. from London, on the road to St. Albans. The parish church of S. Margaret, rebuilt 1765 and 1845, is said to have been part of a monastery. The Chandos Arms Inn has a fireplace from the mansion of Canons (q.v.). At Edgware was the forge of William Powell, whose work on the anvil is said to have suggested Handel's Harmonious Blacksmith. Piper's Green preserves the tradition that a former lord of the manor provided a minstrel for the amusement of his tenants. Edgware has stations on the L.N.E.R. and is also served by the extension of the Hampstead tube rly. There is an aerodrome here.

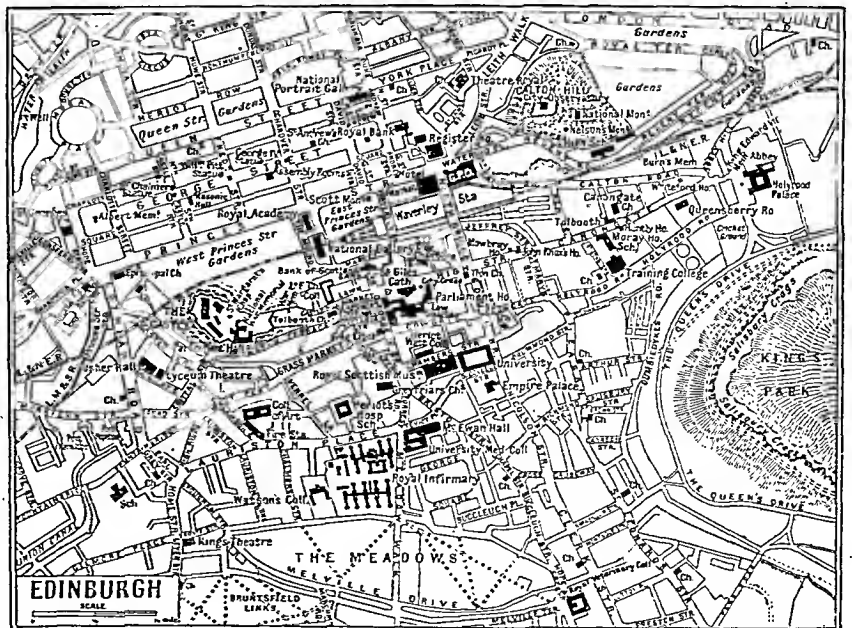

EDICT (Lat. edictum). Promulgation, on his entry upon office, by a Roman magistrate, especially a praetor, of the principles upon which he intended to administer the law during his term. The word was used, especially in France, for certain laws, e.g. the edict of Nantes.

EDINBURGH. Capital of Scotland and of the county of Midlothian. It stands on the S. side of the Firth of Forth, 396 m. from London, on the L.M.S. and L.N.E. Rlys. The most notable of its hills is Arthur's Seat (see illus. p. 135). In 1920 Edinburgh amalgamated with Leith and absorbed the suburban districts of Liberton, Colinton, Corstorphine and Cramond. An important banking and insurance centre, Edinburgh includes among its industries printing and publishing, whisky distilling, and brewing. The city is governed by a council presided over by the lord provost. Pop. 426,300.

The oldest part of Edinburgh is affectionately known as Auld Reekie. The castle contains S. Margaret's chapel and the Scottish war memorial, opened in 1927. Between the castle and Holyrood are the Lawnmarket, High Street, and Canongate. The Parliament House now contains the Law Courts. In 1925 the Advocates' Library became the National Library of Scotland.

Of the many churches the chief is that of S. Giles, a famous recent addition being the Chapel of the Order of the Thistle. Others are S. Mary's Cathedral, S. John's, S. George's, S. Cuthbert's, S. Andrew's, and the Tron Church. Greyfriars churchyard is an historic spot, as are the Grassmarket, the Cowgate, and the Tolbooth in the Canongate. Other notable features are the City or Mercat Cross, restored by Gladstone; John Knox's house, the White Horse Close in the Canongate, Riddle's Close, and the 17th century house restored by Lord Rosebery in the Lawnmarket. The Royal Observatory is on Blackford Hill. The finest thoroughfare of the modern city is Princes Street, overlooked from the E. by the Calton Hill. It is proposed to replace the disused Calton jail by a new Sheriff's Court and other public buildings.

Edinburgh is famed for its educational institutions, which include the university, the

Edinburgh. Plan of the central part of the city. The valley spanned by the North Bridge separates the Old Town on the South from the New Town on the North

Heriot-Watt College, George Watson's College, Fettes College, the Royal High School and Edinburgh Academy. The University, founded in 1583, is specially equipped for training in medicine and surgery. In 1924 new science laboratories at Liberton were opened.

The Edinburgh Review was projected by Sydney Smith, who edited the initial number, published at Edinburgh in Oct., 1802. It was an organ of the Whigs, and Macaulay was one of its contributors. The review ceased to exist in Sept., 1929.

EDINBURGH, ALFRED ERNEST ALBERT, DUKE OF (1844-1900) The second son of Queen Victoria, he was born at Windsor Castle, Aug. 6, 1844. He was educated for the navy, and in 1893 was made admiral of the fleet. He was created duke of Edinburgh in 1865, and in 1893 became reigning duke of Saxe-Coburg and Gotha. In 1874 he married Mario Alexandrovna, only daughter of Alexander II of Russia, who died Oct. 25, 1920. He died July 30, 1900, as duke of Saxe-Coburg and Albany (q.v.).

Alfred Ernest,
Duke of Edinburgh
Russell

and was succeeded by his nephew, Leopold Charles, duke of Albany (q.v.).

Edinburghshire. Name of the county more correctly known as Midlothian (q.v.).

EDISON, THOMAS ALVA (b. 1847). American physicist and inventor. He was born at Milan, Erie co., Ohio, Feb. 11, 1847 of mixed Dutch and Scottish descent. He learnt the elements of telegraph operating, and shortly after began to invent a remarkable series of improvements on the then crude methods of electrical transmission which revolutionised telegraphy throughout the world. The automatic repeater, the quad duplex and printing telegraph, and the sextuplex method of transmission followed in rapid succession.

He brought to perfection the phonograph, the forerunner of the modern gramophone, the kinoscope, out of which developed the cinematograph, and many other inventions which were practically fundamental. More than 1,000 patents have been granted to him for his inventions. See Cinematograph.

EDMONTON. Urban district of Middlesex, practically a suburb of London. It is 9 m. from the city and is served by the L.N.E. Rly., which has two stations here. The district has associations with

Thomas Alva Edison, American physicist and inventor, in his laboratory

served by the Canadian Pacific and Canadian National Rlys. In an important rancbing and coal mining district the city has meat-packing plants, sawmills, iron foundries, etc.. It is the seat of the provincial university. The Hudson's Bay Co. established a post here early in the 19th century. Pop. 65,163.

EDMUND OR EADMUND (841-70). Saint and king of East Anglia. Late legends describe him as the son of Alkmund, king of the Saxons, and state that he was born at Nuremberg and adopted by Offa, whom he succeeded as king of East Anglia in 855. Captured by the Danes on their invasion in 870 and refusing to give up Christianity, he was beheaded at Hoxne, Suffolk. His body was removed in the 9th century to Bury (now known as Bury St. Edmunds), where the famous shrine was erected. His festival is kept on Nov. 20.

A later Edmund, a son of Edward the Elder, was king of the English from 940 until he was murdered, May 26, 946.

EDMUND (c. 1175-1240). Saint and archbishop of Canterbury, known as Edmund Rich. Born at Abingdon, he was elected archbishop of Canterbury in 1233. He vainly protested against the foreign favourites of Henry III, the lack of discipline amongst the monks at Canterbury, and the provision of English benefices for Italian clergy. Finally in 1240 Edmund withdrew to France, where he died at Soissy. He was canonised in 1247, and his festival is kept in the Roman Church on Nov. 16. A college is dedicated to him at Ware, Hertfordshire.

EDMUND IRONSIDE (c. 981-1016). King of the English. A younger son of King Ethelred the Unready, he was ruling Mercia, evidently as an under-king, when Canute invaded the land, and raised an army for its defence. When Ethelred died Edmund was chosen king in London and Canute at Southampton, and the war between them was continued more fiercely than before. In Somerset the English king was victorious, and he was soon master of Wessex. This did not last

long, and after a defeat at Assandun, Edmund and Canute agreed to divide the kingdom between them. Just after this event he died in London, Nov. 30, 1016. He left two sons, Edmund and Edward.

EDOM. District to the S. of Palestine. It stretched from the Dead Sea to the Gulf of Akabah, covering about 100 m. by 20 m. The name Edom (red) is probably derived from the red sandstone of the district. During the Exodus the Edomites refused the Israelites passage, and hence arose a feud. The Edomites were polytheistic, and marriages between their women and the Hebrews were a frequent source of trouble. The Herod family was of Edomite origin.

EDUCATION, BOARD OF. Body established in 1899 to supervise public education in England and Wales. Its head, the president, is a party politician, usually a member of the Cabinet, and receives a salary of £2,000 a year. He is assisted by a parliamentary secretary and a permanent secretary, under whom are a large staff of inspectors and other officials, and also by a consultative committee. The chief departments of the Board are concerned with elementary education, secondary education, technical education, and training colleges.

In Scotland education is looked after by an education department under the general control of the secretary for Scotland. Since 1922 the Irish Free State has had an education department under a minister. In Northern Ireland there is also a minister of education.

EDUCATION ACTS. Series of Acts dealing with education in England and Wales from 1870 onwards. The principal of these were the Elementary Education Act of 1870, which instituted a state system of compulsory education; the Act of 1891, which reduced or abolished school-fees; the Act of 1902, by which an education rate was levied in respect of all schools, both state and voluntary; and the Act of 1918, which dealt comprehensively with the whole question of education, raising the school age to 14, and providing free and compulsory part-time instruction up to the age of 18 at continuation schools. See Child

EDWARD, LAKE, formerly known as Albert Edward Nyanza. Lake of East Central Africa, 150 m. W. of Lake Victoria (Victoria Nyanza). At an alt. of 3,000 ft., it is connected on the N.E. with Lake George. The latter was discovered by H. M. Stanley in 1875, who believed it to form part of the Albert Nyanza (Lake Albert); but, while tracing the source of the Semliki river in 1889, he discovered the lake he named Albert Edward Nyanza, and also the channel connecting it with Lake George. The length of Lake Edward is 44 m.

EDWARD, CALLED THE ELDER (d. 924). King of the English. The son of Alfred the Great, the witan chose him as Alfred's successor in Nov., 901. His succession was disputed by his cousin Ethelwald, who rebelled and was slain in battle in 905. By 918 Edward brought the Danes into subjection; in 919 he absorbed Mercia; and in 921 he subdued the Welsh. He ruled as far north as the Humber, and his overlordship was acknowledged by all the other kings. He died at Farndon, Northamptonshire, was buried at Winchester, and was succeeded by his son Athelstan.

EDWARD, CALLED THE MARTYR (c. 963-978). King of the English. The son of Edgar, his right to the succession was disputed on Edgar's death in 975 by his stepmother Elfrida, who put forward her son Ethelred (the Unready). Edward was supported by Archbishop Dunstan, and was crowned. On March 18, 978, he was assassinated by Elfrida's orders, and was hastily buried at Wareham. In 980 his body was transferred to Shaftesbury, and his tomb became a place of pilgrimage. He was long revered as saint and martyr, his festival being kept on March 18.

EDWARD, CALLED THE CONFESSOR (c. 1005-66). King of the English. The son of Ethelred the Unready, he was born at Islip, Oxfordshire, but was taken to Normandy when Sweyn became king in 1013. When his half-brother, Hardekanute, died in 1042, Edward was chosen king, and placed on the throne largely by the help of Earl Godwin, whose daughter Edith he married in 1045. Edward's chief interest was religion, and he devoted a large part of his revenues to the erection of Westminster Abbey. He died Jan. 5, 1066. He was canonised in 1161, and his festival is kept on Oct. 13.

Edward the Confessor.

British Museum

EDWARD I (1239-1307). King of England. The eldest son of Henry III, he was born at Westminster, June 17, 1239, and succeeded to the throne in 1272. During his reign, Edward conquered Wales, and endeavoured to form a united kingdom embracing the whole island by asserting his sovereignty over Scotland, which regularly rebelled whenever the king was engaged elsewhere. He died July 7, 1307.

Edmonton. 1. Parliament buildings of the province of Alberta.
2. University of Alberta

Keats and Cowper, who made John Gilpin ride to the Bell Inn here, and with Charles and Mary Lamb, who are buried in the parish churchyard. It sends one

member to Parliament. Pop. 66,800.

EDMONTON. Capital of Alberta, Canada. It stands on the North Saskatchewan river. 793 m. W. of Winnipeg, and is

Edward I ranks as one of the greatest kings of England. He systematised the English laws, and gave the English parliamentary system its definite form by summoning to the Model parliament of 1295 not only the higher clergy and baronage, but knights and burghers.

EDWARD II (1284-1327). King of England. Son of Edward I, he was born at Carnarvon, April 25, 1284. In 1301 he was created prince of Wales at Lincoln, and in 1307 became king. He abandoned the war against Scotland, and married Isabella of France. The barons took up arms, with Edward's cousin, earl Thomas of Lancaster, at their head, and they forced the king to banish his favourite, Piers Gaveston. In 1314 the Scotch war was renewed and Edward suffered defeat at Bannockburn, but a combination of circumstances brought about the defeat and death of earl Thomas in 1322. Edward and his new favourites, the Despencers, were then supreme until 1326, when he was formally deposed, and on Sept. 21, 1327, he was murdered at Berkeley Castle. (See illus. p. 238.)

Edward II. Effigy in Gloucester Cathedral
From Stothard,
"Monumental Effigies"

Edward III (1312-77). King of England. Born Nov. 13, 1312, he was raised to the throne by the deposition in 1327 of his father, Edward II. The government was in the hands of his mother Isabella and Roger Mortimer till the young king overthrew them in 1330. Edward's ambitions soon turned to France, and in 1338 began the Hundred Years' War. In the course of it he secured the English supremacy of the narrow seas by the naval victory of Sluys, June 24, 1340, established the prestige of the English soldiery and the military supremacy of the English archers by the victory of Crécy, Aug. 26, 1346; and in 1347 captured Calais. Edward was confirmed in the independent sovereignty of Aquitaine by the treaty of Brétigny in 1360. He died June 21, 1377. His sons were Edward, the Black Prince, and the dukes of Clarence, Lancaster, and York. His successor was his grandson Richard II.

EDWARD III (1312-77). King of England. Born Nov. 13, 1312, he was raised to the throne by the deposition in 1327 of his father, Edward II. The government was in the hands of his mother Isabella and Roger Mortimer till the young king overthrew them in 1330. Edward's ambitions soon turned to France, and in 1338 began the Hundred Years' War. In the course of it he secured the English supremacy of the narrow seas by the naval victory of Sluys, June 24, 1340, established the prestige of the English soldiery and the military supremacy of the English archers by the victory of Crécy, Aug. 26, 1346; and in 1347 captured Calais. Edward was confirmed in the independent sovereignty of Aquitaine by the treaty of Brétigny in 1360. He died June 21, 1377. His sons were Edward, the Black Prince, and the dukes of Clarence, Lancaster, and York. His successor was his grandson Richard II.

EDWARD IV (1442-83). King of England. The eldest son of Richard duke of York, he was born at Rouen, April 28, 1442. In Dec., 1460, he became the leader of the Yorkists. He crushed the Lancastrians at Mortimer's Cross, and in London was hailed as king. After a victory at Towton Edward was able to hold his own, but when Warwick and Clarence, the king's brother, joined his foes, his position was precarious. He prepared to meet them in the field, but the desertion of 6,000 men was fatal to his cause, and he left for the Netherlands. Returning with an army, he won battles at Barnet and Tewkesbury. These victories made secure his throne. He died April 9, 1483. See illus. p. 197.

EDWARD V (1470-83). King of England. He was born in the Sanctuary, Westminster, Nov. 3, 1470, a son of Edward IV and Elizabeth Woodville. When he succeeded to the throne, April 9, 1483, his uncle, the duke of Gloucester, was his guardian. Gloucester, however, imprisoned the boy king and his brother in the Tower, and had himself crowned as Richard III, July 6, 1483. According to Sir Thomas More, Edward and his brother were murdered very shortly after.

EDWARD VI (1537-53). King of England. He was born at Hampton Court, Oct. 12, 1537, the son of Henry VIII and his third wife, Jane Seymour, and succeeded to the throne

Jan. 28, 1547. His uncle, the duke of Somerset, was protector and the real ruler for the first half of the reign, and on Somerset's fall and execution his rival, the earl of Warwick, later duke of Northumberland, held the chief power. Edward died at Greenwich, July 6, 1553.

EDWARD VII (1841-1910). King of Great Britain and Ireland, and emperor of India. The second child and eldest son of Queen Victoria and Prince Albert of Saxe-Coburg, he was born at Buckingham Palace, Nov. 9, 1841.

Almost at once he was created prince of Wales. He studied science at Edinburgh, and went up successively to Christ Church, Oxford, and Trinity, Cambridge, but took no degrees. The wisest part of his education consisted of travel. In 1863 he married Princess Alexandra, daughter of Prince Christian of Glücksburg, who shortly afterwards became king of Denmark. With Queen Victoria a widow and in partial retirement, the prince and princess of Wales were the leaders of English society, a state of affairs which continued for 38 years. The prince was fascinated by foreign politics, and, although no student, had an inexhaustible interest in the men and matters of the day. He mixed with men of all shades of opinion, both at home and abroad, and his shrewd judgement was rarely at fault in estimating their characters and influence. In 1871 a serious illness interrupted the prince's many activities and proved, when he recovered, how popular he was. He travelled much, a visit paid in 1875 to India being notable. In 1884 he was a member of the commission that inquired into the housing of the working classes. Less acceptable to some was his connexion with the turf—three times his horses won the Derby—and his appearance as a witness in a lawsuit over an alleged case of cheating at cards. On Jan. 22, 1901, the prince became king and took the name of Edward VII. His coronation, fixed for June, 1902, was postponed owing to an attack of appendicitis, and he was crowned on Aug. 9. Socially his reign was a period of gaiety. Court functions became more numerous and splendid, and on such occasions the king, with his natural dignity and his regard for etiquette, was at his best. Annually he visited his favourite resorts abroad, where he kept in touch with the leaders of other nations. King Edward succumbed to an attack of bronchitis, May 6, 1910. He had five children who survived infancy: the duke of Clarence, who predeceased him, King George V, the princess royal, princess Victoria, and the queen of Norway. The equestrian statue

Edward VII in the uniform of a British Field-marshal
Lafayette

erected in Waterloo Place, London, in 1921, forms one part of the King Edward VII Memorial, another part being Shadwell Park.

EDWARD (b. 1894). Prince of Wales. The eldest son of King George V and Queen Mary, he was born at White Lodge, Richmond, June 23, 1894, and christened Edward Albert Christian George Andrew Patrick David. In 1907 he entered the Royal Naval College, Osborne, and in two years went on to Dartmouth. He was created prince of Wales, June 23, 1910, and his investiture at Carnarvon was notable because he was the first of nineteen princes of Wales to be invested in Wales itself. He was invested Knight of the Order of the Garter, June 10, 1911, and in 1912, after a visit to Paris, he entered Magdalen College, Oxford. Towards the end of 1914 the prince went to join the army in France. He served also in Egypt in 1916, and visited the Italian front. After the armistice he undertook many public duties, and by his geniality and courtesy to all classes and his interest in their sports and other activities made himself extraordinarily popular. He visited Canada and the U.S.A. in 1919, Australia and New Zealand in 1920, and India, 1921-22. He toured Africa in 1925, and again visited Canada, where he had a ranch, in 1927. In 1928 he went on a hunting tour in Africa, but returned hurriedly owing to the king's illness. In Jan.-April, 1930, he was in Africa on a hunting tour.

Edward, Prince of Wales, heir to the British throne
Foulsham & Danfield

EDWARD (1330-76), known as the Black Prince. Eldest son of Edward III of England, he was born at Woodstock, June 15, 1330; in 1333 was made earl of Chester, four years later duke of Cornwall, and in 1343 prince of Wales. In 1345 he accompanied his father on the French campaign and distinguished himself at the battle of Crécy. Later the prince won glory at Poitiers. In 1362 his father gave him Gascony and Aquitaine, and his time was mainly passed there and in Spain, which he invaded. He died at Westminster, July 8, 1376, leaving a son who became Richard II.

In 1362 his father gave him Gascony and Aquitaine, and his time was mainly passed there and in Spain, which he invaded. He died at Westminster, July 8, 1376, leaving a son who became Richard II.

EDWARDES, GEORGE (1852-1915). British theatrical manager. He was born Oct. 8, 1852, of Irish parents, and started his career as business manager at the Gaiety Theatre, Dublin. In 1875 he became business manager for D'Oyly Carte at the Opéra Comique, London, and went with him to the Savoy. In 1886 he became manager of The Gaiety, London, which he directed for nearly thirty years, producing a long series of successful musical plays. He died Oct. 4, 1915.

EDWARD MEDAL. Medal instituted in 1907 by Edward VII to reward heroic acts in civil life, especially in mines and quarries. It consists of two classes, the Edward medal, and the Edward medal in silver. Bars are awarded for further conspicuous acts of bravery. The medal bears a portrait of King Edward. The ribbon is dark blue with yellow edge.

who predeceased him, King George V, the princess royal, princess Victoria, and the queen of Norway. The equestrian statue

EDWARDS, ALFRED GEORGE (b. 1848). British prelate, the first Anglican archbishop of Wales. Born Nov. 2, 1848, he was ordained

and became in 1875 headmaster of Llandoverly College. In 1885 he was made vicar and rural dean of Carnarthen, and in 1889 was consecrated bishop of S. Asaph. In April, 1920, Dr. Edwards was elected the first archbishop of the new province of Wales.

EDWARDS, JOHN PASSMORE (1823-1911). British journalist and philanthropist. Born at Blackwater, Cornwall, on March 24, 1823, he was proprietor and director of the London evening journal *The Echo*, 1876-96, and sat as Liberal M.P. for Salisbury, 1880-85. Active in political and social reform, he is chiefly remembered for his benefactions to hospitals, libraries, art galleries, etc. He died April 22, 1911.

EDWARDS, JONATHAN (1703-58). American divine and metaphysician. He was born Oct. 5, 1703, at East Windsor, Connecticut, and in 1727 became minister at Northampton, Massachusetts. From 1750-58 he resided at Stockbridge as a missionary to the River Indians, and a few weeks before his death, March 22, 1758, he was appointed president of Princeton College.

EDWIN or **EADWINE** (c. 585-633). King of Northumbria. The son of Ella, king of Deira, he was driven from Deira after his father's death by the king of Bernicia. When the latter was slain in 617 Edwin annexed Bernicia and became king of Northumbria. He was slain in battle Oct. 12, 633. Edinburgh, which he fortified, is named after him.

EEL (Anguillae). Group of fishes with elongated snake-like bodies and no visible scales. They are found in both sea and fresh waters in most parts of the tropical and temperate regions of the world. The common European eel (*A. vulgaris*) is a familiar example of the class. In autumn the mature eels migrate down the rivers to the sea, and those in ponds will often go overland for considerable distances at night to reach the rivers. Eels spawn in the sea during winter, the eggs hatching out as little fish known as *Leptocephali* or glass fishes—flat, ribbon-like creatures, curiously deep in body, scaleless, and transparent. These gradually shrink both in length and depth, and become round in body. In this state they make their way up the rivers in such countless millions that the water is often black with them. See *Conger Eel*.

ELECTRIC EEL (*Gymnotus electricus*). This is a large fish found in the rivers of Brazil and Guiana. Though resembling an eel in general appearance, it is widely removed from it in internal structure. It attains a length of 6 ft.,

Eel-grass. Plants of the aquatic herb

and is notable for the powerful electric shock that it can give. The electricity is generated by four organs lying in pairs under the skin.

EEL GRASS (*Valisneria spiralis*). Perennial aquatic herb of the order Hydrocharitaceae. The short stem is immersed in the mud of rivers and lakes, and from it arises a tuft of long, thin grass-like leaves. The female flower has a long spiral stalk which enables it to lie upon the surface of the water. The male flowers break away from their attachment and float to the surface, where they pollinate the females. This accomplished, the female, by the contraction of its stalk, is withdrawn to the bottom, where it develops into a berry.

EEL PIE ISLAND. Islet in the Thames. It is opposite York House, Twickenham, also called Twickenham Eyot. The inn on the islet occupies the place of Eel Pie House, which was pulled down in 1830.

EEL POUT or **BURBOT** (*Lota vulgaris*). Fresh-water fish. Common in European and American rivers, it is found in Great Britain chiefly in the Cam and the Ouse. It is about a yard long, and somewhat eel-like in shape.

EFFENDI. Turkish title of respect. It is applied in the East to government officials, men of learning, and others. It is a corruption of the Greek *authentēs* (mod. pron. *attendēs*), a lord.

EFFIGY (Lat. *effigies*, image, likeness). Likeness or impression of a person, especially the head or impression on a coin or medal. Monumental effigies are found on tombs in Christian churches in England and France, especially on tombs of the 13th-17th centuries. From these effigies monumental brasses later developed. See *Brass*.

EFFLORESCENCE. Term applied in chemistry to the changes which some crystals undergo when exposed to air. The surface of the crystals becomes covered with a fine powder, fancifully known as flowers. The change is due to the giving up of water owing to the higher vapour pressure of the crystal compared with that of the surrounding atmosphere. The term efflorescence is also used in botany for the process of flowering.

EGAN, PIERCE (1772-1849). British sporting author. He spent his life reporting

Eel. Above, the common eel. Below, the electric eel, a S. American fish

aces, prize-fights, cock-fights, cricket matches, trials, and executions. He achieved great popularity as the author of *Life in London: or the Day and Night Scenes of Jerry Hawthorn, Esq., and his elegant friend, Corinthian Tom*, accompanied by Bob Logic, the Oxonian, in their Rambles and Spree through the Metropolis, issued in monthly parts from 1821 and illustrated by J. R. and G. Cruikshank. Egan died in London, Aug. 3, 1849.

EGBERT (d. 839). King of Wessex. The son of Ealhmund, a king of Kent, he became king of the West Saxons in 802. He subdued West Wales or Cornwall, defeated the king of Mercia at Ellandune, annexed Kent, and in 829 became overlord of all the English kings. He was defeated by Scandinavian pirates in 836, but in 838 routed a formidable army of Northmen and West Welsh at Hingston Down, in Cornwall. He died in 839 and was succeeded by his son Ethelwulf.

EGEDE, HANS (1686-1758). Scandinavian missionary in Greenland. Born in Norway, he was a Lutheran minister at Vaagen from 1706-17. Four years later he went with his wife and family to Greenland, where he worked among the Eskimos for fifteen years and converted many to Christianity. He died Nov. 5, 1758. He wrote accounts of his work, and *A Description of Greenland* (1729-41), Eng. trans. 1745. After him is named Egedes Land, that portion of E. Greenland N.W. of Denmark Strait.

EGER, OR CHEB. Town of Bohemia, Czechoslovakia. It stands on the right bank of the Ohre (Eger), 92 m. W. of Prague, beneath the Fichtelgebirge. The ruined castle stands on a rock above the town. The old Gothic church of S. Nicholas was restored in the 19th century. The museum was formerly the burgo-master's house, in which Wallenstein was murdered.

Other objects of interest are the old town hall, the Schillerhaus, where the poet lived for a time, the merchants' hall, and the market place. It is an important railway junction. Pop. 27,524.

The city in Hungary called Eger or Erlau is 70 m. N.E. of Budapest. Its chief industry is the making of red wine. The cathedral, in the Italian style, was erected in the 19th century; the church of the Brothers of Mercy and the minaret of an old mosque are also noteworthy. Other buildings include the town hall and the observatory. Pop. 28,753.

EGERIA. In classical legend, a nymph beloved of Numa Pompilius, king of Rome, who set great store by her advice and prophecies. On the death of Numa her grief was so great that she dissolved in tears, and was turned into a fountain by Diana. The name is now given to a lady who stimulates and inspires a man's intellectual activity. Pron. *Ee-je-ri-a*.

EGG. Reproductive cell formed in the body of the female animal, which, when fertilised by union with the spermatozoon of the male, produces a new individual. Except in the lowest forms of life, when propagation takes place by fission or budding, every animal begins its life history as an egg. In the viviparous animals, as in nearly all mammals, the development of the egg takes place in the body of the mother; in the oviparous, e.g. insects, fishes, reptiles, birds, it is extruded, and development proceeds apart from union with the mother. See *Biology*.

EGG, AUGUSTUS LEOPOLD (1816-63). British artist. Born in London, May 2, 1816, he exhibited for the first time in 1838, became an A.R.A. in 1848, and R.A. in 1860. A subject painter, his best work includes Queen Elizabeth Discovers She is No Longer Young, 1848; Peter the Great Sees Catherine for the First Time, 1850; and The Night Before Naseby, 1859. He died March 26, 1863.

EGGAR MOTH. Group of fairly large moths. There are four British eggar moths, belonging to three distinct genera. Three of them are red-dish-brown in colour and the other is grey; the expanse of the wings varies from 1 in. to 3 ins. See *Moth*.

Eggar Moth. Example of small eggar moth, *Eriogaster lanestris*

EGG PLANT (*Solanum melongena*). Herb of the order Solanaceae. The leaves are oval, lobed, and woolly beneath; the flowers are similar to those of the tomato, white, yellow, or purple. The fruit, a berry as large as a goose-egg, is white or purple. The herb is a native of N. Africa. It is edible, and largely grown for food.

Egg Plant. Specimen of the herb, showing leaves, flower, and berries

EGHAM. Urban dist. of Surrey. It is on the Thames, 21 m. W.S.W. of London on the Southern Rly. Here are the Royal Holloway College for women, and Holloway Sanatorium, a private asylum. Pop. 15,000.

EGGLANTINE. Name applied by the earlier poets to the sweet brier (*Rosa eglanteria*). In Milton it probably refers to the honeysuckle (*Lonicera periclymenum*), still called eglantine in parts of Yorkshire.

EGLINTON, EARL OF. Scottish title held by the family of Montgomerie since 1508. Sir Alexander Montgomerie was made a lord of the Scottish parliament about 1445, and his grandson Hugh, the 3rd lord, was made earl of Eglinton in 1508. When the 5th earl died the family in the male line became extinct. The titles and estate then passed to Alexander Seton, a grandson of the 3rd earl, who took the name of Montgomerie.

Archibald, the 13th earl (1812-61), a Tory politician, was the organizer of the famous Eglinton Tournament, held at Eglinton Castle, his Ayrshire seat, Aug. 28, 1839. In 1859 he was made earl of Winton, a title held by his ancestors, the Setons. The earl's eldest son is known as Lord Montgomerie.

EGMONT. Cone of an extinct volcano, North Island, New Zealand. It rises from the Taranaki plain to a height of 8,260 ft. It is perpetually covered with snow, and is a landmark for sailors.

Egmont, N. Zealand. Snow-capped cone of an extinct volcano

eval (1683-1748), was one of the founders of the colony of Georgia. The title is taken from Egmont, a little place in Co. Cork.

EGMONT, LANORAL, COUNT OF (1522-68). Flemish statesman. He was born at La Hamaide Castle, Hainault, Nov. 18, 1522, and in 1541 was with Charles V on his expedition to Algiers, and in subsequent campaigns against France. In 1545 he married a sister of the elector palatine and later was appointed governor of Flanders. In spite of his proved loyalty to the Spanish government he fell under suspicion, and was beheaded at Brussels, June 5, 1568. His life forms the subject of Goethe's tragedy (1788).

EGREMONT. Town of Cheshire, a residential suburb of Liverpool and Birkenhead. On the S. side of the Mersey, 2 m. N.W. of Birkenhead, it has, with Seacombe, a station on the L.M.S. and L.N.E. Rlys. A promenade connects it with New Brighton, and steamers go regularly to Liverpool. Pop. 15,847.

EGREMONT. Urban dist. and market town of Cumberland. It stands on the Eden, 5 m. S.E. of Whitehaven, on the L.M.S. Rly. There are ruins of a 12th century castle.

The title of earl of Egremont was borne by the family of Wyndham from 1750 to 1845, when it became extinct. Charles, the 2nd earl (1710-63), was secretary of state 1761-63. George, the 3rd earl, made his seat at Petworth in Sussex notable for hospitality. Market day, Sat. Pop. 7,500.

EGRET. Name applied to several species of small white herons, of which the little egret is one of the best-known examples. It occurs very rarely in Great Britain, but is common in S. Europe and in many parts of Asia and Africa. The French name, aigrette, is used in England for the tufted head plume of the bird. It is also the name given by the French to the smaller white heron itself.

Egret, a small white heron. The species shown is called the little egret

Egypt. Map of the country from the Mediterranean to the Second Cataract; inset, the Nile Delta

EGYPT. Country of N.E. Africa. It is bounded N. by the Mediterranean, S. by the Anglo-Egyptian Sudan, E. by the Red Sea and Palestine, W. by Libya. The total area, including the Sinai peninsula and various islands in the Red Sea and Gulf of Suez, is about 383,000 sq. m., of which the cultivated and settled region covers about 13,600 sq. m. Important towns include the capital, Cairo, Alexandria, Port Said, and Suez. Pop. 14,168,000.

The main physical features are the Nile and the desert. With improved irrigation and drainage the cultivable area is constantly increasing. Reservoir works include a dam at Assuan (q.v.), and barrages at Asyut, Isna (Esneh), and Zifta. The fertile regions are mostly around the delta, the Nile valley and the oases. The staple product is cotton, upon the success of which crop the prosperity of the country largely depends. Other agricultural products include rice, maize, wheat, barley, millet, sugar cane, and lentils.

Besides being a distributing centre for the Levant, Egypt holds a commanding position on the trade route from Europe to the East, the Suez Canal providing a direct sea route between the Mediterranean and the Red Sea. The rly. system forms the N. section of the Cape to Cairo scheme; the main line follows the Nile to Shellal, S. of Assuan. The majority are fellahien (agriculturists). The Beduins are herdsmen and the Nubians mostly peasants.

ANCIENT HISTORY. Probably for some centuries before the 1st dynasty of Egypt a fresh race had been permeating the country. At last a body of about a tenth of the number of the male population entered Egypt as conquerors. Of a higher civilization, they brought with them the elements of writing, and a great artistic skill, as well as more organization. They held Upper Egypt at first, centring at Hierakonpolis, and later at Abydos. Thence

they conquered to Fayum, where they centred. Memphis became the capital under Menes and his successors of the 1st dynasty.

The 1st dynasty (about 5800-5300 B.C.), following the two prehistoric civilizations, was the highest point of the Third civilization.

Egypt. Relief in the Temple of Seti I (1300 B.C.) at Abydos, showing the king making an offering
Photo: Sir W. M. Flinders Petrie

Much of the old arts continued, but there was an immense change. Writing became usual; a large official class had arisen; jewelry shows skilful work; building in wood and in brick was much increased; ivory carving was excellent; the use of copper was much extended; and glazing became a decorative art for building.

The IVth dynasty (about 4800 to 4500 B.C.) established the Fourth civilization. The Egyptians here reached the highest mastery of art. Never has the immensity or accuracy of the great pyramid of Khufu (Cheops) been

equalled; never has there been a greater expression of character and dignity than in the portrait sculpture; never has any people created a greater mass of artistic detail for their tombs. The personal character shown in the portraiture is most attractive: firmness with kindness, dignity unspoiled by pride; vigour, insight, determination.

The XIIth dynasty (about 3600-3400 B.C.) established the Fifth civilization. By the middle of the XIIth dynasty the princes of Thebes began to spread their power. The XIIth dynasty reunited all the country, and pushed up into Nubia. The most magnificent king of this age was Amenemhat III, who reclaimed a large part of the Fayum, till then a swamp. The Syrians were beginning to press into the country, and in the decadent XIIIth and XIVth dynasties some even rose to be kings. These were the forerunners of the Hyksos conquest about 2600 B.C.

The XVIIth-XXth dynasties (1587-1102 B.C.) established the Sixth civilization. The XVIIth dynasty was a Nubian family which headed the southern Egyptians against the Hyksos, who were expelled from Egypt by Aahmes, the founder of the XVIIIth dynasty. This revival centred at Thebes, which became the largest city of that time. The most important aspect was the foreign intercourse, by conquest in Syria and by trade with Babylon, Crete, and Greece.

By about 1530 B.C. Tehutmes I had conquered all Syria out to the Euphrates near Aleppo. This was retained until the wars of Tehutmes III, about 1460, and almost as much until the crumbling of the foreign hold under Akhenaten about 1370 B.C. In the

XIXth dynasty Seti I recovered Syria, about 1320 B.C.; and Rameses II kept the greater part of it till about 1250. After that, Egypt barely held a little of the S. of Palestine. When Egypt became weakened, there were coalitions of Algerian and western peoples against it in 1229 B.C. in the reign of Merneptah, and in 1197 under Rameses III. This was followed by a coalition of Syrians and western peoples in 1194, who were overthrown. The frequent wars in Syria led to the semitising of Egyptian language and art.

In the XXIst dynasty (1102-952 B.C.) the land was amicably divided between a succession of priest-kings at Thebes and the kings at Tanis in the Delta. The main interest lies in the attempts to save the mummies of the kings of the XVIIth-XXth dynasties from robbers. The priest-kings made a great cache at Deir el Bahri, which was left unopened because it was known that no gold remained with the bodies.

The XXIInd and XXIIIrd dynasties (952-721 B.C.) revived the power of Egypt somewhat. They were due to the energy of a Mesopotamian adventurer, Sheshenq or Shishak, and his family, who settled at Bubastis. The Ethiopian invasion about 727 B.C. found Egypt split up among eighteen or more little states. The Ethiopian kings who ruled till 664 B.C. were vigorous and able men, and they had a good system of appointing the crown-prince as viceroy of Egypt.

The XXVIth-XXXth dynasties (664-342 B.C.), founded the Seventh civilization. They were under Ethiopian influence and then largely controlled by Greek action, and under Persian rule. Necho in 609 raided Syria and held it more or less for four years, when

Egyptian crafts and a scene of industry. Left and centre, alabaster vase and carved chair from the tomb of Inana and Tuaa, 15th cent. B.C. Right, retainers of Mehenkwtetre at work in the slaughter house
From Theodore Davis, 'Tomb of Iqnaya', and Metropolitan Museum, New York

Babylon defeated him, and he retired to Egypt. The Persians held the country from 525 to 401 B.C., and then the native Egyptians in the Delta revived for a couple of generations, forming the XXIXth and XXXth dynasties, 399-342 B.C. Ten years under the degenerate Persians ushered in the golden age of Alexander's conquest.

The transition from Alexander and his heir to the rule of the old general Ptolemy Soter (the Saviour) was very gradual. The earlier

of the family were able men, wary, strong and enlightened, backed by powerful queens of their own family. Egypt had not been so peaceful and prosperous for some centuries as it was from 300 to 200 B.C. Even under the effete rule of the later Ptolemies

the country was remarkable for the extent of its learning and wealth.

The Roman Age lasted from 30 B.C. to A.D. 640. The end of Egyptian independence was the death-stroke to the country, which became the milch-cow of the emperor of Rome, the private property of the Crown. It was steadily drained of all wealth, taxed in corn to feed Rome, besides being taxed in money. In 640 the Roman government collapsed before a few thousand wild Arab horsemen. The Arab rule decayed, and the Mamluk dynasties, for some centuries before the

Turkish conquest in 1517, were a ceaseless turmoil of fighting and plundering. When Turkish power waned, only the strong hand of Mehemet Ali restored a stable government.

MODERN HISTORY. When, in 1876, the Khedive suspended payment of his treasury bills, Europe intervened.

A series of events led to Great Britain taking control, and under Lords Cromer and Kitchener the financial and political conditions improved. In 1914 Great Britain declared the Turkish suzerainty at an end, and a British protectorate was declared. In Feb., 1922, the British government declared Egypt an independent state, and in the following March the sultan Ahmed Fuad Pasha was proclaimed king as Fuad I. In 1923 a new constitution, providing for a reformed electoral system, including cabinet responsibility to Parliament, had come into force. After the death of the nationalist leader Zaghlul in 1927, Nahas Pasha became premier, but his ministry was dismissed and Mahmud Pasha became premier.

In July, 1928, King Fuad suspended the constitution for three years, but Mahmud remained in office until Jan., 1930, when Nahas Pasha became premier. In May he attended a conference in London in connexion with Egypt's

claim to the Sudan, but in May this ended without result. See Abu-Simbel: Cairo; Colossus; Dendera; Karnak; Nile; Pyramids; Rameses; Sphinx; Thebes; Tutankhamen, etc.; consult also A History of the Ancient Egyptians, J. H. Breasted, 1920; Cambridge Ancient History, Vol. I, 1924.

EGYPTOLOGY. Study of the antiquities of Egypt. It is concerned not only with the material remains, but also with religion, history, language, art, and social life. Archaeologists accompanied Napoleon on his expedition to Egypt in 1798, and soon after this the first experts in Egyptology appeared, of whom Champollion and Lepsius were notable. In 1858 Egypt set up, under Mariette, a special department of Egyptology.

The modern scientific treatment of Egyptian antiquities dates from about 1880, and is associated specially with Gaston Maspero and Flinders Petrie. An Egypt Exploration Society was started in London in 1882. The offices are at 13, Tavistock Square, London, W.C.

EHRlich, PAUL (1854-1915). German physiologist. Born at Strehlen, Silesia, March 14, 1854, his researches brought him world-wide renown, and in 1903 he shared with Metchnikoff the Nobel prize for physiology and medicine. The founder of chemotherapy, Ehrlich laboured to discover a safe cure for syphilis, being latterly assisted by a Japanese doctor named Hata. A cure was found in 1910 and was termed 606, this being the number of the successful experiment. Ehrlich also invented new bacteriological stains, was one of the founders of serum therapy, and did good work on cancer and on diphtheria antitoxin. He died Aug. 20, 1915.

EIDER DUCK (Somateria). Genus of wild duck. It is famed for the soft down which it uses for lining its nest. Eiders have short beaks; the males have black and white plumage with green markings on the head, while the females have mottled brown plumage. The common eider (*S. mollissima*) is resident in Great Britain throughout the year. All the eiders are divers, and feed upon shell-fish and small crustaceans. They keep to the rocky shores and nest on the ground.

Eiffel Tower, Paris.
It is 984 ft. high

EIFFEL, ALEXANDRE GUSTAVE (1832-1923). French engineer. Born at Dijon, Dec. 15, 1832, he executed his first notable work, the bridge over the Garonne at Bordeaux, in 1858. His outstanding engineering achievements include the great Eiffel Tower, Paris, 1887-89; the movable dome of the Nice Observatory; and the framework for Bartholdi's colossal statue of Liberty in New York harbour. He was one of the first engineers to employ compressed-air caissons in bridge building, and invented movable section bridges. He died Dec. 28, 1923.

The Eiffel Tower was designed for the Paris Exhibition of 1889. It is 984 ft. high, and is built of iron throughout. Electric lifts run to the top. The tower is an important wireless telegraphy station and meteorological centre.

EIGHT. In rowing, a name applied collectively to the members of a racing crew, when such consists of eight men, in addition to the cox.

Piece of eight is the name given to the old Spanish silver coin, the piastre, so called because it was divided into eight silver reals. It circulated in Spain and Spanish America during the 17th and 18th centuries. Its value was about four shillings.

EIKON BASILIKE (Gr. royal likeness). Book purporting to be written by Charles I, and published immediately after his execution. Its sub-title is *The Pourtraicture of His Sacred Majesty in His Solitudes and Sufferings*. It professes to give the king's views of the events of his reign and a number of his prayers. Historians take sides for Charles and for John Gauden, bishop of Worcester, who claimed to have written it.

EILDON HILLS. Range of hills in Roxburghshire, S. of Melrose. They rise into three peaks, the highest 1,385 ft. According to tradition, the single hill was split into three by the wizard Michael Scott.

EINSTEIN, ALBERT (b. 1879). German physicist. He was born at Ulm, in Germany, March 14, 1879, of Jewish parentage. In

1901 Einstein was naturalised as a Swiss, and accepted a post in the patent office at Berne. It was in 1905 that Einstein formulated his own theory of relativity in its narrower or "special" form. In 1909 he was appointed professor at the university of Zürich, and in 1914 he went to Berlin as a member of the Academy of Science. In 1915 he caused a sensation in the

scientific world by his explanation of gravitational attraction, accompanied by an explanation of the anomalous motion of the planet Mercury. He then made a remarkable prediction as to the bending of light rays from the stars which passed close to the sun: the verifying of this prediction by the British solar eclipse expeditions in 1919 made Einstein world-famous. See Relativity.

EISNER, KURT (1867-1919). Name adopted by Salomon Kosnowsky, a German socialist writer and politician, born in Berlin, May 14, 1867. Joining the socialists, he became associate editor of their organ, *Vorwärts*. On the outbreak of the revolution he took the position of prime minister and minister of foreign affairs, and later that of first president of the Bavarian republic. He unavailingly sought to separate Bavaria from the other German states and to make separate peace arrangements with the Allies. He was assassinated Feb. 21, 1919.

EISTEDDFOD (Welsh, session). Welsh national bardic festival. According to tradition, under the name of the Gorsedd or Druidic congress, it was celebrated before the Roman

invasion of Britain, and was the repository of the laws, science, and poetry of the country. Authentic records go no farther back than the 12th century. The Eisteddfod flourished under the Tudors.

In the Cromwellian period it fell into abeyance, but a notable revival was witnessed in the 19th century. It is now held annually, in the north or south of the principality alternately. Noteworthy features of the occasion are the crowning of the chief bard and musical competitions. See Bard.

EJECTOR. Appliance for operating a vacuum brake by exhausting air from the brake cylinders. It

consists of a pipe within an outer casing, with an annular space between the two. When steam is admitted to the pipe, in the act of escaping at the outer end it draws the air from the annular space, connected by piping to the brake cylinders.

EKATERINBURG. City of the Ukraine. It stands on the river Isset, 175 m. from Perm, and is an important station on the Trans-

Siberian Rly. It is the centre of a rich mining district in the Urals and metals are assayed and smelted here. The city, which was founded by Peter the Great and named after his wife Catherine, has two cathedrals. Here in July, 1918, the tsar Nicholas II and his family were murdered. Pop. 60,000. See illus. above.

ELAGABALUS or HELIOGABALUS. Roman emperor A.D. 218-222. The son of Sextus Varius Marcellus and Julia Soaemias, he was

made priest of Elagabalus, the Syrian sun-god, and assumed his name. By pretending that he was the natural son of Caracalla, his grandmother, Julia Maesa, persuaded the legions in Syria to proclaim him emperor. Abandoning the reins of government to his mother and grandmother, he devoted the first year of his reign at Rome to the introduction of the worship of the sun-god. His short reign was ended by assassination.

ELAM. Biblical name for a low land and mountain region in S.W. Persia, N. of the Persian Gulf. It comprised the lowlands E. of the Tigris, with the highlands N. and E. Wars were frequent between the Assyrians and the Elamites. Susa, the Biblical Shushan, in Persia, became the capital. Its population, at one time dominating Babylonia, afterwards became subject, allied, or independent. See Babylonia; Susa.

ELAN. River of Wales. It rises on the E. boundary of Cardiganshire, and flows through Radnorshire to Brecknockshire, where it turns N.E. to form the boundary of these counties and enters the Wye. The Elan, with its tributary the Claerwen, is the chief source of the water supply of Birmingham.

ELAND. Genus of antelopes, found only in Africa. They are the largest of all the

Ekaterinburg. House in which the Russian royal family were murdered

Albert Einstein.
German physicist:

Eider Duck. Male, black and white; female, mottled brown

Kurt Eisner.
German socialist

Elagabalus.
Roman emperor:
Buried in the
Capitol, Rome

Eland. Large antelope peculiar to Africa. Both sexes bear horns

antelopes, a fine bull standing nearly 6 ft. high. In colour, they vary from light fawn to grey, and the bulls usually have a thick tuft of dark hair on the forehead. Both sexes bear horns, about 2 ft. in length, and more or less twisted. They are found in most parts of E. Africa, but appear to be extinct in the South.

ELANDSLAAGTE. Village in Natal, 16 m. N.E. of Ladysmith, 3,614 ft. above sea level. It is known for an engagement, Oct. 21, 1899, in the S. African War. The Boer artillery was weaker than the British, and with a few casualties their position was taken.

ELASTICITY. Property of matter in virtue of which it resists change in shape or bulk, and tends, after distortion, to recover its original shape or bulk when allowed to do so. Fluids have no fixed shape, and therefore no power to resist change of shape; they have no "elasticity of form"; but they resist compression and have "elasticity of bulk." Solids possess both kinds of elasticity. An external force producing distortion in a body is known as a stress and the distortion itself is called a strain. The mathematical theory of elasticity deals with the various kinds of strain which a body may suffer, and the stresses corresponding thereto.

ELATER BEETLE (Gr. elatēr, driver). Group of beetles, also called click beetles. The destructive wireworm is the larva of one of these beetles; and the firefly of the W. Indies belongs to the same group. See Beetle; Click Beetle.

Elater beetle, the larvae of which are garden pests

ELBERFELD. Town of Prussia. In the Rhine Province, it stands on the Wupper, 16 m. N.E. of Düsseldorf, and with Barmen, which it adjoins, may be described as the Manchester of Germany. Textiles of all kinds, chemicals, hardware, paper, and beer are made. There is an overhead electric rly. suspended above the Wupper. The public buildings include the Rathaus, law courts, almshouse, and museum. Here originated the so-called Elberfeld system of poor relief which, reorganized in 1852 by Daniel von Heydt, spread to other parts of Germany. Pop. 167,577. See Barmen.

ELBING. Town and seaport of Prussia. On the Elbing, about 5 m. from its mouth in the Frisches Haff, it is 50 m. by rly. E.S.E. of Danzig, and is connected with the Vistula by a canal. S. Mary's Church dates from the 13th century, and Corpus Christi is nearly as old. It has an old school. The chief industries are shipbuilding, iron-working, and the manufacture of machinery. Until 1918 much work for the German navy was done here. The town grew up round a castle built by the Teutonic Knights. It became a member of the Hansatic League, was included in Poland in 1772, and at the partition of Poland became part of Prussia. Pop. 67,878.

ELBOW. Joint formed by articulation of the lower end of the humerus, or upper arm bone, with the radius and ulna, the two bones of the forearm. The tip of the elbow is formed by a process of bone called the olecranon; the bony prominences on the inside and outside of the elbow are the internal and external condyles of the humerus.

Injuries to the elbow include dislocation, sometimes complicated by fracture; and sprain, an accident not infrequent in young children, in which the head of the radius slips down, and one of the ligaments becomes ripped between the radius and humerus. It is easily replaced by bending the limb and then extending it. Diseases of the joint include tuberculosis, more frequent in children than in adults, arthritis, and synovitis.

Elbow: a hinge joint. Relation of bones to biceps and other muscles

ELBURZ or **ELBRUS.** Mountain of the Caucasus. A little to the N. of the main chain, it consists of two extinct volcanic peaks, 18,526 ft. and 18,460 ft. respectively. Elburz was first ascended in 1829. Tradition says it was the first resting-place of the Ark.

The Elburz mountain range, skirting the S. shore of the Caspian, extends for a length of 600 m., and to a width in places of 200 m., through N.W. Persia. Naphtha and petrol are found. The highest peak, the volcano, Mt. Demavend, is estimated to be 18,000 ft. high. See Caucasus.

ELDER (*Sambucus*). Hardy shrubby trees, natives of Britain, of the order Caprifoliaceae. Their height is about 10 ft.; the flowers are white and variegated. *Sambucus nigra* is the common elder, the berries of which are used for the manufacture of home-made wine. A liquid distilled from the flowers, elder-flower water, is largely used for flavouring confectionery.

ELDER. Word used in a civil and an ecclesiastical sense for an overseer. Of frequent occurrence in the Bible, in the O.T. it is applied to the heads or representatives of tribes and families, especially of the Israelites. In the N.T. it is used to define officers of the Church who originally may have been identical with the bishops. Certain office-bearers in the Presbyterian and other churches are called elders.

Elder Brethren of the Trinity House is the title given to members of the corporation of Trinity House, Tower Hill, E.C., sometimes known as Trinity Masters. They consist of members of the royal family, statesmen, retired naval officers, and captains in the mercantile marine. See Trinity House.

ELDON, JOHN SCOTT, 1st EARL OF (1751-1838). British lawyer. Born at Newcastle-upon-Tyne, June 4, 1751, he was called to the bar in 1776 and in 1782 he became a K.C. In that year also Scott entered parliament as M.P. for Weobley.

In 1788 Pitt made him solicitor-general, in 1793 he was promoted attorney-general, and in 1799 he was made chief justice of the court of common pleas and a peer. In 1801 he became lord chancellor, leaving office on Pitt's death in 1806. In 1807 Eldon returned to the post of chancellor, which he was destined to fill for 20 years. He was made an earl in 1821, and died Jan. 13, 1838. The title passed to his grandson John (1805-54), and is still held by his descendants, the earl's eldest son being known as Viscount Encombe.

Eldon's elder brother, William Scott (1745-1836), was also a distinguished lawyer; in 1821 he was made Baron Stowell.

EL DORADO (Span. The Gilded One). Name successively applied to a gilded man, a golden city known as Manoa or Omca, and a region abounding in gold and precious stones, reputed to exist in S. America. Many fruitless expeditions were organized in search of this legendary city, Manoa, the earliest being led by a German governor of Guiana, Ambrose Dalfinger, in 1529. The name El Dorado came to be applied to any place reputed to abound in easily acquired wealth.

ELEANOR. Name of three queens of England. Eleanor of Aquitaine (1122-1204), queen of Henry II of England, was the daughter of William, duke of Aquitaine. Her first husband was Louis VII of France, to whom she was married in 1137, but in 1152 the marriage was dissolved. In the same year she married Henry of Anjou, and by him was the mother of the turbulent princes who disturbed his reign. She died April 1, 1204.

Eleanor of Provence (d. 1291), queen of Henry III of England, was the daughter of the count of Provence. In 1236 she was married to Henry at Canterbury. She died June 25, 1291. Her elder son was Edward I.

1st. Earl of Eldon
British lawyer
After Lawrence

Elba. Fortress of Porto Ferrajo, the capital. Above the harbour is the palace of Napoleon I

ELBASAN. Town of Albania. On the Skumbi, about 65 m. W. of Monastir, it is one of the few important towns of the country, and is the seat of a Greek bishop. It has hot sulphur springs. Pop. 13,000.

ELBE (anc. Albis; Czech, Labe). River of Central Europe. It rises in a number of streams which unite in the Giant Mts. (Riesengebirge), and flows S. and W. to Melnik, the head of navigation, 21 m. N. of Prague. It penetrates the Mittelgebirge and the Erzgebirge, waters Saxony, and falls into the North Sea, near Cuxhaven. Its length is 725 m., and its drainage area about 57,000 sq. m. Besides the Moldau (Vltava), the chief of its many tributaries are the Havel, Saale, Eger (Obře), and Mulde.

The Elbe is linked up by canals with the Oder, Spree, and Trave. Hamburg, Magdeburg, Dresden, Torgau, and Wittenberg are among the important cities on its banks. There is an enormous traffic along the Elbe, principally by barges assisted by a towing chain. The river has been internationalised from its confluence with the Moldau.

Elder. A large specimen of the tree in bloom

Eleanor of Castile (d. 1290), queen of Edward I of England, was the daughter of Ferdinand III, king of Castile, and was married to Edward in Oct., 1254. She died at Harby on Nov. 28, 1290, and was buried at Westminster. The king erected crosses at the places at which her body rested on the journey—Lincoln, Grantham, Stamford, Geddington, Northampton, Stony Stratford, Woburn, Dunstable, St. Albans, Waltham, Westcheap, and Charing.

ELECTION. In politics, and to some extent in business, the choosing of representatives. The methods of election vary, but, generally speaking, a bare majority of votes is sufficient to secure election. In Great Britain the present system includes voting by ballot, a careful enumeration of the votes cast, and, if necessary, a scrutiny and recount.

Elections are divided into general and bye. A general election results from the retirement of all the members, as on the dissolution of parliament; and a bye-election through the death or resignation of a member. In elections for many local bodies, e.g. town councils in England, it is customary for one-third of the members to retire every year, so there is never a general election. County councils, however, have a general election every third year.

At elections of company directors a show of hands is usually sufficient. In elections of this kind the shareholders have votes in proportion to their interest in the company. At elections of members to clubs and societies, a small number of members can keep out a candidate by voting against him; this is called blackballing. See Company Law; Proportional Representation; Vote.

ELECTOR. In general, a person who has the right of voting at elections. In a special sense, however, the name was applied to the German princes who in the Holy Roman Empire voted at the election of the king. At first all the princes took part, or were entitled to take part, but by the Golden Bull issued by Charles IV in 1356, the number was fixed at seven, later increased to nine. In 1806, with the dissolution of the Empire, the electors ceased to exist.

ELECTRA. In Greek mythology, daughter of Agamemnon and Clytemnestra. She incited her brother Orestes to murder his mother, Clytemnestra, in revenge for the latter's murder of his father on his return from Troy. The tragic life of Electra forms the subject of tragedies by Sophocles and Euripides. See Agamemnon; Orestes.

ELECTRIC FISH. Genus of fishes possessing the power of administering an electric shock. There are three known fishes which possess such a power, these being, in the order of their electrical strength, the electric eel (*Gymnotus*), the African catfish (*Malapterurus electricus*), and the torpedo, or electrical ray fish. The latter is the most numerous of these fish. The best known is the Torpedo marmorata of the southern shores of Europe and of the Mediterranean; large specimens may weigh as much as 80 lb. The electric force resides in the powerful tail. See Eel, Electric.

ELECTRICITY. All materials can acquire electricity by friction. In some substances—dielectrics—the charge is confined to the portion of the surface rubbed; in others—conductors—it tends to be diffused over the whole surface. When a glass rod is rubbed with silk the glass becomes positively electrified, and the silk acquires a negative charge. When a stick of resin is rubbed with fur or wool the resin is negatively electrified, and the rubber develops a positive charge.

Bodies of like charge repel, and those of unlike charge attract, each other. William Gilbert (1540–1603) made the first detailed study of these properties.

According to the theory of electricity in general acceptance, the electron is the "atom" of electricity—i.e. the smallest particle which

Electricity. Simple electric circuits. B, battery; G, galvanometer; E, E', earth plates

can exist by itself or be transferred from one atom of matter to another. The electron is negative. The atom of matter is regarded as a nucleus consisting of positively charged particles—about which in different orbits circulate a number of electrons. Normally the negative and positive charges of the atom neutralise one another, but an excess or a deficiency of electrons brings about a negative or a positive electrification respectively. The flow of current in a conductor is a transfer of electrons from atom to atom, moving from the negative to the positive poles. In a dielectric (e.g. the plates of a condenser), the electrons are strained in the direction of the current flow, but do not move from one atom to another. The current from one plate of a condenser to another is not a conduction current, but a displacement current. Currents of another sort, termed convection currents, are caused when electricity passes through a gas—as in the electric arc, or in the thermionic valve—or through a liquid (e.g. the electrolyte in a battery).

The discovery of the Leyden jar by Cunaeus in 1745 led to a knowledge of inductance and capacity. At the beginning of the 19th century came Volta's discovery that two plates of dissimilar metals immersed

Electricity. Method of charging and discharging a simple form of a Leyden jar

in a solution of a salt or an acid remain at different potentials even when connected by a conductor, and that there is a current flow through the circuit thus constituted. Batteries of various kinds were devised by Daniell, Grove, and others; and Davy, Carlisle, and Nicholson further studied electro-chemical decomposition. Faraday, in 1833, enunciated his laws of electrolysis. The science of electro-magnetism originated with Oersted's discovery in 1819 that a magnetic field existed round a wire joining the terminals of a voltaic cell. Between 1825 and 1830 Ohm published his work on the connection between current strength in a conductor and electro-motive force, and introduced the concept of "resistance."

Faraday discovered electro-magnetic induction—i.e. the creation of electric currents in a conductor by the variation of a surrounding magnetic field, and later the phenomena of self-induction. Clerk-Maxwell followed up these researches, and published in 1873 his famous work on electricity and magnetism. Electro-magnetic waves were produced in 1888 by Hertz, who traced their propagation through space. Hertz also noticed the phenomena now termed photo-electricity, in which the conductivity of substances is affected by exposing them to illumination.

In the 20th century we may note the work of Sir J. J. Thomson on electric discharge through gases, and that of Curie, Rutherford,

and Soddy on radio-active materials. By analysing the X-ray spectra of elements it has been possible to determine the atomic weights and the order in periodic classification. Missing elements have been discovered, and substances once considered elementary have been separated into true elements. Reference should be made to the articles on atom, cell, coil, condenser, current, dielectric, induction, ion, magnetism, potential, radio-activity, resistance, wireless. The various electrical units are dealt with under their names—e.g. ampere, ohm, volt, watt, etc.

ATMOSPHERIC ELECTRICITY. In 1752 Franklin made his famous investigations into atmospheric electricity. He identified lightning with the electric spark, and also discovered that between the earth's surface and the air there is a difference of potential which increases with the altitude. Normally the electricity of the air is positive, and that of the surface of the earth is negative. It may change instantly from positive to negative with a lightning flash, and, less quickly, with a sudden rain shower. See Magnetism.

ELECTRIC LIGHTING. In 1810 Davy found that a luminous electric arc could be produced between the points of two carbon rods separated by a short distance, if the rods were connected to a powerful battery. The carbon arc-lamp was developed by Foucault, Wright, and Staite (1845–8), and provision was made for the automatic adjustment of the rods as the carbon burned away. It was not, however, until the invention of the dynamo as a source of electric current that the arc lamp became a commercial proposition.

Incandescent electric lamps with a filament of carbon were devised by Edison in 1879, and by Swan in 1880. The filament was enclosed in an exhausted glass bulb, and was made to glow by the passage of an electric current. Early in the 20th century filaments of metal—tantalum and, later, tungsten—were used, and the bulb was filled with an inert gas. With the metallic filament there is a much smaller current consumption and the life of the lamp is considerably longer.

ELECTRIC POWER. Electricity is not in itself a source of power, but is a product of mechanical or chemical energy. The dynamo takes in power from some other agent, and gives it out again in the form of mechanical energy, chemical action, heat or light; the conversion always means some loss of energy. The advantage of electricity lies in the facility with which it may be transmitted over long distances and then reconverted into any form of industrial energy required. This property has led to the utilisation all over the world of elevated bodies of water as sources of mechanical energy. Water from these sources is led down to some convenient point, and there drives hydraulic motors which, in turn, drive electricity-generating machines. A medium for the return of the electric current to the source of generation is required—the circuit must be complete. This medium may be provided by a separate wire, by the rails of a tramway or railway, or by the earth.

Transmission and distribution, in the case of factories where the electricity is generated on the premises, present no difficulties. The current is usually continuous. Local transmission and distribution represents a more complex and difficult problem. The work is in the hands either of a municipal authority or of a public company. Voltages as low as 100 are in use in the stations of Great Britain, but the newer installations will usually be arranged

for voltages between 250 and 550. Hence the current put into the conductors for transmission may have to be "stepped down" at convenient points. Direct or continuous current cannot be stepped down directly without the use of rotating machinery (mechanical transformers). Alternating current, on the other hand, may be stepped down by the use of static transformers, which are automatic. Local transmission and distribution are effected generally by underground conductors in the power systems in Great Britain.

In large systems where extended areas are to be served the transmission and distributing network may become very complex. To meet such cases, alternating current at high tension is employed. At sub-stations the current may be stepped down by motor generators to 400 volts continuous current, which is supplied to users of power at that tension, and, by means of the three-wire system, to users of light at 200 volts. For long distance transmission alternating current is almost invariably employed, because of the facility with which it can be lowered by the aid of stationary transformers. Overhead conductors are mainly used, supported on steel or concrete towers or pylons.

In 1926 the Electricity Supply Act provided for the supply of power throughout Great Britain. The Electricity Commission divided the country into districts, and prepared a scheme of development for each. A body, the Central Electricity Board, was established to carry out these schemes. The districts are central Scotland; south-eastern England, including London; central England, including Birmingham and district; north-western England and N. Wales; north-east of England; Yorkshire; S. Wales; and south-western England. It is estimated that the new scheme will reduce the cost to 1.25d. a unit.

ELECTRO-CHEMISTRY. This is the splitting up of bodies into their elements or into other compounds, and the formation of new bodies, by the aid of electricity. On the practical or industrial side electro-chemistry has given us the arts of electro-plating and of electro-deposition generally, embracing the electrical refining and smelting of metals; many metals could not otherwise be produced on an industrial scale. Many organic products, too, are manufactured by its aid.

ELECTROCUTION. American term for death from electrical shock. Electrocution of criminals was first adopted by the state of New York in 1890. The method has since been adopted by other states of America. The condemned man is seated in a special insulated chair and a current passed through his body.

Electrode. Term applied to the terminals of an electric cell. See Anode; Kathode.

ELECTRODYNAMICS. Term used for the study of the laws of electricity in motion. Electrokinetics, a later term, has the same meaning. See Electrostatics.

ELECTROLYSIS. The decomposition of liquids by electric current. The liquid which undergoes such action is described as an electrolyte. In the case of water it may be entirely decomposed into its two elements, oxygen and hydrogen, the gases being liberated at opposite

sides or ends of the apparatus—a cell—in which the operation is carried out. In the case of solutions—such, e.g. as sulphate of copper in acidulated water—the decomposition may be only partial, while under suitable conditions, though decomposition goes on, the state of saturation of the solution will be maintained constant. The phenomenon is profoundly interest-

Electric Power. Transformer used in power sub-station. Above, 400-kilowatt turbo-generator, with switch-board

ing from a purely scientific point of view, and has received industrial applications of the first importance. Electro-metallurgy depends largely upon it, and electro-chemistry wholly. See Cell; Electricity; Electro-Chemistry.

ELECTRO-METALLURGY. This is the application of electricity to the extraction of metals from their ores and to metal refining. It also includes electro-plating, the use of the electric furnace, and electric welding. Electro-metallurgy comprises three different types of processes; first, those in which the action is purely electrolytic; secondly, those in which electrolytic action and heating are combined, and thirdly, those in which the effect desired is brought about solely by the heat developed by the electric current. The first class of these processes is well represented by the electrolytic refining of copper.

The operation is carried out in large wooden vats. The bath in which the plates are suspended is a solution of copper sulphate in water acidulated with sulphuric acid, the whole forming an electrolytic cell. The electric current from a dynamo enters the cell at the anode (A), which is the plate of crude copper to be refined, passes across the bath, up a plate of pure copper forming the kathode (B), and out of the cell. The current decomposes the solution, throwing out the copper, which is deposited in a practically pure condition on the kathode. At the same time the plate of crude copper begins to be broken down; the copper goes into solution, taking the place of that removed from the solution and deposited on the kathode; any iron and zinc present in the crude metal will also be dissolved; but the gold, silver, and frequently other metals present, while set free by the action, will not be dissolved, but will settle to the bottom of the vat in the form of slime.

Electrolysis. Electrolytic decomposition of water. A and B, test tubes collecting the oxygen and hydrogen set free

ELECTROMOTIVE FORCE (E.M.F.) Force or pressure which causes electricity to flow in a conductor. It may be produced by chemical action, as in the voltaic cell; by mechanical, as when the armature of a dynamo is turned and cuts the magnetic lines of force; or by heat, as when two unlike metals in contact are heated at the junction. The unit of E.M.F. is the volt (q.v.).

ELECTRON. Name given by Johnstone Stoney in 1891 to the "atom" of electricity, that is to say the smallest quantity that can exist by itself or can be transferred from one atom of matter to another. See Electricity.

ELECTRO-PLATING. The deposition of a metal on another substance, usually another metal, by electro-chemical action, either for

Electro-plating. Bath showing how articles are electro-plated with silver

the purpose of protecting the latter metal from corrosion, as when iron is electro-plated with copper, or for the purpose of giving to a comparatively cheap metal the appearance and some of the properties of one more costly, as when a teapot of Britannia metal is plated with silver. In silver-plating the bath contains a solution of silver. The anode plate is of silver, which is dissolved to take the place of the silver in the solution as the latter is gradually deposited on the article which is being plated. See

Electro-Metallurgy. Copper-refining vat. A, anode; B, kathode. See text

Electro-metallurgy.

ELECTROSTATICS. Term applied to that branch of the science of electricity which is concerned with electricity at rest or with electric charges, and is particularly occupied with the measurement of such charges. The science deals alike with the most elementary facts of electricity, such as the phenomena exhibited by a rubbed glass rod, and with the profound problems associated with the electrical relations of atomic particles. See Electrodynamics.

ELECTRUM. Term at various times applied to different materials. In ancient days it was given to amber, in the Middle Ages to common brass, in modern times to an alloy of copper, nickel, and zinc, much used for the manufacture of drawing and other instruments; also to an alloy of copper, zinc, and tin, and to native minerals containing gold and silver. An alloy of gold and silver known by this term, of a pale yellow colour, was used by the Greeks and Romans for ornaments and coins. The earliest coins known were made of it; while rods having 651 parts gold and 334 silver in 1,000 were used as money in Asia Minor.

LIST OF ELEMENTS, WITH SIGNS, ATOMIC WEIGHTS, AND ATOMIC NUMBERS

Name	Sign	Atomic weight	Atomic No.	Name	Sign	Atomic weight	Atomic No.	Name	Sign	Atomic weight	Atomic No.	Name	Sign	Atomic weight	Atomic No.

ELEMENT (Lat. clementum, first principle). In chemistry, a simple substance which as yet has not been decomposed further by any ultimate analysis. See Atom; Chemistry.

ELEMI. Resinous exudation from a plant, probably Canarium commune. The resin is imported from Manila and is of a pale yellow colour. It has an odour suggesting fennel. Elemi was formerly used in medicine.

ELEPHANT (Gr.-Lat. elephas). Family of large, hoofed mammals. Only two species now survive, the African and the Asiatic. The nose is developed into a long flexible trunk. The ponderous body is encased in thick wrinkled skin, the legs are massive, and the knee joints are much lower down than in most hoofed animals. The head is enormous, the skull consisting of a mass of bone honey-combed by cells. Elephants are vegetarian in diet, feeding on the leaves and twigs of trees and on grass. The trunk is a delicate sense organ for smell and touch.

The Indian elephant is distinguished by its massive bulbous head, comparatively small ears, and the presence of four nails on the hind feet. It is rarely much more than 9 ft. high at the shoulder. The African elephant has a smaller and narrower head, very large fanlike ears, and only three nails on the hind feet. It attains a greater height, has longer legs, and a less heavy appearance than the Indian species. The trunk has two finger-like processes instead of one. Economically the African elephant is valued for its ivory, the Indian elephant as a draught animal.

ELEPHANT AND CASTLE. Design found in early MSS. and in medieval times.

Elephant. Left, African elephant, valuable by reason of its ivory tusks. Right, Asiatic elephant, a good draught animal
Photo of Asiatic elephant by Gambier D'Aton, F.Z.S.

Elephants carrying armed men into battle were used in the East from immemorial days. The Cutlers' Company, who did a large trade in ivory, adopted the animal so castled as their crest.

Elephant and Castle is the name of a London tavern in the met. bor. of Southwark, 1½ m. from Ludgate Hill, and is applied also to the district of which it is the centre.

ELEPHANTA OR GHARAPURI. Island in Bombay Harbour, India. From 4 m. to 4½ m. in circumference, it consists of two hills. It was so called by the Portuguese from a large stone elephant. The island is famous for its caves or rock temples.

ELEPHANT APPLE (*Feronia elephantum*). Large evergreen tree of the order Rutaceae. A native of Coromandel, it has glossy leaflets and white flowers. The fruit is as large as an apple, with a hard, woody rind containing seeds embedded in pulpy flesh. The pulp is eatable. The wood is hard and heavy but not durable. The tree exudes a gum from wounds which forms a constituent of what is known as Indian gum-arabic.

ELEPHANTIASIS OR BARBADOS LEG. Disease characterised by chronic inflammation of the fibrous connective tissue, resulting eventually in excessive swelling of the leg, scrotum, arm or breast, and less frequently other parts. The condition is due to obstruction of the lymph circulation, most often caused by infection by a parasitic worm, the filaria. Treatment is not very satisfactory. It is stated that the best results are obtained by keeping the patient in bed and injecting fibrolysin daily for three to six months.

Elephant's-foot. Leaves and flowers of the S. African climber

The disease is now most often seen in India, Ceylon, China, Japan, the Philippine Islands, Fiji, Samoa, many parts of Africa, the S. United States, Central America, the West Indies, Brazil, and Peru. Its distribution is influenced by that of mosquitoes.

ELEPHANTINE. Island in the Nile at Assuan, Upper Egypt. Marking the S. limit of ancient Nile navigation, it contained the Old Kingdom frontier station, Abu, or elephant town, an entrepôt of the Sudanese ivory trade. On the W. Nile bank opposite are rock-hewn tombs of Old and Middle Kingdom governors. Under Thothmes III, Ramesses II, and other kings, its governor controlled the Assuan granite quarries. An interesting object is the nilometer, dating from the Ptolemaic period.

ELEPHANT'S-FOOT, HOTTENTOT BREAD, OR TORTOISE PLANT (*Testudinaria elephantipes*). Perennial climbing herb of the order Dioscoreaceae. It is a native of S. Africa. The huge rootstock (as much as 4 ft. across) is covered with a corky bark, ultimately cracked into angular protuberances. It contains a store of starch, eaten by the Bushmen of South Africa. The slender stems climb to a height of from 30 ft. to 40 ft., and bear small heart-shaped leaves and sprays of tiny greenish yellow flowers.

Eleusine, showing the finger-like flowers

ELEUSINE. Genus of grasses of the natural order Gramineae. Natives of warm regions, they are distinguished by the flower spikes being arranged finger fashion at the top of the stem. One variety, *E. coracana*, is grown in Japan and on the Coromandel coast, where its large seeds are used as corn.

ELEUSIS. Ancient city of Attica. Said to have been founded by Triptolemus, it stands on the Bay of Levensia, 12 m. N.W. of Athens, with which it is still connected by the old causeway called the Sacred road. It was the chief seat of the worship of Demeter, in whose temple the Eleusinia were performed. These

were rites symbolical of the death of Nature in autumn and its rebirth in spring. The city was destroyed by the Goths. It is now represented by the village Levsina, near Athens, chiefly inhabited by Albanians.

ELEVATOR (Lat. *elevare*, to lift up). American name for a grain silo or store. It contains a number of

Elevator. Interior of a grain elevator: sacks of grain being stacked

deep vertical hins, circular, hexagonal, or square in plan, and constructed of steel plates or reinforced concrete; and is equipped with elevating, cleaning, distributing, and discharging apparatus. A lift for goods or passengers is sometimes called an elevator. See Escalator.

In aeronautics, the flap, or hinged controlling surface, which raises or depresses the nose of the aircraft is an elevator. It is usually mounted at the rear of the machine, and is operated by the fore and aft movement of the control lever. See Aeroplane.

ELF. Small being common to the folklore of most countries of northern Europe. If left undisturbed elves maintain peace with men and delight in doing them service; but if interfered with retaliate with mischief. They are generally gifted with wisdom and sometimes with divination. A common characteristic of the elf was his power of becoming invisible, frequently by means of cloak or cap.

Flint arrow-heads were called elf-arrows or elf-bolts from an idea that they were weapons of these little people. They are worn as amulets (Ancient Etruria, Italy), and reproduced for sale (Meccen). In Ireland water poured over them is given to cattle.

ELGAR, SIR EDWARD (b. 1857). British composer. Born at Broadheath, Worcester-shire, June 2, 1857, he was largely self-taught as a musician. His first success was the production of *King Olaf* at Hanley in 1893. In 1899 his *Enigma* orchestral variations and his *Sea Pictures* added much to his reputation, which was firmly established by the performance of *The Dream of Gerontius* (Birmingham, 1900). His other important works are *The Apostles*, *The Kingdom*, two orchestral symphonies, and *Falstaff*. In 1904 Elgar was knighted, and in 1911 was given the Order of Merit, and in 1924 was made master of the King's Musick.

Sir Edward Elgar, British composer
Lambert

ELGIN. Burgh and co. town of Moray (Elginshire). It is 80 m. by rly. N.W. of Aberdeen on the L.M.S. and L.N.E. Rlys.; Lossiemouth, its port, is 5 m. to the N. The cathedral, founded in 1224, burnt down in 1270, rebuilt, and again destroyed by fire in 1390 by the Wolf of Badenoch, and again restored, was wrecked by the fall of the central tower, 1711. Remains exist of the bishop's palace, a royal

castle, and monasteries of Black friars and Grey friars: the Grey friars' chapel was restored by the third marquess of Bute. Woollen manufacture, ironfounding, and tanning are industries. Market day, Fri. Pop. 7,776.

Elginshire is the old name of the county now called Moray (q.v.).

ELGIN, EARL OF. Scottish title held by the family of Bruce since 1633. Sir Edward Bruce, master of the rolls under James I, was made a baron in 1601, and his son Thomas was made earl of Elgin and later an English baron. In 1746 the earldom of Elgin passed to Charles Bruce, 9th earl of Kincardine, whose successors have borne the double title. Thomas Bruce, 7th earl of Elgin and 11th earl of Kincardine, a general in the army and ambassador at Brussels, Berlin, and Constantinople, is remembered as the collector of the Elgin Marbles. The family seat is Broomhall, Fife, and the earl's son is known as Lord Bruce.

Elgin Marbles. Youths bearing wine for libations to Athena; from the north frieze of the Parthenon
British Museum

The Elgin Marbles consisted largely of sculptures by Pheidias and other great artists from the Parthenon and the temple of Nike Apteros, in Athens. Despite enormous difficulties, including the wreck of the ship conveying the precious cargo to England, they were brought to London in 1806. They were for £35,000, less than half of the sum (£74,000) Lord Elgin had paid to preserve them from total destruction, and are now in the galleries of the British Museum.

ELGIN, JAMES BRUCE, 8TH EARL OF (1811-63). British diplomatist. Born in London July 20, 1811, son of the 7th earl, whom he succeeded in 1841, he was governor of Jamaica from 1842-46, and governor-general of Canada from 1846-54. In 1857 he went as a special commissioner to China, and in 1860 secured the ratification of the treaty of Tientsin. In 1862 and 1863 he was viceroy of India, where he died Nov. 20, 1863.

His son, Victor Alexander Bruce, the 9th earl (1849-1917) was treasurer of the household and first commissioner of works in Gladstone's government of 1886. From 1894-99 he was viceroy of India, and colonial secretary, 1905-08. He died Jan. 18, 1917, when his eldest son (b. 1881) became 10th earl of Elgin.

ELI. Judge and priest of Israel in the later period of the Judges. Through Samuel, who was in his service as a boy attendant, God indicated his anger at the misdeeds of Eli's sons. When the news came that the ark of the Covenant had been taken by the Philistines, Eli fell back and broke his neck.

ELIA. Name taken by Charles Lamb. It was that of a clerk in the South Sea House, and was first assumed by Lamb when in 1820 he began to contribute essays to *The London Magazine*. See Lamb, Charles.

ELIBANK, BARON. Scottish title horn since 1643 by the family of Murray, and now merged in that of Viscount Elihank. Patrick Murray was made a baron by Charles I in 1643. In 1871 Montolieu Fox Oliphant (1840-1927) became 10th baron, and in 1911 he was made a viscount of the United Kingdom. His eldest son, Alexander (1870-1920), was made Lord Murray of Elihank in 1912. Of Viscount Elihank's younger sons, Gideon, who succeeded him as 2nd Viscount in 1927, had a long record of service under the colonial office, and Arthur was M.P. for Kincardineshire, 1908-23.

ELIE. Burgh and watering place of Fifeshire. It is on the N. side of the Firth of Forth, 10 m. S. of St. Andrews and 45 m. by rly. N.E. of Edinburgh on the L.N.E. Rly. It includes Earlsferry. Pop. 1,507.

ELIJAH. Hebrew prophet. A native of Gilead (1 Kings 17, 1), he lived in the days of Ahab. He appears to have led a kind of hermit life in the mountains. On Mount Carmel he challenged the priests of Baal to a test of the rival religions by calling down fire from heaven. When the end came, Elijah passed in a chariot of fire into the heavens. Jewish tradition long held that he would reappear before the coming of the Messiah, and the chair of Elijah is still set ready at the Passover meal.

ELIOT, GEORGE. Pen-name of the English novelist Mary Ann or Marian Evans. Born Nov. 22, 1819, at Arbury Farm, near Nuneaton.

she was the daughter of a carpenter turned estate agent. Her mother's death, and the marriage of her elder sister, Christiana, threw on her shoulders, at 16 years old, the responsibility of her father's household. Here she was surrounded by the narrowest influences of evangelical revivalism, deeply confirmed by her aunt Elizabeth, the original of Dinah Morris in *Adam Bede*. She became wise in all that pertained to country life in Warwickshire, which is the background of her best work. A move to Coventry, in 1841, first brought her into a wider and more literary atmosphere. She turned her mind to such tasks as a translation of Strauss's *The Life of Jesus*, and gave up orthodox faith for ever. On her father's death in 1849 she moved to London, and was soon appointed assistant editor of *The Westminster Review*, where she wrote on ethics. Through this she made the acquaintance of G. H. Lewes, with whom she lived until his death.

It was Lewes who first discovered, almost by accident, Miss Evans's genius for fiction. He encouraged her somewhat diffident aspirations, and himself carried out all the negotiations with editors and publishers, which resulted in the anonymous appearance of three stories in *Blackwood's Magazine*, published in 1858 as *Scenes of Clerical Life*. They were followed by *Adam Bede*, 1859, *The Mill on the Floss*, 1860; and *Silas Marner*, 1861. Henceforth she lived happily and strenuously among the thinkers of the day, a professional woman of letters. Her later output embraced *Romola*, 1863, a painstaking reconstruction of the past in 16th century Italy; *Felix Holt*, the Radical, 1866, a political treatise; *Middlemarch*, 1871-72, a problem novel with three loosely-knit plots;

George Eliot, English novelist
After F. D'Albert Durade

8th Earl of Elgin, British diplomatist

9th Earl of Elgin, British statesman
Elliott & Fry

Daniel Deronda, 1876, a study of an alien race: besides The Spanish Gypsy and The Legend of Jubal in verse. After Leves' death, in 1878, she married in 1880 John W. Cross, afterwards her biographer, but died on December 22 of the same year

ELIOT, SIR JOHN (1592-1632). English statesman. Born at Port Eliot, Cornwall, he was knighted in 1618. First elected M.P. in 1614, he attacked Buckingham in 1626, and was a principal promoter of the Petition of Right in 1627. On March 2, 1629, Eliot read a protest against unauthorised taxation, whilst the Speaker was forcibly held down in his chair, and two days later he was sent to the Tower, where he remained until his death, Nov. 27, 1632. Consult Life, J. Forster, 1864.

Sir John Eliot, English statesman
From a painting in the possession of the Earl of St. Germans

Another John Eliot (1604-90) was a missionary to the Red Indians. His headquarters was at Roxbury, near Boston, where he died May 20, 1690.

ELISHA. Son of Shaphat, and companion of the prophet Elijah, whose successor he became. At the translation of Elijah, he received his mantle as a sign of office. He flourished in the reigns of Jehoram, Jehu, Jehoahaz, and Joash, and had considerable influence in public affairs. His many miracles were mainly of a beneficent character.

ELIXIR (Arab. el iksir, the philosopher's stone). In pharmacy the term is used for preparations containing alcohol, flavouring agents, sometimes active ingredients as senna. It is a tincture of various substances held together by alcohol.

In alchemy, the elixir of life (elixir vitae) was believed to be a substance which would prolong indefinitely the life of anyone who consumed it. See Alchemy.

ELIZABETH (1207-31). Hungarian saint. Daughter of Andro II of Hungary, she was born at Presburg, and early showed her love of the ascetic life. Married in 1221 to Louis, ruler of Thuringia, she was driven from the court on his death in 1227. Renouncing the world, she lived at Marburg and subjected herself to the severest penances. She died on Nov. 19, 1231, and was canonised in 1235.

ELIZABETH (1533-1603). Queen of England. The daughter of Henry VIII and Anne Boleyn, she was born at Greenwich, Sept. 17, 1533. According to the Roman Catholics she was illegitimate, as Catherine of Aragon, being still alive, was Henry's legal wife. In 1536 her mother was executed, and until her accession to the throne the princess lived a hard, loveless life. In an atmosphere of suspicion she learned that duplicity was essential to self-preservation. She did, however, receive an education which gave a chance for her intellectual gifts to display themselves. In Mary's reign she was charged with complicity in Wyatt's rebellion, but proof of her guilt was not forthcoming.

In Nov., 1558, Elizabeth became queen. She herself was the ruler of the country, although she chose her counsellors with profound insight. Public opinion demanded that she should

marry, and for 25 years she played with marriage proposals, the most notable of her suitors being Philip II of Spain: the Austrian archduke Charles; Henry of Anjou, afterwards Henry III of France; and finally his brother, Francis. Fears were at one time entertained that she might marry her undesirable favourite, Robert Dudley, whom she made earl of Leicester. It was not till she reached the age of 50 that the theory of her probable marriage was finally abandoned.

The main events of Elizabeth's reign were the settlement of the religious difficulty by the establishment of a national church system which, although displeasing to extremists on both sides, has stood the stern test of time; and the defeat of the Armada in 1588, by which Spain was crushed and England secured the mastery of the seas. Linked with the struggle with Spain and the tortuous policy pursued by the queen towards France and other foreign powers was the question of the succession to the throne, which became more pressing as Elizabeth grew older and the chances of a direct heir grew less. Mary queen of Scots, a prisoner for 19 years, was the centre of a series of plots, which only ended with her execution in 1587.

The concluding years of the queen's reign were marked by her romantic attachment to Essex and his tragic death; and by signs that parliament was prepared to claim a larger share in affairs of state. Elizabeth died at Richmond, March 24, 1603, having to the end refused to name anyone as her successor, although tacitly recognizing that James of Scotland would become king.

ELIZABETH (1837-98). Empress of Austria. Born Dec. 24, 1837, the daughter of Maximilian I, king of Bavaria, she married Francis Joseph of Austria, April 24, 1854. In 1877 she was crowned queen of Hungary. In 1889 her only son, Rudolf, died in tragic circumstances. The empress was mortally stabbed by an Italian anarchist at Geneva, Sept. 10, 1898.

Elizabeth, Queen of the Belgians

ELIZABETH (b. 1876). Queen of the Belgians. Born July 25, 1876, she was the younger daughter of Charles Theodore, a member of a younger branch of the family that until 1918 ruled over Bavaria. On Oct. 2, 1900, she was married at Munich to Albert, who in 1909 became king of the Belgians. See Albert.

ELIZABETH (1843-1916). Queen of Rumania. Born at Neuviad, Dec. 29, 1843, the daughter of Prince Hermann of Wied, in 1869 she married King (then Prince) Carol of Rumania. She endeared herself to her adopted country by her ministrations to the wounded in the war with Turkey (1877-78), and founded the order of Elizabeth to reward distinguished Red Cross work. She died March 2, 1916. A woman of cultivated tastes, a fine musician, and no mean painter, the queen wrote under the pen-name of Carmen Sylva and published poems and stories in Rumanian, German, French, and English.

Queen Elizabeth
From the painting by F. Zuccaro

ELIZABETH (1709-62). Empress of Russia. Daughter of Peter the Great, she was born Dec. 18, 1709. On Dec. 6, 1741, she dethroned the child emperor, Ivan VI, and mounted his throne. Throughout the Seven Years' War she worked steadfastly for Russian interests, implacable in her opposition to Frederick II of Prussia. To the latter's great relief she died on Jan. 5, 1762. Elizabeth founded the university of Moscow, 1755, and the Academy of Arts at St. Petersburg.

Elizabeth, Empress of Russia

ELIZABETH, PHILIPPINE MARIE HELENE (1764-94). French princess, usually known as Madame Elizabeth. Born at Versailles, May 3, 1764, she was a granddaughter of Louis XV. Accused of aiding her brother, Louis XVI, and the royalist troops in 1792, she was guillotined, May 10, 1794.

ELIZABETH (b. 1926). English princess. The daughter of the duke and duchess of York, she was born in London, April 21, 1926, and baptized as Elizabeth Alexandra Mary. The fact that her uncle, the Prince of Wales, was unmarried made the princess a person of importance, as, owing to the laws governing the succession, she stood third in the line of succession. See York, Duke of.

ELIZABETHVILLE. Town of the Belgian Congo, headquarters of the Katanga prov. It is 2,305 m. from Cape Town and 292 m. from Bukama, on the Luabala portion of the Congo river. There are rich copper deposits in the neighbourhood. There is a postal air service between Elizabethville and Boma.

ELIZABETPOL or GANJA. Town of the Socialist Soviet Republic of Azerbaijan. It is 90 m. by rly. S.E. of Tiflis. There are many Armenian churches. Fruit, vegetables, and tobacco are grown. Pop. 57,394.

Elizabeth, British princess
Marcus Adams

ELK (Alces uachlis). Largest member of the deer family, known in America as the moose. The European elk is found in Scandinavia, E. Prussia, Poland, and parts of Russia; but is now much diminished in numbers. The adult is usually about 6½ ft. high, and may weigh as much as 1,000 lb. It is long in the leg, of heavy build, short in the neck, with long ears, and has a very long head with overhanging muzzle. The antlers of the male are palmated and very broad. It inhabits dense forests, where it feeds mainly on the leaves and young branches of the willow and birch, as well as on lichens and moss. See Moose; also illus. above.

Elizabeth, Queen of Rumania
(Carmen Sylva)

EL KANTARA. Town of Egypt, on the Suez Canal. Here on Jan. 26, 1915, in their first invasion of Egypt, an advance guard of Turks came into touch with a British patrol. On Feb. 3 they launched subsidiary attacks against the canal at El Kantara and other points to cover their main attack at Scrappeum, 32 m. farther S. This battle for the canal ended in the defeat of the Turks. See Egypt; Palestine.

ELL (Lat. ulna, Ger. ellenbogen, Eng. elbow). Medieval European measure of length. It varies from the English ell, borrowed from France, which equals 45 ins., to the Scottish of 37 ins., and the Flemish of 27 ins.

ELLAND. Urban district of Yorkshire (W.R.). It is on the Calder, 3 m. S.E. of Halifax, and has a station on the L.M.S. Rly. It has textile manufactures. Pop. 10,554.

ELLENBOROUGH, EDWARD LAW, BARON (1750-1818). British lawyer. Born at Great Salkeld, Cumberland, Nov. 16, 1750, he was called to the bar in 1780 and eight years later was leading counsel for Warren Hastings (q.v.). In 1802 he was appointed lord chief justice and created a peer. He died Dec. 13, 1818.

1st Earl of Ellenborough.
British administrator

His eldest son, Edward Law, 1st earl of Ellenborough (1790-1871), entered Parliament in 1813. Made lord privy seal in 1828, he was transferred the same year to the presidency of the board of control, and in 1841 became governor-general of India. He annexed Sind in 1842 and subdued Gwalior in 1844, in which year he was created an earl. He was made first lord of the Admiralty in 1846, and president of the board of control in 1858. He died Dec. 22, 1871.

Ellen's Isle, in Loch Katrine, immortalized in Scott's poem *The Lady of the Lake*

Ellen's Isle or **EILEAN MOLACH**. Islet in Loch Katrine, Scotland. It is largely the scene of Scott's *Lady of the Lake*.

ELLESMERE. Urban dist. and market town of Shropshire. It is 11 m. S.W. of Whitelure, on the G.W. Rly., and on the mere and canal of the same name. S. Mary's Church is a fine Gothic structure. Market days, Tues. and Sat. Pop. 1,850.

Earl of Ellesmere is a British title borne since 1846 by the family of Egerton. Francis Leveson-Gower, a younger son of the 1st duke of Sutherland, assumed the name of Egerton in 1833, when he inherited the estates of the Egertons, dukes of Bridgewater. He was created earl of Ellesmere in 1846, and from him the present earl is descended. The earl's chief seat is Worsley Hall, Manchester, but he has property in Shropshire, where is Ellesmere. His eldest son is called Viscount Brackley. See Bridgewater, Duke of.

Ellesmere Island is a large island of British N. America, in the Arctic region, N. of Devon Island, separated from Greenland by Smith Sound, Kennedy Channel, and Robeson Channel. It is a desolate tract of ice and snow.

ELLESMERE PORT AND WHITBY. Urb. dist. of Cheshire. It is 7 m. N. of Chester, at the junction of the Manchester Ship and Ellesmere Canals. An embankment separates the Mersey from the Manchester Ship Canal. The Ellesmere and Chester Canal, connecting the Dee and the Mersey, connects Chester with Ellesmere port. There are large docks and dyeworks. Pop. 16,500.

ELLICE ISLANDS. Group of coral islands in the Pacific Ocean. The chief industries are connected with phosphates and copra. With other islands they were annexed by Great Britain in 1915 as the Gilbert and Ellice Islands Colony, and are under the jurisdiction of the high commissioner for the W. Pacific. Area, 14 sq. m.; pop. 3,582.

ELLIOTT, MAXINE (b. 1873). American actress. Born in Rockland, Maine, Feb. 5, 1873, she began acting in *The Middleman*, with E. S. Willard (New York, Nov. 10, 1890), and was soon taking leading parts. Her first appearance in London was as Silvia in *The Two Gentlemen of Verona*, Daly's, July 2, 1895; from then onwards she acted in England frequently, a notable success being *Zuleika* in *Joseph and His Brethren* (His Majesty's, 1913). Her sister, Gertrude, also an actress, was the wife of Sir J. Forbes-Robertson (q.v.).

ELLIPSE (Gr. elleipsis). Conic section often called an oval. It is a plane curve such that the sum of the distances from any point of two foci on it is a constant.

Ellipse. SS' , foci on the axis XX . AA principal diameter. P is any point on the ellipse, and has the property that $SP + S'P$ is constant

ELLIS ISLAND. Island off New York harbour. In 1891 it was bought from New York State by the U.S. government for use as a centre for dealing with alien immigration into the U.S.A.

ELLORA. Ruined town of India, in Hyderabad state. Situated 13 m. N.W. of Aurangabad, it is famous for its rock temples dating from the 5th to the 9th or 10th century, the finest being the Kailas temple, built in the 8th century. The caves cover the face of a hill for 1½ m. and belong to three groups—Buddhist, Brahminical, and Jain.

ELLWOOD, THOMAS (1639-1714). English author and Quaker. He was born at Crowell, Oxfordshire, and became a Quaker in 1659. He became companion and reader to Milton after the latter lost his sight, and suggested to him the idea of *Paradise Regained*. He wrote various polemical treatises, but his most important work is his autobiography, which was finished by Joseph Wyeth and first published in 1714. He died March 1, 1714.

Elm tree in full foliage. It is a comparatively shallow rooting tree
F. R. Hinkins

80 ft. or thereabouts require a rich alluvial loam. The most familiar species are wych elm (*U. montana*) and the bell elm (*U. campestris*). The timber of elms has a tendency to decay inwardly, involving danger of the limbs dropping off suddenly, without any warning, especially in high winds.

ELMAN, MISCHA (b. 1891). Russian violinist. Born at Talnoy, Russia, Jan. 20, 1891, he received his musical education at Odessa and St. Petersburg. He made his début there in

1904, afterwards appearing in Berlin, Dresden, and elsewhere. His first appearance in London took place March 21, 1905; in New York in 1908. From the first he was recognized as one of the world's greatest violinists.

EL PASO. City of Texas, U.S.A. A health resort and port of entry, it stands 3,760 ft. above sea level on the Rio Grande, which separates the state from Mexico. It is the terminus of the National of Mexico and several other rlys. Among its buildings are the federal building, the city hall, and a Carnegie library. Its educational institutions include a school of mines and metallurgy. Elephant Butte dam was completed in 1916. The chief industry is the smelting of copper and lead ores. Pop. 113,500.

ELPHINSTONE, MOUNTSTUART (1779-1859). British administrator. Born Oct. 6, 1779, the fourth son of the 11th Baron Elphinstone, he entered the Bengal civil service in 1796. He was for some years at Poona, and from 1819-27 was governor of Bombay. He compiled the famous legal code known by his name, and virtually founded the system of state education in India. Elphinstone College, in Bombay, was endowed by the natives as a memorial to him. He died Nov. 20, 1859.

ELPHINSTONE, WILLIAM (1431-1514). Scottish prelate, founder of Aberdeen University. He was educated at Glasgow University, of which he became rector in 1474, was made bishop of Ross in 1481, and nominated to the see of Aberdeen in 1483. In 1488 he was appointed lord chancellor, and lord privy seal in 1492. In 1494 he established King's College, the original foundation of Aberdeen University, securing grants from James IV for its maintenance. He introduced the printing press into Scotland, 1507. He died at Edinburgh, Oct. 25, 1514.

ELSLINORE (Dan. Helsingör). Seaport of Denmark, on the island of Zealand. It stands on The Sound, and has ferry communication with Helsingborg on the Swedish coast, and connexion by rly. with Copenhagen. Ship-building is carried on. The place is the scene of Shakespeare's *Hamlet*. Pop. 17,100.

Elstow (formerly Helenstow). Village of Bedfordshire. It is 1 m. S. of Bedford. Bunyan (q.v.) was born at Harrowden, 1 m. away.

ELSTREE. Town of Hertfordshire. It has a station on the L.M.S. Rly., 7 m. S. of St. Albans. The church of S. Nicolas was rebuilt in the 19th century. Boreham Wood, near Elstree, is a centre of the film industry, several large studios having been built there. Pop. 2,238.

ELSWICK. District of Northumberland. It forms part of Newcastle-upon-Tyne, and has a station on the L.N.E.R. Here are the Elswick Works of Sir W. G. Armstrong, Whitworth & Co., Ltd.

EL TEB, BATTLE OF. Fought by the British, Feb. 29, 1884, against the Arabs. El Teb is a post in the Anglo-Egyptian Sudan on the road from Trinkitat on the Red Sea to Tokar. In 1883 Osman Digna was besieging Tokar, and Valentine Baker, with a force of 4,000 men, was sent to relieve it. He was defeated, and Tokar surrendered. A British force of 4,400 men was then landed at

Mountstuart Elphinstone, British administrator
From a portrait in the British Museum

Suakin On Feb 29 this defeated the Arabs in their camp at El Teb.

ELTHAM. District of Kent, in the met. bor. of Woolwich, 7 m S.E. of London Bridge. It has stations at Motttingham, Well Hall, and Eltham Park on the Southern Ry. Open spaces include Eltham Park and Avery Hill. Eltham Palace was built towards the end of the 13th century. Its extant portions, the banqueting hall and part of the old kitchens, are fine examples of domestic architecture of the reign of Edward IV. The 15th century bridge across the moat remains. Pop. 28,308.

There is a township of North Island, New Zealand, called Eltham, on the main line from Wellington to New Plymouth, from which it is distant 36 m.

The title Earl of Eltham is borne by the eldest son of the marquess of Cambridge (q.v.).

ELVEY, SIR GEORGE JOB (1816-93). British organist and composer. Born at Canterbury, March 27, 1816, in 1835 he was made organist of S. George's Chapel, Windsor, retaining this post until 1882. He was knighted in 1871, and died Dec. 9, 1893. Elvey's compositions are chiefly in connexion with church music.

John Elwes,
British miser.

College, Suffolk, he assumed his name. He was M.P. for Berkshire 1774-87. After a life of the utmost penury and niggardliness, during which he let the estate go to ruin for want of repairs, he died Nov. 26, 1789. He left a fortune of over £500,000.

ELY. City, urban dist. and market town of Cambridgeshire. On the Ouse, in the Isle of Ely, it is 16 m. N.N.E. of Cambridge on the L.N.E.R. The present cathedral was begun in 1083. It embraces every style from Early Norman to Late Perpendicular. The W. portion of the nave and W. tower were added in 1180; the Galilee or W. porch was completed about the beginning of the 13th century; the choir was erected between 1235-52; the Decorated octagon tower and lantern, finished in 1328, took the place of the central tower, which collapsed six years earlier; the lady chapel (now the parish church) dates from 1321-49. Within the precincts are the Tudor bishop's palace, the King's School (1541), a theological college, and a park. Ely became a bishopric in 1109. Market day, Thurs. Pop. 7,690.

ELYOT, SIR THOMAS (c. 1490-1546). English diplomatist and scholar. A native of Wiltshire, he was knighted by Henry VIII and sent on several embassies. His most famous work is *The Book named The Governor*, 1531, the first on the subject of education written and printed in the English language. He also compiled a Latin-English dictionary, 1538. He died at Carleton, Cambridgeshire, March 20, 1546.

Sir Thomas Elyot,
English diplomatist
After Holbein

ELYSEE. Palace in Paris, the official residence of the president of the French Republic. In the Faubourg St. Honoré, a garden separates it from the Champs Elysées. It was built in 1718 for the comte d'Evreux, but passed later into royal hands. After 1870 it became the official residence of the president. See Paris.

ELYSIUM OR THE ELYSIAN FIELDS. In classical mythology, the abode of the souls of the good after death. Some legends make Elysium a part of the underworld, others make it an island in the Atlantic Ocean. Elysium is represented as a place of perpetual sunshine with flowery meadows and pleasant streams.

ELZEVR. Name of a family of printers which is given also to some famous books printed by them, e.g. pocket editions of the Greek Testament, Latin and Italian classics, and French memoirs. The firm, founded in Leiden in 1583 by Louis Elzevir, was carried on after 1655 at Amsterdam by members of the family until 1681, and ended in 1712. The publications of the firm, dated from 1626 to 1680 are generally the most valuable.

EMBALMING (Fr. em, in, baume; Gr. balsamon, balm). Art of preserving dead bodies. Among the ancient Egyptians, and possibly the Peruvians, embalming originated in the idea of the resurrection of the body. Herodotus describes three Egyptian methods, all involving the use of aromatic and antiseptic preparations. Usually the internal organs were separately embalmed and placed in jars. The Egyptians also embalmed cats, crocodiles, hawks, and other sacred animals and birds.

The ancient Persians apparently embalmed with wax, the Assyrians with honey, and the Guanehes, the aborigines of the Canary Islands, in the Egyptian manner. Embalming has long been practised in Europe and is fairly common in the U.S.A.

EMBANKMENT. Mound of loose material artificially formed, or a bank supported by artificial means. Embankments may be classed as (a) embankments formed simply by tipping material and allowing the sides to assume the natural angle of repose of the material of which they consist, as in railway embankments; (b) reservoir embankments for containing and resisting the pressure of water; these are lined with concrete or stone, and rendered watertight by a vertical wall of clay puddle in the centre of the bank;

(c) embankments of earth or similar material retained, supported, and protected by walls.

EMBASSY. Term used for an ambassador and his staff collectively. It is also used for the building which serves as their headquarters. By international courtesy the building is regarded as standing on the soil of the country to which the ambassador belongs. See Ambassador; Diplomacy.

EMBER DAY. In the Anglican and Roman Catholic Churches, fasts of the four seasons. They are the Wednesday, Friday, and Saturday after the 1st Sunday in Lent, Whitsunday, Sept. 14 (Holy Cross Day), and Dec. 13 (feast of S. Lucy). The weeks in which these days occur are called Ember Weeks.

EMBEZZLEMENT. In English law, the wrongful appropriation to his own use, by a clerk or servant, of money received by him from his master. It must be distinguished from larceny. In the latter case the servant steals property which has been in his master's possession; in embezzlement he intercepts it.

EMBLEM (Gr. emblēma, an insertion). Originally meaning an ornament inserted on a mosaic or vase, the term is now generally used for an object or representation symbolic by reason of its connexion with another object, person, or event. It is also used for the marks used by printers to distinguish the work of their press.

In art the emblem has played an important part, especially in the representation of Christian saints, etc. Among the commonest are the keys of S. Peter, the lamb of S. John Baptist, and the dragon of S. George. Emblems are also given to various virtues and religious conceptions.

Embalming. Egyptian embalmers at work, from a relief

EMBOLISM (Gr. embolos, stopper, plug). Obstruction of a blood vessel by material which has been carried along in the blood-stream. The commonest cause of embolism is detachment of a blood-clot or portion of a blood-clot which has formed in a vein.

Embolism of a coronary artery may cause sudden death; embolism of the brain may lead to paralysis; embolism affecting the main blood supply to a limb leads to sudden pain, swelling, and pulselessness, followed by gangrene in some cases or by recovery where other vessels enlarge and replace the blocked circulation.

EMBROIDERY. Art of decoration by means of needle and thread. Its practice is of the highest antiquity. Phrygia and ancient

Embankment. 1. Embankment at Belvide reservoir, Staffs. 2. Section of Thames Embankment at Lambeth

Babylon were renowned for their embroideries, and the art was well known in ancient Greece. In Christian times embroidery became the handmaid of the Church, and so the most ancient examples are ecclesiastical vestments. The oldest existing vestments are those at Arles, dating from the 6th century. One example of medieval embroidery that stands alone is the Bayeux Tapestry (q.v.).

In the 13th century English embroideries were without equal, but in the 15th century the art deteriorated. In Elizabethan times the elaborate embroidery on ecclesiastical vestments was extended to secular dresses and furniture. Magnificent bed-curtains ornamented with trees and large leaves full of elaborate detail were made in the Jacobean period, while under the Hanoverian kings the highly ornate court dresses afforded excellent opportunity for the art of the needle. Later it sank to a low ebb in slavish imitations of

paintings, but the revelation of Japanese art, and the study of Eastern examples have restored embroidery to a very high level.

There are many kinds of embroidery, such as cut-work, appliqué, couching, quilting, etc., while the principal stitches are chain, feather, satin, cushion, comb, cross, tent, lace, long-and-short, back, herringbone, buttonhole, and many Eastern stitches.

EMBRYOLOGY (Gr. *embryon*, embryo: *logos*, science). Science of the individual life-cycle, especially of the early stages during which a germ grows into a body. Generally the individual life of plant or animal begins in the intimate union of two germ-cells or gametes, a more passive egg-cell or ovum and a more active sperm-cell or spermatozoon. What follows refers chiefly to animal development. In most animals the egg-cells are formed by the multiplication of primitive germ-cells within the ovary. The egg-cell usually accumulates yolk-material. The yolk is furnished by the blood or other nutritive fluid of the parent or by special yolk glands. Around the egg are eventually formed sheaths or envelopes of various kinds. Most ova are minute spheres, and the majority are microscopically minute. The egg-cell or oosphere of a flowering plant lies within an "embryo-sac," within the ovule, within the ovary. When it is fertilised, by a nucleus from the pollen-tube, it divides and re-divides to form an embryo. In flowerless plants the male element is usually a motile antherozoid.

The intimate union of the mature ovum and spermatozoon is called fertilisation. The head of the spermatozoon, penetrating the ovum, swells up; it moves towards the reduced ovum-nucleus and the two coalesce. On the heels of fertilisation comes segmentation, the egg-cell dividing into many daughter-cells. The result may be a solid ball of cells (morula), a hollow ball (blastula), or a disk (blastoderm). In many developing eggs which are not enumerated with much yolk material a blastula becomes indimpled to form a two-layered sac of cells (the gastrula). The outer layer is called the ectoderm or epiblast, the inner layer, the endoderm or hypoblast. In sponges and Coelenterates there are only two fundamental layers; in higher forms an intermediate layer, the mesoderm or mesoblast, is established.

As development proceeds new kinds of material become evident; all sorts of different cells—nervous, muscular, glandular, connective, and so on—appear; tissues and organs arise. But while this differentiation is in progress the developing body is also integrated. The germ has somehow had enregistered within it the many developments manifested in the past by the race to which it belongs. Development is the actualisation of this inheritance, and it comes about in such a way that there is in the individual a condensed recapitulation of the evolution which has been the work of ages. See *Biology*; *Cell*.

EMDEN. Seaport and town of Prussia, in the province of Hanover. Near the mouth of the Ems, 50 m. W.N.W. of Oldenburg, it is the terminus of the Dortmund-Ems canal. The port and its harbours are on a ship canal, which connects with the Ems, 2½ m. away, and other canals. The chief churches are the Great Church, Gasthaus Church, and New Church. The 16th century Renaissance town hall contains a collection of firearms. Pop. 27,807.

EMDEN. German light cruiser. A sister ship to the Dresden, she displaced 3,600 tons and had ten 4.1-in. guns. She was launched in

Emden. The German light cruiser when she had been driven ashore on one of the Cocos Islands in 1914

1908. Early in the Great War the Emden did much damage to British commerce. The Australian cruiser Sydney learning that the Emden was at Cocos Island, drove her ashore at North Keeling Island and destroyed her, Nov. 9, 1914. See *Cocos*; *Dresden*.

EMERALD. Green variety of mineral beryl. It crystallises in hexagonal system, and forms long six-sided prisms; it is valued as a gem-stone on account of its colour. Emeralds of antiquity came from Egypt; its mines, reopened in the 19th century, yield handsome stones, generally small in size and pale in hue. The finest crystals come from South America, chiefly Colombia, and from the Urals; a few are found in Austria, Australia, and the U.S.A. Other stones are known as emeralds, e.g. corundums, tourmalines, garnets, spodumenes, and peridots. See *Beryl*.

EMERSON, RALPH WALDO (1803–82). American poet, essayist, and philosopher. He was born at Boston, Mass., May 25, 1803, the son of a Unitarian minister. After graduating at Harvard in 1821, he spent three years in teaching, and then, having entered the Unitarian ministry, was appointed joint minister of the Second Church in Boston, 1829, a position he resigned in 1832.

The first volume of his famous essays was published in 1841, and a second series followed three years later. In 1847 the first collection of his poems was published. He twice visited England, and formed friendships with Carlyle and other writers. On the second occasion, in 1847, he delivered a series of lectures on Representative Men—Plato, Swedenborg, Montaigne, Shakespeare, Napoleon, and Goethe. The volume containing these addresses was published in 1850. In 1856 the fruits of his observation during his stay in England were embodied in a rarely discriminating volume, *English Traits*. Writing and lecturing, he came to take a high position as the chief leader of American thought of his generation. He died at Concord, where his house still stands, Apr. 27, 1882, and is buried there in the famous cemetery of Sleepy Hollow.

EMERY. Dark, granular variety of mineral corundum. In association with schistose

rocks it occurs in Saxony, and in Naxos and other Greek islands. In the U.S.A. it is largely worked at Peekskill, New York. Owing to its extreme hardness, it is used for abrasive purposes, the commercial emery being a mechanical mixture of corundum, magnetite or hematite, and sometimes spinel.

EMERY, WINIFRED (1862–1924). Stage name of Isobel Winifred Maud Emery Maude, British actress. Born at Manchester, Aug. 1, 1862, and belonging to a well-known theatrical family, in 1888 she married Cyril F. Maude (q.v.). Her first appearance on the stage was in Liverpool, 1870, as Geraldine in *The Green Bushes*. Her début as an adult was at *The Imperial*, Westminster, April 14, 1879, in *Man is Not Perfect*. A versatile actress, she appeared with Wilson Barrett, Comyns Carr, Forbes-Robertson, and Beerbohm Tree, and accompanied Henry Irving to the U.S.A. in 1884 and 1887–88. She died July 15, 1924.

EMETIC (Gr. *emetikos*). Drug which causes vomiting. Emetics are occasionally used to relieve dyspepsia by evacuating the stomach of its contents, and also in conditions of difficulty of breathing caused by bronchitis, especially in children, when the act of vomiting stimulates the respiratory mechanism.

The great use of emetics is to remove poison from the stomach. This form of treatment may be adopted with safety in almost all cases except poisoning from strong mineral acids and carbolic acid, which are apt to corrode the stomach wall and render violent movement of the organ undesirable. The simplest emetics are a tablespoonful of mustard, or one or two of salt, in a tumbler of warm water.

EMETINE. Chief alkaloid found in the roots of ipecacuanha (*Cephaelis Ipecacuanha*). Emetine is a violent emetic, but in medicinal doses is a valuable remedy for certain forms of dysentery.

EMIGRATION (Latin *e*, from; *migrare*, to change one's residence). Systematic migration of the surplus population of one land to another for the purpose of settlement. The modern emigration movement began after the discovery of America, developing contemporaneously with the era of the merchant adventurers.

Zeal for the Catholic Church led Spain to attempt to establish on a large scale Catholic nations in S. America. The departure of the Pilgrim Fathers from Plymouth in 1620 for New England laid the foundations of the U.S.A. of to-day. A second great impelling force has been poverty. The most marked example of this was the steady exodus of the Irish people to America during the Irish famines in the 19th century. The third cause is love of adventure and ambition.

The abundant industrial openings and the high wages of the U.S.A. made it for many years the Mecca of the European emigrant. Soon, however, this and other countries began to object to many of the emigrants as belonging to a class lower in the scale of civilization than they themselves. In the British Empire, Canada and Australia adopted a policy of refusing to receive settlers unless up to a certain standard of wealth and education. In 1921 the United States adopted a system by which only a certain number of emigrants, fixed on the number already in the country, were allowed from each nation. In 1928 the number of emigrants from Britain to other countries totalled 397,247.

One of the most significant movements of recent years has been the large Japanese emigration all over the Pacific coast and islands due to the rapid growth of Japanese population. This has given rise to serious difficulties with the white nations of the Pacific.

The emigration of British subjects to the dominions and foreign countries is super-

Embryology. Hen's egg shown in section

R. W. Emerson, American essayist

intended by the Oversea Settlement Office, a department of the British Colonial Office. The address of the office is Caxton House, Tothill Street, London, S.W.1. See Alien; Colonisation; Immigration.

EMIN PASHA (1840-92). German administrator. Born at Oppeln, Silesia, March 28, 1840, of Jewish parents, his real name was Edward Schnitzer. After studying medicine at Breslau and Berlin, he took up an appointment on the staff of Hakki Pasha, in Turkey, and adopted a Turkish name. In 1876 he went to Egypt, and in 1878 was appointed by Gordon governor-general of the Equatorial province. When the Sudan was abandoned

Emin Pasha, German administrator

in 1883, Emin was left in the heart of the country, whence he was rescued by Stanley in 1889. He met his death at the hands of Manyama Arabs in Oct., 1892. His success in abolishing the slave trade and his observations of the flora, fauna, and meteorology of the country gained him an enduring reputation.

EMIR. Arabic word meaning commander, also spelt ameer or amir. It is used for chiefs and other rulers of certain Mahomedan peoples, the form emir being mainly confined to those in Africa.

EMMAUS. Ancient town of Palestine. It is now represented by the village of Amwas, on the road between Jaffa and Jerusalem. It is not to be confused with the Emmaus of the N.T., near which Christ appeared to His disciples after the Resurrection, the site of which is unknown.

EMMET, ROBERT (1778-1803). Irish nationalist. Youngest son of the physician to the viceroy, and brother of the United Irishman, Thomas Addis Emmet, he was born in Dublin. Between 1800-2, Emmet travelled on the Continent, and was fired with the idea of securing French aid in a rising against England. He collected arms at various depots in Dublin and drew up a plan of campaign for a rising on July 23, 1803. This, however, was frustrated, and Emmet fled into the Wicklow Mts. On Aug. 25 he was arrested near Harold's Cross, was found guilty of treason, and hanged, Sept. 20, 1803.

Robert Emmet, Irish nationalist
After Petrie

EMPEDOCLES (c. 495-435 B.C.). Greek philosopher of Agrigento in Sicily. He was the first to teach that all material substances are compounded from the four so-called elements, fire, air, earth, and water. According to legend, Empedocles threw himself into the burning crater of Etna in order that the completeness of his disappearance might engender the belief that he had been translated alive to heaven. This legend is the subject of Matthew Arnold's *Empedocles on Etna* (1852). Pron. Emped-o-kleez.

EMPEROR (Lat. imperare, to command). Title applied to sovereigns of the highest class. It was first used in this sense by Julius Caesar, who, among other titles, called himself imperator. His nephew Augustus established the empire, and the title was borne by his successors both in Rome and in Constantinople: it was taken by Charlemagne when, in 800, he founded the medieval empire. In the 19th century it was assumed by several rulers who regarded themselves as more powerful than ordinary kings. Chief among these was Napoleon, who in 1804 assumed it.

While the English translated the word imperator as emperor and the French as empereur, the Germans had rendered it as Kaiser, a tribute to Caesar, and this was the title taken by Francis II when he became emperor of Austria in 1804. The British sovereign is called emperor of India, a translation of Kaiser-i-Hind, the title taken by Queen Victoria in 1876. See Empire.

EMPEROR MOTH (*Saturnia pavonia*). Large night-flying moth, fairly common in many parts of Great Britain. The wings are mottled brown and tawny, with a conspicuous eye in the middle of each. The caterpillar feeds on the swallow, bramble, heather, and various other plants. See Moth.

Emperor Moth. Female of the species *Saturnia pavonia*
John J. Ward

EMPHYSEMA (Gr. inflation). Condition in which the alveoli or air-cells of the lungs are over-distended with air and their walls atrophied. It is due mainly to long-continued increase of pressure of the air within the lungs, and is most often seen in players on wind instruments, glass-blowers, and sufferers from chronic bronchitis.

Emphysema produces enlargement of the chest, which becomes barrel-shaped. The incomplete oxygenation of the blood may lead to cyanosis or blueness of the face. The disease may persist for many years, but gradually becomes worse. Medical treatment is not of much avail. If possible sufferers should spend the winter in a warm climate.

EMPIRE. Word derived from the Roman word imperium and meaning rule. It was used to describe the lands ruled by an emperor, the most powerful of temporal rulers, who claimed to be superior to kings. The Roman empire founded by Augustus was succeeded by the medieval empire known as the Holy Roman Empire, and by the Byzantium empire at Constantinople. In the 19th century there arose the Austrian, French, and German empires, and in the New World those of Brazil and Mexico.

The great states that existed before the Christian era are, for convenience, called empires, and we are familiar with a cycle of empires—those of Assyria, Persia, Macedonia preceding that of Rome. At present the tendency is to describe a federation of states as an empire, the great use of the word in this sense being for the British Empire.

HOLY ROMAN EMPIRE. Called frequently the Empire, this came into being when Charlemagne was crowned at Rome in 800, and at first it consisted of his dominions. Under his successors it was divided into three parts, and in the 10th century fell into decay. The tradition, however, remained, and in 962 it was restored by the duke of Saxony, Otto I, who was crowned at Rome and who claimed authority over much of Europe. In the 11th century the Empire became involved in that tremendous struggle with the Papacy for the lordship of Christendom in which the dominating figures were Hildebrand (Gregory VII) and Frederick I.

By this time the Empire had become a great mass of principalities, large and small, lay and ecclesiastical, of which one of the German princes was the official head. In 1273 Rudolph of Hapsburg laid the foundations of the greatness of that famous house, and from 1437 until 1806 a Hapsburg was, with one exception, at the head of the Holy Empire. After the Thirty Years' War (1648) the independence of the greater German princes

was an established fact, strengthened in 1785 when Frederick the Great of Prussia formed the Fürstentum to maintain their constitutional rights. In 1806 Francis, who had just taken the title of emperor of Austria, dropped the older title and the Holy Roman Empire ended. See British Empire; Byzantium; Charlemagne; Elector; Papacy; Rome; etc.

EMPIRE DAY. British imperial celebration held annually on May 24, the anniversary of Queen Victoria's birthday. The first official celebration was held in 1904. The movement was started in 1902 by the earl of Meath (q.v.).

EMPIRE STYLE. In decoration and furniture, a development of the Directoire style, an outcome of the admiration felt by the leaders of the French Revolution for Greek and Roman culture. The style was, therefore, severely classical in outline and decoration. The rectilinear outline was adopted, legs of tables and chairs were straight or tapered, round and fluted or reeded. Classic moldings, capitals and pediments, with a few republican symbols and animal masks, were the principal decorative commonplaces. Imperial symbols, such as the eagle, bee, and crowned N, replaced the republican designs. Medallion portraits and figures were used, together with heavy gilded mountings of classic design. Much of the furniture was painted white, or gilded.

EMPLOYERS' LIABILITY. Legal term for the liability of an employer for injuries to his employees. The Employers' Liability Act of 1880 gives right of action for damages to persons engaged in manual labour other than domestic servants on account of (1) defect in machinery through master's or fellow-servant's negligence; (2) negligence of responsible official; (3) wrongful act done in obedience to by-laws of firm or its authority; (4) negligence on the railway. It is closely linked with the system of Workmen's Compensation (q.v.).

EMPLOYMENT EXCHANGE. British organization for bringing employer and employee into touch. They were established in the United Kingdom under the Unemployed Workmen's Act, 1905, and managed by local authorities. Under the Labour Exchanges Act of 1909 exchanges were opened Feb., 1910, the control of which was placed in the hands of the board of trade, with general advisory committees in principal centres. In 1916 the name was altered to Employment Exchange, and they are controlled by the ministry of labour. See Labour; Unemployment; Wages.

EMPHYSEMA (Gr. suppurating). Collection of pus in the pleural cavity—that is, between the layers of membrane lining the chest wall and the lung. The condition may be due to infection from within, following simple pleurisy or septic pneumonia; less frequently to infections from without, as a result of fracture of a rib or a penetrating wound of the chest.

In mild cases it may be sufficient to draw off the pus by aspiration, but generally it is necessary to secure thorough drainage of the pleural cavity by making an opening between the ribs or removing a portion of a rib so that a large drainage tube can be inserted.

EMS. Town and watering place of Prussia. It stands on both sides of the Lahn, 11 m from Cöln. The town is known for its waters and beautiful scenery. Pop. 7,000.

The river Ems rises in the Teutoburger Wald and flows through Westphalia and Hanover to the North Sea. Its length is about 210 m.

The Ems telegram was sent in July, 1870, by the emperor William I to Bismarck, giving an account of his interview with the French ambassador. Bismarck altered its wording and published it, thus making war inevitable, for France treated the altered sentence as a "casus belli" and proceeded to mobilise. See Franco-Prussian War.

EMSWORTH. Seaport of Hampshire. It is at the mouth of the Ems, with a station on the Southern Rly., 76 m. from London and 9 from Portsmouth. Pop. 2,200.

EMU (*Dromaeus novae-hollandiae*). Large bird belonging to the division Ratitae. It is found only in Australia and certain neighbouring islands

Emu, second largest bird known. It is peculiar to Australia. Gambler Bolton, F.Z.S.

and is only exceeded in size by the ostrich, which it resembles in build. The wings of the emu are more rudimentary, and the bird depends entirely on its swiftness as a runner to escape its foes. The slender feathers are brown, mottled with grey. Emus feed chiefly upon small fruits. Although not web-footed, they swim well, and take to the water readily. The male, which is smaller in size than the female, incubates the eggs.

EMULSIN (Lat. emulsus, milked out) or **SYNAPTASE**. Unorganized ferment (enzyme) present in almonds and mustard seeds. The action of emulsin on the amygdalin also present in almonds produces essential oil of almonds in the process of manufacturing the expressed oil.

ENAMEL. Transparent or opaque glassy substance applied to metal or other surfaces in the form of a paste and then fired to fix it. The material—ground very fine, mixed with gum, water, or oil of spike to render it adhesive, and reduced to a pasty consistence—is brushed on to the object, which, when duly decorated, is placed in a furnace.

In the fine arts enamel is principally used in connexion with pottery and porcelain wares, jewelry, watches, snuff-boxes, plaques, and articles for the toilet table. The enamel may be applied by the enclosed method or cloisonnée (q.v.), the engraved or incised method or champlevé, and the surface method, in which the whole surface is covered with enamel on which the design is painted and fired.

ENCAENIA (Gr. en, in; kainos, new). Feast of dedication or renewing. Among the Jews it is applied particularly to the anniversary festival of the dedication of the temple at Jerusalem. At Oxford University, Commemoration, the festival at the end of the academic year, when founders and benefactors are commemorated, is also known as Encaenia.

ENKAUSTIC (Gr. enkaustikos, burnt in). Species of painting with colours and wax, said to have been invented by Polygnotus (5th century B.C.) and much practised by the ancient Egyptians and Greeks. It is surmised that coloured powder was mixed with white wax and kneaded into small cakes. When required metal disks with cuplike indentations were heated and a cake was laid on the palette, a different colour in each depression, and gradually melted. The process was rapid, for the wax, laid on with a brush, cooled quickly and the work had then to be touched again with hot irons, which fused the tints.

ENCKE, JOHANN FRANZ (1791-1865). German astronomer. Born in Hamburg, Sept. 23, 1791, he studied in Göttingen, and in 1817 became director of the Seeburg Observatory near Göttingen. In 1825 he succeeded to the post of astronomer of the Academy of Science, and director of the Berlin Observatory, then

in course of erection. In 1863 he retired to Spandau, where he died, Aug. 26, 1865.

Encke worked out, from the observations of the transits of Venus of 1761 and 1769, the first authentic value of the sun's parallax; determined the path of Pons' Comet; and undertook the observation of another comet, since known as Encke's Comet. He discovered that it revolved about the sun in a period of 3½ years, this being a considerably shorter period than that of any other known comet.

ENCLOSURE. Word used specially for common land which is enclosed, i.e. converted by private persons to their own use. This began in England with the decay of the manorial system, when the lords of the manor frequently enclosed common land. The law about it during the Middle Ages was contained in the statute of Merton of 1235, which allowed the lords to enclose land, provided that they left sufficient common unenclosed to meet the rights of the commoners.

About 1700 there was a change. Enclosures continued, but they were done by special Acts of Parliament, each dealing with a special enclosure, and these distributed the land between the lord of the manor and the various persons who had rights in it. In 1845 the matter was put in the hands of enclosure commissioners. See Commons; Manor.

ENCOUNTER BAY. Inlet of the coast of S. Australia, between Port Elliot on the N. and Jaffa Cape on the S. It is 90 m. across. Off the N.W. corner lies Kangaroo Island.

ENCYCLICAL (Gr. enkyklios, circular). Eccles. term for a letter from a Church authority, not addressed to any particular individual or community. The term is now used for a communication of the Pope to the bishops generally on some ecclesiastical topic.

John Eadecott, Colonial governor

ENDECOTT, JOHN (1589-1665). English administrator. Born at Dorchester, Dorset, he sailed to N. America in 1628 and became manager of the Naumkeag (now Salem) plantation. Being superseded by John Winthrop, he employed himself in fighting the Indians. In 1641 he was made deputy governor of Massachusetts, and three years later became governor, a post he held with intervals until his death at Boston, March 15, 1665.

ENDERBY LAND. Desolate tract of Antarctica. It extends S. from the Antarctic Circle. It was discovered in 1831 by John Biscoe, who named it after his employers, Enderby Brothers. See Antarctica.

Endive (Lat. intibus). Plant of the same genus as chicory (q.v.).

Endor. Village of Palestine, now known as Endur, about 6 m. from Nazareth. It was the home of the witch whom Saul consulted.

ENDOSPERM (Gr. endon, within; sperma, seed). Tissue found in the spores of ferns and their allies and in the seeds of many flowering plants. If a longitudinal section is made of a ripe pine-seed, for example, the embryo will be found in a central cavity, surrounded by a mass of cellular tissue. This is the endosperm, which is gradually absorbed as food by the developing embryo or seedling.

ENDURANCE. Sir Ernest Shackleton's ship in his second Antarctic expedition. She left England in 1914 just after the Great War had begun, and was crushed in the ice, Oct., 1915. See Antarctic Exploration.

ENDYMION. In Greek mythology, a youthful shepherd of great beauty, of whom the moon-goddess Selene became enamoured, as he lay asleep on Mt. Latmos in Caria.

Keats' *Endymion*, a poetic romance in four books of rhymed couplets, opens with the line, "A thing of beauty is a joy for ever."

ENEMA (Gr. injection). Fluid preparation for injecting into the rectum. Enemata are used for washing out the rectum in cases of severe or chronic constipation, for introducing into the bowel substances such as quassia for the purposes of destroying threadworms; and for providing nourishment when acute disease of the stomach prevents feeding in the ordinary way, enemata for this purpose being small in volume and consisting usually of peptonised milk, raw eggs, and meat extracts.

ENERGY (Gr. energia). Capacity to do work. A weight raised above the earth has the power of doing work as it returns to the earth's surface. A body in motion possesses the power of doing work while losing its motion. The energy of a body is measured by the work it can do while changing to some standard state: or conversely, the work which has to be done on the body to bring it from some standard state to the state in which it is. In the two examples chosen, the work the weight can do before it reaches the ground, or the work the body can do before it comes to rest, can be measured. The weight raised above the ground owes its energy to its position. It has potential energy. The energy of the body is due to its motion. It has kinetic energy. Energy is measured in foot-pounds or in ergs.

ENFIELD. Urban dist. and market town of Middlesex. It is 10½ m. N. of London, on the L.N.E.R. The New River intersects the town. The palace built by Edward VI for his sister, Elizabeth, became a grammar school, then a post office, and then a club. In 1928 it was decided to pull it down. The parish church of S. Andrew has a beautiful 15th century brass. The Ridgeway is a residential district. The chase was disforested in the 18th century. At Enfield Lock is the Royal Small Arms Factory, where the Enfield rifles were made. Market day, Sat. Pop. 60,738.

Enfield is mentioned in Domesday Book. Edward VI and Queen Elizabeth lived here, and the chase was a favorite hunting ground of James I. It has associations with Keats, Captain Marryat, and Charles Lamb, who lived at Chase Side.

ENFRANCHISEMENT (old Fr. enfranchir; en and franc, free). In English law, a term meaning the turning of an estate of copyhold into a freehold. This can be done by mutual consent, or at the instance of the lord of the manor or the tenants thereof. If they cannot agree on the terms, these are settled by the Ministry of Agriculture. See Franchise.

ENGADINE. Upper portion of the Inn valley, Switzerland, in the canton of Grisons. It stretches 60 m. between two chains of the Rhaetian Alps, and is 1 m. to 1½ m. broad. From Martinsbruck, on the border of Tirol, it

Endymion. Greek statue of the sleeping shepherd, in the British Museum

runs S.W. up to the Maloja Pass. The Upper Engadine is more frequented than the Lower Engadine, which, however, has mineral springs at Sohlis. The strong, bracing air of the valley renders it a popular health resort.

ENGELBERG. Village of Switzerland. It stands at the N. foot of the Titlis, 14 m. by electric rly. S. of Lucerne. It is a favourite summer and winter tourist resort. The abbey church is interesting. The Benedictine abbey, founded 1120, was rebuilt in 1729: its farm is noted for cheeses Pop 2,520.

ENGELS, FRIEDRICH (1820-95). German writer. Born in Barmen, Sept. 28, 1820, he became associated in early life with Karl

Friedrich Engels, German Socialist

Marx (q.v.), whose political ideas he shared. In 1848 he took part in the rising in Baden, afterwards taking refuge in England, where until 1869 he was in business in Manchester. From then until his death he lived mainly in London, engaged in literary work. There is an English translation of his book *The Condition of the Working*

Classes in England. Engels died in London, Aug. 5, 1895.

ENGINE (Lat. ingenium, skill). Generic name now given to a class of machines for the conversion of one form of energy to another. Formerly a term used for a large variety of mechanical appliances, as beer engine, water engine, etc., its present-day usage is confined chiefly to the names of steam engine, gas engines, and oil or internal combustion engines. In the sense of a mechanical contrivance the term engine was used for a warlike appliance. The conversion of heat energy into mechanical energy by means of the steam engine turned inventors' thoughts to the use of other substances besides water, and there appeared the hot-air engine, and in later years the gas engine, oil engine, etc. The invention of the internal combustion engine has had an enormous effect upon the progress of the world. See Air; Internal Combustion Engine; Motor Car; Oil Engine; Steam Engine.

ENGINEERING. Little is known as to the earliest development of engineering knowledge. It must have been of a comparatively high order to render possible the construction of the monumental works of Egypt and the East. The aqueducts and bridges of the Romans, and the remains of metal pumps of the period, show an understanding of the principles of civil, mechanical, and hydraulic engineering. In England the term engineer as defining an occupation appears to have dated from the 13th century, when it was applied to those who did military artificers' work. About the 12th century an association was formed in France with the main object of building bridges. The association built a large number of important works throughout Europe.

Civil engineering in its modern sense dates from the beginning of the 17th century. At that time the rivers of N. Italy were in a bad state of order, with the result that many disastrous inundations took place. To remedy this a class of practitioners was called into existence capable of dealing with hydraulic works and with their necessary mechanical arrangements, and the scope of their work was gradually extended to cover also the design and construction of roads, bridges, docks, workshops, and machinery. The new profession adopted the title of civil engineer.

The development of the steam engine led to an enormous and rapid expansion in the branch of civil engineering devoted to motive-power machinery, mechanical appliances, and manufacturing processes, and from this period dates the professional term mechanical engineer. Still later, the development of the electric dynamo and of electric power and lighting rendered this sub-branch sufficiently

important to justify the title of electrical engineer. Recent developments have necessitated further intensive specialisation, and aero engineering, agricultural engineering, chemical engineering, and metallurgical engineering are now to all intents and purposes separate professions. In general the term civil engineering is now confined to the design and construction of such works as roads, bridges, railways, docks, harbours, canals, and dams.

The professional training of an engineer includes a three years' course in the engineering school of some university or technical institute. The first two years are common to all branches of engineering. The third is usually devoted to a more advanced treatment of some special branch, and this theoretical training is followed by an appropriate course of practical work.

The Society of Engineers is an organization which exists to further the interests of the profession. Its headquarters are at 17, Victoria St., London, S.W.1. The professional societies of the three main branches of engineers are the Institution of Civil Engineers, Great George St., S.W.1, the Institution of Electrical Engineers, Savoy Place, Victoria Embankment, W.C.2; and the Institution of Mechanical Engineers, Storey's Gate, S.W.1. Two important weekly illustrated journals are devoted to engineering: *The Engineer*, and *Engineering*. The Amalgamated Engineering Union, formed in 1920 by the uniting of the Amalgamated Society of Engineers and nine other engineering unions, is one of the largest trade unions in the country.

ENGINEER OFFICER. Commissioned officer of the British navy. He is a technical specialist, responsible for the running of all main and subsidiary machinery in a warship and the control of the engineering workshops and repairs aboard. Since 1903 engineer officers have been trained as executive officers and are competent to take executive duties and rise to the highest ranks in the navy. An engineer officer is distinguished by wearing strips of purple cloth between the bands of gold lace denoting his particular rank.

ENGINEERS, ROYAL. Technical corps of the British army, popularly termed the Sappers. The origin of the corps is of considerable antiquity. In its modern form it originated in the company of military artificers raised by Sir William Green at Gibraltar in 1772, which, during the long siege, distinguished itself in the construction of galleries on the north face of the Rock and by the repair of breaches made by the enemy's fire.

Royal Engineers badge

In peace time the corps is organized as field, signal, bridging, survey, fortress, railway, printing, and postal companies and troops. During the Great War special companies were added whose duty it was to investigate and direct the use of poison gas and the measures adopted to counteract it. Meteorological companies were responsible for information regarding the weather which was essential for aviation. During the long periods of trench warfare the Engineers were chiefly employed in tunnelling and mining. Their work also included the improvement of the communications, organizing and manning searchlight stations, and the duties previously outlined. There is a School of Military Engineering at Chatham.

ENGLAND. Southern and larger portion of the island of Great Britain, excluding Wales, of which Scotland is the northern portion. Except on the Scottish and Welsh borders it is bounded by the sea. It includes also the Isle of Wight, the Scilly Isles, and a few small islets. Its area is 50,874 sq. m., and its population at the census of 1921 was just under 36,000,000. In 1928 the registrar-general estimated it at just over 37,000,000.

Land above the 1,000 ft. level is confined almost entirely to the northern portion, W. of the second meridian; in the rest, the 500 ft. level is exceeded only in a few small areas. The carboniferous area is rich in coal and iron; while each of the three coasts is well provided with the estuaries which harbour the shipping whereon the wealth of the country depends, most notable being those of the Thames and the Humber on the east coast, and the Severn and the Mersey on the west.

The centres of population are the great cities, London, the greatest of marts, the manufacturing and mining towns of the north, the great ports, and some others which have what might be called specialised attractions.

Of the 40 historic counties into which the whole land is divided, Yorkshire is larger than the next two, Devon and Lincolnshire, together, while Rutland is the smallest; but Lancashire, sixth in size, exceeds Yorkshire in population. Out of the 40, however, ten more administrative counties have been carved; of the whole 50 London has the second smallest area and the second largest population.

HISTORY. The history of England begins with the invasion of the Celtic island of Britain by the Scandinavian and Teutonic tribes collectively called the English, about the middle of the 5th century, when the Roman legions had been withdrawn. In the course of some 150 years the English conquered the east and centre, pinning the Celtic Britons into the higher lands of the west. How far the Celts survived the conquest and mingled with the conquerors is matter of high argument. More than another 200 years passed before the conquerors recognized one supreme king. Then came the Danish invasions, their incomplete defeat by Alfred the Great, the consolidation of the kingdom under Alfred's successors, the episode of a Danish dynasty, and the Norman conquest.

The English customs survived the conquest, but were modified by the class domination of foreign conquerors in place of English magnates and their interpretation of the law in terms of the French feudal system. After the reign of Stephen order was restored by Henry II, the founder of the Plantagenet dynasty and feudatory lord of half France. For 300 years more the foreign policy of the kings was dominated by their ambitions as feudatories in France. Three-fourths of the French possessions were lost by Henry's son John, so that the Norman baronage came to look upon themselves as English and sometimes as champions of the laws of England, emphatically signified in the Great Charter.

Montfort's struggle against Henry III's attempts to override the law turned Henry's son Edward I into the great champion of the law, who, without intending it, created the parliamentary system which placed the control of the purse permanently in the hands of the House of Commons at the close of the 13th century. The ambitions of Edward III began, and those of Henry V renewed, the Hundred Years' War (1338-1453) with France, which ended with the entire loss of the French possessions, Calais excepted.

Engineer Officer. Cuff badges of officers in British navy. Left, sub-lieutenant; right, vice-admiral

Meanwhile, the enormous expense of the wars steadily developed the power of the Commons, which was also furthered by the usurpation of the crown by Henry of Lancaster in 1399, which in turn led up to the dynastic struggle between the rival houses of York and Lancaster known as the Wars of the Roses. In that struggle the old baronage broke

The victory of Parliament became more and more pronounced until near the end of the reign of Charles II, when it bore all the appearance of sudden and complete collapse; but James II, in the mistaken belief that the appearance was the reality, threw away all that his brother's astuteness had won back; the intervention of his nephew and son-in-law William of

ENGLISH LITERATURE. This covers what has been written in the English language in all its variations of date and locality, excluding what is specifically American. Till nearly the close of the 14th century all that survives is chronicles compiled in monasteries, with some ballads and songs in the tongue which is the foundation of the composite language which is English. At that stage English literature begins with Langland's *Piers Plowman* and Wyclif's version of parts of the Bible—written in two widely differing dialects; of which that chosen by Wyclif can now be recognized and read as English. At the same moment appeared the consummate literary artist, Geoffrey Chaucer, the first great English poet, whose fame rests chiefly upon *The Canterbury Tales*.

Chaucer, however, had no distinguished successors till the sudden literary outburst of the 16th century, towards the close of which the main literary impulse took the form of the drama, which achieved greatness with Marlowe, the greatest, with Ben Jonson in another kind, of those who encircled the supreme genius, William Shakespeare. To the dramatists of Elizabeth's closing years and of James I's reign must be added the poets' poet Spenser and the first masters of English prose (whereof the grandest monument is the authorised version of the Bible), headed by Francis Bacon and Richard Hooker. In the next period the only name of first-rate literary rank is that of John Milton, though the stream of minor poets flowed continuously from that time to our own day.

The next stage was the development of English prose and of a type of poetry whose prevailing characteristics are its intellectual quality and regulated exactitude of form rather than emotional appeal and wide ranging harmonies and melodies, with Dryden and after him Pope as its high priests. Dryden did much towards forming a characteristically English prose style. Contemporaries of Pope in the Augustan age were the essayists, pamphleteers and masters of prose fiction, Addison, Swift, and Daniel Defoe, whose reign was succeeded by the literary autocracy of the most English of Englishmen, Samuel Johnson, in whose circle, or more or less connected with it, were the great orator and political thinker, Edmund Burke, the historian Gibbon, Goldsmith, and Sheridan. For a moment Burns blazed on an amazed world, while Blake was working in a mystic dreamland of his own.

Then came the romantic revival of the 19th century, with the great poets, Wordsworth, Coleridge, Shelley, Keats, Scott, and Byron, though, as with Dryden and Pope, there are critics who challenge the right of the two last to the title. Scott, however, created the modern novel, the dominant type of imaginative literature throughout the Victorian era, the era of Dickens, Thackeray, and George Eliot. The most representative poet of that age was Tennyson, though many have found in his contemporary Browning a genius more profound and more stimulating; its leading prophets were Carlyle and Ruskin.

The former was one of the greatest forces which helped to mould the Victorian age.

Of the 20th century, it can only be said that the general subversion of established conceptions wrought by the Great War applies no less to literary than to other values; so that the judgements of yesterday are reversed by those of to-day, many of which are likely to be in turn reversed by those of to-morrow. The masters of English prose and poetry are treated under their respective headings, e.g. Burns, Defoe, George Eliot, Tennyson, etc.

ENGRAVING. (1) Art of drawing on metal or wood by means of an incised line; and (2) impression in ink obtained from such drawing on paper or similar substance. In wood engraving the lines to be printed appear

England and Wales. Map showing the principal railways and the county borders. Large scale maps are given under the headings of the respective counties

itself up so completely that when the rival houses were united in the Tudor dynasty, Henry VII and Henry VIII were able to establish the power of the crown as supreme, provided only that it worked in harmony with national sentiment. Its zenith was reached in the triumphant reign of Elizabeth, the reign in which England became definitely ranged with the Protestant powers in the wars of religion; a reign marked by the overthrow of the Spanish Armada in 1588.

Elizabeth's reign opened the way to the expansion of England; her death, which united the crowns of England and Scotland by making James the Stuart king of Scots king of England also, brought on the great struggle for effective supremacy between crown and Parliament, in which each side declared itself to be the champion of the law against its subversion by the other side. The issue was the Great Rebellion, the fall of the monarchy, the death of a king on the scaffold, the temporary establishment of a military dictatorship, and the restoration of the Stuart monarchy upon terms which practically conceded to Parliament all that it had claimed down to the eve of the war.

of Egham to the S. of Cooper's Hill. The cottage on the green was for some years the home of George IV's Perdita (Mrs. Robinson).

ENGLISH CHANNEL (Fr. La Manche, the sleeve). Stretch of water separating the S. shore of England from the N. coast of France. It communicates with the North Sea on the E. and the Atlantic Ocean on the W. Its extreme length is 280 m. Its width varies from 21 m. between Dover and Cape Griz Nez, to 145 m. between Lyme Regis and St. Malo. Its average depth is 30 fathoms.

The term channel ferry is used for a system of transport service across the English Channel, whereby trains are run direct from the rly. tracks on to a boat which conveys them across the channel. During the Great War there were four such ferries for military purposes: Richborough to Calais, Richborough to Dunkirk, Southampton to Dieppe, and Southampton to Cherbourg. In 1924 a train ferry service was inaugurated between Harwich and Zeebrugge. The term "swimming the channel" refers to the feat accomplished a number of times in the straits of Dover (q.v.). See Channel Tunnel.

ENGLEFIELD.

Parish and village of Berkshire 5½ m. W.S.W. of Reading.

Englefield Green is a residential district in Surrey, 1½ m. N.W.

in relief, the wood between them being cut away. In the metal process, known as in taglio, the lines are sunk or incised by means of a steel graver or burin. Plates of several different metals have been used for intaglio

The town gives name to the title borne since 1789 by the family of Cole. William Willoughby Cole, the 3rd earl (1807-86), made a fine collection of fossil fishes, now in the British Museum. Florence Court, Enniskillen,

Engraving. Example of a stippled engraving on copper of a sketch by G. Morland. Left, the copper plate on which the design was engraved. Right, the impression

engraving: copper, steel, zinc, iron, silver, and even brass and pewter. Copper and steel, however, and especially copper coated with a thin layer of galvanised steel, are by far the most common.

Wood engraving is really wood cutting, and so does not come within the scope of engraving proper. Lithography (q.v.) is a form of engraving on stone.

ENHAM or **KNIGHTS ENHAM**. Parish of Hampshire, 2 m. N. of Andover. In 1919 a scheme was started for taking over the Enham estate to erect buildings for the treatment and training of disabled soldiers. The British Red Cross Society made a grant of £10,000 for the building and equipping of a medical block. The offices of the Enham Village Centre are at 10, Upper Woburn Place, London, W.C.1.

ENLISTMENT. Act of the individual in voluntarily contracting to render military service as a private soldier to the state. The form of contract is the attestation paper, which the recruit, after being accepted and passed medically fit, is required to sign when taking the oath of allegiance, in the presence of an officer, magistrate, or other public dignitary, who witnesses or attests the signature. A recruit may choose the branch of the service he prefers. In the line he may choose any regiment for which he has a preference and which is open to recruiting. He cannot then be transferred to another regiment without his consent. A special branch of the army is detailed for recruiting duties, with an officer in charge of each district. See Army; Conscription.

Ennerdale. Lake in the W. of Cumberland. From it Whitehaven draws its water supply. It is 3 m. long and $\frac{1}{2}$ m. broad.

ENNIS. Urban dist. and county town of co. Clare, Irish Free State. It is on the river Fergus, 25 m. N.W. of Limerick, on the Gt. Southern Rlys. Here are the Roman Catholic pro-cathedral of the diocese of Killaloe and ruins of a Franciscan abbey. Pop. 5,518.

ENNISCORTHY. Urban dist. of Wexford, Irish Free State. It is on the Slaney, 77 m. S. of Dublin on the Gt. Southern Rlys. The chief building is the castle, built by the Norman conquerors in the 12th century. The town is an agricultural centre. Near by is Vinegar Hill (q.v.). Pop. 5,543.

ENNISKILLLEN or **INNISKILLING**. County town of Fermanagh, Northern Ireland. It stands on an island in the river between the upper and lower loughs Erne, and has suburbs on either side, with which it is connected by bridges. It is a station on the G.N. of Ireland Rly., 116 m. N.W. of Dublin. It is notable as a Protestant stronghold in the time of William III. Enniskillen gave its name to two regiments of the British army, fusiliers and dragoons. Pop. 4,850.

is the earl's chief seat, and his eldest son is known by the title of Viscount Cole.

ENNIUS, QUINTUS (239-169 B.C.). Earliest of the great Roman poets. Born at Rudiae, in Calabria, he attracted the notice of the elder Cato, who took him to Rome, where his knowledge of Greek and literary acquirements procured him admission to the Scipionic circle. His works embraced a wide variety of subjects, but it was as the author of some 20 tragedies and of the *Annales*, an epic of Roman history, that he achieved immortality. Only fragments survive, chiefly as quotations in later writers, especially Cicero.

ENOCH. Name of four men in the O.T. They are a son of Cain, a grandson of Abraham, a son of Reuben, and a son of Jared. The last, the father of Methuselah, is recorded to have lived 365 years, and to have been translated without dying. He is described as being the seventh from Adam.

The Book of Enoch is one of the non-canonical O.T. Apocrypha or Pseudepigrapha, written originally partly in Aramaic and partly in Hebrew. It incorporates fragments of the Book of Noah. The work ranges from about 200 B.C. to A.D. 64, the subjects with which it deals including the origin of evil, the millennium, the Messiah, the future life, and even the Hebrew calendar.

The Book of the Secrets of Enoch belongs to the same category as the Book of Enoch. The work, preserved only in Slavonic, seems to have been written by a Hellenistic Jew in Egypt at about the beginning of the Christian era. It describes Enoch's ascension and voyage through the seven heavens.

ENSIGN. Flag which a ship carries astern to indicate her nationality. Each country has separate ensigns for its navy and its mercantile marine. Great Britain has three: the white ensign, flown only by ships of the Royal Navy and vessels of the Royal Yacht Squadron; the blue ensign, which is the flag of the Royal Naval Reserve; and the red ensign, the flag of the merchant service.

When a ship flies her ensign upside down it denotes that she is in distress. See Blue Ensign; Flag.

ENSIGN. Rank in the British army, now obsolete. The rank was that given to an officer of the infantry on first being commissioned, and it was his duty to carry and guard the regimental colours, both on parade and in the field. It was abolished in 1871, the rank of second lieutenant being substituted.

ENSTATITE. Common rock-forming mineral. One of the pyroxene group, it crystallises in the rhombic system, in stout prismatic crystals. Chemically a metasilicate of magnesium, it occurs in serpentines and peridotites, in the Whinsill dolomite, the Cheviot andesite, and generally as a primary

constituent of intermediate and basic igneous rocks. The word *enstatite*, from Gr. *enstatēs*, adversary, refers to the refractory nature of the mineral. See Crystallography.

ENTABLATURE. Term in architecture signifying the combination of architrave, frieze, and cornice at the summit of a building. The entablature is necessarily a prominent feature of the classic or horizontal styles of architecture, rather than of the Gothic or vertical styles. See Cornice.

ENTAIL. Legally, the settling of an estate on a man and his heirs. In feudal times land was granted to a man and his heirs in tail male or tail general, the idea being that if an heir failed it would revert to the king or lord who granted it. The entailed estates of to-day are simply settled estates, but they can only be settled on living persons and a period of 21 years beyond. The entail can be broken with the consent of the heir and after the performance of certain legal formalities.

ENTEBBE. Administrative capital of the Uganda (q.v.) Protectorate, Central Africa. It is on a promontory W. of Murchison Bay in Lake Victoria, and is connected with Kisumu and other lake harbours by steamer.

ENTENTE CORDIALE (Fr. cordial understanding). Phrase that became current early in the 20th century to signify the friendly relations then beginning to exist between Britain and France. The entente began soon after the South African War and was greatly helped by the influence of Edward VII. It culminated in the alliance of 1914.

Enteric Fever (Gr. *enterikos*, intestinal). Infective disease caused by the bacillus *typhosus*. See Typhoid Fever.

ENTERITIS (Gr. *enteron*, intestine). Inflammation of the mucous membrane of the intestine. The condition may be due to eating unsuitable or unsound food, or to irritant poisoning by arsenic and other substances. Secondary enteritis is a symptom of many diseases, particularly cholera, dysentery, and typhoid fever. The prominent symptoms are abdominal pain, severe diarrhoea, and sometimes blood in the evacuations. Epidemic enteritis, or "summer diarrhoea," is a very fatal disease among infants under one year of age. The disease is most prevalent in hot dry weather, the dust from dirty streets and refuse heaps being an important factor.

ENTEROPTOSIS (Gr. *enteron*, intestine; *ptōsis*, falling). General dropping or downward displacement of the abdominal organs. It usually develops gradually. Massage, electricity, and physical exercises may be employed to improve the tone of the abdominal vessels, and the symptoms are often relieved by wearing a belt to support the organs.

ENTERTAINMENT TAX. Duty levied in the United Kingdom on persons attending theatres, music halls, and other places of amusement; also football and cricket matches, and other open-air sports. Introduced in 1916, and modified in 1924, it is charged on all tickets of admission, as follows:

Exceeding 6d. and not exceeding	7d.	..	1d.
" 7d.	" "	8d.	11d.
" 8d.	" "	1/1	2d.
" 1/1	" "	1/3	3d.
" 1/3	" "	2/-	4d.
" 2/-	" "	3/-	6d.
" 3/-	" "	5/-	9d.
" 5/-	" "	7/6	1/-
" 7/6	" "	10/6	1/6
" 10/6	" "	15/-	2/-

ENTOMBMENT. Literally a burial. In a special sense, however, it is applied to the burial of Jesus Christ, and as such is the subject of several notable paintings. The most famous are one by Raphael, in the Borghese Palace at Rome, one by Titian in the Louvre, and one by Caravaggio in the Vatican.

ENTOMOLOGY (Gr. entomon, insect; logos, science). Branch of zoology which deals with insects. The offices of the Entomological Society of London are at 41, Queen's Gate, London, S.W.7. See Insect.

Entr'acte (Fr. entre, between; acte, act). Short piece of music played by the orchestra between the acts or scenes of a play.

ENVER PASHA (1882-1922). Turkish soldier. Born at Constantinople, he entered the Turkish army in 1896. He first came into notice in connexion with the Young Turk movement in 1905 at Salonica, and three years later joined the revolutionaries, who in July, 1908, captured Monastir. Enver soon afterwards was appointed military attaché at Berlin. In 1911 he organized the Arabs of Tripoli against the Italians, and in the second Balkan War he recaptured Adrianople from the Bulgarians in July, 1913. Shortly before he had become minister of war, with the rank of a pasha. One of the leading spirits of the Committee of Union and Progress, the central organization of the Young Turks, he helped to bring Turkey into the Great War. In 1918 Enver fled to the Caucasus, and he was killed in Bokhara, Aug. 4, 1922.

Enver Pasha, Turkish soldier

ENZYMES (Gr. en, in; zymē, leaven). Substance formed by micro-organisms and living animal and vegetable cells, which transforms organic compounds into simpler bodies. An example of enzyme action is the fermentation of sugar by means of yeast. The yeast cells contain an enzyme called zymase, which converts sugar into alcohol and carbonic acid gas. The enzyme itself is unchanged in the process, and a very small quantity is therefore capable of causing a large amount of transformation. Enzymes (e.g. pepsin) play a large part in the digestion of food. The souring of milk and the decomposition of meat by bacteria are other instances of enzymic changes.

EOANTHROPUS (Gr. eōs, dawn; anthropos, man). Systematic name of the oldest known European race with distinct head traits. It was given to some fossil bones now in the British Museum, unearthed in 1912 at Piltown, Sussex. After their discoverer, Charles Dawson, the species is called *E. Dawsoni*. Other remains were subsequently found. See Man: Piltown Skull.

EOCENE. Name given to the earliest part of the Tertiary period, when stratified rocks, the eoene system, were being formed. It followed the Cretaceous period. Eocene beds usually rest on eroded surface of chalk. Eocene rocks of W. Europe are usually soft sands and clays, with some limestone and marl; all were laid down in local basins under marine, brackish, or fresh-water conditions. In S. Europe, Caucasus, Asia Minor, N. Africa, through Persia towards China and Japan, great thickness of limestone developed, made up in places largely of the fossilised shells of large disk-shaped foraminifera (nummulites). The forerunners of nearly all kinds of animals now living appeared in eoene times.

EOLITH (Gr. eōs, dawn; lithos, stone). Stone implement of rud. workmanship than those of the Palaeolithic Age. Many such flints have been found. See chart, p. 98.

ÉON DE BEAUMONT, CHARLES (1727-1810). French diplomatist. Born Oct. 17, 1727, he entered the army in 1755, and in 1757, having attracted the attention of Louis XV, was sent, disguised as a woman, on a diplomatic mission to Russia. In 1762 he came to England, where in a fit of pique he published certain libels, for which he was convicted in 1764 and outlawed. He returned in 1777 to France, where he lived as a woman. In 1795, dressed as a woman, he gave an exhibition of fencing in London. He died May 21, 1810.

Éon de Beaumont, French diplomatist

Eos. In Greek mythology, goddess of the morning. She is identified with the Latin Aurora (q.v.).

EPACRIS. Genus of shrubs of the order Epacridaceae. Natives of Australasia, they have scattered leaves and abundant, cylindrical, bell-shaped flowers produced singly from the axil of a leaf. They are largely grown in European greenhouses, and many varieties and hybrids have been produced.

Epacris nivalis, a greenhouse plant from Australia

EPAMINONDAS (Gr. Epameinōndas). Theban general and statesman. Born about 418 B.C., he won renown at the battle of Leuctra (371), when he was chiefly responsible for the defeat which brought to an end the Spartan hegemony over Greece. Epaminondas determined to break the power of Sparta in Peloponnesus, and united the cities of Arcadia in a league, with the new city of Megalopolis, founded by himself, as the capital. In 362 the Spartans sent an army into Arcadia, which was defeated at the battle of Mantinea, but Epaminondas fell in the battle.

EPAULETTE (Fr. little shoulder). Shoulder ornament worn by officers of the British Navy and bearing the marks that indicate their rank. Lieutenants and superior ranks wear fringed epaulettes. The British Army abolished epaulettes in 1855.

ÉPÉHY. Town of France, 13 m. S. by E. of Cambrai. It was captured by the British, April 1, 1917. Retaken by the Germans, Mar. 22, 1918, it was captured by the British in Sept. of that year.

BATTLE OF ÉPÉHY. This battle was fought between the British and the Germans, Sept. 12-25, 1918. On Sept. 12 the British stormed Havrincourt and Trescault, and five days later fought their way into Holnon, where a fierce struggle, lasting for some days, took place. In the Allied centre the Austrians broke through the German front to a depth of nearly four miles, forcing their way into the outer defences of the main Hindenburg line. By Sept. 22 the British 3rd corps had reached the positions

necessary for the direct attack on the German main fortifications, and on Sept. 24 the Quadrilateral was in British hands. All the British objectives were attained and 100 guns and 11,750 prisoners were taken from the Germans. See Cambrai.

ÉPERNAY. Town of France, about 19 m. W.N.W. of Châlons-sur-Marne. It is an important centre of the champagne industry, the wine being stored in cellars hollowed out of the chalk rock. The town was occupied for a brief period by the Germans early in the Great War. Pop. 21,800. See Marne.

EPHAIH. In the O.T. name for the first in order of the sons of Midian (Gen. 25; 1 Chron. 1; Isaiah 60); concubine of Caleb in the line of Judah (1 Chron. 2); son of Jahdai (1 Chron. 2). The word, of Egyptian origin, was adopted as the name of a Hebrew dry measure which corresponded to the bath in liquid measure.

EPHEMERA or **MAY FLY** (Gr. ephemeros, living only for a day). Family of neuropterous insects, with a long, ten-jointed abdomen terminating generally in three long processes resembling bristles. The eyes are large and compound, the wings lace-like, and the mouth parts undeveloped, as the perfect insect does not eat. The larval stage is passed in the water. The perfect insects emerge about the end of May in most species, and their life is very short. Some examples live only for a few hours, while others survive several days if the weather is favourable. About fifty species of may fly are found in Great Britain.

EPHESIANS, EPISTLE TO THE. The first of the group of Pauline epistles commonly known as the Epistles of the Captivity, because they seem to have been written, probably between A.D. 61 and 63, during S. Paul's first imprisonment in Rome. It was probably intended to be a circular letter, and was not addressed particularly to the Ephesians. It has a close connexion with the Epistle to the Colossians. See Colossians, Epistle to the.

EPHESUS. Ancient city of Asia Minor, on the river Cayster. The chief of the twelve Ionian colonies of Asia, it was founded probably about 1000 B.C. In the 6th century it fell under the dominion of Croesus, king of Lydia, and later under that of Cyrus the Great. During the Athenian hegemony it paid tribute to Athens, but about the beginning of the 4th century B.C. it again passed under Persian rule. Later it acknowledged the Macedonian supremacy, and after the Roman conquest of Greece became the administrative capital of the Roman province of Asia. Ephesus was noted for the worship of Artemis or Diana, whose temple was regarded as one of the seven wonders of the ancient world. The city was visited by S. Paul, and was an early seat of Christianity. There are ruins of a theatre (Acts 19, 27), stadium, odeum, and the temple of Artemis.

Of the six important councils of the Church held at Ephesus the first, in 197, dealt with the date of Easter, and the second, in 245, was directed against the heresy of Noëtus. The third, 431, was the third ecumenical council of the Church. It confirmed the Nicene Creed and condemned the heresy of Nestorius. The fourth, 440, and the fifth, 447, councils here met to decide

Epéhy. Plan of the battlefield showing the ground gained by the British in the battle of Sept. 12-25, 1918

the question of episcopal succession. The sixth or robber council, in 449, dealt with disputes about individual bishops and clergy, but its general findings were superseded by the council of Chalcedon in 451.

Ephod. Jewish high priest wearing the ephod knotted below the breastplate

EPHOD. Symbolical waistcloth worn by the Jewish priests when officiating. That worn by the high priest was of fine linen, fastened round the body by a girdle and supported by two shoulder-straps, each ornamented with an onyx stone inscribed with the names of six of the 12 tribes. Attached to it was the breastplate (q.v.).

EPHRAIM. Second son of Joseph. With his brother Manasseh, he was adopted by their grandfather Jacob, and their descendants were reckoned among the tribes of Israel. The tribe of Ephraim occupied part of the northern territory of Palestine. Joshua belonged to this tribe.

EPIC (Gr. epos, tale, song). Name given to narrative poetry which deals in dignified and elevated style with some important action, usually heroic. The great examples are the *Iliad* and *Odyssey* of Homer, which are unmatched in any other language. Other peoples and later ages, however, produced poetry descriptive of great events to which the term epic has been generally and legitimately applied, such as the French Song of Roland and the English *Beowulf*. These all belong to the authentic, as distinguished from the literary, type, and, the work of many authors drawing upon tradition, are important as historical documents.

Paradise Lost belongs, like Virgil's *Aeneid* or Tasso's *Gerusalemme Liberata*, to the artificial, invented, or literary type. These are imitative poems, written in the epic manner by learned authors in epochs of advanced civilization. In modern times probably the nearest approach to the epic spirit is realized in *The Dynasts* of Thomas Hardy.

EPICETETUS. Stoic philosopher who lived about 100 A.D. Born at Hierapolis in Phrygia, he became an adherent and teacher of Stoicism. One of his pupils, Arrianus the historian, published his *Discourses* and a *Manual* of his doctrines. The latter and four books of the *Discourses* are extant. According to Epictetus, we are only concerned with things that are under our control. The highest principles of life are patience, abstemiousness, and self-control. See Arrianus.

EPICUREANISM. The doctrines of the school founded by the Greek philosopher Epicurus (341-270 B.C.). He was of Athenian parentage, and born in Samos. Coming to Athens, he founded his school in his garden. Epicurus divided philosophy into three parts: Canonics (logic, the theory of knowledge), Physics, and Ethics. The basis of all knowledge is the evidence of sensual perception; all perceptions are true and irrefutable. In physics Epicurus agrees in the main with Democritus, the founder of the atomic theory.

In ethics Epicurus follows the Cyrenaics. Pleasure is the aim of life, the only happiness. The virtuous man, he who rightly pursues pleasure, is alone happy. In modern language, Epicureanism is used for addiction to sensual enjoyment, more particularly that of the table. See Ethics; Philosophy.

EPIDAUROS. Town of Argolis, ancient Greece, on the Saronic Gulf. It was famous for its temple of Aesculapius; the god of healing, about 8 m. distant, which was visited by

the sick from all parts of Greece. Excavations have revealed remains of the temples of Aesculapius and Artemis, etc.

EPIDEMIC (Gr. epi, in; dēmos, people). Occurrence of a disease among a number of persons about the same time. When a disease is continually present in a locality the term endemic is usually employed. A pandemic is an outbreak of a disease which extends over the whole or a large part of the world.

In the Middle Ages, when sanitation was still in its infancy, epidemics were of frequent occurrence and were usually regarded as manifestations of divine wrath. In the 18th and 19th centuries it was gradually recognized that the disease was conveyed from one person to another by some virus or poisonous agent, found in most cases to be a bacillus or other micro-organism. Epidemics are spread by various agencies, including polluted drinking water, contaminated milk and other foods, and the bites of various insects. The prevention and arrest of epidemics necessitate active measures which vary with the particular circumstances controlling the disease.

EPIDENDRUM (Gr. epi, on; dendron, tree). Large genus, mainly of epiphytes, of the order Orchidaceae. They are natives chiefly of S. and Central America and the W. Indies. They have leathery, strap-shaped leaves, and flowers solitary or disposed in spikes and sprays. Characteristic features are the union of the fleshy base of the lip to the column, a passage at the base of the lip, and the four compressed pollen-masses. Some have handsome flowers, but in many species these are of a dingy green hue.

Epidendrum. Flower bud and leaves of this orchid

EPIDERMIS (Gr. epi, on; derma, skin). Name for the superficial layer of the skin, lying above the cutis vera or true skin. It consists of several layers of cells, the most superficial of which are horny in character, and form the thickest part of the epidermis. The deepest layers consist of soft protoplasmic cells. The epidermis grows from the deeper layers, the superficial horny cells being continually shed. See Skin.

Epiglottis seen from the front. Above, sectional diagram showing position of this structure in the throat

EPIDOTE. Hydrous silicate of calcium and aluminium. It is found abundantly, but outside Austria and America is rarely of sufficient transparency and fine colour to be cut as a precious stone. The colour ranges from green to brown. Piedmontite is a manganese epidote found in Piedmont.

EPIGLOTTIS (Gr. epi, on; glossa, glotta, tongue). Thin leaf-shaped structure, consisting of fibro-cartilage, placed behind the root of the tongue and in front of the superior opening of the larynx. It takes part in the closing of the larynx during the act of swallowing. See Larynx.

EPIGRAM (Gr. epi, upon; gramma, a writing). Originally a simple inscription attached to religious edifices and to statues of gods, heroes, and

all who had distinguished themselves by patriotism, courage, and virtue. Finally, among the Greeks, the epigram came to signify any short piece of poetry which conveyed a single idea with neatness and grace. As used by the Latin poet Martial and in the modern sense, the verse epigram has been defined as a short poem, generally of a personal character, meant to vex somebody, to pay off an old score, or to be smart at someone else's expense. Voltaire is the supreme French epigrammatist, while the poetry of Pope is a string of epigrams.

EPIGRAPHY (Gr. epi, on; graphein, to write). Study of inscriptions. In practice it concentrates upon inscriptions on durable materials such as stone, metal, and wood, including coins, gems, ornaments, seals, vases, and weapons, whereas palaeography studies the forms of writing upon papyrus, parchment, and paper. Important departments are Chinese, Greek, Hittite, Latin, Indian, Runic and Semitic epigraphy. See Palaeography.

EPILEPSY OR FALLING SICKNESS (Gr. epilepsis, seizure). Disease of the nervous system characterised by periods of unconsciousness. Epilepsy most commonly begins in childhood, before the fifth year. The fundamental cause is unknown, though fright, injury, alcoholism, and an attack of illness appear to be exciting causes. The offspring of those parents who suffer from insanity or neurasthenia are more prone to exhibit epilepsy than are other children.

Two forms are recognized. In petit mal the attacks of unconsciousness often last no longer than a few seconds and there are no convulsions. Grand mal is characterised by the occurrence of convulsive fits. The subject may have a preliminary sensation or aura, which warns him of what is going to happen. Sometimes the beginning of the fit is marked by a loud cry. At first the muscles are rigid, and suspension of respiration causes blueness of the face. After a few seconds, violent convulsions occur, and the tongue may be severely bitten. After one or two minutes the patient passes into a state of somnolence, which may be succeeded by prolonged sleep.

During an actual fit all that can be done is to prevent the patient from hurting himself. He should be allowed to remain in the recumbent posture, the clothes should be loosened round the neck, and a roll of cloth should be introduced between the teeth to prevent the tongue from being bitten. The most useful drugs are the bromides of sodium and potassium. These should be given for a long period. Careful attention must be given to the general health of the sufferer.

EPILOGUE (Gr. epilogos, conclusion, peroration). Short address in prose or verse frequently employed to round off a dramatic performance; sometimes in the form of an appeal to public favour for the play it followed, sometimes explanatory or even apologetic. The use of the epilogue, as of the prologue, went out of fashion before the close of the 19th century, except on special occasions.

EPIMENIDES. Greek legendary priest and miracle-worker. A native of Crete and associated with the worship of the Cretan Zeus and Apollo, he was summoned to Athens in 596 B.C. to purify the city from the curse of Cylon (see Alcmaeonidae). He is supposed to be the "prophet" of S. Paul's epistle to Titus (1, 12), according to whom the Cretans were "always liars." Pron. Epimēni-deez.

ÉPINAL. Town of France, capital of the dept. of Vosges. It is situated on both sides of the Moselle, 190 m. E.S.E. of Paris. Before the Great War it formed with Verdun, Belfort, and Toul the first line of defences along the Moselle-Meuse line. It is an important garrison town. The church of S Maurice dates from the 11th-14th cent. Pop. 25,816.

EPIPHANY (Gr. epiphainein, to manifest). Festival of the Christian Church, celebrated on Jan. 6. The English Prayer Book title is The Epiphany, or The Manifestation of Christ to the Gentiles. Formerly the Epiphany seems to have been part of the festival of Christmas, which lasted twelve days. It commemorated the manifestation of Christ's birth to the magi, the manifestation of the Trinity at Christ's baptism and Christ's first miracle at Cana.

In England on this day it was customary for the sovereign to offer gold, frankincense, and myrrh at the altar. This offering is made at the Chapel Royal, St. James's, by an officer of the royal household.

EPIPHYLLUM (Gr. epi, on; phyllon, leaf). Small genus of climbing shrubs of the natural order Cactaceae. Natives of Brazil, they have thin cylindrical stems, 2 ft. or 3 ft. high, with short, fleshy, leaf-like branches, whose broad ends produce large, showy flowers of pink or crimson hue.

Epiphyllum. Fleshy branches and flowers of *Epiphyllum truncatum*, a Brazilian cactus

EPIPHYTE. Plant which, instead of being rooted in the soil, grows upon the surface of other plants, chiefly trees. Large numbers of the tropical orchids are of this character, and are therefore known as epiphytal orchids. Some ferns and mosses have the same habit. True epiphytes do not derive any of their nutriment from their hosts, and are therefore often called air-plants.

EPIROS (Gr. ēpeiros, mainland). Country in the N.W. of ancient Greece, bounded by Illyria, Macedonia, and Thessaly on the N. and E., and by the Ionian Sea on the W. The original inhabitants were so-called Pelasgians, but the Epirots of historical times were a mixed race. The most famous king of later times was Pyrrhus (d. 272 B.C.). The modern district includes part of southern Albania and northern Greece. See Albania; Greece.

EPISCIA. Genus of perennial herbs of the natural order Gesneraceae. Natives of Central America and the West Indies, they have opposite leaves and beautiful funnel-shaped flowers. In colour they are white, flesh-tinted, lilac, vermilion, or crimson.

Episcia. Foliage and bloom of the American plant

EPISCOPACY (Gr. episkopos, overseer). Government by bishops. It is thus a particular type of Church government, as are Presbyterianism, Congregationalism or Independency, and Papalism. Early in the 2nd century the growing need of a centre of unity and source of discipline in each church led Ignatius to emphasise the local bishop as such, and so the importance of the presbytery, over which he presided, lessened. From the middle of that century the bishop is the representative and spokesman of each local church.

The bishop was chosen by the church, and his powers as ruler were limited by the concurrent rights of his presbyters, in the appointment of whom the laity also had a decisive influence. The nominee of the local church had then to be recognized and "consecrated" by the bishops of the surrounding churches or dioceses, which gradually formed themselves into provinces under metropolitan bishops; and thus the system acquired that catholic, or world-wide, quality and range to which no rival system has ever attained. See Anglicanism; Apostle; Archbishop; Bishop; Church of England; Diocese.

EPISTAXIS (Gr. epi, on; stazein, to drip). Bleeding from the nose. It may arise from injury, ulceration of the mucous membrane, tumour in the nose, rupture of a varicose vein, the presence of a foreign body, or cerebral congestion. It may also be a symptom of enteric fever, or some other disease. As a rule the haemorrhage can readily be stopped by applying cold compresses to the root of the nose and nape of the neck. In severe cases plugging of the nostrils may be necessary.

EPISTLE (Gr. epistolē, message, letter). Term generally applied in English literature to verses written in the form of letters addressed to specific persons, or to readers generally, as in the epistle dedicatory. Satiric or moral epistles, such as Pope's Essay on Man and Moral Essays, more or less on the Latin model, were a notable feature of English literature in the 18th century, at the close of which Burns gave the epistle an easier and freer form.

There are examples of epistles in the O.T., but the famous letters or epistles of the Bible are confined to the N.T. The chief writer is Paul, to whom thirteen Epistles are ascribed.

EPITAPH (Gr. epi, on; taphos, tomb or grave). Inscription on a tomb. Some of the earliest extant epitaphs are found on Egyptian sarcophagi, and they were commonly used among the Jews. Various anthologies and the catacombs of Rome supply numerous Greek and Latin examples.

In England epitaphs range from the lengthy recital of the deceased's titles and dignities in Latin and the solemn and elaborate survey of his career in the English of the eighteenth century to the severely simple and the frankly humorous. An effective Latin epitaph is that on Sir Christopher Wren in St. Paul's Cathedral, London, Si monumentum requiris, circumspice (If you seek his monument, look around).

EPITHALAMIUM. Nuptial song in praise of a newly wedded pair and invoking blessings on them, sung before the bridal chamber (Gr. thalamos). A celebrated Latin epithalamium is that on Peleus and Thetis written by Catullus. In English literature Edmund Spenser's Prothalamium and Epithalamium are among the most beautiful poems of this kind.

EPITHELIUM (Gr. epi, on; thēlē, nipple). Tissue composed almost entirely of cells with little cementing material. It forms the superficial layer of the skin and lines the internal cavities of the body. Epithelium is classified according to the shape of the cells into pavement (flattened, mosaic effect), columnar, stratified, ciliated, etc.

EPOCH (Gr. epoche, pause). In astronomy, a date arbitrarily fixed, and necessary for computing the place of a heavenly body. Jan. 1, 1901, might, for example, be the date that is computed for the definition of the positions of the planet Mercury, and all the changes in its

positions would then be noted in succeeding periods of time

EPHING. Market town and urban district of Essex. It stands on the summit of a hilly ridge, 382 ft. above sea level, near Epping Forest, 17 m. N.E. of London by the L.N.E.R. The church of St. John Baptist (1832) was rebuilt in 1890 and superseded All Saints at Epping Upland as the parish church in 1889. Its tower was added in 1908. The town hall was built in 1863. Market day, Monday. Pop. 4,197.

Epping Forest is all that remains of the Royal Forest of Essex, known after the 13th century as the Forest of Waltham. It covers about 5,660 acres. The best of the wooded section includes Monkwood and Epping Thicks. Of two ancient camps, Ambresbury Banks is popularly assigned to Queen Boadicea, and Loughton Camp to early British or pre-Roman origin. The forest was secured to the public by the City Corporation and the Commons Preservation Society, and was opened by Queen Victoria in 1882. Additions have since been made to it.

EPSOM. Urban district and market town of Surrey. It is 14 m. S.W. of London on the Southern Rly. First known for its mineral springs, discovered in 1618, it became a fashionable spa in the 17th century. St. Martin's, the parish church, has works by Flaxman and Chantrey. Epsom College is a public school especially associated with the medical profession. Epsom is known for its race meetings held on the Downs. Market day, Sat. Pop. 24,000. See Derby; Horse Racing; Oaks.

Epsom Salts. Magnesium sulphate ($MgSO_4 \cdot 7H_2O$). It crystallises in small prisms, and is a useful saline purgative.

EPSTEIN, JACOB (b. 1880). British sculptor. Born in New York of Russo-Polish parents, Nov. 10, 1880, he studied in Paris at the Ecole des Beaux Arts and at Julien's Academy. Rodin's influence can be traced in the figures on the British Medical Association's former offices in the Strand, 1907-8; the sculpture for Oscar Wilde's tomb, 1913, is interesting for its echoes of Abyssinian and Egyptian art. Among his busts are those of Lord Fisher, the Duchess of Hamilton, Muirhead Bone, and Mrs. McEvoy. Much discussion was aroused by his figures of Venus, 1917, of Christ, 1920, by the figure of Rima in Hyde Park, 1923, and by the groups Day and Night on the Underground Headquarters Building, Westminster, 1920.

Jacob Epstein, British sculptor
Berkeley

EPWORTH. Market town of Lincolnshire. On the Isle of Axholme, 9 m. N.N.W. of Gainsborough and 24 m. from Lincoln on the L.N.E. and L.M.S. Rlys., it was the birthplace of John Wesley, whose father was rector here. Pop. 1,822.

EQUATOR (Lat. aequare, to equalise). Circle drawn round the globe midway between the N. and S. poles. At the equator the sun is seen directly overhead at noon at the time of the equinoxes. Latitude is measured N. and S. of this circle.

Equator. Perspective view of the earth, showing where the equator cuts Africa and a portion of S. America

It is the longest line, in one plane, that can be drawn round the earth, measuring approximately 24,902 m. Strictly speaking,

this line is the terrestrial equator. The great circle in which the plane of the terrestrial equator cuts the celestial sphere is called the celestial equator. The magnetic equator is that line drawn round the earth at any point on which the vertical components of the force of the earth's magnetism is zero. See Earth; Equinox; Latitude.

EQUATORIAL. Instrument so mounted that it can follow a heavenly body from its rising to its setting. This continuous observation is regulated by clockwork machinery. In the best arrangement, a strong steel pillar supports a headpiece, in which is fixed the polar axis of the instrument, parallel to the axis of the earth. This polar axis is turned round once in twenty-four hours. A telescope fixed to such an axis will always move in a "circle of declination," and thus a clock driving the telescope in one direction as fast as the earth is carrying it in the opposite direction will always keep the telescope fixed on the same point in the sky.

Equatorville. Alternative name for the town in Belgian Congo better known as Coquilhatville (q. v.).

EQUERRY. Originally an official of the royal stables. In the British royal household the equerries are army officers in the department of the master of the horse. The chief or crown equerry is a permanent official, who looks after the stables and stud. The sovereign always has an equerry in attendance.

EQUILIBRIUM (Lat. *aequus*, equal; *libra*, balance). In a system of forces a state of equilibrium exists when the forces under consideration are so arranged that they balance or have no resultant at any point. A body is in stable equilibrium when it returns to its original position after being disturbed; in unstable equilibrium when it continues to move in the direction given to it by a disturbing force.

EQUINOX. Dates on which the day and night are of equal length, and the length of day is the same for all parts of the world. Twice a year—at the vernal equinox, March 22, and at the autumnal equinox, Sept. 22—all places on the earth experience a day and a night each twelve hours long.

There is a belief that gales normally occur about the equinoxes, and these are called equinoctial gales. In N. America and Europe and over the N. Atlantic Ocean, from Nov. to Jan. is the period of most frequent and most intense gales.

EQUISETUM. Single genus forming a small order of Pteridophytes, the horsetails. They are mostly natives of the N. temperate regions, but a few are sub-tropical. They have creeping root-stocks, from which arise the erect, hollow, jointed stems. They are solid at the joints, which have toothed sheaths into which the next joint fits and from which the branches are given off in whorls. The spores are produced on the undersides of scales of a terminal oval cone. *Equisetum martii*, a native of Brazil, grows to 30 ft., but the other species are only a few feet high. The stems are covered with silica, and those of *E. hyemale* constitute the Dutch rushes of commerce, used for scouring and polishing.

EQUITY (Lat. *aequitas*). Term used by English lawyers to describe that part of the law of England formerly enforced only by the court of chancery, and not by the common law courts. Equity was of two kinds: (1) where the court of chancery gave rights which the

common law courts did not give; and (2) where chancery gave remedies which the common law knew nothing about.

At one time a court of equity could not award damages. They were reserved for the courts of common law. By the Judicature Act, 1873, however, all branches of the high court can now award damages in proper cases; though it is still unusual for a person to bring an action for damages alone in the chancery division. See Chancery.

ERASMUS, DESIDERIUS (1466-1536). Dutch humanist. He was born Oct. 28, 1463, and was illegitimate. He turned his Dutch father's name into the incorrect Latin and Greek equivalents, Desiderius Erasmus. After four years' schooling at Deventer, he was sent by his guardians to a seminary of the Brothers of Common Life at Herto-genbosch (Bois-le-duc), and in 1486 entered the cloister of Stein and took the vows of the Augustinian order. In 1491 he became secretary to the bishop of Cambrai and a priest in 1492. He studied in Paris and took pupils, one of whom, Lord Mountjoy, invited him to England. Residing chiefly in Oxford, he became the friend of Thomas More and Colet, and received instruction in Greek from Grocyn and Linacre. He taught Greek in Cambridge, and was appointed Lady Margaret professor of divinity. From 1521-29 Erasmus was at Basel, where most of his works were published, and then at Freiburg. He died at Basel, July 12, 1536.

Of his editions of classical works the most important is Terence, 1532. He edited many of the Fathers of the Church, but his greatest service to theology was his edition of the New Testament, 1516, the Greek text with a Latin translation, his treatment of which entitles him to be called the pioneer of Biblical criticism. Other famous treatises are *Encomium Moriae* (Praise of Folly), 1509, and *Colloquia*, 1516. Much of his correspondence throws light on the manners and customs of the England of his day. See More, Thomas.

ERASTIANISM. Term specially applied to the view of Church policy which regarded the Church as mainly or solely a department of the state. Its upholders urged that while the choice and practice of religion was a matter for the individual conscience, the external organization of churches—including the appointment of ministers—was a function of the state. The word comes from Thomas Erastus (1524-83), a Swiss theologian, who maintained that the offences of Christians should be punished rather by the civil power than the ecclesiastical.

ERBIUM. Metallic element of the rare earth erbia, which is its oxide. Its atomic weight is 167.7, its atomic number 68, and its specific gravity is 4.77. The oxide was first recognized in 1843. With dysprosium, holmium, and thulium it forms the erbia sub-group of rare earths, all of which are included in the yttrium group. Erbia is found in almost all the rare earths.

ERCKMANN-CHATRIAN. Compound signature of two successful literary partners and collaborators. They were Émile Erckmann, born May 20, 1822, at Phalsbourg, and Alexandre Chatrian, born Dec. 18, 1826, at

Soldatenthal, both in Lorraine. They first won success in 1859 with *L'illustre Docteur Matheüs*. In 1862 they began, with *L'invasion*; ou le fou Yégo, a series of novels which included *Histoire d'un Conserit* and *Waterloo*, which remain among the best war stories ever written. Industrious playwrights, also in collaboration, they wrote *Le Juif Polonais* (Théâtre Cluny, June, 1869), familiar in English to all playgoers as *The Bells*. Chatrian died in Paris, Sept. 4, 1890. Erckmann died at Lunéville, March 13, 1899.

ERCOLE DA FERRARA (c. 1462-1531). Italian painter. Born at Ferrara, little is known of him except that he was in the service of the duke of Ferrara from 1492-99, and died in Ferrara in 1531. Among his best works, distinguished by the warmth of their colouring, are *The Madonna and Child*, and *Conversion of S. Paul*, in the National Gallery, London.

EREBUS (Gr. *erebos*, darkness). In Greek mythology, son of Chaos and father of Hemera (day) by union with his sister Nyx (night). The word is sometimes used as equivalent to the lower world generally, sometimes for the region through which souls passed on their way to Hades proper.

EREBUS. Volcano of Ross Island, Antarctica. It has an alt. of over 12,000 ft. Another volcanic peak, Mt. Terror, lies 30 m. E. They were discovered by Captain James Ross in 1841, who named them after his ships. Erebus has been recently active. It was reached in March, 1908, by the Shackleton expedition.

Erfurt. Left, Gothic cathedral church of Our Lady; right, the 15th cent. church of S. Severus. See below.

ERECH. Biblical name of the Sumerian city Uruk. Its site is occupied by the modern village of Warka on the left Euphrates bank, 138 m. from Bagdad. Excavation has revealed the temple and ziggurat (or tower) of its city-goddess Nana, as well as relics of the Arsacid and Seleucid period.

ERECHTHÉUM (Gr. *Erechtheion*). Ionic temple on the Acropolis, Athens, just N.W. of the Parthenon. It was built partly in honour of the Greek hero, Erechtheus, the legendary king of Athens. It contained the shrine and a sacred wooden image of Athena Polias, guardian of the city, and the tomb of Cecrops, beside other treasures. A unique and beautiful structure, much of which is still standing, it is noted for its remarkable porch of the Caryatids (q. v.), six draped female figures supporting the roof. See illus. pp. 14, 151.

ERFURT. City of Germany. It stands on the Gera, 14 m. from Weimar. There are engineering shops, especially for tly. rolling stock, breweries, and dye works, and it is an important market for flowers and vegetables. In the suburb of Ilversgehofen is a noted salt mine. The cathedral was mainly built in the 13th century and restored in the 19th. Among its features are the beautiful chancel,

Equisetum. Fertile and barren stems of the horsetail

the cloisters, and the lofty towers. It has decorations by Peter Vischer and others. Other old churches include the Prediger and the Barfüsser. Two convents remain. The monastery to which Luther belonged has been converted into an orphanage. Other buildings are the town hall and the picture gallery. Two citadels overlook the city.

For a time Erfurt was part of Thuringia. In 1255 it became a free city, and early in the 15th century it joined the Hanseatic League. From 1378 to 1816 Erfurt had a university. Pop. 135,579.

ERG (Gr. *ergon*, work). Measurement of work done by the force of one dyne (q.v.) acting on a body through a distance of one centimetre. The unit of power is the erg per second.

ERGOT (Gr. *spur*). Fungoid pest (*Claviceps purpurea*) that attacks the flowers of cereals—especially rye—cultivated grasses, such as rye-grass and Timothy grass, and wild grasses. What should have been a grain is replaced by a hard spurlike outgrowth (ergot), which, if devoured by pregnant stock, may cause abortion. Ergots should not be sown with grain or grass seeds, and wild grasses infested by them should be destroyed.

Ericaceae. Leaves and flowers of *Calluna vulgaris*

ERICACEAE (Gr. *ereikē*, heath). Large natural order of evergreen shrubs, under-shrubs, and a few small trees. They are chiefly natives of temperate and cold climates. They have simple leaves,

and regular flowers. To the order belong the heaths and the rhododendron.

Ericht. Loch on the borders of Perthshire and Inverness-shire. Lying 1,152 ft. above sea level, it is 14½ m. long.

ERICSSON, JOHN (1803-89). Swedish-American engineer. Born July 31, 1803, at an early age he developed great aptitude for mechanics, and in 1820 became an engineer in the Swedish army. He came to England in 1826 and occupied himself with improvements in steam machinery. Three years later he built, with John Braithwaite, the Novelty locomotive engine to compete with Stephenson's Rocket, after which he gave his attention to marine engines. In 1839 he went to America, where he lived for the remainder of his life. Turning his attention to defensive armour for warships and improvements in marine engines, he gained a wide reputation. In 1861 he designed the famous armoured turret ship the Monitor, and in 1862 built a number of similar vessels for the American navy. He died in New York. March 8, 1889.

Ericsson. The Monitor, an ironclad turret ship, built from Ericsson's plans by the Federal navy during the American Civil War

ERIDANUS. In classical mythology, a river and river-god of Italy. It was identified with the Padus, the modern Po, which rises in the Alps and discharges into the Adriatic by several mouths. Eridanus is also the name of one of the Ptolemaic constellations whose larger part is below the northern horizon. See Constellation.

ERIDGE CASTLE. Seat of the marquess of Abergavenny (q.v.) in Sussex, near the Kentish border, 3 m. from Tunbridge Wells. The estate has belonged to the Novilles since the 13th century, but the present castle dates from the early 19th century. At Eridge Green are the Eridge Rocks. The village has a station on the Southern Rly., and the place gives its name to the Eridge Hunt.

ERIDU. Sumerian settlement at Abu Shahrain, S. of Muqaiyr (Moghair or Ur), S. Babylonia. Originally an islet on a Persian Gulf estuary, sacred to the water-god Ea, it was the traditional cradleland of some aspects of Babylonian religion. Its sandstone wall, 20 ft. high, enclosed a platform with marble stairs, bearing a two-staged brick tower.

ERIE. Southernmost of the Great Lakes of N. America. It forms part of the boundary between the U.S.A. and Canada. Area, 10,000 sq. m. It is 250 m. long, and its greatest breadth is 60 m. The lake is about 330 ft. above the level of Lake Ontario, into which it discharges its waters by the Falls of Niagara. In winter it is generally frozen over for a considerable period. Lake Erie is the outlet of a system of connecting canals. The Welland Canal connects with Lake Ontario; the Erie Canal affords communication between Buffalo and Albany, thus linking up with the Hudson river; the Ohio Canal begins at Cleveland and ends at Portsmouth, on the Ohio river; and the Miami and Erie Canal connects Toledo with Cincinnati. See Canada; also map, p. 349.

ERIE. City of Pennsylvania, U.S.A., on Lake Erie, 88 m. S.W. of Buffalo. Its harbour is protected by a strip of land called Presque Isle. It is an important industrial and commercial centre with trade by lake and rly. in coal, iron, grain, and agricultural produce. It was founded on the site of the old French fort of Presque Isle, erected 1753. In 1915, the city suffered from a cloudburst. Pop. 93,372.

ERIGENA, JOHANNES SCOTUS (c. 810-877). Scottish philosopher. He was a Scot born in Ireland, and the name Erigena (*Ierugena*, *Erugena*, *Erugena*) probably means Irish-born. About 840 he became a teacher at the court school at Paris. Erigena attempts to combine the neo-Platonist theory of emanation with the Christian idea of the Creation and the doctrine of the Trinity, the result being a kind of pantheism, the view that all things are contained in God.

ERIN. Poetical name for Ireland. It was popularised by Thomas Moore's Irish Melodies, but is of much earlier origin.

The phrase *Erin go bragh* means Ireland for ever. Through its association with Ireland's demand for a freer and more independent government it became a party instead of an entirely national cry.

ERINUS. Genus of alpine herbs of the natural order Scrophulariaceae.

They are natives of W. Europe. The spoon-shaped leaves, which grow in a tuft, have their broad ends boldly cut into about five pointed teeth. The leafy stem ends in a cluster of pretty rosy-purple or yellow flowers.

ERIS. In Greek mythology, goddess of discord. Annoyed at not being invited with the other gods to the wedding-feast of Peleus and Thetis, she threw a golden apple into the midst of the feast inscribed "for the fairest." It was claimed by Hera, Athena, and Aphrodite, and Paris (q.v.) had to decide.

ERITH. Urban district of Kent. On the S. side of the Thames, 14 m. E. of London, it has a station on the Southern Rly. There are large engineering works and other industries. The church of S. John the Baptist has a number of interesting brasses. Pop. 31,558.

ERITREA. Italian colony on the Red Sea. With a coast of about 670 m., it is bounded N. and W. by the Anglo-Egyptian Sudan, S. and S.W. by Abyssinia, and on the extreme S. by French Somaliland. Stock raising is the chief industry, and cotton is increasingly grown. The exports include hides, vegetable ivory, salt, potash, and mother of pearl. There are pearl fisheries at Massawa and in the Dahlak Archipelago, which is included in the colony. A rly. (75 m.) joins the capital, Asmara, to the chief port, Massawa. There is wireless communication with Italian Somaliland and with Italy. In 1870 Italy purchased Assab and the surrounding territory, in 1885 the Italians occupied Massawa, and in 1890 the Italian possessions on the Red Sea were formed into the colony of Eritrea. Its area is 45,754 sq. m. Pop. 510,000, of whom about 3,500 are Europeans.

ERIVAN. Capital of Armenia. It stands on the Sanga, 40 m. N.E. of Ararat. It contains the remains of an old palace of the Persian viceroys. The name Erivan is sometimes applied to the Armenian Republic itself. Pop. (est.) 90,000. See Armenia.

ERLKING or **ERLKÖNIG.** Figure in German mythology. He personifies an evil spirit haunting forests and plotting mischief to passers-by, especially children. The word, meaning king of the alders (Ger. *Erl*), from the vapours that cling to these trees at night, is a mistranslation, and should properly be *elf-king*. It is the subject of a famous ballad by Goethe, set to music by Schubert.

ERMINE. Name given to the winter phase of the stoat (q.v.), when the fur is white with the exception of the black tip to the tail. In Great Britain this change from the brown of summer takes place regularly in Scotland, and often in the N. of England; but further S. it is very rare. The ermine fur of commerce comes chiefly from Alaska; but it is now in little favour, except for official robes.

In heraldry, ermine is the principal fur. It is represented as silver or white powdered with sable spots, usually depicted like a small arrow head surmounted by three dots. See Heraldry.

ERMINE STREET. Early English name for an ancient British highway from London to Lincoln, and thence to York. Incorporated in part into the Romano-British road system, it passes through London along Kingsland and Stoke Newington to Royston, thence through Godmanchester, Castor, and Ancaster to Lincoln. See Britain.

Erinus. Roots, foliage and flower of *Erinus alpinus*

ERNE or **SEA EAGLE.** Name given to the white-tailed sea eagle, the only member of its group still found in Great Britain. It is of brownish colour, has a white tail, and is about 3 ft. in length. It still breeds in the Hebrides, but is becoming rare. See illus. p. 537.

ERNE. River and loughs of Ireland. The river issues from Lough Gownagh, in co. Longford, and flows mainly N through Lough Oughter and both upper and lower Lough Erne until it falls into Donegal Bay near Ballyshannon. Its main feature is the Ballock Falls on the lower river. Its length is 70 m. Enniskillen is on its banks. After leaving Longford it passes through counties Cavan and Fermanagh. The upper lough is 15 m. long and in one place 4 m. wide. The lower lough is 18 m. long and in one place 5 m. wide. The loughs are ten miles apart, and in both are a number of islands.

The title of earl of Erne has been borne since 1789 by the family of Crichton. The family seat is Crom Castle, Fermanagh, and the earl's eldest son is called Viscount Crichton. Pron Cryton.

ERNEST AUGUSTUS (1771-1851). King of Hanover. The fifth son of George III of England, he was born at Kew, June 5, 1771. He entered the Hanoverian army and distinguished himself during the Napoleonic wars. In 1799 he was made duke of Cumberland and Teviotdale, and in the House of Lords he acted with the more extreme Tories in opposing all kinds of reform, especially Roman Catholic emancipation and the great measure of 1832. At one time it seemed likely that Ernest would inherit the English throne, and by the operation of the Salic law he succeeded to Hanover in 1837. He died Nov. 18, 1851, and was succeeded by his son George. See Hanover.

ERNLE, ROWLAND EDMUND PROTHERO, BARON (b. 1852). British politician and writer. Born Sept. 6, 1852, a younger son of the Rev. G. Prothero, canon of Westminster, he was admitted to the bar, did literary work for some years, and in 1894 was made editor of *The Quarterly Review*. An authority on agriculture, he was appointed agent-in-chief to the duke of Bedford in 1899. In 1914 Oxford University chose Prothero as one of its members, and in 1916 he was included in the Coalition Government as president of the board of agriculture. He was made a peer as Baron Ernle in 1919. He wrote *The Pioneers and Progress of English Farming*, 1888; *Life and Correspondence of Dean Stanley*, 1893 (with G. G. Bradley); *The Psalms in Human Life*, 1903; and other books.

Baron Ernle,
British politician
Elliott & Fry

Eros. In classical mythology, the Greek name for Cupid (q.v.).

EROS. Nearest of the minor planets, discovered in 1898. The importance of the discovery lay in the fact that it had then approached nearer to the earth than Mars. The asteroid's subsequent nearest approach to the earth was in 1901. Another near approach is due in 1931.

EROSION (Lat. erosio, eating away). Wearing down of the earth's surface through the action of the atmosphere, rain, rivers, ice, and the sea and its tides. Wind transports particles and polishes surfaces over which they are carried. Sudden changes of temperature cause particles of rock to split off, subsequently to be removed by wind or water. Atmospheric acts chemically through rainfall, in causing decomposition of rocks. Disintegration of rocks being thus effected, the products are afterwards removed by running water. Glacial erosion takes place over large areas and on an extensive scale, and marine erosion is in continuous progress along coasts. The general result of all erosion is to lower the level of land. See Coast; Glacier; River.

ER RAM. Village of Palestine, on a hill on the Jerusalem-Nablus road. Identified as the ancient Ramah (q.v.) of Benjamin (1 Kings 15, 17), it formed a kind of frontier castle between the N. and S. kingdoms of Palestine, and was reoccupied after the return from captivity. The modern village was captured by Allenby, Dec. 28, 1917, in the advance following the capture of Jerusalem. See Palestine.

ERSE. Early Scottish variant of Irish. In the 14th-15th centuries the term was used of kings and caterans. In the 18th century it denoted Gaelic speech; at first Scottish Gaelic, and subsequently Irish Gaelic. In modern philology it sometimes designates the language-group, embracing Gaelic and

Erse. Irish Gaelic alphabet of eighteen letters

Manx, which is now usually called Goidelic. See Gaelic; Ireland.

ERSKINE, EBENEZER (1680-1754). Scottish divine and founder of the Secession Church. Born at Dryburgh, in Berwickshire, June 22, 1680, the son of a minister, his first charge was at Portmouk, in Kinross-shire, whence he moved to a church at Stirling. There he came into collision with his ecclesiastical superiors, and in 1732 he was suspended. With some associates he founded a separate presbytery, which developed into the Secession Church. In this Erskine remained until 1748, when his foes secured his removal from the ministry. He died at Stirling, June 2, 1754.

Ebenezer Erskine,
Scottish divine

ERSKINE, THOMAS ERSKINE, 1ST BARON (1750-1823). British lawyer. A younger son of the 10th earl of Buchan, he was born in Edinburgh, Jan. 10, 1750.

In 1778 he was called to the bar, and his success was instantaneous. In 1783 he was elected M.P. for Portsmouth. Having been attorney-general and chancellor to the prince of Wales, he was lord chancellor in the Whig ministry of 1806-7. He was then raised to the peerage. He died Nov. 17, 1823. The barony still remains with his descendants.

Erskine's eldest brother, Henry Erskine (1746-1817), was also a distinguished advocate. He was lord advocate in 1783, and again in 1806-7.

ERUBESCITE. Ore of copper also known as variegated copper pyrites and as horse-flesh ore. Chemically it is a sulphide of the metal. See Copper.

ERVINE, ST. JOHN GREER (b. 1883). Irish dramatist and novelist. He was born at Belfast, Dec. 28, 1883, and in 1915 was manager of the Abbey Theatre, Dublin. Notable plays written by him are: *Mixed Marriage*; *The Magnanimous Lover*; *Jane Clegg*; *John Ferguson*; *The Ship*; *The Lady of Belmont*; and *The First Mrs. Fraser*, which was produced in London in 1929. He has also written novels and volumes of short stories, including *Eight O'Clock* and *Other Studies*, 1913; *Mrs. Martin's Man*, 1914; *Changing Winds*, 1917; *The Foolish Lovers*, 1920; and *The Wayward Man*, 1927.

ERYSIPPEL (Gr. erythros, red; pella, skin). Acute contagious disease due to infection by the micro-organism *Streptococcus pyogenes*. Infection occurs through some injury to the surface of the skin, which may be quite trivial. The skin rapidly becomes swollen and red, the inflammation advancing with a more or less well-defined margin and dying away behind this. The face is most frequently involved.

The duration of the disease is generally from one to three weeks. In aged, debilitated persons and chronic alcoholics the outlook is not good. Treatment by drugs does not appear markedly to influence it, but some physicians recommend perchloride of iron. Icthyol is a useful local application. Injections of antistreptococcal serum have been used with success. The patient must be strictly isolated.

ERYTHEMA (Gr. from erythainein, to make red). Redness of the skin owing to dilatation of the small blood-vessels. It is usually associated with swelling. The condition may be localised, when it may be due to simple inflammation, burning, or irritation by chemical substances; or it may be more or less present over the whole body, when it is usually a symptom of infectious fever, or of poisoning by unsound food or certain drugs.

ERZBERGER, MATTHIAS (1875-1921). German politician. Born at Buttenhausen, Sept., 1875, he devoted himself to the study of political economy. He entered the Reichstag, and came into prominence when, as a member of the Catholic or Centre Party, he made a speech on July 6, 1917, accusing ministers of misrepresenting the military situation, and at the same time demanding the reform of the Prussian franchise and a statement of the peace aims of Germany. In 1919 he was minister of finance and vice-premier. Erzberger resigned in Feb., 1920, and was assassinated, Aug. 26, 1921.

ERZERUM or **ERZURUM.** City of Turkey.

In a wide plain, surrounded by mountains, 6,200 ft. above the sea, it is 120 m. S.E. of Trebizond (Trabzon), its port, and about 150 m. W. of Mt. Ararat. It is the centre of a large pastoral district and a depot for goods passing between Persia and Europe.

Its main importance came from its position strategically with respect to Russia. Under the Turks, who occupied it in the 16th century, it was made into a fortress and was the headquarters of an army corps. It was taken by the Russians in 1829 and again in 1878. During the Great War it was captured by the Russians in Feb., 1916, but during the winter of 1917-18 it was abandoned by them by order of the Bolshevik Government, and was re-occupied by the Turks in March, 1918. It was the scene of massacres of Armenians in 1895 and again in 1915. Pop. 30,800.

ERZGEBIRGE or **ORE MOUNTAINS.** Mountain range of central Europe. Partly in Saxony and partly in Bohemia, it stretches for about 90 m. from the Elbe to the Elstergebirge. The highest peaks are in the centre, the Kln (Keilberg) being over 4,000 ft. high. Only a little lower are the Fichtelberg and the Spitzberg. On the S. the range has a precipitous face, but on the N., or Saxon side, it slopes more gradually. The range, as the name suggests, is rich in minerals, silver, lead, tin, copper, iron, and gold being found. There are a number of health and pleasure resorts, and much of the scenery is very fine and attracts numerous visitors. The hills are densely wooded and the whole district is well served by railways.

ERZINGAN or **ERZINJAN.** Town of Turkey, the medieval Arsing. This formerly important military centre of the Turks lies on the W. Euphrates (Kara Su) about 75 m. W. of

1st Baron Erskine,
British lawyer
After Hoppner

Erzerum. During the Great War it was the headquarters of a Turkish army corps, and as a military base was second in importance only to Erzerum. It was captured by the Russians in July, 1916.

ESARHADDON. Assyrian king, who reigned 680-668 B.C. His first three years were marked by the rebuilding of Babylon, destroyed by his father, Sennacherib (2 Kings 19). Besides conducting campaigns against Cilicia, Arabia, and Elam, he sacked Sidon, 676, and Memphis, 670. At Shamaal he set up a stela with his portrait in relief, and erected palaces at Nineveh and Calah. His son Ashurbanipal succeeded him.

ESAU. Son of Isaac and elder brother of Jacob, whose great rival he became after the younger brother had secured by a trick the privileges of primogeniture. He became a hunting man, married wives of Hittite nationality, and founded a tribe which occupied the mountains S. of the Dead Sea. See Jacob.

Escalator. Diagrammatic view of an escalator as used on the London Underground Electric Railways

ESBJERG. Seaport of Denmark, in Jutland. It stands opposite the island of Fanø, 56 m. by rly. W. of Fredericia. It exports to Gt. Britain bacon, beef, etc. Pop. 21,251.

ESCALATOR. Moving stairway, consisting of an endless chain of steps running round sheaves at the top and bottom of the staircase. Every step is mounted on two two-wheeled trucks, the forward wheel of a truck being out of line with the rear one. On the sloping part of the staircase the rear-wheel rails are set higher than the front-wheel, but gradually reach the same level as the horizontal portions are approached; the treads are always horizontal. The stair-chain is driven by an electric motor.

An escalator transports more people than a lift in a given time, vertical travel and power consumption being equal in both cases, costs less in attendance, and is generally more convenient to use. At many stations on the London underground railways they are in use in place of lifts.

ESCALLONIA. Genus of evergreen shrubs of the natural order Saxifragaceae, natives of S. America. The tubular white, pink, or red flowers are disposed in small clusters at the ends of branches. Two species are grown in the South of England near the sea as garden hedges.

ESCARPMENT

(Fr. escarper, to cut vertically). Steep face or ridge along which a bed or formation of rock abruptly ends. Escarpments are often found where gently tilted beds of hard and soft rocks occur in alternate layers. The steep southern face of the N. Downs and the abrupt northern face of

the S. Downs are escarpments. Escarpments are also found in plateau regions, where they are usually produced by the fracturing and tilting of crustal blocks.

ESCHATOLOGY (Gr. eschatos, last; logos, discourse). Term used for that branch of theology which deals with death, judgement, the life after death, and the return of Christ to the earth. The general teaching of the Christian Church on the subject has been marked by great reserve, with the exception of the Church of Rome in the Middle Ages, when the doctrine of purgatory was developed in detail. The present attitude of theologians is one of opposition to speculation on the subject. See Immortality; Survival.

ESCHEAT (Lat. excedere, to fall out). Term used in law for the reversion of land to its ultimate owner, generally the crown, because there is no other heir. Escheat was recognized by both English and Scottish law, until it was abolished in 1922.

ESCUDO (Port. shield). Silver coin, monetary unit of Portuguese currency since May 22, 1911. Divided into 100 centavos, and of nominal value 4s. 5d., 2, 5, and 10 escudo pieces are minted in gold, and 1,000 form a conto.

ESCURIAL (Span. Escorial). Palace and monastery of Spain, situated 26 m. N.W. of Madrid, on a spur of the Guadarrama mountains. It was designed for Philip II of Spain by Juan Bautista de Toledo, and took from 1563 to 1582 to build. It is of grey granite, in the severest Doric style. The plan is that of an immense rectangle, with a comparatively small rectangular wing, embodying the Palace of the Infantas, projecting beyond the E. side. The gloomy severity of the exterior is emphatic. The central space is occupied by the church, the plan of which was based on the original one of S. Peter's, Rome. Below the high altar is the famous Pantheon, containing the tombs of the kings and queens of Spain. Distributed over the church are paintings by Tintoretto, El Greco, Zurbaran, Ribera, and Coello. On the N. side is the palace.

Philip II was the founder of the Escorial Library. Don Diego de Mendoza, the Inquisition, and Augustin, archbishop of Tarragona, were other donors, the collection being further increased by confiscated libraries, and by the rule that a copy of every book published in Spain should be presented to it.

ESDRAS. THE BOOKS OF. Several works bear the title Esdras. One of these (O.T. Apocrypha), commonly called I Esdras, contains substantially the same materials as the Biblical books known as Ezra, Nehemiah, and II Chronicles. The other work in the O.T. Apocrypha is

commonly called II Esdras, but sometimes IV Esdras. It contains seven visions, and is the only specimen of Apocalyptic Literature in the O.T. Apocrypha.

ESHER. With Thames Ditton and Long Ditton, an urban district of Surrey and residential suburb of London. It stands on the Portsmouth Road near the river Mole, 15 m. S.W. of London on the Southern Railway. Esher Place, built by William of Wyndesbury in 1460, and now represented by a ruined tower, was the residence of Wolsey after his fall in 1529. It was sold in 1928 by Lord D'Abernon. One mile S. is Claremont (q.v.). Pop. 14,309.

ESHER, WILLIAM BALIOL BRETT, 1ST VISCOUNT (1817-99). British judge. He was born Aug. 13, 1817. In 1840 he became a barrister, and after some years at the bar entered the House of Commons as Conservative M.P. for Helston in 1866. In 1868 Brett was made solicitor-general, but left political life to become a judge of the court of common pleas. In 1876 he was promoted to be a lord justice, and in 1883 to be master of the rolls. He died May 24, 1899. In 1885 Brett was made Baron Esher, and in 1897 was raised to the rank of viscount.

His son, Reginald Balioi Brett (1852-1930), the 2nd Viscount, was Liberal M.P. for Penryn and Falmouth 1880-85. He was secretary to the office of works 1895-1902, and under King Edward VII he was deputy-governor of Windsor Castle, and again from 1928. Esher took a great interest in the Territorial Force, and was on the committee of imperial defence. He died Jan. 22, 1930. His publications include To-day and Tomorrow and Other Essays 1910; and, with A. C. Benson, he edited the Letters of Queen Victoria, 1907.

2nd Viscount Esher, British publicist Hereford

ESK. River of Great Britain. Formed by the confluence of the Black Esk and White Esk, which meet in Eskdalemuir, it flows for 42 m. through Dumfriesshire and Cumberland to the Solway Firth, about 5 m. below Long-

Escorial. The palace and monastery from the north. In the centre is the church; the palace, college, and convent occupy parts of the surrounding buildings

town. The Esk of Midlothian, formed by the junction of the N. Esk and S. Esk in Dalkeith Park, flows thence 3½ m. N. to the Firth of Forth at Musselburgh. The North Esk flows S.W. for 29 m. to the North Sea, 4½ m. N.N.E. of Montrose. The South Esk flows 49 m. S.E. and E. to the North Sea at Montrose.

ESKIMO (Abenaki, raw flesh eater). Primitive race inhabiting arctic America. Their geographical range of 5,000 m. is the widest of any aboriginal race in the world. The native name is Innu (men). Long-headed, broad-faced, lank-haired, and of a yellowish brown colour, an origin in prehistoric Europe is suggested, but has recently been contested in favour of relationships more definitely mongoloid. Their one-man skin canoes (kayak), transport boats (umiak), summer tents of skin, winter huts of turfed stone, migrant snow-houses (igloo), harpoon floats, dog sledges,

Escarpment Sectional diagram illustrating formation of escarpments E.E. 1. Soft layers of lower Severn Valley. 2. Oolitic limestone of Cotswold Hills. 3. Soft layers of middle Thames basin. 4. Chalk beds of Chiltern Hills. 5. Soft layers of London basin.

ally the same materials as the Biblical books known as Ezra, Nehemiah, and II Chronicles. The other work in the O.T. Apocrypha is

cairn-burials, all betoken an intelligent adaptation to adverse conditions. They live by hunting the musk ox and reindeer, and seals are captured with the harpoon.

Eskimo man in hunting dress

The language stock, with its many dialects, attests an ancestry anterior to their American advent. Their animism embraces a crude magic, governed by medicine-men (angakok). Their communal life recognizes no national chiefs; tribal warfare is unknown. The Aleuts of the Aleutian Islands are a self-contained branch of the race. A tribe of blond Eskimo was discovered by Stefansson during his 1909-11 expedition on Coronation Bluff, far in the Arctic zone. See Aborigines.

ESKIMO DOG. Breed of dogs kept by the Eskimos of Arctic America. They are little more than domesticated wolves of the district.

The Eskimo dog has a sharp muzzle, upright ears, rough coat, and a bushy tail. Though usually of the colour of the wolf, black-and-white specimens are not uncommon. Like the wolf, it does not bark, but howls. It is employed for sledge drawing, about eight being usually yoked together. When the going is good a dog will draw on an average over 300 lb. for 35 m. in a day. They are fed on frozen fish, and their drink is snow.

Eskimo Dog. Specimen of the breed, closely akin to the wolf

ESMOND, HENRY VERNON (1869-1922). Stage and pen name of Henry Vernon Jack, British dramatist and actor. He was born at Hampton Court, Nov. 3, 1869, and went on the stage in 1885. He was the author of many plays, some of which enjoyed considerable popularity. They include *Bogey*, 1895; *One Summer's Day*, 1897; *The Wilderness*, 1901; *The Sentimentalist*, 1901; *My Lady Virtue*, 1902; *A Young Man's Fancy*, 1912; *Eliza Comes to Stay*, 1913; *The Dangerous Age*, 1914. He died April 17, 1922.

ESNEH, ESNA OR ISNA. Town of Egypt. It is on the W. bank of the Nile, 36 m. by rly. from Luxor. The *Tesnet* of ancient Egypt, it was called *Latopolis* by the Greeks, after the locally venerated lotos fish. The chief object of interest is the temple of Khnum. A subterranean Coptic church was identified here in 1895. The harrage at Esneh ensures adequate irrigation for a large area. Pop. about 20,000.

ESPALIER (Fr.). Shape or form of fruit-tree. An espalier consists of a main root stem, the original stock, from which fruit branches in tiers extend horizontally right and left, one above another.

During the year after hudding, when the side-shoots make their appearance, all are removed except three, grouped close together. One is trained upwards to form a continuation of the main stem, and the remaining couple are coaxed to grow right and left, parallel with the ground. When the main stem produces three more buds suitably situated, the process is repeated above the original tier.

Espalier. Pear tree trained to grow in this way upon a trellis

ESPARTO GRASS (*Stipa tenacissima*). Tall perennial grass of the order Gramineae. It is a native of S. Europe and N. Africa, where it grows in rocky soil. Its leaves are rolled in from the edges, so that they appear thread-like. Being tough and wiry, it is used in the manufacture of ropes, mats, and a superior kind of paper. For the latter purpose many thousands of tons of the grass are imported into Britain annually. As a crop it yields about 10 tons per acre. See Paper.

Esparto Grass

ESPERANTO. International language invented by Dr. Zamenhof, an oculist of Warsaw. Completed in 1878, and first published in 1887, it has since made great strides, the number of Esperanto societies rising from 26 in 1901 to 2,700 in 1913. The alphabet consists of 28 letters, and the language is easily learned, every rule being without exception, the spelling phonetic, and the vocabulary surprisingly small.

International congresses have been held annually since 1905, except during the years 1914-18. The language is controlled by an international academy and a language committee, and the organization of the movement by the central office at 51, Rue Clichy, Paris. There is a flourishing literature, translated and original, and some 70 Esperanto periodicals are now published regularly. The headquarters for the British Empire is The British Esperanto Association, Inc., 142, High Holborn, London, W.C. The *Universala Esperanto-Asocio* is at 14, Muscum-strasse, Berno, Switzerland. See Language; Phonetics.

ESPIONAGE (Fr. *espion*, spy). Aiding an enemy by supplying information otherwise than as a helligerent engaged on reconnaissance duty, or as a citizen openly helping his own country. The soldier if captured must be treated as a prisoner of war; a civilian may be guilty of a war crime, such as war treason, but in neither case, if no dissimulation has been practised, is the offence that of espionage. A captured spy may be lawfully sentenced to death, as were numbers during the Great War.

ESQUIMALT. Port of British Columbia, Canada. It is on Vancouver Island, 3 m. from Victoria. It has a magnificent harbour and is the Pacific coast headquarters of the Canadian navy, for which there is a dockyard and other naval establishments. The town is served by the C.N.R. and C.P.R. The industries include shipbuilding. Pop. 4,700.

ESQUIRE (old Fr. *es-cuyer*, shield-bearer). Title of honour. The word, originally denoting one who bore the shield for a knight, became a title of honour below the rank of knight. Among those legally esquires are sons of peers, the eldest sons of baronets and knights, justices of the peace, and barristers.

ES SALT. Village of Palestine. Identified as the ancient Ramoth (Deut. 4, 43; Josh. 20, 8), it is 15 m. N.E. of the crossing of the

Jordan at El Ghoraniye, 20 N.E. of the N. end of the Dead Sea. During the Great War it was a depot of the Turks, who when they retired from it, April 1, 1918, brought away some thousands of Jewish, Syrian, and Armenian refugees. On April 30 Allenby resumed operations E. of the Jordan, and Australian mounted troops entered Es Salt. It was evacuated by the British, May 3, when Allenby withdrew his whole force to the Jordan crossings. See Palestine.

ESSEN. Town of Prussia, in the Rhine province, 20 m. N.E. of Düsseldorf. Situated near vast iron and coal deposits, it was here that the Krupp works were established, and to them the town owes its growth, the population having increased from 9,000 in 1850 to 470,524 in 1925. It is also an important railway centre. Essen grew up around a Benedictine nunnery, and has a notable church, the minster. Other buildings include the town hall, railway station, and exchange. Essen, with neighbouring towns, was occupied by the French in Jan., 1923. See Krupp; Ruhr.

ESSENES. Jewish sect originating in the 2nd century B.C. It sought to combine the ascetic practices of the Jewish religion with various Oriental tenets and rites. The Essenes believed in one God and in eternal predestination. While maintaining the immortality of the soul, they denied the resurrection of the body; and they held a Greek view of future rewards and punishments. They led very austere lives. Community of goods was practised, and the time was divided between prayer, study of the sacred books, and agriculture. Strongly opposed by orthodox Jews, they were favoured by the Herods. The sect died out before the 3rd century A.D.

ESSENTIAL OILS. Oils representing in the majority of cases the characteristic properties of the plant from which they have been extracted. They are sometimes called volatile oils. This class of oils can be entirely volatilised without change, whereas the fixed or fatty oils make a permanent greasy mark if placed on a piece of paper.

ESSEX. County of England. It is bounded S. by the Thames, E. and S.E. by the North Sea, N. by Suffolk and Cambridgeshire, and W. by Hertfordshire and Middlesex. Its area is 1,530 sq. m. Its seaboard is indented

Esquimalt, British Columbia. Aerial view of harbour, one of the safest on the Pacific coast

Courtesy of Agent General for British Columbia

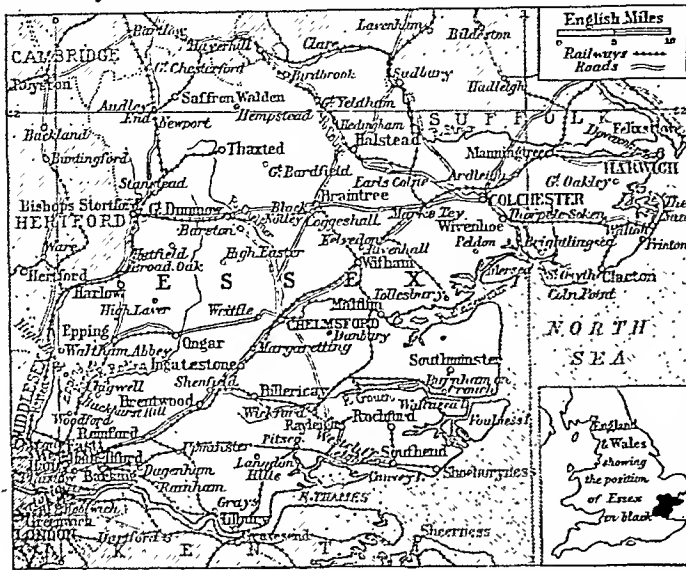

by several river estuaries and marked by low-lying islands: Canvey, Foulness, Wallasea, Mersea, etc. The chief rivers are the Thames, Lea, Stour, Colne, Chelmer, Blackwater, Crouch, and Roding. The coastal region is flat and marshy, but there is comparatively high ground in the N.W. and centre. Chelmsford is the county town. Harwich is the chief port, and Southend, Walton-on-the-Naze, Dovercourt, Clacton, and Frinton are popular holiday resorts.

The county produces wheat, barley, and fruit, but apart from brewing (Romford) and engineering (Colchester), the manufacturing industries are largely confined to the metropolitan area, in which is the bulk of the population. The Crouch, Blackwater, and

Colne have productive oyster beds. There is a gunpowder factory at Waltham Abbey, and the Tilbury Docks and Victoria Docks (Plaish

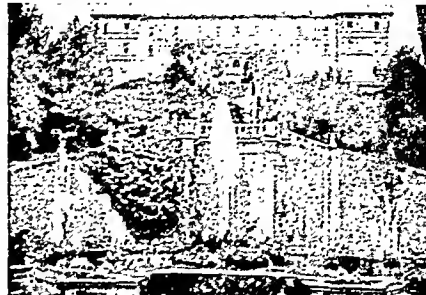

His son, Robert Devereux (1591-1646), the 3rd earl, was restored in 1604 to the title his father had lost, James I being then on the throne. In 1639 he held a command in the army sent by Charles I against the Scots, but on the outbreak of the Civil War he took the side of the parliamentarians, and was appointed general of their forces. He resigned his position when the self-denying ordinance was passed in 1645, and died Sept. 14, 1646.

the rate of 4 p.c., reckoned from the day of death. On real estate this can be paid by instalments, on which interest is only charged after twelve months. See Legacy; Will.

ESTCOURT. Town of Natal. At an elevation of 3,833 ft., on the rly. from Pietermaritzburg to Ladysmith, 76 m. N.W. of the former it was the scene of important operations during the S. African War. At Weenen, 28 m. E., parties of Boers were massacred by the Zulus in 1838. Pop. 800.

ESTE. Name of a noble Italian family founded by Oberto II (c. 1015), margrave of Casalmaggiore. It takes its name from a city

ESSEX. Map of the deeply-indented county, showing its relation to the London area (tow) are on the Thames. Burnham-on-Crouch is a yachting centre. The forest of Essex has dwindled to what is known as Epping Forest (q.v.). The county is served by the L.N.E. and the L.M.S. Railways. For long the county was in the diocese of London, but since 1914 it has been in that of Chelmsford.

The county is rich in prehistoric, Roman, Anglo-Saxon, medieval, and monastic remains: has many notable churches and some fine old houses, Audley End among them, while the remains of Norman castles, e.g. Colchester and Hedingham, and the fragment at Hadleigh, bear witness to the Norman occupation Pop. 1,470,257.

ESSEX. EARL OF. English title now held by the family of Capell. There were earls of Essex soon after the Norman conquest, and Geoffrey de Mandeville was one of the first. The earldom afterwards passed successively to the Bohuns, the duke of Gloucester, the Bourchiers and the Devereux. With the death of Robert Devereux, in 1646, the title became extinct. In 1661 Arthur Capell was made earl of Essex. He was succeeded in 1683 by his son Algernon, and the title is still held by his descendants. His chief seat was Cassiobury Park (q.v.). The earl's eldest son is known as Viscount Malden. In 1916 Algernon (h. 1884) became the 8th earl.

ESSEX, ROBERT DEVEREUX, 2ND EARL OF (1591-1646). English soldier and courtier. Eldest son of the 1st earl, he was born at Netherwood, Herefordshire, Nov. 19, 1566, and was introduced at court in 1577, when he soon became a favourite of the queen. He took part in Drake's expedition to Portugal, 1589, commanded an expedition to Normandy, 1591, distinguished himself at the capture of Cadiz, 1596, lost favour by the failure of the Islands. or Cadiz Voyage, 1597, and was master of ordnance, earl marshal, and informal foreign secretary to the queen. In 1599 he was appointed governor-general of Ireland, but was dismissed from office and imprisoned from Oct., 1599, to Aug., 1600. He attempted a rising in London, was arraigned, and beheaded Feb. 25, 1601. He was a writer of sonnets and masques.

the Castle and Key and the word Gibraltar on their colours. They fought in the West Indies and Egypt against France, before taking part in the Peninsular War. They were at Waterloo, and in the retreat from Kabul (1842), the Crimean War, the Indian Mutiny, the China War (1860), the Nile Campaign (1884-85), and the S. African War. In the Great War the 2nd Essex were in the retreat from Mons, and in Cambrai, 1917, a company of the 13th Essex made a gallant stand at Moeuvres. The regimental depot is at Warley.

ESTATE DUTIES. Name given in the United Kingdom to the duties paid on the estates of deceased persons. They date from

ESTATE DUTIES. Table showing the scale of duties in force after the Budget introduced by Mr. Philip Snowden in 1930, in which the rates on fortunes of £120,000 and over were increased

1894. Real property, hitherto exempt from charges of this kind, was made to pay at the same rate as personal property, and the duties were levied on a graduated scale. The legacy duty, which was in force before 1894, is sometimes classed with the estate duties.

Gifts made within three years of death, unless part of the deceased's normal expenditure, are charged with duty. Payment may be made in real or leasehold property; also in war loan, which is taken at its nominal value. Estates under £500 may pay an inclusive fee of 30s. or 50s., which covers all duties. Interest on the duty on personal property is charged at

ESTHER. Book of. O.T. book so named after the chief character in the story. When Vashti, the consort of the Persian king Ahashverosh (Xerxes), was deposed, Esther, the

adopted daughter of Mordecai, a Jewish exile, was chosen in her place. She was thus enabled to frustrate the plots of Haman (q.v.) a powerful enemy of her people. The real purpose of the book seems to be to explain the origin of the Jewish festival Purim.

ESTON. Urban dist of Yorkshire (N.R.). It is 5 in S.E. of Middlesbrough, on the L.N.E.R. There are blast furnaces and iron-foundries. Pop. 30,634.

ESTONIA. Republic of N. Europe, formerly part of the Russian Empire. It is bounded N by the Gulf of Finland, E. by Russia and Lake Peipus, S. by Latvia and the Gulf of Riga, and W by the Baltic Sea. Except in the S.E., which is hilly, the mainland of Estonia lies low, it is intersected by numerous rivers and streams and much of it is swampy. There are many lakes. About 20 p.c. is forest. The climate is rather hot in the summer and cold in the winter. Hiiumägi (Dago), Oesel (Ezel), and other islands belong to it. Its area is about 18,632 sq. m. pop. 1,116,474.

The chief occupations are agriculture and dairy farming. Good crops, particularly of flax, are raised from a naturally poor soil, and there is a flourishing livestock industry. Oil-shale is plentiful. Manufactures include textiles, paper, wood pulp, and spirits. Among the exports are dairy produce, wood and wood products, cotton fabrics, and paper. Estonia carries on a large transit trade, the seaport of which is Tallinn (Reval), the capital, connected by railway with Leningrad. Other towns include Narva, Tartu (Dorpat), and the port of Pärnu (Pernau).

Early in the 13th century the country was conquered by Danes and Germans. The Danes founded Reval (Tallinn) in 1219, and later divided the land between themselves and the Germans, finally selling their part in 1346 to the Teutonic Knights, who joined it up with Livonia. After the dissolution of the Teutonic Order in 1560, N. Estonia passed to Sweden. S. Estonia remained under Poland till 1629, when the whole of Estonia became a Swedish province with Livonia, which was ceded to Russia in 1721.

After the outbreak of the Russian Revolution in 1917, Estonia regained her independence, being proclaimed an independent republic on Feb. 24, 1918. On May 3, 1918, Great Britain, and later France and Italy, accorded Estonia de facto recognition, and on Jan. 26, 1921, the Supreme Council of the Allies agreed to give the republic de jure recognition. Soviet Russia recognized Estonia's independence on Feb. 2, 1920. Estonia is a member of the League of Nations. The country is governed by a state assembly of 100 members, who choose the members of the government and the premier or state head.

ÉTAPLES. Town of France. On the estuary of the Canche, 17 m. S. of Boulogne, and near the coast, it is the railway terminus for Paris-Plage, and is a fishing centre. The Great War created a new Etaples. It expanded N. along the main road to Boulogne, a city of hospitals, with the British military cemetery on the Camiers road. It was a huge British

encampment. Among the training grounds was the well-known Bull Ring. Pop. 5,846.

ETCHING (Ger. ätzen, to corrode). Method of engraving on metal either by biting with an acid a design drawn through a ground specially laid on the metal, or by drawing with a needle directly on the metal. Copper is the metal almost universally used. In etching by acid, the plate is covered with a coating of wax or other resinous substance. The drawing is traced with a steel needle through the wax down and into the copper, and the plate submitted to the action of nitric or other acid. The parts that are to come light and sketchy are "stopped out" with varnish. Those which are to be darker are exposed for a further period, and then stopped out; and those which contain the heavy shadows and blacks are then exposed long enough

1014 Ethelred fled to Normandy, where duke Riehard was his father-in-law. He was again in England when he died in 1016. Ethelred's sons included Edmund Ironside and Edward the Confessor.

ETHER OR **ÆTHER** (Gr. aithēr). Name given to a super-sensible elusive medium supposed to fill all space, not only the space between the worlds, but the space between the atoms of matter even in the most solid objects. This medium is held to be responsible for gravitation and cohesion as well as for electric and magnetic attraction. Light waves are thought to be propagated through the ether, and those forms of vibration of which Hertzian waves or electro-magnetic oscillations are an example. A recent school of mathematical physicists seeks to dispense with the ether. See Relativity.

ETHER (ETHYL ETHER) (C₂H₅)₂O. Colourless, inflammable liquid, lighter than water, prepared by heating together a mixture of sulphuric acid and alcohol. Large quantities of ether are used in the manufacture of cordite, aniline dyes, and artificial silk. As a solvent of gun-cotton it is employed in making collodion, used in the wet-plate process of photography.

In medicine, ether is employed in doses of 15 to 30 minims for repeated administration, and 45 to 60 minims for single administration. Ether evaporates rapidly, producing great cold, and a spray directed against the skin eventually numbs sensation sufficiently to permit the performance of small operations. Its most frequent use is as a general anaesthetic. See illus. p. 80.

ETHEREGE, SIR GEORGE (1634-91). English dramatist. Born of an Oxfordshire family, he gave his time mainly to the life of a man of fashion. In 1664 his first comedy, *The Comical Revenge*, or *Love in a Tub*, was produced, and from that time its author's name and fame were assured. A second comedy and then a third followed, each a distinct success. In 1685 Charles II, having knighted Etherege, sent him to represent England at Ratisbon. In 1688 he left that city, and passed most of his later life in Paris. Etherege may be described as the originator of the modern comedy of social life.

ETHICS. Inquiry into human conduct in so far as conduct is right or wrong, or has moral value. The term good is used to denote that which possesses such value, and thus ethics is sometimes described as consisting of an inquiry into the meaning of good. It is to be distinguished from anthropology or sociology, sciences mainly descriptive or scientific, while ethics is essentially reflective or philosophic. "What is the aim of human life, and what the chief end of man's activities?" is the question which ethics has to answer. Starting with men's moral judgements of right and wrong, of good and bad, it asks what they imply as to man's nature.

In modern times the greatest influence has been the growth of the natural sciences with their view of nature as one deterministic system. This assumption has focussed ethical inquiry on the problem of the freedom of the will. The modern point of view is best represented by Immanuel Kant. He regarded the outstanding fact of conduct as the contrast between what is and ought to be, and emphasised the impossibility of deriving the latter from the former.

The Ethical Society was founded for the culture of morality apart from theology. South Place, Finsbury, E.C., and the W. London Ethical Church, Bayswater, W., are the principal London centres. The more important English ethical societies are federated in a Union with headquarters at 1, Little George Street, Westminster, S.W.1.

Estonia. Map of the Baltic republic which, before the Great War, was part of the Russian Empire. Its independence was proclaimed on Feb. 24, 1918

to complete the cross. In the dry-point method the artist draws his subject with a hard, sharp steel point upon a perfectly clean, unscratched, flawless copper plate.

Etching dates from the time of Albert Dürer (1471-1528), who dry-pointed two or three plates in 1512 and etched a few more between 1515 and 1518, but no practitioner has ever equalled Rembrandt (1606-69). Modern etchers like 'Sir' Seymour Haden, James McNeill Whistler, Sir D. Y. Cameron, William Strang, Joseph Pennell, Muirhead Bone, and many Continental artists, carry on the best traditions of the art.

Ethane. Variant name for the gas ethyl hydride. See Ethyl.

ETHELBERT. Name of two English kings. One became king of Kent about 590, and in 597 was described as overlord or bretwalda of England. He became a Christian through the influence of his wife Bertha, a Frankish princess, and was baptized by Augustine, who settled at Canterbury in his reign. He died about 616. See Bertha.

A later Ethelbert, an elder brother of Alfred the Great, was king of Wessex and Kent from 860 to 865.

ETHELRED. Name of two English kings. Ethelred I, an elder brother of Alfred the Great, succeeded his brother Ethelbert as king of Wessex and Kent in 865. His reign, which ended with his death, April 23, 871, was occupied in fighting the Danes, over whom he gained a great victory at Uffington.

Ethelred II, called the Unready, became king in 979. He was responsible for paying Danegeld to the Danes, and was king when many of them were massacred in Nov., 1002. Years of fighting between the English and Sweyn, king of Denmark, followed, and in

ETHIOPIA OR **AETHIOPIA** (Gr. Aithiopia). In ancient geography, name given by the Greeks to the whole of Africa from the Red Sea to the Atlantic, in a narrower sense to parts of what are now the Anglo-Egyptian Sudan and Abyssinia. The name was originally applied to all countries inhabited by persons of dark-brown or black colour. From earliest times Ethiopia was intimately connected with Egypt, which more than once had Ethiopian kings. The first Ethiopian kingdom was that of Napata, founded about the 11th century B.C. The name Ethiopia is also given to a Christian kingdom established in the Abyssinian highlands. This was the origin of the empire of Abyssinia (q.v.), the official title of which is still Ethiopia.

ETHNOLOGY. Study of the characteristics and distribution of the various races of mankind over the various regions of the globe. Man as we know him is not differentiated into species; that is, the divisions which we call races can be crossed and produce offspring which remains fertile. Everyone now takes for granted that the animal genus *Homo* was evolved, not less than half a million years ago, out of a lower form of animal structure from which were also evolved the anthropoid apes.

The species *Homo sapiens* which peoples the earth to-day may not have arrived till two or three hundred thousand years later. Other species of the genus may also have arrived and perished—that may be indicated by some of the doubtfully human bones of an incalculable antiquity which modern research has discovered; but, such bones apart, other species have left no traces of themselves.

Wherever and whenever it was that *Homo sapiens* did arrive as a species endowed with the specific characteristics which still belong to him, his offspring had scattered themselves far and wide over the earth's surface before the last Ice Age came and went, leaving that surface changed beyond recognition. Man survived, already dispersed and divided into distinguishable type-groups, the nuclei of the primordial 'races,' marked by growing divergences in their physical structure and appearance—colouring (which seems to be mainly a matter of long racial development under continuous climatic conditions), growth of the hair, size and thickness of the bones, shape of the face, and most of all (in the view now prevalent), shapes of the jaw and cranium.

These races it is usual to divide primarily into four groups: the American, since the people who had found their way to that hemisphere were almost permanently cut off from the peoples on the other land-mass; the Negro in the African equatorial regions and south of the equator; the 'Caucasian' on the North African littoral, in Western Asia and in Europe; and the Mongolian in central, northern, and eastern Asia. With the Negro proper in Africa is connected the Negroid in southern Asia, the archipelagos, and Polynesia. Both Mongolian and Caucasian have many

mental divisions, the geographical distribution corresponding in general to the craniological and other structural criteria of classification, though there are many regional blendings of physical types. The Negro develops as a 'long-head' with protruding jaw, the Mongolian as a 'short' or 'broad'-head with a flat face, while the Caucasian is more complex, including both long-head and short-head, whose fusion produces also a middle-head type.

After another thousand centuries or so, in the twilight dawn of history, now no more than between five and ten thousand years ago, the Caucasians seem to provide us with three distinguishable main groups—short-headed Mediterraneans, Alpines in the European interior and Asia Minor, and long-headed Semites in western Asia, though the Sumerians of Babylonia appear to be Mongolian. The cultural development has two centres, the Nile basin and Mesopotamia, the one presumably but not quite certainly deriving from the other, though which is parent and which offspring is hotly disputed. But about 3000 B.C. set in the migrations—in a long succession of waves—of another Caucasian race, long or middle headed, variously referred to as Aryan, Indo-European or Nordic, from its very uncertain homeland somewhere north of the Black Sea.

Its eastern streams penetrated India and Persia; its Hellenic and Latin streams flowed into the Balkan peninsula and Italy, the Celtic or Gallic into the lands with an Atlantic seaboard; in every case not exterminating but dominating, permeating and gradually in various degrees fusing with the more populous tribes they found already in possession. Only about 100 B.C. began the last great Teutonic influx in combination with a Scandinavian element, though the Slavonic group behind them were still to overflow into the Balkan peninsula. And later still Mongolians—not Caucasians at all—were by the tenth century A.D. to plant themselves as distinct peoples, Magyars in Hungary and Bulgars on the Danube, and finally Turks; though without otherwise affecting the racial ingredients of Europe. See Anthropology; Man.

ETHYL. Organic radical represented by the chemical formula C_2H_5 . It has not been isolated, but its combinations, e.g. ethyl-alcohol (ordinary alcohol) and many compounds, are well known. Ethyl chloride or monochlorethane is a volatile liquid, used as a solvent. Ethyl nitrite is a solution containing 3 p.c. of ethyl nitrite, by weight, with 95 parts of absolute alcohol and five parts of glycerine. It forms the Liqueur Ethyl Nitritus of the British Pharmacopoeia.

Ethyl petrol is the name given to motor fuel containing a small proportion of lead tetra-ethyl. It is claimed that such an addition reduces the 'knock' in the engine, gives longer mileage, and confers other advantages.

ETHYLENE (C_2H_4). Colourless gas prepared by the action of sulphuric acid on alcohol. It is easily inflammable, burns with a luminous flame, and forms an explosive mixture with air or oxygen.

ETIVE. River and sea-loch of Argyllshire. The river issues from Loch Mathair Etive and flows 15 m. S.W. to the head of Loch Etive. The loch extends 10½ m. S.W. and then 8½ m. W. to the Firth of Lorne.

ETNA (Lat. Aetna; Sicil. Monte Gibello). Active volcano near the E. coast of Sicily. Its height is about 10,750 ft. The base covers an area of about 460 sq. m., and has a circum-

ference of 90 m. Etna presents the appearance of a symmetrical cone, broken on the E side by the Valle del Bove, a gaping abyss from 2,000 to 4,000 ft. deep. There are some 200 minor cones. Its slope comprises three zones of vegetation. In 1923 there was a serious eruption of Etna, and in Nov., 1928, another.

Ancient legend connects the volcano with the giant Typhön, who is said to have been buried beneath it by Zeus, and to have caused its eruptions by his breathing; and with the workshops of Hephaestus (Vulcan), wherein the Cyclopes fabricated thunderbolts.

Eton. The town from Windsor; in the centre is the college chapel. Above, the School Yard and Lupton's Tower, built in the 16th century

ETON COLLEGE. English public school at Eton, Buckinghamshire. It was founded by Henry VI, and its first charter is dated Sept. 12, 1440. A supplementary charter was granted in 1441, when the buildings, completed in 1553, were begun. Henry Sever was the first provost, succeeded by William of Waynflete, 1443. Among heads have been Nicholas Udall, John Keate, the famous Hoger, E. C. Hawtrey, J. J. Hornby, Edmond Warre, E. Lyttelton, and C. A. Alington.

Of the buildings, the hall, 1448, restored 1858, is the only part built according to the founder's final plan. The Gothic chapel, 1442-80, resembles that of King's College, Cambridge, and was restored in 1848-60. The library was built in 1729. The wall game is a form of football played at Eton. Rowing boys are known as wet bobs, cricketers as dry bobs.

ÉTRETAT. Town and watering place of Normandy. Facing the English Channel, 16 m. N.N.E. of Havre, it became a popular holiday resort in the latter part of the 19th century. Its Romanesque church dates in part from the 11th century. Pop. 2,000

ETRURIA (Gr. Tyrrhēnia). Ancient district of Italy nearly corresponding to the modern Tuscany. Its inhabitants, called Tusei, Etrusci, or Rasenae, were warlike and enterprising people, whose power, at its height during the 7th century B.C., began to decline two centuries later. They early came into contact with Rome, whose Tarquin kings were of Etruscan origin, and in 285 finally submitted to her yoke.

In their buildings the Etruscans made use of the principle of the arch, as in the bridges at Chiusi (q.v.). Their walls, unattached by cement, consisted of large blocks of stone. The Servian wall at Rome was of Etruscan construction. Their tombs in mountainous districts were usually hewn out of rock. Where

Etna. The snow-capped volcano seen from Taormina, the beautiful Sicilian coast town on the Straits of Messina

varieties, of great importance in the later developments. But these four seem to be acceptable, at least provisionally, as the funda-

the soil was yielding and crumbly they took the form of a tumulus.

The Etruscans showed special skill in making clay vessels adapted from Greek models, cinerary urns, and terra-cotta sarcophagi. Numerous specimens are extant of statues, and of various kinds of vessels, candelabra, silver goblets, ivory, gold, and silver thrones, and ornamented weapons. Perhaps in painting they achieved the greatest success, whether on the walls of sepulchral chambers or on pottery. The Etruscan mirrors, too, are well known—round or pear-shaped plates of bronze, the outer side polished and the inner adorned with figures. The Etruscans were skilled musicians, their national instrument being the flute.

ETRURIA. District of Staffordshire. It is within the bor. of Stoke-upon-Trent, with a station on the L.M.S. Rly. Josiah Wedgwood established his pottery works here in 1769. Etruria Hall, where Wedgwood died in 1795, has been converted into offices. See Burslem.

The name Etruria Marls is applied in geology to beds of red and purple marl and clay, occurring in the upper coal measure strata of the coal-basins of the Midlands and N. of England. They are used in pottery manufacture. See Pottery.

ETTRICK FOREST. District of Selkirkshire. Formerly a part of the Caledonian Forest which comprised Selkirkshire and portions of Peeblesshire and Midlothian, it was a hunting ground of the Scottish kings. It is now almost denuded of its trees.

The river of Selkirkshire known as Ettrick Water rises in Ettrick Pen and flows 32 m. N E to the Tweed, about 2 m. below Selkirk. In the churchyard of Ettrick parish are buried Hogg, the Ettrick shepherd, and Tibbio Shiel (1732-1878), who kept the famous inn at the head of St. Mary's Loch.

ETTY, WILLIAM (1787-1849). English painter. Born in York, March 12, 1787, he entered the Royal Academy schools in 1806,

William Etty,
English painter
From a photo, 1849

and was for a year a pupil of Sir Thomas Lawrence. In 1824 he was elected A.R.A., and R.A. in 1828. He died in York, Nov 13, 1849. Of his smaller pictures Youth on the Prow and Pleasure at the Helm in the National Gallery is the most popular. Among his vast canvases are The Combat and the three Judith pictures at Edinburgh, and Ulysses and the Sirens in the Royal Institution, Manchester.

ETYMOLOGY (Gr. etymon, true; logos, science) The investigation of the origin and meaning of words. Etymology as a science is of comparatively recent origin, and became possible with the introduction of a knowledge of Sanskrit into Europe by Sir William Jones. This led to a thorough examination of the vocabulary of the Indo-European languages and the establishment of certain fixed principles of sound-change which governed the changes in the form of a word in different languages. See Language.

EUBOEAE (Turk. Egribo; Ital. Negroponte). Island of Greece in the Aegean Sea. Off the E. coasts of Boeotia and Attica, it has a length of 115 m. and a breadth varying from 4 m. to 32 m., and is separated from the mainland by a narrow channel called Euripus. The surface is mountainous with fertile valleys, pasturing large herds of cattle. Its thermal springs have been esteemed since ancient times. The chief town is Chalcis. Euboea was taken by the Turks in 1470, and in 1830 was restored to Greece. Area 1,430 sq. m. Pop. 154,449. Pron. Ev-via.

EUCAINE (Gr. eu, well; and cocaine) Artificially prepared alkaloid allied to cocaine. It is used as a local anaesthetic in small operations and extraction of teeth.

EUCALYPTUS (Gr. eu, well; kalyptos, covered). Genus of trees of the order Myrtaceae. The name is given to it because the petals cover thoroughly the unexpanded flowers. (See Gum Trees.) Eucalyptus gum, the exudate of the red gum-tree of Australia, contains tannic acid and is a powerful astringent. Eucalyptus oil is distilled from the Eucalyptus globulus, the blue gum-tree. It is used as an antiseptic, and as an inhalation.

EUCHARIS (Gr. eucharis, pleasing). Small genus of bulbous herbs of the natural order Amaryllidaceae. Natives of New Granada, they have egg-shaped bulbs, and white flowers from 3 ins. to 5 ins. across. These are borne in clusters on top of a tall stem, and consist of a slender tube expanding into a cup, surrounded by six sepals and petals.

Eucharis Amazonica, a South American bulbous herb

EUCHARIST (Gr. eucharistia, thanksgiving). One of the names used from early times for the Sacrament of the Lord's Supper. It arose from the Gospel accounts of the Supper, in which Christ is recorded to have given thanks over both the bread and the cup. The Eucharist has always been the central act of Christian worship in most churches. The Roman Church styles it the Mass, the Anglican Church Holy Communion, while most of the Protestant denominations prefer the primitive name of the Lord's Supper. It has been the cause of much controversy.

As regards the sacrificial aspect, the Roman Church teaches that in the Eucharist there is a "true and proper" sacrifice of Christ, Who is offered to the Father as a propitiation for both living and departed. The Eastern and Anglican Churches recognize a perpetual memorial or pleading before God of the sacrifice of Christ on Calvary, but not a repetition of it. The various Protestant churches altogether reject the sacrificial idea.

Except the Church of Rome, all Churches from Apostolic days have given Communion to the people in both kinds. The Roman Church requires at least one annual participation, at Easter; the Anglican Church fixes three times a year, Easter to be one, as the minimum. See Communion; Mass.

EUCHRE. A card game. It is played with 32 cards, the 2, 3, 4, 5, and 6 of each suit being thrown out. There are two players, or four in partnership. The dealer gives five cards to each player, three at a time and then two, turning up the next face upwards on the pack for trumps. In the trump suit the knave, the "right Bower," is highest, the other knave of the same colour coming next, the "left Bower." The remaining cards of the trump suit, and those of the other three, rank from ace to seven.

Special rules attach to the players' decision to play or to pass. Two cards constitute a trick. The game is five up. Five tricks constitute a march, and score two points; if a player makes three tricks, he makes the point, and scores 1 (four tricks count for no more than three). If he fails to make three tricks he is euchred, and his opponent scores 2.

EUCLASE. Rare mineral consisting of hydrated silicate of beryllium and alumina. Occurring in short prisms, with vertical striae on crystal faces, it is either colourless, yellowish, green, or blue. It is found in Minas Geraes, Brazil, in the Ural mts. and Austrian Alps.

EUCLIDES (fl. 300 B.C.). Greek mathematician, whose more familiar name is Euclid.

Little is known of his life, except that he was of Greek descent, and lived and taught at Alexandria. Besides the Elements of Geometry, Euclid wrote De Divisionibus, a collection of 36 problems on the division of areas, possibly the only survivor of many such collections.

EUCLID. Text book on the elements of geometry, based upon the work of Euclides. It has been discarded by schools mainly for two important reasons: it is unsuitable to students of school age because it is entirely deductive; it is almost valueless as an introduction to geometry because it takes no note of modern ideas. Measurement and constructive movement are dominant in modern life, and Euclid ignores both.

EUDIOMETER. Instrument used for measuring gases. It is commonly used for determining the constituents of a gaseous mixture. In some forms it comprises a graduated glass tube or cylinder, either straight or U-shaped, closed up at one end and open at the other, and having inverted near the closed end two platinum wires, which are near enough to allow the passage of an electric spark through the mixture.

EUGENE (1663-1736). Italian prince and Austrian soldier. Born in Paris, October 18, 1663, his father was Eugene Maurice, prince of Savoy. In 1691 Eugene held a command in Italy, where, between then and 1693, he won several successes over the French.

In 1697 he crushed the Turks at Zenta. He fought in the war of the Spanish succession, and was with Marlborough at Blenheim, but when Ramilies was fought (1706) he was again in Italy, where he captured Turin. He fought at Oudenarde, and after the English had withdrawn he arranged in 1714 the peace of Rastatt. He was commander against the Turks in 1716, and captured Belgrade in 1717. A period of peace followed, the prince serving as governor for the Netherlands. In 1734 he led the Austrians in the war of the Polish succession, and on April 21, 1736, he died in Vienna, the greatest of all the soldiers who have served Austria.

Prince Eugene,
Austrian soldier

portrait

EUGENICS. The science of breeding. The word is derived from the Greek eugenēs, meaning well born, and the primary objects of the science are the perpetuation and augmentation of healthy physical and mental attributes in the human race. The modern eugenio movement dates back to the time of Sir Francis Galton (1822-1911) who was largely influenced by Darwin's theories of evolution in his efforts to better the human race. It has been placed on a more secure basis by recognition of the importance of the observations of Mendel (1822-82) on the transmission of physical characteristics.

The fundamental fact of eugenics is that the chief determining factor of human life is what the child is or has to start with, in virtue of its hereditary relation to parents and ancestry. The statistical inquiries of workers in the Galton Eugenics Laboratory show the prime importance of natural inheritance.

For the practical application of eugenics societies have been formed whose activities may be described under three headings: (1) Positive eugenics; this includes the encouragement of marriage and the procreation of children by individuals of a fine

stock (2) Negative eugenics, or the discouragement or prevention of the procreation of children by those of feeble or diseased constitutions. (3) Preventive eugenics, under which are included the majority of the principles of hygiene and social reform. See Evolution; Heredity; Mendelism

EUGÉNIE (1826-1920) Empress of the French. Born at Granada, Spain, May 5, 1826, the daughter of count de Montijo and Maria Manuele Kikspatriek, whose Scottish father was U.S.A. consul at Malaga, she made her debut in Paris society in 1851, where her beauty attracted Napoleon III, who married her, Jan. 30, 1853. In political affairs the empress exercised a strong, not always beneficial, influence upon Napoleon. At the outbreak of the Franco-Prussian War, 1870, she became regent when the emperor went to the front, but after Sedan fled to England, where she was joined by the emperor, 1871, and they settled at Chislehurst. Napoleon died in 1873; their only son, the Prince Imperial, was killed with the British army in the Zulu campaign in June, 1879; and Eugénie, who moved to Farnborough (q.v.) in 1887, died whilst on a visit to Spain, July 11, 1920.

Eugénie, Empress of the French

EUGENOL. Chief constituent of clove oil. Obtained by distilling cloves, and from pimento-leaf oil, the oil contains from 80 to 90 p.c. of eugenol. It has the same spicy odour as clove oil, from which it is separated by caustic potash. Eugenol is used medicinally as a carminative, and frequently as a palliative in toothache. Commercially eugenol is of importance in the manufacture of vanillin.

EUMAEUS (Gr. Eumaios). In Greek legend, the faithful swineherd of Odysseus, to whom his master revealed himself when he arrived in disguise in his native Ithaca. Eumaeus afterwards helped Odysseus to slay the suitors of Penelope (q.v.). Pron. U-mény-deez.

EUMENIDES or **ERINYES**. In Greek mythology, avenging deities who pursued those guilty of crime, especially crimes against the family and crimes of bloodshed. They are represented as winged women with snakes sprouting from their heads instead of hair, and bearing torches and scourges. They were three in number—Tisiphone (avenger), Aleeto (unceasing, relentless), and Megaera (jealous). They were propitiated by wineless libations of water, milk, and honey.

A tragedy by Aeschylus, which deals with the trial of Orestes before the Areopagus (q.v.) for the murder of his mother, Clytaemnestra (q.v.), is called Eumenides. Pron. U-mény-deez.

EUMOLPUS (Gr. sweetly singing). In Greek mythology, son of Poseidon, the sea-god, by a mortal mother, Chione, who, in remorse, threw the infant Eumolpus into the sea. He was saved by Poseidon. He was credited with being the founder of the Eleusinian mysteries, and his descendants, the Eumolpidae, were priests at Eleusis (q.v.).

EUNUCH (Gr. eunē, bed, ekhein, to keep). Word originally applied to a man in charge of the women's apartments in Oriental countries, but afterwards to a castrated attendant in the harem. Eunuchs frequently acquired great power and high position. In modern times lads were castrated in order to preserve their clear, boyish voices. Italian churches employed castrati in choirs, but Leo XIII abolished the practice in 1878.

EUPEN. District and town of Belgium. The district lies S. of Aix-la-Chapelle, and covers an area of 400 sq. m., with a pop. of

about 40,000. It contains Eupen, Raeren, Kammersdorf, and Conzen. The town has a pop. of 12,245. It is situated on the Weser, 10 m. S. of Aix-la-Chapelle.

Formerly part of the duchy of Limburg, Eupen was under the government of Austria until 1801, when by the peace of Lunéville it passed to France. In 1814 it was given to Prussia. By the treaty of Versailles (1919) Germany renounced in favour of Belgium all rights and title over the territory comprising the whole of the circles of Eupen and Malmédy.

EUPHEMISM (Gr. eu, well; phēmē, voice). Substitution of refined and delicate words for coarse and vulgar words conveying the same idea. The object is to suppress as far as possible painful or unpleasant subjects which yet must be mentioned.

EUPHONIUM (Gr. eu, well; phōnē, sound). Brass wind instrument of the saxhorn family. Of bass pitch and tone, it is of the same pitch as the baritone saxhorn, but its bore is wider and tone fuller. The euphonium is the chief bass solo instrument employed in military bands. Euphoniums are made in C and B flat, both played as non-transposers, and have a chromatic compass of over three octaves.

Euphonium, 4-valve instrument
By courtesy of
Hawkes & Co.

Asia Minor, at one point being only 80 m. from the Mediterranean. It then turns to the S.E. and later in its course enters Mesopotamia or Iraq. Its length is about 1,800 m. Near Basra it unites with the Tigris, and as the Shatt-al-Arab the united stream enters the Persian Gulf. There are no large towns on its banks, and, having only one large tributary, the Khabur, its waters suffer much from evaporation. It is only navigable for small vessels.

The valley of the Euphrates and Tigris was one of the cradles of civilization and in ancient times one of the most fertile areas in the world. This was due in part to a system of irrigation canals between the two rivers which are mentioned by Xenophon. These fell into disuse, but in 1909 steps were taken to irrigate the area again, and in 1913 two dams were erected to regulate the flow of the Euphrates and so reclaim a considerable extent of land. See Iraq; Tigris.

EUPHUISM (Gr. euphuēs, clever). Name given to the artificial style in which John Lyly (q.v.) couched his famous romance, Euphuës, the Anatomy of Wit, 1579, followed in 1580 by Euphuës and His England. The characteristics of this "new English" were the balanced antithetical sentences marked by elaborate alliteration, the excess of classical allusion, and the extravagant drafts upon natural history for purposes of moral reflection.

EURASIAN. Term originally denoting the offspring, and their descendants, of a European father and a Hindu mother. It was formed out of the continental names, about 1820; the colloquial name in previous use was ebe-chee.

EUREKA (Gr. eurēka, I have found). Exclamation of Archimedes (q.v.), on finding that he had discovered a method of detecting the alloy in the gold of Hiero's crown. In modern language, the term is applied to an expression of delight on making a discovery.

EURHYTHMICS (Gr. eu, well; rhythmos, measured motion). Art of expressing harmony by gestures, in which physical movement is made to reflect musical notation. It was

invented by Émile Jaques-Daloz, professor of harmony at the Geneva Conservatoire, towards the end of the 19th century. Time is shown by movements of the arms and notes by movements of the legs. The unit is the crochét. The various exercises relate to rates and changes of speed, dynamic, expression, syncope, phrasing, etc., and are made by both arms and legs. There is a School of Daloz Eurhythmics in London.

EURIPIDES (480-406 B.C.). Athenian dramatist. According to tradition, he was born on the island of Salamis on the day of the great naval victory over the Persians. In 455 B.C. he exhibited his first tragedy, and in 441 gained the first prize for the first time. He was credited with over 90 plays in all, of which 18 survive. These are: Alceste, Medea, Hippolytus, Hecuba, Andromache, Ion, The Suppliants, Heracleidae, The Mad Heraeas, Iphigenia among the Tauri, The Trojan Women, Helen, The Phoenician Maidens, Electra, Orestes, Iphigenia at Aulis, Baeaeae, Cyclops, the last being the only extant specimen of a satyr drama. The Rhesus is certainly spurious.

Euripides,
Greek dramatist:

The plots of Euripides were all drawn from the old mythology, but the characters act and talk like Athenian men and women of his time. Euripides was accused by his contemporaries of endeavouring to undermine faith in the gods and in morality, and was bitterly attacked by Aristophanes. The last few years of his life were spent at the court of King Archelaus in Macedonia, where he died, 406 B.C. See Drama; Tragedy. Pron. U-ripi-deez.

EUROCLYDON (Gr. Euros, east wind; klydon, wave). Name given in Acts 27, 14, A.V.: to the gale which, blowing off Crete, seized the ship in which S. Paul was wrecked on the coast of Malta. The form adopted in the R.V. is Euraquilo, meaning a tempestuous N.E. or E.N.E. wind of the Mediterranean.

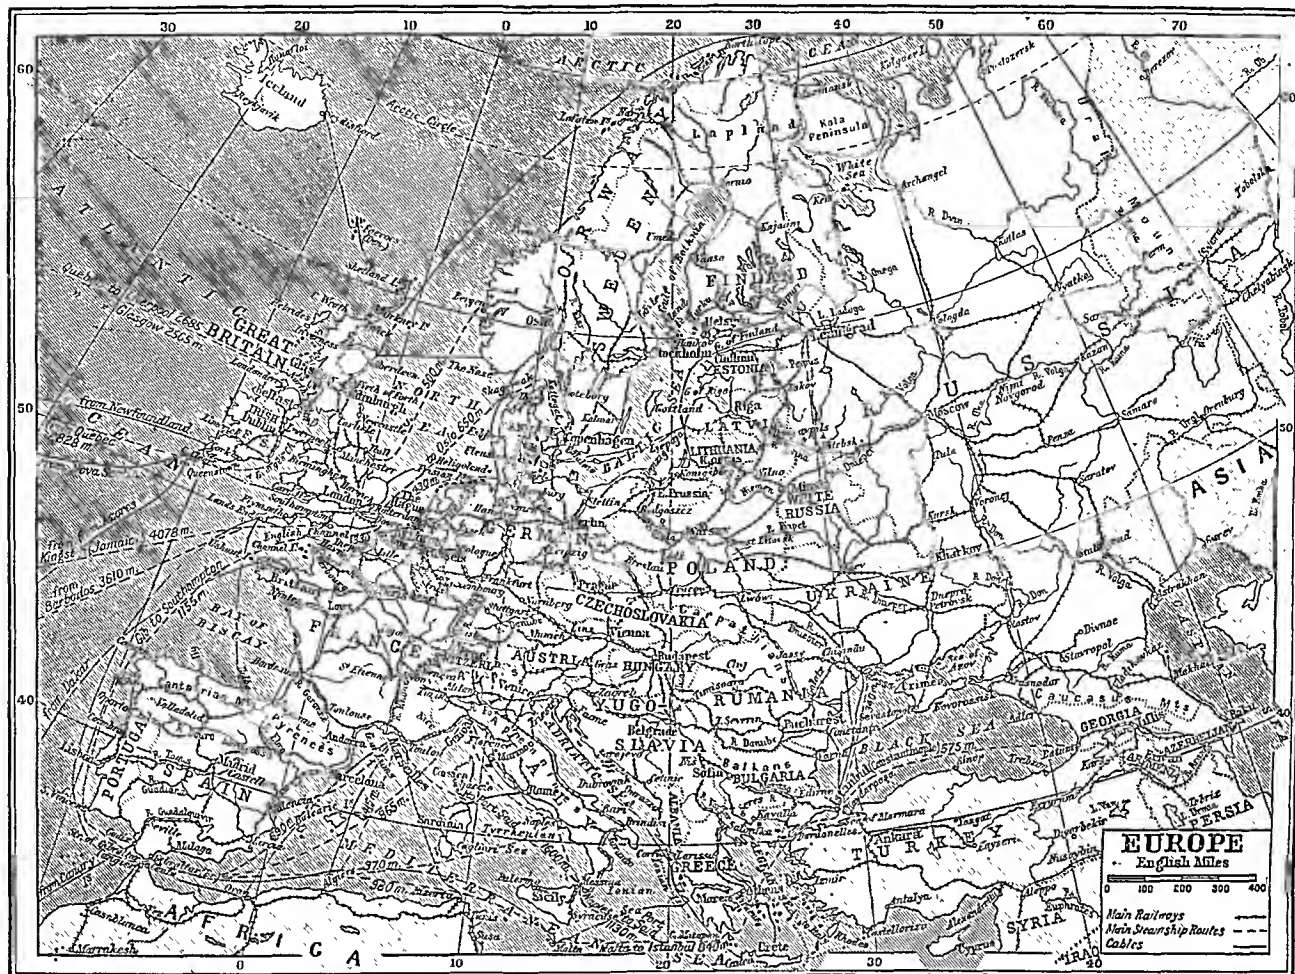

EUROPA. In Greek mythology, daughter of Agenor, king of Phoenicia. While she was playing one day with her maidens, Zeus appeared in the form of a white bull, and Europa was induced to mount on the animal's back. The bull thereupon carried her off over the sea to Crete, where by Zeus she became the mother of Minos, the king and lawgiver of Crete, Rhadamanthus, and Sarpedon.

Europa Point is a headland at the extremity of the peninsula of Gibraltar, Spain, just S.E. of Europa Bay. To the N.W. is Little Europa Point and to the E. Great Europa Point.

EUROPA. German liner. Belonging to the North German Lloyd line, she is sister ship to the Bremen, and her tonnage is 46,000. In March, 1930, she beat the record set up in 1929 by the Bremen for the fastest Europe to America run, the Europa's time being 4 days, 17 hours, 6 minutes. See Bremen.

Eurhythmics. An attitude in a plastic exercise in this rhythmic method of training

Europe. Map showing the states and boundaries of this continent. Larger scale maps of the different countries will be found under their respective headings

EUROPE. One of the world's six or seven continents. It covers an area of about 3,750,000 sq. m., and is thus about the same size as Canada and slightly larger than Australia. Its length from the North Cape to Cape Matapan in Greece is about 2,400 m., and its breadth from Cape S. Vincent to the Urals is about 3,000 m. The political boundary between Europe and Asia extends to the Urals; in the south-east the continent is bounded by the Black Sea, Turkey, and Persia.

Washed by the Atlantic and Arctic Oceans, with the Mediterranean Sea as its southern boundary, Europe has a very extensive coastline. Its climate, except in the far north, is temperate and its soil fertile. Its agricultural and mining industries can produce most of the requisites of human life, but owing to its comparatively dense population, the continent is an importer of foodstuffs, as it is of cotton, rubber, and other tropical products. It is rich in coal and ironstone, but for silver, copper, and tin it is mainly dependent on outside areas. Its most important rivers are the Danube and the Rhine; nearly all the others are national, not international waterways.

THE STATES OF EUROPE. There are in Europe 35 separate countries, reckoning as such the Irish Free State, part of the British Empire, and Iceland under the same ruler as Denmark. The largest is Soviet Russia, which covers more than one-third of the continent, and the smallest the new Vatican state. The second largest is France. States which came into being after the Great War are Austria, Czechoslovakia, and Hungary, formed out of the ruins of the Austro-Hungarian empire; and

Estonia, Finland, Latvia, and Lithuania, once part of Russia. Poland and Albania, too, are new, although both had been independent states in the past. Turkey is still a European state, but only to the extent of 10,000 sq. m.

Since 1918 there have been no empires in Europe. There are, however, 13 kingdoms, Albania, Belgium, Bulgaria, Denmark, Great Britain, Iceland, Italy, Netherlands, Norway, Rumania, Spain, Sweden, and Yugoslavia. Of the others, 16 are republics. Of these all save four, Switzerland, France, and the tiny states of San Marino and Andorra, are creations of the 20th century.

POPULATION. The population of Europe is estimated at 475,000,000. Of this total 108,000,000 are in Soviet Russia. Germany, with 63,000,000, is numerically the next largest, and then follow in order Great Britain, Italy, and France, the three almost equal, Poland, Spain, Rumania, Czechoslovakia, and Yugoslavia. No other European country has 10,000,000 inhabitants.

HISTORY. Five thousand years ago, Europe was sparsely inhabited by various races whom we may call collectively pre-Aryans. In the second half of the second millennium B.C. appeared the Hellenic branch of the Aryan races, dominating the pre-Aryans in the eastern Mediterranean peninsula, the isles of the Aegean, and the coastland of Asia Minor; where they developed the form of polity known as the city state, which fostered an intense political and intellectual vitality that militated strongly against union and consolidation. In the 5th century the city states did combine sufficiently to hurl back the conquest threatened by the Oriental power

of Persia, but none could establish a decisive supremacy; individually, their artistic and intellectual achievements have never been surpassed. In the 4th century they conquered half Asia, begetting by their contact with the east the culture called Hellenistic; but they were incapable of maintaining political unity.

Political consolidation was born of the genius of the Latin Aryans in Italy. There, too, the city state developed between the Apennines and the sea; but there, during the 5th and 4th centuries, the city of Rome established a complete ascendancy over her neighbours. In the 3rd she exterminated the rival Mediterranean power of Carthage and planted her own power in Spain; in the next two she established her dominion over all Europe W. of the Rhine (by this time mainly Celtic), and S. of the Danube, and extended her empire far beyond the bounds of Europe. But she had to defend her frontiers against new and warlike Aryan tribes, German or Scandinavian; by the close of the 4th century A.D., when Christianity had already driven out paganism, the Roman empire was falling asunder; the barbarian tide flooded in, and though the empire survived for another thousand years at Constantinople, the west sank into the welter known as the dark ages.

A new approximation to order was inaugurated by the great king of the Franks, Charlemagne, who was crowned the first Holy Roman emperor of the west in 800 A.D. Emperor and pope were recognized as the two heads, temporal and spiritual, of Christendom. This empire lasted for another thousand years, and was in conflict with the papal claims to a superior and divine authority. If became,

in effect, a German empire, ever striving vainly to retain a grip on Italy and to absorb rising Magyar or Slavonic kingdoms in central Europe. All Europe based itself on the feudal system, which made a strong central government all but an impossibility. Italy became a collection of city states, which in the 14th and 15th centuries rivalled those of ancient Greece in their artistic and intellectual brilliancy and their incapacity for union. But in the west, England, France and finally Spain consolidated national kingdoms; so that at the moment when new worlds were being discovered a new state system was born in Europe, the system of rival Great Powers. And even at that moment the Turk had wiped out the historic Roman empire and planted himself at Constantinople (Istanbul).

The conflict of Papacy and Empire was for a time displaced by that between the papacy and the protestant reformation. The state rivalry shaped as a rivalry of dynasties, mainly Hapsburg and Bourbon, till the rise of Russia under the Romanovs and Prussia under the Hohenzollerns in the 18th century. This was interrupted by the French Revolution and Napoleon: and culminated in the World War of 1914-18, which was followed by the birth of a new order, still in its infancy to-day, and centring in the League of Nations. See England; France; Germany; Spain, etc.

EUROPIUM. Rare element discovered by E. A. Demarçay in 1896. Found associated with samarium, it was separated by fractional crystallisation, and was first isolated in 1901. Its symbol is Eu, its atomic weight 152, and its atomic number 63.

EURYDICE. In Greek mythology, wife of the poet Orpheus. When she died Orpheus went down into Hades, and by the power of his lyre induced Pluto, ruler of the underworld, to restore his wife to him, on condition that he did not look behind until he reached the earth again. In his eagerness to see if his wife were following, he forgot the condition, and Eurydice was lost to him for ever. See Orpheus. Pron. U-riddy-see.

EUSEBIUS (c. 264-340). Church historian. Often called Eusebius Pamphili, he was probably a native of Palestine. His historical writings, especially *Praeparatio Evangelica* (selections translated by H. Street, 1842), *Demonstratio Evangelica*, and *Historia Ecclesiastica*, entitle him to be called the father of ecclesiastical history.

EUSTACHIAN TUBE. Tube leading from the upper part of the pharynx to the tympanic cavity of the ear. Its function is to maintain equal atmospheric pressure on both sides of the ear-drum. It is ordinarily closed, but is opened by each act of swallowing. The tube is named after Bartolomeo Eustachio (d. 1574), an Italian anatomist. See Ear. Pron. U-stā-kyan.

EUTECTIC (Gr. eu, well; tēkein, to melt). Term introduced to denote a condition of equilibrium which was found to exist in solution of common salt, and since extended to include similar conditions. Plumbers' solder, consisting of two parts lead and one part tin, is a eutectic alloy, solidifying at a lower temperature than any other alloy of these metals, hence its utility in wiping a joint.

EUTHANASIA (Gr. eu, well; thanatos, death). Easy or comfortable death: in medical language, the employment of means calculated to render the death of those suffering from painful and incurable diseases as painless as possible.

EUTYCHES (5th century A.D.). Founder of the Eutychian heresy: He taught that the human nature of Christ was absorbed in the divine, and therefore non-existent, even His body not being truly human. Pron. U-ty-kecz.

EUTYCHUS. Name of a young man who, having fallen into a deep sleep while Paul was preaching at Troas, fell from the third loft, and was healed or restored to life by the Apostle (Acts 20, 9-10).

Euxine. Ancient name of the Black Sea, the Pontus Euxinus, or hospitable sea. See Black Sea.

EVANDER. Legendary Italian hero. Writing and other arts and the institution of the Lupercalia in honour of the Arcadian god Pan were ascribed to him.

EVANGELICAL (Gr. evangelikos, of the Gospel). Term applied to the two religious revivals in England in the 18th century. The movement led by John Wesley (q.v.) became exterior to the Church. The other movement is attributed to the teaching of William Law (q.v.), author of *The Serious Call*. The Evangelicals emphasised original sin, the efficacy of the Atonement, the need of personal conversion, justification by faith, and veneration for the letter of the Scriptures.

The World's Evangelical Alliance is a Protestant organization founded in Liverpool in 1845, and incorporated in 1912.

The Evangelical Union, a Scottish Presbyterian body, was founded by the Rev. James Morison, 1816-93, of Kilmarnock, in 1843.

EVANGELIST (Gr. evangelistēs, proclaimer of glad tidings). Originally one chosen by the apostles to preach the Gospel where it was unknown. Theodoret first restricted the name to travelling preachers; Oecumenius first applied it to the authors of the four Gospels; to-day it is also used for missionaries and revivalist preachers. See Apostle; Gospel; Preaching.

EVANS, SM ARTHUR JOHN (b. 1851). British archaeologist and numismatist. Born at Hemel Hempstead, the eldest son of Sir John Evans, he was educated at Harrow, Oxford, and Göttingen. His excavation of the Minoan palace of Knossos in 1900-8 elucidated the Aegean civilization first revealed by Schliemann at Mycenae. In 1911 he was knighted. His publications include *The Palace of Minos at Knossos*, 2 vols., 1922 and 1928.

EVANS, EDITH. British actress. Born in London, she won fame as the Serpent and the She-Ancient in Shaw's *Back to Methuselah*, parts she created in 1923 at the Birmingham Repertory Theatre; in *Tiger Cats* at the Savoy in 1924; and

as Millamant in *The Way of the World* at the Lyric, Hammersmith, in 1924.

EVANS, EDWARD RADCLIFFE GARTH RUSSELL (b. 1881). British sailor and explorer. He was navigating officer to the Antarctic relief ship *Morning*, 1902-4, joined the British Antarctic Expedition

as second in command in 1909, and after the death of Captain Scott in 1912 brought it back. He was in command of the *Broke* when, in 1917, that vessel and the *Swift* defeated six German destroyers and he received the D.S.O. He has published *Keeping the Seas*, 1920; *South with Scott*,

1921. In 1929 Evans took command of the Australian navy.

EVAN-THOMAS, SIR HUGH (1862-1928). British sailor. Born Oct. 27, 1862, he entered the navy in 1875. Rear-admiral of the first battle squadron, 1913-14, he commanded the fifth battle squadron in the battle of Jutland. Knighted for his services in 1916 and promoted admiral in 1920, he was commander-in-chief at the North, 1921-24. He died Aug. 30, 1928.

Sir H. Evan-Thomas,
British sailor
Russell

monly given to the process by which a liquid, and less commonly a solid such as carbonic acid snow, changes into a state of vapour. Evaporation may be said to be a function of heat and pressure. Liquids may evaporate at all temperatures; under the application of heat or the removal of pressure from their surfaces, they evaporate more quickly. At a given temperature evaporation in a closed vessel ceases when a certain pressure of vapour is attained, for condensation of the vapour balances the evaporation of the liquid.

The evaporation value in fuels is the amount of water which each is capable of converting into steam when burnt under specified conditions. See Fuel.

EVE. Name of the first woman in the Biblical story. In Hebrew the form is Chawwah. It was given to the woman by Adam (Gen. 3, 20). See Adam; Creation.

EVELYN, JOHN (1620-1706). English author and diarist. He was born at Wotton House, Surrey, Oct. 31, 1620. One of the founders of the Royal Society, his *Sylva*, 1664, first drew attention to the importance of forestry in England; *Terra*, 1676, was a first attempt in English at a scientific study of agriculture. He wrote a *Character of England*, 1659, *Sculptura*, 1662, a work on engraving, an admirable *Life of Mrs. Godolphin*, a discourse on Medals, and a *History of the Dutch War*, which is lost.

Evelyn is remembered for his *Diary*, 1640-1706 (more properly described as his memoirs), a work valuable for its reflection of the political, social, and religious life of his time. The MS. of this was in danger of destruction when, at the suggestion of William Upcott, it was edited by William Bray, and first published in 1818. After 1694 Evelyn lived at Wotton, Surrey, where he died, Feb. 27, 1706, and was buried in the chapel there.

EVENING PRIMROSE (*Oenothera biennis*). Biennial herb of the order Onagraceae. It is a native of N. America. The leaves are oblong-lance-shaped: the flowering stem (2nd year), 4 ft. or 5 ft. high, branched, with narrower, toothed leaves, terminates in a long spike of large, pale yellow flowers, opening in the evening.

EVEREST. Loftiest peak of the Himalayas and on the globe. Its height is 29,141 ft. (5½ m.). It stands on the border between Nepal and Tibet and was named after Sir George Everest (1790-1866) the noted geographer and surveyor.

John Evelyn,
English diarist:
After Holt

Evening Primrose,
a biennial herb

Sir Arthur Evans,
British archaeologist:
Lafayette

Edith Evans,
British actress
Suzanne

E. R. G. R. Evans,
British explorer
Russell

Everest from Mt. Phalut, Darjeeling. Over five miles high, its summit is the loftiest in the world

Several expeditions have attempted to scale the mountain, notably those led by C. G. Bruce (q.v.) in 1922 and 1924. In the second of these the climbers were only beaten when at a height of over 28,000 feet. See Himalayas.

EVERETT, EDWARD (1794-1865). American politician and orator. Born at Dorchester, Mass., April 11, 1794, he became a Unitarian minister. In 1819 he was made professor of Greek at Harvard, and in 1820 editor of *The North American Review*. In 1824 he entered Congress and resigned both positions. From 1841-45 he was American minister in London, and from 1845-49 president of Harvard. In 1853 he was a senator, and he died at Boston, Jan. 15, 1865. Everett won a high reputation by his speeches, highly elaborated and most carefully prepared.

Edward Everett, American statesman

EVERGLADES. Swampy wilderness in S. Florida, U.S.A. It extends N. to S. for about 120 m., is about 45 m. broad, and is mainly covered with saw-grass. Attempts at reclamation by cutting canals have met with some success, and sugar cane has been cultivated in the drained portions. See Florida.

EVERGREEN. Plant whose leaves last several years and are not shed simultaneously. Although there is a leaf-fall every year, it only affects the oldest leaves, and the foliage as a whole is always full and green. Evergreen leaves are of leathery consistence with glossy surface, and are thus protected against rapid loss of moisture in summer and the effects of frost in winter.

Everlasting Flowers of *Helichrysum bracteatum*

form and colour for several years

• **EVERSLEY.** Village of Hampshire. It is 14 m. N.E. of Basingstoke. The church of S. Mary had Charles Kingsley for its rector from 1844-75. Pop. 864.

EVERSLEY, GEORGE JOHN SHAW-LEFEVRE, BARON (1832-1928). British politician. Born

June 12, 1832, he was a nephew of Charles, 1st Viscount Eversley (1794-1888), who was Speaker of the House of Commons 1839-57. As a Liberal he was M.P. for Reading, 1863-85, and for Bradford, 1885-95. He was civil lord of the admiralty in 1856, secretary to the board of trade, 1869-71; first commissioner of works, 1881-83 and 1892-93; postmaster general, 1883-84; and president of the local government board, 1894-95. He was raised to the peerage in 1906. In 1919 he published his *Reminiscences*, and he died April 19, 1928.

EVERTON. Suburb of Liverpool (q.v.). It is celebrated for its toffee.

Everton gives its name to an Association Football Club, which, founded in 1879, originated from a church school, the first ground being in Stanley Park, Liverpool. In 1885 it adopted professionalism, and in 1888 was one of the twelve clubs that formed the Football League on its foundation. Its present ground is Goodison Park, Liverpool. Everton won the Association Cup in 1906 and has been at the top of the Football League on several occasions. See Football.

EVERYMAN. English morality play of the late 15th century, probably translated from its Dutch counterpart, *Elckerlijck* (printed c. 1495). The story of God's summoning of Everyman (all mankind represented as an individual) by Death on that journey which none may escape, and of Everyman's attempts to find a willing companion, is based on an earlier parable told in the religious romance of Barlaam and Josaphat.

The Everyman Theatre at Hampstead, London, N.W., was opened as a repertory theatre on Sept. 15, 1920.

EVESHAM. Borough and market town of Worcestershire. It stands on the Avon, 15 m. E.S.E. of Worcester, on the G.W. and L.M.S. Ryds. It is a centre for fruit growing. Market day, Mon. Pop. 8,900.

The battle of Evesham was fought here, Aug. 4, 1265, when the royalists under Edward, afterwards Edward I, defeated the baronial party under Simon de Montfort, who was killed.

EVICITION (Lat. evincere, to overcome). Name given to the process of ejecting a tenant from a house or land. The word is chiefly known in connexion with the evictions of Irish tenants for refusing to pay their rent, which was a feature of the land trouble between 1880 and 1900. See Distraint; Rent.

EVIDENCE (Lat. evidētia). Word used for the legal method of proving facts in a court of law. In England all evidence must be relevant to the issue and relevant matters must be proved by the "best" evidence. How far any given fact tends to prove any matter in issue is for the judge to decide. A witness's opinion is no evidence. The contents of a document must be proved by producing the document itself unless the judge is satisfied it has been lost, stolen, or destroyed. A statement made by one of the parties (admission or confession) is always evidence against him, but not in his favour. In a criminal case, except in a case of bigamy, a husband or wife cannot give evidence for the prosecution, unless it is on a charge brought by one spouse against the other. See Jurisprudence; Law.

A View of the *Evidences of Christianity* is the title of a theological work by William Paley first published in 1794.

EVIL. In the theological sense the absence of good; also that which does not conform to the Will of God. In certain circumstances a thing may be evil which is not necessarily evil in itself. But we are not in a position to judge the circumstances; for the simple reason that only a portion of the world of reality lies within our ken. See Ethics.

EVIL EYE. Faculty of causing material harm by means of a glance. In rural England it is called overlooking. From its ancient Roman name, *fascinum*, comes the word fascination. It denotes a form of witchcraft, owing its origin to the presumption that the eye is capable of operating at a distance. It may be exerted, voluntarily or involuntarily, upon human beings and domestic animals, especially when young, besides crops, dwellings, and other objects. Envy is an incentive of evil eye. See Amulet; Divination; Magic; consult also Evil Eye, F. T. Elworthy, 1895.

EVIL MERODACH (d. 560 B.C.). King of Babylon. The name is the Biblical spelling of the eunuchiform Amel-Marduk, servant of Marduk. He succeeded his father, Nebuchadnezzar II, and was, within two years, violently slain by his brother-in-law, the Nergalsarezer of Jeremiah 39, who thereupon seized the reins of government.

EVOLUTION (Lat. *evolvere*, to unroll). Process wherein one kind of living creature gives rise to another kind, which persists alongside of or in place of the original stock. Thus we believe that birds evolved from an ancient reptilian stock, and mankind from a primitive simian lineage, the origins in both cases being extinct. Similarly, wild ancestors of such cultivated plants as cabbages and apple trees still exist. The evolutionary process should not be confused with development, which in biology is the individual's coming to be. Hence we should speak of the development, not of the evolution, of the earth.

Evolution may be in the direction of increased complexity and control (differentiation and integration), or in the opposite direction. Yet in spite of many instances of retrogressive evolution in animate nature, the general trend of the process has been progressive, i.e. towards increased differentiation and integration of fuller and freer life. The divergence between plants and animals was one of the greatest cleavages in evolution, the raw material of which is furnished by variations which are inborn, not acquired or imposed from without.

The idea of evolution virtually dates from Darwin's great work of 1859: *The Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Existence*. He stated the gist of the theory, which Alfred Russel Wallace had independently reached, in a couple of sentences: "As many more individuals of each species are born than can possibly survive, and as, consequently, there is frequently recurring struggle for existence, it follows that any being, if it vary, however slightly, in any manner profitable to itself, under the complex and sometimes varying conditions of life, will have a better chance of surviving, and thus be naturally selected. From the strong principle of inheritance any selected variety will tend to propagate its new and modified form." See Adaptation; Biology; Cell; Darwin, C.; Heredity; Life; Sex.

Evreux. The city and cathedral seen from the south. To the left is the 15th century belfry

EVREUX. City of Normandy. It is 67 m. W.N.W. of Paris, and stands on the Iton, a branch of the Eure, in the dept. of

Eure, of which it is the capital. The chief building is the cathedral of Notre Dame, the earliest part dating from the 11th century and some parts from the 16th. It was completely restored at the end of the 19th. Evreux was frequently besieged and taken in the wars between England and France, and from it the English family of Devereux takes its name. Pop. 15,913.

EWE. W. African language-group. Mostly found in Dahomé, S. Togoland, and the Gold Coast Colony, it forms part of a primitive W. Sudanic speech once widespread in the Guinea region before the advent of Bantu influences.

EWING, SIR JAMES ALFRED (b. 1855). British physicist and engineer. Born at Dundee, March 27, 1855, he was educated at the high school and at Edinburgh University. Until 1878 he assisted Lord Kelvin, and from 1878-83 was professor of mechanical engineering at the imperial university of Tokyo, Japan, where he studied earthquakes. After holding professorships at Dundee and Cambridge he was director of naval education 1903-16 and principal and vice-chancellor of Edinburgh University 1916-29. He was knighted in 1911.

Ewing's inventions include: magnetic curve-tracer, hysteresis tester, and a permeability bridge, all used for testing the iron employed in making dynamos and transformers.

EXARCH (Gr. *exarchos*, leader). In Byzantine history, a title specially applied to the military governor of the district of Ravenna in Italy. It lasted from 584-752. The name was also given to a dignitary of the church who held a position above that of metropolitan and to the head of certain monasteries, and survives as the title of the patriarch of Bulgaria.

EXCAVATOR (Lat. *ex*, from, out; *cavare*, to hollow). Mechanism for removing large masses of earth. Some closely resemble

Excavator which digs a trench 18 in. wide and 4 ft. deep, doing in one hour the day's work of 50 men

dredgers, as the steam shovel or steam navy, which will deal with anything from soft earth to lumps of blasted rock weighing several tons each. Some of these giant diggers in combination with mechanical unloaders will enable ten men to clear in a day as much as would keep 500 men busy with shovels. One form of mechanical excavator for surface work is a rotary machine with a capacity of about 16 tons of material per minute. Some sections of the London tube tunnels were driven by an electrically operated rotary boring digger, a transverse wheel with six radial arms carrying chisels and scoops. The cutting chisels loosen the material, which falls into the invert and is picked up by the buckets and emptied on to a belt-conveyor.

EXCELLENCY. Title of honour. In modern British usage it is confined to the governor-general of India, the governor-general of Ireland, colonial governors, ambassadors and envoys. In France and the S. American republics the president is styled Excellency, but not in the U.S.A.

EXCESS PROFITS DUTY. Tax levied by the British Government to meet the expenses of the Great War. It was first imposed in Sept., 1915, when all excess profits made in business were taxed at the rate of 50 p.c., the amount being raised to 60 p.c. in 1916 and to 80 p.c. in 1917. Excess profits were defined as those in excess of the average made in the two or three years before the outbreak of war, but the tax was not charged on the first £200. Farmers and professional men were not liable to the tax, which was abolished in Mar., 1921, though receipts from excess profits were collected for several years afterwards.

EXCHANGE. Term used in various senses. In a financial sense it means the transformation of the money of one country into that of another. By money is meant coin, or else some instrument or document—a cheque, bill, or note, for example—convertible as of right into coin.

The rates of exchange, which vary from day to day, are given in the newspapers. Banks and financial houses do a large business in exchanging the currency of one country into that of another, e.g. pounds into dollars or francs into pounds.

The name Exchange is given to a building wherein merchants meet for the transaction of business. See Stock Exchange.

EXCHEQUER. Name given in England to the department entrusted with the duty of receiving the royal revenues. The word means a chess board, because it was by means of a device of this kind that the early accounts were kept. The Late Lat. equivalent is *scaccarium*, and the *Dialogus de Scaccario*, a treatise of the time of Henry II, gives most of our existing information about the early English exchequer.

The early kings had both a treasury and an exchequer, and the functions of the two have been somewhat intermingled even until the present day, when, while the main financial work of the country is done by the treasury, its actual head is the chancellor of the exchequer, and not the first lord of the treasury, who is the prime minister. See Treasury.

The Exchequer and Audit Department is a Government department under the comptroller and auditor-general, whose business is to see that all public money is expended in accord with the wishes of Parliament. The office was established in 1866.

An exchequer bill was a form of British Government security in vogue from 1696 to 1896. Exchequer bonds are promissory notes issued generally by the Government for three or five years and redeemable at par.

EXCISE (Lat. *ad*, to; *census*, a tax). Name given to taxes levied on goods produced within a country as opposed to customs, which are duties levied on imports. The principle of free trade demands that every customs duty shall be balanced by a corresponding excise duty, so as to give no preference to either.

In Great Britain excise duties are levied on beer, spirits, patent medicines, table waters and matches. The licence duties paid by publicans and others are excise duties, and the entertainments tax falls into the same class. In 1930-31 the estimated revenue from the excise duties was £129,860,000. The duties are collected by the board of customs and excise, which has inspectors and collectors all over the country.

EXCITER. Generator for producing electric current for exciting the field magnets of an alternator or a dynamo. In the case of alternators, the field magnetism of which it is difficult to excite by current generated by the alternator itself, the exciter may consist of a separate dynamo. Direct current

dynamos are usually self-excited, i.e. their magnetic fields are produced by their own current. See Dynamo.

EXCLUSION BILL. Measure introduced into the English Parliament in 1679 for the purpose of excluding James, duke of York, from the throne. Passed in 1680 by a large majority in the House of Commons, it was rejected by the Lords.

EXCOMMUNICATION (Lat. *ex*, out of; *communis*, common). Term used specifically for the temporary or permanent exclusion of an offending member from the fellowship of the Christian Church. Generally it means exclusion from any organized community. Examples are found in the history of the Jews (Lev. 13; Num. 9 and 12; Ezra 10). It existed among Greeks, Romans, and Druids, and has affinity in the tabu of the Polynesians.

The Christian Church claims Scriptural authority for excommunication (Matt. 16 and 18; John 12 and 16; 1 Cor. 5). Imposed first by the community and then by the bishops as a penalty for heresy, immorality, or disobedience, its primary objects were the bringing of the offender to repentance, and the protection of the Church from corrupting influences. In pagan and Christian usages it has been imposed in degrees of varying severity, ranging from admonition to temporary and partial suspension, and, finally, anathema (q.v.)

EXE. River of Devon. It rises in Somerset on Exmoor and flows across Devon, mainly S., to the English Channel. Its length is 55 m. There is trout fishing in the Exe, which flows mainly through wild and beautiful scenery.

EXECUTION (Lat. *exsequi*, to follow out, carry out). Act of performing anything. It is used in law for the carrying into effect of the judgement of a competent court or the signing, sealing, and delivering of a legal document. It is also used in other senses, as in executing a commission, or the execution of a piece of music. In a special sense the word has come to mean the carrying out of a death sentence. In England the death penalty was carried out mainly by hanging or by beheading. Beheading was reserved for political offenders and persons of rank. When the death penalty was confined to serious crime, hanging became the only form. In France the guillotine is adopted for executions, while electrocution is the method which is in use in the U.S.A. See Capital Punishment; Electrocution; Guillotine.

EXECUTIVE. Name given to a body of men who carry out the orders of others. In most modern states the legislature makes the laws, which the executive carries out. In the United Kingdom the executive consists of the Cabinet and the various state departments under its control. The local government bodies have also a legislature and an executive. See Cabinet; Government; Parliament.

EXECUTOR. In English law, the person or persons appointed by a testator to carry into execution a will as the "legal personal representative" of the deceased. An executor becomes the legal owner of all the deceased's property. He must first prove the will. Armed with the probate copy thereof he collects the property, realizes enough to pay (1) funeral and testamentary expenses; (2) debts, crown debts coming first; (3) legacies in order; and then hands over the balance to the persons entitled under the will. He is allowed a year to wind up the estate before any legatee can sue him for his legacy. See Estate Duties; Will.

EXEGESIS (Gr. *explanation*). Branch of study concerned with the interpretation of Holy Scripture. Properly including all that is

connected with the full exposition and understanding of the Bible, it is more commonly restricted to literary interpretation, which determines the sense of the sacred text upon the same principles that would be applied to any other literary work. It differs from Biblical criticism in taking the text as it stands, and examining its meaning rather than its origin and authenticity. See Bible.

EXERCISE (Lat. exercitium). Movements of the muscles, either voluntary or passive. Voluntary exercise means deliberate movement; passive exercises are movements effected by the manipulation of another person or by a machine. Muscular contraction, such as occurs during steady walking, stimulates the circulation of the blood through the muscles. This, in turn, acts on the heart and the respiratory system, which both act more vigorously. The formation of more waste products in the tissues makes increased demands upon the excretory system.

Strenuous exercise is beneficial to the young and healthy, but should not be undertaken by persons beyond middle life or those suffering from cardiac or other serious affections.

Passive exercises are mainly employed to prevent wasting of the muscles and stiffening of the joints following sprains of the bones or other injuries to limbs, and to increase the mobility of joints in those suffering from rheumatism or similar conditions.

EXETER. City of Devonshire, also a county in itself since 1537, river port, and the county town. It stands on the Exe,

EXETER, MARQUSS OF. English title borne by several distinguished families. In 1605 Thomas Cecil, Lord Burghley, a son of the great Lord Burghley (q.v.), was made earl of Exeter. His descendants continued to hold the title, and in 1801 Henry, the 10th earl, was made a marquess. In 1898 William Thomas (b. 1876) became the 5th marquess. The seat is Burgbly House (q.v.), and the eldest son is known as Lord Burghley.

1st Earl of Exeter,
English statesman
After Jansen

In 1397 John Holand, a half-brother of Richard II, was made duke. He was executed in 1409 for conspiring against Henry IV. Thomas Beaufort was duke from 1416 to 1426, after which the title was given to John Holand, a son of the duke executed in 1400. His son Henry lost it during the Wars of the Roses.

EXETER HALL. Public building in London, the site of which is now occupied by the Strand Palace Hotel. Built in 1831, it became a centre for the annual meetings of many religious bodies. In 1880 it was acquired by the Y.M.C.A., which occupied it until 1907.

EXHAUST (Lat. ex, from, out; haurire, to draw). Word meaning in general the stream of burnt gases ejected from an engine, or it may be applied to the exhaust piping itself.

EXHIBITION (Lat. ex, out; habere, to have). Term used for a display or show of any kind. In a special sense the word is used for displays of manufactured goods, and national and international exhibitions of this kind were organized on an enormous scale during the 19th and 20th centuries. These are known to the French as expositions. In a sense they are the modern equivalent of the great medieval fairs, although the idea is not so much to sell goods directly as to make them known.

The modern international exhibition is generally regarded as having started in 1851, when one was held in Hyde Park, London. It was visited by over 6,000,000 people. The British Empire exhibition, held Apr.-Nov., 1924 and 1925, at Wembley, was intended to foster imperial interests, both commercial and political. See Crystal Palace.

EXHUMATION (Lat. ex, out of; humus, ground). Act of digging up and removing any object from the ground, but generally applied to the removal of a dead body from its burial place. It is a misdemeanour to do this for any purpose without legal authority. See Bodysnatching; Burial.

EXILE (Lat. exsilium). Removal from one's native land, either voluntarily or under compulsion. In Greece, exile was chiefly a punishment in cases of homicide, but was also enforced for certain crimes and offences against the state and society. A peculiar method of banishment was ostracism (q.v.). In Rome exile did not become a recognized form of punishment until about the time of the Gracchi. See Deportation; Transportation.

EXMOOR. Elevated moorland expanse in Somersetshire and Devonshire. Formerly a forest, three-fourths of its area is now covered

with heather and coarse grass, on which are pastured ponies, sheep, and red deer. On Feb. 22, 1917, Sir Thomas Acland granted a lease of between 7,000 and 8,000 acres to the National Trust for 500 years. Lorna Doone, Blackmore's romance, has made Exmoor familiar. The highest point is Dunkery Beacon.

EXMOUTH. Urban dist., seaport, market town, and watering place of Devonshire. It stands at the mouth of the Exe, 10½ m. S.E. of Exeter on the Southern Ry. Market day, alternate Tues. Pop. 13,614.

EXMOUTH. Ship at Grays, Essex, in which boys are trained for the merchant service

The name Exmouth is given to a training ship for the British merchant service. It is moored off Grays, Essex.

EXMOUTH, EDWARD PELLEW, 1st Viscount (1757-1833). British sailor. He was born at Dover, April 19, 1757, and entered the

1st Viscount Exmouth,
British sailor
After W. Owen, R.A.

navy at the age of 13, and became one of the most able commanders of Nelson's time. In 1814 he was raised to the peerage as Baron Exmouth of Canonteign. Made viscount in 1816, he died Jan. 23, 1833. The title is still held by his descendants, Edward (b. 1890) having become the 5th viscount in 1899.

Exmouth Gulf. Inlet of the W. coast of Australia. It penetrates inland about 65 m., and at its entrance is 30 m. across.

EXODUS. The second book of the Pentateuch, or rather Hexateuch. The title, taken from the Septuagint (Ex. 19, 1), means the "Going-forth." The Hebrew title is "Names" or "And these are the Names." See Hexateuch.

EXOGENY (Gr. exō, outside; gamos, marriage). Primitive institution binding a man to marry outside his own social group. Its primal impulse was probably economic rather than eugenic. Arising from it are such marriage customs as marriage by capture. A special form called hypergamy exists in some Hindu castes; it requires a woman to marry into a caste higher than her own. See Marriage.

EXOGENS (Gr. exō, outside; stem, gen, to be born). Name for the great division of plants now generally known as dicotyledons. It indicates that the annual increase of girth is due to the addition of a ring of new wood between the old wood and the bark. See Botany.

EXORCISM (Gr. ex, out; horkizein, to adjure). The expulsion of malign spirits by ritual means. The Semitic Babylonians regarded most mental and bodily ailments as due to intrusive demons, whose expulsion was sought by the incantation of charms containing a divine name, fortified by material aids. Exorcism passed into the Greco-Roman world, was rife in W. Asia in N.T. times, and was taken over by early Christianity. Baptismal exorcism is retained by the Roman and Old Lutheran communions. See Demonology.

Exeter. West front of the cathedral and the 14th-15th century screen ornamented with sculptured figures of Biblical characters

17½ m. W.S.W. of London, on the G.V. and Southern Rlys. Still partly surrounded by its old walls, it occupies an elevated position on a ridge of land overlooking the Exe. The chief attraction of the city is its comparatively small but magnificent cathedral, a complete restoration of which was undertaken by Sir G. G. Scott towards the end of the 19th century. In its library is an MS. collection of Anglo-Saxon poems presented in the 11th century by Bishop Leofric. The guildhall is a fine Elizabethan building. The city has a university college, part of a memorial to Prince Albert. Exeter School, one of the most important public schools in the west of England, was founded in 1629.

There is an important rly. centre, has form and basin, and is connected with the sea.

EVERSLEY. Estuary which extends five miles and 14 m. N.E. of Exeter near Topsham. Formerly had Charles I. an active woollen industry, 1844-75. Pop. 864. A centre, while brewing, for manufacture are

EVERSLEY, GEORGE J. day. Pop. 60,990 Baron (1832-1928). British.

EXPANSION (Lat. ex, from, out; pandere, to spread). Enlargement of an object, a term used especially of metals when heated. For each degree centigrade the following are the coefficients of expansion of some materials:

Platinum	0.00000899
Copper	0.00001678
Zinc	0.00002918
Glass	0.0000033

The expansion, both apparent and absolute, of some liquids can also be determined. Gases expand with heat at all temperatures, but pressure changes their coefficients of expansion. See Heat; Temperature.

EX PARTE (Lat. from one side). Expression used in English law to signify something done or said by one person not in the presence of his opponent. Thus an *ex parte* application is one made in the absence of the other side. An *ex parte* statement is one made when no one is present to contradict it.

EXPECTATION. State of expecting something. In the plural it is used for the money which one should receive under a will. Expectation of life is a term used by actuaries and others engaged in life insurance business for the number of years a person may be expected to live. By careful calculations from a large number of cases tables have been worked out which are used when annuities are bought and sold. The expectation differs for males and females, and for different ages, but a roughly accurate method is to value the expectation of life at two-thirds of the difference between the present age and 80. See Annuity; Death; Insurance.

EXPEDITIONARY FORCE. Name given in the British army organization to the force of regulars trained and ready for operations abroad. The British Expeditionary Force that reached France in Aug., 1914, had a combatant strength of about 60,000 men—four divisions of infantry and one cavalry division. The other two divisions of infantry, provided in the reorganization of the army, 1907, did not reach the front till the middle of Sept. The original force, divided into two corps under Sir Douglas Haig and Sir Horace Smith-Dorrien, and the whole commanded by Sir John French, took its place on the front in Belgium, Aug. 23. See Army; Mons.

EXPERIMENT. Testing a provisionally adopted theory by facts. The great progress of natural science in modern times has been chiefly due to the systematic employment of experiment.

EXPERIMENTAL FARM. An experimental farm is one at which science is applied to the processes of agriculture and the results tabulated for reference and publication. The best known and oldest of English experimental farms is that founded by Sir John Lawes at Rothamsted in 1843. Since that pioneer work, the great agricultural societies started other stations such as that at Woburn, and of Pumphorston in Scotland. There are experimental farms on a large scale in Canada and Australia. See Agriculture; Crops; Farm.

EXPLODER. Term designating the priming employed in high-explosive shell, and the electric machine for firing blasting charges fitted with electric detonators. The high-explosive charge employed in a shell is always in a very dense condition in order to reduce its sensitivity, utilise the greatest possible weight in the limited space, and prevent movement owing to the shock of discharge when the projectile is fired. Exploders for firing blasting charges occasionally utilise current from a set of accumulators passed through an induction coil, but the more usual machines are of the magneto type. See Ammunition; Shell.

EXPLOSION (Lat. ex, from, out; plaudere, to clap). Accidental ignition of gas. Explosions in coal mines are due to the fact that coal deposits give off certain gases which, when mixed with air in certain proportions, form explosive compounds which only require a spark or flash to fire them. Mine explosions began to be more frequent as the ventilation of the workings was improved, a circumstance which led to an important inquiry as to the relations between explosive gas and the oxygen in the atmosphere of the workings. In England the use of the safety-lamps is made imperative and certain classes of explosives are prohibited in all dangerous mines; while arrangements now exist for giving all coal mining regions warnings of any approaching atmospheric changes which may be calculated to favour the escape of gas in the workings and increase the normal risks. See Safety-Lamp.

EXPLOSIVE (Lat. explosus, driven out). Solid or liquid substance or mixture which is capable of being converted in a very small interval of time into other more stable substances wholly or chiefly gaseous. The tremendous disruptive effect of explosives is due to their capability of releasing the whole of their energy in a minute interval of time.

For some six centuries gunpowder remained the only known explosive, and its composition remained almost unchanged, saltpetre, charcoal, and sulphur being the ingredients. In 1846 nitrocellulose and nitroglycerine were discovered, but many disasters followed the first attempts to use them. Nitroglycerine was too sensitive to percussion for safe use, and Alfred Nobel invented dynamite, a less sensitive explosive consisting of a plastic mass of nitroglycerine and kieselguhr.

Nitrocellulose proved very unstable, but in 1868 guncotton, a successful military explosive, was developed from it. Ammonium nitrate explosives were introduced in 1867. Sprengel experimented in 1871 with picric acid (trinitrophenol), which was first used for shell filling in 1885. It was the first of a new class of explosives—the nitro-derivatives of aromatic hydrocarbons. Smokeless powder, with nitrocellulose as a base, was invented in 1865, and adopted for military use in 1884. Cordite, a smokeless nitroglycerine explosive, was patented by Abel and Dewar in 1880. Since picric acid did not prove very suitable for shell filling, the nitration of other aromatic hydrocarbons was essayed, and trinitrotoluene came into use, being adopted for military purposes by most of the Great Powers. Dynamite and blasting gelatine are generally used where great shattering effect is required, and gunpowder is still employed for rendering.

In mining the explosives in use comprise: gunpowder, cheddites, dynamite, gelignite, ammonite, roborite, and fulminate of mercury, which is used for detonators. For use in coal mines safety explosives are employed, these usually having an ammonium nitrate base.

The manufacture, storage, and transport of explosives are governed in Great Britain and other countries by special legislation aiming at the protection of both public and workers. The Explosives Act, 1875, defines an explosive to include gunpowder, nitroglycerine, fulminate of mercury or of other metals, coloured fires, dynamite, guncotton, blasting powders, and every other substance used or manufactured with the object of producing an explosive or pyrotechnic effect. Special regulations govern the conveyance of such substances by rail or ship. See Ammonite; Ammunition; Dynamite; Gunpowder.

EXPORTS (Lat. exportare, to carry out). Name given to goods sent out of a country. These are valued at the custom houses, or by other authorities, and all civilized countries issue periodical returns showing their value.

In the United Kingdom this is done monthly by the Board of Trade.

The difference between a country's exports and its imports is known as its balance of trade, but, while exports are valued at their price when put on board ship, in the price of imports the cost of carriage is included. Invisible exports is the name given to charges for freights and the like.

The following figures show Great Britain's exports in 1913 and from 1925 to 1929:

1913	£634,820,000
1925	927,417,000
1926	778,542,000
1927	832,034,000
1928	843,780,000
1929	838,000,000

The above totals include the re-exports. See Balance of Trade; Imports.

EXPORT CREDITS In 1926 the British Government introduced a scheme to facilitate foreign trade by guaranteeing credit to reputable firms in return for a premium of insurance. Under the Department of Overseas Trade it has an office at 9, Clement's Lane, Lombard Street, London, E.C.

EXPRESS SERVICE. Organization for the rapid transit of small parcels. Companies for this purpose are specially numerous in the U.S.A. and Canada, where they undertake the carrying of money and valuables, as well as of ordinary goods. They insure these and, if required, collect the money on delivery.

EXTENSION. Term used in engineering for the stretching of materials under strain. All materials stretch under a pull, though the amount may be relatively very small. Heat is an important cause of extension of metals, and due allowance for that extension is made in all engineering construction.

An extensometer is an instrument for measuring the stretch or small deformation of materials under various kinds of stresses. Modern extensometers will measure to less than the millionth part of an inch. See Engineering.

EXTRACT (Lat. extractus, drawn out). Term applied in chemistry and pharmacology to products obtained by treating any substance with solvents and then evaporating the latter. In a more restricted sense, an extract is a concentrated form of a vegetable drug. It contains the active part of the drug, the inert portion, consisting of woody fibre, being exhausted of its active principles during the process of extraction.

EXTRADITION (Lat. ex, out; traditio, handing over). Term used in law for the surrender, by one state to another, of fugitive criminals. As between the states, this depends on treaty; no state has an inherent right, apart from express agreement, to claim extraditory rights from another. Treaties for extradition now exist between most civilized states, but political criminals are invariably excepted from their operation. The manner in which extradition is applied for and granted depends upon the law of the country where the fugitive is.

EXTRATERRITORIALITY. Term used in international law. It describes the status of a person who, when in foreign territory, is immune from the jurisdiction of local laws and courts. Sovereigns and diplomatic agents are considered such persons by ancient usage. A ship of war in a foreign harbour, behaving peacefully, remains a part of the country whose flag she flies.

EXTREME UNCTION. Fifth of the seven sacraments of the Roman Catholic Church. Recognized also in the Greek, Coptic, Armenian, and Nestorian Churches, with varying ceremonial, and dating from the 12th century, it is regarded as authorised by James 5. 14-15, and is administered by the priest, who anoints the dying person. See Sacrament.

EYAM. Village of Derbyshire. It stands in Eyam Dale, 5 m. N of Bakewell. In the churchyard is a Runic cross, and there are several barrows. During the plague in 1665-66 the greater part of the population perished. Pop 1,224. Pron. Eem.

Eyam. Cottages dating from the plague of 1665-66

vince of Limburg. He began, and his brother Jan (c 1385-1440) completed, the famous altar-piece of The Adoration of the Lamb, executed for the cathedral of S. Bavon, Ghent, where he died, Sept. 18, 1426. Both painters rank among the very greatest of the Flemish school. Their drawing and finish were meticulously exact, their colouring is almost as fresh and brilliant as it was 500 years ago, and they so improved the method of oil painting that they made it virtually a new medium.

Jan, who died at Bruges on July 9, 1440, is represented at his best in the National Gallery, London, by the magnificent picture of John Arnolfini and his Wife, and at the Louvre by the exquisite Chancellor Rollin Kneeling before the Virgin.

EYE. The essential parts of the visual apparatus are the eye, or eyeball, certain nerve cells in the hinder part of the large brain, and nerve fibres connecting the eye with these cells. Vibrations of the ether, known as light, produce images of the outside world on the sensitive membrane, or retina, at the back of the eye, thus stimulating the ends of the optic nerve, whence impulses pass back to the brain and cause the sensation of sight.

The eye is contained in the orbit, a bony cavity in the front of the skull, and is thus largely protected from external violence. Its movements are effected by three pairs of opposing muscles. In front is a circular transparent window, the cornea, and beyond this the white of the eye. The latter represents the sclerotic coat, a dense tough membrane, which, except for the corneal surface, covers the eyeball. This is almost spherical, but if the eye is examined from the side, it is seen that the cornea projects from the sclerotic part. Within the sclerotic coat is another, the choroid, and inside this the retina. The former extends forward to near the junction of the cornea with the sclerotic coat, where it forms folds known as the ciliary processes, and beyond is continuous with the outer circumference of the curtain of the eye, the iris.

The iris, which is of different colours in different individuals, is perforated by a central,

circular opening, the pupil, which contracts or dilates according as the eye is exposed to a bright or a dim light. Behind the iris is the crystalline lens of the eye, an elastic body capable of varying its convexity, and thus hinging about accommodation or the power of focussing. The lens and its suspensory ligament divide the eye into a smaller front and a larger back portion, the former filled with aqueous, or watery, humour, the latter occupied by a clear, transparent jelly known as the vitreous humour.

The retina has many layers, the most important being a layer of nerve fibres, the layer of specialised nerve cells known from their shape as rods and cones and behind these a layer of pigment cells. The rods and cones are marshalled together all over the retina, except on the optic disk, a small area marking the point of entrance of the optic nerve; consequently there is no perception of light here. At the centre of the back of the eye there is a little area called the macula lutea or yellow spot, in which visual perception is sharpest in ordinary illumination. Lining this part and close around it there are only cones; on the outlying parts of the retina, however, where vision is best in a subdued light, the rods form a great majority. See Blindness:

Van Eyck. The Adoration of the Lamb, the central panel of the altar-piece at the cathedral of S. Bavon, Ghent, the masterpiece of the Van Eyck brothers

Cataract; Conjunctivitis; Sight; Squint; Stye; Trachoma.

EYE. Borough and market town of Suffolk. It is 19 m. N. of Ipswich, on the L.N.E. Rly.; has castle ruins, a grammar school founded in 1566, and corn exchange. Brewing is an industry. Market day, Mon. Pop. 1,781.

EYEBRIGHT (*Euphrasia officinalis*). Small annual herb of the natural order Scrophulariaceae. A native of N. Europe, N. and W. Asia, and N. America, it is a parasite upon the roots of grasses, sedges, etc. The leaves are oval or lance-shaped, with cut edges, the flowers small, white, veined with purple, and the middle lobe of the lip yellow. It grows freely in meadows and heaths.

Eye. Sectional diagram showing its formation and principal parts

EYEMOUTH. Burgh of Berwickshire. A fishing centre, it stands at the mouth of the Eye, 8 m. from Berwick, on the L.N.E. Rly. There is a good harbour. Pop. 2,453.

EYLAU. Town of Prussia. It stands on the Pasma, about 24 m. from Königsberg, and is noted for the battle fought here, Feb. 8, 1807, between the French under Napoleon and the combined Russians and Prussians. The last named retired on Königsberg, having lost 18,000 men and 24 guns. The French losses amounted to 15,000 men. Pron. Ile-ow.

EYRA. S American wild cat. Resembling a large weasel with a long tail, it ranges from Mexico to Brazil. It is a pest to the poultry farmer.

EYRE. Former lake of S. Australia. It is 4,000 sq. m. in area and 110 m. across at its widest, and its surface is now a parched flat of salt and sand. The centre of many native legends, the result of its extraordinary mirages, it was discovered by Edward John Eyre in 1840 and explored by aeroplane in 1921 and 1929, when a few springs were found on its western margin. Borings revealed water at a depth of 19 ft.

EYRE, EDWARD JOHN (1815-1901). British explorer. Born at Hornsea, he emigrated to Australia in 1833, and carried out valuable explorations, especially of the coast between Adelaide and King George Sound, in 1841. He went to New Zealand as governor in 1846, to St. Vincent, 1854, and to Jamaica, 1861. He died Nov. 30, 1901.

EYRES-MONSELL, SIR BOLTON MEREDITH (b. 1880). British politician. A son of Bolton Monsell, he took the name of Eyres on his marriage in 1904. At that time he was in the Navy, which he entered in 1894. He left it in 1906, but returned to active service during the Great War. In 1910 he was elected Unionist M.P. for S. Worcestershire, and in 1919 was made treasurer of the household. Next he was civil lord of the Admiralty and then its financial secretary. In 1923 he became the chief whip of the Unionist party, and as such was parliamentary secretary to the Treasury in 1923 and again 1924-29. In 1929 he was made a baronet.

EZEKIEL, BOOK OF. One of the prophetic books of the O.T. Its author was one of the priests of Jerusalem who, with King Jeboiachim and other members of the upper classes, were deported to Babylonia in 597 B.C. by Nebuchadrezzar (605-562 B.C.).

Ezekiel's visions of the chariot and cherubim (Ezek. 1, 1-3, 15) had considerable influence on the later symbolical literature. The vision of the valley of dry bones in Ezekiel 37 has become famous. In Ezekiel 38 and 39 occur the curious creations Gog and Magog.

Eyebright. Flowers and leaves of *Euphrasia officinalis*

Gog, perhaps suggested by Gyges, king of Lydia, is a prince from the land of Magog, who leads a great host of nations against the restored Israel, and is defeated ignominiously. In the later Jewish eschatology Gog and Magog are represented as leading in vain the final attack of the powers of the world upon the Kingdom of God.

EZRA, BOOK OF. Book of the O.T. It was written by a Jewish scribe living in exile in Babylon, under Artaxerxes Longimanus. About 458 B.C. he was allowed to return to Jerusalem. There he found the remaining Jews had intermarried with heathen women, and great laxity prevailed, and he set out to restore worship and order. He started the rebuilding of the Temple, and restored the text of the Jewish law. The threefold work, Chronicles-Ezra-Nehemiah, covers the history of Israel from Adam to the second visit of Nehemiah to Jerusalem in 432 B.C.; but the history is viewed from a different standpoint from that of the other O.T. books from Genesis to Kings, namely an ecclesiastical and priestly standpoint.

F. Sixth letter of the English and Latin alphabets. Its ordinary sound is as in fat. In of, it is pronounced as v. In halfpenny, f and l are mute (hā-peny). In the plural, f is often softened, as in loaf, loaves. Its sound is represented by ph in words derived from the Greek, as philosophy, phrase.

In music, F is the fourth note of the natural scale of C. See Alphabet; Phonetics.

FABER, FREDERICK WILLIAM (1814-63). British divine. Born at Calverley, Yorks, June 28, 1814, and educated at Balliol College, Oxford, he became rector of Elton, Huntingdonshire. In 1845 he seceded to the Roman Church, and four years later became superior of the Oratory of S. Philip Neri. A popular preacher, he wrote some notable hymns, including Sweet Saviour, bless us ere we go, and Hark, Hark, my soul. He died at Brompton, Sept. 26, 1863.

FABIUS, MAXIMUS QUINTUS (d. 203 B.C.). Roman general. Appointed to the command of the Roman forces after the Carthaginian victory at Lake Trasimenes, 217 B.C., by a series of delaying tactics—whence his surname, Cunctator (the delayer)—he avoided pitched battles with Hannibal, wore down the Carthaginian offensive, and by giving the Romans time to reconstitute their forces paved the way for Scipio's victories. Fabian tactics became proverbial for a cautious and waiting policy, and were adopted by the promoters of the Fabian Society, an English socialist organization founded in 1884.

The name Fabius was borne by Gaius Fabius Pictor (c. 302 B.C.), the first Roman painter, and Quintus Fabius Pictor (c. 225 B.C.) the earliest Roman historian.

FABLE (Lat. fabula, story, narrative). Short allegorical story in which generally animals, trees, etc., are endowed with speech and human qualities, and by their words and deeds are made to convey moral lessons. Its invention is frequently ascribed to Aesop (q.v.), but many fables associated with his name probably originated at a much earlier date in India. Of later fabulists La Fontaine, Gay, and Kriloff are the best known.

FABRE, JEAN HENRI (1823-1915). French scientist. Born at Sainte-Leone, Aveyron, his early years were passed in great poverty. At

Jean H. Fabre, French entomologist

18 he was in charge of a primary school, where he improved his knowledge of mathematics and physics in his spare time, and where he bought his first book on entomology. Becoming professor of philosophy in the college of Ajaccio and in the Lycée at Avignon, he turned his attention to the study of insects. His earliest observations appeared in the *Annales des Sciences Naturelles*, 1855-58; subsequently enlarged in *Souvenirs Entomologiques*, 10 vols., 2nd ed. 1914, etc. His writings display not only most amazing powers of minute and careful observation, but possess an unusually high literary quality. He died Oct. 11, 1915. Consult *Works*, complete Eng. trans. A. Teixeira de Mattos, 1912, etc.

FACE. Front of the head: the regions of the forehead, temples, ears, eyes, nose, mouth, cheek, and upper and lower jaws. Of the facial bones, twelve are in pairs: the superior maxillary, malar, nasal, palate, lacrymal, and inferior turbinated bones. The mandible or lower jaw and the vomer, which forms part of the septum dividing the nose into two parts, are single bones. Some of the bones assigned by anatomists to the cranium also help to form the face, namely: the frontal, parietal, sphenoid, and temporal bones. The eyeball is in a bony framework known as the orbit.

The trigeminal nerve is the main sensory supply, and the facial nerve supplies most of the muscles. The facial artery passes from the neck to the eye. The facial angle is the method, show in the accompanying diagram, of measuring the facial profile. It is 40° in the orang-utan, 70° in the negro, and 80° in the European profile.

A face conveyor is a machine used for the transport of coal. Face value means the nominal value of financial securities.

FACTOR (Lat. faecre, to make). An agent, especially one who buys and sells for a principal. He differs from a broker in that he usually handles the goods in which he deals and transfers them to his principal; moreover, he has a greater latitude about buying and selling. In England the laws regulating the relations between a factor and his employer were consolidated in 1889. Factor is used in Scotland for a man who manages an estate, a land agent. A judicial factor is one appointed by a court of law to manage the estate of a minor or imbecile.

The factor of safety is the figure which indicates the maximum strength of any part of an engineering structure in relation to the maximum stress it is called upon to bear. In aeroplanes it is replaced by the factor of loading, based on the forces acting on the plane in horizontal flight.

FACTORY ACTS. In the United Kingdom, a series of over twenty statutes, aimed at regulating conditions in factories and workshops, especially on behalf of women and children. The first was passed in 1802, Addington's Act, and the existing law is contained in the Factory Acts of 1901 and 1911, by which minute provisions are laid down for ventilation, sanitary conveniences, fencing of machinery, means of escape from fire, as to inspection, accidents and disease and their prevention, education of children, and working hours.

In textile factories the hours for women and young persons must not exceed 66 a week, which period includes at least 10 hours for meals, and they must not start before 6 a.m. or leave off after 7 p.m. The Saturday half-day is general. No female may be employed within four weeks after her confinement. Children who work half-time are not to be employed otherwise. For these classes of employees Sunday work is barred, with specific exceptions, and overtime and night work are the subject of restrictions. There are many women as well as men inspectors attached to the Home Office. Efforts are being made to bring about an international eight-hour day and a 48-hour week. See Child; Labour.

FACULTY (Lat. facultas, facility, ability). Any special mental power; e.g. the faculty of speech; a department of a university and its instructors; and the members in a collective sense of a learned profession, e.g. the faculty of advocates in Scotland.

The court of faculties is a court held on behalf of the archbishop of Canterbury for granting faculties in connexion with church buildings, for marriage otherwise than by publication of banns, and so on. In the archdiocese of York similar work is performed by the archbishop's court. See Bishop; Chancellor.

FAED, THOMAS (1826-1900). Scottish painter. Born at Gatehouse of Fleet, Kirkcudbrightshire, June 8, 1826, he painted many scenes of Scottish life. A.R.S.A. in 1843, he came to London in 1852, and became A.R.A. 1861, and R.A. in 1864. He died Aug. 17,

1900, almost blind, at St. John's Wood. His *Faunts on Both Sides*, *Silken Gown*, and the *Young Highland Mother* are in the Tate Gallery, London.

Face. Diagram showing the method of measuring the facial angle

FAENZA (anc. Faventia). City of Italy. Founded by the Romans, it stands on the Lamone, 31 m. by rly. S.E. of Bologna. Surrounded by medieval walls, it has for centuries been famed for its art pottery, called faience (q.v.). On the principal square are the cathedral (1474), the former palace of the Manfredi, now the city hall, and the church of S. Michele. There is an arcaded market-place, and the municipal art gallery has frescoes, sculptures, and specimens of local majolica. Pop. 43,070.

FAGAN, JAMES BERNARD (b. 1873). British dramatist. He was born May 10, 1873, and educated at Clongowes Wood College and Trinity College, Oxford. He was for four years an actor. His first play, *The Rebel*, was performed in 1899. It was followed by *The Prayer of the Sword*, 1904; *Under Which King*, 1905; *Hawthorne, U.S.A.*, 1905; *The Earth*, 1909; *A Merry Devil*, 1909; *Bella Donna* (adaptation), 1911; *And So to Bed*, 1926; and *The Greater Love*, 1927.

FAGGING. System at English public schools under which the older boys are empowered to exact certain duties from the younger boys. The duties consist of running errands, tidying studies, etc., and games fagging. The system varies at different schools. As a rule the sixth form alone are entitled to fags, but some schools extend the privilege to the fifth and also to members of the cricket and football teams.

FAGUET, ÉMILE (1847-1916). French critic. Born at La Roche-sur-Yon, he became professor of poetry at the university of Paris, 1897. His writings, which are reminiscent of Sainte-Beuve, include *La Tragédie au XVIIe Siècle*; studies of great French authors of the 16th, 17th, 18th, and 19th centuries; and a number of monographs, including those on Voltaire, Flaubert, and Zola. He died June 6, 1916. Consult *Émile Faguet*, A. Seché, 1904.

FA-HIEN OR **FA-HSIEN** (c. A.D. 400). Chinese traveller and antiquary. A Buddhist monk, he set out in 399 from Hsian-fu, Shensi, for a pilgrimage of the Buddha's cradle-land. Traversing the Gobi desert to Khotan, he crossed the Hindu Kush into the Afghan valleys, visiting Peshawar and the Ganges cities. He proceeded by sea in 412 to Ceylon, whence he returned home in 414.

FAHRENHEIT. Thermometer invented by Gabriel Daniel Fahrenheit (1686-1736), a German physicist, who reckoned the freezing point of water at 32°. The difference between this and the boiling point of water Fahrenheit divided into 180 degrees, so that the latter is 212° F. The centigrade scale of temperature has the melting point of ice for its zero degree, and the boiling point of water is fixed at 100°. See Centigrade; Thermometer.

FAÏENCE. Term loosely used to designate every description of glazed pottery and earthenware painted with decorative designs. The name comes from the Italian city of Faenza (q.v.), which has made a speciality of this kind of ware from the close of the 13th century. It had a soft paste and thin transparent glaze, which heightened the colours. Some varieties from Josiah Wedgwood's work are styled English faience. See Pottery.

FAILSWORTH. Urban dist. of Lancashire. On the L.M.S. Rly., just outside the Manchester boundary, its industries are connected with the manufacture of cotton. Pop. 16,973.

FAINTING OR **SYNCOPE.** Temporary unconsciousness caused chiefly by defective action of the heart, sudden emotion, over-exertion, loss of blood, and blows on the head or abdomen. While unconscious, the sufferer should be allowed to lie quietly on his back with his head as low as possible, the clothing about neck and chest loosened, and persons should be prevented from crowding round. Smelling salts may be held beneath the nose, but until consciousness returns nothing should be given by the mouth. When able to swallow, a little brandy or sal volatile in water may be given.

FAIR (Lat. feria, holiday). Periodical assembly of traders at a place and time fixed by charter, statute, or custom. In early times certain localities came to be used for the periodical exchange of commodities, either by reason of their situation or because they were resorted to at stated times for religious or other purposes. With the improvement in communications the importance of fairs diminished, and gradually many were abolished. Amusements formed an important feature of the old fairs, many of which became more disorderly revels and were suppressed as nuisances. The most celebrated London fair was Bartholomew (q.v.) fair.

Existing English livestock fairs are those for horses at Horncastle, Barnet, and Woodbridge; Weyhill for sheep, and Ipswich for lambs; Exeter for cattle and horses; and Carlisle and Ormskirk for cattle. Nottingham has a goose fair; Falkirk a fair, or tryst, for cattle, sheep, and horses; and Ballinasloe, co. Galway, one for cattle. Gloucester cheese fair is well known. In parts of England and Wales, and in Scotland, servants are engaged at the hiring, or statute, fairs.

On the continent of Europe, the great annual book fair at Leipzig is one of the best known. In America an industrial exhibition is called a fair, and this use has spread to Europe, where world fairs have been held in various large cities. See Exhibition.

FAIRBAIRN, ANDREW MARTIN (1838-1912). British theologian. Born near Edinburgh, Nov. 4, 1838, and educated at the university there and at Berlin, he became principal of Airedale Congregational College, Bradford, in 1877, and in 1889-1909 was principal of Mansfield College, Oxford. He was Muir Lecturer at Edinburgh, Gifford Lecturer at Aberdeen, and Lyman Beecher Lecturer at Yale. He published numerous books chiefly on the philosophy of religion. He died Feb. 9, 1912.

FAIRBANKS, DOUGLAS (b. 1883). American actor. Born at Denver, May 23, 1883, he was educated there and studied mining at the Colorado School of Mines. His first appearance on the New York stage was in 1901. Engagements at various New York theatres followed, and he toured the U.S. from 1908-10 in A Gentleman from Mississippi. About 1914 he took up cinema work, at which he made a great success. In 1920 he married the film actress Mary Pickford (q.v.).

FAIRFAX, THOMAS FAIRFAX, 3RD BARON (1612-71). English soldier. The son of the 2nd baron, Ferdinando (1584-1648), he was born at Denton, Yorkshire, Jan. 17, 1612, and educated at St. John's College, Cambridge. In

Thomas Fairfax, English soldier. From an engraving.

1644 he was made commander-in-chief of the parliamentary armies. He was one of the judges appointed to try Charles; but refused to sit, and in 1650 resigned as head of the army. In 1659 he helped Monk to place Charles II on the throne and was elected M.P. for Yorkshire. He died Nov. 12, 1671, at Nun Appleton, his Yorkshire seat.

Thomas Fairfax (1692-1782), the 6th baron, settled in Virginia, where his successors in the title also lived. The result was that this lapsed, but in 1912 it was revived for Albert Kirby Fairfax (b. 1870), who ranked as the 12th baron.

FAIRFORD. Village of Gloucestershire. It stands on the Coln, 25 m. W.S.W. of Oxford, and has a station on the G.W.R. Its 15th century church, built by John Tame, a London merchant, contains some of the most wonderful stained glass in the country. The 23 windows depict the story of the Creation and the work of Christ. Pop. 1,347.

FAIRING. In aeronautics, any streamline-shaped cover or casing, or any part so shaped that it provides a streamline form and lessens wind resistance. See Aeronautics.

FAIR ISLE OR **SHEEP ISLE.** One of the Shetland Is. It is 3 m. long and 2 m. broad, rises to 480 ft. in Sheep Craig on the E. coast, and has two lighthouses. Pop. 130.

FAIR TRADE. Term much used during the latter part of the 19th century by opponents of free trade, who demanded that the United Kingdom should only admit goods of other nations on reciprocal terms. See Free Trade; Safeguarding; Tariff Reform.

FAIR WAGES CLAUSE. A clause in agreements with any contractor undertaking work paid for from public money. It provides that he "shall pay his workmen the wages usually deemed fair in the district in the trade to which they belong, i.e. the trade union rate of wages, under a penalty of £— or under pain of forfeiting the contract at the option of the employer."

Fairway. Navigable part of a river or other channel. It is continually under supervision, as it must be kept free from obstruction.

FAIRY. Legendary or mythical being common to folklore. Fairies are manifested in varied forms; sometimes they are friendly, sometimes mischievous.

Since fairy originally meant enchantment, and then fairy people collectively, a single fairy is better called fay. The vivid green fairy rings in fields fancifully ascribed to fairies dancing in a circle at night, are caused by certain species of fungi—notably the fairy-ring champignon (Marasmius oreades). The term fairy stories is applied to all tales introducing earthly beings of an extra-natural character. See Brownie; Cinderella; Elf; Folklore; Gnome; Goblin; Puck; Sylph.

FAITHFULL, EMILY (1835-95). British publicist. Born at Headley Rectory, Surrey, daughter of Rev Ferdinand Faithfull, and educated at Kensington, she devoted the greater part of her life to advocating the claims of women to remunerative employment. In 1860, in Great Coram Street, London, she founded a printing-office in which women were employed as compositors. Later, in Farringdon Street, she formed the Victoria Press. In 1863 she started the Victoria Magazine. In 1868 she issued a novel, Change upon Change. Her lectures in the U.S.A., 1872-73, were described in her Three Visits to America, 1884. She died May 31, 1895.

Emily Faithfull, British publicist. Downey

FAITH HEALING. Cure of disease by faith in the healing power of God. Such cures are usually effected in functional and nervous complaints, not in cases of organic lesion; and medical science attributes them to the power of suggestion upon the minds of persons in a state of strong religious emotion.

FAITHORNE, WILLIAM (1616-91). English engraver. Made prisoner by the Roundheads in the Civil War, he pursued his art in Aldersgate prison. In 1650 he set up as a print-seller near Temple Bar, London, retiring in 1680. He died in Blackfriars May 13, 1691. Faithorne engraved portraits of most of the conspicuous figures of the Commonwealth and Restoration after Van Dyck, Lely, Dobson, and others.

FAKENHAM. Market town of Norfolk. It stands on the Wensum, 24 m. by rly. from King's Lynn. It has two stations, one on the L.N.E. and the other on the L.M.S. Rly. Pop. 2,966.

FAKIR (Arab faqir, beggar). Religious devotee, especially in India. The Mahomedans are orthodox members of the marrying dervish orders or unorthodox celibate mendicants. The Hindus include members of the monastic yogi orders devoted to education and poor relief, besides mendicant vagabonds

Fakir. 1. Undergoing the thirst ordeal; with the river and jars of water within reach, he abstains from drinking. 2. Lying on a bed of thorns

who practise jugglery and resort to mutilations and austerities.

Fal. River of Cornwall. It rises near Roche, flows for 23 m. to the English Channel at Falmouth, and is navigable for nearly 10 m.

FALABA. Town of Sierra Leone, W. Africa. It lies near the frontier of French Guinea, 170 m. N.E. of Freetown, at the junction of many trade routes. Pop. 6,000.

The Falaba, an Elder Dempster liner of 4,800 tons, was torpedoed by the German submarine U28 south of St. George's Channel, on March 23, 1915.

FALAISE. Town of France. It is 20 m. from Caen and is famous because William the Conqueror was born in its castle, of which there are some remains. There is a statue of William near the town hall. The church of S. Gervais has a fine Norman tower. This town is noted for its horse and cattle fairs. As part of Normandy, Falaise was long a possession of the English Kings. Pop. 6,856.

Falaise. The castle in which William the Conqueror was born

FALCON (Lat. *falex*, sickle). Name applied to the family of birds of prey which includes falcons, hawks, kites, and eagles; but more especially to a sub-family which includes the true falcons, the peregrine falcon and the kestrels. All these have short, curved beaks with one notch in the upper mandible, round nostrils, short pointed wings, and long toes. The peregrine falcon builds sparsely on cliffs

Falcon. Peregrine falcon, commonly trained for hawking

in the S. of England, and preys mainly on birds. Other falcons are occasional winter visitors. The birds take their name from the hook-shaped claws. See Hawking.

Falcon. Volcanic island of the Tonga or Friendly Islands. It made its appearance on Oct. 14, 1885, after a volcanic eruption.

FALCON, ORDER OF THE. Icelandic order. Established in 1921, when Iceland was separated from Denmark, it has four degrees: grand commander, commander of the star, commander, and knight. It is conferred by a committee of four.

FALDSTOOL.

Portable folding stool used by bishops when occupying a seat in the sanctuary other than their throne. The term is applied to the small, low desk at which the Litany is enjoined to be sung or said, and to the stool at which a sovereign kneels at his coronation.

Faldstool or Litany desk of carved oak

Falernian. Famous wine of the ancient Romans. It was made from vines grown on the ager Falernus, part of a fertile plain in Campania.

FALIERO, MARINO (1279-1355). Doge of Venice. Member of an ancient Venetian family, he was elected doge in 1354. The unrest caused by the defeat of the Venetian navy by the Genoese aroused his ambition. He allied himself with the leaders of the populace, and a plot was hatched to murder the leaders of the nobility on April 15, 1355, and proclaim Marino prince of Venice. The Council of Ten discovered the plot, seized Faliero, who confessed his share in it and was executed April 17, 1355.

FALK, PAUL LUDWIG ADALBERT (1827-1900). German statesman. Appointed Prussian minister for ecclesiastical and educational affairs in 1872, he introduced a law declaring the right of the state to supervise all schools. The unpopularity of this law led to his resignation. He died July 7, 1900.

Ludwig von Falkenhayn, German soldier

FALKENHAUSEN, LUDWIG VON (h. 1844). German soldier. Born Sept. 13, 1844, he entered the army in 1862 and took part in the campaigns of 1866 and 1870-71. In 1914 he was given a high command on the Western front. From April, 1917, until the peace of Nov., 1918, he was governor-general of Belgium.

FALKENHAYN, ERICH VON (1861-1922) German soldier. He was born at Burg Belchau, Sept. 11, 1861, and entered the German army in 1880. In 1913 he became minister of war, and in Dec., 1914, chief of the general staff. From this post he was removed in Aug., 1916, owing to the failure of the German offensive at Verdun. In Sept., 1916, he was made commander-in-chief of the Ninth Army, and later unsuccessfully directed the Turkish operations against the British in Palestine and Mesopotamia, but was recalled in Mar., 1918. He died April 8, 1922. In 1919 he published *General Headquarters, 1914-16*, and its *Critical Decisions*, Eng. trans. 1919.

Erich von Falkenhayn, German soldier

FALKIRK. Burgh and market town of Stirlingshire. On the L.N.E. and L.M.S. Rlys., it is the centre of a busy ironworking and colliery district. A mining institute was opened here in 1930. Market days, Tues. and Thurs. Pop. 33,312.

The first battle of Falkirk was fought July 22, 1298, when the English under Edward I invaded Scotland to crush the rebellion of William Wallace. The Scots, mostly pikemen, were greatly outnumbered and beaten.

The second battle was fought between the English and the Jacobites, Jan. 17, 1746. Charles Edward's Highlanders swept away the English troops, and the English lost 700 prisoners.

Viscount Falkland, English royalist After Van Dyck

FALKLAND, LUCIUS CARY, 2ND VISCOUNT (c. 1609-43). English

royalist. He was the son of Sir Henry Cary (d. 1633), a Devonshire man, who, after being lord deputy of Ireland, was made a Scottish peer as Lord Falkland in 1620. Lucius was never a bitter partisan, but, as the opposition to Charles hardened, he became more definitely on his side, and was killed at Newbury, Sept. 20, 1643, when riding alone towards the foe. He loved learning and the society of

scholars and wrote verses and philosophical tracts. Of him Clarendon said, "Whosoever reads such a life need not care upon how short warning it be taken from him."

Falkland is a small hugh in Fifeshire with a palace once a residence of the Scottish kings.

FALKLAND ISLANDS. British crown colony in the S. Atlantic. The chief islands are East Falkland (area 2,580 sq. m.) and West Falkland (2,038 sq. m.). The chief industries are sheep farming and whale fishing; horses and cattle are reared. The climate is bleak but healthy. The only indigenous mammals are the fox and mouse. Stanley, the capital, which is situated on E. Falkland, has a good harbour.

The Falklands were discovered by John Davis in 1592, and became British in 1832. Pop. 2,271.

THE BATTLE OF, 1914. Following the destruction of Cradock's cruisers at Coronel (q.v.) Lord Fisher sent the battle cruisers *Invincible* and *Inflexible* under Vice-Adm. Sturdee secretly from England on Nov. 11. They were joined off Brazil by three old armoured cruisers, two light cruisers, and two armed ships. They reached Port William on Dec. 7, and on the following day Von Spee's squadron, including the armoured cruisers *Scharnhorst* and *Gneisenau* and the light cruisers *Nürnberg* and *Leipzig*, was wiped out, while the cruiser *Dresden* was destroyed in Chilean waters on March 14, 1915. The Germans lost 2,100 men. The victory is commemorated by a memorial unveiled at Stanley, Feb. 26, 1927.

FALL, THE. In the Eden story Adam and Eve's wilful disobedience to God at the instigation of the serpent. From this theology has deduced the doctrine that all men are born in a state of sin. But the assumption that the human race started in a state of perfection is in conflict with the theory of evolution, and the account of the Fall in Genesis does not contain the doctrine, which is difficult to reconcile with a true conception of Divine justice and human responsibility. See Sin.

FALLACY (Lat. *fallax*, likely to deceive). Term meaning in general a mistaken belief or opinion; in logic, a process of reasoning at variance with the recognized rules. Fallacies may be verbal, material, formal. The commonest verbal fallacies arise from the use of ambiguous terms.

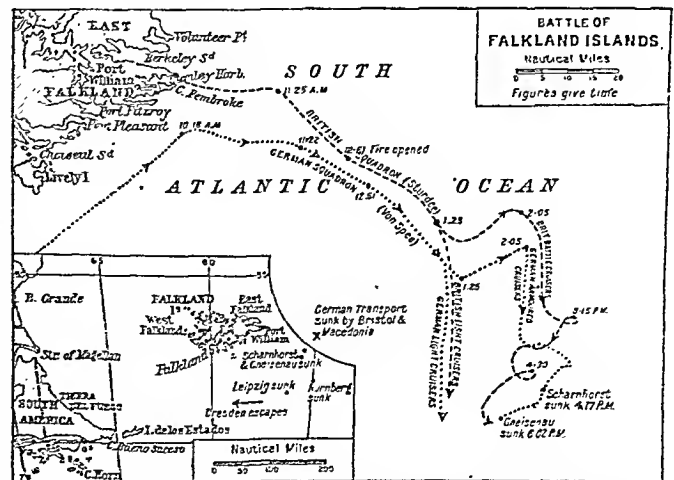

Among material fallacies are hegging the question or arguing in a circle, an attempt to prove or disprove something irrelevant to the question at issue. Formal fallacies consist in violating the rules of the syllogism. See Induction; Syllogism.

Armand Fallières, French statesman

FALLIÈRES, CLÉMENT

ARMAND (h. 1841). French statesman. Born at Agen, Lot-et-Garonne, Nov. 6, 1841, he studied law in Paris, and became a barrister at Nérac, for which he was elected republican deputy, 1876. After holding various cabinet

Falkland Islands. Chart illustrating the course of the naval battle of Dec. 8, 1914. Inset, map showing the relative position of the Falkland Islands

offices he was president of the republic Jan. 17, 1906, till Jan. 7, 1913. The chief event of his presidency was the cementing of the Franco-Russian Alliance. Pron. Falli-yare.

FALLOPIUS OR **FALLOPIO**, GABRIELLO (1523-62). Italian physician and anatomist. He discovered the functions of the two tubes, one on each side of the uterus or womb, which convey the ova or eggs from the ovary to the uterus. Born at Modena, he died at Padua Oct. 9, 1562. He published in 1561 his *Observationes Anatomicae* at Venice, where his *Opera Genuina Omnia* appeared in 1584.

FALLOW. Saxon word meaning reddish or buff-coloured, used to describe ploughed land without a crop. Before root-crops were known and artificial manures in use, land exhausted by the growth of crops was given a rest and said to be in bare fallow. In modern agriculture fallowing is replaced by the growth of root-crops or kale or rape, which do not interfere with cleaning operations, and allow of replenishment of plant-food by suitable manuring. See Agriculture.

FALLOW DEER. Small group of deer, characterised by having antlers round at the base and palmed above. They have small heads, rather large ears, and comparatively long tails, and usually stand about 3 ft. high. The hair is generally fawn colour, more or less dappled with white. This is the deer kept in the parks of Britain. See Deer.

FALL RIVER. City of Massachusetts, U.S.A., in Bristol co. It has a commodious barbour, is among the leading producers of cotton goods in the country, and manufactures calico, woollens, boots and shoes, hats, pianos, and machinery. There are also brass and iron foundries, and granite is largely worked in the neighbourhood. Abundant water-power is obtained from Fall River. Forming part of Freetown down to 1803, it was called Troy until 1834, and received a city charter in 1854. Pop. 128,993

Falmouth. Prince of Wales pier, opened in 1905, from which steamers start

FALMOUTH. Borough, seaport, and market town of Cornwall. It stands at the mouth of the Fal, 11½ m. by rly. s. of Truro, on a branch of the G.W.R. It is an important port of call, and has an excellent harbour and three deep dry docks with pneumatic plant, electric welding apparatus, and an oil depot. Shipbuilding and engineering, brewing and rope-making are prominent industries, and there is a considerable pilchard fishery. Its mild and equable climate and the scenery of the Fal valley make it a favourite watering place. Market day, Sat. Pop. 13,322.

The title of Viscount Falmouth has been borne by the family of Boscawen since 1720. The family is an old Cornish one, members of it having possessed Boscawen-Rose in the time of King John. Evelyn Hugh (b. 1887), the 8th viscount, succeeded to the title in 1918. The family seat is Tregothnan, Truro.

FALSE ACACIA (*Robinia pseudacacia*) OR **LOOUST TREE**. Tree of the order Leguminosae, native of N. America. It attains a height of 60 ft. to 80 ft. Its long, narrow leaves are broken up into 5-12 pairs of oval leaflets. The fragrant white flowers are produced in long, pendant sprays, like those of the laburnum. The seed-pods, too, are like those of laburnum, but dark red in colour.

FALSE PRETENCES. Term used in English law. It is a misdemeanour at common law to obtain or attempt to obtain money or property by false pretences with intent to defraud. The pretence may be made otherwise than by words. False pretences must be distinguished from larceny by trick. Falsification, as that of accounts, is punishable by penal servitude. See Forgery; Larceny.

FALSETTO (Ital.). Term applied to a kind of high voice of men, who disregard the natural pitch of speaking and singing in order to cultivate extreme high notes and sing an alto part. See Tenor; Voice.

FALSTER. Island of Denmark. It lies to the S. of Zealand. Stock-raising, dairy farming, and agriculture are the principal occupations. Sugar beet and fruit are the chief crops. The largest towns are Nykjöbing and Stubbekjöbing, connected by rly. Area 133 sq. m. Pop. 51,392.

FAMILIAR (Lat. *familiaris*). In the Roman Catholic Church, a person who belongs to the household of a pope or bishop. The council of Trent decreed that a familiar could not be ordained by his bishop unless he belonged to the same diocese and had lived with him three years. Familiars of the Holy Office were officials of the Inquisition. The name is explained by reference to their admission to the confidence of the Holy Office as members of the family. See Inquisition.

Familiar was also the term applied to the spirit supposed to be in the service of necromancers and witches. See Demonology.

FAMILY (Lat. *familia*). Group comprising father and mother, with their offspring and relations. The first modern attempt to elucidate the origin of family life was Maine's patriarchal theory (1861) that the primitive father possessed uncontrolled power over his household. This view was supported by Darwin (1871) and Westermarck (1891).

A movement for the payment of wages according to the number in family has won much support since the Great War in England, France, Germany, Belgium, and other European countries. It has been put into operation in one or two directions, for instance, in the public services of Australia.

In zoological classification the term family is used for a group of genera

False Acacia. Flower of the Locust tree of N. America

Bourbon kings of France and Spain for the maintenance of an alliance between them. The first was signed on Nov. 7, 1733, directed against Austria; this alliance was renewed in Oct., 1743. The third was made in 1761, when the Seven Years' War was raging.

FAMINE (Lat. *fames*, hunger). Period of want or scarcity of food supplies. Its chief primary cause is deficiency of rainfall, but floods, frosts, storms, visitations of insects or other pests, inadequate agricultural methods, ill-directed labour, deficient transport, and the

ravages of war are contributory causes. Neglect in the storage of food frequently brings famine among primitive peoples, but it is sometimes to be accounted for by wholesale deforestation, which gives rise to local conditions of drought, and the dependence of a race upon one kind of food, as maize in S. America, rice in China, or the potato in Ireland. See Black Death.

FAN (Lat. *vannus*). Implement for agitating the air, especially used for cooling the face. Fans have been used from the earliest ages in hot countries, especially on ceremonial occasions. The folding fan, a Japanese invention, was adopted in Europe toward the end of the 16th century. Fan painting became an art in the middle of the 17th century, Antoine Watteau and François Boucher in France and Charles Conder in England being among those who have practised the art.

The Fanmakers' Company of London was incorporated in 1709. It is one of the City livery companies.

FAN. A revolving wheel to remove air or gas for ventilation or industrial purposes. To an axle, usually horizontal, is attached a series of vanes or blades, which may be flat or curved, the whole being enclosed in a casing of volute shape having a central opening for admission of the air or gas, and an opening in the circumference for its delivery.

Fan. Diagram of centrifugal ventilating fan. A, fan wheel; B, air inlet; C, casing; arrows indicate course of air

FANFARE (Fr.) OR **FLOURISH**. Properly, a short passage for trumpets in unison, performed on state occasions. Some composers have used fanfares in opera.

FANG. In poisonous snakes teeth by which the venom is conveyed into the wound caused by the bite. In the viper tribe the fangs are channelled.

FANNING. Coral island in the Pacific Ocean, due S. of Hawaii. Administratively it is annexed to the Gilbert and Ellise Islands Colony. It is a station of the submarine cable between Australia and Vancouver. Its area is 15 sq. m. Pop. 150.

FAN PALM (*Livistona*). Genus of trees of the natural order Palmae. They have large, fan-shaped, plaited leaves, and are natives of Eastern Asia, Malaya, and Australasia. The best known species are *L. australis*, from Eastern Australia, and *L. chinensis*, from S. China.

Fan Palm. Foliage of *Livistona chinensis*, from S. China

FANSHAWE, SIR RICHARD (1608-66) English diplomatist and writer. Born at Ware Park, Hertfordshire, he became secretary to the prince of Wales, and in 1648 was made treasurer of the navy. He was created a baronet in 1650. After the Restoration he sat in Parliament for Cambridge University, and undertook various missions to Spain and Portugal. He translated the *Lusiad* of Camoens, 1655, and died at Madrid, June 26, 1666.

FAN TAN. Chinese gambling game. The implements are a bowl full of beans or counters and an oblong card, the corners of which are numbered from 1 to 4. Bets made upon these corners are decided by the hanker taking a handful of beans or counters and dividing them into fours: the number of odd pieces over deciding the win. If there is no remainder, No. 4 wins.

FANTASIA (Ital.). Musical composition in which strict form is not exacted, and everything is left to the "phantasy" of the composer. Examples are the naïve contrapuntal string trios of Orlando Gibbons (early 17th cent.), the monumental organ fantasias of J. S. Bach (early 18th cent.), and much worthless pianoforte music of the 19th century.

FANTI (cabbage-eaters). Negro people in the Gold Coast colony, W. Africa. They are allied to the Ashantis, and their number is estimated at 1,000,000. They are of medium stature, and live in small village communities and on the coast. Their tribal scars are three lines on each side of the jawbone. Their Tshi dialect is the dominant speech round Cape Coast Castle. They were formerly cannibals. See Ashanti.

FANTIN-LATOURE, IGNACE HENRI JEAN THÉODORE (1836-1904). French painter. Born at Grenoble, Jan. 14, 1836, son of the painter Théodore Fantin-Latour, he studied under Boissaudran and at the Beaux-Arts. He began to exhibit at the Salon in 1861, and obtained his first award in 1876. At first an unsurpassed painter of flowers, he achieved a striking triumph with a portrait of Manet: an even higher achievement is the portrait of Mr. and Mrs. Edwin Edwards in the National Gallery, London. He died at Bure, Orne, Aug. 28, 1904.

Fantin-Latour, French painter. Self-portrait in *Offizi Gallery, Florence*

FAN TRACERY. Form of ornament in Perpendicular Gothic architecture. In it the tracery of a vault is created by springing the stone ribs from their various points of support in such fashion that the effect is that of a spreading fan. There are fine examples in Henry VII's Chapel, Westminster Abbey, and also at St. Stephen's Cloister, Westminster Hall. See Gothic Architecture.

Fan Tracery seen in the vaulting of Henry VII's Chapel, Westminster Abbey

FAO. Village of Iraq. It lies on the right bank of the Shatt al Arab, about 3 m. from the Persian Gulf. It was captured by the British, Nov. 7, 1914, and retained as a sort of naval base. Pop. 600.

FARAD. Unit of electrical capacity of an electrical conductor. A capacity of one farad is that which would be raised to a difference of

pressure of one volt by a charge of one coulomb. For practical purposes the farad is too large, and a smaller unit—the microfarad, one millionth of a farad, is employed. See Capacity.

FARADAY, MICHAEL (1791-1867) British chemist and physicist. The son of a blacksmith, he was born at Newington Butts, London, Sept. 22, 1791, and in 1813 became assistant to Sir Humphry Davy at the Royal Institution. His many discoveries in chlorine combination, liquefaction of gases, optical glass, electricity, and magnetism were incorporated in invaluable lectures and treatises. He laid the foundation of electrical science as it is known to-day. He died at Hampton Court, Aug. 25, 1867. The Faraday Society was founded in his honour in 1903.

Michael Faraday, British physicist

Faraday's Law is the discovery by Faraday that an electrical current may be measured in terms of the quantity of an electrolyte which it decomposes.

Faradism is a term for the use of an interrupted current of electricity in medicine. See Electricity; Magnetism.

FARCE (Fr. from Lat. *farciare*, to stuff). Dramatic piece of an essentially ridiculous character to which extravagant language, caricature, and ludicrous situations may all contribute. The word originally meant an interpolation, like an actor's gag, hence a performance in which jests and humorous incidents predominated.

Farcy (Lat. *farcinum*). Disease affecting horses. It is a form of glanders (q.v.), and must be notified to the local authorities.

FAREHAM. Market town, seaport, and urb. dist. of Hampshire. It stands on a creek off Portsmouth harbour, and is a junction on the Southern Rly. The chief building is S. Mary's Church. There is trade in corn and coal. In medieval times Fareham was a prosperous port, but now it can only be reached by small vessels. Market day, Mon. Pop. 10,066.

Farwell. Cape of Greenland, on a small island off the coast, with an alt. of 1,000 ft. It is dangerous for navigators.

FARINA (Lat. meal). Starchy preparation used for food or in the industrial arts. The food-products of cereal grains and pulses, starchy stems, roots, and tubers, are farinaceous. In N. America farina is white granular maize meal, used for puddings, and in S. America starchy breadstuffs with fibrous admixture derived from cassava.

The farina used for sizing cotton textiles is principally potato starch, and is the chief source of British gum or dextrin. Fossil farina or rock-meal is a white, crumbly form of calcium carbonate.

FARINELLI (1705-82). Professional name of the Italian soprano singer Carlo Broschi. Born at Naples, Jan. 24, 1705, Broschi was a pupil of Porpora, in whose opera, *Enmene*, he made a famous first appearance in 1722. In 1736 he went to Madrid and became a favourite of Philip V. There he remained for 25 years. Farinelli died at Bologna, July 15, 1782.

Farinelli, Italian singer

FARINGDON. Market town of Berkshire, known also as Great Faringdon. A station on the G.W. Rly., it is 17 m. S.W. of Oxford. All Saints' Church is a large building with brasses and other memorials. Faringdon has a trade

in corn, cattle, etc. Market day, first Tues. Pop. 2,758.

FARINGDON, ALEXANDER HENDERSON, 1ST BARON (b. 1850). British business man and politician. A son of George Henderson of Langholm, Dumfries, he was born in London, Sept. 28, 1850. He became a stockbroker, and in 1894 chairman of the Great Central Rly. He was Unionist M.P. for West Stafford, 1888-1906; and 1913-16 for St. George's, Hanover Square. In 1902 he was made a baronet and in 1916 a baron.

FARINGTON, JOSEPH (1747-1821). British artist. A prominent R.A., he is chiefly noted for his voluminous diaries, acquired by *The Morning Post* early in 1922, and, as edited by James Greig, first published serially in that journal.

FARM (late Lat. *firma*, a tribute). An agricultural estate; land used for raising crops, dairy and garden produce, etc. Pastoral farms, such as those in the west of England, are almost wholly utilised for the breeding of horses, cattle, and sheep. The dairy farm is for the production of milk, cheese, and butter, where the by-products are utilised in calf-rearing and pig-feeding. The upland farms of southern England, e.g. Hampshire, are almost entirely restricted to the breeding and fattening of the heavy breeds of sheep. There are few farms in England where large areas of corn are grown without the assistance of sheep as a means of manuring and consolidating light and shallow soils.

A typical mixed farm of not more than 400 acres would appear to be as much as one man can manage, especially in view of the amount of detail in modern intensive farming. The planning and erection of modern farm buildings requires as much expert advice as the erection of dwelling-houses or factories. The aspect most favoured is S. or S.E.; to facilitate drainage the buildings should be erected on rising ground. See Experiment.

FARMAN. Name of aeroplanes built by the brothers Henry and Maurice Farman. The son of an English journalist, Henry (b. 1875) was born in France and began his career as a bicycle racer, then manufactured bicycles and motor cars. He took up aeronautics in 1907, and developed and perfected an aeroplane known by his name, making his first trials at Issy-les-Moulineaux, Nov., 1907-Jan., 1908. He was the first aviator to fly from town to town (Châlons-Reims, 1908) and to fly 100 miles (Reims, 1909). He established in 1908 a school of aviation and works at Bue, near Versailles, France.

Maurice Farman established aviation works a little later, and in 1912 the two combined their resources, erecting a factory at Billancourt. Various types of their machines rendered useful service in the Great War. See Aeronautics; Aeroplane; Flight.

FARM COLONY. Name given to a settlement of persons on the land to cultivate it. General Booth established one at Hadleigh, Essex, in 1891, for the unemployed. The first farm colony for ex-soldiers was established in 1916 at Holderness, in E. Yorkshire; and one was founded at Lasswade, near Edinburgh, by Sir Robert Philip in 1910. The Small Holdings (Colonies) Act, 1916, arranged for the settlement of ex-service men at Holbeach, Patrington, and elsewhere.

FARMER, JOHN (1835-1901). British musician. Born at Nottingham, Aug. 16, 1835, he studied music at Leipzig and Coburg, and afterwards taught it at Zürich. In 1862 he settled at Harrow, and in 1864 was made

John Farmer, British musician. Elliott & Fry

music master at the school. From 1885 until his death he was organist of Balliol College, Oxford. He died July 17, 1901.

FARNBOROUGH. Urban dist. and parish of Hampshire. It is 33 m. S.W. of London, on the Southern Railway. A mausoleum

Farnborough. Mausoleum in which Napoleon III, the Empress Eugénie, and the Prince Imperial are buried 1881-1920.

On Farnborough Common is the Royal Aircraft Factory. Here, too, is a large aerodrome. Pop. 15,720.

Another Farnborough is a village in Kent, 4 m. S.E. of Bromley, and there are Farnboroughs in Berkshire and Warwickshire.

Farne. S. Cuthbert's church, Inner Farne, on the site of the hermitage where the saint died in 687
Valentine

FARNE, FEARNE, OR FERN ISLANDS, OR THE STAPLES. Group of seventeen rocky islets and rocks off the coast of Northumberland. Farne or House, the largest (16 acres), was the retreat of S. Cuthbert (q.v.) in the 7th century, and Longstone with its lighthouse is famous for its association with Grace Darling (q.v.).

FARNESE. Name of the Italian ducal family of Parma. They became prominent by the election as Pope Paul III of Alessandro Farnese, 1534. In 1545 Pope Paul gave the duchy of Parma to his natural son Pierluigi (1503-47), whose son Alessandro (1520-89) completed the Farnese Palace in Rome, one of the finest examples of later Renaissance architecture. The third duke Alessandro (1596-1642) was a famous soldier in the Spanish service.

Elizabeth Farnese (1692-1766) married in 1714 Philip V of Spain. The direct Farnese succession ended with Antonio (1679-1731) when the Farnese Palace passed to the king of Naples.

FARNHAM. Market town and urban district of Surrey. On the Wey, 38 m. S.W. of London, on the Southern Rly., it is the centre of an important hop district. The castle, till 1926 the seat of the bishops of Winchester and now used as a church house, dates mainly from the 17th century. The park was bought for the town. Near are Moor Park, the residence of Sir W. Temple, where for a time Swift lived, and the ruins of Waverley Abbey. Cobbett's birthplace is now an inn, The Jolly Farmer. Market day, Mon. Pop. 18,000.

FARNOL, JOHN JEFFERY (b. 1878). British novelist. Born Feb. 10, 1878, he went in 1902 to America, where he painted theatrical

scenery, and published his first volume, *My Lady Caprice*, 1907 (reissued as *Chronicles of the Imp*). In 1910 he returned to England, and by the publication of *The Broad Highway* achieved popularity as a writer of healthy romance. Later stories included *The Money Moon*, 1911; *The Amateur Gentleman*, 1913; *Beltane the Smith*, 1915; *Our Admirable Betty*, 1918; *Black Bart's Treasure*, 1920; *Sir John Dering*, 1923; *The Loring Mystery*, 1925; *The Quest of Youth*, 1927; and *The Shadow*, 1929. He wrote *Some War Impressions*, 1918.

FARNWORTH. Urban district of Lancashire. It is 3 m. S.E. of Bolton, on the L.M.S. Rly. It has cotton spinning mills, engineering works, machinery shops, and brick and tile works, while around are coal mines. Market day, Mon. Pop. 27,894.

FARO. Gambling card game. A full pack of 52 cards is put into a dealing box with an open top, one card being released at a time. The first card in sight at the beginning of each deal is called soda and the last card left in the box is in boc. The dealer or hanker withdraws soda and places it some distance away; the next card, termed the loser, he lays by the side of the box. The third card taken out is the winner, which he places on the soda; thus, each alternate card is a winner or loser, eventually forming two separate piles, with soda and loser for foundation. The object of the players is to forecast correctly which particular card of any suit will win or lose.

FAROEES OR FAEROES (Dan. Færøerne, sheep island). Group of 21 islands in the N. Atlantic, belonging to Denmark. They lie about 195 m. N.W. of the Shetlands, and are hilly with lofty cliffs and deep fiords. The rainfall is heavy, and the climate mild. The chief industries are sheep raising, cattle-breeding, wild-fowling, whaling and fishing. The largest island is Strömø, which contains the capital, Thorshavn.

Colonised by the Norwegians in the 9th century, the islands became a Danish possession in 1380. The people have a local parliament and are represented in the Danish parliament. The area is 540 sq. m. Pop. 22,835.

FARQUHAR, GEORGE (1678-1707). English dramatist. Born in Londonderry, and educated at Trinity College, Dublin, he started

George Farquhar, English dramatist

Lady Bountiful and Boniface, the innkeeper, have passed into the language as types. The Recruiting Officer, 1706, contains the well-known song *Over the Hills and Far Away*.

FARRAGUT, DAVID GLASGOW (1801-70). American sailor. Born July 5, 1801, he entered the navy, and is specially remembered for his brilliant capture of New Orleans and his defeat of Buchanan at Mobile during the Civil War. Died Aug. 14, 1870.

Jeffery Farrar, British novelist Elliott & Fry

FARRAR, FREDERIC WILLIAM (1831-1903). British divine and writer. Born in Bombay, Aug. 7, 1831, he was educated at London University and Trinity College, Cambridge, and became in 1855 an assistant master at Harrow. He was headmaster of Marlborough College 1871-76, when he became canon of Westminster and rector of S. Margaret's. He was made dean of Canterbury in 1895, and he died March 22, 1903.

Farrar's Life of Christ, 1874, enjoyed a remarkable success, and he also wrote popular, if somewhat sentimental, books for boys, of which *Eric*, or *Little by Little*, was one.

F. W. Farrar, British divine Elliott & Fry

Elizabeth Farren, British actress After Sir T. Lawrence

Farren, William (1786-1861). British actor. He made his debut on the London stage, Sept. 10, 1818, as Sir Peter Teazle at Covent Garden, and took leave of the public at The Haymarket, July 10, 1855, in his favourite part of Lord Ogleby in *The Clandestine Marriage*. He died in London, Sept. 24, 1861. As the old man of 18th century comedy he was unrivalled.

Farren married the actress Helena Faucit, and their two sons, William (1825-1908) and Henry (1826-60), were both actors. Henry was the father of Ellen or Nellie Farren (1848-1904), who was so successful in boys' parts in the burlesque at the old Gaiety. She retired from the stage in 1892.

FARROW'S BANK. Former British bank. Founded in 1904 by Thomas Farrow, it had in 1907 a capital of £1,000,000 and 75 branches. In 1920 it failed and in 1921 Farrow was sentenced to imprisonment for frauds.

FARTHING (A.S. feorþa, fourth). Name of the smallest British bronze coin, value one quarter of a penny. It became a bronze coin in 1860, has a standard weight of 43.750 grains, and is legal tender to the number of four at one time. See Coinage.

FARTHINGALE (Span. verdugado, hooped). Hooped framework supporting and extending a wide skirt. The fashion was introduced from Spain into England in the time of Elizabeth, and continued until about the middle of the 17th century. The fardingale, as it was then called, was revived in rather a different form in the time of Queen Anne. Abolished in George IV's reign, it reappeared later as the crinoline.

William Farren, British actor From a daguerreotype by Mayall

Farthing. Obverse and reverse of George V farthing

David G. Farragut, American sailor

FASCES (Lat. bundles). Bundles of rods with an axe bound up in the middle. They were symbols of higher magisterial authority in ancient Rome.

FASCINE (Lat. fascina, lagot). Name for a long fagot of thin boughs or brushwood, tightly packed and securely bound, used in military engineering.

Fascine. Roman symbol of magisterial authority

A cradle of trestles is arranged at a uniform height, the lengths of brushwood are placed thereon and tightly packed by means of a choker, which consists of a length of chain, the two ends of which are secured to stakes. After being compressed the fascine is secured by withes.

FASCISTI, THE (Lat. fascia, bundle). Movement started in Italy in 1919. Its leader was Benito Mussolini, then a journalist, and its place of origin Milan. Its rise was due to the discontent of those who had fought in the Great War with the Government policy and economic and social conditions in general, to which was soon added the desire to combat the activities of the communists. Fascism soon dropped its early republican ideas and became national and patriotic.

At the election of 1920 Fascist candidates failed everywhere to secure election to the Chamber of Deputies, but they were more successful in obtaining representation on the town councils. More decisive, however, was the formation of a military organization which openly challenged the communists and must share the responsibility for riots in Bologna (Nov., 1920) and several other places; indeed for a time there was something like civil war.

In May, 1921, another general election was held, and 38 Fascists were returned to the Chamber. Now a political party, its members held a congress in Rome and adopted a programme. In Oct., 1922, after another congress at Naples, occurred the march of 200,000 Fascists on Rome, the result of which was that the existing government was overturned and Mussolini was appointed premier, or, more correctly, dictator. In April, 1924, having altered the electoral law, he secured a majority in the Chamber, and since then the history of Fascism has been the history of Italy.

The uniform of the movement is a black shirt. There is a Society of British Fascists at 99, Buckingham Palace Road, S.W.1. See Italy; Mussolini, B.

FASHODA, now KOPOK. Town of the Anglo-Egyptian Sudan. It is on the W. bank of the White Nile, 470 m. S. of Khartoum.

On Sept. 7, 1898, a small French expedition under Major (afterwards General) Marchand occupied Fashoda, which since 1895 had been declared within the sphere of British influence. Sir Herbert Kitchener, then sirdar, went to Fashoda and asked Marchand to withdraw. The French officer refused, but on Nov. 5 his government ordered him to retire. By an agreement of March 21, 1899, France undertook to withdraw from the Nile valley, and a new boundary was outlined.

FASTING (A.S. faestan, to hold fast, observe). Total or partial abstinence from all or special kinds of food and drink for religious or other reasons. The Church of England makes no distinction between fasting and abstinence, and leaves the manner of fasting or abstinence to the individual. In the Roman Catholic Church all baptized persons who have completed their 21st year are

bound to observe the days of fasting, on which they may not eat more than one full meal, this meal to be without flesh meat and to be eaten after midday.

In the Eastern Church 226 days in the year are set apart for fasting; and it is an important religious duty and observance among the Hindus and Mahomedans.

FASTNET. Rock off the S.W. coast of Cork, Irish Free State. There is a lighthouse on the rock, erected in 1907 to replace one built in 1854. Its light can be seen for 18 miles.

FAT. Chief constituent of fatty or adipose tissue in the body. Chemically, fat consists of carbon, oxygen, and hydrogen, and its function in the animal economy is to provide a reserve of combustible material which is drawn upon to maintain the heat of the body.

FATA MORGANA. Form of mirage seen in the straits of Messina between Sicily and Calabria. The name is due to the fact that it was supposed to be the work of a fata or fairy named Morgana. The term is in general use to describe a mirage (q.v.).

FATES. In classical mythology, the three-goddesses who presided over the destinies of men. By the Greeks they were called Moirai, by the Romans Parcae. Clotho, the youngest, hold the distaff which spun the thread of life; Lachesis mixed good and evil fortune with it; Atropos cut the thread at the allotted moment. In art the Fates are generally represented as aged women, but sometimes as maidens of grave mien: Clotho with a distaff or book of fate; Lachesis pointing with a staff to a globe; Atropos with a pair of scissors or a pair of scales.

FATHERHOOD. Theological term for one aspect of the relationship of God to the universe generally and to man particularly. In Christian theology the term father is applied to the First Person of the Trinity, both as expressing a special relationship to the Son and an attitude as Creator, sustainer and benefactor of the human race. See Trinity.

The Fathers of the Church are the early Christian writers pre-eminent for learning and sanctity whose works are regarded as having authority next after that of the Bible.

FATHOM. Nautical measure 6 ft. in length. Cables, etc., are measured by the fathom, and lead lines are marked off in fathom spaces.

FATIGUE. Condition produced by prolonged or excessive muscular activity. It is due partly to consumption of energy-producing materials and partly to the accumulation in the tissues of the waste products formed during these efforts which leads to exhaustion of the central nervous system. The scientific study of fatigue in workers has received a great impetus in recent years.

In metallurgy it has been shown that a continued vibratory stress, even well within the limits of elasticity of a metal, will in time "fatigue" it and cause a rearrangement of the molecules, a crystallisation in fact, or a change in the original crystalline structure, which will result in fracture; or a microscopical flaw may by such stressing be developed into a plane of rupture. See Steel.

In military parlance fatigue embraces work performed by soldiers in connexion with the administration of the troops, but not personal service for officers.

FATIMA (c. 606-632). Daughter of Mahomet by his first wife Kadijah. She bore her husband Ali three sons, Al-Hassan, Al-

Hussein, and Al-Muhsin. From the first two are descended the Fatimate caliphs of N. Africa and Syria.

Another Fatima was the heroine of Perrault's story of Bluebeard (q.v.). The name also occurs as that of an enchantress in the Arabian Nights story of Sindbad the Sailor.

FATSHAN. City of China, in the prov. of Kwangtung. It lies in the Si-Kiang and Pe-Kiang delta, 7 m. S.W. of Canton. It has iron and steel industries and a trade in cereals, oil, and timber. Pop. est. 500,000.

FAUCIT, HELENA SAVILE (1820-98). A British actress. She made her first London appearance at Covent Garden, Jan. 5, 1836, as Julia in Sheridan Knowles's *The Hunchback*, and achieved conspicuous success as Juliet, Portia, Constance, Desdemona Imogen, and Hermione. In 1851 she married Sir Theodore Martin, who wrote *her Life*, 1900. She died Oct. 31, 1898.

Helena Faucit, British actress

FAULDHOUSE. Town of Linlithgowshire. It is 7 m. S.W. of West Calder, on the L.M.S. and L.N.E. Ryds. Coal and ironstone are worked, and there is a paraffin industry. Pop. 4,889.

FAULT. In geology, a dislocation of rockbeds due to movements of the earth's crust. Three main types are recognized: normal, reversed, and transcurrent. In normal faults the displacement is more or less inclined, rarely vertical. Reversed faulting is usually

Fault. Diagram illustrating a fault in the earth's surface. The relative positions of the letters A, B, C, etc., show the extent of dislocation.

associated with highly inclined or folded strata, and may lead to development of overthrusts. With transcurrent faulting the movement has been in an horizontal direction, and there are

neither upthrows nor downthrows. Friction is set up along the planes of all faults, and results in the crushing and polishing of the opposite rock surfaces.

FAUN (Lat. favere, to favour). In Roman mythology, originally an Italian nature god. He was the patron of agriculture and (as Lupercus) of flocks and herds. The festival of Lupercalia (Feb. 15) was celebrated in his honour. In art he is sometimes represented as a bearded man, with goatskin cape and bearing a club and a horn.

FAUNA. Term used by naturalists for the collective animal life of any special locality or period, just as flora is used for the plant life growing naturally in any country or district. See Animal.

FAURE, FRANÇOIS FÉLIX (1841-99). French statesman. Born in Paris, Jan. 30, 1841, he made a fortune as a shipowner in Havre. He fought as a volunteer officer in the war of 1870-71, and entered the chamber as republican deputy for Havre in 1881. He was elected president Jan. 15, 1895. An unsuccessful attempt on his life was made, July 14, 1896. The chief events marking his tenure of office were the visit of the tsar of Russia and the negotiations for a Franco-Russian alliance, 1896, and the opening stages of the Dreyfus affair. Faure died suddenly, Feb. 16, 1899.

FAUST. German scholar of the 16th century, whose name has become the centre of a great body of legend and poetry in European literatures. Marlowe's drama, 1604, is the first appearance of the story in serious literary form in England. In Goethe's Faust, the greatest version of all, Faust, inspired by a fierce desire for knowledge and pleasure, sells himself to Mephistopheles; but ultimately decides that only a life of useful activity can satisfy the soul, and is thus saved from perdition.

Faust has been used as the basis for operas by Spohr, 1818, Berlioz, 1846, and Gounod, 1859; and for a tragedy by W. G. Wills, produced by Irving at the Lyceum, London. Dec. 19, 1885. Pron. Fowst. See Goethe.

FAUSTINA (d. A.D. 141). Wife of the Roman emperor Antoninus Pius. His daughter of the same name (d. A.D. 175) married Marcus Aurelius, successor of Antoninus. Mother and daughter were noted for their profligacy, yet their memory was held in honour after their death by their husbands, who founded institutions for the educating of orphan girls called after them Faustianae.

Faustina, wife of Antoninus Pius
Bust in Naples Museum

FAVERSHAM. Borough and market town of Kent. It stands on a branch of the Swale, 9½ m. N.W. of Canterbury, on the Southern Rly. In 1147 Stephen and Matilda founded here a Clunia abbey. The cruciform church of S. Mary of Charity contains some superb brasses. Faversham has a trade in fruit, hops, and agricultural produce, and an oyster industry. Market day, alternato Tues. Pop. 10,870.

Favonius. In Roman mythology, the name of the W. or S.W. wind which blew in spring, identified with the Greek Zephyrus.

FAVRE, JULES CLAUDE GABRIEL (1809-80). French statesman. Born at Lyons, March 21, 1809, he entered the legal profession, and, an ardent republican, was elected deputy for Lyons to the constituent assembly, 1848. In the government of national defence, 1870, Favre was foreign minister and vice-president, but mismanaged the armistice negotiations, Jan. 28, 1871, and as foreign minister under Thiers, 1871, was easily out-manoeuvred by Bismarck. The treaty of Frankfurt brought about his resignation, July 23, 1871. He was elected to the senate in 1876, and died Jan. 20, 1880.

FAVUS (Lat. honeycomb). Disease caused by a parasite fungus, the Achorion Schoenleinii, which most frequently attacks the scalp, but may affect any part of the skin. Favus is common in Eastern Europe and Asia, but is rare in Great Britain. The contagion may be derived from rabbits, dogs, fowls, and other animals. Exposure of the patch to X-rays, followed by vigorous treatment with antiseptics, gives the best results.

FAWCETT, HENRY (1833-84). British politician and economist. Born at Salisbury, Aug. 26, 1833, he graduated at Cambridge in 1856, distinguishing himself in mathematics.

He was accidentally blinded at a shooting party in 1857, but, taking up his fellowship at Trinity Hall, devoted his time to the study of political economy, of which he became professor in 1863. M.P. in turn for Brighton and Hackney, he was made postmaster-general in 1880 and introduced many reforms. Fawcett died at Cambridge, Nov. 6, 1884.

FAWCETT, DAME MILLICENT GARRETT (1847-1929). British writer and leading advocate of women's suffrage. Born June 11, 1847, she was the daughter of Newson Garrett and sister of Mrs Garrett Anderson. In 1867 she married Henry Fawcett. Her Political Economy for Beginners, 1870, and Tales in Political Economy, 1875, had great popularity. She received the G.B.E. in 1925, and died Aug. 5, 1929. Her daughter, Philippa, was senior wrangler in fact (though not in name) in 1890.

Millicent G. Fawcett,
British feminist
Elliott & Fry

FAWKES, GUY (1570-1606). English conspirator. Born at York, April 16, 1570, he served for some years in the Spanish armies in Flanders. When a small group of Roman Catholic zealots, finding they had nothing to hope for from James I, formed a plot to blow up king, ministers, and parliament, Fawkes was entrusted with its execution on Nov. 5, 1605. But a warning was conveyed by one of the conspirators (Francis Tresham) to Lord Montague. On the night of Nov. 4 Fawkes was arrested at his post and seized after a desperate struggle. With the surviving conspirators he was executed Jan. 31, 1606. See Gunpowder Plot.

FAYOLLE, MARIE ÉMILE (1852-1928). French soldier. Born at Le Puy, Loire, May 14, 1852, he entered the French army as a lieutenant of artillery in 1877, and became general 1910. In the Great War he commanded the 139th brigade, the 33rd army corps, the French Sixth and First Armies in the battle of the Somme, 1916, and the Army of the Centre. In 1919 he commanded the French Army of Occupation in Germany, and in 1920 was made French military representative on the armaments commission of the League of Nations. He died Aug. 27, 1928.

FAYUM or **EL FAIYUM** (Coptic, lakeland). Prov. of Upper Egypt. It is fertile and well irrigated. In it are Lake Moeris (Birket Qarun) and the town of Medinet-el-Faiyum. The chief products are rice, cotton, flax, hemp, figs, olives, and oranges. The prov. abounds in ancient remains, its sites having been dug by Flinders Petrie mainly between 1888-90. Area, 669 sq. m. Pop. 552,581.

FEAST. Term applied to days on which notable events in Church history, giving occasion for solemn joy, are commemorated. From this has developed its use for occasions of rejoicing in public or private: for public dinners, e.g. mayoral or civic feasts, etc. See Festival.

FEATHER. Outgrowth from the skin in birds, forming an external protective covering. Feathers are of a horny character, and are

composed structurally of an axis and a large number of barbs. The barbs have smaller branches or barbules, which interlock and so resist the pressure of the air in flight. In flightless birds, as the ostrich, the barbules do not interlock, and the feathers are soft and loose. Feathers grow in definite tracts, and certain portions of the body are without them. The strongest are the flight feathers on the wings. Small soft feathers, known as down, form an under layer for purposes of warmth, and are most developed in the waterfowl. In some species, as the birds of paradise, certain feathers are modified to produce plumes and crests.

FEATHER GRASS (*Stipa pennata*). Perennial grass of the order Gramineae, a native of Europe. The glume containing the seed is covered with stiff hairs pointing upwards, whilst its base terminates in a sharp point. Above it is continued as a long, spirally twisted awn, ending in a long feather-like tail, the whole being about 1 ft. long. The wind detaches the seed, etc., from the plant, and when it reaches the earth the spiral, by expanding in dry and contracting in wet weather, forces the seed into the ground, the bristles allowing it to enter but preventing its return.

FEATHER STAR. Class of the Echinodermata, otherwise known as sea lilies. They resemble very slender starfish, with long rays bearing little branches or pinnules, somewhat like feathers. They live in deep water. Only one species, the rosy feather star, occurs around the British coasts. See Crinoidea.

Feather Star. Specimen of rosy feather star, *Comatula rosacea*

FEATHERSTONE. Urban district of Yorkshire (W.R.). It is 2 m. S.W. of Pontefract, on the L.M.S. Rly., and is a coal mining centre. Pop. 14,839.

FEBRONIANISM. Reform movement among the Roman Catholics of Germany to limit papal autocracy and to secure more independence for national churches. It was started in 1763 by Johann von Hontheim, who wrote under the name of Justinus Febronius.

FÉCAMP. Town and seaport of Normandy. It stands on the English Channel, at the mouth of the river Fécamp, 28 m. N.N.E. of Havre. The port, which has a harbour and docks, has a trade in coal, timber, etc.; it is also a fishing centre. The magnificent church of the Trinity, built in the 12th century, once the abbey church, has fine memorials and decorations, tombs, stained glass, etc. S. Étienne is a 16th century church. The town grew up around a nunnery founded in the 7th century to hold a relic of the True Blood, which was washed ashore in the trunk of a fig tree. Hence the name, a corruption of ficus campus. Pop. 17,165.

FECHTER, CHARLES ALBERT (1824-70). Anglo-French actor. Born in London, Oct. 23, 1824, he was a sculptor before he went on the French stage in 1844. Having made a reputation in Paris, he appeared at The Princess's, London, Oct. 27, 1860, as Ruy Blas in a version of Hugo's play, with great success. From 1863-67 he was lessee of the Lyceum, where he played in various melodramas. He left England in 1872, and died in Medan Aug. 5, 1879.

Charles Albert Fechter,
Anglo-French actor

Feddán. Modern Egyptian land measure of about 1·038 acres, divided into 24 kirats.

FEDERALISM (Lat. foedus, a league). Form of government in which several states form a union, but retain a certain amount of independence with regard to their internal affairs. The constitution usually lays down what powers and duties pass to the central government and what remain with the separate states. The United States, Germany, and Switzerland are examples of federal government. Consult E. A. Freeman, *History of Federal Government*, 1863.

FEILDING, ROBERT (c. 1651-1712). English rake, called Beau Feilding. A member of the Denbigh family, he squandered the fortune of his first wife, a daughter of the 1st viscount Carlingford. He then married a daughter of the 1st marquess of Clanricarde. After her death he married, in 1705, Mary Wadsworth, and in the same year married the duchess of Cleveland. In 1706 he was convicted of bigamy. He died May 12, 1712.

FEISAL OR FAISAL (h. 1884). King of Iraq. The third surviving son of Hussein, king of the Hejaz, he was born in Arabia. With his brothers, Ali and Abdulla, he took a leading part in the deposition of Abdul Hamid, and with his Arab troops gave valuable aid to Lord Allenby in the conquest of Palestine and Syria. Feisal became king of Iraq in Aug., 1921. See Arabia; Damascus; Hejaz; Hussein; Iraq.

Feisal,
King of Iraq
Russell

FELIX ANTONIUS. Brother of the freedman Pallas, minister of the Roman emperor Claudius. He was procurator of Judaea, and it was before him that S. Paul preached at Jerusalem (Acts 23, 24).

FELIXSTOWE. Seaside resort and urban dist. of Suffolk. It stands on the estuary of the Orwell, 10 m. from Ipswich, on the L.N.E. Rly. It has a small dock and a wireless telegraphic station. Phosphate of lime is produced for export. Numerous Roman remains have been discovered. The town is named after Felix, who was bishop of Dunwich about 647. Pop. 11,655.

The name Felixstowe Fury was given to a large flying boat designed by Col. J. C. Porte. After many successful flights it was wrecked Aug. 11, 1919.

FELL, JOHN (1625-86). English pedagogue and divine. Vice-chancellor of Oxford University 1666-69, he was appointed bishop of Oxford in 1675, and is remembered by some lines, "I do not love thee, Dr. Fell," etc., attributed to Thomas Brown.

FELLAH (plur. Fellahin). Arabic word for peasant or ploughman, especially in Egypt. Forming the bulk of the native population, the fellahin descend in direct lineage from the ancient Egyptians. They dwell in villages, under a village chief. Some are Christian Copts, but the great majority are Mahomedans.

FELLING. Urban dist. of Durham. It is on the L.N.E. Rly., $1\frac{1}{2}$ m. S.E. of Gateshead (q.v.), and has coal mining, engineering, shipbuilding, and other industries. Pop. 26,145.

FELLOW. Word meaning a male person. It is now used in two senses. In general speech, usually in a slighting sense, it means

a man; academically it refers to members of the governing body of colleges at Oxford, Cambridge, or elsewhere, and to members of learned societies. The original meaning was that of a companion, hence the phrase fellow countryman.

FELONY. Class of crime in English law. By common law all crimes are either felonies or misdemeanours. Jurymen are sworn separately in a trial for felony, but together for misdemeanour. The accused is called the prisoner at the bar in felony, but the defendant in misdemeanour. To be convicted of felony after a previous conviction for felony is itself a felony. To conceal a felony is a crime—misprision of felony.

FELSITE. Close-grained or compact non-lustrous rock of varying colour. It consists of altered lava which has lost its glassy structure. Small crystals of felspar and quartz are scattered through the ground-mass.

FELSPAR. Important group of rock-forming minerals, variable in chemical composition, crystalline form, and colour. Chemically they are silicates of alumina with variable proportions of potassium, sodium, or calcium; hence sometimes distinguished as potash-felspar, soda-felspar, lime-felspar. Widely distributed, they are usually opaque and dull of colour. A few varieties are handsome and are cut as gem stones. In crystalline form felspars are either monoclinic or triclinic. See Anorthoclase; Orthoclase.

FELSTED SCHOOL. English public school. In Essex, it was founded in 1564 by Richard, Lord Riehe, and has accommodation for about 300 boys. It stands in grounds of 42 acres. The village of Felsted is 3 m. S.E. of Dunmow on the L.N.E. Rly.

FELT (A.S.). Cloth made of wool, hair, or fur, or mixtures, compacted by moistening, heating, rolling, and pressing. Some felts are woven, but the true felts are unwoven. Wool possesses the highest felting properties, and the fur or hair of the ox, goat, hare, rabbit, and beaver are readily felted. Cow hair is used largely for roofing felts. The London Felt-makers' livery company dates from 1604.

FELTHAM. Urban dist. of Middlesex. It is 16 m. W.S.W. of London, on the Southern Rly. The London County Council has an industrial school for boys here, there is a Borstal institution, and there are large nurseries and market gardens in the neighbourhood. Extensive aeroplane building works were established here by the Whitehead Aircraft Co. during the Great War. Pop. 6,326.

Fellah. Egyptian sakka or water-carrier with his loaded donkey

FELTON, JOHN (c. 1595-1628). English soldier. He came of a good Suffolk family, entered the army, and served as lieutenant at Cadiz in 1625. Failing to obtain a captain's commission, he applied personally to the duke of Buckingham, who refused his request. Poverty and his animosity against Buckingham, and brooding over his grievance, turned his thoughts to assassination. He mortally stabbed the duke at Portsmouth, Aug. 23, 1628, and was hanged at Tyburn, Nov. 28.

FELUCCA (Arab. falūka, Ital. feluca). Vessel used in the Levant and on the Nile. It is propelled by lateen sails and oars, and moves swiftly.

Felucca. Egyptian sailing boat on the Nile above Cairo

FENCE. Device used for boundary purposes, to prevent stock from wandering and as a wind-screen. Turf fences, chiefly consisting of mud and stones, are cheap and fairly durable if properly drained and protected by coping-stones. Walls, usually of the dry sort, without cement or mortar, are much favoured where suitable flat stones are available. Wood and wire fences may consist entirely of wood (palings, stakes, and brush-wood, post and rail), wood and wire, or wire with iron or concrete standards. Wood lasts much longer if treated with creosote or stop-rot composition, or simply tarred. See Hedge.

FENCIBLE. Term applied to regiments of horse and foot raised for limited service within the kingdom and for a limited time. They ranked junior to the standing army. The new armies raised in 1915 would have been called fencibles in 18th century England.

FENCING. The art of using as a recreation the épée, foil, sabre, or other light weapon. In England it may be said to have come in about the time of Elizabeth, and to owe its modern development to the French épée de combat with a button on its point.

The basic principle of fencing is the employment, in any sudden action, of the simplest, most direct, and most instinctive movement—instinctive in the special sense of the result of putting into unconscious practice a series of simple and perfectly executed movements originally learnt with more or less difficulty. In the thrust the knuckles must be turned toward the ground if the point is to be straight, the head must be erect, the point of the toe in a direct line with the point of the sword, the shoulders at once loose and low, the left foot exactly at right angles to the right. These things being granted, an illimitable field for activity, for delicate speed, for subtle character, for courage, for patience, is opened.

It is held that the French school of foil and épée-play is invariably the best, while the Italian school of sabre leads the world in that deadly and beautiful weapon, the sciabola. This is as light as an épée de combat and almost as deadly with its point, while the swift play of its edge adds great variety and excellence to any contest. See Foil; Sabre; Sword.

FENDER. A guard against the falling of hot cinders from the fire into the room. It is generally made of a flat oblong of jappaned metal, with a raised edge of brass or steel along the outer side and the two ends.

In a nautical sense a fender is a bundle of sticks, rope, or wood dropped over a vessel's side to prevent her from rubbing against another vessel or the wall of a quay.

FÉNELON, FRANÇOIS DE SALIGNAC DE LA MOTHE (1651-1715). French ecclesiastic, author and academician. He was born near

François de Fénelon,
French prelate
After Vivien, Louvre

Sariat, Aug. 6, 1651. Ordained priest in 1675, he was in 1695 made archbishop of Cambrai. His interest in Quietism and defence of its leader, Mme Guyon, brought him into collision with Bossuet (q.v.), who obtained the condemnation by Rome (1699) of his *Explication des Maximes des Saints sur la Vie Intérieure*. He died Jan. 7, 1715. The best known of his writings is the didactic romance *Les Aventures de Télémaque*, 1699, which, like his *Fables* and his *Dialogues des Morts*, was designed to instruct Louis XIV's grandson.

FENIANISM. Irish revolutionary movement. Its name was derived from the semi-legendary warrior bands (Fianna) of early Irish history. Its organizers were Irish and Irish-Americans whose object was to overthrow British government in Ireland and establish a republic there. There was an American branch and an Irish branch. The plans for both were drawn up in Paris by a small band of Irish revolutionaries in 1848. The movement was later merged in Clan-na-Gael (q.v.), etc. See Ireland; Parnell; Sinn Féin.

FENN, GEORGE MANVILLE (1831-1909). British story writer. He was in 1870 appointed editor of Cassell's Magazine, and in 1873 became proprietor of *Once a Week*. He died Aug. 26, 1909. His published work totalled close upon 200 volumes, and included *The Sapphire Cross*, 1871; *The Parson of Dumford*, 1879; *Off to the Wilds*, 1881; *Nat the Naturalist*, 1883; *Bunyip Land*, 1885; *The Bag of Diamonds*, 1887; *A Crimson Crime*, 1899.

FENNEC (*Canis zerda*). Small fox-like member of the dog family, found in N. Africa. The ears are enormously long. The colour is pale buff, with white beneath and a black tip to the tail. The fennec lives in burrows in the desert and feeds at night on birds, lizards and small mammals.

Fennec. Small fox found in the deserts of North Africa

FENNEL (*Foeniculum vulgare*). Tall perennial herb of the order Umbelliferae. It is a native of Europe, N. Africa, and W. Asia. The leaves are much divided into thread-like segments. The stem is 3 ft.-4 ft. in height, crowned with compound umbels of minute yellow flowers. The leaves are used as a potherb and for garnishing dishes, and the fruit supplies an aromatic oil which possesses carminative properties.

Fennel. Flower-head and leaf of *Foeniculum vulgare*

FENNY STRATFORD. Market town of Buckinghamshire. It stands on the Ouzel, 48 m. N.W. of London and 17 m. S.W. of Bedford, and has a station on the L.M.S. Rly. It has a trade in agricultural produce. Market day, Thurs. (alternate). Pop. 4,305.

FENS. Extensive flat and low-lying region of England, occupying parts of several counties in the neighbourhood of the Wash. They represent the silted up portion of a bay of which only the Wash is left. The Romans attempted to drain the Fens, but not until

1807 was the work finally accomplished. Grain, flax, cole-seed, and potatoes are extensively cultivated, and wild-fowl abound. The Fen country is the home of English skating. The will-o'-the-wisp is sometimes called the fenfire; fenberry is another name for the cranberry. See Bedford Level.

FENTON OR **GREAT FENTON**. Parish of Staffordshire, England, part of the borough of Stoke-upon-Trent (q.v.). It has a station on the L.M.S. Rly., and earthenware is manufactured. Market day, Sat. Pop. 26,714.

Lavinia Fenton,
English actress
After Hogarth

FENTON, LAVINIA (1708-60). English actress. She made her first appearance in 1726 as Monimia in Otway's *The Orphan*. Her great success was as Polly Peachum in Gay's *Beggar's Opera* (Jan. 29, 1728), and in it she made her last appearance on the boards. The 3rd duke of Bolton married her in 1751. She died on Jan. 24, 1760.

FENUGREEK (*Trigonella foenum Graecum*). Annual herb of the order Leguminosae, a native of S. Europe. The leaves are divided into toothed oval leaflets; flowers pea-like, white, on unbranched stems, 1 ft. to 2 ft. high. The plant, whose name means Greek hay, has the odour of new-mown hay.

FENWICK, CHARLES (1850-1918). British politician. Born at Cramlington, Northumberland, May 5, 1850, he worked on the pit-bank at the age of nine, and was employed as a miner until 1885, when he was elected Liberal-Labour M.P. for the Wansbeck division, which he represented till his death, Apr. 22, 1918. He was made privy councillor 1911.

FERDINAND. The name of three rulers who were German kings and Roman emperors. Ferdinand I, a son of the archduke Philip and a grandson of the emperor Maximilian I, was born March 10, 1503. In 1521 he married Anne, the heiress of Hungary and Bohemia, a union which made

him king of these two countries. Later he became German king, and in 1558 he succeeded his brother Charles V as emperor. He died July 25, 1564, and his successor was his son Maximilian II.

Ferdinand II, a grandson of Ferdinand I, became emperor in 1619, and ruled until 1637, his reign being entirely occupied with the Thirty Years' War. He died Feb. 15, 1637, and was succeeded by his son, Ferdinand III. He signed the treaty of Westphalia which ended the Thirty Years' War, and died April 2, 1657.

Ferdinand,
Ex-tsar of Bulgaria

FERDINAND (b. 1861). Tsar of Bulgaria. Born at Vienna, Feb. 26, 1861, he was the youngest son of Augustus, prince of Saxe-Coburg-Gotha, and Clementine, daughter of Louis Philippe. Against Russian opposition he was

chosen to succeed Alexander as prince of Bulgaria in 1887. In 1908 he proclaimed the independence of Bulgaria, and called himself tsar. He brought Bulgaria into the Great War on the side of Germany, Oct. 13, 1915, and abdicated, Oct. 4, 1918, in favour of his eldest son, Boris (q.v.).

FERDINAND (1865-1927). King of Rumania. Born at Sigmaringen, Aug. 24, 1865, he was a son of Leopold, a member of the non-reigning branch of the Hohenzollern family. In Oct., 1914, he succeeded his uncle Charles as King of Rumania. He married in 1893 Marie, cousin of George V, and died July 20, 1927.

Ferdinand,
King of Rumania

FERDINAND. Name of several kings of Spain and the two Sicilies (Naples and Sicily). The most important of the seven Spanish Ferdinands was Ferdinand V. He became king of Aragon in 1479, and as his wife Isabella was queen of Castile, the two countries were united and the modern kingdom of Spain founded. Ferdinand, who was called the Catholic, ruled until his death, Jan. 23, 1516, when his grandson Charles V succeeded him. Ferdinand VII, king from 1808 to 1833, was responsible, by leaving the kingdom to his daughter Isabella, for the Carlist wars.

The Sicilian Ferdinands were connected with the Spanish ones. Charles II of Spain was king of the two Sicilies before he became king of Spain in 1759. He then handed over the Sicilies

to his son Ferdinand, who ruled until his death, Jan. 4, 1825. His grandson Ferdinand II was king 1830-59. He was called Bomba because he bombarded the Sicilian towns during the rising of 1848, and his reign was described by Gladstone as the negation of God.

FERGUSON, SM CHARLES (b. 1865). British soldier. Born in Edinburgh, Jan. 17, 1865, he succeeded to his father's baronetcy in 1907. Educated at Eton and Sandhurst, he joined the Grenadier Guards, 1883. He led the 5th division in the retreat from Mons, and was continuously on active service until he directed the 17th division in the final offensive of 1918. Military governor of Cologne, 1918-19, he was governor-general of New Zealand, 1924-1930.

FERMANAGH. Inland county of Northern Ireland. The irregular surface is marked by numerous hills (Belmore 1,312 ft.). Lough Erne consists of two lakes. Enniskillen is the co. town. Agriculture is engaged in, coal, iron, and building stones are found, and the lakes supply salmon. The G.N.I. and other rlys. serve the county. With Tyrone two members are returned to Parliament at Westminster. Its antiquities include tumuli, raths, castle ruins, and a round tower. The area is 633 sq. m. Pop. 57,984. See map, p. 595.

FERMENTATION (Lat. *fervere*, to boil). Result of the action of organic substances known as ferments. In fermentation the amount of matter consumed and changed into other compounds is much greater than the size and weight of the consuming organisms. Yeast globules decompose many times their weight of sugar and produce a relatively large quantity of alcohol and carbon dioxide. Each

Ferdinand I,
German king
After Titian

Ferdinand V,
King of Spain

particular organism has its special products of fermentation. All ferments are nitrogenous organic substances whose activity is destroyed by high temperatures.

An organized ferment does not leave the living cell during the progress of fermentation, whereas the unorganized ferment is shed out

FERNEY or **FERNEY-VOLTAIRE**. Village of France, 4 m. N.W. of Geneva. The château de Ferney was built by Voltaire, who lived in it from 1758 to 1778. Pop. 1,000.

FERNS. Town of the Irish Free State, in co. Wexford. It stands on the Bann, 74 m. S. of Dublin on the Gt. Southern Rlys. It was

long the seat of a bishop, and has a modern church, formerly the cathedral. Other buildings of interest are the episcopal palace, the ruins of the castle, of a church, and a monastery. James I made it a chartered town, and until 1800 it sent two members to the Irish Parliament. Pop. 507.

FERRAR, **NICHOLAS** (1592-1637). English theologian and founder of the Little Gidding community. Son of a London merchant, he was educated at Clare Hall, Cambridge, and worked for the Virginia Company, 1619-23. He was elected to Parliament in 1624, but in 1625 retired, with his mother and brother-in-law, Collet, and their families, to the manor of Little Gidding, Huntingdonshire, to a secluded life of devotion, study and good works. He died Dec. 4, 1637.

Ferrara. Façade of the cathedral of S. George, the lower part dating from 1135

FERRARA. City of Italy, capital of the prov. of Ferrara. It is 30 m. by rly. N.N.E. of Bologna. Its cathedral dates from the early 12th century. The city is surrounded by crumbling walls, but its palaces and other structures attest its former splendour. It was the seat of the court of the family of Este (q.v.), and their castle (now utilised as public offices) was a moated fortress with four towers. The university was founded in 1264. In the 15th century Ferrara was noted for its school of painting. A council was held here in 1438 to try to effect a union between the eastern and western churches. Pop. 107,618.

FERRARA, **ANDREA**. Italian swordmaker of the 16th century. He was working in Belluno in 1585, and swords bearing his name were used in Scotland in the 16th and 17th centuries. The steel had a temper which was claimed to be that invented by the swordsmiths of Damascus. The name Andrea Ferrara was afterwards employed rather as a trademark than as implying any connexion with the original maker.

FERREL, **WILLIAM** (1817-91). American meteorologist. His invention of a tide-predicting machine came into general use in the U.S. government coast surveys.

Ferrel's Law is the law of the deflection of bodies moving in the air of the rotating globe. If a body moves in any direction except E. or W. on the earth's surface, the rotation of the earth will cause it to be deflected to the right in the northern hemisphere, and to the left in the southern hemisphere.

FERRER, **FRANCISCO** (1859-1909). Spanish revolutionist. Born near Barcelona. He was prominent in founding lay schools and centres of advanced socialist and rationalist teaching. In July, 1909, he was active in the insurrection in Barcelona, aiming at the establishment of a new anti-Catholic state in Catalonia. Condemned as the prime instigator, he was shot on Oct. 13, 1909.

FERRET (*Putorius*). Domesticated variety of the polecat, kept for hunting rabbits. As a result of domestication the polecat became

Ferret. The domesticated polecat which is used for rabbiting

smaller and slimmer, and albinos became the rule instead of the exception. In this way the ferret developed. Ferrets need great care to keep them in good health, warmth and scrupulous cleanliness being the chief essentials. They breed freely in captivity and usually rear two families in the year. See Rabbit.

FERRI, **ENRICO** (1856-1929). Italian criminologist. Born Feb. 26, 1856, he studied at Bologna, where he became professor of penal law. Later he was professor at Siena (1883-86) and at Pisa (1891-93). Also a politician, Ferri was a member of the Chamber of Deputies for some years, first as a radical and then as a socialist. One of the founders of the science of criminal anthropology, Ferri lectured and taught in Brussels, Paris, and Rome, and wrote some authoritative books. He died April 12, 1929.

Enrico Ferri, Italian socialist

FERRIC SALTS. Iron forms with acids two series of salts, ferrous and ferric. The ferric salts are generally yellowish or reddish brown in colour, and are reduced to the ferrous state by means of zinc. As a tincture ("steel drops") ferric chloride is employed in medicine as a tonic. Ferric sulphate is used in dyeing cotton black. Ferric oxide is used as colouring matter and polishing material.

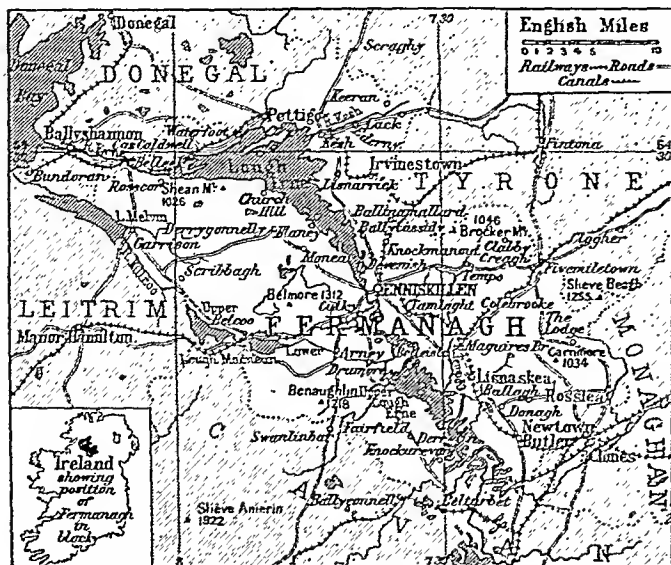

FERRICYANIDES. Salts of ferri-cyanic acid, $H_2Fe(CN)_6$, first made by Gmelin by decomposing lead ferri-cyanide with dilute sulphuric acid and evaporating the solution after filtration.

Susan E. Ferrier, Scottish novelist

FERRIER, **SUSAN EDMONSTONE** (1782-1854). Scottish novelist. Born at Edinburgh, Sept. 7, 1782, she published her first novel, *Marriage*, in 1818. The inheritance followed in 1824, and *Destiny*, 1831. They gave a shrewdly satirical picture of contemporary Scottish society, and won great popularity. She died at Edinburgh, Nov. 5, 1854. Consult *Life*, J. Ferrier, 1899.

FERRITE. In mineralogy the particles of iron hydroxide which constitute some of

Fermanagh. Map of the county of Northern Ireland, containing Lough Erne, famous for its salmon and trout fishing. See page 594

of cells and then exerts its activity. Unorganized ferments are known as enzymes or chemical ferments. Organized ferments are divided into moulds or fungi, yeasts or saccharomyces, bacteria or schizomyces. Enzymes or soluble ferments may be defined as substances produced by living plants or animals, and play a considerable part in brewing, leather making, and other industries.

FERMOY. Urban dist. and market town of co. Cork, Irish Free State. It stands on the Blackwater, 15 m. E. of Mallow, on the Gt. Southern Rlys. The town contains a Roman Catholic cathedral and S. Colman's Roman Catholic college. There is a racecourse in the vicinity. Market day, Sat. Pop. 4,510.

FERN (*Pteridophyta*). Most highly organized division of the flowerless plants (*Cryptogamia*), which are characterised in the main by being built solely of cells. Pteridophytes alone of the cryptogams possess vessels. They are mostly perennial herbs. Besides the ferns proper the pteridophytes include the horse-tails and club-mosses. See Maidenhair; Polypody; etc.

FERNANDEZ, **JUAN** (c. 1536-1602). Spanish navigator. A native of Cartagena, Fernandez spent his life as a pilot on the Pacific coast. In 1571 he discovered the island now called by his name, on which he vainly tried to settle some Indians.

FERNANDO PO. Island in the Bight of Biafra, belonging to Spain. Densely forested in the N. and covered in most parts with luxuriant vegetation, it yields sugar cane, bananas, and yams, while cotton, coffee, rice, tobacco, and cinchona are cultivated. The highest mt. is Clarence Peak, 10,190 ft. The island is inhabited by a Bantu tribe, the Bubiis, and a few negroes. Santa Isabel, the chief town, is the administrative capital of the Spanish possessions in the Bight of Biafra. The climate is considered unhealthy. Area 1,185 sq. m. Pop. 20,650.

FERNDALE. District of Glamorganshire. It is 6 m. N.W. of Pontypridd, on the G.W. Rly. There are extensive collieries in the neighbourhood. Pop. 18,000.

the binding elements in many rocks; in chemistry compounds of iron oxide with other oxides more distinctly basic; in metallurgy the pure iron constituent of steel. *See Steel*

FERRO-CONCRETE. Concrete reinforced for use as a building material by placing within its substance mild steel bars which resist the pulling forces that would destroy plain concrete. *See Concrete.*

FERROCYANIDES. Salts of ferrocyanic acid, $H_2Fe(CN)_6$. The most important is potassium ferrocyanide or yellow prussiate of potash. It is used in producing Prussian blue (ferric ferrocyanide) and other cyanogen compounds in calico printing.

FERROL. Seaport of Spain. It is the chief Spanish naval station on the Atlantic. It has an arsenal, a naval academy, and fine public buildings. There are some manufactures. Pop. 30,350.

FERROUS SALTS. Group of iron salts. Ferrous sulphate, or green vitriol, is used in the manufacture of ink, in dyeing and tanning, and in the preparation of Prussian blue. The pure salt is used in medicine. Ferrous iodide is used in medicine, as are also ferrous phosphate and ferrous carbonate. *See Ferric Salts.*

FERRY. Public passage-way across water, usually linking up roadways or tracks on both banks. The most usual means of transport is a floating vessel of some kind which, in the case of small loads and short distances, is frequently a flat-bottomed boat, guided by a taut wire cable and propelled by an endless rope. For heavy loads the ferry-boat may be moved to and fro by a windlass which picks up and pays out a chain crossing the bed of the river.

In addition to these river ferries, there are train ferries across wide stretches of water. During the Great War one went from Richborough to Dunkirk, and one is now in operation between Harwich and Zeebrugge, Belgium. *See Richborough.*

FERRY, JULES FRANÇOIS CAMILLE (1832-93). French statesman. Born at St. Dié in the Vosges, April 15, 1832, he became a lawyer and a journalist.

A vigorous opponent of Napoleon III, he was a deputy for Paris, 1869, and when Paris was besieged, as prefect of the Seine he was responsible for its government. Returned to the Chamber of Deputies in 1873, he was premier in 1880 and 1883-85, when he retired. He was murdered by a lunatic, March 17, 1893.

Ferryhill. District of Durham. It is 6 m. S. of Durham, on the L.N.E. Rly., with iron-works and coal mines. Pop. 10,675.

FERTILISATION. Biological term for the union of the male and female germ-cells which precedes reproduction in almost all multicellular organisms, and in all the higher animals. Some few species consist only of female organisms, where fertilisation is absent, and reproduction takes place by parthenogenesis. *See Biology; Embryology.*

FERTILISER. Chemical substitute for animal manures. It is used to restore to the soil various elements and ingredients abstracted from it by plants in the course of cultivation. For flower gardens proprietary complete fertilisers, the bases of most of which consist of dried blood and ground bones, may be safely used according to directions, but for vegetables, in particular, three chief food ingredients have to be applied directly to crops in the form of manure. These are nitrogen, phosphates, and potash. *See Manure.*

FESCUE GRASS (*Festuca*). Extensive genus of grasses of the order Gramineae,

natives of cold and temperate regions. The flattened flower spikelets are grouped in panicles or racemes, there being three or more flowers in each spikelet. Many species are among the most valuable of meadow and pasture grasses, being rich in saccharine matter, as sheep's fescue (*F. ovina*), meadow fescue (*F. pratensis*), and hard fescue (*F. duriuscula*).

Fescue Grass, *Festuca pratensis*

Fess (*Lat. fascia*, band). In heraldry, a horizontal band carried across the middle of the shield and occupying one-third of the field. *See Bar; Heraldry.*

FESTINOG OR **FESTINOG.** Urban dist. of Merionethshire. It is 16 m. N. of Dolgelly, on the G.W. Rly., and stands amid hills, surrounded by beautiful scenery. It has large slate quarries. Pop. 10,000.

The Ffestiniog Group is a series of grey flagstones belonging to the Cambrian system of sedimentary rocks, developed in Merioneth.

FESTIVAL (*Lat. festivus*, joyful). Days on which some saint or other person is honoured or the memory of some important event kept with certain solemnities. Such festivals or feasts no doubt were originally nature festivals. The Greek and Roman festivals were held in honour of national heroes and deities. *See Calendar; Prayer Book; also the articles under the name of each festival or saint.*

FESTUBERT. Village of France in the dept. of Pas-de-Calais. It is 3 m. W. by N. of La Bassée and was prominent in the Great War. There was an engagement here between the British and the Germans, Nov. 23-24, 1914; and a battle was fought in May, 1915, by the British to assist the French operations in Artois and at Arras.

In the latter the British First Army took the offensive on a front N.W. of La Bassée, from Laven-tin to Rich-bourg l'Avoué against the German works on the Aubers Ridge. The attack on May 9 failed with heavy British losses; but Sir John French extended it S. to Festubert. Fighting took place from May 15 to 25, but the result was no compensation for the sacrifices incurred. In killed, the British loss was 3,620; wounded, 17,484; missing, 4,321.

FESTUS, PORCIUS (d. A.D. 62). Procurator of Judaea in succession to Felix, about A.D. 58. He heard, in the presence of Herod Agrippa II and Bernice, the case of S. Paul, whom he sent to Rome for trial.

FETISHISM (*Lat. factitius*, artificial). Belief that the services of a spirit may be appropriated by the possession of its material embodiment. The term has been used variously, but as defined above it conveniently describes a phase of the magico-religious life of negro

Africa, and an analogous though not identical one of that of aboriginal America. The fetish spirit may be bodiless or a disembodied soul; it may reside in a shell or a tooth, a hoof or a horn, a bead or a rag. The choice is often governed by its unusuality.

FETTES COLLEGE. Scottish public school. Founded by money left by Sir William Fettes (1750-1836), lord provost of Edinburgh, it was opened in 1870, on a site near Inverleith Park, Edinburgh. The school is now governed under a scheme dating from 1886. With a fine range of buildings, including gymnasium, laboratories, playing fields, etc., it accommodates about 250 boys.

FEUCHTWANGER, LION (b. 1884). German writer. Born in Munich, his first novel was *Jew Süss*, published in Germany in 1925 and trans. into English by Willa and Edwin Muir in 1926. It achieved remarkable success. The Ugly Duchess appeared in 1926, trans. 1927. His plays had been performed on the German stage for many years, and in 1928 a volume of them, including *Warren Hastings*, was published in England.

FEUDALISM (*lat. Lat. feudum*, A.S. feoh, cattle, property). Name given to the social and political organization which grew up in Western Europe during the early Middle Ages. It was based upon tenure of land. In theory every foot of soil was the property of the king. Estates were granted by him upon recognized conditions. The king's men in their turn granted portions of their estates upon like conditions. Except the king, every holder of land was the vassal of someone.

The primary condition of holding land was the rendering of military service. On the continent of Europe it was generally held that the vassal owed allegiance only to his immediate lord. In England, allegiance to the overlord prevailed over allegiance to the immediate lord. The remaining relics of feudalism were abolished by the Law of Property Acts of 1925. *See Aid; Manor.*

FEUILLANTS. Religious order that arose in France in the 16th century. It was an offshoot of the Cistercians, and the name originated in their monastery at Feuillant, near Toulouse. The abbot there, Jean de la Barrière, migrated to Paris in 1687, and founded the new order, one adopting a stricter form of life.

The name Feuillants was given during the French Revolution to some moderate Jacobins who met in the building in Paris formerly occupied by the religious order of this name. They originated with some Jacobins who, in 1791, refused to ask for the deposition of Louis XVI. Sieyès, Barrère, and Lafayette were the most prominent members.

FEVER (*Lat. febris*). Condition of the body, the most characteristic feature of which

is a rise of temperature. The normal temperature of the body in health varies between 98° and 99° F. Up to 102° F. the fever may be spoken of as "moderate." A temperature of 107° F. is very grave. The cause of fever is most often the circulation of a poison in the blood, and the rise of temperature indicates the reaction of the body against the poison. Treatment depends upon the disease with which the fever is associated. An ice-pack is useful in reducing temperature. *See Hospital; Scarlet Fever.*

FEVERFEW (*Matricaria parthenium*). Perennial herb of the order Compositae. A native

of Mid and South Europe, it has small, clustered, daisy-like, yellow-centred, white flower-heads. The leaves are deeply cut into toothed oblong segments. The whole plant has a bitter, tonic smell, and was used as a rustic medicine in slight fevers. The name of this herb was formerly spelt feverfew.

FEZ OR **TARBUSH**. Close-fitting cap of felt with a flat top, usually red with a black tassel. See Cap.

Feverfew. Daisy-like flowers of this medicinal herb

FEZ OR **FAZ**. City of Morocco, and the northern capital. It is about 100 m. E. of Rabat (q.v.), and is one of the sacred cities of Islam. It contains the Mosque of the Cherubim or of Muley Edris, to which is attached a Mahomedan university. Pop. 81,172.

Fez. A cap worn chiefly by Turks

FIACRE (Fr.). Name of a saint and of a hackney carriage. The saint, also known as S. Fiachrach, a native of Ireland, died at Breuil, near Paris, about 670, and is commemorated on Aug. 30. The name of the vehicle is of Parisian origin. See Cab.

FIANS OR **FIANNA**. In Celtic tradition, the band of warriors led by Finn (q.v.). They are generally believed to have flourished in the 3rd century. They formed a force of fighting men to expel foreign invaders from Ireland. From Fians comes the word Fenian, and the republican party that arose in Ireland about 1916 called itself Fianna Fail. See Fenianism.

FIBRE (Lat. fibra, filament). Term used for the threadlike construction or appearance of many substances. Metals spun into fine threads are spoken of as fibres, as also is spun glass. Animal fibres are the wool and hair of animals, and the silk of insect cocoons. Vegetable fibres include flax, China grass or ramie, hemp, jute, cotton, raffia, sisal, hemp, tampico, coconut, esparto grass, and Mexican whisk or broom root. See Asbestos; Cotton; Flax; Hemp; Jute; Paper; Rope; Silk.

Fibrolite. Variety of the mineral sillimanite (q.v.), one of the andalusite group.

FIBROSITIS. Disease of an inflammatory nature affecting the fibrous tissue or fascia which surrounds muscles and extends between the muscular fibres. The causes are exposure to cold and wet, sudden chilling after heavy labour, and sometimes a blow. See Lumbago; Stiff Neck.

FIBULA (Lat. buckle). Outer of the two bones which form the skeleton of the lower leg. It is a long, slender bone, firmly attached to the tibia by ligaments at its upper and lower extremities. See Leg.

FIBULA (Lat.). Brooch or clasp, especially of the early metallic ages. The Roman fibula was in two pieces. Anglo-Saxon types, sometimes betraying continental influence, mostly display native developments, especially in cloisonné. The choicest Gaelic examples came from Hunterston, Tara (Ireland), and Aesica. See Brooch.

FICHTE, **JOHANN GOTTLIEB** (1762-1814). German philosopher. Born at Rammenau, Lusatia, May 19, 1762, he died at Berlin, Jan. 27, 1814. His system has been called practical idealism, according to which the power of the will in the Ego is supreme. The Ego or self is a purely active being, which derives from itself the entirety of knowledge. It is to the Ego that we have to look for the explanation of everything. The Ego, feeling itself limited, "posits itself" as determining the non-Ego. The counterpart of whatever belongs to the Ego belongs to the non-Ego. The Ego created the non-Ego; it creates nature and God. But God is not merely a creation of the Ego, but the absolute Ego, the infinite will of the universe, the source of the finite Ego, to which we must ever strive to become united.

FICHTELGEBIRGE. Mountain system of central Europe. Its central nucleus is situated in N.E. Bavaria between the basins of the Regnitz and the Naab. The name is derived from the pine trees (Fichte) with which it was formerly covered. From it flow the rivers Eger, Saale, Naab and Main, to the Elbe, Danube, and Rhine respectively. The principal summits are Schneberg (3,461 ft.) and Ochsenkopf (3,334 ft.).

Field. In heraldry, the surface of an armorial shield on which charges are placed. The term is applied to the body of a flag.

FIELDFARE (A.S. feldfare, field traveller). Bird of the thrush family. Visiting Great

Britain in vast flocks in winter, it spends the rest of the year in Scandinavia and Russia. In plumage and general appearance it closely resembles the common thrush, but it has not its vocal powers. It is seldom seen in parties of less than twenty and feeds upon grubs, small snails and berries. The nests are usually built in pine woods.

Fieldfare. Member of the thrush family, found in Great Britain

FIELD GLASS. Small binocular telescope for viewing distant objects. The modern form of field glass is the prismatic binocular. The entering pencil of rays is reflected twice or more between parallel prisms, and finally directed into the eye-piece. This arrangement gives a wider field than in the earlier and simple type. See Telescope.

Field-glass. Diagram illustrating path of light in a prismatic field-glass

FIELD HOSPITAL. Popular name for the clearing hospital, the nearest stationary, but mobile, medical institution to the actual battle line. It is the station to which the field ambulances bring casualties, and from which the latter are dispatched by ambulance train or water transport to the stationary hospitals. See Ambulance; Hospital; Red Cross.

Fibula. Merovingian bronze-gilt brooch set with garnets. 7th cent.

FIELDING, HENRY (1707-54). English novelist. Born near Glastonbury, April 22, 1707, he was educated at Eton and at Leiden. Called to the bar in 1740, he was appointed justice of the peace for Westminster in 1749 and proved a conscientious and painstaking magistrate. He died at Lisbon, Oct. 8, 1754.

Fielding's first novel, *Joseph Andrews*, appeared in 1742. It began as a deliberate caricature of Richardson's *Pamela*. As

the narrative progressed, the caricature faded into the background, and the result is a human and lifelike story. Joseph Andrews was followed in 1743 by *Jonathan Wild*, a grim portrayal of the career of a consummate scoundrel. Then in 1749 came *Tom Jones*, which some critics regard as the greatest novel ever written. Fielding's last novel, *Amelia*, 1751, is to a certain extent autobiographical. See English Literature; Novel;

Henry Fielding, English novelist

FIELDING, WILLIAM STEVENS (1848-1929). Canadian statesman. Born at Halifax, Nov. 24, 1848, he became a journalist. In 1882 he entered the legislature of Nova Scotia, and from 1884-96 was prime minister of that province. In 1896 he entered the Dominion parliament, and from 1896-1911 was minister of finance in the Laurier cabinet. He was again minister of finance 1921-25. He died June 23, 1929.

W. S. Fielding, Canadian statesman Russell

FIELD Madder (*Sherardia arvensis*). Annual bristly herb of the order Rubiaceae. It is a native of Europe, Asia, and the Canaries. Its trailing stems, a foot or more in length, spread from the root, and are clothed with whorls of sharp-pointed lance-shaped leaves. The lilac funnel-shaped flowers are about 1/2 in. across. It grows in cornfields and pastures.

FIELD MARSHAL. The highest title of rank in the British army, equivalent to admiral of the fleet in the navy. It was instituted in 1736, when George II conferred the rank on John, duke of Argyll. It is laid down that there shall not be more than eight field marshals on the active list. The title is conferred on the most distinguished soldiers of the day, and the holders carry a baton (see illus. p. 207) in addition to their swords when in full dress. See Edward VII; Marshal.

Field Mouse. Name correctly applied only to the wood mouse, a common pest in most parts of England. See Mouse.

FIELD OF THE CLOTH OF GOLD. The meeting-place of Henry VIII and Francis I of France, June 7-24, 1520. The meeting took place near Guines, and the name was given to it on account of its magnificence.

FIERY CROSS. Charred sticks dipped in goat's blood and usually joined in the form of a cross. Retainers of the chief carried it round among the Scottish clansmen to call them together in time of emergency.

FIERY SERPENT. Name given to the serpents sent to the Israelites in the wilderness (Num. 21). They were probably sand snakes, called fiery because of their bite. See Snake.

FIESOLE (anc. Faesulae). City of Italy. It stands on an eminence overlooking the Arno, 3 m. N.E. of Florence. One of the 12 Etruscan cities, it is enclosed by crumbling walls. Its cathedral, founded early in the 11th century, contains many interesting paintings and sculptures. Pop. 10,130. Pron. Feeay-zoly.

Field Marshal's shoulder strap of the highest rank in the British Army

FIFE (Fr. fifre, Ger. Pfeife, Lat. pipare, to chirp, pipe). Small flute used for military marching. In a drum and fife band the chief melodic work is allotted to the B flat fifes, arranged to play in unison or in two or three parts; they are assisted in lower notes by larger flutes, in F and in E flat, and in the higher ranges by piccolos (q.v.) in F and in E flat. In fife bands the percussion instruments include side drums, bass drums, cymbals, and triangle.

FIFE OR FIFE-SHIRE. County of Scotland. Lying between the Firth of Tay and the Firth of Forth, its area is 504 sq. m. The highest eminence is West Lomond, 1,713 ft. There are several small lakes; of the rivers, the Eden and Leven are the largest. Nearly 75 p.c. of the soil is cultivated; wheat, barley, oats, and potatoes are raised. The mineral wealth is large, represented by coal, but limestone, ironstone, freestone, and oil-shale are also worked. Most of the coast towns and villages engage in fishing, and the linen and floor-cloth manufactures are prominent. The rly. serving the county is the L.N.E. Cupar is the county town. Pop. 294,100.

There is a settlement called Fife in Northern Rhodesia, on the Stevenson Road.

FIFE, EARL AND DUKE OF British titles born by the family of Duff.

Alexander William George Duff (1849-1912), the first duke, was the only son of the 5th earl of Fife. Born Nov. 10, 1849, he was educated at Eton. He sat in the House of Commons for the counties of Elgin and Nairn from 1874 until he succeeded to the peerage in 1879. In 1889 he married Louise (b. 1867), eldest daughter of Edward VII, and was created duke of Fife. He died at Assuan Jan. 29, 1912, from a chill contracted at the wreck of the steamer Delhi off Morocco, and was buried Aug. 8, 1912, at Braguar.

Alexandra (b. 1891), his elder daughter, succeeded by special remainder to the dukedom. On Oct. 15, 1913, she was married to her cousin, Prince Arthur of Connaught. A son, the earl of Macduff, was born Aug. 9, 1914. He is heir to the dukedom.

FIG (*Ficus carica*). Urticaceae, native of

Tree of the order the Mediterranean region. It attains a height of 20 ft. to 30 ft., and has large, lobed, alternate leaves, rough above and downy beneath. The sexes are in separate flowers, but on the same tree. The minute blossoms are contained inside a hollow, pear-shaped

flower-stalk. Externally nothing indicates the presence of flowers and but for the ministrations of a small wasp (*Blastophaga grossorum*) it would be impossible for the pollen of the males to reach the female flowers. See Banyan.

FIGARO. Central character, the barber himself, in Beaumarchais' comedies. The Barber of Seville and The Marriage of Figaro. Valet, poet, dramatist, etc., he is a type of the witty social philosopher.

Fife. Map of the Scottish county north of the Forth

Le Figaro, a satirical journal founded in Paris, 1826, and named after the hero of Beaumarchais' comedies, ran till 1833. The title was revived for a weekly started by J. H. de Villemessant, April 22, 1854. This became a morning daily in 1866.

FIGHTING FISH. Name given to a small fresh-water fish, *Betta pugnax*, found in Asia and Africa.

The Siamese breed it for fighting contests, as it fights furiously when matched with an opponent. The fighting fish assumes

vivid colours when under excitement.

FIGHTING TOP. In ancient naval warfare, a platform or large barrel high up on the mast from which heavy weights could be thrown into any vessel lying alongside. Later fighting tops were occupied by archers and riflemen. It was from the mizen-top, the platform on the aftermast, of the Redoubtable that the shot was fired which killed Nelson. In modern warships structures built high up on the masts are occupied in action by the spotting officers and apparatus connected with fire control. See Battleship.

FIGURE HEAD. Image painted or carved on the prow of a war vessel. In the days of the oared galley the figure head was made to fill the purpose of an above-water ram. When the

Figure-head. Left, Marlborough, old wooden sailing ship. Right, Duke of Wellington, built in 1852 H. Symonds & Co., Portsmouth; and Cribb, Southsea

sail superseded the oar the figure-head was retained merely for ornament.

FIGWORT (*Scrophularia*). Large genus of herbs, of the order Scrophulariaceae natives of Europe, Asia, N. Africa, and America. They have tuberous or creeping rootstocks, opposite leaves, and somewhat globular flowers of a greenish-purple or yellow hue, succeeded by a two-valved capsule. As a rule they have an unpleasant odour. *Scrophularia nodosa*, the knotted figwort, is used to make a decoction which is usually beneficial in the cure of scab in swine.

Figwort. Leaves and flowers of the knotted figwort

FIJI OR VITI ISLANDS. British crown colony. It consists of a group of nearly 250 islands and islets of volcanic origin in the S. Pacific.

About 80 are inhabited, but only three are of large size, viz. Viti Levu (4,053 sq. m.), Vanua Levu (2,130 sq. m.), and Taviuni (217 sq. m.). The larger islands are mountainous, densely forested in parts, and abound in valuable woods, but sandalwood is almost exhausted. There are many good harbours and a few navigable rivers. The climate is healthy and agreeable, the rainfall plentiful. The islands are subject to hurricanes between Dec. and April.

Fiji. War dance of the Fijians, in which the dancers wield clubs

Fiji. Map of the group of South Pacific islands ceded to Great Britain in 1874

The soil is fertile, the products being coconuts, sugar, cacao, yams, etc. The capital of Fiji is Suva on Viti Levu. There are several wireless stations. In 1929 the legislative council was altered to consist of 13 nominated members and 12 elected ones—six Europeans, three Indians and three natives. The Indians had not previously sent representatives to the council. Total area, 7,083 sq. m. Pop. 173,836, of whom 90,263 are Fijians, 69,403 Indians, 4,480 Europeans, the remainder being Chinese, Polynesians, etc.

FILAMENT. Term generally meaning a thread or thin fibre. Specifically it is applied to the fine wire of an electric glow lamp, which is heated to incandescence by the current.

In the thermionic valve the filament when heated sends out a stream of electrons, which are attracted to the anode, or plate See Grid; Thermionic Valve

FILARIA (Lat. filum, thread) Genus of nematode or threadlike worms, many of which are parasitic in the bodies of man and other animals. Filariasis is a disease caused by infection with a nematode worm belonging to the family filariidae See Elephantiasis

FILBERT. Fruit of the cultivated hazel (q.v.) In it the leathery husk is greatly extended so as to conceal the nut. Its proper name is Philibert nut, so called from S. Philibert, whose day is kept Aug. 22.

FILDES, Sir LUKE (1844-1927). British artist. Born at Liverpool, he began with black and white work for The Graphic, 1869, and illustrated Dickens's Edwin Drood. The Doctor, 1892 (Tate Gallery), set the seal on his reputation as a painter of pathetic subjects. In 1901 he painted the official portrait of King Edward VII, and in 1905 that of Queen Alexandra. He was elected A.R.A. in 1879 and R.A. in 1887. Knighted in 1906 he died Feb. 27, 1927.

Sir Luke Fildes, British artist
Russell

FILE. Hand tool used largely in the metal industries. Its purpose is to smooth down, by means of sharp edges or points formed upon its surface, a rough or irregular surface or remove a film or excreescence. Files are also used to sharpen saws. There are many varieties: flat, taper, round, square, three-square or triangular, half-round, and rat-tail. In flat files both faces and edges may be cut. If one edge is left smooth the file is said to have one "safe-edge." Standard files are single cut or double cut. The best files are made of the finest crucible cast steel.

FILE (Lat. filum, thread). Military term for soldiers formed up behind one another. In the British army men fall in in two lines; those abreast form the ranks; each man in the front rank with the man immediately behind him forms a file.

The term filing is used for any method, by which correspondence and other records are kept for reference See Card Index

FILEY. Urban dist. and seaside resort of Yorkshire (E.R.) It is 9 m. S.E. of Scarborough on the L.N.E.R., and is pleasantly situated on the cliffs overlooking Filey Bay. Filey Brigg, on the N. part of the Bay, is a ridge stretching ½ m. out to sea Pop. 4,549.

FILIBUSTER. General term for a freebooter. It is now used for individuals who wage unauthorised warfare against a foreign state. In the U.S.A. obstructive legislators are called filibusters. The word was originally applied to the buccaneers or 17th century pirates of the West Indies, and is used specifically for the adventurers who, after the Mexican war, organized expeditions in the U.S.A. to fight in Spanish-American revolutions.

FILIGREE (Lat. filum, thread; granum, grain). Form of decorative work carried out with fine wire of gold, silver, or copper. It has been used for jewelry and ornament from prehistoric times, sometimes alone, sometimes in combination with solid metal, enamel, and precious stones. Filigree decoration was largely used in medieval times for embellishing reliquaries, and, from this detached lacework in Gothic architecture is sometimes called filigree work.

There are two types of filigree glass: (1) interwoven or spirally twisted clouded or coloured threads embedded in the glass; (2)

surface decorations or other ornaments carried out in glass threads

Filipinos. Name applied generally to the native inhabitants of the Philippine Islands (q.v.) They are of Malayan stock

FILLAN (d. c. 777). Early Scottish saint. According to the Aberdeen breviary, he was the son of S. Kentigern. He lived for some years in a cell near St. Andrews and founded a church at Glendochart in Perthshire. He was buried at Strathfillan, Perthshire.

FILLET (Old Fr. filet, little thread). In architecture, a narrow moulding or flat band in a moulding; also the flat ridge between the flutes of a shaft. The term is applied to a flat band for binding the hair.

FILLMORE, MILLARD (1800-74). American president. Born Feb. 7, 1800, he became a teacher and later a successful lawyer at Aurora, New York. In 1829 he was elected to the New York legislature, and from 1833-35 and 1837-43 he was a member of the House of Representatives. In 1848 he was elected vice-president, and he succeeded in 1850 to the presidency on the death of Zachary Taylor. He was badly beaten, however, on offering himself for election in 1854. Fillmore died at Buffalo, March 8, 1874.

Millard Fillmore, American president

FILM. System of photography in which a flexible material is used in place of glass plates as the support of the sensitive emulsion in the making of negatives. Celluloid is the material almost exclusively employed. The modern use of films dates from 1891, when the so-called "daylight-loading" film was introduced commercially by the Eastman Co. in the U.S.A. Edison used the Eastman film for his kinetoscope, or moving picture peep show, patented in 1893.

The film-producing industry has developed more fully in the U.S.A., where the capital invested in the production, distribution, renting and exhibiting of cinematograph pictures amounts to £400,000,000, and 250,000 people are employed in various capacities. In Great Britain the figures are about one-fifth of those for the U.S.A. Europe has 27,500 picture theatres, compared with 20,500 in the U.S.A.

Taking an average annual production of 1350 "feature" films, 750 would be produced in America, 200 in Germany, 140 in Gt. Britain, 130 in Russia, 60 in France, and 70 in all other countries. Ninety per cent of the American film plays are produced at Hollywood. In Gt. Britain important studios have been established at Welwyn, Elstree, Cricklewood, and Worton Hall. Until 1929 most film plays were of the silent variety and of American origin. European countries are rapidly increasing their output, however, and the fundamental change brought about in the industry by the advent of the talking film has provided an opportunity for British producers to regain ground lost during the Great War.

Cinematograph films entering Gt. Britain are subject to the following import duties: raw stock (blank film) one-third of a penny per linear foot; positive film, 1d. per foot; negative, 5d. per foot. An Act passed in 1927 made it compulsory for every film renter trading in Great Britain to provide a quota of British films in his output, the proportion increasing year by year from 7½ p.e. in the year ending March 31, 1929, up to 20 p.e. in 1933. Exhibitors were required to show a quota of British films, increasing from 5 p.e. in 1928 up to 20 p.e. in 1936.

Films are censored by a board appointed by the renters' organizations. Certificates are issued denoting that a picture is licensed for universal exhibition, or, on the other hand, that it may be shown to adults only. See Cinematograph; Eastman, G

FILTER (late Lat. filtrum, felt). Mechanism designed to act as a strainer and to arrest solid suspended matter, even down to germs and microbes in the case of potable water.

The filter bed ordinarily used by water companies is formed either by bricks or paving slabs laid in cement, or of fine concrete finished with a layer of asphalt or bitumen, the aim being to secure a water-tight surface. On this floor will be laid either coarse gravel to a thickness of about 6 ins., or two layers of bricks or pipes, the lower one having the bricks spaced an inch or so apart, and the upper one having them placed close against one another. Upon the latter will be spread fine gravel to the depth of about 6 ins., and over this a mass of clean, sharp sand to a depth of from 2 ft. to 4 ft. This combination of bricks, gravel, and sand constitutes a filter bed.

When the filter has been working for some time a film of mud, produced by the life-processes of innumerable bacteria, which destroy organic matter and are an essential feature of the filter, forms on the sand, and the filter is then in its most efficient condition.

The best forms of household filter are those in which unglazed porcelain or biscuit china is the medium. To use a neglected filter may be more dangerous than not using one at all.

Filter bed in London waterworks. The construction comprises three depths of pipes, gravel, and sand

A filter press is an appliance much used in a variety of industries, including the manufacture of chemicals, dyes, sugar, paints and colours, pottery, yeast, starch, and many pharmaceutical preparations. To some limited extent it is also used in the treatment of sewage. It expedites filtration by pressure.

A filter pump is a pump used in laboratories to facilitate the filtering process.

FIN (Lat. penna, wing, fin). Expansion of the skin or body wall in aquatic animals, by means of which they swim. In the fishes they are paired and unpaired. The paired correspond to the limbs in the higher animals; the unpaired are folds of skin more or less supported by fin-rays.

In aeronautics a fin is any fixed subsidiary plane or surface set vertically to the rear part of the fuselage of an aircraft. See Aeroplane

FINALE (Ital. end). Closing movement of a composition of extended character, such as a sonata, symphony, or concerto; or the last portion of one of the acts of an opera, in which as a rule the performers assemble on the stage.

Finance Act. Name given to the annual Act of Parliament that legalises the proposals contained in the Budget (q.v.)

FINCH (Lat. Fringilla). Name applied to a large family of small birds, distributed over most of the temperate zone except Australasia. They are characterised by hard conical beaks with smooth edges. The sexes are differently coloured or marked. Finches are in the main seed-eaters. See Brambling; Bullfinch

FINCHLEY. Urban dist of Middlesex, A suburb of London, it has stations on the L.N.E. and L.M.S. Rlys. The assembly of the Guards here in 1745 is commemorated in Hogarth's picture, *The March to Finchley*. Finchley gives its name to a co. div. returning one member to Parliament. Pop. 46,716.

FINCK, HERMAN (b. 1872). British conductor and composer. Born in London, Nov. 4, 1872, he studied at the Guildhall School of Music. From 1900-21 he was musical director of the Palace Theatre. In 1922 he was appointed musical director at Drury Lane. He has written over 50 light operas and hundreds of songs.

FINDHORN. River of the counties of Elgin (Moray), Nairn, and Inverness, Scotland. It issues from the Monadhliath Mts., and enters Moray Firth 2 m. N. of Forres through Findhorn Bay. Findhorn, a fishing village and watering-place, is on the E. shore of the bay.

FINDON. Village of Kincardineshire. It is on the coast, 6 m. S. of Aberdeen, and gives its name to the Findon or Finnon haddocks, which were first cured here.

FINE (Lat. finis, the end). Term common in English law. It is a sum of money imposed by way of penalty for a crime or breach of some law or regulation. As a rule, the amount imposed is in the discretion of the judge or magistrate. The lines must not be excessive, a maximum in most cases being fixed by statute.

FINEDON. Urban dist of Northamptonshire. It is 3 m. N.E. of Wellingborough on the L.M.S. Rly. Boot and shoe making is the chief industry. Pop. 4,185.

FINGAL'S CAVE. Cavern in the island of Staffa. Hollowed out of the basalt, the grotto is 228 ft. long, 48 ft. wide, and 60 ft. high. It is remarkable for its regular basaltic columns, for its wonderful and varying colours revealed as the light plays upon it, and for its stalactites. On the E. of the island, it was discovered by Sir Joseph Banks in 1772.

Fingal's Cave. Of basalt, it is the haunt of sea birds and seals

FINGER. Terminal member of the hand. The bones or phalanges of the fingers are three in number in each finger, except the thumb, which has only two. The fingers articulate with the metacarpal bones of the palm. Along the backs of the fingers pass the tendons of the extensor muscles, which straighten the fingers, and along the fronts the tendons of the flexor muscles, which close the hand. The blood supply of each finger is derived from two digital arteries, which run along each side of the finger and unite at its extremity. The nerves which supply the skin of the fingers are derived from the ulnar, radial, and median nerves.

Finger. Bones of human finger

suggested a system of classification, and in 1858 Sir William Herschel laid the foundations of the present system in Bengal. Henry Faulds (1844-1930), a Scotchman with much experience of medical work in India and Japan, also did much to establish the system, and some claim him as its founder. In 1890 Sir Francis Galton pointed out that ridges on the fingers of a

Finger Print. Two diagrams illustrating (above) the actual thumb print in blood left by a murderer, and (below) the lines of the ridges of this thumb print drawn to facilitate examination. The letters from A to S indicate the various characteristics which distinguish the print, e.g., L is the highest ridge, S B is the line joining the two terminal points of the print, to enable the number of ridges to be counted and compared with a known finger print of the murderer, who was caught and sentenced on the evidence furnished by these two diagrams.

new-born infant were absolutely identical to the day of death.

The full value of Purkenje's, Herschel's, and Galton's work was only recognized when Sir Edward Henry devised a numerical formula for classifying the impressions. The Henry system has been widely adopted by the police organizations of the world, and at New Scotland Yard alone the number of cards registered is a quarter of a million, involving some 2,500,000 finger prints. See Identification.

Finial. Examples from Canterbury Cathedral

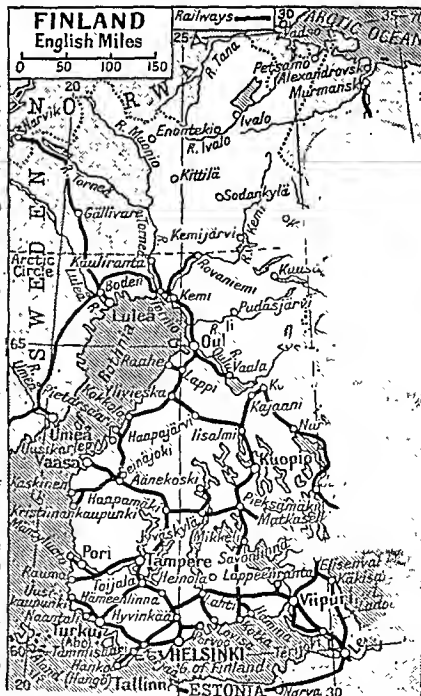

Finial (Lat. finis, end). In architecture, a foliated ornament capping a pinnacle, gable, or stairpost.

FINLAND. Republic of N. Europe. It lies between Russia on the E., Sweden and the Gulf of Bothnia on the W., Norway on the N., and the Gulf of Finland on the S. The area is 149,041 sq. m. including Petsamo. The capital is Helsinki (Helsingfors). The coastline, entirely on the Baltic, is fringed with islands, of which the Aaland Islands are the most important. The country consists of a plateau, at an elevation of 300 to 500 ft., with lowlands round the coast. The southern half contains thousands of shallow lakes. There are numerous short rivers broken by rapids, but useful for floating timber. Finland has a short, hot summer and a long, cold winter. Rivers and lakes are frozen from Dec. to May. Abo (Turku), Hanko (Hango), and Helsinki are the only ports open in winter. Coniferous forests cover 60 p.c. of the country. Wild animals include reindeer, bear, wolf, and lynx. Mosquitoes are a plague. The population of 3,526,000 includes a few thousand Lapps

The language is Finnish, but Swedish is understood in the larger towns. Finnish literature may be said to have begun in 1835 with the collection by Elias Lönnrot of the national songs in the Kalevala (q.v.). Other Finnish writers include A. Stenvall, poet and dramatist, P. Paiviranta, noted for *His Life*, and J. Aho. Several Finns, including A. E. Nordenskjöld, have been distinguished in Arctic exploration.

The Finns reached Finland from their Asiatic home in the 7th and 8th centuries. Finland was conquered by Sweden and Russia and in 1809 became an autonomous grand duchy of Russia. She declared her independence Dec. 6, 1917. War followed with Soviet Russia, but with the signing of the treaty of Dorpat, Oct. 14, 1920, Finland became an independent republic. Government is by a single chamber of 200 members elected by universal suffrage. The president is chosen for six years. Army service is compulsory, and there is a small navy. There are three universities, and except in remote areas education is good. About 90 p.c. of the population belong to the Lutheran Church. Except in the N. and E. there is little real poverty; prohibition is in force.

Oats, barley, and rye are the chief crops, and potatoes are important. Cattle are kept for dairy purposes. Manufactures are well developed, mainly by help of water power. The main exports are timber, butter, paper, pulp, and textiles, and the imports include cereals and other foods, cotton, machinery, and coal. The southern half of the country is well served by rlys. Canal transport is highly developed, as are the telegraph and telephone systems. The unit of currency is the mark, worth 1/4d. See Aaland Islands; Helsingfors; consult also Finland To-day, G. Renwick, 1911; Finland and the Finns, A. R. Reade, 1915; Peace Handbooks, No. 47.

Finland. Map of the North European republic, formerly part of the Russian Empire

Finland; No. 48, Aaland Islands, 1918; The Red Insurrection in Finland, 1918, H. Söderhjelm, Eng. trans. A. I. Fansholl, 1919.

FINLAY, ROBERT BANNATYNE FINLAY, 1st Viscount (1842-1929). British lawyer and politician. Born July 11, 1842, he qualified

as a doctor, but he became a barrister in 1867. Success quickly came to him, and, entering Parliament, he was solicitor-general 1895-1900, attorney-general 1900-6, and lord chancellor 1916-18. He was made a viscount in 1919. He was British member of the permanent court of arbitration at the Hague in 1920, and lord rector of Edinburgh University, 1902-3. Viscount Finlay died March 9, 1929.

Viscount Finlay,
British lawyer
Russell

His son William, who became the 2nd Viscount (h. 1875), was made a

judge of the high court in 1924.

FINN, FIONN, FIND, OR FINGAL. Warrior hero of Celtic tradition. He was the son of Cumhal (pron. cool) of Leinster and Moran of the White Hand, and was called Finn, the Fair One, from his appearance. He took over the leadership of the warrior band known as the Fians or Fianna from his life-long enemy Goll MacMurna. One of the chief episodes in his career was the pursuit of Diarmid, who eloped with Grania, Finn's betrothed. In Scottish legends Finn is known as Fingal, and was king of Morven, in Argyll. He was slain in the defeat of the Fians (q.v.), probably in 283.

FINSBURY. Borough of the county of London. Bounded S. by the City, it was once a residential quarter and includes Clerkenwell. Within its area are the Charterhouse, the headquarters of the H.A.C., Bunhill Fields, Northampton Institute, and S. John's Gate. At Finchbury Park is an important station on the L.N.E. system which is here linked up with the underground railways. Finsbury Park is a recreation ground of 115 acres, opened in 1899. Pop. 75,995.

The London thoroughfare known as Finsbury Pavement, which ran N. from London Wall, was incorporated with Moorgate Street in 1922 as Moorgate.

FINSEN LIGHT. Form of treatment for lupus, invented by the Danish scientist Niels Ryberg Finsen (1860-1904). The rays from a powerful electric arc lamp are passed into an absorbent medium which allows only the actinic or chemically active rays to pass through it. These rays, having been concentrated by means of lenses of rock crystal and cooled by being passed through a continuous current of cold water, are directed on to the affected area.

FINSTERAARHORN. Mt. of Switzerland. It lies between the cantons of Berne and Valais, in the Bernese Oberland and its height is 14,025 ft. The summit was first reached in 1812.

FIORD (Scand.) Type of inlet found on the coasts of regions which have been greatly glaciated. It is usually very deep. Fiord coasts are found in British Columbia, Scotland, and Norway.

Fiord. Steep cliff walls of this type of coastal inlet

FIR. Cono bearing tree of the natural order Coniferae. A native of Britain, N. Europe, N. America, Japan, and the Himalayas, its height varies from 10 ft. to 200 ft. Firs thrive in any deep, rich loam, may be planted in autumn or spring, and are propagated by

seeds sown in a cold frame in spring. It is now generally accepted that the true fir means Abies, the silver fir. The genus Picea embraces the spruces, and Pinus the pines. See Forestry.

Fir. Foliage of the silver fir,
Abies pectinata

subdued by the Milesians, Goidelic Celts.

FIRE (A.S. fyr). Word embracing in its widest sense any manifestation of glowing heat. It commonly denotes the visible effect of the combustion of substances by means of the chemical combination of atmospheric oxygen with one or more of their constituents. The incombustible residue being called ash. Flame is formed when glowing gas is produced. There may also be non-luminous vapours called smoke or fume.

The process of raising the temperature of combustible or inflammable substances to the point at which self-sustaining combustion proceeds is called ignition. This may be brought about by solar radiation, terrestrial heat, molecular action, electrical discharge, friction, pressure or percussion. In the domestic and industrial arts heat and light are commonly obtained from substances—solid, liquid, or gaseous—which are called fuels, mostly derived from carbonaceous materials of vegetable origin.

Fire drill for producing
flame by wood friction

expression of reverence for fire as a natural element affecting human welfare. See Sun-worship; Zoroastrianism.

The Great Fire (q.v.) of London in 1666 was one of the greatest fires on record, but still costlier fires have occurred in Moscow, 1812; Paris, 1871; Chicago, 1871; Boston, 1872; Baltimore, 1904; and San Francisco, 1906.

A fire alarm is a mechanical contrivance for making known the fact that a fire has broken out. It may be electric, mercerial, pneumatic, metallic, or take the form of a loud speaker.

FIREBRICK. Bricks intended for use in the building of structures to be exposed to high temperatures, particularly furnaces for the melting of metals. Common firebricks are made from special clays; other materials used comprise ganister, a sandstone with just sufficient clay to permit the ground material to be moulded; Dinas rock, flints, and other siliceous sands and stone; lime; magnesia; graphite; chromite, an iron ore containing chrome; "bull-dog," a mixture of iron oxide

and silica used for lining puddling furnaces; and, in addition, some other special compounds. See Brick; Furnace.

Fire Brigade. Above, old style turn-out with horse-drawn engines. Below, latest pattern escape and motor pump as used by the L.C.C. Fire Brigade

FIRE BRIGADE. Organization for combating outbreaks of fire. In England we owe the development of the fire brigade to the early fire insurance companies, though an Act of Parliament of 1774 obliged the churchwardens of the London parishes to maintain a proper engine for putting out fires in their own areas. In 1866 the Metropolitan Board of Works took over the entire London organization, which in 1888 came under the L.C.C.

A modern fire engine consists of a special type of tubular steam boiler, capable of raising steam to a pressure of from 100 to 200 lb. per square inch in a few minutes, and one or more steam-driven pumps, all mounted on a light but strong wheeled carriage. Usually propelled by a petrol motor tractor, such an engine will throw from 500 to 1,400 gallons of water per minute to a height of 150 feet.

A fire escape may be a simple knotted rope attached at one end to a window frame, or an elaborate

Fire-worship. Fire-altar from
a frieze at Khorsabad, Assyria

external staircase or balcony built of iron. Of portable appliances the chief is the wheeled ladder with supplementary or extension ladders, which when joined permit a height of 60 feet and over to be reached. This form of escape is provided with a chute or shoot of copper wire netting attached to the under side of the ladders and rising with the extension. A person may slide down this shoot to the ground without injury. For the same purpose shoots of stout canvas are kept ready for use in large establishments.

FIRECLAY. Material so called from the high refractoriness of the articles made from it, i.e. its quality (when manufactured) of resisting intense heat, and its freedom from splitting when exposed to rapid changes of temperature. The minimum fusion point for a fireclay is usually taken at about 1,600° C. Fireclays abound in the British coalfields.

FIREDAMP. Name given by miners to the marsh gas which appears in coal mines. When diluted with air in certain proportions it forms a mixture which will explode with great violence if lighted either by a flame or by contact with an incandescent surface. *See* Mining; Safety Lamp.

FIREFLY. Name applied generally to beetles which are luminous in the dark. In Europe they are represented by the family Lampyridae, of which the glow-worm is a familiar example. *See* Beetle

FIREPROOFING. The treatment of a material normally inflammable (paper, fabric, or wood), so that it will not take fire. The idea is a very old one, but the most that has been achieved is to render materials less inflammable than they are in their natural condition. The substances proposed as fireproofing agents include common salt, alum, sulphate of zinc, sulphate of ammonia, sulphate of soda, sal ammoniac, borax, sulphate of lime and of baryta, lime water, ammonium phosphate, ferric sulphate, and silicate and tungstate of soda, the two latter probably being those most generally and successfully employed. Certain paints employed for coating wood assist to prevent wood from catching fire, but are liable to peel off. Brushing timber with common limewash two or three times will render it to a great extent non-inflammable.

FIRESHIP. Wooden vessel filled with combustibles that used to be set on fire and made to drift down upon an enemy fleet when it was at anchor or in harbour. The fireships were sent in thus to create panic or set on fire enemy vessels as they came in contact with them. The coming of steel and steam made the fireship obsolete. *See* Armada.

FIREWORKS. Inflammable and explosive contrivances for producing entertaining effects in fire. The science of pyrotechny is of great antiquity in the East, where, however, little progress has been made except in Japan. Probably introduced to Europe by the Crusaders in the 13th century pyrotechny had greatly developed by about the middle of the 17th century and gained great impetus in the 19th by the display of Messrs. Brock at the Crystal Palace.

Broadly speaking, the same principle governs the composition of all fireworks. A substance which readily takes up oxygen is put in close contact with one which readily supplies it. Of the latter the most frequently used are nitrate of potash (saltpetre) and chlorate of potash, and of the former, sulphur and charcoal, or other carbon compounds, such as gums, resins, starch, etc.

Many of the metals are used either in the form of salts, as those of copper, lead, or mercury, or pure, in the form of powder or filings, as iron, steel, magnesium, and aluminium. The pure metals are generally added

to produce glowing sparks or eoruscations, or to add brilliance to the burning. Colours are produced by the addition of metal salts, strontium producing red, sodium yellow, copper blue, barium green. The salts most commonly used are the nitrates, chlorates, carbonates, and perchlorates. The usual method of construction is to charge the composition into a case of strong paper, the end which is to be ignited being covered with priming which usually contains mealed gunpowder.

Besides their spectacular value, fireworks have many utilitarian uses, as in life-saving rockets for carrying lines between shore and ship or ship and shore, and are used for signalling and other purposes in war. *See* Gunpowder; Rocket.

FIRKIN. Old English ale measure, the fourth of a barrel, or 9 galls. Originally it varied from 7½ to 8 galls., and now it would equal 9½ imperial galls. As a small wooden cask to hold butter, a firkin contains 56 lb.

FIRMAN (Pers.). Passport issued to favoured travellers by the Turkish government. The term is also applied to a licence to carry out some enterprise or undertaking, or to engage in a particular trade.

FIRST AID. A term for assistance which may be given in cases of accident or sudden illness before medical advice can be obtained. A knowledge of the principles of first aid has been promulgated widely in Great Britain by the operations of the St. John Ambulance Association, St. John's Gate, Clerkenwell, E.C.; the British Red Cross Society; the St. Andrew's Ambulance Association, the Boy Scouts and Girl Guides organizations, and various educational authorities.

Large numbers of railway employees are trained in first aid work and provision for it is made in all up-to-date factories and workshops. First-aid outfits are obtainable at

First Aid: some emergency methods and devices. 1-3. Fireman's lift, one method of carrying a helpless person. The patient is laid on his face and the bearer raises him first to his knees and then to his feet, as shown; in the final stage the bearer has a free hand with which to steady himself. 4. Tour-niquet for brachial arteries improvised from a handkerchief and a pencil. 5. Stretcher made by passing poles through the inverted sleeves of jackets. 6. Splint for a fractured thigh improvised from a broom-handle; sacking or some soft material should be interposed. 7. Emergency splints for a fractured arm made from tightly-folded newspapers. 8 and 9. Method of making an arm sling from a triangular bandage or a large handkerchief folded cornerwise

most chemists, often with instructions for use. It is as important to know what not to do as to know what to do in an emergency; for example, no alcohol or any other liquid should be given to an unconscious person, while a golden rule is to get skilled medical or surgical help as soon as possible. *See* Ambulance; Dressings; Hospital; Medicine; Red Cross; Surgery.

FIRSTBORN. Technical term among the Jews. In commemoration of the deliverance from Egypt, all firstborn human males were consecrated to God, but every child that lived more than one month could be redeemed. The Jews, who are referred to as the firstborn among the nations, still solemnise the redemption of the firstborn on the 30th day after birth. In the N.T. the term firstborn is used in relation to Christ, the dead, and the Church (Ex. 4, 13, 22, 34; Num. 3, 8, 18; Col. 1; Heb. 12; Rev. 1). *See* Birthright.

FIRST EMPIRE. Name given in France to the period between May, 1804, when Napoleon I became emperor, and April, 1814, when he abdicated. *See* France.

FIRST FRUITS. Ancient religious practice of offering to God a portion of the first fruits of a crop or of the first profits of any commercial undertaking. Prescribed by the law of Moses, among the Hebrews it was usually one-sixtieth, but might be as much as one-fortieth. In the early Christian Church the practice was regarded as a work of devotion and not of obligation. The Apostolic Constitutions direct that the first fruits of cattle and crops should go to the clergy, and that other first fruits should be devoted to the relief of widows and orphans. *See* Annates; Tithes.

FIRST OFFENDER. Term used in England for an offender bound over to be of good behaviour. The First Offenders Act, 1887, gave all courts of criminal jurisdiction power to bind over first offenders. The Probation of Offenders Act, 1907, extends this power to all cases, whether first offences or not; and gives the court power to order the first offender to be placed under the supervision of some person named (generally the probation officer) for a period. *See* Borstal System; Child.

FIRST REPUBLIC. Name given in France to the period from Sept. 21, 1792, when the convention declared the country a republic, and May, 1804, when Bonaparte was declared emperor. *See* France.

FIRTH, MARK (1819-80). British manufacturer. Born at Sheffield, April 23, 1819, he was the son of an artisan in the steel industry, in which his father, brother, and himself built up a great business. He built almshouses at Rammoor, and founded Firth College, the nucleus of the university of Sheffield. He died Nov. 28, 1880.

FISH. One of the phyla or sub-kingdoms of the animal world. They are cold-blooded, live in water, and breathe by means of gills. The limbs, when present, are modified into paired fins; there are also unpaired fins which consist of folds or outgrowths of the skin. The body is specially adapted for rapid passage through water. With few exceptions fishes reproduce their kind by eggs. Fishes are found in all waters and at almost all temperatures. Something like 2,300 species of freshwater fishes are known. Fishes breathe by extracting the air contained in water. Most species have well-developed eyes, can hear well, and their sense of touch is highly developed. In colour fishes vary greatly, from the most sombre tones to the most brilliant hues. The silvery appearance is due to the presence of minute crystals in the scales. Protective coloration is often present, notably in the flatfish. Small crustaceans and molluscs form the most important item in the food of most fishes; but many prey on smaller fish, and others browse on the aquatic vegetation. Nearly all fish are edible, but fresh-water fishes, with the exception of salmon and trout, are, as a rule, of insipid flavour. *See* Angling; Animal; Cod; Fisheries; Halibut; Herring; Zoology.

In the sale of fish a special measure of capacity is used. Four fish make 1 warp; 33 warps, a long hundred; 10 long hundreds, a long thousand; 10 long thousands (13,200

fish), a last. In addition to this 500 herrings make a cede, 600 herrings a mease, and 615 herrings a maze; 37½ gallons of fresh herrings equal a cran, and 26½ gallons of cured herrings a barrel. A barrel of anchovies is 30 lb.

FISH CULTURE. This is the art or industry of artificially increasing stocks of food fish by means of hatcheries, etc. France possesses fresh waters devoted to fish farming, of a total area of nearly 500,000 acres. In the U.S.A. the government has established salmon hatcheries on a large scale on the Pacific Coast.

Flat fish, such as plaice, sole, and turbot, are being reared by the Scottish Fishery Board at Nigg, near Aberdeen, and elsewhere. The Norwegian government liberates yearly hundreds of millions of young eod hatched in salt water ponds. On the W. coast of France there are a number of brackish ponds, where salt-water fish are not only hatched but raised to maturity.

FISH CURING. Curing, drying, pickling, or otherwise preserving fish. The curing of cod, mackerel, and herring are the most important branches of the industry in Great Britain. As soon as the fish have been brought ashore, the heads are cut off and the fish carefully cleaned, gutted, and bled. After being washed in salt water they are pickled in covered vessels. One barrel of salt is usually necessary to cure three barrels of herrings.

FISHER, ANDREW (1862-1928). Australian politician. Born Aug. 29, 1862, at Crosshouse, Kilmarnock, Scotland, he worked as a boy in the coal mines. In 1885 he emigrated to Queensland, and entered the Commonwealth parliament as M.P. for Wide Bay in 1900. In 1904 he became minister of trade and customs, and in 1907 leader of the labour party. As such he was prime minister in 1908-9, in 1910-13, and 1914-15, when he became high commissioner in England resigning in 1921. He died Oct. 23, 1928.

Andrew Fisher,
Australian politician

FISHER, HERBERT ALBERT LAURENS (b. 1865). British historian and politician. Born in London, March 21, 1865, he had a brilliant career at Winchester and New College, Oxford. As president of the board of education, 1916-22, he was responsible for the Education Act of 1918. He entered Parliament as M.P. for Sheffield in 1916, and in 1918 and 1923 was returned as a member for the newer English universities. He became warden of New College, Oxford, in 1925, and president of the British Academy in 1928. His historical books include *Studies in Napoleonic Statesmanship*, 1903; and *Napoleon*, 1913.

in 1504 was made bishop of Rochester. He was a keen opponent of Henry VIII's divorces from Catherine of Aragon, was imprisoned in the Tower in 1534 for refusing to swear to the Act of Succession, and on June 22, 1535, was beheaded on Tower Hill for refusing to recognize Henry as supreme head of the Church. He had been created a cardinal on May 20. He was instrumental in bringing Erasmus to Cambridge. He was beatified on Dec. 9, 1885.

Fish. Diagrams illustrating the structure of fishes. Above, skeleton of common perch: a, premaxillary bone; b, maxillary bone; c, under jaw; d, palatine arch; e, cranium; f, inter-operculum; g, g, vertebral column; h, pectoral fin; i, ventral fin; k, l, dorsal fins; m, anal fin; n, n, caudal fin. Below, internal anatomy of carp: b, branchiae or gills; c, heart; ei, intestinal canal; o, ovaries; a, a, anus; o, oviduct.

FISHER, JOHN ARBUTHNOT FISHER, 1ST BARON (1841-1920). British sailor. Born Jan. 25, 1841, at Rambodde, in Ceylon, he entered the navy on June 12, 1854, on board the *Victory* at Portsmouth. "penniless, friendless, and forlorn." After distinguished service afloat he became first sea lord, 1904-10, and again in 1914-15. He was knighted in 1894, and took the title of Lord Fisher of Kilverstone when made a baron in 1909.

Lord Fisher,
British sailor
Russell

the introducer of oil fuel and submarines into the British navy. His work in improving the shooting of the navy was of the utmost importance. He died July 10, 1920, when his title passed to his son. His letters to *The Times* in 1919-20 were memorable for the refrain "sack the lot," and he always spoke of himself as "ruthless and relentless." Consult *The Life of Lord Fisher of Kilverstone*, Admiral Sir R. H. Bacon, 1929.

FISHERIES. An important branch of the world's commerce, embracing the culture, preservation, catching, and marketing of fish.

Since the opening of the 20th century the industry has seen the disappearance of the fishing smack in favour of the powerful and fast steam trawler, together with improvements in the gear and machinery employed, and the introduction on a large scale of ice for preserving the fish. Thus fish can now be brought from far greater distances than was formerly the case, and trawlers can remain at sea for one or two weeks before returning to land their catch.

John Fisher,
English prelate
After Holbein

The enormous figures given in the official returns suggest either that the quantity of fish must seriously diminish as time goes on, or else that the supply is inexhaustible. The latter is probably the truth, provided that the fish get fair treatment. The reason is biological, their extraordinary power of

reproduction. A herring produces from 20,000 to 30,000 annually; turbot, cod, and some others produce millions. How complicated the question of distribution is, may be realized from the fact that (as F. G. Affalo says), "a slice of turbot eaten in a London club may have been caught in the Bay of Biscay, then brought on ice to Plymouth Barbican, sent by rail to Waterloo, thence by van to Billingsgate, and finally by cart to the Bond Street shop from which the club buys it."

FISHERY BOARD. In Gt. Britain a body of men whose work it is to foster and protect the fishing industry. Scotland has a separate

board. In England and Wales the fisheries are looked after by the ministry of agriculture and fisheries. In Nov., 1919, the fisheries department of the board of agriculture was placed under the direct control of the parliamentary secretary, who acts as deputy-minister of fisheries.

FISHGUARD OR ABERGWAEEN Urban

seaport, and market town of Pembrokeshire. It stands on the Gwaen near its entrance into Fishguard Bay. A terminus of the G.W.R., Fishguard has an excellent harbour and a fine breakwater (2,500 ft.), a coastguard and lifeboat station. There is regular steamer communication with Rosslare, Ireland. Market day, Thurs. Pop. 2,999.

Fish Hook. 1. 14-in. beetle spinner. 2. Insect bait. 3. Hollow-pointed Limerick hook. 4. Pennell turn-down eye hook

By courtesy of S. Alcock & Co

FISH HOOK. Apparatus for catching fish. Hooks vary greatly in size and shape, from the huge hook with swivel and chain attachment used for catching sharks, down to the tiny eye hook on which the smallest trout flies are dressed. See Angling.

FISHMONGERS' COMPANY. London city livery company with a charter dating from 1364. It examines all fish brought into Billingsgate. The hall, in Upper Thames Street, E.C., was built in 1831-33.

Fishmongers'
Company arms

FIT (A.S. *fitt*, struggle). Popular term for a sudden seizure, accompanied by loss of consciousness, with or without convulsions. See Convulsion; Epilepsy; Hydrophobia; Rickets.

FITZGEORGE. Name taken by the three sons of the duke of Cambridge and his morganatic wife, Miss Louisa Fairbrother, the actress, whom he married in 1840. Sir Adolphus Augustus Frederick FitzGeorge (1846-1922) became rear-admiral in 1904; he was knighted, as was Sir Augustus Charles Frederick FitzGeorge (b. 1847), who entered the Rifle Brigade and retired as a colonel.

FITZGERALD, LORD EDWARD (1763-98). Irish rebel. Son of the 1st duke of Leinster, he joined the United Irishmen in 1796 and took an active part in the plans for the French invasion. The plot was discovered, and Fitzgerald died in prison, June 4, 1798, from wounds inflicted by one of his captors. His wife Pamela was generally, but wrongly, believed to be a daughter of Madame de Genlis by Philippe Egalité, duke of Orleans. She, who was probably born in Newfoundland, married Fitzgerald in 1792 and lived until Nov., 1831.

Lord Edw. Fitzgerald, Irish rebel
After O. Humphry, R.A.

FITZGERALD, EDWARD (1809-83). English poet and translator. He was born March 31, 1809, at Bredfield House, near Woodbridge, Suffolk, and was educated at Bury St. Edmunds and Cambridge. In middle age he married Lucy, daughter of Bernard Barton.

Edward Fitzgerald,
English poet

Fitzgerald is best remembered by his translation of The Rubáiyát of Omar Khayyám, first published in Jan., 1859. A second, greatly revised, edition appeared in 1868, and its subsequent popularity has been world-wide. He also published Six Dramas of Calderon, 1853; a version of the Agamemnon, 1876; two Oedipus Tragedies, 1880-81; and Readings in Crabbe, 1882. He died June 14, 1883.

Mrs. Fitzherbert,
wife of George IV
After R. Cosway

FITZHERBERT, MARIA ANNE (1756-1837). Wife of George IV. A daughter of Walter Smythe, of Brambridge, Hampshire, she married in 1775 Edward Weld, of Lulworth Castle, Dorset. Her second husband was Thomas Fitzherbert (d. 1781). In 1785 she met the prince of Wales, who married her privately on Dec. 21, 1785. According to the Royal Marriages Act, 1772, the union was illegal. In 1795 George married Caroline of Brunswick. Mrs. Fitzherbert, who had an allowance of £6,000 a year, died at Brighton, March 29, 1837. Consult Mrs. Fitzherbert and George IV, W. H. Wilkins, 1905.

FITZPATRICK, SIR CHARLES (b. 1853). Canadian politician. Born in Quebec, Dec. 19, 1853, he became a barrister. From 1890-96 he was a member of the legislative assembly of Quebec, and in 1896 he entered Dominion politics as M.P. for Quebec. In the same year he was made solicitor-general in the Laurier administration, and in 1901 he became minister of justice. He was chief justice of Canada 1906-18, and lieutenant-governor of the province of Quebec 1918-23. In 1907 he was knighted and from 1908-10 was a member of the Hague Tribunal.

Sir C. Fitzpatrick,
Canadian lawyer

FITZROY. River of Queensland, Australia. It is formed by the union of the Dawson with the Mackenzie, and discharges into Keppel Bay. Another river of this name in W. Australia rises in King Leopold range, and empties into King Sound. The name Fitzroy is given to a north-eastern suburb of Melbourne, Victoria.

FITZROY, EDWARD ALGERNON (b. 1869). British politician. Born July 24, 1869, he was educated at Eton and Sandhurst, and joined the 1st Life Guards, serving in the Great War. He was Conservative M.P. for S. Northamptonshire (now the Daventry Division) 1900-6 and was re-elected in 1910, and at all subsequent elections. He was deputy-chairman of committees 1922-24, and 1924-28, when he succeeded J. H. Whitley as Speaker.

E. A. Fitzroy,
Speaker since 1928
Russell

FITZSIMMONS, ROBERT (1862-1917). British pugilist. Born at Helston, Cornwall, June 4, 1862, he went to New Zealand at the age of nine, and was trained as a blacksmith. After several local successes as a boxer he entered the ring as a professional, and in 1897 obtained the heavy-weight championship. Retiring in 1912, he died Oct. 22, 1917.

FITZWILLIAM, EARL. Title held by the Irish family of Fitzwilliam since 1716. William, the 3rd baron (1643-1719), was created an earl in the Irish peerage in 1716, and William, the 3rd earl, was made earl in the British peerage in 1746. From him the present peer, William (b. 1872), is descended. The earls own large estates in Yorkshire and Wicklow, also Milton Hall, Peterborough, which has been in the family since about 1500. His eldest son is called Viscount Milton, and his chief seat is Wentworth Woodhouse, near Rotherham.

The Fitzwilliam Museum is an art and archaeological museum in Cambridge. It was founded by Richard Fitzwilliam (1745-1816); 7th Viscount Fitzwilliam, an Irish peer. He bequeathed to the university his collection of books, illuminated MSS., pictures, drawings, engravings, etc., together with certain dividends, for the erection of a gallery to accommodate them. The money was allowed to accumulate, and when £40,000 had been amassed the Fitzwilliam Museum in Trumpington Street, Cambridge, was erected. The original bequest has been increased by other donors, and the museum possesses a valuable library. See illus. p. 343.

FIUME. Italian seaport. It is on the river Rēfina, at the N.E. extremity of the Adriatic, and has several harbours. Much of the shipping trade of Hungary passes through the port, and the fisheries are of great importance.

The town possesses distilleries, petroleum refineries, and mills, while there is trade in fruit, barrels, staves, furniture, tobacco, paper, chemicals, fertilisers, and soap. The pop. is largely Italian, but the suburb of Sushak across the river, and the surrounding area, is inhabited by Yugoslavs, chiefly Croats. Pop. 49,199.

On Sept. 11, 1919, Gabriele d'Annunzio seized Fiume and set up a provisional government. On Nov. 12, 1920, the treaty of Rapallo established it as an independent state, but by a treaty of Jan. 27, 1924, the town and harbour works were acquired by Italy together with a strip of hinterland, while Yugoslavia acquired Porto Barros and the Delta. See Italy; Yugoslavia.

FIVE-POWER NAVAL TREATY. Part of the naval treaty of London (q.v.). It was signed, April 22, 1930, by Great Britain, U.S.A., Japan, France and Italy, and embodied agreements reached on limitation and scrapping of warships, rules for submarine warfare, etc.

FIVES. Game of handball. It is played either with the bare hand or with gloves. The Eton game is played by four players, and demands the highest skill and quickness of movement. Both the Rugby and Winchester games can be played either by one or two players a side.

In both games the service is given by one player throwing the ball on to the wall. His adversary can refuse any service, but if he does not refuse it, he must hit the ball on to the right-hand side wall, and then on to the front wall above the ledge or line. The rally then proceeds in the ordinary way, i.e. the ball is returned on the volley or the first round above the line. The player who first fails to do this loses the rally, and either yields the service to another player or loses a point. A game consists of 15 points. The ball used in fives is made like a racket ball. Its weight in Eton fives is 1½ oz. and in Rugby 1¼ oz. Apart from its vogue in public schools, the game is popular in the north of England.

Fives. An Eton game in progress, illustrating the construction of the court. Above, about to volley for the pepper-box or buttress

FIXTURE (Lat. figere, to fix). In English law a tenant is entitled to remove all fixtures that have been put up by him for ornament or convenience which can be removed without damage to the premises. In the case of trade fixtures, the tenant may remove them, unless in so doing he causes damage to the property. Similarly agricultural fixtures can always be removed, but the tenant must make good any damage he does. A tenant must remove his fixtures before his tenancy expires. See Landlord; Tenant.

FLACCUS. Name of a notable Roman family. (1) Quintus Fulvius Flaccus, Roman general in the second Punic War; (2) Marcus Fulvius, one of the commissioners appointed to carry out the agrarian measures of Tiberius Gracchus; (3) Marcus Verrius, a grammarian in the reign of Augustus. The poet's Horace and Valerius belonged to the family. See Horace; Valerius.

Flag. Yellow flag, Iris pseudacorus, showing the tall sword-like leaves

FLAG. Popular name given to plants of the genus iris, especially to I. pseudacorus, the yellow flag of ditches and marshes. The species form two groups: one in which the rush-like foliage dies down each autumn, and the life of the plant is continued by a long bulb-like tuber; the other in which the thick, sword-shaped leaves arise from stout, slightly creeping rhizomes. The term flag is generally applied to members of the second group, the others being spoken of by the name iris (q.v.).

FLAG. Piece of fabric flown from a staff, lance, mast, or halyard. It may be national or personal. The British national flag is the Union Jack. The white ensign, with the red cross of S. George and the Union Jack in the upper quarter, is reserved for the Royal Navy and certain privileged yacht clubs. The blue ensign, with a plain blue field and the Jack in the upper corner, belongs to the Royal Naval Reserve, certain national service ships and privileged yacht clubs. The red ensign is the merchant flag.

Regimental flags are similar to the above, the field being of the colour of the regimental facings. The flags of the British Dominions are the blue and red ensigns, with Union Jack supplemented by national emblems or armorial shields placed in the fly. See Colours.

A flag officer in the British navy is one of admiral's or flag rank.

His aide-de-camp, who wears an aiguillette or golden cord on the left breast, is called a flag lieutenant. The ship which carries the admiral is called a flagship (q.v.).

A flag day is a day set apart for the raising of money for charitable purposes by selling small emblems, usually flags, in the streets. The origin of the scheme was due to the success attending the sale of artificial roses on Alexandra Day (q.v.).

FLAGELLANTS (Lat. flagellum, little whip). Name given to various ascetic bodies in the Roman Catholic Church that practised flogging as a means of discipline. The flagellants arose in Italy in the 13th century, and continued to break out sporadically for about 150 years. See Asceticism.

FLAGEOLET (Fr.). Wind instrument of flute tone, played vertically through a mouth-tube. The modern one has a separate mouth-piece, but those of the 17th century had the blowing hole on a sloped end of the main tube.

FLAGSHIP. Vessel in which a flag officer is accommodated, and in which he flies a distinctive flag to indicate the ship to which others must look for signals. At the principal home naval stations the flag of the local commander-in-chief is flown in an old warship, e.g. the Victory, but the officer lives in an official residence ashore. See Battleship; Navy.

Flail. The threshing implement in use

FLAIL (Lat. flagellum, little whip). Hand implement for threshing. It is now little used, except on a small scale for flax or when securing

peas and beans for seed purposes. It consists of a shaft or handle, commonly made of ash, and a swingle (swiple) of some hard, non-splitting wood.

FLAMBOROUGH HEAD. Promontory on the E. coast of Yorkshire, to the N. of Bridlington Bay. The lighthouse has a flashing light visible for 21 m.

FLAMBOYANT (Fr. flaming). In architecture, a development of late French Gothic. It owes its name to the flame-shaped openings in tracery which were its chief characteristic. The period of Flamboyant was the late 15th and early 16th centuries.

FLAME. Gaseous matter raised to a temperature at which it becomes self-luminous by combustion. Ordinary flames are hollow. "Solid" flames occur where the complex molecule of a gas is by combustion broken up into simpler forms, e.g. in burning nitrogen trichloride. Berzelius pointed out that a candle or hydrocarbon flame shows four distinct regions: (1) the dark central region, (2) the yellow region, (3) the blue region, and (4) the faintly luminous portion. The dark portion consists of unburnt gases, whilst the yellow portion, occupying the greatest part of the flame, is the luminous portion. The temperature of a flame depends upon the heats of combination of the constituents and the specific heats of the products of the combination. See Fire; Heat.

FLAME FLOWER or **REDHOT POKER** (Kniphofia aloides). Perennial herb of the order Liliaceae. It is a native of S. Africa. The leaves, which grow in a compact tuft from the root, are long, narrow, and of tough consistence. The brilliant red, tubular flowers are disposed in a close oval spike at the summit of a stem which is from 3 ft. to 4 ft. high.

FLAMINGO (Phoenicopterus). Order of large birds, nearly related to the ducks. They have extremely long legs and necks, rosy or scarlet plumage with black on the wings, and beaks sharply bent down at an angle. One European species, four or five American, and one African are known. Flamingoes are wading birds and are found in great flocks by the margin of lakes and rivers, feeding on molluscs and vegetation. The nests are of mud.

FLAMINIUS, TITUS QUINCTIUS (d. c. 175 B.C.). Roman general. Having become consul, he overthrew Philip V of Mace-

don and conquered Greece. In 196 at the Isthmian games he proclaimed the independence of Greece, really the exchange of a Roman for a Macedonian master.

FLAMINIUS, GARUS. Roman statesman. During his censorship in 220 B.C. he built the great Circus Flaminius, and extended the Via

Flanders. Map of East and West Flanders, indicating the area recovered from the Germans during the great battles of Sept.-Nov., 1918. See p. 608

Flaminia to Ariminum, making it the first Roman road to cross Italy.

FLAMMARION, CAMILLE (1842-1925). French astronomer. Born Feb. 26, 1842. He entered the Paris observatory in 1858. From 1863 onwards he edited *Cosmos* and *L'Astronomie*. He carried out numerous observations, especially on Mars, at his private observatory at Juvisy, won fame as a popular writer on astronomy and founded the astronomical society of France in 1887. In Oct., 1920, he married Gabrielle Renaudot, his collaborator in some of his works. Among his books translated into English are *Popular Astronomy* and *Astronomy for Amateurs*. He died June 4, 1925.

Camille Flammarion French astronomer

FLAMSTEED, JOHN (1646-1719). English astronomer. Born at Denby, Derbyshire, Aug. 19, 1646, his chief work was the great catalogue of the fixed stars, the origin of all later catalogues. This was incomplete at his death on Dec. 31, 1719, but was published with his other observations in 1725. He was the first astronomer royal, and from 1684 till 1719 was vicar of Burstow, Surrey.

FLANDERS. That part of the Netherlands which is bounded roughly by the lower reaches of the river Schelde, the Lys valley, and the coast from Calais to the Schelde estuary. Its political frontiers have varied considerably, but most of it lies in Belgium, and the old name is retained in the two provinces of W. Flanders and E. Flanders. These provs. are mainly peopled by peasant Flemish stock. Ethnologically, a large part of the French dept. of Nord is Flemish, and is often referred to as French Flanders.

Flame-flower. Specimens in bloom

Flamingo. Adult specimens of the European flamingo

BATTLE OF FLANDERS. Fought Sept.-Nov., 1918, this was part of the Allied offensive extending from Dixmude to the S. of the Ypres salient. The attacking force under King Albert consisted of the Belgian army, the 6th French army with three divisions in line and one in reserve, in the centre, and the 2nd British army (Plumer), with the 2nd and 19th British corps, on the right. The attack opened on Sept. 28, coincident with the assaults by the British on the Hindenburg line, and by the French and American armies. By Oct. 1 the German front had been penetrated to a depth of over 8 m. On Oct. 17 the last Germans quitted Ostend. See map, p. 605.

FLANDRIN, JEAN HIPPOLYTE (1809-64). French painter. Born at Lyons, March 23, 1809, son of a miniature painter, he was employed in the mural decoration of S. Séverin, 1841. In portrait-painting, his best works included the full-length portrait of Napoleon III, at Versailles. He died at Rome, March 21, 1864.

Of his brothers, Jean Paul (1811-1902) did his best work in landscape painting, Auguste (1804-43) worked under Ingres.

FLASH. Bow of broad black silk ribbon with long ends, which is attached to the back of the tunic collar of the Royal Welch Fusiliers.

FLASH POINT. Temperature at which an inflammable liquid gives off vapour which takes fire when a flame is passed over the surface, or at which the vapour that collects forms an inflammable mixture with the air in the closed vessel of a test apparatus. The test is specially applied to petroleum products. See Oil.

FLAT. In music, a sign (♭). It indicates that the note to which it refers is to be a semitone lower in pitch than the ordinary note of the same alphabetical name or in the same position on the staff. It was first applied to the note B. See Natural; Semitone; Sharp.

FLATFISH (Pleuronectidae). Large group of fishes of flattened shape, in which the two sides are unlike in colour and the two eyes are on one side. The plaice and sole are examples. Flatfish are marine in habit, though flounders often ascend rivers. Most are good table fish.

FLAT FOOT. In man, a condition in which the arch of the foot is reduced, or in bad cases nearly abolished, so that almost the whole extent of the sole comes in contact with the ground. Flat foot is most common in young persons whose occupation has necessitated their standing for long periods, or frequently carrying heavy weights. See Foot.

FLATFORD. Village in Suffolk, near East Bergholt. It is associated with the name of Constable (q.v.), who painted the mill here. In 1928 Mr. J. R. Parkinson presented the mill and the adjoining house (now a guest house for artists and students) to the nation.

FLATULENCE (late Lat. flatulentus, full of wind). Gas in the stomach or intestines. It is due partly to air which is swallowed with food, and partly to the fermentation of food in the alimentary canal. The condition is often associated with disorders of digestion, due to imperfect mastication. See Dyspepsia.

FLAUBERT, GUSTAVE (1821-80) French novelist. Born at Rouen, Dec. 12, 1821, the son of a surgeon, he went to Paris to study law in 1840, but spent a number of years in travel, visiting the East in 1849-50. Returning to Paris in 1850, he began his first novel, *Madame Bovary*. It took six years of constant labour to complete, and made his name famous. Others followed including one published after his death at Croisset, near Rouen, May 8, 1880. He

Gustave Flaubert, French novelist

was the dominant figure among French novelists of the last epoch of Romanticism.

FLAVINE (Lat. flavus, yellow). Antiseptic discovered in 1916 by the Bland-Sutton Institute for Clinical Pathology. The drug itself was discovered by Prof. Ehrlich, who treated cases of sleeping sickness with it. Flavine is a yellow dye official name acriflavine. See Antiseptics; Surgery.

FLAX (*Linum usitatissimum*). Annual herb of the natural order Linaceae. It is a slender plant, with erect stems, about a foot and a half high, and narrow, lance-shaped alternate leaves. The numerous flowers (1 inch across) are purplish-blue. The fibres of which linen is woven are obtained by macerating the skin of the stems. Flax seed, from which linseed oil comes under pressure, leaving oilcakes as a valuable residue, is obtained from this species.

Flax is little grown in the United Kingdom, except in Ulster and some parts of Yorkshire. A board of trade committee report of 1920 referred to substitutes such as ramie, the main difficulty in preparing which for spinning was the elimination of the gum which holds the fibre together. Germany before the Great War discovered a process of degumming. This was transferred to England, and ramie yarns are now produced in Yorkshire.

New Zealand flax (*Phormium tenax*) is a perennial herb of the natural order of Liliaceae, native of New Zealand. Purging flax (*L. catharticum*), a wild plant of heaths and meadows, has small white flowers. Narrow-leaved flax (*L. angustifolium*) found in southern England, has pale blue flowers. See Linen.

FLAXMAN, JOHN (1755-1826). English sculptor. Born at York, July 6, 1755, he was the son of a maker of plaster casts. In 1770 he entered the Academy schools, and in 1775 began to be employed by the Wedgwoods in designing classical friezes and medallions for their ware. Elected A.R.A. in 1797 and R.A. in 1800, in 1810 he was appointed professor of sculpture. He died Dec. 7, 1826.

John Flaxman, English sculptor After Jackson

Flaxman's most notable monumental works are in Westminster Abbey and S. Paul's, his classical figures and groups at Petworth, Woburn, and other country seats, and his characteristic memorial reliefs are numerous in the British cathedrals and churches. Collections of his drawings are in the British and other museums. See Sculpture.

FLEA. Family of small wingless insects, more or less parasitic on other animals. The body is laterally compressed, and strongly encased in a coating of chitin; the last pair of legs is very long, enabling the insect to jump about 200 times its own length. The jaws are modified into a piercing instrument and a sucking tube, and the insect in the adult stage lives by sucking blood.

Flea. 1. Rat flea. 2. Common flea. *Pulex irritans*, male and ♀, female 1. photographed at Nat. Hist. Mus., S. Kensington

Most of the numerous species confine their attention to some one genus of the animal world. The rat flea is a conveyer of plague, and it is probable other fleas also carry disease. The human flea (*Pulex irritans*) deposits its eggs in the dust of floors, where the white, worm-like larva feeds on decaying organic matter, taking about a month to attain maturity. See Insect; Parasite.

FLEABANE. Herbs of the order Compositae. *Pulicaria dysenterica*, a native of Europe, N. Africa, and the Himalayas, is a perennial, with creeping root-stock, erect stems, and heart-shaped, oblong, woolly leaves. The daisy-like flower-heads are bright yellow. It was formerly used as a medicine in dysentery. Canadian fleabane (*Erigeron canadense*), generally distributed in warm regions, is an annual, with small, yellow-centred, white flower-heads.

Fleabane. Leaves and flowers of *Pulicaria dysenterica*

FLEET. Urban district of Hampshire. It is 6 m. N.E. of Odiham and 36 m. S.W. of London, with a station on the Southern Rly. Pop. 3,689. There is also a village of this name in Lincolnshire, 2 m. S.E. of Holbeach.

FLEET, THE. Name of the navigable part of an old London river which, rising in Hampstead, entered the city S. of Chick Lane (now Charterhouse Street) and joined the Thames at Blackfriars. Now a sewer, it gave its name to a prison which stood near the site of the Memorial Hall in Farringdon Street and where,

Fleet Prison. The inner court, with prisoners engaged in a game of racquets

From a drawing by Rowlandson & Pugin, 1807

or in the Fleet liberties, clandestine marriages, known as Fleet marriages, took place between 1614 and 1754. See London.

FLEET STREET. London thoroughfare It runs W. from Ludgate Circus to Temple Bar, and contains two churches, S. Bride's and S. Dunstan's in the West, the remains of Clifford's Inn and the second Serjeants' Inn, part of the Law Courts, entrances to the

Fleet Street looking E., showing, left, Bonverie House and the new offices of The Daily Telegraph

Temple (q.v.), and a restored timber house of 1610, the projecting upper storey of which is called Prince Henry's Room. In it are many newspaper offices, and Fleet Street is sometimes used as a synonym for the press

FLEETWOOD, CHARLES (d. 1692). English soldier. A Northamptonshire man, he joined the Parliamentary army at the outbreak of the Civil War, and in 1646 entered the House of Commons as M.P. for Marlborough. He went with Cromwell into Scotland in command of the horse, and was present both at Dunbar and Worcester. Fleetwood was commander-in-chief in Ireland 1652-1655, and was one of Cromwell's major generals. He was commander-in-chief when Monk entered London, and, although he had taken no part in the trial of Charles I, he was exempted from a complete pardon. He married, in 1652, Cromwell's daughter Bridget, the widow of Ireton, and died Oct. 4, 1692.

Charles Fleetwood, English soldier After Walker

FLEETWOOD. Urban dist., seaport, and watering place of Lancashire. It stands at the mouth of the Wyre, 9 m. N. of Blackpool, on the L.M.S. Rly. Sir P. H. Fleetwood, who built quays and rlys., planned the town in 1836. It has regular steamer service with the Isle of Man and Ireland, and carries on a brisk coasting trade. The fisheries are extensive, and salt is produced for export. In 1930 a new promenade was opened. Market day, Fri. Pop. 21,750.

Margaret Fleming After a water-colour by I. Keith

FLEMING, MARGARET OR MARJORIE (1803-11). Infant prodigy and favourite of Sir Walter Scott. A niece of Mrs. Keith of Ravelston, she read history at the age of six and wrote diaries and poems. Her story is told in Pet Margarie, H. B. Farnie, 1858, and Dr. John Brown includes an essay on her life and character in Horae Subsecivae.

FLEMINGS. Name given to the inhabitants of Flanders (q.v.). Flemish immigrants to England have frequently played a part in English and Welsh history, especially in the growth of the weaving industries.

FLENSBURG. Seaport of Schleswig, Prussia. It lies at the S. extremity of the Flensburg Fiord and has a good harbour, with shipyards, foundries, and breweries as the chief industries. Pop. 63,139.

FLETCHER, JOHN (1579-1625). English poet and dramatist. Son of Dr. Richard Fletcher, he was born at Rye, Sussex, and educated at Bene't (Corpus Christi) College, Cambridge. He collaborated with Francis Beaumont (q.v.) and others in plays which introduced tragedy to the English theatre. Independently he wrote fifteen plays, including *The Faithful Shepherdess*, a pastoral. In addition to a number of beautiful lyrics, he wrote some of the raciest dialogue in English dramatic literature. He died of the plague, and was buried in S. Saviour's, Southwark.

John Fletcher, English dramatist

FLEUR-DE-LIS (Fr. lily-flower). In heraldry, an extremely ancient symbol. Probably a representation of the lotus, river side flag, or the iris, it was early assumed as a cognizance by the Carolingian kings, and so became identified with the royal houses of France, who bore the golden flowers on a blue shield. The French arms (azure, semée de lis d'or) was quartered with the arms of England by Edward III; Henry IV reduced the number of lis to three, and after the treaty of Amiens and the Union with Ireland in 1801 the quartering was omitted. Pron. Fleur-de-lèss.

Fleur-de-Lis in heraldry

FLEURY, ANDRÉ HERCULE DE (1653-1743). French statesman. Born at Lodève, Hérault, June 22, 1653, he became chaplain to Louis XIV, who made him bishop of Fréjus in 1698, and tutor to the future king Louis XV in 1715. In 1726 he became chief minister and was appointed cardinal. His administration was upright, economical, and peaceful, but failed to prevent France from being involved in the war of the Austrian Succession, 1740. He died discouraged and in ill-favour, Jan. 29, 1743.

FLIGHT. The development of the aeroplane and the airship is dealt with in the article on Aeronautics; the construction of an aeroplane is explained in that entitled Aeroplane. The first real advance in the study of flight was made by Langley, who demonstrated that a flat plate of material could be

Flight. Handley Page Wing Slots. 1. Wing at normal flying angle. 2. Wing on point of stalling, the air becoming turbulent and ceasing to follow upper surface. 3. Wing at still larger angle of incidence, with slot open, the air stream introduced through slot from below smoothing out air flow and keeping it in contact with upper surface of wing, so that control is maintained. Courtesy of Handley Page, Ltd.

made to support itself if forced through the air at a certain angle and at a certain speed. Lillenthal and others discovered that curved surfaces were better than flat ones for flying purposes. The resistance offered by the air to the rapid passage of a body is less in the case of certain

of power, in the internal combustion engine, and the employment of cambered or curved planes, flying became possible.

An aeroplane flies as a result of support given to it by its wings when driven through the air. As the aeroplane moves forward, the wings, owing to their curved shape, drive downwards the air through which they pass. It is the constant falling of the air, as it were, which gives the support necessary for flight. It was early discovered that the air is forced downwards in a way depending upon the angle at which the wings are set and the speed of forward movement. With any particular angle it was found that lifting power increases as the square of the speed. With the increase of speed there comes increase of resistance to forward motion, requiring increased engine power to overcome it, and, therefore, increased weight. In any given aeroplane there is a given speed of flying for a particular angle at which the wings are set. If speed is increased, then the angle must be altered to satisfy this principle. In steady horizontal flight the lifting force on the wings is equal to the weight of the aeroplane; it is greater in climbing flight, less in diving flight.

Flight. Handley Page Auto-slot Courtesy of Handley Page, Ltd.

The problem of stability in flight is complicated in that, though the surfaces, both main and control, may be sufficient to maintain equilibrium for a particular speed of flight, they are not sufficient at some other speed. As the angle of incidence of the wing is increased there is a certain angle at which the lift is at a maximum, after which it decreases steadily. The Handley Page slotted wing and automatic slot (see illus.), fitted from 1923 to many aeroplanes, provide remarkable control at just those speeds when control is usually lost. With wing slots in use the critical angle—the stalling point—is deferred to a much greater angle of incidence. See Aeronautics; Aeroplane; Atlantic Flight, p. 153; Australian Flight; Helicopter; Johnson, Amy.

FLIGHT LIEUTENANT. In the old R.N.A.S. the rank equivalent to that of lieutenant in the R.N. and of captain in the army, and originally confined to pilot officers. In the Air Force the title has been extended to all officers of that rank. See Air Force.

FLINDERS, MATTHEW (1774-1814). British sailor. Born March 16, 1774, the son of a surgeon, in 1790 he went to transplant bread-fruit trees from the South Sea Islands to the W. Indies. After distinguished active service in the Bellerophon he won fame as an explorer of the Australian coasts. He circumnavigated Tasmania, charted the Gulf of Carpentaria, and surveyed the coast of New Holland. He wrote an account of his discoveries, and died July 19, 1814.

Matthew Flinders British sailor From an engraving

A river of Queensland which, issuing from the N. extremity of Lake Neelia in Rupert co., flows about 220 m. to the Gulf of Carpentaria, is named after Matthew Flinders, as is Flindersia, a small genus of evergreen trees, natives of Australasia and the Moluccas.

FLINT. Crystalline mineral composed mainly of silica; a variety of chalcedony. It is compact, somewhat harder than steel, and breaks with a shell-like fracture, forming sharp cutting edges. When first unearthed it is

brittle, becoming toughened by exposure. Chert and hornstone are coarser forms. In Great Britain and W. Europe flint occurs mainly in the middle and upper chalk formations. The cutting edge produced by flaking enabled palaeolithic man to invent edged tools, prior to the introduction of metal-lurgy.

Flint Lock. Mechanism of firing device of a 17th century musket

The discovery that sparks are produced when flint is struck with iron pyrites brought about

the percussive method of fire-making and led to the introduction of the flint lock, a musket common about 1630 and until the invention of percussion caps.

As road metal flint is unsatisfactory because of its readiness to pulverise. This quality is utilised for pottery and optical or flint-glass. It was largely used in E. Anglia for church building. See *Cell*; *Chalk*; *Eolith*; *Gun*.

FLINT. Borough formerly the county town of Flintshire. It stands on the S. shore of the Dee estuary, 12 m. N.W. of Chester on the L.M.S. Rly. Artificial silk is made; there are alkali and copper works and lead and coal mines. The castle, built by Edward I, after being restored, was opened to the public in 1928. Market day, Sat. Pop. 6,410.

FLINTSHIRE. County of Wales. It lies to the W. of the Dee estuary, with a detached portion situated E. of Denbighshire; area, 255 sq. m. The co. contains the lower courses of the Dee and Clwyd. Coal, lead, iron, and

and marched N., for Henry VIII was fighting in France. In the unequal battle the Scots suffered a crushing defeat, James IV and most of his court being killed. A monument, inscribed "to the brave of both nations," marks the spot where James is supposed to have been killed.

FLOGGING. A punishment for crime. It is applicable in English law (a) to young male offenders, by birching; (b) to persons convicted of stealing from the person with violence; and (c) to certain male offenders under the Criminal Law Amendment Act, 1912.

FLOOD. Submersion of land by overflow of water. After extra heavy or prolonged rainfall, or in spring and summer, when snow and ice fields melt, great quantities of surface water drain directly into rivers. The banks cannot contain all the water, which, overflowing, submerges the low-lying parts of the valley. The Nile floods are caused by tributaries which have their sources in regions of heavy summer rainfall. The summer water they bring down causes floods along the lower course of the main stream. See *Deluge*.

Henry Flood
Irish statesman
After Comerford

member for Kilkenny. In 1783 he was returned to the British House of Commons as one of the members for the city of Winchester. He died Dec. 2, 1791.

FLORA. In Roman mythology, the goddess of flowers. She had a temple near the Circus Maximus, and a festival called Floralia was held in her honour every year from April 28 to May 1.

Flora is a collective name for the plants growing naturally in any district or country.

Flora Day or FURRY DAY. A holiday observed at Helston (q.v.), Cornwall, on May 8.

FLORENCE (Ital. Firenze). City of Italy. It was the capital of the grand duchy of Tuscany. Situated on both banks of the Arno, which is spanned by six bridges, it is in a valley amid the foothills of the Apennines. Of the bridges the Ponte alle Grazie (1237) was the scene of the Guelph-Ghibelline union in 1283, and the existing Ponte Vecchio (1362) is a successor of one dating from Roman times. Florence has silk and wool manufactories and straw-plaiting, jewelry, and mosaic industries. Pop. 277,688.

Founded in Etruscan days, in the days of the Medici family, the birthplace of the Renaissance, and still a centre of intellectual and artistic life; the city is rich in treasures of art and architecture. Of its numerous palaces the Pitti and Uffizi contain some of the most famous pictures and sculptures in the world. The Duomo (1298) is the fourth largest church in the world. Giotto's 14th century marble campanile stands near, as does the octagonal Baptistery (1100) famous for its bronze doors. The San Marco museum was once a monastery. The church of Santa Croce (1294) has monuments to Galileo, Dante, and Michelangelo, that of San Lorenzo

(founded 390) has a domed mausoleum added by Cosimo I, and in the sacristy by Michelangelo are that artist's wonderful statues of Day and Night, Evening and Dawn, guarding the monuments of Lorenzo and Giuliano de' Medici. The Biblioteca Laurenziana is a priceless library of books and MSS. Among the names notable in Florentine history are those of Dante, Boccaccio, Machiavelli, Guicciardini, Savonarola; the artists Botticelli, Cimabue, Masaccio, Ghiberti, the Lippis, and Andrea del Sarto; the sculptors Pisano, Luca della Robbia, Donatello, and Ghiberti; and the musicians Lully and Cherubini. See *Dante*; *Italy*; *Savonarola*.

Florentium. Variant name for the rare-earth metal illinium (q.v.).

FLORES. Island of the Azores, in the Atlantic Ocean. The soil is fertile, and fruit and vegetables are cultivated. The chief town is Santa Cruz. Off Flores, in 1591, took place the naval action between Sir Richard Grenville in the *Revenge* and several Spanish vessels. Pop. 8,250.

FLORES. Island of the Dutch East Indies, in the Sunda group of the Malay Archipelago. A dependency of Timor, it lies S. of Celebes, from which it is separated by the Flores Sea, midway between Java and Timor. Oblong in shape, it is 230 m. from W. to E., with an average breadth from N. to S. of 28 m. and an area of 5,860 sq. m. The chief products include sandalwood, cotton, edible birds'-nests, dye-woods, tortoiseshell, and beeswax, while rubber culture is making progress. Pop. about 50,000.

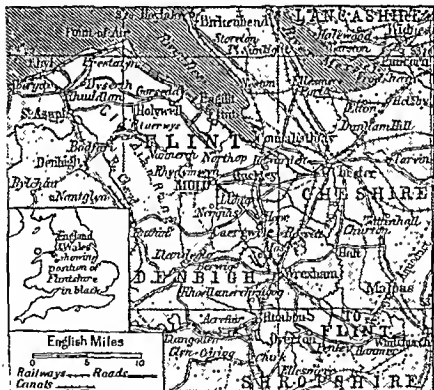

Florence. 1. Palazzo Vecchio, 1298-1344, used as the Town Hall since 1871. 2. View showing Giotto's campanile and the cathedral dome

FLORIDA. State in the extreme S.E. of the U.S.A. Its area is 54,861 sq. m. Of many navigable rivers the Apalachicola and Suwanee are the chief, and the largest lake is the Okeechobee. Pineapples, oranges, various cereals, cotton and tobacco are cultivated; phosphate rock is the chief mineral.

Manufactured products are tobacco, lumber, turpentine, tar, and resin. There are a state university at Gainesville, and a state college for women at Tallahassee. More than 5,500 m. of railroad are worked. Tallahassee is the capital. Pop. 1,263,549, of whom over 400,000 are negroes. In Sept., 1928, 16,000 people were rendered homeless by a hurricane near Palm Beach.

Florida Bay, an arm of the Gulf of Mexico, separates Florida state, U.S.A., from Florida Keys. Florida Keys is a curved chain of reefs off the S. coast of Florida. Florida Straits separate the S.E. extremity of Florida and Florida Keys from Cuba and the Bahama Islands. The channel is 300 m. long.

Flintshire. Map of the county showing also the detached portion between Cheshire and Shropshire

other minerals are worked. There are ironworks, and artificial silk, flannel, and cement are manufactured. The L.M.S. is the chief railway. Mold is the county town. Pop. 106,617.

FLOATING DEBT. Name given in the U.K. to that part of the national debt which is not funded. It consists mainly of treasury bills, but also of advances made by the Bank of England and by government departments. See *National Debt*.

FLOATING KIDNEY. Condition in which the kidney is abnormally mobile and can be freely moved within the abdomen by manipulation. Lesser degrees of the condition are known as palpable kidney and movable kidney. See *Kidney*.

FLODDEN, BATTLE OF. Fought between the English and the Scots, Sept. 9, 1513. Flodden is a ridge of the Cheviots on the English side of the border. It is 3 m. S.E. of Coldstream. Suddenly renewing the war with England, James IV crossed the border on Aug. 22 with a large army and besieged Norham Castle. Surrey collected an army

FLORIN. Name of several gold and silver coins of various European currencies. Its name is derived from a gold coin struck at Florence in 1252 and bearing, obverse, the figure of S. John Baptist, reverse, the Florentine lily. The British florin is valued at two shillings, was issued in 1849, and is minted at the present time, though the silver it then contained has been much reduced in quantity.

FLORIO, JOHN (c. 1553-1625). Author and translator. Born in London of Italian parentage and educated at Magdalen College, Oxford, he became a teacher of French and Italian. In 1598 appeared his Italian-English dictionary, *A World of Words*, and in 1603 his translation of Montaigne's *Essays*, on which his reputation rests.

FLOTILLA (Span. small fleet). In the tactical organization of a fleet, usually a number of destroyers grouped and intended to be worked as a whole. See *Destroyer*.

A flotilla leader is a ship between a light cruiser and a destroyer in size and intended for service as senior vessel of a destroyer flotilla.

FLOTSAM (low Lat. flottare, to float). Term that is used in English law. Goods found floating upon the sea are flotsam. Jetsam means goods jettisoned, cast overboard in a storm, or washed upon shore after a wreck. They become the property of the crown unless claimed by the rightful owners.

FLOUNDER (*Pleuronectes flesus*). Small species of flatfish, common in the sea and the lower reaches of rivers. It belongs to the same genus as the plaice, but is smaller. It has dark mottlings. Its flesh is delicate, but its small size makes it unimportant as a food fish.

FLOUR. Tho. ground contents of the wheat berry freed from its dermal envelopes. The corresponding product of other grains, e.g. maize and rice, is called corn-flour. Similar starchy meals are yielded by buckwheat, pulses, banana, sago-palm pith, tapioca, arrowroot, potato.

The wheat berry is composed of carbohydrates, 71.2 p.c., cellulose, 2.2 p.c., proteins, 11 p.c., fats, 1.7 p.c., mineral salts, 1.9 p.c., and water, 12 p.c. Besides its use in bread-making, wheat flour is also made into semolina, macaroni, and vermicelli. It is a thickening agent in textile printing, and the base of some violet powders.

In the modern flour mill various appliances blend different kinds of grain, and extract bran and dust, and the whole process of making flour is automatic, being done by roller-mills. See *Bread*; *Wheat*.

FLOWER (Lat. flos, stem, flor., flower). Part of a plant containing the organs of re-

production. It consists of four whorls which differ in different species. The outer set are the calyx leaves, which form the bud;

Florin. Gold coin of Edward III; above, silver florin minted in 1918. Actual diameter of Edward III florin, $1\frac{1}{8}$ in., of George V flor. n. $1\frac{1}{2}$ in.

separately they are known as sepals, and are usually green. The second series are corolla leaves, mostly brightly coloured, separately known as petals. The third series are stamens, consisting of a stalk or filament and the anther, the latter containing pollen—the male element. The fourth series is the pistil, which consists of the ovary, containing ovules or seed-eggs, surmounted by a stigma or stigmas, which may be supported by stalks or styles. Grains of pollen caught by the sticky or rough surface of the stigma send out shoots which penetrate the style and fertilise the ovules, which then develop into fertile seeds. See *Calceolaria*; *Carnation*; *Daffodil*; *Geranium*; *Iris*; *Lily*; *Orchid*; *Rose*; *Tulip*, etc.

FLOWERING RUSH (*Butomus umbellatus*). Perennial marsh herb of the natural order Alismaceae. A native of Europe and Asia, it has rose-red flowers.

FLOWER OF JOVE (*Lycynis flos-jovis*). Perennial herb of the natural order Caryophyllaceae, a native of Europe. Each branch of the stems ends in a small cluster of purple or scarlet flowers of the campion (q.v.) type.

FLÜGEL HORN. Brass instrument similar to the cornet, but of wider bore, and of mellow, horn-like tone. It is a modern improvement of the key bugle. The term means wing horn. See *Cornet*; also *illus.* below.

FLUID. Any form of matter unable to resist permanently any shear stress. Fluids are liquids or gases distinguished from solids in that they owe their shape at any particular time to a containing vessel or restraining forces.

Flounder, a small flatfish found round the coasts of the British Isles

In the U.K. the gallon is the unit measure for fluids, and in countries where the metric system is standardised the litre is the unit.

FLUKE. Group of trematode worms of parasitic nature, usually leaf-shaped. One, the liver fluke (*Fasciola hepatica*), in its adult condition lives in and devours the liver of the sheep, causing the much-dreaded and incurable "rot." See *Sheep*.

FLUORESCENCE. Absorption of light of certain colour or wave-length, and radiation or emission of light of other wave-lengths by certain bodies. The light emitted by a fluorescent body is found spectroscopically to comprise light of various colours,

Flügel Horn. Improved model of B flat horn. See above. By courtesy of Hawkes & Son

FLUORINE. Gaseous element of greenish-yellow colour, first isolated by Moissan in 1886. Its symbol is F, its atomic weight 19, and its atomic number 9. Alcohol, ether, benzene and turpentine take fire on contact with fluorine. Fluorides are salts of hydrofluoric acid. Calcium fluoride (CaF₂) occurs native as fluor spar or "blue-john," and from it most of the preparations of fluorine are made.

FLUORSPAR. Common mineral widely distributed in rock crevices. It is a compound of calcium and fluorine and is used as a source of hydrofluoric acid and as a metallurgical flux. When colourless and transparent it is used for lenses; amethyst, purple, green, or yellow specimens yield "false" amethysts, sapphires, etc., for cheap jewelry. Derbysire "blue-john" is made into ornamental vases.

FLUSHING (Dutch. Vlissingen). Seaport of Holland. On the S. coast of the island of Walcheren, it lies at the mouth of the Schelde, in the prov. of Zeeland. Before the Great War it was the port for communication with Queenborough and Folkestone, with through rly. connexion to the N. of Europe generally, and had developed as a sea-bathing resort. There is some shipbuilding. Pop. 21,588

Flute. 1. Military flute, 19 $\frac{1}{4}$ ins. 2. Military flute, 15 ins. 3. Piccolo or octave flute, 12 ins.

FLUTE (Lat. flatus, blast). Family name of many wind instruments of the whistle type. Originally, its six finger-holes were the only means of obtaining a scale; but key after key has been added, until now all the semitones are producible in good tune and with even tone. Flute is also the name of an organ stop imitating the tone of the orchestral instrument of the same name. See *Fife*; *Flageolet*; *Organ*.

FLUTING. In archi. Fluting of column in Canterbury Cathedral. Fluting is a texture, the grooves in a column, separated by fillets. Fluting is generally vertical, but spiral fluting occurs in Norman architecture. See *Column*.

FLUX. Term used in metallurgy. In nature most metals are combined with other elements, forming an ore. These ores are smelted by the aid of fluxes. The chief fluxes are lime or limestone, common salt, sodium carbonate, clay, silica, borax, litharge, nitre, carbon, argol or bitartrate of potash, flour, starch, and potassium cyanide. Argol and nitre are used in combination to form black and white fluxes

Fly. 1 and 2. House fly, *Musca domestica*. 3. Girdled drone fly, *Volucella inanis*. 4. Gold-girdled fly, *Chrysotoxum bicinctum*. 5. Dung fly, *Scatophaga stercoraria*. 6. Humble-bee fly, *Bombylius major*.

FLY. Insect of the order known as Diptera from being characterised by the possession of

only two wings. The fore wings alone remain as flying organs, the hind ones having become reduced to two small balancers resembling drum-sticks and known as halteres, upon which depends the insect's power of balancing itself in the air. Flies are vast in number, feed on fluids, and many are carriers of disease. See Green Fly; House Fly.

FLY-AGARIC

(*Amanita muscaria*). Large toadstool of the family Agaricinae. A poisonous species, it was formerly employed for poisoning fly-papers.

FLY CATCHER (Muscapa). Small bird of a family including nearly 300 species. All feed upon insects, which they usually catch on the wing.

Fly Catcher. The pied fly catcher, a spring visitor to Great Britain

FLY FISHING. Fishing with an artificial fly. The flies are made of feathers, silk, tinsel, fur, and other materials. Trout-flies are made to resemble as closely as possible some form of fly or other aquatic insect. It is essential in fly fishing for the angler to keep himself and his rod out of sight of the fish. See Angling.

FLYING BOAT. Acroplane the body of which is of boat formation. In the hull space is provided for passengers, pilot, petrol supply, and cargo.

The engine is usually placed between the wings, which are attached directly to the boat. The boat can move under its own power on the water without rising. Flying boats, which are specially valuable for coastal work and cross-ocean transport, are among the heaviest types of aircraft and some are made to alight on land or water. In October, 1929, the Dornier Do.X, a monster German flying boat, made a flight carrying 169 persons. See Aeronautics; Aeroplane; Seaplane.

FLYING BUTTRESS. In architecture, a half arch used to transmit the thrust or pressure of a structure, usually a vault, to a main buttress (q.v.) or solid foundation.

FLYING CORPS, ROYAL. Former branch of the British army. Formed in 1912, its total personnel at the outbreak of the Great War was about 2,000 and only 82 aeroplanes were fit to send overseas. In April, 1918, it was merged in the Royal Air Force. See Air Force.

FLYING DUTCHMAN, THE. Spectral ship traditionally haunting various seas, unable to reach port. The legend was dramatised by Douglas Jerrold, 1829; Marryat founded his story, *The Phantom Ship*, on it, 1839; and it inspired Wagner's opera, 1844.

FLYING FISH (*Exocoetus*). One of a group of tropical fishes. It includes over forty species which have the pectoral fins so lengthened as to resemble wings. They can leap out of the water to escape their enemies, and take long skimming flights.

FLYING FOX. Popular name for the fruit bat, *Pteropus*, due to the fact that its head slightly resembles that of a fox. It feeds entirely on flowers and fruit. It is found in S. Asia, the E. Indies, Madagascar, Australia, and some of the Pacific islands. The largest, that of Malaya, measures 5 ft. between the tips of the wings. See Bat; also ill. below.

FLYING LEMUR (*Galeopithecus*). Popular name for the colugo of Malaya. The loose skin along the sides of the body and neck spreads into a kind of parachute when the animal launches itself into the air, enabling it to cover at one bound as much as 70 yds. from tree to tree. It feeds chiefly on leaves. See ill. below.

FLYING SQUID

(*Ommastrephes sagittatus*). Species of squid or cuttle fish. Long and narrow in shape, it is common in the open seas, and forms an important part of the food of the sperm whale. See Cuttle.

Flying squid, a cuttle fish which springs out of the water

FLYING SQUIRREL

(*Pteromys*). Squirrel found in N. America, Asia, and E. Europe. Members of this group are able to simulate flying by the extension of the loose, lateral folds of their skin. There are many species and all are nocturnal in habit.

FLY WHEEL. Large, heavy-rimmed wheel mounted on a shaft which is subjected to, or has to exert, a turning effort more or less intermittently. By virtue of its inertia it acts as a reservoir of energy and has a powerful steadying effect. See Steam Engine.

Flying Lemur, Galeopithecus, with skin distended for gliding

Flying squirrel of north America. It is nocturnal in habit

1894, and later was professor of military history, strategy, and applied tactics at the École Supérieure de Guerre. In 1905 he became chief of staff to the 5th Army Corps, in 1907 brigadier-general, and was for 4½ years in command of the École de Guerre. In 1913 he took command of the 20th Army Corps at Nancy.

On four critical occasions during the Great War, before he was

Ferdinand Foch, French soldier Henri Manuel

appointed generalissimo, Foch proved his principles in action, and his appointment to the supreme command came in March, 1918. Created marshal on Aug. 6, he showed his great qualities in the peace as in the war. He was the chief cause of the acceptance of the German offer, and largely framed the preliminary terms of peace. He died March 20, 1929, and was buried in the Invalides.

FOCHABERS. Tourist resort of Elginshire (Moray). It stands on the Spey, 8 m. S.E. of Elgin, on the L.N.E. Rly., and near by is Gordon Castle. Pop. 1,020.

FOCUS (Lat. hearth). Primarily the point at which converging lines or rays meet, but usually any point through which rays of light, heat, etc., or lines pass.

Focus. In the diagram C A B is part of a spherical mirror whose centre is O. A ray of light from U strikes the mirror at P, and is reflected along P.V. The angle U.P.O is equal to O.P.V.

In mathematics a focus is a point from which, if lines are drawn to any points on a curve, the lengths of these lines are connected by some law. In optics, sound, heat, etc., the focus is the point to which rays are brought after reflection from a curved surface or after refraction through a lens. See Lens.

FOG. Clouds either close to or in contact with the ground. The conditions for the formation of clouds are the presence of dust and water vapour in the atmosphere, and the falling of the temperature of the air below dew point, i.e. that temperature at which the atmosphere is incapable of holding its invisible water vapour without condensation. If these conditions are fulfilled, each particle of dust receives a thin coating of water. In the country fog is usually white, but in large towns and cities it is sometimes dense and black. Extensive fogs are also produced where currents of air of different temperatures come in contact with each other. Thus off Newfoundland the warm air from the Gulf Stream meets chilled air, and the region is the foggiest in the world. See Cloud.

Fog signals are contrivances for producing warning sounds on railways, at sea, and on roads when visual signals are obscured by atmospheric conditions. Under suitable conditions aircraft and aerodromes use Very lights and directional wireless.

FOGGIA.

City of Italy, capital of the S.E. prov. of Foggia. It is 78 m. E.N.E. of Naples. An important fair is held every May for the sale of sheep, wool, corn, capers, and cheese. Pop. 86,295. Pron. Foj-ja.

Foghorn installed on the Bass Rock in the Firth of Forth

FOGHORN. Instrument carried by ships to indicate their presence to other vessels during a fog at sea. Foghorns may be operated by mouth, hand, or mechanical power. The types designed for shore use are especially employed for port and harbour signals. The more powerful horn installations used on steam vessels, and some coast stations, are technically called sirens. The Board of Trade require sailing vessels under way, and vessels towed, to sound foghorns at one-minute intervals.

FÖHN (Ger.). Warm, dry wind experienced in Alpine valleys. In the circulation of the atmosphere air is caused to descend mountain slopes. During its descent it is heated by compression, and being thus enabled to hold more moisture, it descends as a warm, drying wind, which in a few hours clears away more snow than many days of bright sunshine, and uncovers the upland pastures. In some valleys the early sowings are entirely dependent upon this wind, whilst in others it is relied upon to ripen the grapes in autumn.

FOIL. Weapon used in fencing. It is a very slender, four-sided steel blade, with a handguard to the hilt and a button on the tip. The object of the fencer is to touch a specified part of his opponent's body with the button. See Fencing.

Foil, fencing weapon, and method of holding

FOIX. Town of France, capital of the dept. of Ariège. Former capital of the co. of Foix, it stands between the rivers Ariège and Arget, 46 m. S. of Toulouse. The counts of Foix lived in its castle, round which the older part of the town clusters. The church of S. Volusien dates from the 14th century. There are small industries, and it is a commercial centre for a large district. Pop. 6,165.

The family of Foix were rulers of the co. of Foix between about 1000 and 1500. The court of Gaston Phoebus (d. 1391) is vividly described by Froissart. In 1479 Francis Phoebus became king of Navarre. He left no sons, so the county passed to his sister, wife of Jean d'Albret, and thence to the family of Bourbon (q.v.). A member of a younger branch of the family was the famous soldier Gaston de Foix (1489-1512).

FOKKER, ANTONI HERMAN GERRAD (b. 1890). Dutch engineer. Born April 6, 1890, he began to build aircraft for the German Government about 1913 at Sehwerin. He designed a biplane called after him, and during the Great War a great number of these were employed. In 1919 he opened a factory in Amsterdam. See Aeronautics.

FOLKESTONE. Borough, watering place, and market town of Kent. It is 71 m. S.E. of London by the S.R. For visitors the attractions include the Leas—a fine promenade on the top of the W. cliff, pleasure gardens, a theatre, and a pier. Radnor Park is a public pleasure ground, and there are tennis courts, golf links, and a racecourse. The hatching is good. Between Folkestone and Dover is a large open space called the Warren in which fossils are found. In 1920 this, with the east cliff, was given to the town by the earl of Radnor, who owns much of the land and whose eldest son is called Viscount Folkestone. It is one of the chief ports for France and Holland. In May, 1930, a new steel bridge was created over the Old Harbour channel, replacing the timber swing bridge. Folkestone was an important port of embarkation for the troops in the Great War. Market day, Mon. Pop. 37,535.

FOLKLAND. Name given in England in Anglo-Saxon times to the land that was held by folk or common right and subject to certain established burdens. See Boeland.

FOLKLORE. Generic term under which the traditional beliefs, customs, stories, songs, and sayings current among backward peoples, or retained by the uncultured classes of more

advanced peoples, are comprehended and included. The term is used for the scientific study of these objects.

The Handbook of the British Folk-Lore Society, which was founded in 1878, describes folklore as "the expression of the psychology of early man, whether in the fields of philosophy, religion, science and medicine, in social organization and ceremonial, or in the more strictly intellectual regions of history, poetry and other literature." Folklore thus embraces the whole outlook of uncultured man upon the world, the beliefs concerning his own nature and destiny, his relation to other beings, whether objective or imaginary, whether human or non-human, the rites and customs which are the outcome of his beliefs and the expression of these varied relations, and, finally, the amusements of his vacant hours. See Fairy; Genie; Mythology; Witch; etc.

FOLK SONG. Song created by people whose cultural development has been effected through the unconscious and intuitive exercise of natural and inborn faculties. As between folk music and that of cultivated musicians the difference is one of kind, not of degree, akin rather to the difference between the wild and the garden flower.

Folk music ordinarily consists of melody only; it is very seldom—e.g. among the peasants of parts of Russia—that it has been carried as far as the harmonic stage. Aesthetically, the characteristic of the folk tune is its transparent sincerity, freshness, spontaneity, naïveté, and directness of statement. The work of collecting and recording English popular music has been greatly advanced by the English Folk-Song Society, founded in 1898.

FOLLY. Name given generally to a building for which there appears to be no particular use or reason, or is an example of the builder's extravagance. The palatial building erected at Fonthill (q.v.), Wiltshire, by the author of Vathek, is sometimes referred to as Beekford's Folly.

FOMENTATION (Lat. fovere, to warm). Fold of boracic lint or similar material, wrung out in boiling water and applied to relieve pain or inflammation, or to assist discharge of pus.

FONSECA, MANOEL DRODORO DA (1827-92). President of Brazil. Born at Alagoas, Brazil, Aug. 5, 1827, he joined the army in 1849, rose to the rank of general, and was in 1886 appointed governor of the province of Rio Grande do Sul. Becoming closely identified with the republican movement, he was recalled; he headed the insurrection which was followed by the establishment of the republic of Brazil. He was appointed its first president in Feb., 1891, but resigned in Nov. Fonseca died on Aug. 23, 1892.

The Gulf of Fonseca, or Amapali, is an arm of the Pacific Ocean which penetrates 40 m. between Honduras, Salvador, and Nicaragua. Two volcanoes—Conchagua and Coscoquina—stand on either side of its entrance, which is 21 m. wide.

FONT (Lat. fons, stem font-, fountain). In eccles. architecture, the basin for the rite of

baptism. Constructed of marble, stone, or lead, it is placed in a part of the church reserved for the purpose, or in a separate baptistery. As total immersion at baptism was customary.

Fontainebleau, former French royal residence. The Cour du Cheval Blanc, where Napoleon bade farewell to men of the Old Guard, April 20, 1814

early Christian fonts were of considerable size. Many fine Norman fonts are to be found in old churches in England.

FONTAINEBLEAU. Town and commune of France, in the dept. of Seine-et-Marne. Lying 37 m. S.E. of Paris, it is famed for its palace and forest, and has a school of military engineering. Pop. 16,000.

The palace was founded about 998, and rebuilt by Louis VII and Francis I. Fontainebleau was the favourite dwelling-place of Napoleon I. Much altered and decorated by Louis Philippe between 1837-40, it remains one of the finest buildings in France, no less for its internal than its external and garden beauty. The forest, which is a state property, has an area of some 42,500 acres and a circumference of nearly 57 m.

FONTENOY, BATTLE OF. Fought May 11, 1745, between the British, Dutch, and some Germans, under the Duke of Cumberland, and the French under Marshal Saxe. The Allies' object was to relieve Fontenoy, a village about 5 m. S.E. of Tournai, Belgium, then besieged by the French. The battle ended in a victory

for the French, the losses amounting to about 7,000 on each side. The Allies had about 45,000 men; the French rather more.

Font. 1. Carved Norman example in Hereford Cathedral. 2. Font in Henry VII's Chapel, Westminster Abbey

FONTEVRAULT or FONTEVRAUD (Well of S. Evrault). Town of France, in Maine-et-Loire dept. It is on the Vienne, 10 m. S.E. of Saumur. Here, in 1099, Robert d'Arbrissel (1047-1117) founded a great Benedictine abbey which existed down to the time of the Revolution. In 1804 the abbey buildings were converted into a prison. In 1910, when the abbey church was restored, the tombs of Henry II of England, his wife Eleanor of Aquitaine, and his son Richard I of England were discovered. Pop. 2,302.

FONTHILL or FONT-HILL GIFFARD. Village near Hindon, Wiltshire. William Beckford the younger (q.v.), who settled here in 1796, built Fonthill Abbey at a cost of over £250,000, and disposed of it and the greater part of its contents in 1822 for £330,000. The church of Holy Trinity, which was built in 1866, replaced one which was created in 1748.

FOOCHOW or FUCHOW. Treaty port of China, capital of the prov. of Fo-Kien. It stands in a plain surrounded by hills on the river Min, 36 m. from its mouth. The river is spanned by the bridge of Ten Thousand Ages, said to be over 800 years old. A marvellous example of Chinese engineering, it connects with the island of Nan-tai, the European quarter. There are shipbuilding yards, an arsenal, a dry dock, numerous wharves, and a school of navigation. Foochow was opened to foreign trade in 1842. Pop. 314,900 See China.

FOOD. Nutritive matter taken by animals to sustain life. The principal nutritive constituent of meat is protein. In fish the chief nutrient constituents are protein and fat. Thin soups, beef-tea, meat extracts, and similar preparations contain chiefly the flavouring constituents of meat, but stimulate the flow of the gastric juices. Milk contains a certain amount of all the essential constituents of food. Cream and butter constitute easily digested forms of fat. Cheese is highly nutritive but somewhat indigestible. Eggs are highly nutritive, and most digestible when lightly boiled.

Vegetable foods contain a large proportion of carbohydrates, usually present in the form of starch or sugar. They contain a little protein and fat. Bread is a highly nutritious but by no means perfect food, since it contains so small a proportion of protein. Oats are rich in nitrogenous matter, and particularly rich relatively in fat. Maize also is as nutritious as wheat, and richer in fat. Rice is poor in protein, fat, and mineral matter. Peas, beans and lentils are rich in nitrogenous material, 95 p.c. of which is in the form of protein. Potatoes are very rich in starch, and are most digestible when eaten in the form of a purée. Green vegetables, such as cabbage, spinach, etc., contain only a small proportion of nutritive material, but play an important part in digestion. Some fruits, such as bananas, dried dates, prunes, currants, and raisins, contain a considerable amount of carbohydrate, mostly in the form of fruit sugar. The importance of a certain amount of uncooked food in the form of fruit in the diet is now generally recognized.

In the United Kingdom there is a regular system of food inspection. Special attention is paid to imported foodstuffs and food adulteration. See Adulteration.

In times of crisis, such as during the Great War, or of shortage due to other causes, the organization, busbanding, and distribution of essential foods are undertaken by government. The official responsible for carrying out the Government's decisions during the war was known as the Food Controller.

FOOL (Lat. follis, wind-bag). Retainer kept in the medieval period, and up to the 17th century, by kings and nobles for their entertainment. The fool wore a special parti-coloured dress and a cap shaped like a cock's comb with

ass's ears, and carried a mock sceptre with a fool's head carved on it. In addition, he usually carried a bladder at the end of a string.

FEAST OF FOOLS. Medieval burlesque religious festival. It was originally celebrated on the first day of the year. A boy or young man, who was known by such names as the boy bishop or the abbot of unreason (q.v.), was chosen to conduct the ritual; but the ceremonies quickly degenerated into buffoonery. The Feast of Fools survived until the Reformation. The ass, representing Balaam's ass, the ass which stood by the manger, that on which the Virgin and Child fled to Egypt, or that on which Christ rode into Jerusalem, often played a part. In some places there was a special Feast of the Ass, e.g. at Beauvais.

FOOLSCAP. Properly, the cap worn by fools and jesters, usually conical in shape with bells fastened to it. It is also the common name for a sheet of paper, strictly 17 ins. by 13½ ins., but frequently smaller. It had formerly a fool's cap and bells for its watermark.

FOOL'S PARSLEY (*Aethusa cynapium*). Annual herb of the order Umbelliferae. It is a native of Europe and Siberia, growing chiefly in cultivated ground. It has a spindle-shaped root and a smooth stem about 2 ft. high. The large, wedge-shaped leaves, are much divided into small, thin segments. The minute white flowers are massed in compound umbels. Though somewhat like parsley, its nauseous odour would prevent any but "a fool" from being imposed upon by the resemblance.

FOOT. Lower extremity of the leg. Of the bones, seven form the tarsus or posterior part; five the metatarsal bones; and fourteen the phalanges, forming the toes. The tarsus consists of the os calcis, which forms the heel; the astragalus, which articulates with the tibia and fibula to form the ankle joint; and five smaller bones—the scaphoid, three cuneiform bones, and the cuboid bone. The metatarsal bones are elongated, and articulate behind with the tarsus and in front with the phalanges. The foot is arched in the centre, the posterior pier of the arch being formed by the heel and the anterior by the heads of the metatarsal bones. See Ankle; Flat Foot.

FOOT. One of the oldest and commonest measures of length, based upon that of a man's foot, traditionally the king's. The English statute foot is divided into 12 ins. In prosody, foot is the term applied to a group of syllables, one of which is stressed to mark the rhythm that forms a constituent part of a verse.

FOOT AND MOUTH DISEASE. Fever mainly affecting cattle, sheep, and pigs, though other animals, including man, are also liable. When there is an outbreak in Great Britain the district in which it appears is isolated, and the affected animals are liable to be slaughtered, compensation being paid. See Bacteriology.

FOOTBALL.

Open-air game played with ball containing an inflated bladder. In the Rugby game, named from the famous school where it originated, the ball is oval; in the Association game it is spherical.

THE ASSOCIATION GAME. The Association game is played by 11 players (one goal-keeper, two full-backs, three half-backs, and five forwards) on each side. The maximum length of the field of play is 130 yds., minimum length 100 yds., maximum breadth 100 yds., minimum breadth 50 yds. The goals are upright posts, 8 yds. apart, with a bar across them 8 ft. from the ground. The circumference of the ball may not be less

than 27 or more than 28 ins., its casing must be of leather; its weight from 13 to 15 oz. The duration of the game is normally 90 mins.

The winners of the toss have the option of kick-off or choice of goals. Ends may only be charged at half-time. The goal-keeper may, within his own penalty area, use his hands, but with this exception intentional handling of the ball is not allowed. The referee is sole judge of fair and unfair play

Football. Diagram showing lines and dimensions of Association ground

Football. Diagram showing lines and dimensions of Rugby ground

The Football Association, the governing body of English amateur and professional association football, founded in 1863, has its offices at 22, Lancaster Gate, London.

The Football League, a union of Association clubs for playing matches

against each other, dates from 1888. In this there are a first division, a second division, and a third division in two sections, northern and southern. Each section consists of 22 clubs. There is also a Scottish league in two divisions of 20 clubs each, an Irish league, and various local leagues in Lancashire and elsewhere. See Association Cup; Aston Villa; Corinthian, etc.

THE RUGBY GAME. Running with the ball, the distinctive feature of Rugby football, came into vogue in 1823, but was not recognized until 1841. The Rugby game is played by 15 players (one full back, four three-quarters, two half-backs, and eight forwards) on each side. The field of play may not exceed 110 yds. in length nor 75 in breadth. The goal-posts are 11 ft. in height, placed 18 ft. 6 in. apart and joined by a crossbar 10 ft. from the ground. The object of the game is to kick

Foot. Diagram showing the bones of the human foot, seen from above and from the side

Fool. The court fool of ancient time attired in his motley After A. Lambdon

the ball over this crossbar and between the posts. A try, or grounding the ball on the line, scores 3 points, to which two are added if a goal is kicked. The oval ball is 11 ins. to 11½ ins. in length; circumference, 30 ins. to 31 ins.; width (circumference), 25½ ins. to 26 ins.; weight, 13 oz. to 14½ oz.

FOOTE, SAMUEL (1720-77). English actor and dramatist. Born at Truro, 1720, he was educated at Worcester College, Oxford. He joined the bar, but gave up a legal career to go on the stage. He was a skilful mimic and brought out at The Haymarket a successful series of caricature comedies. He died Oct. 21, 1777, and was buried in Westminster Abbey.

Samuel Foote,
English dramatist
After Sir J. Reynolds

FOOTPATH. Narrow path, used by pedestrians only. In the United Kingdom the right of way over footpaths may be acquired by grant, which after 40 years is deemed absolute, unless enjoyed by some consent expressed by deed or other evidence in writing. The safeguarding of the right is entrusted to the parish and district councils and is also made the object of attention by the Commons and Footpaths Preservation Society. See Commons; Enclosure; Right of Way.

FOOT'S CRAY. District of Kent. One of the four contiguous parishes on the river Cray—St. Mary Cray, St. Paul's Cray, Foot's Cray, and North Cray—it is 2 m. S. of Sideup. Until 1920 it was a separate urban district, but it is now part of Sideup (q.v.).

FORAMINIFERA (Lat. foramen, small hole). Minute creatures of low organization, belonging to the sub-kingdom Protozoa. Most of them are marine. They secrete a limy or membranous shell, usually perforated with minute holes through which thread-like processes of the body protoplasm can be extruded. With the aid of these pseudopodia (false feet) the animal is able to creep about and to secure the particles of organic matter on which it feeds. The ooze of the ocean beds and the limestone in the earth's crust are largely composed of their shells.

Forbes. Town of New South Wales, Australia, 290 m. W. of Sydney. It is a centre of sheep and horse breeding. Pop. 4,654.

FORBES, ARCHIBALD (1838-1900). British war correspondent. Born in Elginshire, April 17, 1838, he made his reputation in the Franco-Prussian War of 1870-71 as correspondent, first of The Morning Advertiser and then of The Daily News. He saw service in the Russo-Turkish and Zulu Wars, and wrote Memories and Studies of War and Peace, 1895. He died in London, March 30, 1900.

FORBES, JOAN ROSITA (b. 1893). British traveller and writer. Born Jan. 16, 1893, a daughter of H. J. Torr of Morton Hall, Lines, she visited remote parts of Africa and Arabia, and was given the gold medal of several geographical societies. In 1921 she married Col. A. T. McGrath. She is author of The Secret of the Sahara-Kufara; The Jewel in the Lotus; Adventure; and other works.

FORBES, STANHOPE ALEXANDER (b. 1857). British artist. Born in Dublin, Nov. 18, 1857, he was educated at Dulwich and studied art in London and Paris. A member of the Newlyn group, his pictures are chiefly scenes of the sea or the country. The Health of the Bride, depicting a Cornish wedding, is in the Tate Gallery. Other popular pictures are The Lighthouse; The Fish Sale; The Village Philharmonic; The Quarry Team; and Forging the Anchor. Forbes was elected A.R.A. in 1892 and R.A. in 1910.

FORBES-ROBERTSON, SIR JOHNSTON (b. 1853). British actor. Born in London, Jan. 16, 1853, eldest son of John Forbes-

Sir J. Forbes-Robertson,
British actor
Marian Lewis

Robertson, art critic and journalist, of Aberdeen, and educated at the Charterhouse and Rouen, he studied art at the R.A. school, and elocution under Samuel Phelps. He made his debut, March 5, 1874, at The Princess's, London, as Chastelard, in Mary Queen of Scots. Gifted with a magnetic personality and exceptional elocutionary ability, he was one of the most popular actors of his time. Of the many parts he played, his Hamlet, the title rôle in The Passing of the Third Floor Back, and Diek Helder in The Light That Failed are specially memorable. In 1900 he married May Gertrude, sister of Maxine Elliott (q.v.), who acted with him in many of his successes. He was knighted in 1913. His brother, Norman Forbes (b. 1859), also won distinction as an actor; and his sister, Frances Forbes-Robertson, has written several novels.

FORCEPS. Instrument consisting of two blades for grasping or compressing tissues or objects. The midwifery forceps, used for assisting delivery with difficult labour, was a discovery of Peter Chamberlen, a Huguenot refugee in the 17th century, but did not become generally known till 1733. A form of forceps is employed in nearly all surgical operations, and by dentists, watchmakers, etc.

E. Onslow Ford,
British sculptor
Elliott & Fry

ling and truth of likeness. He died Dec. 23, 1901.

FORD, HENRY (b. 1863). American manufacturer. Born at Greenfield, Michigan, July 30, 1863, he began to work when a boy in an engineering shop at Detroit. He rose to be chief engineer at the Edison Illuminating Co., and in 1903 founded a business of his own at Detroit. This became the Ford Motor Co., and under his presidency the largest maker of automobiles and farm tractors in the world. He opened factories at Manchester and Cork, and in 1929 started to build enormous works at Dagenham. In 1922 he published My Life and Work; in 1929 My Philosophy of Industry.

Henry Ford, American
manufacturer

FORD, JOHN (1586-c.1639). English dramatist. Born at Islington, Devon, April 17, 1586, he spent a year at Exeter College, Oxford, and then entered the Middle Temple. His reputation rests on his tragedies, 'Tis Pity She's a Whore, 1626; The Broken Heart,

1629. and the historical drama of Perkin Warbeck, 1634.

FORDWICH. Parish and village of Kent. It is 2 m. N.E. of Canterbury. In the Middle Ages, and later, the Stour was navigable here and Fordwich was a corporate member of the Cinque port of Sandwich. It has an old church, St. Mary's, with a Norman shrine. It was a borough until 1884. Pop. 254.

FORECLOSURE (old Fr. forecloz, shut out). Term used in English law. When a mortgagor has failed to pay a debt the mortgagee may bring an action to foreclose, when the court orders that if the mortgagor does not redeem within a certain time the mortgagee shall become the owner of the security. See Mortgage.

FOREIGN LEGION. (Fr. légion étrangère). French corps which includes men of other nationalities, and serves particularly in North Africa. Its headquarters are in Algiers, and it is officered chiefly by Frenchmen. Connected with the Legion are certain disciplinary battalions known as the Zephyrs.

Foreign Legion. Officer and men
of the First Foreign Legion with
their colours

FOREIGN OFFICE. British government department. Its head, the secretary of state for foreign affairs, appoints, sends out, and supervises ambassadors, consuls, and other diplomatic agents, and by various means, not excluding the use of secret agents, keeps himself acquainted with the course of affairs abroad. Before 1782 the control of foreign affairs was divided between the two principal secretaries of state. The secretary is assisted by a parliamentary and a permanent under-secretary, and his office, entered from Downing Street, overlooks St. James's Park.

FORELAND, NORTH AND SOUTH. Two headlands on the coast of Kent. The North, about 2½ m. S.E. of Margate, has a lighthouse

Foreign Office, London, seen from St. James's Park

168 ft. above sea level, with a light visible at 20 m. The South, 3 m. N.E. of Dover, has also a lighthouse. It was here that, on the advice of Michael Faraday, electricity was first used for lighting British lighthouses.

FORESHORE. Part of a beach or sea-shore which is covered at high tide and uncovered at low tide. The extent of the foreshore depends partly upon the slope of the ground and partly upon the height of the tides. The boundary has been fixed, by a decision of English law, as the mean between the high and the low water mark. Foreshore is vested in the crown. See Coast.

FORESHORTENING. Technical term in perspective drawing. In a portrait, for example, an arm represented as pointing at

full length towards the onlooker occupies less space than if it were shown as pointing to one side; yet the perspective must clearly indicate that the length of the arm is the same.

FORESTER. One who looks after a forest. The Ancient Order of Foresters is the name of a large friendly society.

Foreshortening. Example of foreshortening of an arm, from a recruiting poster of the Great War. Courtesy of London Opinion

Founded in 1834, this has over 1,600,000 members and its total funds amount to £21,500,000. Its headquarters are at 17, Russell Square, London, W.C., and the order has spread to the United States and the British Dominions overseas. See Friendly Society.

Forest Gate. District of Essex and E. suburb of London. It is 5½ m. N.E. of Liverpool Street station on the L.N.E.R.

FOREST HILL. Residential dist. in the borough of Lewisham, London. It is 5½ m. S.E. of London Bridge station, on the Southern Rly. The Horniman Museum, standing in a public park, was opened in 1901.

FOREST ROW. Village of Sussex. It is 3 m. S.E. of East Grinstead, on the Southern Rly., and a convenient starting-point for a visit to Ashdown Forest. Pop. 3,303.

FORESTRY. The science of cultivating trees, especially for providing timber. No trees will thrive where stagnant moisture is present in large quantities. On soils where the water is percolating the willow, alder, spruce, fir, and poplar may be planted. On chalky soils larch, Scots pine, beech, oak, ash, and sycamore are the best. On the ordinary rich loam any British timber tree will flourish. On sandy soil, only the coniferous trees, such as the pines, firs, and spruces, may be expected to prosper; while on the heavy clay lands the British oak is the only tree, except perhaps the hornbeam, which is likely to repay planting.

The most generally practised system of forestry is that of utilising old pasture or waste lands, and planting oak- or two-year-old trees upon it. In Great Britain the establishment of a forest or wood from seed rarely proves successful. The only effectual safeguard against the depredations of rabbits is wire netting. All dead and dying trees and ragged and tangled undergrowth must be cleared away to afford room for new seedlings. The most immediately remunerative plantations to lay down are those of spruce, pine, and fir. Thinning of woods should be in exact proportion to the amount of exposure to which they are subjected. Training in forestry is given in the Imperial Forestry Institute at Oxford. The Forestry Commission, at 22, Grosvenor Gardens, London, S.W.1, exists to promote the interests of forestry in Great Britain. See Afforestation.

To secure an adequate supply of timber for the various purposes of the Great War, Britain secured the help of Canadian lumbermen, who were formed into a Forestry Corps in Oct., 1916, and by Jan., 1918, this force, which had a base, training and mobilisation camp in England, and about 70 camps in France, had grown to 18,000.

FORFAR. Burgh and county town of Forfarshire (Angus). It is 21 m. N.E. of Dundee on the L.M.S. Rly. The chief industries are the manufacture of linen and jute; others are tanning, bleaching, and rope-making. Market day, Mon. Pop. 9,555.

Forfarshire. Eastern co. of Scotland, since 1928 officially known as Angus (q.v.).

FORFEITURE (late Lat. *loris factum*, something done outside): Deprivation of lands, goods, or other property, usually in consequence of a sentence passed by a court of law or some breach of the law. A common instance of forfeiture is in the case of leaseholds, the conditions of which are not complied with by the tenant.

FORGE (Lat. *fabrica*, workshop). In metallurgy, term relating to appliances for the working of iron from a crude or semi-manufactured form to a higher order, as distinguished from melting and casting. It covers the simple hearth of the blacksmith, early furnaces such as the Catalan forge, in which malleable iron was produced in Europe for a long period, and the extensive plant which makes up a modern iron-manufacturing works.

Forging is the production of articles of iron or steel or other metal by hammering, pressing, rolling, or otherwise shaping the metal while heated but not in a molten condition. In its broad sense it embraces all the operations of shingling, cogging, and rolling by which "merchant" bars and plates are produced.

A forging press is a hydraulic machine for forging metal by steady pressure. Some of these machines exert a pressure of 10,000 tons.

FORGERY (Lat. *fabricari*, to frame). English law term for making or altering a written instrument which purports to be valid on the face of it with intent to defraud. The law is dealt with by the Forgery Act, 1913.

FORGET-ME-NOT. Hardy perennial plant of the order Boraginaceae, genus *Myosotis*. A native of Britain, its flowers are blue and yellow, except those of the rare species *M. palustris alba*, which are white.

Forget-Me-Not. Leaves and flowers of the perennial plant

(q.v.) is a two-pronged steel instrument which when struck gives a fixed and definite note, used to determine musical pitch.

FORLÌ. City of Italy, the ancient Forum Livii. Capital of the prov. of Forlì, it stands in a fertile plain, intersected by the rivers Montone and Ronco, 40 m. by rly. S.E. of Bologna. A walled town, it contains a cathedral (rebuilt), a citadel, 1361, utilised as a jail, a lyceum, technical institute, a municipal art gallery, a town hall, a good library, and a hospital. The churches contain pictures and frescoes by local masters. Pop. 51,859.

FORMALIN OR FORMALDEHYDE (HCOH). Pungent gaseous compound first prepared in 1867 by Hofmann by passing methyl alcohol vapour and air over a heated platinum spiral. A 40 p.c. solution of formaldehyde is known as formalin, and is the form in which the gas is

obtainable in commerce. Formalin is employed as a preservative and antiseptic. It is a powerful caustic and disinfectant. Combined with ammonia, formaldehyde yields hexa-methylene-tetraamine, which, under the name of urotropine, is used in medicine as an internal antiseptic.

FORMALISM. Adherence to cut-and-dried rules applied to sculpture or painting. The term is specially used of the reduction of religious forms and dogmas to a system.

FORMAN, SIMON (1552-1611). English physician. Born Dec. 30, 1552, he went to the Netherlands about 1580 and there studied medicine. In 1583 he began to practise in London, where he was soon very popular among both rich and poor. At first the authorities would not recognize him, but in 1603 the university of Cambridge granted him a licence to practise. He died Sept. 11, 1611, leaving a number of treatises on medicine and mathematics.

Simon Forman, English physician

FORMATION. In geology, an old term used to denote a group of strata or rock-beds distinguished by common lithological characters. Modern divisions of stratified rocks are based on the fossils enclosed. See Geology.

FORMBY. Urban district and watering place of Lancashire. It is 7 m. S.W. of Southport, on the L.M.S. Rly., and a residential suburb of Liverpool. Near are the Altcar Flats, on which the Waterloo Cup is decided.

Forme. Four pages of type locked up in a chase, making a forme ready for printing

FORME. In printing, a page or number of pages of type, or stereo-plates, arranged, or imposed, for printing and secured, or locked up, in a metal frame which is called a chase. See Printing.

FORMIC ACID (Lat. *formica*, ant). The lowest in the important series of fatty acids. Its chemical formula is $\text{CH}_3\text{CO}_2\text{H}$. It was first obtained by John Ray in 1670 by distilling red ants with water. Formic acid occurs in other animal and vegetable substances, but is now made by various chemical processes. The liquid acid is colourless, and has a pungent, sour taste and odour.

FORMIDABLE. British battleship. She was completed in 1901, and had a displacement of 15,000 tons. She was torpedoed in the English Channel on Jan. 1, 1915. About 600 lives were lost; 71 officers and men were saved.

FORMOSA OR TAIWAN. Island in the W. Pacific Ocean, separated from China by Formosa strait. It has an area of 13,500 sq. m. Of wonderful fertility and great natural beauty, its western side consists of highly cultivated plains; the eastern, of lofty forest-clad mountain ranges. The mountains are inhabited by savage tribes of Malay or Negrito origin, who, since the island was surrendered by China to Japan after the war of 1894-95, are being brought into subjection. The western half is inhabited by Chinese agricultural and industrial settlers and by Japanese. Pop. 3,994,236.

Formosa. Natives of Karenka on the beach. They are of Malay origin and are half savage

The chief products are rice, tea, sugar, salt, rattans, sweet potatoes, hemp, jute, indigo, and camphor. The minerals are gold (alluvial), silver, coal, copper, petroleum, and sulphur. Economic timber may be said to be inexhaustible. Formosa is the principal source of the world's camphor supply. The climate is hot, damp, and malarious. Typhoons are frequent. Taihoku is the capital. A rly. runs from Keelung to Hozan. See Japan.

FORMULA (Lat. forma, little form). Prescribed form of anything. In mathematics formulae are the general expressions used in solving problems. The word is most commonly used perhaps in chemistry. A collection of formulae in a book is called a formulaary. Chemical formulae are symbolical representations of the arrangement of the atoms within the molecule, the modes of the formation and decomposition of a compound, or the relation which the allied compounds bear to one another. Modern usage has developed from a system employed by the Swedish chemist Berzelius (q.v.). See Chemistry.

FORRES. Burgh and market town of Moray or Elginshire. It is 12 m. S.W. of Elgin on the L.M.S. Rly. An ancient monolith, named Sueno's stone, is said to have been placed here early in the 10th century. Footwear, woollen goods, and chemical manures are manufactured. Forres is in a sheltered position at the foot of the Cluny Hills, and near by is the Cluny Hill hydropathic. Pop. 4,116.

FORREST, JOHN FORREST, BARON (1847-1918). Australian statesman and explorer. Born near Bunbury, W. Australia, Aug. 22, 1847, he became a state surveyor, 1865, and explored the interior. First premier of W. Australia, 1890-1901, he held several ministerial offices in the Commonwealth. He was knighted in 1891 and in 1918 created a peer, the first Australian so honoured. His title lapsed on his death, Sept. 3, 1918.

FORSTER, HENRY WILLIAM FORSTER, 1ST BARON (b. 1866). British politician. Born Jan. 31, 1866, he was educated at Eton and New College, Oxford. He entered parliament in 1892 as M.P. for Sevenoaks, and was financial secretary to the war office 1915-19. In 1919, when he resigned, he was made a peer. From 1920-25 he was governor-general of Australia.

FORSTER, JOHN (1812-76). British biographer. Born at Newcastle, April 2, 1812, he edited *The Daily News* during 1846. The two works by which he is best known are *The Life and Times of Oliver Goldsmith*, 1848, and *The Life of Dickens*, 1872-74. His collection of MSS., books, and pictures forms the Forster bequest at the S. Kensington Museum. He died Feb. 1, 1876.

John Forster, British historian After C. E. Perugini

FORSTER, WILLIAM EDWARD (1818-86). British politician. Born at Bradpole, Dorset, July 11, 1818, of Quaker parentage, he was Liberal M.P. for Bradford from 1861-86. In 1868 he became vice-president of the council in Gladstone's first ministry. It fell to him to frame and introduce the important Education Act of 1870. He remained in office until 1874, and was from 1880-82 chief secretary for Ireland. He died in London, April 6, 1886. He married, in 1850, Jane Martha, eldest daughter of Dr. Arnold, and he adopted four children, his wife's nephews and nieces, who were known by the name of Arnold-Forster.

FORSYTHIA. Genus of shrubs of the natural order Oleaceae. Natives of Japan and China, they have scattered yellow flowers. The genus is named after William Forsyth, an 18th century gardener.

FORTALEZA. Seaport of Brazil. It stands on an open bay, 350 m. N.W. of Pernambuco, with an anchorage two miles out, cargoes being landed on the beach in surf boats. There is a trade in rubber, cotton, coffee, sugar, etc. Pop. 96,442.

FORT AUGUSTUS. Village of Invernessshire. It is situated at the head of Loch Ness (see illus. p. 340), and is connected with Spean Bridge, 24 m. S., by a branch of the L.M.S. Rly. The fort, built originally in 1716, was purchased by Lord Lovat in 1857, and presented by him, in 1876, to the Benedictines, who made it a monastery. Pop. 1,030.

FORTESCUE, SIR JOHN (c. 1394-1476). English judge and writer. The son of another Sir John Fortescue, he belonged to the Devon family of that name. Born at Norris in Somerset, he was educated at Exeter College, Oxford, and in 1442 was made chief justice of the king's bench. His treatise on the laws of England (*De Laudibus Legum Anglie*) was published after his death.

Sir John Fortescue, English judge After W. Faithorne

FORTESCUE, SIR JOHN WILLIAM (b. 1859). British historian. Born Dec. 28, 1859, a younger son of the 3rd Earl Fortescue, he was educated at Harrow and Trinity College, Cambridge. He is author of the standard *History of the British Army*, in 13 volumes, 1899-1930, and *The Story of a Red Deer*, 1897. He was librarian at Windsor Castle, 1905-26. He received the K.C.V.O in 1926.

FORTESCUE, MISS. Stage name of May Finney, British actress. She made her stage debut as Lady Ella, in *Patience*, at The Opéra Comique, London, April 23, 1881. A notable Celia in *Iolanthe* at The Savoy, 1882, she appeared as Dorothy in *Dan'l Druce*, at The Court, 1884. She played Mary Melrose in *Our*

Boys, at The Strand, 1884, after which date she organized a touring company of her own, which she ran for some years. Other parts played by her were Juliet; Rosalind; Lady Teazle; and the duchess of Strood in *The Gay Lord Quex*.

FORT GEORGE. Village of Invernessshire. It stands on Moray Firth, 12 m. N.E. of Inverness, on the L.M.S. Rly. It was erected after the rebellion of 1745.

FORTH. River of Scotland, which, flowing into the N. Sea, forms as its estuary the Firth of Forth. Formed by the meeting of the hill streams Duehray Water and Avonduh, near Aberfoyle, in Perthshire, the Forth flows through Perthshire, Stirlingshire, and Clackmannanshire, its length as far as Alloa being about 53 m.

The Firth of Forth begins at Alloa, and varies in width from one to 17 m. The chief islands are Inchkeith, Inchcolm, Cramond Island, and the Bass Rock (see illus. p. 205).

Forth Bridge. It has three main piers, the span between each support being 1,710 feet

Leith, Granton, Grangemouth, Alloa, Burntisland, and Methel are the chief harbours and fishing ports. The Firth is spanned at Queensferry by the Forth Railway Bridge, a great cantilever structure (see illus. pp. 301, 338) designed by John Fowler and Benjamin Baker and built 1882-90. It has a length (with approaches) of 8,295 ft. A suspension road bridge at S. Queensferry is under consideration. See Queensferry; Rosyth.

The Forth and Clyde Canal extends from Grangemouth, on the Forth, to Bowling, on the Clyde. It was constructed between 1768-90 at a cost of £330,000, and has a length of 39 m. Since 1807 it has been the property of the Cal. Rly. (now L.M.S.). A ship canal along the same route is proposed.

FORT JAMESON. Settlement in N. Rhodesia. On the Tanganyika plateau, it is about 300 m. N. of Tete by road and 125 m. W. of Lake Nyasa.

FORTRESS. Place erected or adapted for the defence of a country or the protection of an army. The old fortress was a walled city or town with a castle or citadel. The modern one is a place that is protected by guns and defence works skilfully sited round it.

The value of fortresses now lies in the influence they can exert upon the operations of field armies. Only in exceptional cases, such as in narrow straits like the Dardanelles or in sea canals like that of Panama, can ordnance mounted in forts exercise any direct effect upon the movements of the war vessels which decide the issue of a naval war.

Commercial harbours are sometimes fortified as places of refuge for merchant shipping, but safety at sea, rather than in harbour, is the condition needed for the security of the vessels carrying the trade of a community depending upon sea commerce for existence. See Artillery; Citadel.

Miss Fortescue as Julia in the Hunchback

FORTROSE. Burgh and seaport of Ross and Cromarty. It stands on the Moray Firth, 9 m. N.E. of Inverness, on a branch of the L.M.S. Rly. Fortrose was formerly the seat of the bishops of Ross, but the cathedral was destroyed by Cromwell, who built his fort at Inverness with the stones. There is ferry communication with Fort George. Market day, Friday. Pop. 963.

FORT ROSEBERRY. Settlement of N. Rhodesia, about 45 m. W. of Lake Bangweulu. A former settlement of this name was on the Luapula, about 60 m. N.W. of the new township.

FORT SUMTER. Fort in S. Carolina, U.S.A. On an island at the entrance to Charleston harbour, it was bombarded by the Confederates, April 12, 1861, and surrendered the following day, the action immediately leading to the opening of the Civil War.

FORTUNA. In Roman mythology, the goddess of chance or good luck. The most famous seats of her worship were Antium and Praeneste. In art she is represented with a rudder as symbol of her guidance of things, also with a cornucopia as a symbol of the prosperity she brought to mankind.

FORTUNATE ISLES. Alternative name for the Islands of the Blessed, or the Elysian Fields, of early Greek mythology. They were vaguely spoken of as beyond the Pillars of Hercules, i.e. the Straits of Gibraltar. It has been generally accepted that the Canary Isles are the Fortunate Isles of the ancients.

FORTUNE TELLING. Revelation by non-rational processes of what is to befall a person in the future. It was brought from the East across medieval Europe by the gypsies. As a modern superstitious survival it is associated with palmistry, astrology, crystal-gazing, lot-casting by cards or otherwise, and subjective processes.

Under the Vagrancy Act, 1824, any person who undertakes to tell fortunes, or uses any subtle craft, means, or device, by palmistry or otherwise, to deceive and impose upon any person, is liable to imprisonment as a rogue and vagabond. In the United States fortune tellers are usually classed by statute

as disorderly persons, liable to arrest and summary examination. See Crystal; Divination; Palmistry.

FORT WILLIAM. Burgh and tourist resort of Inverness-shire. It stands on the E. shore of Lower Loch Eil, at the foot of Ben Nevis, 65 m. S.W. of Inverness, on a branch of the L.N.E.R. The fort was dismantled in 1860. It is a starting-point for the ascent of

Ben Nevis (q.v.). The water for supplying power to the British Aluminium Company's establishment is brought through the Ben Nevis tunnel, completed in 1930. Pop. 1,913.

FORT WILLIAM. Port and city of Ontario, Canada. It stands at the head of Lake Superior, on the Kaministiquia river, its importance being due to its position between E. and W. Canada. It is 420 m. E.S.E. of Winnipeg, and is served

Forum. Above, reconstruction of the western buildings in the Forum Romanum. The procession is passing the Temple of Castor and Pollux, and beyond are the Basilica Julia and the Temples of Saturn, Vespasian, and Concord. Below, the Forum to-day, with (right) the Arch of Septimius Severus

Photo, Anderson

by the C.P.R. and Canadian National Rlys. A street rly. goes to Port Arthur, 4 m. away. Steamers ply to ports on the Great Lakes and the St. Lawrence. The city has flour mills, iron foundries, and other industries. Pop. 20,541.

FORUM. Among the ancient Romans any open space used for public business. More particularly the term was applied to the open space in Rome, an irregular oblong in shape, lying between the Palatine and Capitoline hills, known as the Forum Romanum. Here the assembly of the people met, and magistrates and others addressed them from the tribunal or rostra. With the growth of the city other fora were added, the Forum Julium by Julius Caesar, the Forum Augustum, and the Forum Pacis, where Vespasian erected a temple of Peace. The Forum Trajanum, erected by the emperor

Trajan, surpassed all others in size and splendour, and remains the greatest monument of Roman architecture

FOSSA or **FOUSSA** (Cryptoprocta lerox). Carnivorous mammal, found only in Madagascar, and placed by most zoologists between the cat and the civet. It is about 5 ft. long.

FOSSE WAY. Early English name for an ancient British highway from Axminster to Lincoln. Incorporated in the Romano-British road system, no part of its 182 m. deviates more than 6 m. from a straight line between these places. It runs through Bath, Cirencester, High Cross, and Leicester.

FOSSIL (Lat. fossilis, dug up). Term applied to traces of plants or animals found in the earth's crust. According to the influences to which they have been subject, and to a large extent according to their age, fossil plants, shells, and bones become altered in constitution, losing some of their chemical constituents and perhaps gaining others by substitution. The passage from wood-fibre into coal matter by the giving off of gases and the retention of a large part of the carbon is a familiar example. Fossils may suffer complete solution, but at the same time some other substance may be deposited from the solvent which preserves the original form and structure. Frequently, however, the fossil is dissolved away, leaving only a mould, an external cast, in the encasing rock.

It was not until the close of the 18th century that it was realized that strata could be "identified by organized fossils." This phrase is due to William Smith, who showed that successive deposits contained successive types of animal remains. Hence, when a sequence has been established by observation, it is possible to determine from the fossil contents the relative age of a deposit. See Geology.

Sir George E. Foster, Canadian statesman
Russell

FOSTER, SIR GEORGE EULAS (b. 1847). Canadian statesman. Born in New Brunswick, Sept. 3, 1847, in 1882 he entered parliament for Kings, New Brunswick, and in 1885

he was minister of marine and fisheries under Sir John Macdonald. He became minister of finance in 1888, and remained in the cabinet until 1896. In 1911 he took

Fossil. 1. Skeleton of Ichthyosaurus intermedius, about 9 ft. long, Lower Lias, Somerset. 2. Slab of Lias with remains of Pentacrinus hiermeri, Württemberg

2. British Museum

office as minister of trade and commerce under Sir Robert Borden. He was made a G.C.M.G. in 1918, and represented Canada at the Peace

Conference in Paris, 1919, and at the Assembly of the League of Nations in 1921 and 1926.

FOSTER, JOHN (1770-1843). British essayist. Born near Halifax, Yorkshire, Sept. 17, 1770, he studied at the Baptist College at Bristol, and was inducted into his first charge at Newcastle-upon-Tyne, 1792, afterwards filling pastorates in Dublin, Cork, Chichester, Downend, and Frome. In 1805 appeared his *Essays*, and in the same year he became one of the principal contributors to *The Eclectic Review*. He died Oct. 15, 1843. His essays, particularly that *On Decision of Character*, are notable.

FOSTER, MYLES BIRKET (1825-99). British artist. Born at N. Shields, Feb. 4, 1825, he illustrated in black and white many poetical publications, and in 1859 turned to water-colour, painting especially English landscapes. He became member of the Royal Water Colour Society in 1861. He died March 27, 1899.

FOTHERINGHAY. Village of Northamptonshire. It stands on the Nene, 4 m. N.E. of Oundle. Few traces remain of its 11th century castle, famous as the scene of the imprisonment, trial, and execution of Mary Queen of Scots, in 1587, and as the birthplace of Richard III in 1452. Pop. 200.

FOUCAULT, LÉON (1819-68). French physicist. Born Sept. 18, 1819, he became physicist to the Paris Observatory, where he constructed various instruments, of which the gyroscope and the polariser which bear his name were the most notable. He is best remembered by "Foucault's pendulum." From the roof of the Panthéon in Paris he hung a pendulum 200 ft. long, free to oscillate in any direction. The pendulum never retraced its path, but always deviated to the right, showing that the floor was moving and the earth rotating. He died Feb. 11, 1868.

Foucault currents are currents induced in solid iron cores by alternating current passing through coils wound thereon, and by rotation in a magnetic field. See *Electricity*.

FOUCHÉ, JOSEPH (1759-1820). French politician. Born near Nantes, May 21, 1759, he became principal of Nantes College in 1790. Throwing in his lot with the Revolution, he sat in the National Convention (1792), became a Jacobin, and vehemently advocated the execution of Louis XVI.

Instrumental in the fall of Robespierre, Fouché occupied various positions in the succeeding government, becoming minister of police in 1799. Under Napoleon he was raised to the senate, and, under the empire, was also minister of the interior. He was made duke of Otranto in 1808 and governor of Illyria in 1813. Under the Bourbons he again became minister of police. He was, however, exiled as a regicide in 1816, and died in Trieste, Dec. 25, 1820.

FOULIS, ROBERT (1707-76). Founder of the Foulis Press, Glasgow. Born at Glasgow, April 20, 1707, he started printer and bookseller in 1741.

He was appointed printer to Glasgow University, and in 1744 took his brother Andrew (1712-76) into partnership, and the business was continued by Robert's son, Andrew (d. 1829). The Foulis Press issued more than 550 vols., reprints of Greek, Latin, and British classics, remarkable for beauty of type, format, and textual accuracy. Pron. Fowls.

Joseph Fouché,
French politician

Robert Foulis,
Scottish publisher
From a medalion by
J. Tassie

FOUNDATION (Lat. fundare, to lay the bottom of, found). Literally, the base of a building, or that upon which a structure rests. It is freely used, however, for a society, such as a college or school, hospital or monastery, which is endowed, and so founded or set up on a permanent basis. The money given for this purpose and the conditions for which the society exists are the foundation, the work of the founder. Permanent charities, such as an almshouse or a hospital, are also known as foundations, as are cathedrals.

FOUNDLING HOSPITAL. Institution originally founded to prevent the murder or exposure of newly born children. One of the most interesting of such institutions was that in London. Its founder, Thomas Coram (q.v.), opened a house in Hatton Garden on March 25, 1741, for the admission of 20 infants. The later building in Guilford Street, Bloomsbury, dated from 1745, when it had 600 inmates. Since 1760 admission has been limited to illegitimate children who have been deserted by the father, but whose mothers can prove previous good character.

The hospital was temporarily transferred to Redhill in 1926, and in 1928 an estate, Ashlyns Hall, near Berkhamsted, was bought by the governors for the erection of a new foundling hospital. The London site was bought by Lord Rothermere for a children's park.

FOUNT. In printing, a term for a supply of type of one size and face, with a distinctive nick. A fount will normally contain a standard number of all the letters of the alphabet, graded in bulk according to the occurrence of the letters in the language in which the type is cast. See *Printing*.

FOUNTAIN (late Lat. fontana). Term applied to any construction for the supply of water, from a simple spring to an elaborate artificial basin with ornamental jets. Traces of the use of fountains have been found among the relics of the Chaldean civilization; in ancient Rome they were fully developed as a means of distributing the water brought to the city by the aqueducts.

The treatment of fountains was at first purely utilitarian. During the Renaissance, however, the ornate fountain was rapidly developed, culminating in the elaborate fountains at Versailles, with their thousands of jets. When the practice of installing a water supply in individual houses was introduced towards the end of the 18th century, utilitarian fountains became rare. But bodies like the Metropolitan Drinking Fountain Association, formed in London in 1859, proved that the demand for this type still exists.

FOUNTAINS ABBEY. Ruined abbey in Yorkshire. It stands near the river Skell, 3 m. S.W. of Ripon, in the grounds of the mansion of Studley Royal, while near is a Jacobean mansion, Fountains Hall. The ruins include those of the church with its tower, the former being 380 ft. long, the chapter house, and the magnificent cloisters (see illus. p. 422). The abbey, a Cistercian house, was begun about 1140, and only completed 200 years later. It was dissolved by Henry VIII. See *Abbey*.

Fountain. Neptune fountain at Bologna,
by Giovanni da Bologna, 1563-67

FOUQUIER-TINVILLE, ANTOINE QUENTIN (1747-95). French Revolutionist. Born at Hérouel, Aisne, and trained for the law, he came to Paris and entered the secret police in 1783. He joined the extremist party in the Revolution, and was appointed by Robespierre public prosecutor of the Revolutionary Tribunal, 1793. He sent men and women of all ages and parties to the guillotine, but in the reaction from the Reign of Terror he himself was convicted and guillotined May 7, 1795.

A. Q. Fougquier-Tinvill,
French Revolutionist
From a sketch

FOURIER, FRANÇOIS CHARLES MARIE (1772-1837). French Socialist. Born at Besançon, April 7, 1772, he set himself to evolve a new social system in a series of works, the chief of which are *Theory of the Four Movements*, 1808, and *The New Industrial World*, 1829. He died Oct. 8, 1837.

Fourier's theory was that the population should be redistributed in a number of new social units, each to consist of 1,500 to 1,800 people, housed in a common building with a square league of land attached, to be industrially complete in itself and self-governing. His ideas were much discussed in the U.S.A. from 1840-50, and several communities were established to put them into practice.

F. C. Fourier,
French Socialist

FOURTEEN POINTS. The conditions stated by President Wilson as those on which the Allies were prepared to make peace with Germany. He outlined them when speaking to Congress on Jan. 11, 1918, and at the end of the year they were accepted as the basis of the peace. They included the evacuation by Germany of all Russian, French, Belgian and other allied territory, the restoration of Poland, freedom of the seas, reduction of armaments, and open diplomacy.

FOURTH ESTATE. Term sometimes applied to the press to emphasize its importance in the state, the three estates of the realm according to the constitution being the lords spiritual, lords temporal, and commons. The term was first used by Edmund Burke.

FOURTH PARTY. Name given about 1880 to a small independent and irresponsible body of Conservative politicians. They were Lord Randolph Churchill, Sir H. D. Wolff, Sir John E. Gorst, and at times A. J. Balfour.

FOWEY. Borough, seaport, market town, and watering place of Cornwall. On the W. shore of the Fowey estuary, 10 m. S.E. of Bodmin, on the G.W.R., it has a fine harbour, is a favourite yachting station, and is largely occupied in pilchard fishing. There is trade in china clay. Fowey is the Troy Town referred to in some of Quiller Couch's stories.

Fountains Abbey. Ruins of the
great Cistercian house near Ripon

Market day, Sat. Pop. 1,982. Pron. Foy.

FOWL (A.S. fugol, bird). Name loosely applied to the various species of the genus *Gallus* of the pheasant family of the zoological

order Gallinae, to which the game birds generally belong. Most of them have handsome plumage, and are provided with strong legs, being better adapted for running than for flight. They range in size from the quail to the turkey, are mixed feeders, and are all valued for purposes of the table. All the many varieties of the domestic fowl are descended from the wild jungle fowl of India. The jungle fowl, which flourishes well in captivity, breeds freely with the domestic varieties, and the hybrids are always fertile. See Andalusian; Brahma; Dorking; Leghorn; Orpington; Plymouth Rock, etc.

FOWLER, SIR JOHN (1817-98). British engineer. Born July 15, 1817, he became a civil engineer and was largely employed in the many railway schemes which accompanied the boom of 1846. The Pinlloe Bridge was built according to his designs in 1860. The same year he was engaged in the construction of the Metropolitan Rly., which was opened Jan. 9, 1863. In 1883, in partnership with Benjamin Baker, he designed the Forth (q.v.) Bridge, which was opened in 1890. For this Fowler, who had been knighted in 1881, was made a baronet. He died Nov. 20, 1898.

FOX. Animal belonging to the genus *Vulpes*. It differs from other dogs in the shape of its skull, and in the fact that the pupil of the eye is elliptical instead of circular. It is of slim build, with long bushy tail and rather long ears. Foxes feed upon small mammals and birds, but also eat insects and fruit, feeding by night and spending the day in burrows, hollow trees, and clefts in rocks. They are found nearly everywhere throughout the northern hemisphere. The common fox (*Vulpes canis*) is reddish-brown in colour, with white beneath. It usually adapts the burrow of the badger or rabbit. The young, usually four or five in number, are born about April.

Fox. Common fox, *Vulpes canis*, emerging from its earth

The fox is valued for its fur, especially that of the black and silver varieties. It is a favourite animal for hunting, while on the other hand it often works havoc in the game preserve and the poultry yard. The breeding of foxes for their fur is a considerable industry in Canada and elsewhere. See Fox Hunting.

The fox is valued for its fur, especially that of the black and silver varieties. It is a favourite animal for hunting, while on the other hand it often works havoc in the game preserve and the poultry yard. The breeding of foxes for their fur is a considerable industry in Canada and elsewhere. See Fox Hunting.

FOX. Channel of N. America. It lies to the N. of Hudson Bay, separating Baffin Island on the E. from Melville Peninsula and Southampton Island on the W. It communicates by Hudson Strait with the Atlantic, and by Fury and Hecla Strait with the Arctic. Luke Fox explored it in 1631. Fox Land is a desolate region in the S.W. of Baffin Island.

Fox Islands is a variant name for the Aleutian Islands (q.v.), which are more specifically confined to the extreme E. group.

FOX, CHARLES JAMES (1749-1806). British statesman. Born in London, Jan. 4, 1749, he was a younger son of Henry Fox, Lord Holland, his mother being a daughter of the duke of Richmond. In 1769 he entered Parliament as M.P. for Midhurst. Fox's career as a

Charles James Fox, British statesman After Reynolds

Whig leader dates from 1775. In 1782 he entered the cabinet of Lord Rockingham as secretary of state, but in a few months the premier died, and he joined Burke and Sheridan in a Whig secession which in 1783 resulted in the coalition between Fox and Lord North, a ministry which resigned after the rejection of Fox's India Bill. In 1784 Fox appeared as an opponent of Pitt's ministry, although on some matters—the impeachment of Hastings, for instance—he was in agreement with Pitt. In 1789 came his famous declaration of welcome to the French Revolution, and in 1791 his long friendship with Burke came to an end on this issue. He declared against the war with France, but by now he had few followers, and after 1797 he ceased for a time to attend parliament. About 1802 Fox returned to public life. He remained in opposition until the death of Pitt in 1806, when he again became a secretary of state, and endeavoured to negotiate peace with France. He died Sept. 13, 1806.

FOX, GEORGE (1624-91). Founder of the Society of Friends (q.v.). He was born at Drayton-in-the-Clay (now Fenny Drayton), Leicestershire, in July, 1624, son of Christopher Fox, a weaver. In 1648 he began to

George Fox, English Quaker

preach in public, adopting the terms "thee" and "thou," opposing many social conventions as well as ecclesiastical formalism, refusing to take oaths, condemning war, and advocating a rigid simplicity of dress. By 1658 communities of his followers were established in all parts of England. Founder and followers were, however, bitterly persecuted. He died Jan. 13, 1691, and was interred in the Friends' Burial Ground, Bunhill Row. Fox's voluminous writings are now seldom read, with the exception of his Journal, first published in 1694.

FOX OR FOXE, RICHARD (c. 1448-1528). English statesman and prelate. Born at Ropesley, Lincs, he entered the service of Henry VII in 1485. He began as the king's secretary, but was soon lord privy seal. Already ordained, and vicar of Stepney, he was made bishop of Exeter in 1487; in 1492 he was translated to Bath and Wells, and in 1494 to Durham. From 1501 until his death, Oct. 5, 1528, he was bishop of Winchester. Fox was Henry's chief adviser, and most of the diplomatic work passed through his hands. His great work was the foundation of Corpus Christi College, Oxford.

FOXES, JOHN (1516-87). English martyr-logist. Born at Boston, Lincs, and educated at Oxford, he was a tutor in the Lucy family at Charlecote, and in the Howard family at Reigate. During Mary's reign he lived on the Continent, publishing in Latin at Strasbourg the first draft of his *Acts and Monuments*, familiarly known as *Foxe's Book of Martyrs*. On Elizabeth's accession Foxe returned to England, was ordained priest, and worked on his *Acts and Monuments*, published in folio by John Daye, 1562-63. He became prebend of Salisbury and vicar of Skipton, 1563. He died April 18, 1587.

FOXGLOVE. Hardy biennial and perennial plants of the order Scrophulariaceae and genus *Digitalis*. Only one is a native of Great Britain, although there are a number of other species, which were introduced from Western Asia and Southern Europe. Their

height is from 2 ft. to 5 ft., and their flowers are purple, pink, white, yellow, or brown. The wild purple foxglove of our lanes is *D. purpurea*. See *Digitalis*; also illus. below.

FOXHOUND. Breed of hound specially maintained for hunting the fox. Of mixed origin, it is generally believed to be descended from the old type of bloodhound and the pointer, with perhaps a dash of the bulldog strain. The present breed is probably not more than 300 years old. The foxhound is notable for its speed and endurance. A good

Foxhound. Hound from the kennels of the Oakley foxhounds

hound should stand about 24 ins. high at the shoulder, but the females are usually 3 ins. shorter. The head should be large and full, the nostrils wide open. The short, rounded shape of the ear is the result of cropping when a puppy. The back and shoulders should be strong and muscular, the hind quarters well formed, and the legs straight. The coat is always parti-coloured.

FOX HUNTING.

English sport. Fox hunting, as carried on in the 20th century, is a comparatively modern sport, being introduced in Leicestershire and Northamptonshire about 1750.

It flourished in these and neighbouring counties, which, owing to the abundance of grass, are specially suited to it, but it spread, also, to other counties where grassland and ploughland abound, and to-day there are Hunts in almost every part of the country. Horses and dogs are bred specially for the sport, and the English horse and the English dog are unrivalled throughout the world. The most famous Hunts include the Quorn, Cottesmore, and Belvoir. Each has a master, and for staff a huntsman, whips and others, with kennels in the centre of its country.

Foxglove. Flower of *Digitalis purpurea*

high. The leaves are rough and flat; the flowers form a soft, cylindrical panicle. It is a valuable meadow grass and of high nutritive value.

FOX TERRIER. Small breed of terrier, formerly used in the hunt for unearthing the fox. To some extent it is still used for this purpose, and is used for ratting. It is deservedly popular as a companion for man and as a house dog. There are two breeds, the smooth and the rough-coated. The former is perhaps the favourite as a companion, but the latter possesses the better hunting instincts. In colour the fox terrier should be black, white and tan. In everything except coat the two varieties of fox terrier are identical.

Fox Terrier. A prize winner in the London Fox Terrier Club's Championship show

FOX TROT. American dance. It originated in a dance, consisting of alternate slow and rapid movements, performed by a music-hall artist. To this he gave the name Fox-trot. It was adopted as a social dance for two, and was brought to France and England early in the 20th century, many variations being introduced. See Dancing.

FOY, MAXIMILIEN SÉBASTIEN (1775-1825). French soldier. He entered the army in 1791 and was soon given a command. Having distinguished himself in Italy, 1801, and against the Austrians, 1806, he was sent by Napoleon to Turkey to assist the sultan. He served right through the Peninsular War and held a command at Waterloo, where he was wounded. Foy, who died Nov. 28, 1825, wrote a History of the Peninsular War, which was published in 1827.

Maximilien Foy,
French soldier

FOYERS. Two cascades near the mouth of the Foyers river, on the E. side of Loch Ness, Inverness-shire. They have long been used for generating electricity.

FOYLE. Lough or inlet between cos. Donegal and Londonderry, into which drains the river Foyle, 16 m. long. There are dangerous shoals on the W. side.

FRACTURE (Lat. fractura). Word meaning breakage, but specially applied to breakages of the bones. These are usually caused by external violence, and are of several kinds. In a simple fracture there is no communication between the seat of fracture and the external air; in a compound fracture the overlying parts are so injured as to bring about this communication. In a comminuted fracture the bone is broken into more than two pieces, and in an impacted fracture the ends of the bones are driven into each other. A fracture which does not completely break the bone, but bends and splits it, is termed a green-stick fracture, and is most often seen in young children, whose bones are soft.

The general treatment consists first in bringing the broken ends into opposition with each other in the normal position and securing them by means of bandages, splints, and, in appropriate cases, plaster of Paris.

FRAGONARD, JEAN HONORÉ (1732-1806). French painter and engraver. Born at Grasse, in Provence, April 5, 1732, he studied under Boncher and Chardin, and, after being received into the Academy in 1765, he abandoned classical painting for the freer style appreciated by the Court. During the Revolution he retired to Grasse, where he completed the five paintings of *The Lover's Progress*, now in the Pierpont Morgan collection and exhibited at the Guildhall in 1902. He died Aug. 2, 1806. Apart from the Grasse pictures, his most famous works are in the Louvre and the Wallace Collection, London.

J. H. Fragonard,
French painter
After Gérard

FRAGSON, HARRY. Stage name of the British comedian Leon Pott (1870-1914). Born at Brixton, he went on the stage and gave imitations of Paulus, a star of the Paris music halls. Meeting with little success in London, he moved to Paris, and after living in poverty made a success with his *Ronde des Petits Cochons*. In 1904 he appeared in pantomime at Drury Lane, where he made a success with his *Love, Love, Whispers of Love*. He was at the height of his popularity when he was murdered by his father. Jan. 1, 1914.

FRAM (Norweg. forward). Three-masted schooner of 402 tons built in 1892 for Nansen's Arctic expedition. She was 117 ft. in length, with triple external planking ranging from 24 ins. to 28 ins. in thickness, and auxiliary

Fram. The polar exploration ship after she had been converted from steam to oil for Amundsen's expedition in 1910

engines driving a screw propeller. Nansen sailed in her in Aug., 1893, and entering the ice at the new Siberia Islands drifted northward. In June, 1895, he left the ship and marched north as far as 86° 13' 6". The Fram returned in safety to Norway, and in 1899 was used by Sverdrup in his exploration of Jones Sound, in the N. of Baffin Bay.

In Aug., 1910, Captain Roald Amundsen (q.v.) left Norway in the Fram, and made his way from Madeira to the Antarctic regions. See Arctic Exploration; Nansen.

FRAMBOESIA or **YAWS** (Fr. framboise, raspberry). Infectious and contagious disease caused by infection with a minute spiral-shaped organism, *Treponema pertenue*, discovered by Castellani in 1905. The disease is almost confined to tropical and sub-tropical regions. It is characterised by the appearance on the face and elsewhere of red raspberry-like papules which may develop into nodules. The disease is rarely fatal, but it is a cause of much sickness. Treatment by injection of salvarsan has been found very effective, and is now widely adopted.

FRAMLINGHAM. Market town of Suffolk. It is a station on the L.N.E.R., 22 m. N.E. of Ipswich and 90 m. N.E. of London. S. Michael's Church contains tombs of some of the Howards, including that of the earl of Surrey, the poet. The castle, a fine ruin, was the stronghold of the Bigods, and later of the Howards, both families holding the earldom of Norfolk, in the lands of which the place lay. Framlingham College is a public school, opened in 1865. Market day, Sat. Pop. 2,400.

FRAMPTON, SIR GEORGE JAMES (1860-1928) British sculptor. He first exhibited at the R.A. in 1884, was elected A.R.A. 1894, and R.A. 1902, and knighted in 1908. As a decorative sculptor he is in the front rank, excelling in polychromatic figure work and architectural skill. Among his works are the bronze memorial to Charles Mitchell. 1898; S. George, 1899; statue of Queen Victoria, Calcutta; Peter Pan in Kensington Gardens, memorial. He died May 21, 1928.

FRANC. French silver coin, the unit of the French decimal monetary system. The name comes from the inscription *Francorum Rex*, king of the Franks, on the obverse of the gold coin issued by John II in 1360. It was

then the equivalent of the livre, and consisted of 20 sols. In 1795 the franc was again established, superseding the livre, and, consisting of 100 centimes, remains the unit of French currency, the standard being the gold piece of 20 francs. The coin has the same name in Belgium and Switzerland. French francs are nominally reckoned at 25 to the £ sterling, but the Great War caused great fluctuations of value. On June 26, 1928, the franc was stabilised at 124.21 to the £ and 25.52 to the dollar. See Coinage.

FRANCE. Country of Europe. Its area is 212,659 sq. m., including the territories restored as a result of the Great War. Lower Alsace, Upper Alsace, and Lorraine are now the depts. of Bas-Rhin, Haut-Rhin and Moselle. Paris is the capital. The pop. in 1928 was estimated at 41,020,000.

The mt. ranges which divide France from Switzerland, Italy, and Spain are the Jura, Alps, and Pyrenees. The Vosges, until the restoration of Alsace and Lorraine, served as a frontier between France and Germany. Another and independent mt. system includes the Cévennes, the mountains of Auvergne, and the Causse. There are ranges of hills in Brittany and Normandy, and the French Ardennes towards the Belgian frontier. The chief rivers are the Loire (the longest), Seine, Garonne, and Rhone.

Agricultural products include wheat, oats, barley, rye, and sugar-beet. France is famous for its wines, the principal districts being in Burgundy, Champagne, and the Medoc (Bordeaux) region. Vast quantities of fruit are produced, including apples for cider, as well as early vegetables and flowers from the S. Silk culture is important. Horse breeding is a national industry. Mineral products include coal, iron, antimony, salt, and potash. Tobacco and matches are state monopolies. There are about 26,000 m. of rly., mostly in private hands. The canals, upwards of 3,000 m., are a valuable auxiliary to the rlys. The roads are excellent.

The land of France corresponds generally, but not accurately, to the Gallia or Gaul (Transalpine) of the Roman Empire. Its name is taken from the Rhineland tribes of Franks who conquered the Latinised Celts of Gaul when the Roman empire was disintegrating at the end of the 5th century.

The Franks maintained as their rulers until the 8th century the Merovingian princes, the descendants of the Frankish chief Clovis. Then the Merovingians were deposed by the family who, as mayors of the palace, had been the effective rulers for half a century; the actual founder of the new Carolingian dynasty being Pepin the Short, son of Charles Martel and father of Charlemagne, who had already been king of the Franks 30 years when he was crowned emperor in Rome (800). His empire was partitioned among the grandsons of the great Charles; from towards the close of the 9th century, the West Franks owed no allegiance to the German branch or to the elected German emperors. The French kingdom had definitely come into being. On the death of the last Carolingian in 987, the nobles elected Hugh Capet king; and his descendants in direct male line ruled as kings of France till 1848 with no actual break except during the period 1792-1815.

For two centuries the great aim of the Capet kings was to add to the land under their own control, at the expense of those controlled by the great feudatories. In this way the advance of

Franc. Left to right, reverse sides of French, Belgian, and Swiss francs, actual size

the royal power was continuous till it met a set-back, the result of a disputed succession, in the 14th century, on the outbreak of the Hundred Years' War with England. Brilliant English victories were followed by an English collapse; but under a half-witted king, Charles VI, France was rent

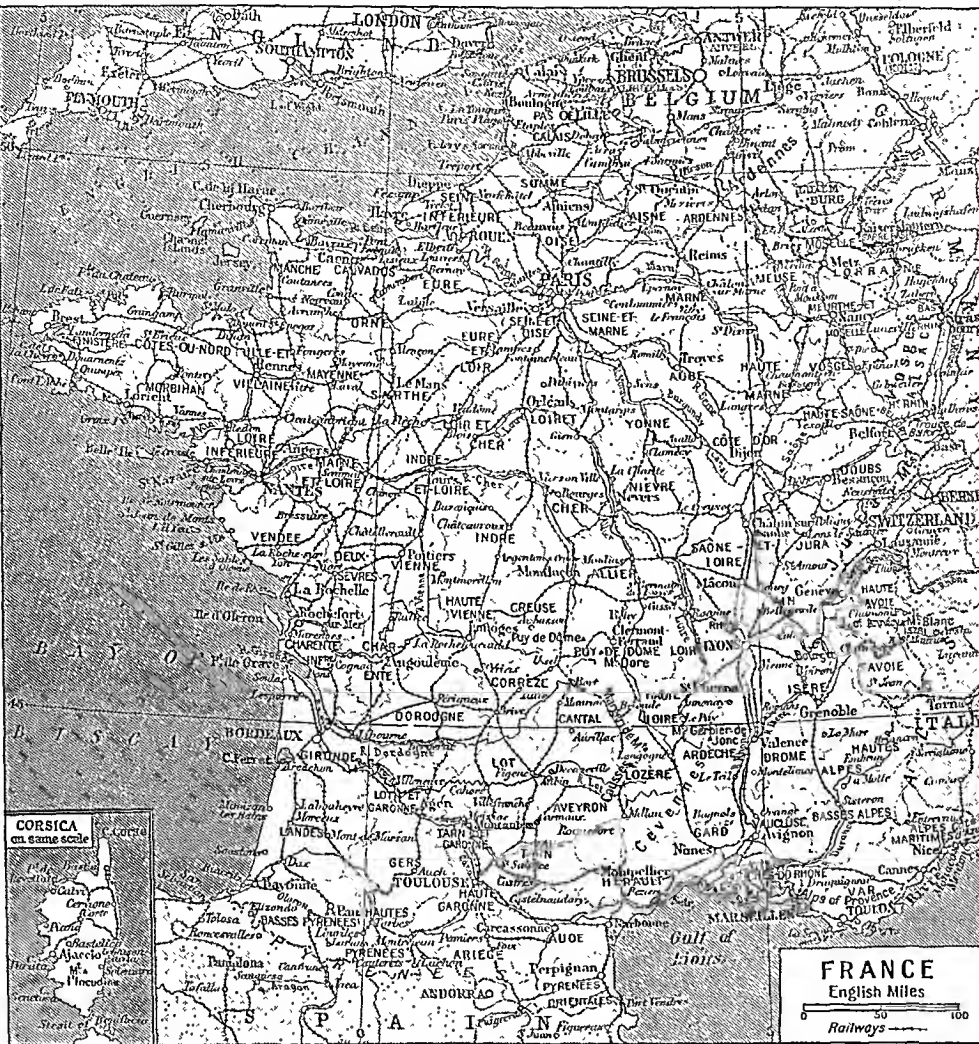

his successor Mazarin. His retirement and death left his master and pupil, Louis XIV, in 1661, the absolute ruler of France, with the best armies and the best generals in Europe in his service. In France Louis was an autocrat; it was his ambition to be also the dictator of Europe.

second Republic, whose president, a nephew of the great Napoleon, made himself emperor in 1852. Eighteen years later the Second Empire crashed in the conflict with Prussia and the Third Republic was born.

For some years a monarchical restoration seemed possible, but monarchists could concentrate upon no one claimant; for 50 years the permanence of the Republic has been an established fact. At the close of the 19th century France, long isolated, entered on an alliance with the Tsardom, and a few years later adjusted her differences with Britain. This was followed by the Great War, from which, after suffering terrible losses, France emerged victorious. The enemy was driven from her soil and Alsace-Lorraine was recovered.

The chief representative of France at the peace negotiations of 1919 was Clemenceau, and the questions that most concerned him and his colleagues were the nature of the security to be given to France and the amount of reparations she could obtain from Germany. Soon after the signature of the treaty Clemenceau resigned (Jan., 1920), and for about two years a succession of premiers struggled with these problems, but without any great success. In 1922, therefore, Raymond Poincaré became premier and a more aggressive policy was adopted. As Germany was in default with her payments, the Ruhr was occupied in Jan., 1923, but this policy did not bring the desired results, and in May, 1924, Poincaré resigned.

With M. Herriot as premier France accepted the Dawes Scheme about reparations, and on Dec. 5, 1925, signed the pact of Locarno, but meanwhile the franc was falling heavily and conditions generally were unsatisfactory. In July, 1926, Poincaré again became premier, also taking charge of the ministry of finance. He stabilised the franc, settled the vexed question of the debt due to Great Britain, and in August, 1928, his foreign minister, M. Briand, signed the peace pact in Paris. In 1929 at the Hague the question of reparations was

France. Map showing the departments, principal railway lines, and the frontier as determined by the Treaty of Versailles 1919. Inset, the island of Corsica

by factions, a junior branch of the royal family having acquired the lordship of Burgundy and the Netherlands. Henry V of England revived the war in 1415, but the English kings lost the last of their French possessions, except Calais, which they held for another century, in 1453; leaving Charles VII and his son Louis XI free to reorganize the supremacy of the crown.

When the era of the Reformation arrived France was divided between orthodox Catholics and Calvinistic Huguenots; the latter were far the fewer, but were led by some of the most powerful of the nobles. Throughout the second half of the 16th century she was torn by the wars of religion. Her conflicts with the Hapsburg monarchs were indecisive; the religious wars were ended for a time by the reconciliation between the Huguenot claimant to the crown, Henry IV, and the Papacy, and by the compromise of the edict of Nantes.

On his death the religious struggle revived practically as an effort on the part of the nobles to recover their ancient independence of the crown. The attempt was gradually crushed by the genius of Richelieu, whose work in that field attained completion under

When Louis died in 1715 his 50 years of almost constant warfare still left France the first military power in Europe; the French court the model which every prince in Europe strove to copy; French culture the leader of European culture; and the French monarchy the absolute controller of the destinies of the French people. Eighty years later the overseas empire, of which the foundations had been laid in his reign, had passed to Britain; the French monarchy had fallen; the French Revolution was convulsing all Europe; and the French Republic was fighting for its life against a world in arms.

Even at that moment, however, the destinies of France were passing into the hands of Napoleon Bonaparte. For 20 years, first as general of the Republic and then as autocrat, Napoleon dominated Europe. When he was finally overwhelmed at Waterloo the Bourbon monarchy was restored with constitutional limitations. It strove to cancel those limitations, and was displaced by the second Revolution of 1830, which set up the Orleans limited monarchy. This in turn fell in the third or February revolution of 1848, setting up the

settled and the arrangements made for the evacuation of the Rhineland by French and British troops. In July, 1929, Poincaré resigned and was succeeded by Briand and then by Tardieu.

GOVERNMENT. The hereditary principle which survives in the British constitution has no place in the French Republic. The head of the state is a President elected for a term of seven years, not by popular vote, but by official groups of electors; his powers and functions closely resemble those of the British monarch. An officially elected Senate corresponds to the House of Lords, in a position of dignity rather than effective power—which is vested in the Chamber of Deputies, elected for a term of four years under a system of proportional representation.

LANGUAGE AND LITERATURE. French is one of the Romance languages; that is, it is based upon the Latin which with wide variations became the popular language of the Celtic Gauls under the Roman empire, borrowing almost nothing from the native German of the Franks. The differences of dialect were very marked for a long time; it was not

till the end of the 12th century that the langue d'oïl of the north definitely gained ascendancy over the langue d'oc of Provence and became the parent of modern French.

In France, as everywhere, there was during the early Middle Ages almost no written literature in the tongue spoken by the people, but plenty of verse "romances" with love and war as their theme. Prose began with the chronicles of the 13th and 14th centuries, of which the most familiar is Froissart's.

But French literature in the full sense was born with the general revival of art and letters which was the culmination of the Italian renaissance. Thus in the 16th century appeared three writers of French prose, each in his own field an author of the first rank, John Calvin, Rabelais, and Montaigne; while Ronsard and the circle of poets known as La Pléiade directed French poetry into the classical lines which culminated in the great writers of the reign of Louis XIV, when all Europe bowed to Boileau as the supreme critic; when also Descartes was acknowledged as the supreme philosopher; though Molière, greatest of comedians, gave to the comic drama of France a flavour all its own. Consult Short History of France, V. Duruy, 1917; History of Modern France, E. Bourgeois, 1919; The Story of France, Paul Van Dyke, 1928; How France is Governed, R. Poincaré, 1915; A Short History of French Literature, G. E. B. Saintsbury, 7th ed. 1917.

FRANCE, ANATOLE (1844-1924). Pen-name of Jacques Anatole Thibault, French author. Born in Paris, April 16, 1844, he early devoted himself to literature, publishing his first book, a study of Alfred de Vigny, in 1868. After producing two volumes of poems in 1873 and 1876, he turned to prose work with the tales, *Jocaste* et *le Chat Maigre*, 1879. Out of the long succession of works of fiction, satire, and criticism, which France has since produced, the following are the most noteworthy: *Le Crime de Sylvestre Bonnard* 1881; *Le Livre de mon Ami*, 1885; *Balthazar* 1889; *Thais*, 1890; *La Vie Littéraire*, a series of reprinted essays, 1888-92; *La Rôtisserie de la Reine Pédauque*, 1893; *Pierre Nozière*, 1899; *Jeanne d'Arc*, 1908; *L'île des Pingouins*, 1908; *Les Dieux ont Soif*, 1912; and *La Révolte des Anges*, 1914.

Anatole France was a staunch supporter of Zola in the Dreyfus affair, and a prominent supporter of socialist, radical, and anti-militarist causes. He was elected a member of the Academy in 1896, and died Oct. 13, 1924.

FRANCESCA DA RIMINI. Heroine of a famous Italian love-story. Giovanni Malatesta of Rimini obtained her in marriage from her father, Guido da Polenta, lord of Ravenna, and sent his brother Paolo to fetch her. Francesca and Paolo fell in love and were caught together and slain by Giovanni, 1285. The story was told by Dante, and has since been used by writers, painters, and musicians.

FRANCHE COMTÉ. District of Europe: in full, the free county of Burgundy. It was first an independent state, then part of the duchy of Burgundy, and finally part of France. Its capital was Dôle. It was conquered by Louis XIV of France, who formally secured it by the Treaty of Nimwegen in 1678. It now forms the depts. of Haute Saône, Jura, and Doubs, and part of the dept. of Ain. See Burgundy.

FRANCHET D'ESPEREY, Louis (b. 1856). French soldier. Born in Algeria, he entered the army in 1876, and saw a good deal of service. During the Great War he was

placed at the head of the Fifth Army in 1914. In 1916 he was given command of a group of armies, and he was on the western front till June, 1918, when he was given supreme command of the Allied armies of the Orient. He received the surrender of Bulgaria Sept. 1918, and was in command in European Turkey until Nov. 1920. He was created a marshal in 1921.

Franchet d'Esperey.
French soldier

idea of freedom was attached, i.e. the free grant of a privilege. It is now used in two narrower senses, one in law and the other in politics. In law, a franchise is a privilege granted by the crown to an individual, or more usually to a corporation, such as the right to hold a market or fair, or rights of fishing. In politics, the franchise is the right to vote, especially at elections of members of parliament.

In the United Kingdom there are two franchises, the parliamentary and the municipal. Before 1918 women could enjoy the latter although not the former, but the differences between them have practically disappeared. The parliamentary franchise, at first confined to a few privileged classes of men, was gradually extended by Acts of 1832, 1867 and 1884. In 1918 certain classes of women were admitted to it, and in 1928 an Act gave the vote to all adults, with very few exceptions. The municipal franchise has been similarly enlarged. See Election: Reform Bill

FRANCIS, SAINT. Italian saint known as Francis (Francesco) of Assisi. Born about 1182 at Assisi, his father was a prosperous cloth merchant. Francesco's youth was marked by a love of pleasure, but soon he began to take a more serious view of life. In 1202 he was taken prisoner in a battle. His release in 1203 was followed by a serious illness and at this time he decided to enter upon a life of sacrifice and service towards the poor and diseased.

At the end of 1209, or more probably in 1210, having already a small group of disciples, he went to Rome and begged Innocent II to confirm a brief rule which he had drawn up, and thus to authorise a new religious order. The pope, after some natural hesitation, consented.

Although head of the order, Francis still devoted himself to missionary work. He made preaching journeys in Italy and in 1214 was in Spain. In 1219 he went to Palestine, and during his absence from Italy his vicars joined with other notables in a policy which tended to bring the Franciscans into line with the older orders. At this news he suddenly returned, but was unable entirely to check the movement, which had considerable support from the papal court. Recognizing his own want of strictly business qualities, he resigned the direction of the order. At La Vernia, in Sept., 1224, he is said to have miraculously received the Stigmata, or five wounds of Christ. He died Oct. 3, 1226, and was canonised in 1228. See Assisi; Franciscans.

Francis de Sales,
French saint

canonised in 1665, and adopted as the patron saint of writers and journalists in 1923.

FRANCIS. Name of two emperors of the Holy Roman Empire. Francis I (1708-65) was duke of Lorraine when, in 1736, he married the empress Maria Theresa. In 1737 he became grand duke of Tuscany and in 1745 was chosen emperor, but owing to the wars with Prussia and the consequent disorder in his realm his rule was never very effective. He died Aug. 18, 1765. From his union with Maria Theresa the Hapsburgs are descended.

Francis II was born in Florence, Feb. 12, 1768. His father, hitherto grand duke of Tuscany, became Roman emperor as Leopold II in 1790, and two years later (March 1, 1792) Francis succeeded him. He carried on a war with France, which resulted in disaster and disruption. In 1804 he took the title of emperor of Austria, thus seeking to unite more closely the various lands over which he really ruled. In 1806 the Holy Roman Empire, of which he was the nominal head, ceased to exist. Later he came to terms with Napoleon, giving him his daughter in marriage; but in 1813 he joined the Allies, and his armies assisted in Napoleon's defeat. He died March 2, 1835. He left his successor, Ferdinand I, and other children, one being the father of the emperor Francis Joseph (q.v.).

FRANCIS. Name of two kings of France. Francis I (1494-1547) was born at Cognac, Sept. 12, 1494, and in 1515 succeeded his

Francis I,
King of France

cousin Louis XII, whose daughter he had married in 1512. He invaded Italy and defeated the duke of Milan at Marignano in 1515. In 1519 he made an unsuccessful bid for the imperial crown, which Charles V obtained, and the famous rivalry of the two monarchs began. In 1525 he again invaded Italy, and was captured at Pavia, Feb. 25. Kept

prisoner at Madrid, he was set free in 1526 on surrendering Burgundy and abandoning various claims in favour of Charles. He died at Rambouillet, March 31, 1547. Francis II (1544-60) was born at Fontainebleau, Jan. 19, 1544, the eldest son of Henry II. He was married to Mary Stuart, Queen of Scots, 1558, and became king on his father's murder in April, 1559. During his short reign the government was conducted by his mother, Catherine de' Medici, and the Guises. He died suddenly in Paris, Dec. 5, 1560.

FRANCIS, SIR PHILIP (1740-1818). Supposed author of *The Letters of Junius* (q.v.). He was born in Dublin, Oct. 22, 1740, entered the public service and rose to a high position in the War Office. A member of the council of Bengal, 1774-81, Francis quarrelled with Warren Hastings, who wounded him in a pistol duel, 1779. He was M.P. for Yarmouth, I.W., 1784; Bletchingley, 1790; and Appleby, 1802; assisted Burke in impeaching Warren Hastings; became an intimate of the Prince Regent; and supported Wilberforce against the slave trade. In 1793 he founded the Society of Friends of the People; and in 1814 married Emma Watkins, whom he encouraged in her belief that he was the author of the *Junius Letters*. He died in London, Dec. 22, 1818.

FRANCIS FERDINAND (1863-1914). Austrian archduke. A son of the archduke Charles Louis and nephew of the emperor Francis Joseph, he was born at Graz, Dec. 18, 1863. After inheriting, in 1875, the wealth and titles of the house of Hapsburg-Este,

Francis Ferdinand,
Austrian archduke

he became, by the suicide of the crown prince Rudolf in 1889, heir-apparent to the crown of Austria-Hungary. On hismorganatic marriage in 1900 to the Countess Sophia Chotek, who was created Princess Hohenberg, he renounced for the children the right of succession, but his own position remained, and he was one of the directors of the policy of Austria-Hungary. His assassination at Sarajevo, June 28, 1914, precipitated the Great War.

FRANCIS JOSEPH I (1830-1916). Emperor of Austria. The eldest son of the archduke Francis and

Francis Joseph,
Emperor of Austria
After L. Horowitz

a grandson of the emperor Francis II, he was born at Vienna, Aug. 18, 1830. In 1848 the shaking throne was occupied by Ferdinand, a childless imbecile, and it was decided that Francis Joseph should take his place. Thereupon he became emperor and reigned from Dec. 2, 1848, until Nov. 21, 1916, one of the longest reigns in the world's history. But its interest is not so much in its length as in its vicissitudes. He saw Austria lose her possessions in Italy, 1859, and, defeated by Prussia, 1866, driven from the German confederation. He saw a hated rule lead to continuous discontent in Hungary and Bohemia. The emperor's private life was even more tragic. His wife Elizabeth, daughter of Maximilian duke of Bavaria, was assassinated at Geneva in 1897; his only son, Rudolf, committed suicide, or was killed, in 1889; his nephew and heir, the archduke Francis Ferdinand, was murdered at Sarajevo, June 28, 1914. He died Nov. 21, 1916, and was succeeded by his grand-nephew, the archduke Charles. His surviving family consisted of two daughters.

The emperor took a real part in ruling his empire, with its warring races and inherited difficulties, and hut for him it is probable that it would have fallen to pieces before it did. See Austria-Hungary.

FRANCISCANS. Order of friars, also known as Friars Minor or Minorites, or Grey Friars, founded in 1209 by S. Francis of Assisi. The first general chapter, in 1219, was attended by upwards of 5,000 members. The rule was solemnly ratified by Honorius III in 1223. A year later the order was established in England, at Canterbury. Following a relaxation of the strict rule of poverty, the order was divided into Conventuals, who lived in large convents under modified conditions; and Observantines, who adhered to the original rule. Known in France as Cordeliers, the Observantines subsequently divided into Observants, Friars Armed, Discalced, Relics and Capuchins. Far the to

Franciscan. Dress of the order

as a result of the efforts of Leo second half of the 13th century, the Conventuals and Capuchins by the wars of the Hapsburg monarchy were united under the religious wars of the 16th century. The order was reconciled between the two branches, the Friars Minor and the Capuchins, by the crown, Henry VIII, under the name of the Poor Clares, and, as a practically as an order. See Francis, Saint.

On his death the Poor Clares, and, as a nobles to recover their. See Francis, Saint. of the crown. The attack on the Poor Clares, Dec. 10, crushed by the genius of Richelieu, there, work in that field attained completion

and at Paris. After teaching for two years in Belgium, he settled in Paris in 1844, and devoted himself to teaching and composition. In 1858 he became organist at the church of S. Clotilde, and in 1872 professor of the organ at the Conservatoire. He composed a large amount of music of varying merit, chiefly the oratorio Les Béatitudes, orchestral works, including Ruth, Redemption, and Rebecca, and chamber music, notably a quintet for piano and strings and a string quartet. He died Nov. 8, 1890.

FRANCONIA (LAND OF THE FRANKS). Name given in the 9th and 10th centuries to one of the great duchies into which Germany was divided, the one founded and inhabited by the Franks. The west-central part of Germany, it was the district through which the Main runs, although a portion of it, including the cities of Mainz, Worms, and Spire, was on the W. side of the Rhine. Its capital was Frankfurt. The Bavarian portion of Franconia is now divided into three parts: Franconia, capital Baireuth; Middle Franconia, capital Ansbach; and Lower Franconia, capital Würzburg. See Bavaria.

FRANCO-PRUSSIAN WAR. Fought in 1870-71 between France and Prussia assisted by Bavaria and other German states. On July 3, 1870, Prince Leopold of Hohenzollern-Sigmaringen was selected for the vacant throne of Spain. Napoleon III feared a Prussianised state on his Spanish frontier, and demanded that the idea should be abandoned. Bismarck knew that Germany was ready for war, and that France was not as ready as Napoleon believed, and by the Ems telegram, which did not truly represent King William's words, sent French feeling to fever point. War was declared on July 19. Both Austria and Italy declined to intervene.

The Germans were organized in three armies; the first or northern one, under Steinmetz; the second, under Prince Frederick Charles; the third or southern army, under the Crown Prince. The first actual conflict of forces larger than reconnoitring parties took place at Sarrebruck on Aug. 2, when the French drove back a few battalions and crossed the frontier.

On Aug. 6 there were two battles, one at Wörth and the other at Spicheren. Both ended in German victories. The whole of Alsace-Lorraine, except the fortresses, was abandoned by France. From their disorganized forces the French formed two new armies, one round Metz and the other at Châlons. On Aug. 18 the former was beaten at Gravelotte and shut up, with its leader Bazaine, within the fortifications of Metz.

The other army under MacMahon went forward to relieve Bazaine, but was met by the Germans and forced back to Sedan. There on Aug. 31 and Sept. 1 a decisive battle was fought. The French army surrendered, Napoleon himself being among the prisoners. Bazaine, his desperate attempt to break out having failed, held off the enemy until Oct. 27, when he surrendered with his army. A month earlier Strasbourg, after a siege, had passed into German hands.

While a republic was being proclaimed the Germans were marching without opposition to Paris, which they invested on Sept. 20. Armies were formed to resist the invaders, but these could make no impression upon their trained forces and thorough organization.

During Jan., 1871, Paris was regularly bombarded, and in addition its inhabitants endured the pangs of hunger. Disease and death were rampant, and the necessity for capitulation became evident. Jules Favre was sent to arrange terms of surrender at Versailles, where William, now crowned as German emperor, had taken up his headquarters. Negotiations were opened on Jan. 24; a

general armistice was proclaimed and the terms of surrender were definitely settled on the 28th. By the peace treaty, France lost Alsace and Lorraine, and paid Germany a war indemnity of £200,000,000.

FRANKFORT-ON-MAIN. City of Germany, called by the Germans Frankfurt. It stands on the Main, the city proper being on the right bank; and on the left bank is Sachsenhausen; while the city also includes Bockenheim and other suburbs. Pop. 467,520.

The interest of Frankfurt is in its buildings and historical associations on the one hand and in its banking and commercial interests on the other. It was the birthplace of Goethe, while from it came the Rothschilds. In the centre of the old town is the Römerberg or market place. Beyond is the comparatively new town, begun in the 14th century. Beyond that are the Anlagen, or promenades, laid out early in the 19th century when the city walls were pulled down. Of the many churches, the cathedral was founded in

Frankfort-on-Main. The Römer or town hall. Above, monument to Gutenberg, inventor of movable type

the 9th century. Much of the present building dates from the 14th century, but it was thoroughly restored in the 19th century after a fire. The town hall, called the Römer, consists of a number of old houses linked together. In it are the election chamber, where the electors met to choose the German king, and the Kaisersaal, where the coronation feast, described by Schiller, was held. Several bridges cross the Main. The most notable is the old bridge dating from the 14th century. A university was founded here in 1914.

Frankfort is served by a network of railway lines, while the river adds to its facilities for transport. It has always been noted as a banking centre, while some of the earliest printing was done here. There is a large trade in leather and other articles.

FRANKFORT-ON-THE-ODER. Town of Germany. It stands on the left bank of the Oder, with the suburb of Damm on the right, and is about 50 m. E. of Berlin. Of its old buildings the chief are the 13th century church of S. Mary and the town hall. It is a port on the Oder, and is also a rly. junction. Pop. 70,884.

FRANKINCENSE (old Fr. franc encens, true incense). Fragrant gum exuded from several trees of the genus Boswellia. It is abundant on the Somali coast and in South Arabia. A cut is made in the tree trunk, and the weeping resin coagulates in breast-shaped globules which are scraped off.

The ceremonial religious use of frankincense is of great antiquity, having been practised by the Egyptians, Persians, Babylonians, and

Assyrians; by the Jews as a constituent of the incense of the sanctuary (Ex. 30, 34), and by the Greeks and Romans.

FRANKING (Fr. franc, free). Free use of the postal service. To the extent of sending ten letters a day and receiving fifteen, it was a privilege granted to both the House of Lords and the House of Commons in 1764. With the introduction of penny postage in 1840 it was abolished, but letters are still franked by the public departments.

FRANKLIN, BENJAMIN (1706-90). American statesman and scientist. The son of an English immigrant, a tallow chandler, Benjamin Franklin was born at Boston, Mass., Jan. 17, 1706, and was apprenticed in 1719 to his eldest brother, a printer. He moved to Philadelphia in 1723; and in 1729 he purchased a weekly journal, *The Pennsylvania Gazette*. He became postmaster of the city in 1737, clerk to the general assembly from 1736-51, and a member from 1751-64.

Benjamin Franklin,
American statesman
After J. H. Duplessis

Meanwhile Franklin had added scientific research to his many activities. About 1746 he began to investigate problems connected with electricity, his work leading to the invention of the lightning conductor in 1749. Earthquakes, meteorology, stoves and chimneys, ocean currents and navigation were all among the many subjects of his inquiries during these years; his experiments with the pouring of oil on stormy water and with agricultural fertilisers showed the versatility of his mind.

In 1757 he went to England for the second time as the agent of Pennsylvania in the colonial dispute with the Pennsylvanian proprietors. In 1762 he went back to America, but 1764 found him again in London in his former capacity. In 1766 he negotiated the alliance between America and France, and was then appointed plenipotentiary in Paris, where he remained throughout the war, negotiating the treaty of peace, finally signed in 1783. He died at Philadelphia, April 17, 1790.

FRANKLIN, SIR JOHN (1786-1847). British explorer. Born at Spilsby, Lincolnshire, April 16, 1786, he entered the navy as a midshipman in 1801, being present at the battle of Copenhagen. He took part, between 1818 and 1827, in three Arctic expeditions. For these services he was promoted captain, knighted, 1829, and awarded various scientific distinctions at home and abroad. From 1836-43 he was governor of Van Dieman's Land (Tasmania). A new British

Sir John Franklin,
British explorer

expedition, consisting of the ships *Erebus* and *Terror*, with Franklin in command, intending to explore the N.W. Passage, sailed from the Thames on May 19, 1845. The vessels were last sighted in Baffin Bay.

In 1857 an expedition was sent out to find him. Two years were spent in search, and in June, 1859, a cairn was found at Point Victory in which was a record of Franklin's expedition down to April 25, 1848, with definite proof that he had discovered the N.W. Passage, and that he had died on June 11, 1847.

FRANKLINITE. Sometimes considered an ore of zinc, but more properly an ore of iron. Its normal composition is peroxide of iron, 67 p.c.; sesquioxide of manganese, 16 p.c.; oxide of zinc, 17 p.c. It occurs in coarse,

granular, massive form and in brilliant crystals frequently of large size. It is brittle and slightly magnetic, but blacker than magnetic iron ore, which it resembles. It is used in the manufacture of Bessemer steel.

FRANKS (late Lat. *franeus*, free). Group of tribes dwelling in Europe in the 3rd century, who founded the kingdom of France, to which they gave their name.

In the 4th century or a little later the Franks were divided into two main branches: the Salian Franks around the mouth of the Rhine and the Riparian Franks higher up the river. They were first enemies and then tributaries of the Romans, and the decay of the Roman empire was their hour. The man to use it was Clovis, descendant of one Chlodio, who had led the Salian Franks into what is now France and had made Tournai his capital. Clovis was baptized as a Christian, and nominally at least the Franks were no longer pagans. His sons continued his career of conquest, and soon Frankland was a great district lying on both sides of the Rhine.

A definite division was made in 817, and soon afterwards the E. Franks became Germans and the W. Franks became French. The boundary between them was not easily drawn; indeed, it may be said to have been a prime cause of a thousand years of intermittent European warfare. France added Celtic elements from the S. and W. to her Franks; Germany added Slavonic ones from the E. to hers, and for this and other reasons the two developed into distinct nations. See Europe; France.

FRANZ JOSEF LAND. Archipelago in the Arctic Ocean, lying N. of Novaya Zemlia and N.E. of Spitsbergen in lat 80° to 82° N. and long. 42° to 64° E. Of about 100 small islands, the chief are Graham Bell Land, Wilezek Land, McClintock Island, Alexandra Land and Crown Prince Rudolf Land. The loftiest point rises to 2,800 ft. Bears, walruses, seals, foxes, and a large variety of birds are found. Discovered by the Austrian explorers, Payer and Weyprecht, in 1872-73, the islands are uninhabited.

FRASCATI. City and summer resort of Italy. It stands on the slopes of a wooded hill, at an elevation of about 1,000 ft., 15 m. by rly. S.E. of Rome. The cathedral, founded in 1700, contains a tablet to the Young Pretender, interred here in 1788. In the neighbourhood are remains of numerous ancient villas, an amphitheatre, a theatre, and a reservoir belonging to the town of Tusculum, which was destroyed in 1191. Between the ruins of the ancient city and Frascati, the villa of Cicero once stood, and on its site some monks in the 11th century built a convent. Frascati is famous for its wine. Pop. 11,115.

FRASER. River of Canada, in British Columbia. Rising in the Yellowhead Pass in two branches, it flows N.W. for the first 160 m. of its 800 m. course, and subsequently almost due S. until it reaches Hope, after which it flows W. to its outlet in the Strait of Georgia at New Westminster. Notable for salmon, it is navigable for some 80 m.

FRASERBURGH. Burgh, seaport and fishing town of Aberdeenshire. On the W. shore of Fraserburgh Bay, and on the S. side of Kinnaird's Head, 47 m. N. of Aberdeen, on the L.N.E.R., it is the chief centre of the Scottish herring fishery. It has a good harbour, with piers and a breakwater. The town cross is noteworthy. The town was named from Sir Alexander Fraser, who, in 1613, made it a burgh. There are remains of the castle of the Frasers. Pop. 10,514.

FRASERVILLE. Town and watering place of Quebec, Canada, known also as Rivière du Loup. It stands on the Rivière

du Loup, near the junction of that river with the St. Lawrence, 110 m. N.E. of Quebec. The town is on the C.N.R. Its industries include pulp mills. Pop. 7,703.

FRAUD (Lat. *fraus*, deceit). English law term, for which no comprehensive definition exists. The essence of the matter is deceit—some statement or suppression of fact in word or deed with intent to deceive. When a man sues on the ground of fraud, or claims property fraudulently withheld from him, his right of action begins to accrue from the time he discovers the fraud, and not from the time it was perpetrated upon him. Some frauds are criminal, but not all. But a conspiracy to defraud is always criminal. If a person has been induced to enter into a contract, or to transfer property by fraud, he can always, on discovering it, have the contract or transfer set aside; but he must be careful to take steps immediately. And he cannot recover his property as against some innocent purchaser who has bought it without notice of the fraud.

FRAUNHOFER, JOSEPH VON (1787-1826). German optician and physicist. Born at Straubing in Bavaria, he was apprenticed to a glass polisher, and eventually set up for himself as a maker of achromatic lenses. He taught himself mathematics and optics, and in 1806 was appointed optician in the mathematical institute at Munich, and later became the manager of another such institute, which he had helped to found. He died June 7, 1826.

FRAUNHOFER LINES. Fraunhofer was responsible for great advances in lenses, while by his invention of the diffraction grating he opened up a new field of development for theoretical optics. But his greatest discovery was that of the Fraunhofer lines. When a beam of sunlight that has been admitted through a thin slit is passed through a prism, so as to be drawn out into a spectrum, and this spectrum is examined through a telescope, it is found to be crossed by a multitude of dark lines. The position of each line corresponds to a definite angle of refraction, and thus to a definite wave-length, and the presence of any given dark line implies that light of that wave-length has failed to reach us, owing generally to absorption by some element in the sun's atmosphere. These lines had been noted by Wollaston, but Fraunhofer discovered them independently, mapping them, and assigning to the seven most prominent the letters A to G, by which they are still known. See Spectroscopy.

FRAZER, SIR JAMES GEORGE (b. 1854). British anthropologist. Born in Glasgow, he was educated privately and early devoted himself to researches into the social institutions, mythology and folklore of mankind in all ages. His main work is embodied in *The Golden Bough*, first published in 1890, of which revised and expanded editions have since appeared. His other books include *Studies in the History of Oriental Religion*, 1906; *The Scope of Social Anthropology*, 1908; *Totemism and Exogamy*, 1910; and *Folklore in the Old Testament*, 1918. He was made professor of social anthropology, Liverpool, 1907. In 1914 Frazer was knighted and in 1925 he received the O.M.

FRECKLES. Rounded or irregular spots of yellowish or brownish pigment in the deeper layers of the epidermis, most common in fair and red-haired persons. Freckles are permanent in some people, but in many they appear in the summer months, following exposure to sun, and disappear in the winter. Persons desirous of avoiding the condition should wear veils in strong sunshine. Freckles may be removed or lessened by application of a dilute solution of perchloride of mercury, but only under medical advice.

FREDERICK I (c. 1124-90). German king and Roman emperor, known from the redness of his beard as Barbarossa. A member of the family of Hohenstaufen, Frederick became duke of Swabia in 1147 and was chosen king in 1152. Three years later Frederick was crowned emperor by the pope at Rome. The eventful years of Frederick's life were spent in Italy, where he came into conflict with the rich cities of Lombardy and the pope. To cow the cities he placed his own officials therein, and in 1162 stormed and humiliated Milan. The cities formed against him the Lombard League, an association blessed by the pope, and the struggle went on with varying fortunes until, on May 29, 1176, the rival armies met at Legnano. Frederick was totally defeated and forced to sue for peace, and in 1177 he signed the treaty of Venice with Alexander III. In 1189 he set out on a crusade, and on June 10, 1190, was accidentally drowned in a river in Cilicia.

FREDERICK II (1194-1250). German king and Roman emperor. Son of the emperor Henry VI and grandson of Frederick I, Frederick was born in Italy, Dec. 26, 1194, heir to the splendid Hohenstaufen inheritance and to that of his mother, Constance, the heiress of Sicily. Educated with more than usual care, his varied abilities earned for him the designation of stupor mundi, the wonder of the world.

In 1212, following an invitation from some of the princes, Frederick left Italy to supplant Otto IV in Germany, and was there crowned king by his partisans. After six years the old struggle between Welf and Hohenstaufen ended in his favour with Otto's death in 1218. In 1220 he was crowned emperor at Rome, and after spending some years in governing Sicily and fighting in Italy he tardily fulfilled his promise to go on crusade. In 1228 he reached the Holy Land, and, having already taken the title of king of Jerusalem, was crowned there as soon as he had obtained possession of the city and its neighbourhood.

The concluding years of Frederick's reign were sad and unfortunate. In 1231, and again somewhat later, his eldest son Henry revolted. About 1239 began his last and greatest quarrel with the Papacy. Excommunication he faced with a smile of contempt, but it was more serious when the pope allied himself with the Lombards and worked upon the turbulent princes of Germany. Struggling to the last against a ring of foes, Frederick died at Fiorentino, Dec. 13, 1250. His splendid tomb is in the cathedral at Palermo.

FREDERICK III (1415-93). German king and Roman emperor. A prince of the house of Hapsburg, Frederick was chosen German king in 1440, and was nominal ruler of the country for over 50 years. His feeble attempts to secure the kingdom of Hungary and Bohemia failed, and he was for a time deprived of Austria, and was unable to check the Turkish inroads. For some time before his death, on Aug. 19, 1493, he had ceased to take any part in the government of the country. Frederick III was the last emperor to be crowned in Rome, 1452.

Frederick,
German emperor

FREDERICK (1831-88). German emperor. Son of the emperor William I, he was born at Potsdam, Oct. 18, 1831. In 1855 he was betrothed to Victoria, princess royal of England, whom he married in 1858. In politics he strongly opposed Bismarck, and in the Austrian war, 1866, he commanded an army at Sadowa. In command of an army in the war of 1870, he fought at Wörth and Sedan, and took part in the siege of Paris.

On the death of his father in March, 1888, he succeeded to the throne, which he had only occupied for ninety-nine days when he died at Potsdam, June 15, 1888. His family consisted of two sons and four daughters. The former were William II and Prince Henry of Prussia. See William II.

FREDERICK. Name of eight kings of Denmark. Frederick III, who reigned 1648-70, was the first hereditary king of Denmark, the others having been elective. Frederick IV, who reigned 1699-1730, was mainly occupied in wars with Sweden. Frederick V ruled 1746-66. Frederick VI, who became regent in 1784 and king in 1808, guided Denmark's affairs during the Napoleonic period. He was also king of Norway until the two countries were separated in 1814. Frederick VII, who lost the duchies of Slesvig and Holstein, was the last king of the Oldenburg dynasty.

Frederick VIII (1843-1912) was a son of Christian IX and a brother of Queen Alexandra. He married a daughter of Charles XV, king of Sweden, and succeeded to the throne in 1906. He died suddenly at Hamburg, Aug. 14, 1912. His eldest son, Christian, became king of Denmark, and another, Charles, became king of Norway.

FREDERICK II (1712-86) called the Great, king of Prussia. Born in Berlin, Jan. 24, 1712, he was the son of king Frederick William I. He was soon at variance with his eccentric father and ran away from his court, only to be captured and sentenced to death by a court martial. The sentence was not carried out, instead the prince, in comparative tranquillity, was able to give time to music and French literature, both of which he loved greatly.

Frederick the Great,
King of Prussia
After C. Vanloo

In 1733 he married a princess of Brunswick, and soon he had started upon his career as a soldier by serving under Prince Eugene and as an author by writing *Anti-Machiavel*, outlining his views on kingship. He also made the acquaintance of Voltaire.

In 1740 the emperor Charles VI was succeeded by his daughter Maria Theresa, who declined to recognize Frederick's claim to Silesia. The Prussian king at once made war. He took Breslau and after a victory at Mollwitz was in possession of Silesia. These reverses induced Maria Theresa to make peace, and in 1742 Prussia's conquest was formally ceded to her. In 1744, alarmed at Austria's successes, Frederick again attacked Maria Theresa, France being his chief ally. He entered Bohemia and captured Prague; other successes followed and in the end, as master of Dresden, he dictated there the peace which confirmed his possession of Silesia.

A period of peace, lasting eleven years, followed and during this time the king was able to carry out many reforms, which added greatly to the wealth and prosperity of the land. This beneficent work was interrupted in 1756 by the outbreak of the Seven Years' War in which Frederick, aided only by Great Britain, was engaged with nearly all Europe. His military genius gained more than one splendid victory, but his enemies were far too strong for him, and his country was reduced to poverty and his people to despair. Nevertheless he fought on until peace was made in 1763.

The king now set about the work of reconstruction with his accustomed vigour. No department of church or state was immune from his interference. He would clap a judge into jail, or appoint a cardinal for his Roman

Catholic subjects, or keep a general in arrest for weeks. He set up loan offices, built an opera house, and put his artillery horses to the plough, in the intervals of instructing ambassadors and publishing poetry. In 1772, by sharing in the partition of Poland, he added more territory to Prussia. Frederick died childless at Sanssouci, Aug. 12, 1786, and was succeeded by his nephew, Frederick William II. Consult *History of Frederick II of Prussia*, T. Carlyle, 6 vols., 1858-65; *Life of Frederick the Great*, N. Young, 1919.

FREDERICK (1707-51). Prince of Wales. The eldest son of George II, he was born Jan. 6, 1707, his father being then crown prince of Hanover. From 1714, when his grandfather became king as George I, until in 1729 he was made prince of Wales, he was called duke of Gloucester. Frederick is important only as the centre of the opposition to George II, and as the father of George III. He died March 20, 1751. In addition to George III he left four sons and two daughters by his wife, Augusta, daughter of Frederick, duke of Saxe-Gotha, who lived until 1772.

Frederick,
Prince of Wales

FREDERICK WILLIAM (1620-1688). Elector of Brandenburg, known as the Great Elector. Born in Berlin, Feb. 16, 1620, the son of the elector George William, he passed much of his youth in the Netherlands, a stay that was responsible for his marriage with Louise, a princess of Orange, in 1646. In 1640 he became elector, and his first duty was to free Brandenburg from the horrors of the Thirty Years' War. He organized the army, founded the navy, welcomed industrious immigrants, started colonies in Africa, and encouraged trade. He had great influence in European affairs, and helped William of Orange's invasion of England in 1688. He died May 9, 1688, and was succeeded by his son Frederick, first king of Prussia.

Frederick William,
Elector of Brandenburg

FREDERICK WILLIAM. Name of four kings of Prussia. Frederick William I (1688-1740), a son of king Frederick I, reigned from 1713 to 1740. He is noted as the collector of giants for his army and the harsh father of Frederick the Great. He died May 31, 1740.

Frederick William II (1744-97) was a grandson of Frederick William I and the nephew and successor of Frederick the Great. He was king from 1786 to 1797, but his chief interest was in promoting the curious creed known as Rosicrucianism rather than in affairs of state. He died Nov. 16, 1797. His eldest son, Frederick William III (1770-1840), who succeeded to the throne, was king when, in 1812, the people rose against France and freed their land from the invader. He took part in the congresses that followed the Napoleonic Wars, and died June 7, 1840. Frederick William IV (1795-1861) reigned from 1840 to 1861. He died Jan. 2, 1861.

Frederick William,
ex-Crown Prince
of Germany

FREDERICK WILLIAM (b. 1882). German prince. The eldest son of William II, he was born May 6, 1882, and in 1888, on his father's accession, became crown prince. When the Great War broke out he was given

a high command and was nominally the head of a group of armies on the west front. On the collapse of Germany in 1918 the crown prince associated himself with his father's abdication and took refuge in Holland. In 1903 he was married to Cecilie, duchess of Mecklenburg. He published his *Memoirs*, 1922.

FREDERICKSBURG. City of Virginia, U.S.A. On the Rappahannock river, 60 m N. of Richmond, it is served by the Potomac, Fredericksburg, and Piedmont, and other rlys. The town was the scene of an important battle in the American Civil War, Dec. 11-15, 1862. This resulted in the defeat of the Federals under Burnside by the Confederates under Robert E. Lee (q.v.), with tremendous losses on both sides. See American Civil War.

FREDERICTON. City and capital of New Brunswick. On the river St. John, 84 m from its mouth, and 68 m. N.N.W. of the city of St. John, it is a station on the C.P.R. and C.N.R., while steamers ply the river to St. John. The chief buildings include those of the provincial legislature and the government offices, Government House, the city hall, the barracks, the Anglican cathedral, and the university of New Brunswick.

Fredericton. Parliament buildings in the capital of New Brunswick

wick. It is the centre of a lumbering district and makes boats, shoes, etc. The city was founded about 1740, and was made the capital in 1788. Its first name was St. Ann's. Pop. 8,114.

FREDERIKSBORG. Palace of Denmark. It is built on a group of small islands in a lake near Hillerød, in the district of Frederiksborg, in Zealand, 21 m. by rly. N.N.W. of Copenhagen. Erected in the 17th century by Christian IV on the site of an older castle, it was restored after a fire in 1859, and now houses a national historical museum. Several Danish monarchs have been crowned in the chapel of the castle.

Frederiksborg, Denmark. Courtyard of the royal palace which was rebuilt after the fire of 1859

FREE CHURCH. Term adopted for the various denominations formerly known as dissenters. They claim to possess entire freedom in choice of doctrine, church government, and the appointment of ministers.

The Free Church Council is an organization in England and Wales the object of which is to federate the various Free Churches. Officially styled the National Council of Evangelical Free Churches, it originated shortly before 1892 in a Free Church Congress held in Manchester, and numerous annual gatherings have been held since. The headquarters are at the Memorial Hall, London, E.C.

FREE CHURCH OF ENGLAND. Title assumed at various times by congregations which have separated from the Church of England on doctrinal or other grounds. It is more especially applied to a small sect which originated about 1844 in Devonshire as a protest against the Oxford Movement. This has

bishops, who derive their succession from Bishop Greig, who seceded from the American Church. See Church of England.

FREE CHURCH OF SCOTLAND.

Name borne by a distinct Presbyterian church in Scotland from 1843 to 1900, and since the latter date by another body of Presbyterians. The original Free Church was founded at what is known as the Disruption of 1843, when members of the Established Church severed themselves from that body over patronage and liberty of individual congregations to reject ministers presented to livings. The Rev Thomas Chalmers (q.v.) was virtually the leader. The present Free Church represents the dissenters from the union of the original Free Church and the United Presbyterian Church in 1900. Few in numbers, it secured by a judgement of the House of Lords the property of the original Free Church, but an Act of Parliament in 1905 altered this position. To-day the Free Church of Scotland is quite a small body, strongest in the Highlands. See Scotland, Church of; United Free Church.

FREE CITY. City that is independent of any save the highest authority. The free cities of the Middle Ages were under the rule of none save the emperor himself, being in practice little republics, each with its own form of government. The modern free city, Danzig (q.v.), is under the protection of the League of Nations only.

The number of the free cities of the Holy Roman Empire varied; in 1521 a list gave 84 of them, after which there was a decrease.

With the changes caused by the French Revolution many of the cities lost their freedom, and in 1803 six only were recognized. They were Hamburg, Lübeck, Bremen, Augsburg, Frankfurt, and Nuremberg. In 1806 Bavaria secured Augsburg and Nuremberg, but the other four lasted until 1866, when Frankfurt, having fought against Prussia, lost its independence. As free cities the other three entered the German empire in 1871, and remained therein after the changes of 1918.

FREEHOLD. Term used in English law for land which is free from all charges save those to the state. The essence of it is that it cannot be held for a definite term of years, however long; it must be indefinite. It is the best kind of tenure which is known to English law.

FREEMAN. One who is free, i.e. one who is not a slave. The distinction between the two classes, bond and free, is an old one. It was found among the Greeks and earlier. In Rome there were two classes of freemen, those who were born free and those who were freed. Among the Teutonic tribes of Europe, including the Anglo-Saxons, the freeman was the one who enjoyed political power.

The freeman of to-day is one who possesses the freedom of a city or borough, e.g. London, this being in former days the right to share in its government and to enjoy certain material privileges. The honorary freedom of a city or borough is granted to persons of distinction.

FREEMAN, EDWARD AUGUSTUS (1823-92). British historian. Born at Harborne, Aug. 2, 1823, he was educated at Oxford, after which he settled down in the country to the career of a writer, making his home from 1860 at Somerleaze, near Wells. His first book was *A History of Architecture*, 1849. He also wrote a great deal for the reviews, especially *The Saturday Review*. Freeman's historical works

place him in the front rank of British historians. The first was an unfinished *History of the Federal Government*, 1863, followed by the *History of the Norman Conquest*, 6 vols., 1867-99. In 1884 Freeman was appointed regius professor of modern history at Oxford, but his health was bad, and he died at Alicante, Spain, March 16, 1892.

FREEMASON. Member of an ancient and extensive secret order or society. The oldest masonic records in the British Isles are in Scotland. Edinburgh Lodge, No. 1, the oldest Scottish lodge, possesses record books from 1599, but these do not record the beginnings of that ancient organization. The first freemason to be initiated on English soil, so far as the records show, was Sir Robert Moray, who was also one of the founders and first president of the Royal Society. He was initiated at Newcastle-upon-Tyne, May 20, 1641. The organization of the grand lodge of England was effected June 24, 1717, by the union of four lodges then meeting in London. The grand lodge of Ireland was formed in 1729, and the grand lodge of Scotland in 1736.

In the grand lodge of England two offices only are elective, viz. grand master and grand treasurer, the remaining offices being in the appointment of the grand master, a similar custom pertaining to the grand lodges of Ireland and Scotland.

Freemasonry the world over is noted for its benevolent activities. In England there are three well-known institutions, viz. the Royal Masonic Institution for Girls, founded in 1788, which has a senior school at Clapham Junction, with a junior school and convalescent home at Weybridge, opened in Aug., 1918, with nearly 800 girls receiving benefits; the Royal Masonic Institution for Boys at Bushey, Herts, founded in 1798, with nearly 900 boys receiving benefits; and the Royal Masonic Benevolent Institution for Aged Freemasons and the Widows of Freemasons at Croydon, which has nearly 15,500 annuitants on its register. The British headquarters are in Great Queen Street, Kingsway, London, where in 1930 the Masonic Peace Memorial was being erected.

In 1928 it was estimated that there were 4,400,000 freemasons in the world. Of these England and Wales have 322,000, Scotland 90,000, and Ireland 50,000. The U.S.A. has 3,270,000, and Canada 195,000.

FREE PORT. Port at which no customs or other duties are charged on goods. In the Middle Ages there were a number of these ports, some being in Italy, others in Germany and elsewhere. Their existence made it much easier for merchants to exchange their wares than would have been the case if duties had to be paid before this could be done. A modern substitute for the free port is the bonded warehouse system, although some free ports still exist, e.g. Hong Kong and Singapore. In other cases a free port and an unfree one are side by side in the same seaport. Thus Hamburg and Copenhagen have each a free port, as well as the ordinary one for the import of goods. The free ports of modern China are such in a different sense; they are ports open to foreign trade.

FREESIA. Small genus (two species only) of bulbous herbs of the natural order Iridaceae. They are natives of the Cape of Good Hope. They have long, narrow, grass-like leaves and large funnel-shaped white or yellow flowers. *F. leichlinii* has yellow or cream-coloured flowers, and *F. refracta* pure white blossoms, marked with violet lines and sweetly scented.

Freesia. Funnel-shaped flowers of this bulb
Courtesy of
Sutton & Sons

FREESTONE. Sedimentary rock, usually sandstone, but sometimes limestone, which can be easily worked with the chisel and lacks the usual tendency to split along certain planes. Freestone is extensively used in architecture for mouldings.

FREETHOUGHT. Belief of one who is free from conventional authority in religion; a rationalist. It may be regarded as a scientific label for the attitude of mind which challenges all demands for belief on grounds of traditional or documentary authority. Broadly considered, this attitude reacts in the same way against historical and other propositions as against religious dogmas and narratives; but inasmuch as the latter have always made the most menacing claim to uncritical acceptance, it is to the critical refusal of acceptance in their case that the term has always been commonly applied.

Freetown, Sierra Leone. The sea front and harbour of this West African port and coaling station

FREETOWN. Port, coaling station, and capital of Sierra Leone, British W. Africa. On the Sierra Leone river, at the N.W. end of the Sierra Leone peninsula, it was founded as Granville town in 1788 as a residence for freed African slaves. It has an excellent harbour, which is connected by a narrow-gauge rly. with the interior. The town has a cathedral. Pop. 44,142. See Sierra Leone.

FREE TRADE. In general, the absence of restrictions of any kind on trade. In modern speech it refers particularly to the system by which goods are allowed to enter one country from another country without paying customs duty for the protection of home producers.

Concisely stated, the free trade theory is that the prosperity of Great Britain and the unity of the British Empire are best advanced by leaving the ports of the United Kingdom open to the goods and the shipping of all the world, subject only to such charges as may be imposed for revenue purposes, and to such measures as may be necessary to guard the country against injury at the hands of an actual or a potential enemy. That a similar proposition is true for other countries most of them have denied. See Safeguarding; Tariff Reform.

FREE WILL. Psychologically, the theory that men's actions are not dependent on any external force, but are the result of conscious motives operating from within. Metaphysically, free will is the power of acting independently of any cause whatever, external or internal—the capacity of willing or not willing the same thing at the same time. The existence of free will (metaphysically) is denied by determinism, affirmed by indeterminism. See Arminianism; Calvin, John.

FREEZING POINT. Temperature at which a liquid assumes the solid form. The freezing point of water is one of the fixed points on the thermometric scale (0° C., 32° F.). Liquids may be divided into two classes as regards freezing; water is an example of the liquids which undergo crystalline solidification in an abrupt change to the solid state. On the other hand, molten glass undergoes

"amorphous" solidification; as the temperature falls the glass becomes viscous, then gradually hardens into a solid. The second class of liquids can hardly be said to have a definite freezing point.

In the first type the freezing point is not constant, but varies under pressure. Water expands when it freezes, and the effect of pressure is to lower the freezing point. Paraffin wax, on the other hand, contracts in freezing, and here the effect of pressure is to raise the freezing point. The freezing point of a liquid is lowered by the presence of a salt dissolved in it. A temperature of -20° C. can be reached in this way with a mixture of snow and common salt, but by the use of other salts which dissolve with greater absorption of heat much lower temperatures can be obtained. Such a mixture is called a freezing mixture. See Heat; Temperature.

FREIBURG-IM-BREISGAU. Town of Baden, Germany. It stands on the Dreisau, near the western borders of the Black Forest, 40 m. S. of Strasbourg. The Gothic cathedral, known as the minster, is one of the most complete of its kind, and its tower is celebrated for its delicate beauty of outline. The university, founded in 1455, has an excellent library. There are a fine archbishop's palace, ducal palace, and merchants' house, and spacious botanical gardens. The town has manufactures of textiles and carries on a trade in wine and timber. Pop. 90,475.

FREMANTLE. Seaport of W. Australia. At the mouth of the Swan river, 12 m. S.W. of Perth, with which it has rly. and river communication, it has a deep and well-equipped harbour, and is a port of call for European mail boats. Among the chief buildings are a town hall and public library. Pop. 31,983.

FREMANTLE, SIR SYDNEY ROBERT (b. 1867). British sailor. The eldest son of Sir E. R. Fremantle, an admiral, he was born Nov. 16, 1867. In 1881 he entered the navy, and in 1903 became a captain. In 1915 he served in the Dardanelles, being in command of the Russell when she was sunk. Afterwards he was made deputy chief of the naval staff, from which he was transferred in 1919 to command a battle squadron of the Atlantic Fleet. He was in command at Portsmouth, 1923-26, and was knighted in 1919.

Sir Sydney R. Fremantle, British sailor Russell

FREMONT, JOHN CHARLES (1813-90). American explorer. Of French extraction, he was born at Savannah, Georgia, Jan. 21, 1813. From 1842-54 he explored Oregon, California, and New Mexico, in which states he made rly. surveys and did much to open up the far west to settlers. A senator in 1850, he was nominated Republican candidate for the presidency in 1856, but his anti-slavery sentiments angered the Southern states and he was defeated by Buchanan. He served in the Civil War. The rly. crisis of 1873 ruined him financially, but he was governor of the territory of Arizona, 1878-82. He died in New York, July 13, 1890. After him is named Fremont's Peak, in the Rocky Mts., in Wyoming, 13,790 ft. high, which he ascended in 1842. Fremont's Pass is in Colorado in the Rocky Mts.

FRENCH. River of Ontario, Canada. Rising in Lake Nipissing, it flows nearly due W. to Georgian Bay, Huron Lake. Its length is 60 m., and it forms part of the scheme to connect this lake with the St. Lawrence river. See Georgian Bay.

French. Family name of the earl of Ypres (q.v.). The first holder of the title was the famous soldier Sir John D. P. French.

FRENCH REVOLUTION. Name given to the period of upheaval in France, usually reckoned as beginning with the meeting of the States-General in 1789 and closing with the establishment of the Directory in October, 1795. Its ideal was set out in the words Liberty, Equality, Fraternity.

In 1788 drastic reform in France was a sheer necessity. The political system was an uncompromising absolutism which allowed the people no share whatever in the government. The king ruled through ministers whom he appointed and dismissed at his pleasure. Socially the people were divided into rigid castes, forming primarily three groups, noblesse, clergy, and commons. In the towns there was a middle class and a working class. In the country districts the peasants were virtually the serfs of the landed proprietors. Noblesse and clergy were exempt from taxation. Individual liberty did not exist.

Under these conditions the States-General, which had not met since 1614, was summoned and met in May, 1789. The third estate at once asserted itself, declared itself a national assembly, and was recognized as such by the king. The people of Paris showed their sympathies with the new order, and on July 14 a mob destroyed the Bastille. This was the signal for revolutionary movement all over the country, with the tricolour as its emblem.

The national assembly went on with its work. All privileges were abolished, and, in order to frame a new constitution, its members declared themselves a constituent assembly. Many of the nobles, realizing that force was useless against a nation in arms, fled from the country, while the more ardent spirits, wishing reform to move even more rapidly, formed the Jacobin Club, from which sprang similar societies all over the country.

In April, 1791, Mirabeau, the one man who might have prevented the excesses of the extremists, died, and soon afterwards the king and queen fled from Paris. They reached Varennes, where they were stopped and brought back. A Constitution, with the king with limited powers at its head, was adopted, and a legislative assembly was called. In this the chief parties were the Feuillants or Constitutionalists, the Girondins, and the Jacobins or extreme republicans.

A threat of interference in the interests of the king had already been received from the Austrian Emperor and the king of Prussia, but it had been withdrawn before the zeal of the revolutionaries compelled France to declare war on Austria in March, 1792. During the ensuing excitement the Jacobins took control of the government, and under their direction military reverses gave way to military successes, of which the victory at Valmy was the first.

The National Convention was the next experiment in government. This abolished the monarchy and declared France a republic. Liberation was promised to all oppressed peoples, and on January 21, 1793, Louis XVI was beheaded. After that the reign of terror began. The Committee of Public Safety, with Robespierre as its leading spirit, sent aristocrats to the guillotine by the hundred. In October, 1793, Marie Antoinette suffered the same fate. The revolutionaries then turned upon one another, and the execution of Danton, on April 5, 1794, was followed on July 28 by that of Robespierre. This marked the end of the Reign of Terror. The next change was the establishment of a Directory. See France.

FRENHAM. Village of Surrey, 3½ m. S. of Farnham. The larger of its two lakes covers 90 acres and is visited for boating and fishing. The church of S. Mary, restored in 1866, is interesting, parts of it being Early English. Frenham Common is a large open space, used by the military. Pop., parish, 3,971.

FRERE, SIR HENRY BARTLE EDWARD (1815-84). British administrator. Born at Clydach, Brecknockshire, March 29, 1815, he entered the Bombay civil service in 1834. For his services during the Mutiny he received the thanks of both Houses of Parliament and was knighted. He was governor of Bombay from 1862-67. In 1877 he was appointed governor of the Cape and high commissioner of native affairs in S. Africa, with a view to the

Sir Bartle Frere, British administrator

confederation of the S. African colonies, but his policy was not acceptable to the Liberals, and he was recalled in 1880. He died May 29, 1884, and was buried in S. Paul's. There is a monument to him on the Thames Embankment, London.

Frere Town, in Kenya Colony, opposite Mombasa, was named after him.

FRESCO (Ital. fresh). Method of painting in water colour upon fresh mortar. It was the favourite process of mural decoration before the introduction of oil painting. The plaster must be fresh in order to absorb the colour, and since it dries rapidly, the artist must work with great dexterity, decision, and speed. The wall must be free of saltpetre, and only such colours can be employed as are not affected by lime—a limitation which excludes certain of the most brilliant greens, reds, and yellows.

The artist first of all drew a cartoon (q.v.), and then transferred it piecemeal to as much fresh plaster as he could cover "at a sitting."

The palette was dispensed with because it could not hold enough colours, and pots of different colours were used instead. Though regarded as a process of water-colour painting without agglutinants, size, or white or yolk of egg, was required to fix certain colours. Theoretically, fresco should last as long as the wall which it adorns, but a damp climate is fatal to it. See Painting.

FRESHFIELD, DOUGLAS WILLIAM (b. 1845) British traveller. Born April 27, 1845, he became an ardent mountaineer, and in 1869 was the first to climb Mt. Kasbek (16,545 ft.), in the Caucasus. In 1899 he made an expedition to Sikkim, and journeyed round Kangchenjunga. He travelled in Uganda, Syria, Algiers, Caucasus, Armenia, etc. He was vice-president of the Royal Geographical Society, 1906-13, president 1914-16, and president of the Alpine Club, 1893-95.

Freshfield, a promontory on the coast of King George V Land (q.v.), Antarctica, separating Cook Bay from Deakin Bay, discovered by the Mawson Expedition of 1911-14, was named after him.

FRESHWATER. Watering place of the Isle of Wight. On the river Yar, 1½ m. S.W. of Yarmouth, it is a terminus of the Southern Rly. Its parish church, on the site of an older building, retains a Norman doorway, a 12th century arcade, and a memorial brass of 1390. Lord Tennyson resided at Farringford House, in the neighbourhood, and a monument to him is on High Down. Pop. 3,439.

FRETWORK (O.F. frette, trellis work). Carved woodwork in perforated patterns.

The wood used should be of fine grain, such as satinwood, walnut, lacewood, sycamore, lime, or maple. The strongest is three-ply. The usual thickness is a quarter inch. The chief tools are a saw, drill, and bradawl, a fret-saw board and carving board being also necessary. The former is a piece of ordinary wood with a V-shaped opening at the front which allows the saw to be moved freely. The hull saw, chiefly used, is a three-sided frame of steel or wood, of which the fourth side is formed by the saw, often no thicker than a thread. A fret-machine is an clatoration of the saw, and allows both hands to be free for guidance.

In architecture fretwork is the carved ornament, consisting of intersecting lines in relief, used as ceiling decoration

FREUD, SIGMUND (b. 1856). Austrian scientist. Born at Freiberg, Moravia, May 6, 1856, he was appointed professor of the therapeutics of neurotic diseases at Vienna.

Freud made the discovery that many neurotic affections were due to a conflict between the conscious and the unconscious parts of the mind, the conscious endeavouring to act in conformity with social training, while the unconscious was endeavouring to find an outlet for primitive tendencies suppressed by the patient. By gradually bringing the suppressed material into consciousness so that the patient understood his mental conflict, the symptoms were found to disappear.

For this purpose Freud devised the method known as psychoanalysis, a process most often applied to the investigation of dreams, which Freud considers represent in a symbolic manner the gratification of suppressed wishes. Freud has written many books on his ideas, and most of them have been translated into English. See Dream; Psychoanalysis.

FREYJA. Goddess of love and healing in Norse mythology. Two wild cats drew her chariot, and she could fly in a magic feather skin. Her house in Asgard was Folkvang, where she received the souls of half the slain from Odin.

FREYR OR FREY. Norse god of rain, sunshine, and fruitfulness, especially worshipped in Sweden. Brother of Freyja, his house in Asgard was Alfheim. He possessed the Sword of Victory, but gave this away to win Gerda, a giant maiden, and thus was conquered in the last great fight.

FRIAR (Fr. frère, brother). Term applied to members of the mendicant orders of the Roman Catholic Church. These have included Franciscans, 1209; Dominicans, 1215; Carmelites, 1245; Augustinians, 1256; Servites, 1233; Trinitarians, 1198, and Crutched or Crossed Friars, 1169. See Franciscans, etc.

FRIAR'S CRAG. Hill overlooking Derwentwater, famous for its view. It is on the E. side of the lake, about 1 m. from Keswick. On it is a memorial to Ruskin. See illus. p. 502.

FRICTION (Lat. a rubbing). Resistance offered by one body to motion over another. A body resting on a table requires a certain

force to move it along the surface of the table, and also to keep it moving. The magnitude of this force depends upon two things: (1) the material of which the substances are made, and (2) the normal pressure between the touching surfaces. Friction between two bodies is greatly decreased by the use of lubricants. It is easier to keep a body moving on a surface than it is to start it moving, and it follows that what is known as static friction, i.e. friction at rest, is greater than kinetic friction, or friction of motion. When a wheel or cylinder rolls on a surface, there is resistance to motion at the point of contact, and this is called rolling friction. The friction of liquids and gases is properly called viscosity.

FRIDAY STREET. Beauty spot in Surrey. It is about 4 miles from Dorking, beneath Leith Hill, and consists of a few cottages picturesquely placed near a small lake. In 1929 the Severells estate, which includes Friday Street, was bought for the nation

FRIDESWIDE. English abbess and patron saint of Oxford. Her father, Didan, viceroy of Oxford under Ethelbald, built for her a church at Oxford, in connexion with which she founded a nunnery, and became herself its first abbess. Persecuted by a Mercian noble, she took refuge at Binsey, where she built an oratory, and where she died about 900.

S. Frideswide's nunnery was taken over by Austin Canons in 1004, and suppressed in 1525 by Wolsey, who replaced it by Cardinal College. Frideswide was canonised in 1481, and her festival is still kept at Oxford on Oct. 19, though it disappeared from the English Church calendar at the Reformation.

FRIEDLAND. Town of Prussia. It is situated on the river Alle, 26 m. S.E. of Königsberg, and is famous as the scene of a battle fought June 14, 1807, between the French under Napoleon and the allied Russians and Prussians under Bennigsen. Napoleon's attempt to march on Königsberg was resisted by Bennigsen, who crossed the Alle and engaged Marshal Lannes at Friedland. Ney's advance on Friedland was checked by Russian cavalry, but Victor was hurried to his assistance, and an artillery concentration led to the rout of the Russians, who, pursued by Ney, fled through Friedland and back across the river. The Allies lost 20,000 killed and wounded.

FRIEDRICHSHAFEN. Town of Württemberg, Germany. It stands on the lake of Constance, and consists of two parts, Hofen and Buchhorn. It has a harbour on the lake, built by Frederick I, king of Württemberg. The chief building is the palace.

The town has a meteorological station. Friedrichshafen is a tourist resort, and steamers go from here to various places on the lake. It was known as a Zeppelin depot. Here the machines were put together, and over the lake they made their trials. The building of boats is another industry. Pop. 11,718

FRIENDLY OR TONGA ISLANDS. Group of islands in the S. Pacific Ocean, a British possession. Consisting of three groups of islands—Tongatabu, Haabai, and Vavau—and the outlying islands of Niuatobutabu, Taofahi, and Nuafoa, they lie some 400 m. E. of the Fiji group. They are administered by a British high commissioner, with the assent of the king or queen and native chiefs. The islands are of volcanic and coral formation. The capital is Nukualofa. There is a wireless station at Nukualofa, and a sub-station at Vavau. The Friendly Islands were so named by Cook in 1773, from the courteous behaviour of the inhabitants. Tasman first touched here in 1643. Its area is about 390 sq. m. Pop. 25,918 natives and 1,130 other nationalities.

FRIENDLY SOCIETY. Voluntary association for the mutual relief and maintenance of members in sickness, old age, distress, etc.

Sigmund Freud, Austrian scientist

Fresco, Christ received by two Dominican monks, painted in fresco by Fra Angelico in S. Mark's, Florence

In Great Britain, voluntary associations for the mutual relief and maintenance of members in sickness, old age, unemployment, and other forms of distress were legalised in Great Britain in 1793. An Act of that year permitted an unlimited number of persons to raise funds for their mutual advantage, to make rules and to impose fines. The privileges of the Act were secured when a society obtained from a justice of the peace the confirmation of its rules.

Other legislation followed, and to-day the societies are supervised by the Registrar of Friendly Societies, who is also the Industrial Assurance Commissioner, a government official with staff and offices at 17, North Audley Street, London, W.1. There is an office for Scotland at 19, Horiot Row, Edinburgh.

Registration of friendly societies was formerly voluntary, but since the passing of the Act of 1923 it has been compulsory. An unregistered society that carries on business is liable to a penalty of £50 a day, and to have all its policies treated as illegal. To be registered a society must have at least seven members. The total amount assured on any one life must not exceed £300, where it is by one or more than one society. Societies must make annual returns to the registrar, and must value their assets and liabilities at least once every five years. A registered society can hold land, own property in the names of the trustees, carry on legal proceedings in such names, and take summary proceedings against persons committing offences against its property. It enjoys freedom from income tax. Its members can legally insure for the funeral expenses of their wives and children, and can dispose of sums payable at death up to £100 by written nomination.

The Act of 1923 gave the Industrial Commissioner much more extensive powers than he had enjoyed simply as Registrar of Friendly Societies. His inspection of their accounts became more complete, and in reporting on this, in 1925, he gave various examples of the abuses he had been able to stop.

The societies may be divided into collecting and non-collecting. The former are mainly occupied with industrial insurance, i.e. insurances made by the working classes, the premiums on which are collected weekly or at other short periods by paid agents. Non-collecting societies are the older friendly societies, such as the Manchester Unity of Oddfellows. They do not employ paid collectors. Both classes have formed approved societies to work the health insurance scheme.

FRIESLAND (Dutch, Vriesland). Province of the Netherlands. The Zuider Zee and North Sea form its W. and N. boundaries, and it is contiguous on the E., S.E., and S. with Groningen, Drenthe, and Overijssel; it includes the three islands of Terschelling, Ameland, and Schiermonnikoog. The flat and in parts marshy country is mainly agricultural. The chief town is Leeuwarden (q.v.). The old Frisian dialect prevails. Its area is 1,249 sq. m. Pop. 402,788.

East Friesland is the name of a district in Hanover between Groningen and Oldenburg.

FRIEZE. In architecture, the middle member of the entablature, between the cornice and architrave. The Greek frieze in its simple form was divided into panels or metopes by triglyphs or channelled blocks, the metopes being sometimes sculptured with a floral design, and sometimes, as in the Parthenon, with figures. Different varieties of frieze developed in Roman and Renaissance times,

and when domestic architecture assumed importance the feature was applied both to exterior and interior decoration. Exterior friezes are now mainly confined to public buildings, but modern rooms are frequently decorated with a wall-paper frieze, and occasionally with a frieze pattern in low relief.

FRIGATE (Ital. fregata). Forerunner of the modern light cruiser. A fast vessel of from 25 to 50 guns, she was useful for either the attack or defence of commerce on the high seas, and for scouting duties with the line-of-battle fleets. The first English frigate was the Constant Warwick, designed by Peter Pett

Frigate Bird, Specimen of the larger species found in tropical regions

FRIGATE BIRD (*Fregata aquila*). Sea-fowl related to the gannet and the pelican. It has a long, slender body, ending in a forked tail resembling that of the swallow, and the beak is long and hooked. Found only in the warmer seas, usually far from land, it lives upon the fish that it catches or robs from other sea-fowl.

FRILLED LIZARD (*Chlamydosaurus*). Australian lizard. Measuring nearly a yard in length, it is distinguished by a large membranous frill on either side of the neck. This is usually folded back, but can be erected when the animal is alarmed, apparently for the purpose of frightening its enemies.

Frilled Lizard, *Chlamydosaurus Kingi*, from Australia

FRIMLEY. Urban dist. of Surrey. It stands on the Blackwater, 2 m. S. of Camberley, on the Southern Rly. A farm colony for sailors and soldiers suffering from tuberculosis was organized here in 1920. Bret Harte was buried here. Pop. 13,673.

FRINGE TREE (*Chionanthus*). Genus of shrubs or small trees of the order Oleaceae. Natives of China and N. America, they have large, smooth, magnolia-like leaves, and white, sweet-scented flowers which hang in graceful

Frieze. Example of ancient frieze from Trajan's Forum, Rome

clusters; the corolla is cut into narrow segments, which give it a fringed appearance. *C. virginica* is the American snowdrop tree.

FRINTON-ON-SEA. Urban dist and seaside resort of Essex. It is 2 m. S. of Walton-on-the-Naze, on the L.N.E., and has good bathing facilities and golf links. A model garden town, its roads are wide and planted with trees. Pop. 3,037.

FRIPP, SIR ALFRED DOWNING (1865-1930). British surgeon. Born at Blandford, Sept. 12, 1865, he was educated at the Merchant Taylors' School and qualified as a doctor. For 40 years he was connected with Guy's Hospital, and he was also consulting surgeon to the navy. Fripp served in S. Africa with the Imperial Yeomanry and was knighted in 1903. He died Feb. 25, 1930. Sir Alfred was known as the head of the Ancient Order of Frothblowers (q.v.).

FRISIAN ISLANDS. Chain of islands extending from the coast of North Slesvig and Schleswig to the Zuider Zee. The North Frisian Islands are separated from the mainland by the Watten. The principal members of this group are Sylt and Föhr. The East Frisian Islands form an almost continuous line masking the coast between the mouths of the Ems and Weser. The chief islands are Norderny and Borkum. The West Frisian group, of which the most important islands are Terschelling, Vlieland, and Texel, screens the mouths of the Zuider Zee. Frisian, the original speech of these islands, resembles the older forms of English.

The Frisians were a Teutonic people originally inhabiting the country now covered by the Dutch provinces of Friesland and Groningen and the German district of East Friesland. They were closely connected with the other Low German peoples. Numbers of them were probably associated with the Angles and Saxons in their incursions into Britain in the 4th and 5th centuries. See Netherlands.

FRIT. Name popularly applied to certain small dipterous insects destructive to corn crops. The one generally so named is *Chlorops* frit, a small black fly which sometimes causes havoc among the crops. It is not found in Britain, though there its allied species, *C. taeniopus*, frequently attacks barley.

FRITH, WILLIAM POWELL (1819-1909). British painter. Born at Aldfield, Yorks, Jan. 9, 1819, he studied at Sass's Academy, Bloomsbury, and at the R.A. schools. Founding his style on that of Daniel Maclise, he began to paint historical subjects, his *Malvolio* being hung at the R.A., 1840. He was elected A.R.A. in 1844, and R.A. in 1852. He scored popular successes with *Ramsgate Sands*, 1854; *Derby Day*, 1858; *The Railway Station*, 1862; *Private View* at the R.A., 1881. He died Nov. 2, 1909.

FRITILLARIA. In zoology, the name applied generically to certain Ascidians, commonly called sea squirts, of the free swimming class. In botany it is given to a large genus of Liliaceae. See Snake's-head.

FRITILLARY. Name given to several species of butterfly of the *Argynnis* and allied genera.

Several of these are native in Great Britain. In the spotted or tessellated marking of their upper surface the fritillaries, silver-washed fritillary, a British butterfly. In appearance the flowers of the fritillaria. See Butterfly.

FRIULI. District of Italy, at one time an independent duchy. It lies around the head of the Adriatic and was formerly partly in Austria and partly in Italy. The Isonzo and Tagliamento flow through it, and there was much fighting here during the Great War. The adjective for Friuli is Furlanian. The area is about 3,300 sq. m.; pop., about 700,000.

The district takes its name from the Roman settlement of Forum Julii. Venice secured part of it, while eastern Friuli was added about 1500 to Austria. In 1797 Austria obtained the Venetian portion, which she retained in 1815. In 1866 the new kingdom of Italy was given the part that had previously belonged to Venice. After the Great War Austrian Friuli was claimed by Italy and Yugoslavia, but by the treaty of Rapallo (1920) the whole became Italian. Udine is the capital of the district.

FROBISHER, SIR MARTIN (c. 1535-94). English sailor. Born in Yorkshire, he spent some years in voyages to the Levant and N. Africa. In 1575 he was commissioned by the Muscovy Company to search for the North-West Passage, and set out on June 7, 1576, with two ships, sighted Greenland, and reached Frobisher Bay in N. America. Returning to England, Frobisher repeated the voyage in 1577 as admiral of the company of Cathay. In 1586 he was vice-admiral to Drake's expedition to the W. Indies, and, in command of the *Triumph*, helped to defeat the Armada (1588), being knighted for his gallantry. Mortally wounded in the sea attack against Brest, he died Nov. 22, 1594.

Sir Martin Frobisher
English sailor

FRODSHAM. Market town of Cheshire. It is 10 m. N.E. of Chester, and has a station on the L.M.S. Rly. It has a Norman church, restored in the 19th century. Frodsham Marshes is a low-lying area between the Weaver and the Mersey, which rivers meet near here. Market day, Thurs. Pop. 3,025.

FROEBEL, FRIEDRICH WILHELM AUGUST (1782-1852). German educational reformer. Born at Oberweissbach, April 21, 1782, he studied at Jena, 1801, and at Göttingen, 1811, teaching in the interval. In 1816 he opened a small school at Griesheim, Thuringia, transferred later to Keilhau. His book, *The Education of Man*, appeared in 1826, and he did important work in training teachers at Burgdorf, Switzerland, between 1833-37. He opened his first kindergarten in Blankenburg, near Keilhau, in 1837. He died June 21, 1852.

His theory of children's education is known as Froebel's system. He believed that children should be allowed to develop naturally, in happy and harmonious surroundings. His system lays great stress on the value of play, which is regarded as a spiritual activity, and on giving a free hand to the instinctive sense of rhythm and the natural creativeness of the child mind. The main part of Froebel's theories was put into practice in the kindergarten schools, where the child's senses are developed by such means as clay-modelling, work with colour brushes, mat-plaiting, etc., and the observation and care of natural objects, animals, flowers, etc., help to encourage his finer instincts. See Kindergarten; Montessori.

The Froebel Society was founded to assist in the dissemination of the Froebel system of child education. Its headquarters are at 4, Bloomsbury Square, London, W.C.

FROG. Smooth-skinned member of the order Ecaudata (tailless), of the class Batrachia, and family Ranidae. Nearly 200 species are known.

Frogs can live only in damp places; they are found in all parts of the world, except in New Zealand, Papua, the extreme S. of South America, and the frozen regions. Like all batrachians, frogs pass through a series of metamorphoses. The eggs are deposited in a jelly-like mass in fresh water, and hatch out as tadpoles, consisting of an oval body and a long tail. During this stage they breathe by means of gills. The tail and gills are gradually absorbed, and at the same time the four limbs make their appearance. At the completion of this stage they leave the water and take to a terrestrial life, breathing air by means of lungs. The fore feet are not webbed; the hind ones are partially webbed. The food consists of insects and slugs, which are seized by thrusting out the long, sticky tongue. The winter months are passed in a state of hibernation, usually in the mud of ponds.

Great Britain possesses two species of frogs, of which the common frog (*Rana temporaria*) is found almost everywhere. The edible frog (*R. esculenta*) is found mainly in the eastern counties, and is distinguished by its usually larger size and more mottled appearance, especially on the thighs. On the Continent and in N. America the edible frog is often used for the table, but rarely in Great Britain.

FROG. In engineering, two short lengths of rail spliced together and forming part of a railway crossing. The term is also applied to part of a horse's hoof, and to that part of a soldier's equipment which carries the sword or bayonet.

Frog used in engineering as part of a railway crossing

FROGBIT (*Hydrocharis morsus-ranae*) Floating aquatic herb, of the order Hydrocharitaceae. A native of Europe and N. Asia, it has long-stalked, kidney-shaped leaves, and three-petalled white flowers. It sends out runners which produce new plants, and in autumn bulbs which sink to the bottom of the ponds and ditches in which it lives, where they pass the winter in the mud. In spring they rise to the surface of the pond or ditch and put out leaves.

Frogbit. Bulbs rising to the surface. One has developed into a plant with four leaves

FROG-HOPPER, OR FROTH-FLY. Name popularly given to a large family (Cereopidae) of hemipterous insects. Their larvae may be noticed on plants, where they are covered with froth and are often known as "cuckoo spit." The adult insects are grey or greeny, and leap vigorously if disturbed.

FROGMORE. Residence in Windsor Park. It is within the Home Park, Windsor, 1 m. S.E. of the castle: and was purchased by

Queen Charlotte in 1800. In the grounds are two mausoleums. One contains the remains of the duchess of Kent, mother of Queen

Frog. Left, common frog, *Rana temporaria*; right, edible variety, *R. esculenta*

Victoria. The other, a cruciform structure surmounted by an octagonal lantern, was erected by the queen over the tomb of the Prince Consort. The queen herself was buried here in 1901. The mausoleum is shown each year on Jan. 22, the anniversary of her death.

Frogmouth.

Family of night-flying, insectivorous birds. There are numerous species, distributed over Australia, Malaya, and parts of India. They resemble the nightjars.

FROHMAN, CHARLES (1860-1915). American theatrical manager. Born at Sandusky, Ohio, June 12, 1860, he established himself in 1893 at the Empire Theatre, New York, and later had five other theatres under his control in that city. In 1897 he became lessee of the Duke of York's, London, where he brought out Sir James Barrie's plays, *The Admirable Crichton*, 1903; *Peter Pan*, 1904; *What Every Woman Knows*, 1908; and experimented with a repertory system in 1910, producing plays by Barrie, Bernard Shaw, John Galsworthy, and Granville Barker. He was drowned when the *Lusitania* was torpedoed, on May 7, 1915.

FROISSART, JEAN (c. 1338-e. 1404). A French chronicler. He was born at Valenciennes and probably started to write the first part of his history about 1358. He became secretary to Philippa of Hainault, queen of Edward III of England, in 1361, and while in her service visited the court of David II of Scotland. Later he visited Gascony, N. Italy, and Béarn, and travelled with the knight Espaing de

Lyon, whose stories gave him much picturesque matter for his *Chronicles*, to the brilliant court of Gascony. He paid another visit to England.

The *Chronicles*, in four books, trace the history of the main events in England, Scotland,

Frogmore, Windsor. The royal mausoleum built by Queen Victoria
F. W. Hardie

Ireland, France, Flanders, and Spain, as well as happenings at the papal courts at Rome and Avignon, between 1325 and 1400, and form one of the greatest of medieval historical works. It was translated into English by Lord Berners, 1525.

FROME OR **FROME SELWOOD** Urban dist. and market town of Somerset. It stands on the Frome, 24 m. by rly. S.E. of Bristol on the G.W.R. Brewing, printing, and the manufacture of cloth are the chief occupations, the woollen industry having declined. The parish church is a Decorated building dating from the 14th century, magnificently restored in the 19th.

Louis de Frontenac
Statue by P. Hébert
in the Parliament
Buildings, Quebec

Market day, Wed. Pop. 10,506. Pron. Froom.

FRONTENAC, **LOUIS DE BUADE, COMTE DE** (1620-98). French governor of Canada. He belonged to a noble family of Béarn, and served in the French army with distinction. In 1672 he was sent out to Canada as governor, and held that position until 1682, and again from 1689-98. As a ruler he was successful, but his autocratic temper caused constant quarrels with other officials. Frontenac died at Quebec, Nov. 28, 1698.

FROST. Term used for the formation of ice on ground, plants, etc., sometimes called hoar frost or rime. The formation of hoar frost is due to the condensation of water vapour on surfaces which are themselves at a temperature of less than 32° F. The frost consists of small particles of ice, crystalline in structure, which often form the most variegated patterns. Hoar frost is in reality frozen dew. Black frosts are long-continued severe frosts, generally with absence of hoar or white frost, and are so called because they kill or blacken vegetation. See Ice; Meteorology.

FROST BITE. This is localised gangrene of the tissues produced by exposure to severe cold. The parts most likely to be involved are the fingers and toes, and exposed parts such as the nose and ears. The first sign of frost-bite is a patch of redness with slight swelling and sometimes severe pain. If the exposure continues the part becomes white, hard, shrunken, and waxy-looking, but without pain. Ultimately it becomes black and ulcerated.

Treatment consists in very gradual restoration of circulation in the affected area. The patient should be kept in a cold room, the temperature of which is slowly raised, and the frozen part rubbed with snow or bathed with cold water. If actual gangrene occurs the part must be kept carefully protected and aseptic until a line of separation forms, and the subsequent ulceration heals.

FROTHBLOWERS, ANCIENT ORDER OF. British charitable organization. It was founded by Mr. Bert Temple, a London business man, in Sept., 1924. Members pay a subscription of 5s. A member who enrolls 25 others is a Blaster; a Tornado if he enrolls 100, a Monsoon if he enrolls 500, and a Grand Typhoon if he raises 1,000 new members. The Frothblowers' anthem is "The more we are together." See Frupp, Sir A. D.

Froth-Fly. Variant name of the insect called the frog-hopper (q.v.).

FROUDE, **JAMES ANTHONY** (1818-94). British historian. Born at Dartington, Devon, April 23, 1818, he entered Oriel College, Oxford, afterwards becoming a fellow of Exeter. At Oxford Froude was associated with the Tractarians,

James A. Froude,
British historian

but he never joined them, and later he broke with orthodox religion. He expressed his changed views in *The Nemesis of Faith*, 1848, and resigned his fellowship at Exeter. His *History of England from the Fall of Wolsey to the Spanish Armada* appeared in 1856-70. As pendants to it he wrote *The Divorce of Catherine of Aragon*, 1891; *The Spanish Story of the Armada*, 1892; and *Lectures on the Council of Trent*, 1896. As the sequel to an intimate friendship, Froude was named as Carlyle's executor, and he published some *Reminiscences*, 1881. Mrs. Carlyle's *Letters*, 1822, and *Life*, 1882-84, which gave a markedly unfavourable picture of the relations between Carlyle and his wife.

In 1892 Froude succeeded Edward A. Freeman as professor of modern history at Oxford. He died at Salcombe, Devon, Oct. 20, 1894. His most delightful work is in the four volumes of *Short Studies on Great Subjects*. He also wrote *The Life and Letters of Erasmus*, 1894.

His elder brother, Richard Hurrell Froude (1803-36), was fellow and tutor of Oriel, and brought Newman and Keble together, thus starting the Oxford Movement (q.v.). He died Feb. 28, 1836.

FRUIT (Lat. fructus, enjoying). General term for that part of a plant which contains the seed. Many fruits are edible, and with this the word is chiefly associated—the chief fruits being apples, pears, plums, grapes, currants, peaches, etc. The most common method of preserving fruit is boiling it with sugar until it becomes jam (q.v.). But it may be preserved in other ways. It may be crystallised, the sugar preserving it as in jam; it may be put through a drying process, so that the moisture is entirely evaporated, decay being thus prevented; or it may be hermetically sealed in vessels with syrup or water.

FRUIT PIGEON. Name given vaguely to a number of large coloured pigeons, of the family Treronidae, which feed mainly on fruit. The beak is so adapted that it can swallow fruits whole. Found throughout S. Asia and Australia, these birds do great damage to crops. See Pigeon.

Charles B. Fry,
British athlete
Lafayette

FRY, CHARLES BURGESS (b. 1872). English athlete. Born at Croydon, April 25, 1872, he went to Repton and Oxford, and excelled particularly as a cricketer. He was captain of the XI against Cambridge in 1894, played for Surrey, later for Sussex, and in 1909 for Hampshire. In 1900 he made a total of 3,147 runs, with an average of over 78 per innings. His innings of 232 not out for the Gentlemen v. Players, in 1903, ranks as his best performance. He also gained his blue at football and athletics. For many years Fry held the record for the long jump. He was also an international at Association football.

FRY, ELIZABETH (1780-1845). English prison reformer. Born at Gurney Court, Norwich, May 21, 1780, a daughter of John Gurney, Quaker and banker, she was brought up in

Fruit Pigeon of
Oceania, *Carpophaga oceanica*

Elizabeth Fry,
Prison reformer
After C. R. Leslie

entured surroundings, and married Joseph Fry, another Quaker, in 1800. In 1813 Mrs. Fry paid her first visit to Newgate prison. The horror of the conditions prevailing there determined her to devote herself to improving the lot of the prisoners, especially the females, and the rest of her life was spent in this cause. In 1817 she formed an association for their improvement, and extended her interests to Continental prisons. She died Oct. 12, 1845.

FRY, JOSEPH (1728-87). British manufacturer. Born at Sutton Benger, Wiltshire, he had a good medical practice in Bristol, but his fame rests upon his business enterprises. He founded the business of cocoa and chocolate manufacturers, later the firm of J. S. Fry & Sons, and also became a typefounder. Fry died March 29, 1787.

Like many of his descendants, Fry was a member of the Society of Friends. One of his grandsons was Francis Fry (1803-86), the bibliographer. Sir Theodore Fry (1836-1912), an ironmaster, was M.P. for Darlington from 1890-95; and Lewis Fry (1832-1921), M.P. for Bristol, 1878-92 and 1895-1900.

FRYATT, CHARLES (1872-1916). British sailor. Born Dec. 2, 1872, he entered the service of the G.E.R., being promoted captain in 1913. When the Great War broke out he was in command of the G.E.R. steamer *Brussels*, and helped to maintain the service between Holland and England. On March 3, 1915, he was attacked by a German submarine, and succeeded in ramming it. Bound from Holland to Tilbury on June 23, 1916, he was captured by a German destroyer, tried by a court-martial on July 27, the evidence of his log for March 28 being produced against him, was condemned as a frane-tireur, and shot the same evening.

Charles Fryatt,
British sailor

Fuad,
King of Egypt

FUAD OR AHMED FUAD PASHA (b. 1868). King of Egypt. Born in Cairo, March 26, 1868, he was the youngest son of the khedive Ismail Pasha and brother of the first sultan of Egypt. Hussein Kamil, whom he succeeded Oct. 9, 1917. He was a candidate for the new throne of Albania, but withdrew in order to devote himself to Egyptian interests, and was proclaimed king of Egypt in 1922. See Egypt.

FUCHSIA. Hardy and half-hardy flowering shrubs, of the order Onagraceae. They are natives of Central America, whence they were introduced in 1788. Their colours are all shades and mixtures of white, cream, pink, purple, crimson, and violet. Greenhouse sorts rarely attain a height of more than 2 ft., but in warm open districts, notably Devon and Cornwall, hardy species frequently grow to 10 ft.-12 ft. The shrub takes its name from the German physician and botanist Leonhard Fuchs (1501-66).

FUEGIANS. South American Indian tribes inhabiting Tierra del Fuego. The primitive race are the central Yagans, who use rudo wind-shelters, skin aprons, and mantles. See Tierra del Fuego; also illus. p. 631.

FUEL. Any combustible substance burnt for the sake of the heat evolved in the process. All common fuels contain carbon as their chief constituent,

Fuegians. Indian and his squaw wearing blankets. See p. 630

either alone or in combination with hydrogen (hydrocarbons), and the ultimate result of their complete combustion is the conversion of this carbon into carbon dioxide, the hydrogen being similarly oxidised to water. Fuels may be solid, liquid, or gaseous. Some occur naturally, others are prepared or derived fuels. The most important is coal; other natural solid fuels are lignite, peat, wood, and vegetable materials such as straw. Coke is the most important derived solid fuel. Mineral oil is the chief liquid fuel. As obtained from the earth, it contains a large number of hydrocarbons which differ in volatility, and it is found more profitable to separate these into groups or "fractions," and to use each portion in different ways, than to burn the whole mixture. The distillation of coal and other solid fuels yields oils and gas. Natural gas issuing from the earth is used as a fuel, notably in America.

Pulverised fuel, consisting of powdered coal carried in a stream of air, behaves in many ways like a gaseous fuel; it is commonly used for firing cement-burning kilns, and has been applied to metallurgical furnaces and steam boilers. In 1928 a Blue Star ship employed pulverised coal on a trip to S. America, the first British ship to do so. Since the Great War a Fuel Research Board has been at work in England. There is a fuel research station at East Greenwich, London, S.E.10. See Coal; Coke; Oil, etc.

FUGUE (Fr. from Ital. fuga, flight). Important form of contrapuntal music akin to the round and canon but much more free. The subject is the chief theme, announced by all the voices or parts in turn, but it is called the answer when it has the dominant as its key-centre instead of the tonic. The counter-subject is the counterpoint which accompanies later entries of subject and answer.

Enjiyama. The famous snow-capped mountain of Japan viewed from Omiya village

FUJIYAMA, FUSIYAMA, OR FUJISAN. Mountain peak in Japan, on the island of Honshu. Alt. 12,390 ft. A dormant volcano, with a beautiful snow-capped cone, it occupies a position of splendid isolation 60 m. S.W. of Tokyo. Its crater is nearly 3 m. in circumference and over 500 ft. deep. The sacred mountain of Japan, it is annually visited by thousands of Buddhist

pilgrims. It is frequently portrayed on Japanese pottery, and is a favourite theme with poets and artists. See Cone.

Fulah woman from Timbuctoo

formed in sandy soil, and less commonly in rocks, by passage of lightning. This often penetrates to a depth of many feet, fusing the particles it encounters. The glassy lining often produced in tubes varies in size to more than 2 ins in circumference

FULA (Mandingan, red-dish). Dominant African people in the W. Sudan, the plural being Fulbe and the Hausa name Fulani. Estimated at 8,000,000, and descended from an early admixture of Libyan—if not pre-Libyan—and negro stocks, they are handsome, oval-faced, chestnut-hued, straight-nosed, thin-lipped, and curly-haired. They are now a virile stock, three-fourths Caucasian, dwelling from the Atlantic coast to the Nile valley.

FULGURITE (Lat. fulgur, lightning). Tube

formed in sandy soil, and less commonly in rocks, by passage of lightning. This often penetrates to a depth of many feet, fusing the particles it encounters. The glassy lining often produced in tubes varies in size to more than 2 ins in circumference

Fulham. Courtyard of Fulham Palace, built in the time of Henry VII

FULHAM. Metropolitan borough of London. On the Middlesex side of the Thames, S.E. of Hammersmith it has been a parish since 1631 and a met. bor. since 1899. Its oldest building is Fulham Palace the residence of the bishops of London. A part of the grounds, Bishop's Park, is open to the public. The parish church of All Saints has a 14th century tower. Fulham contains the grounds of the Chelsea and Fulham football clubs, and those of the Hurlingham club. Pop 157,938.

FULHAM WARE. This fine stoneware first produced in 1671 by John Dwight at Fulham was an imitation of china, semi-transparent, with hard, close body of grey colour. The enamel was brilliant, the colours were largely blue and purple, the decorations of flowers and leaves were raised. Marbled pieces were also produced. Dwight gave up in 1746, and was succeeded by White until 1762. The factory is still carried on. In 1888 William De Morgan began the manufacture of quaintly shaped pots and pans in lustre ware.

FULLER, THOMAS (1608-61). English divine and eccles. historian. Born at Aldwinkle, Northants, he held at various times the curacy of S. Benet's, Cambridge, the rectory

of Broadwindsor, Dorset, the curacy of Waltham Abbey, and the rectory of Cranford, Middlesex; but from 1642 till his death depended largely upon his pen for subsistence. His Church History of Britain, a folio of 1,300 pages, was published in 1655, and his History of the Worthies of England was issued in folio in 1662. He died Aug. 16, 1661.

FULLER'S EARTH. Soft, earthy variety of clay, greenish, brownish, or yellow in colour. Chemically a hydrous aluminous silicate, it

Fulgurite. Specimens obtained at Maldonado, Uruguay

falls to powder on immersion in water. It is found in the Lower Green-sand and in Jurassic strata, and gives its name to a stratum extending from Dorset to Gloucestershire. It is used by fullers as a grease absorbent, though to a less extent than formerly, and is employed also in many cleansing preparations and soaps, and in the filtration of mineral oils.

FULLING. Process of cloth finishing also known as milling. The cloth is saturated with soap and water, twisted rope-like, and passed between vertical rollers, the object being to shrink the cloth in the direction of the weft. The wet cloth is then cuttled, i.e. stored in an enclosed space, when it shrinks in the direction of the warp. Fulling is carried out on woollen cloth to be used for overcoats and heavy suits. See Wool.

FULMINATE (Lat. fulminare, to lighten, thunder). Sensitive and violently explosive compound used for the detonation of high explosives. Fulminate of mercury, the chief of these salts, is manufactured by dissolving mercury in strong nitric acid and adding this whilst warm to alcohol, the fulminate being deposited from the solution as fine crystals. Fulminate of mercury is detonated by very moderate friction or percussion, by heating to about 150° C., or by contact with strong sulphuric acid. If unconfined, small quantities burn violently when ignited, but two sheets of paper confine it sufficiently to cause violent detonation. See Detonation; Explosive.

FULTON, ROBERT (1765-1815) American engineer. Born in Pennsylvania, in 1794 he invented various improvements for the canal systems, and two years later went to Paris, where he turned his attention to the adaptation of the steam engine for marine purposes. After a successful experiment in 1803, he constructed in 1807 a larger vessel, the Clermont, in New York, whither he had returned the previous year. This vessel was followed by the steam frigate Fulton, in 1814. He died Feb. 24, 1815. Fulton was the first to apply steam successfully to navigation.

FULWOOD. Urban dist. of Lancashire. It has a station on the L.M.S. Rly. and barracks. It is within the parliamentary borough of Preston. Pop. 6,599.

FUMITORY (Lat. fumus terrae, earth-smoke). Small genus (Fumaria) of annual or perennial herbs of the order Fumariaceae.

Natives of Europe and Asia, they hang on the borders of cultivation. The leaves are much divided into slender segments, and the small flowers are in terminal sprays. Common fumitory (F. officinalis), the best known species, has delicate, much-divided leaves and rosy-purple flowers. See illus. p. 632.

Fulham Ware. Figure of Jupiter by John Dwight. Liverpool Museum

Thomas Fuller, English divine

FUNCHAL. Capital of Madeira, an island in the Atlantic, belonging to Portugal. It stands on Funchal Bay, on the gentle ascent of some hills in the form of an amphitheatre.

Fumitory. Flowers and foliage of *Fumaria officinalis*. See p. 631

A popular winter health resort, it has a cathedral, museum, theatre, casino, meteorological observatory, and wireless station. There is cable communication with Lisbon, Falmouth, and Pernambuco.

The streets, which are steep and narrow, have no wheeled traffic, ox-sleds being used. In the roadstead is a steep black rock crowned by a castle. Pop. 20,844.

FUNDAMENTALISM. Religious movement in the United States which demands the acceptance of the "fundamental" truths of the Christian faith, namely, the virgin birth, the resurrection, the atonement, the miracles and verbal inspiration. It arose about 1910 and has provoked much controversy.

FUNDY, BAY OF. Extension of the N. Atlantic Ocean, dividing Nova Scotia from New Brunswick. It terminates in two branches, the northern known as Chignecto Bay, and the southern as Minas Channel, which leads to Cobequid Bay. From Grand Manan Island, at the entrance, to Cape Chignecto, its length is about 100 m., and its mean breadth 35 m. The chief rivers draining into the bay are the St. John and St. Croix. The bay is remarkable for the great rise and fall of its tides.

FÜNEN. Island of the Baltic Sea (q.v.), forming part of Denmark. It lies between Jutland and Zealand, being separated from the mainland by the Little Belt, and from Zealand by the Great Belt. Area, 1,133 sq. m. Mostly flat, and much indented, it is very fertile. The chief towns are Odense (q.v.), the capital, Svendborg, and Nyborg. Pop. 285,849.

FUNERAL (low Lat. funeralia, things belonging to a funeral). Comprehensive term, at one time written in the plural, for the ceremonies, etc., attending the conveyance of a dead person to grave or tomb. The term obsequies, often used in the same connexion, has not quite the same meaning; funeral means a mournful ceremony, especially the processional part of it; obsequies, a respectful

valediction. Elaborate ceremonial rites attending the disposal of the dead have been observed in all parts of the world from neolithic times to the present day. See Burial; Death.

FUNGUS. Enormous class of cellular cryptogams or flowerless plants. They are characterised by a total absence of chlorophyll and starch. They have no real roots, but the creeping threads (mycelium) which constitute the fungus proper serve the same purpose. For lack of chlorophyll they are unable to decompose the carbonic acid of the atmosphere, and they obtain organized carbon from decaying or living vegetable or animal matter. Those that attack living matter are known as parasitic fungi; those that are content with decaying material are saprophytes.

The forms of fungi are multitudinous, varying from the hard or corky brackets that advertise their attacks on trees, through the mushrooms, toadstools, and puff-balls of the woods and fields, to the minute leaf-moulds, rusts, smuts, and mildews, and to the bacteria. They are all produced by spores, but in some families there is a sexual process before spore production. Some species of fungi—e.g. the mushroom—are edible, but others are highly poisonous. See illus. below.

FUNNY BONE. Popular term for the groove between the olecranon process of the ulna and the internal condyle of the humerus on the inner side of the elbow. The ulnar nerve passes along this groove, and a blow on the nerve at this point produces the familiar sensation of "pins and needles."

FUR. Skin of certain mammals which, after preparation, is worn by men and women

we are told, used the skin of the Nemean lion as a garment.

Furs fell into disuse in Britain during the Stuart period, but a most important event with regard to the trade happened after the Restoration, when Prince Rupert founded a company to trade for furs in Hudson Bay, 1670. From this really dates the commencement of the British fur trade.

The two great fur-producing countries of the world are Canada and Siberia. The colder the country the better the fur, hence the covering of the animals found in the high latitudes of Canada and Russia is particularly thick and warm. From Canada and Siberia come, among others, the sable and American marten, mink, ermine, fisher, red and silver fox, lynx, wolf, beaver, musquash, otter, bear, squirrel, Wolverine, elk, and musk ox; while within the Arctic circle are found the polar bear, white fox, seal, and hair seal. Skunk, raccoon, and opossum come largely from the U.S.A. Australia produces opossum, wallaby, and vast quantities of rabbit; the beautiful chinchilla comes from Peru and Argentina; and Armenia gives its name to the ermine, though its habitat is farther north. Astrakans, slinks, caracul, tigers, sheep, goats, and bears are natives of Central Asia.

London, although its supremacy has been recently challenged by St. Louis, U.S.A., is still the premier fur market of the world, and to London the bulk of the raw skins is consigned. They are lotted and sold at Colledge Hill sale rooms to buyers from all over the world, in Jan., March, and Oct.

HERALDIC FURS. There are two principal furs used in heraldry. Ermine is shown by a white field flecked with black ermine tails. Vair is shown by its representation of a fur of small skins sewn in rows, blue and white skins alternately. See Heraldry.

Furies (Lat. Furiae). In classical mythology, the name under which the Romans knew the Eumenides (q.v.).

FURIOUS. British aircraft carrier. Designed as a cruiser, her design was altered, and she was finished in 1918 as an aircraft carrier. Between 1921-25 she was entirely refitted and her appearance altered. She displaces 19,000 tons, and can steam 32 or 33 knots. The aircraft that bombed the German airship sheds at Tondern, July 19th, 1918, were launched from the deck of the Furious. See Aircraft Carrier; Glorious.

FURKA. Mt. road of Switzerland. It runs between the upper Rhône valley and that of the Reuss to Andermatt. Its maximum height is 7,991 ft.

FURLONG (O.E. furlang, furrow-long) British measure of length, one-eighth of a mile, or 220 yards. The name is derived from the old English furrow length. A square, each side of which was a furrow 220 yds. long contained 10 acres. See Acre.

FURLOUGH (Dutch ver lof, for leave, or oorlof, permission, sanction). Army term designating the absence from duty of N.C.O.'s and men, for periods in excess of six days. It is, usual for approximately a quarter of the strength of regiments to be on furlough on full pay from Oct. 1 to Feb. 1, each man generally being granted a month at a time. A soldier on furlough is not permitted to leave the kingdom, and his pass may be endorsed with the permission to wear civilian clothes.

FURNACE (Lat. fornax, a furnace). Term applied to a structure in which heat is developed or utilised, including those used for steam raising and certain chemical operations. Its most general and important application is to the structures used for the extraction of metals from their ores, or for the refining or working of metals. Modern furnaces may be divided into five types. Hearths, the first type, are very largely used for roasting ores to drive

Fungus. 1. Inky mushroom, *Coprinus atramentarius*. 2. Jew's ear fungus, *Hirneola auricula-judae*. 3. Lawyer's wig mushroom, *Coprinus comatus*. 4. Puff-ball, *Lycoperdon perlatum*. 5. Ivory cap, *Hygrophorus virgineus*. 6. Oyster mushroom, *Pleurotus eousmus*. 7. Orange Elf cap, *Oideia aurantia*. 8. Amethyst mushroom, *Laccaria laccatis*

for warmth. The Assyrians, Greeks, and Romans all made lavish use of furs. The practice is mentioned by Herodotus, and Hercules,

off sulphur, arsenic, or other volatile elements. They are the simplest forms of furnace, consisting, in some cases, of a prepared piece of ground on which the ore is stacked in a heap; more advanced forms are seen in the stall, pit, and kiln. All these are worked by natural draught. In the common blacksmith's hearth and the iron refinery we have a type of hearth worked by forced draught.

The second type of furnace is the shaft, worked by natural or forced draught. These include the iron ore calciner, various kilns, the blast furnace, the cupola and special modifications of the blast furnace. The third type is the reverberatory. The metal being treated in this furnace is not normally in contact with solid fuel, but the heat is caused to reverberate, or to be thrown from the crown or sides of the furnace on to the metal below.

The fourth type is the closed vessel type. It includes the ordinary crucible and muffle furnaces and the retort furnaces as used for the production of zinc. The fifth type is represented by the electrical furnace, which, like other types, assumes various forms. (See Aluminium, and Héroult cell, illus. p. 66.) Furnaces generally consist of two essential portions, an inner one, which contains the metal and in some forms the fuel also, and an outer portion, the purpose of which is to give structural stability to the whole. See Blast Furnace, and illus. p. 264.

FURNES. Town of Belgium, in W. Flanders. It is 16 m. E. of Dunkirk, on the rly. from Dunkirk to Dixmude. In the Great War it was first bombarded by the Germans, Oct. 24-27, 1914, in which month the Allies evacuated it. The French conferred the croix de guerre on it in 1920. Pop. about 8,000.

FURNESS. District in the N.W. of Lancashire. It is detached from the main portion of the county by Morecambe Bay. Its area is 250 sq. m., and it contains large supplies of hematite iron ore. The Furness Rly., which serves the district, is now part of the L.M.S. Rly. system.

FURNESS, CHRISTOPHER FURNES. 1st Baron (1852-1912). British shipowner. Born April 23, 1852, at West Hartlepool, he became a shipbroker in 1876, establishing soon afterwards the Furness line of steamers. In 1885 he went into partnership with Edward Withy, of Hartlepool, the firm being known as Furness, Withy & Co. He was Liberal M.P. for Hartlepool, 1891-95, and 1900-10. Knighted in 1895, he was raised to the peerage in 1910 as Baron Furness of Grantley. He died Nov. 10, 1912, and was succeeded by his son Marmaduke (b. 1883), who was created a viscount in 1918.

The Furness Line has regular sailings from British ports to Canada and the United States, and from Bombay to Antwerp, Montreal to Antwerp, etc. Its head office is Furness House, Leadenhall Street, London, E.C.

FURNES ABBEY. Picturesque ruins, 1 m. S. of Dalton, Lancashire. On the banks of a stream, in a wooded valley, close to a station on the L.M.S. Rly., they include part of the Transitional Norman nave, Early English chapter house, Decorated transepts, and Perpendicular belfry and presbytery.

The abbey, dedicated to S. Mary, was founded in 1127 by Benedictines from Normandy, and became Cistercian in 1148. In 1920 it was presented to the nation by Lord R. Cavendish, and restoration work was undertaken.

FURNISS, HARRY (1854-1925). British caricaturist. Born at Wexford,

of Anglo-Scottish parents, he came to London in 1878. He joined the staff of Punch in 1880 as illustrator of the Essence of Parliament. In 1894 he started his own weekly, Lika Joko. He illustrated the works of Dickens, 1910, and Thackeray, 1911, and also wrote many books, including Confessions of a Caricaturist, 1901; Harry Furniss at Home, 1903; Poverty Bay, a novel, 1905; How to Draw in Pen and Ink, 1905. He died Jan. 14, 1925.

FURNITURE. The earliest known records of domestic furniture are found in Egyptian bas-reliefs dating from 4000 B.C., where beds, tables, chairs, and stools are all represented. Very little furniture was used by the ancients, but it was often elaborately decorated. Chairs and thrones appear to have been fabricated of metal, ebony and other rare woods inlaid with ivory. The furniture of Chaldaea and Assyria, also portrayed on the bas-reliefs, is more crude. It is always rectangular, with

metal bosses at the corners, and with heavy fringes. The civilization of Persia was more Oriental, and its furniture included low divans.

Greek vases show that elegant forms of furniture existed in 500 B.C. The Romans surpassed the Greeks in domestic luxury, and after the sack of Corinth in 146 B.C., when paintings, sculptures and works of art arrived for the first time in Rome as part of the spoils, these objects of art were at once reproduced by the Greek craftsmen who flocked to Rome.

Whenever the Romans colonised they introduced a certain amount of furniture, and it is easy to trace its influence on both Saxon and Norman motives. In the time of Alfred the Great beds generally consisted of a sack filled with straw laid on a chest or on boards. About 1200 they began to assume a balustered form. Posts to beds were invented in the 16th century. The earliest form of English chair was of turned oak, but every variety was scarce until the 17th century. Fixed uphol-

Furness Abbey. Ruins of the 12th century buildings of a former wealthy and powerful Cistercian abbey
Valentine

stery did not exist in Great Britain until about 1600. Round and trestle tables were in use from Saxon times until the 16th century, when the oak "joyned" table, composed of a long top resting on a frame, made its appear-

ance. Other important pieces of furniture in oak were cupboards, buffets, and chests.

About 1655 a great change took place in all furniture. Walnut was much used, and a twist was introduced into the uprights on tables and the tall backed chairs. Soft wood furniture, elaborately carved and gilt, came to England from Italy and France, leading to the introduction and development of the cabriole leg. By 1720 this was firmly established lending itself well to the new hard wood, mahogany, and introduced particularly on chairs, the backs of which had become low, with hooped backs and with the flat splats which first brought fame to Thomas Chippendale. This master and his school produced every possible form of mahogany furniture, and later Chippendale allied himself with Robert Adam (q.v.) and produced pieces of inlaid satin wood and mahogany furniture of very light and elegant design. Hepplewhite and Sheraton continued along these delicate lines, adding painting to their decorations. Towards the end of the 18th century a classical style known as Empire arose in France. This, represented in England without any of its original charm, drifted into the heavy mahogany and gilt pieces of George IV. See Buhl; Bureau; Chair; Chest; Chippendale; Hepplewhite; Sheraton; Table, etc.

FURSE, DAME KATHARINE (b. 1875). British organizer. She was born at Bristol,

Nov. 23, 1875, the daughter of John Addington Symonds, and educated privately; she married C. W. Furse, the painter, in 1900. On the outbreak of the Great War she became associated with the Voluntary Aid Detachment and went to France to organize the work there. In 1915 she became commandant-in-chief of the force, and in 1917 director of the Women's Royal Naval Air Service. She was created G.B.E. in 1917.

Dame Katherine Furse, British organizer Elliott & Fry

FURTWÄNGLER, WILHELM (b. 1886). German musician. Born in Berlin, Jan. 25, 1886, he was the son of Adolf Furtwängler, a noted archaeologist. He received his musical education in Munich, and between 1911 and 1915 was conductor at Breslau, Zurich, Munich, and Strasbourg. From 1915-19 he was in Mannheim, and from 1920-22 in Vienna. In 1922 he was made conductor of the famous Gewandhaus concerts at Leipzig, and of the philharmonic concerts in Berlin, and from 1927-30 of the philharmonic concerts in Vienna. He has also conducted in New York and London.

Furze. Left, seedling of Ulex europaeus; right, dwarf furze, U. minor

FURZE or GORSE (*Ulex europaeus*). Shrub of the order Leguminosae. It is a native of Europe, the Canaries, and Azores. It varies in height from 2 ft. to 8 ft., and is densely covered with sharp evergreen spines. The bright yellow, scented flowers are borne on the larger spines, which are twigs. The dwarf furze (*U. minor*), smaller in all its parts, is native only in Belgium, France, and Britain.

FUSAN. Seaport of Korea or Chosen, belonging to Japan. At the S.E. extremity of the Korean peninsula, on Broughton Strait,

7 m. from the mouth of the Nak tong, it is the S. terminus of the rly. from Seoul. A treaty port, it was opened to foreign commerce in 1883. Steamers ply to and from Nagasaki, Port Arthur, Vladivostok, Shanghai, and other ports, and the town has cable communication with Nagasaki. There is trade in cotton fabrics and raw silk, as well as in herring and other fisheries. In 1917 the Korean rly. system was put under the control of the S. Manchurian Rly. It extends from Fusan to Changchun, a junction for the route to Leningrad via Harbin. Pop. 78,161.

FUSE (Dim. of fusee, from Fr. fusil, a gun) Means employed to ignite a detonator (q.v.). When a charge of explosive is to be fired instantaneously the fuse is made of quick-match. When a delay is needed to enable the firing party to get to a safe distance a safety fuse of fine gunpowder is used. For blasting purposes an electric fuse is sometimes used. In this, when an electric current is switched on, a thin wire is heated by its passage and ignites the detonator. In the case of shells, a fuse forms part of the projectile, and acts at the instant the shell grazes the target (percussion fuse), or it can be "set" to cause explosion of the shell during flight (time fuse). See Explosivo; Shell; Shrapnel.

ELECTRIC FUSE. This is a safety device forming part of an electrical circuit. Fuses are designed to carry the ordinary amount of current in a particular circuit, and to melt and break the circuit automatically should the current become so great as to heat the other parts of the circuit beyond the limit of safety. The material used is generally an alloy of tin and lead, with a low melting point. A fine copper wire is sometimes used. The fuse is usually fixed between brass clamps on a small slab of porcelain, or it may be enclosed bodily in a porcelain tube or case, while the space about it is packed with some non-conducting material which will effectually prevent the passage of a spark or the formation of an arc when the fuse "blows."

FUSEL OIL or **AMYLIC ALCOHOL** Volatile liquid present in the products of the alcoholic fermentation of saccharine liquids, especially those derived from potato starch. It is a complex liquid and varies according to the source of the alcohol, and the proportion obtained is influenced by the activity of the particular bacteria which form amylac alcohol. Its presence in potable spirits is undesirable. Fusel oil is used in connexion with the manufacture of rubber by synthetic methods.

FUSIBILITY. Property by virtue of which matter may be melted or rendered fluid if heated to a sufficiently high temperature under suitable conditions. Metals melt at very different temperatures, ranging all the way from -39°C , the melting point of solid mercury, to $1,740^{\circ}\text{C}$, the approximate temperature at which platinum melts. The melting is always accompanied by the absorption of heat which becomes "latent" and a change of volume.

FUSIBLE METALS. These are metal alloys which melt at comparatively low temperatures. An alloy composed of 15 parts bismuth, 8 lead, 4 tin, and 3 cadmium, known as Wood's metal, will melt at 155°F . By varying the proportions of the constituents, alloys can be made which will melt at from 202°F . to 380°F . Some have an important use in the manufac-

ture of fusible plugs. These plugs, being inserted in the furnace plates of a steam boiler, will melt if the plate becomes dangerously overheated, and, by permitting the steam to escape, may prevent a serious accident.

FUSILIER. Formerly the designation of special bodies of troops equipped with a fusil or light flintlock musket at a time when the matchlock was the standard firearm. It is now only the distinctive regimental name of certain corps of infantry who are armed exactly the same as infantry of the line.

The senior fusilier regiment of the British Army is the Royal Fusiliers (City of London Regiment), formed in 1685. The Scots Fusilier Guards relinquished the title fusiliers in 1877, and became the Scots Guards. Other British regiments of fusiliers are the Northumberland, Lancashire, Royal Scots, and Royal Welch. The distinctive uniform of British fusilier regiments is the bearskin cap.

F U S T,

JOHANN (d. 1466). German printer. He was a wealthy goldsmith of Mainz and financed Gutenberg's business there. He foreclosed on a mortgage and carried on the business with Peter Schoe-

ffer, Gutenberg's son-in-law, one of the masterpieces of this partnership being a Latin Psalter, 1457, the initial letters in which were printed in red and blue.

FUTURISM. Name given to an art movement which originated at Turin in Italy in March, 1910. It owed its inception mainly to F. T. Marinetti, the Italian poet. The adherents of the movement endeavoured to introduce into the art of painting a "poetry of motion," whereby, for example, the painted gesture should cease to be a fixed momentary thing and become actually "a dynamic condition." This aim was further complicated by the Futurists' effort to indicate, in the painting of a scene, not only the state of mind of the painter, but also that of the person or persons who are depicted in the picture.

The original Futurists included Marinetti and the Italian painters Boccioni, Carrà, Russolo, Balla, and Severini. The first exhibition of Italian Futurist painting was held in 1911 in Paris, whence it was transferred to London in March, 1912.

FYFE, HAMILTON (b. 1869). British journalist and author. After varied service on The Times, he edited The Morning Advertiser 1902-3, and The Daily Mirror, 1903-5. From 1905 until 1919 he was special correspondent of The Daily Mail, which he represented, during the Great War, in France, Russia, Rumania, Italy, Spain, Portugal, and the U.S.A. He was in charge of British propaganda in Germany, July-Nov., 1918. He has written several plays and novels, including The Widow's Cruise, 1920. He was editor of The Daily Herald, 1922-26.

Fylde. Name given to the flat district in Lancashire between the estuaries of the Wyre and the Ribble.

FYNE. Sea loch of Argyllshire. It extends S.W. and S. for 40 m. from above Inveraray to its mouth at the Sound of Bute with a breadth of from 1 m. to 5 m.

G. Seventh letter of the English and Latin alphabets. In English it has two sounds, the one hard, as in gate, the other soft, as in gender. Before n, as in gnat, it is mute, as also in brought and bough. Often it has the sound of f, as in rough, enough. See Alphabet; Phonetics.

In music G is the fifth note of the major scale of C. It is a perfect fifth above C, and is known as the dominant of the key C.

GABA TEPE. Hill in Gallipoli (q.v.). As part of the Allied operations to open the Dardanelles, the Australian and New Zealand Army Corps, under Birdwood, sailed from Mudros, April 24, 1915. Reaching the Gallipoli coast early next morning, they landed on the beach, afterwards called Anzac, about 2 m. N. of Gaba Tepe, and took up a line extending for a mile N. of Gaba Tepe to high ground over Fisherman's Hut. The Turks, strongly reinforced, struck at this line for four hours, but were repulsed with great loss by the Anzacs. During the nights of the 25th and 26th the Turks delivered repeated assaults, but the Anzac line held firm.

GABERDINE (Span. gabardina, smock, coarse frock). Loose garment, usually of rough, dark material, reaching to the ankles and girt with a cord. It was worn in the Middle Ages by pilgrims and mendicants, in which connexion the Scots word gaberlunzie, a beggar, is noteworthy, and came to be identified chiefly with the Jews, who were flowing robes of this type.

Gaberdine, as worn by Jews

GABÈS. Port of Tunisia. On the Gulf of Gabès, or Gabès, it is 205 m. by rly. S. of Tunis. W. of Gabès are salt lakes or shats. Pop. about 15,119.

The Gulf of Gabès extends between the Kerkenna Islands on the N., the Circinae Islands, and Jerba (Djerba) Island on the S. The latter contains the ruins of El-Kantara. Sponge-fishing is carried on. The chief towns are Sfax and Gabès.

GABLE (old Fr. fork). - Pointed or nearly pointed termination of a roof in the Gothic style. In classical architecture the gable is known as a pediment. The simplest form of gable is the triangular. Recent building has seen a marked revival of the

Gable. Example from an old house in Salisbury, c. 1360

gable for small houses. See Barge-board.

GABORIAU, ÉMILE (1833-73). French novelist. He was born at Sanjon, Nov. 9, 1833. A master of detective fiction, his story L'Affaire Lerouge, 1866, brought him instant fame. This was followed by Le Dossier No. 113, 1867; Le Crime d'Orcaire, 1867; and other novels of the same type. He died Sept. 28, 1873.

Gabriel (Heb. man of God). Name in Biblical and post-Biblical literature of one of the seven archangels. See Angel.

GABUN, GABON, OR GABOON. Colony in French Equatorial Africa. It lies to the S. of Cameroons, and is bounded W. by the Atlantic Ocean, E. by the French Middle Congo colony (Moyen Congo), and S. by the Belgian Congo

Its area is 104,320 sq. m. The colony contains vast forests and the products include rubber, palm kernels, and cocoa. The climate is unhealthy in the coastal regions, sleeping sickness prevailing, but comparatively healthy in the elevated interior. Pop. 388,899.

GAD. Seventh son of Jacob, by Zilpah the handmaid of his wife Leah (Gen. 30, 10, 11).

Gad is also the name of a prophet who acted as a counsellor to David (2 Sam. 24, 11; 2 Chron. 29, 25), and wrote a history of his reign (1 Chron. 29, 29).

GADARA. Ancient town of Palestine. It stands on the E. side of the Jordan, 6 m. S.E. of the Lake of Tiberias. Founded by Greeks, it is mentioned in Mark 5, 1, in connexion with the Gadarene swine. Extensive ruins include remains of two theatres and a colonnade.

GAD FLY (*Tabanus bovinus*). Two-winged fly nearly an inch in length, exceedingly troublesome to cattle and horses in summer time. Its larvae live in the soil.

GADOLINITE. One of the rare earths, the first to be discovered. Investigated by J. Gadolin, the Swedish chemist, in 1794, it was shown later to contain yttrium and other rare substances. It is a greenish black mineral and is chiefly found in Texas, Ytterby in Sweden, and Risör and Hitterö in Norway.

GADOLINIUM. Rare-earth element of which the oxide, associated with terbium, was discovered by Marignac in 1880. These two rare elements are found in gadolinite, samarskite, and orthite. The symbol for gadolinium is Gd; its atomic weight is 157.3, and its atomic number 64.

GAD'S HILL. Village of Kent, associated with Charles Dickens. It is 2 m. from Rochester on the road to Gravesend. The home of the novelist was Gad's Hill Place. Shakespeare (1 Henry IV) makes Falstaff meet the men in buckram in the road by Gad's Hill.

GAEA or **GE.** In Greek mythology, the earth goddess. The daughter of Chaos, she was the mother of Uranus (Heaven), and Pontus (Sea), and by the former of the Titans. She represented the productive power of earth. Her Roman counterpart was Tellus.

GAEKWAR. Title borne by the ruler of Baroda (q.v.). It is the family name of the house that has governed this state since the early part of the 18th century. The word is derived from a native word meaning a cow.

GAELIC. The language of the Gaelic branch of the Celtic race, which in Greek and Roman times occupied the middle of Europe. Though Irish, Manx, and Scottish Gaelic are all derived from the ancient Gaelic, the original name is now almost restricted to the Gaelic spoken in the Scottish Highlands.

The beginnings of Gaelic literature date back to the 5th century A.D. The great 11th century MSS., *Leabhar na h'Uidhre*, is the oldest exclusively Gaelic MS. in existence. At the dawn of letters among the Gael, S. Patrick figures as the author of two letters in Latin, the *Epistola ad Coroticum*: and a *lorica*, or hymn, in Gaelic, popularly known as S. Patrick's Breastplate. After him S. Columba and his followers inaugurated a period of great literary activity. They wrote in Latin and Gaelic, using the Roman script and the Roman alphabet, and made Latin copies of books of the Bible, some of them beautifully illuminated. They also wrote hymns and lyrical poems having nature for their theme. The

19th century produced a succession of gifted bards, e.g. MacLachlan and Maccoll.

Gaelic poetry is in the main lyrical. There are no epic poems except Macpherson's *Ossian*. The best prose is represented in the Gaelic Bible, Caraidnan Gaidheal, and Nicolson's *Proverbs*. See *Celt*; *Erse*.

GAFF. Stick armed with an iron hook for landing large fish, especially salmon. The use of the gaff is prohibited in the Tweed after the close of the net fishing and in the Helmsdale while kelts are in the water.

Gaff: angling implement. 1. With handle. 2. For trout. 3. Folding gaff. By courtesy of S. Alcock & Co.

In nautical phraseology a gaff is a spar which stretches out the upper end of a sail. Gaff topsails are sails set above the mainsail.

GAINSBOROUGH. Urban dist., market town, and river port of Lincolnshire. It stands on the Trent, 18 m. N.W. of Lincoln and is served by the L.N.E.R. The industries include the manufacture of linseed oil. The Old Hall dates from the 15th cent. It gives its name to a co. div. returning one member to Parliament. Four fairs are held annually: Market days, Tues. and Sat. Pop. 19,694.

GAINSBOROUGH, THOMAS (1727-88). English painter. Born at Sudbury, in Suffolk, in May, 1727, he studied art in London. In 1745 he married and lived for a time in Ipswich. In 1750 he moved to Bath, where his portraits attracted much attention. In 1774 he settled in London, and there his reputation reached its height. His studio was crowded with sitters, who were not deterred by the high prices he charged. He was an original member of the Royal Academy, at which he exhibited regularly until 1783, when he quarrelled with the council. He died in London, Aug. 2, 1788, and was buried at Kew.

T. Gainsborough, English painter

Of Gainsborough's wonderful paintings, more than 200 were portraits. He also practised the art of etching, and produced a few plates in aquatint. Some of his finest pictures are in the National Gallery, Dulwich Gallery, Windsor Castle, Buckingham Palace, National Gallery at Edinburgh, the Wallace Collection, and in private collections. He stands in the front rank of English portrait and landscape painters. For exquisite beauty and vibrant quality his portraits have never been surpassed. His *Blue Boy* was purchased in 1921 by Henry Huntington of New York for, it was stated, £150,000. In 1928 his *The Harvest Wagon* was bought for £72,000 by Sir Joseph Duveen. In Oct., 1927, a memorial exhibition of his paintings was held in Ipswich. See *Art*; also *illus.* p. 393.

GAIRLOCH. Sea loch of Scotland. On the W. coast of Ross and Cromarty, it is 6 m. long and 3½ m. broad at the entrance. The name is also borne by a village at the head of the loch, which has a pier and golf links. Pop., parish, 2,781.

GAITERS (Fr. *guêtre*). Covering of cloth for the leg, buttoning from knee to ankle, and usually extending to the instep. Spatter-dashes, or spats, both forms of gaiters, are part of the uniform of Highland regiments.

GAIUS (2nd century A.D.). Roman jurist. He lived during the period from Hadrian to Marcus Aurelius. Fragments of his Institu-

tiones are preserved in Justinian's *Digest* and other works. See *Roman Law*.

GALAGO. Group of small, long-tailed, lemuroid animals, found in most parts of tropical Africa. The largest of them is about the size of a domestic cat, while the smallest is only five inches long. They are nocturnal in habit, and feed mainly on fruits, insects, and small birds. They are distinguished from the true lemurs by their large ears.

Galago. Specimen of the Maholi galago

GALAHAD. Knight of Arthur's Round Table, who achieved the vision of the Holy Grail. Son of Lancelot and Elaine, daughter of King Pelles, he was brought up by nuns, and received knighthood at Arthur's hand.

GALÁPAGOS OR **TORTOISE ISLANDS.** Group of volcanic islands in the Pacific Ocean, 695 m. W. of Ecuador, to which they belong. Officially renamed the Colon Archipelago in 1892, the chief are Albemarle, Indefatigable, Chatham, James, Hood, Narborough, Barrington, Charles, and Abingdon. Total area 2,868 sq. m. The islands possess a richly endemic flora and an interesting fauna. Sulphur exists in quantities. On Charles Island is a penal settlement. Pop. 500.

GALASHIELS. Burgh of Selkirkshire. It is 33½ m. S. by E. of Edinburgh, on the L.N.E.R. The chief seat of the Scottish woollen industry, Galashiels has also tanneries and dyeworks. Market day, Tues. Pop. 14,000.

GALATEA. In Greek mythology, a sea nymph, one of the daughters of Nereus. She loved the Sielian youth Acis (q.v.), who was slain by the jealous Cyclops Polyphemus. The name has also been given to a statue endowed with life by Venus at the prayer of Pygmalion.

GALATIA. Territory in Asia Minor, comprising part of Phrygia and part of Cappadocia. Its inhabitants were an offshoot from the host of Gauls who overran Asia Minor until checked by Attalus I, king of Pergamum (241-197 B.C.), who compelled them to settle within the country later known as Galatia. Under Augustus, Galatia became a Roman province.

GALATIANS, EPISTLE TO THE. One of the four principal Epistles written by S. Paul. Like the Epistle to the Romans, it contains the main points of the Apostle's teaching, together with autobiographical matter, which supplements the biographical statements in the Acts. If, as Sir W. Ramsay suggests, the Epistle was addressed to the Church in South Galatia, the Epistle may be supposed to have been written from the Syrian Antioch about A.D. 53. See *Paul*, *Saint*.

GALA WATER. River of Scotland. It rises among the Moorfoot Hills, and flows through Selkirkshire and Roxburghshire to join the Tweed 1 m. below Galashiels. Its length is 21 m.

GALBA, SERVIUS SULPICIUS (3 B.C.-A.D. 69). Roman emperor. After holding several provincial governorships with credit, he was proclaimed emperor in June, 68, but his reign lasted only till the following December, his harshness and parsimony making him extremely unpopular. He was murdered by the soldiery.

Servius Galba, Roman emperor. Front a bust

GALBANUM. Gum resin used in medicine for chronic catarrh and rheumatism. Believed to be a resin from an umbelliferous

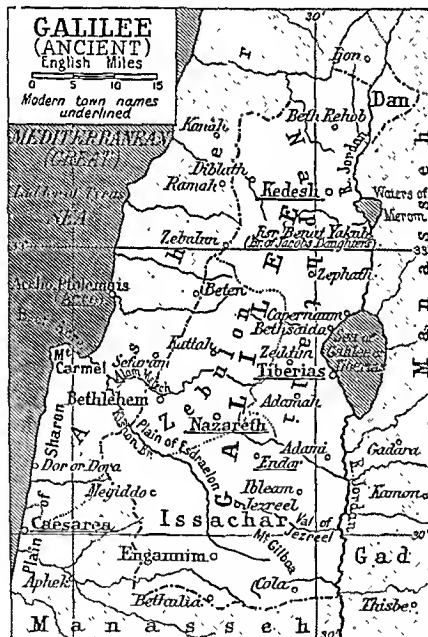

plant, *Ferula galbaniflua*, found in Persia, it occurs in large masses, yellow in colour, and possessing an odour of balsam

GALEN OR **CLAUDIUS GALENUS** (c. A.D. 130-200). Greek physician. Born at Pergamum, Asia Minor, he was intimate with Marcus Aurelius, and author of some 500 treatises on medical and philosophical subjects. Of these 83 are extant. As a physician he ranks second only to Hippocrates; he was great as a practical anatomist, but as a physiologist orred on the side of theory. He coordinated all the medical knowledge of his time

Claudius Galen,
Greek physician
From a bust in the Coll.
of Physicians, London

GALENA OR **LEAD GLANCE**. The most important ore of lead and the source of most of the lead of the world. Widely distributed in granite, limestone, argillaceous, and sandstone rocks, it is often associated with ores of zinc, silver, and copper. When pure it contains 86.55 p.c. of lead and 13.45 of sulphur, and is a sulphide of lead. It usually contains silver. It is used in crystal detectors. See Lead: Silver

Galilee. Map of the province as in New Testament times

GALERIUS, VALERIUS MAXIMIANUS (d. 311). Roman emperor A.D. 305-311, also known as Maximianus II. At the quadripartite division of the empire by Diocletian in 293, Galerius became one of the Caesars or junior rulers, and on the abdication of Diocletian in 305 he became senior emperor.

GALGACUS. Caledonian chief. He commanded the native tribes when Caledonia was invaded by the Romans under Agricola (q.v.), and after a determined resistance was defeated about A.D. 85 at the battle of Mons Graupius, probably the modern Grampians.

GALICIA. District of Europe. Before 1919 it was a province of Austria, but now most of it is within the republic of Poland. Galicia extends for rather more than 300 m. along the N. W. of the Carpathian Mts., from the common lead, 4 t. of Poland and Czechoslovakia in the metal. will in Tsin (Tesechen) to the front proportions of the. The whole area is a natural made which will me. The whole area is a natural Some have an importa great salt mines of Wic have been worked for

centuries. Drohobycz is the chief centre of the famous oil district. There are important textile manufactures; coal, timber, spelter, and agricultural produce are exported.

Northwards drains the Bug, one of the chief tributaries of the Vistula, southwards the Dniester and its main affluent, the Sereth, and the Pruth drain to the Black Sea. The inhabitants in the W. are Roman Catholic Poles, and in the E. Greek Orthodox Ruthenes or Little Russians. In the towns there are many Jews. Galicia was the scene of heavy fighting between Russians and Austro-Germans in 1916.

Galicia is also the name of a former kingdom and prov. of N.W. Spain.

GALILEE. Prov. of N. Palestine. After the Captivity it was ceded by the Assyrians to the Israelites. It contains Nazareth. Tiberias was its chief city. Once a fertile and populous district, it is now little better than a wilderness.

The Sea of Galilee, also called the Lake of Tiberias and Lake of Gennesareth, is formed by an expansion of the Jordan. About 13 m. long by 8 m. broad, it is subject to sudden and violent storms. On its shores stood Tiberias and Capernaum.

GALILEE CHAPEL. In ecclesiastical architecture this is the name applied to a chapel at the west end of Durham Cathedral, and also to large porches such as those to be seen in Ely and Lincoln cathedrals. See Ely.

GALILEI, GALILEO (1564-1642). Italian astronomer. Born at Pisa, Feb. 15, 1564, he was the son of a Florentine nobleman. In 1592 he went as professor of mathematics to Padua. A report from Flanders in 1609 of the invention, by Hans Lippershey, of a glass which made remote objects appear near, led to his constructing a telescope, and its first application to astronomical observation. He made a thermometer and the first pendulum.

Galileo Galilei,
Italian astronomer
From a picture in
Trin. Coll., Camb

Specially notable was his discovery of the satellites of Jupiter, confirming the planetary theory of Copernicus (q.v.). Later, as mathematician to the duke of Tuscany in Florence, he observed sun spots and the formation of Saturn. In 1632 appeared his great work, *The Dialogue of Two Systems of the World*, and the Holy Office obliged him to recant the doctrine that the earth moved round the sun. Becoming blind in 1637, he died on Jan. 8, 1642, and was buried in the church of Santa Croce in Florence. See Astronomy.

GALL. Word used in different senses according to its etymology. (1) The fluid secreted from the liver, more generally known as bile (Gr. *chole*, Lat. *fel*). The phrase gall and wormwood is used to express anything specially painful or unpleasant. (2) The gall-nut or oak-apple (Lat. *galla*), a swelling on the oak tree resulting from the attacks of certain parasitic insects. From this probably comes the meaning of a soft tumour or sore on a horse's back, the result of rubbing, the verb to gall being used in the sense of to chafe. See Gall Fly.

GALL STONES. Also called biliary calculi, these are masses consisting of cholesterol and bile pigments formed in the gall bladder, and less frequently in the substance of the liver. In the gall bladder the number of calculi may vary from a single stone, perhaps measuring as much as four inches across, to many hundreds of small stones; those formed in the liver are usually small grains. The essential cause of gall-stones appears to be catarrhal inflammation of the mucous membrane of the gall bladder,

which is probably set up by micro-organisms. In a considerable number of cases the condition has followed enteric fever. Sedentary occupation, over-eating, and constipation are predisposing factors. Severe cases may demand surgical treatment.

Galilee, looking across the sea towards Tiberias

GALLA OX OR **SANGA**. Domesticated breed of humped cattle, found only in Abyssinia and the surrounding country. It is remarkable for its massive horns.

GALLE OR **POINT DE GALLE**. Seaport of Ceylon, on the S.W. coast of the island. Its harbour has deep water close to the land, but lacks adequate shelter. Pop. 39,073

GALLEON (Span. *galeón*). Spanish ship of the 15th-17th centuries. Sometimes with three or four gun decks, it was used both for war and in the Indies trade. The name is sometimes used loosely of any large ship.

GALLERY (Fr. *galerie*). Upper floor extending over a part of the room below it. In secular architecture the use of a gallery may be traced, in Great Britain, to the Norman keep (q.v.), the hall of which was often surrounded by a gallery lighted by an upper tier of windows. As a domestic feature the gallery did not attain importance till the Elizabethan Long Gallery was introduced.

When it became the fashion to collect family portraits and other works of art, the gallery was selected for their accommodation; hence the application of the term to a museum of art treasures. The minstrels' gallery is a well-known feature of the hall of the fortified manor house. Church interiors, in the Middle Ages, were often fitted with galleries. The word gallery is also used to describe a level or drive in a mine.

Galleon such as formed part of the Spanish Armada
From an old print

GALLEY (late Lat. *galca*). Six-oared boat in a warship, used by the captain. It is the largest single-banked (i.e. not having two oars abreast) boat in the ship. An admiral's boat is called a barge. Large galleys were the earliest form of fighting ship. The last great battle between galleys was that of Lepanto (1571). In modern vessels the place where cooking is done is called the galley. See Boat.

In printing, a galley is a flat tray of metal or wood used for holding type after it has been set. It is oblong or quarto in size, with flanges on each side and at one end. See Printing.

Galley. Medieval Venetian trireme; the rowers sat in groups of three, the oars of each group passing through the same rowlock-port. From *l'incat*, 'Le Trireme'.

GALL FLY. Group of hymenopterous (membrane-winged) insects, nearly related to the wasps, and more correctly called gall wasps. They are all small, black or brown in colour, and the insect in its larval stage is usually parasitic on plants. The galls found on the stems and leaves of trees are caused by the attacks of these insects; though certain beetles, flies, and aphides are also responsible for causing them.

Galley of type as set up before making up into pages

GALLIC ACID ($\text{H}_2\text{C}_2\text{H}_2\text{O}_5 \cdot \text{H}_2\text{O}$). Substance with an astringent taste. It occurs naturally in small quantities in galls, sumach, and divi divi. Prepared in two ways, gallic acid is used in medicine as an astringent, and in photography on account of its power of reducing gold and silver salts.

Gall Fly. Galls formed on oak by *Cynips kollari*

GALLI-CURCI, AMELITA (b. 1889). Italian singer. Born in Milan, Nov. 18, 1889, she made her first public appearance in Rome in 1909 as Gilda in *Rigoletto*. She has appeared in Chicago, New York, and in London, and is a coloratura soprano and an accomplished pianist.

GALLIÉNI, JOSEPH SIMON (1849-1916). French soldier. Born at S. Bât, Haute Garonne, April 24, 1849, he entered the French army in 1870 and was governor of Madagascar from 1896-1905, organizing the island as a French colony. During the Great War he was military governor of Paris, and his plans helped to decide the victory of the Marne, Sept., 1914. In Oct., 1915, he was minister of war in the cabinet of M. Briand, but, compelled to resign by ill-health in March, 1916, he died on May 27. He was posthumously created a marshal in 1921.

Joseph S. Gallieni, French soldier

ment from 253 onwards, and succeeded him. During his reign hordes of Goths penetrated the N.E. frontier, while plague reduced the empire's population. Usurpers arose in all parts, and while dealing with one of these, named Aureolus, Gallienus was murdered by his own soldiery in 268.

GALLIO. Proconsul of Achaia in the middle of the 1st century A.D. He was a brother of the stoic philosopher, Seneca. Paul was brought before him at Corinth. He typified Roman impartiality towards the controversies around him, as implied by the phrase "he cared for none of these things" (Acts 18, 17).

GALLIOT (late Lat. galeota, small galley). Type of Dutch trader somewhat akin to the British barge, now almost obsolete. The galliot is a long, narrow, two-masted craft of about 100 tons burden. She carries a mainmast

and a mizzen, but the sail on the latter is of small area and used principally to assist in steering the vessel. See Barge.

GALLIOLI. Peninsula of Europe. It is 52 m. in length from the isthmus of Bulair in the N. to Cape Helles (Helles Burnu) in the S. and varies in width from 2 m. to 12 m. The E. shore is of enormous strategical importance. The peninsula is covered with rocky ridges and hills, some of which rise nearly 1,000 ft. The coast has only two good openings, Suvla Bay on the W. and Morto Bay on the S. From the town of Gallipoli there is a poorly paved road S. to Maidos. The other roads of the peninsula are mere tracks.

The population is sparse, and apart from the town of Gallipoli there are only some small and squalid villages. The most important place is Kilit Bahr, at the foot of the Pasha Dag, 700 ft. high. Mohammed II, who took Constantinople in 1453, founded it, and it came to be termed the castle of Europe, just as Chanak opposite it was called the castle of Asia. In the 17th century the Turks constructed fortifications at Sedd-el-Bahr, at the S. end, and at Kum Kale, at the entrance to the Dardanelles from the Aegean. Gallipoli is within the zone of the straits under a commission appointed by the League of Nations.

Gallipoli is the name of a seaport of Greece, formerly belonging to Turkey. Situated at the N.E. end of the Dardanelles, on the peninsula of the same name, it is 130 m. S.W. of Constantinople (Istanbul). There are two good harbours, of which the Allies made full use during the Crimean War. Pop. 7,842.

Gallipoli is also the name of a seaport and city of Italy, in the prov. of Lecce. It stands on the Gulf of Taranto, on an island connected by a bridge with the mainland, 23 m. W. of Otranto. Pop. 12,751.

Galliot, a Dutch sailing vessel

GALLIOLI, CAMPAIGN IN. Campaign of the Great War undertaken by the Allies to relieve the pressure on the Russian army in the Caucasus. It lasted from Feb. 19, 1915, till Jan. 9, 1916. A naval attack on the Turkish forts commanding the Dardanelles (Feb. 19-March 18) having resulted in heavy losses, an attempt was made to open the straits by the capture of Gallipoli, with Constantinople as the ultimate objective. On March 12 Sir Ian Hamilton was appointed to command the allied forces.

The landing, which was made on exposed beaches, began on April 25 with a total force of about 90,000 British and French, and by the evening of the 27th the British had established themselves on a line about 3 m. long from N.E. of Tekke Burnu to Eski Hissarlik Point. They found themselves short of artillery and ammunition, still shorter of water, and confronted by a superior Turkish force well entrenched and with ample supplies. The utmost heroism was displayed by the attacking force, which included, in addition to Australian and New Zealand troops, the 2nd S. Wales Borderers, the K.O.S.B., Plymouth (Marine) battalion R.N.R., 2nd R. Fusiliers, Lancashire Fusiliers, Dublin Fusiliers, Munster Fusiliers, Hampshire, West Riding Field Company, and various other units.

Reinforcements were sent out, but by the second week of October the Allied force had fallen to 50,000 fit men. Sir Ian Hamilton was replaced by Sir C. C. Monro, and in Nov. the British

Government decided to evacuate the peninsula. This was carried out by Jan 8-9, 1916, without any casualties.

In the campaign 468,987 men were employed by the British, with losses of 33,522 killed, 7,636 missing, and 78,420 wounded. The French force employed was probably over 80,000, with proportionate casualties.

On Nov. 8, 1918, under the conditions of the armistice with Turkey, the Gallipoli forts and peninsula were occupied by British troops, and four days later Constantinople was reached. See Dardanelles; Hamilton, Sir Ian; Krithia.

GALLIUM. Metal belonging to the zinc group. It was discovered in 1875 by Lecoq de Boisbaudran, in samples of zinc blende obtained in the Pyrenees. Its chemical symbol is Ga; atomic weight, 69.9; atomic number, 31. Its melting point is only 86° F.

Gallipoli. Map showing the scene of the campaign

GALLON. British standard measure of liquid and dry capacity. It was standardised by the Act 5, Geo. IV, c. 74, in 1824, as containing 277.274 cubic ins. The gallon is divided into four quarts or eight pints, and equals 4.54346 litres. Two gallons make one peck. The gallon in the U.S.A. and Canada is 231 cub. ins.

GALLOWAY. District of S.W. Scotland. Comprising the counties of Kirkcudbright and Wigtown, it is noted for a breed of horses and hornless cattle. The Mull of Galloway is a promontory, the extreme S. point of Scotland. On it is a lighthouse.

Gallows. Wayside gibbet once used for malefactors

The crimina was slowly strangled. See Execution; Gibbet; Tyburn.

GALLUS, TREBONIANUS. Roman emperor, A.D. 251-253. Governor of Lower Moesia during the campaign of Decius against the Goths, with whom, when he had been proclaimed, he concluded a humiliating peace. In 253 he was defeated and slain at Interamna by the usurper Aemilianus.

Galop (Fr.). Dance popular in England at the end of the 19th century. It is danced to two-four time.

GALSTON. Burgh and market town of Ayrshire. It stands on the Irvine, 5 m. E. by S. of Kilmarnock on the L.M.S. Rly. Market day, Wed. Pop. 4,977.

GALSWORTHY, JOHN (b. 1867). British novelist and dramatist. Born at Coombe, Surrey, he was educated at Harrow and at Oxford. He became a barrister, but passed his time in travel and writing, at first under the name of John Sinjohn. Soon he began to write under his own name, and one after another novels appeared from his pen. These include *The Island Pharisees*, *The Dark Flower*, and *The Freelanders*, but the most notable are the series

John Galsworthy, British novelist. Russell

which deal with the fate of the imaginary family of Forsyte. These, which appeared as *The Man of Property*, *To Let*, *In Chancery*, *The Silver Spoon*, *The White Monkey*, *Swan Song*, and other titles, are concerned with the wealthy classes of England in his own time, and their lives and ideas are described with remarkable fidelity and insight.

Galsworthy is also a dramatist of note. In his plays he turns a searching light on the

social and moral conventions of contemporary society; of the administration of justice in *The Silver Box*, on Capital and Labour in *Strife*, on prison problems in *Justice*, and on changes in English country life in *The Skin Game*. Others include *Loyalties*, *Escape*, and *Exiled*. In 1929 he was given the O.M. Consult John Galsworthy, S. Kay-Smith, 1916.

GALT. Town of Ontario, Canada, in Waterloo co. It stands on the Grand river, 24 m. N.N.W. of Hamilton. It is served by the C.P.R. and C.N.R., and electric rlys. connect it with Hamilton and other adjacent towns. Galt is a manufacturing town, producing iron and cotton goods, electric power being obtained from the Niagara. Pop. 13,216.

GALT, JOHN (1779-1830). Scottish novelist. Born May 2, 1779, at Irvine, Ayrshire, his best known book is *The Annals of the Parish*, 1821. The years 1826-29 he spent in Canada as agent of the Canada Company. Later he brought out *Lawrie Todd*, 1830, and *Boyle Corbet*, 1831, novels of settler life in America, and a *Life of Lord Byron*, 1830. He died April 11, 1830.

John Galt, Scottish novelist

His son, Sir Alexander Tilloch Galt (1817-93) was from 1880-83 high commissioner for Canada in London.

GALTON, SIR FRANCIS (1822-1911). British anthropologist and meteorologist. Born near Birmingham, Feb. 16, 1822, a cousin of Charles Darwin, he formulated the theory of anticyclones and new methods of weather-charting, embodied in *Meteorographica*, 1863. His *Hereditary Genius*, 1869, and *Inquiries Into Human Faculty*, 1883, established the principles of eugenics, in furtherance of which he founded a laboratory, 1904, bequeathing £45,000 for a chair in London. He systematised finger print methods. He was knighted in 1909, and died Jan. 17th, 1911. See *Finger Print*.

Sir Francis Galton, British scientist

GALTONIA. Small genus of bulbous herbs of the natural order Liliaceae. Natives of S. Africa, they have more or less erect strap-shaped leaves, about 30 ins. long. They have also a tall scape (4 ft.) bearing at its summit a loose truss of drooping bells, which in the case of *G. candicans* are pure white.

Galty or GALTÉE. Range of mts. in the Irish Free State. It extends for 15 m. through the counties of Tipperary and Limerick.

GALVANI, LUIGI (1737-98). Italian scientist. Born at Bologna, Italy, Sept. 9, 1737, he became, in 1762, professor of anatomy at Bologna University, resigning, for political reasons, in 1797. By experiment, largely on frogs, he

Luigi Galvani, Italian physiologist

discovered animal electricity, and his investigations are commemorated in certain electrical manifestations and terms, e.g. galvanism and

Galway. Map of the second largest county in the Irish Free State, with Galway Bay and the adjacent islands. See article below

galvanometer. His collected works were published 1841-42. He died Dec. 4, 1798

GALVANISING. Method of coating iron with zinc. It was devised by Paul Jacques Malouin, the French chemist, in 1742. In galvanising, the zinc coating does not merely lie on the surface of the iron as a sheet of paper might, but actually combines or alloys with the iron. The modern process is in all essentials as proposed by Malouin, the principal departure being the use of sal-ammoniac as a covering to the molten zinc and as a flux, a modification patented by H. W. Crawford in 1837. The process is chiefly applied to the coating of thin sheets of iron or steel intended to be used for roofing and other building purposes, and to wire. See *Zinc*.

Galvanometer. Instrument for detecting the passage of an electric current, or, in its refined form, for measuring small currents.

GALVESTON. City and port of Texas, U.S.A., the co. seat of Galveston co. Situated at the N.E. end of Galveston Island at the entrance to Galveston Bay, it is served by several rlys., is the leading port of the Union for the exportation of cotton, and is a flourishing seaside resort. Galveston has regular steamship communication with Europe, Asia, S. America, and the ports of the U.S.A. Pop. 49,700.

GALWAY. County of the Irish Free State. In the prov. of Connaught, its area is 2,370 sq. m. It has a coastline of about 400 m. on the Atlantic, where are several bays with excellent harbours, and off which are a number of islands. The country is one of the wildest and most beautiful parts of Ireland, especially its western portion. The Shannon flows along

Galtonia leaf and truss of bell-shaped flowers

its borders. Lough Corrib is the most notable lake. The industries are the rearing of cattle, sheep, and poultry, and fishing. Oats and potatoes are grown, limestone and marble are worked. The co. is served by the Gt. Southern Rlys. There are cathedrals at Tuam and Clonfert. Pop. 169,366. See map above.

GALWAY. Seaport, market town, and co. town of Galway, Irish Free State. It stands on the N. side of Galway Bay (an inlet between co. Galway and co. Clare), at the mouth of the Corrib, and is 130 m. from Dublin on the Gt. Southern Rlys. It has a good harbour, fisheries, and a considerable

Galway. Bridge over river Corrib, dividing the town proper from one of its suburbs

shipping trade; its other industries include flour mills, distilling, and marble polishing. Market days, Wed. and Sat. Pop. 14,227.

Viscount Galway is an Irish title borne since 1727 by the family of Monckton-Arundell. In 1887 George (b. 1844) the 7th viscount was made a peer of the United Kingdom as Baron Monckton. Pron. Gaulway.

GAMALIEL (d. c. 52). Jewish rabbi. The grandson of Hillel, he was a member of the Sanhedrin. S. Paul as a youth attended his school at Jerusalem.

GAMBETTA, LÉON MICHEL (1838-82). French statesman. Born at Cahors, Lot, April 2, 1838, son of a grocer of Genoese origin, he was elected to the Chamber in May, 1869, and became a leader of the uncompromising anti-imperialist party. After Sedan he was one of the proclaimers of the republic, and became minister of war and of the interior, Sept. 4, 1870. He founded the newspaper *La République Française* in Nov., 1871, and was elected president of the chamber in Jan., 1879, and was premier from Nov., 1881, to Jan., 1882. An accidental wound from a pistol brought about his death at his villa at Ville d'Avray, near Sèvres, on Dec. 31, 1882.

Léon Gambetta, French statesman

GAMBIA. River of W. Africa. It rises in Futa-Jallon in French Guinea, and flows for over 500 m. to the Atlantic at Bathurst. At its estuary it is 12 m. broad, and it is navigable for 300 m.

GAMBIA. British colony in W. Africa. It is situated on the lower river Gambia, and includes the colony of St. Mary's Island and the five provinces, North Bank, South Bank, etc., which form a protectorate. The area of the colony proper is 4 sq. m., and that of the protectorate about 4,500 sq. m. The capital is Bathurst, on the island of St. Mary. The pop. (about 200,000) consists of Mandingos, Jolas, Sarahulis, and Fulas, four-fifths being Mahomedans. Ground-nuts, rubber, rice, hides, wax, and palm kernels are exported. See Africa; Bathurst.

1st Baron Gambier, British sailor

After Sir W. Beechen, R.A.

GAMBIER, JAMES GAMBIER, BARON (1756-1833). British sailor. Born at New Providence, Oct. 13, 1756, he went to sea at 11 and fought with distinction under Lord Howe in 1794. In 1805 he became admiral, and in 1807 bombarded Copenhagen and captured the Danish fleet. For this he was raised to

the peerage. Promoted admiral of the fleet in 1830, he died April 19, 1833.

The name **Gambier** is given to a group of seven small coral islands in the Pacific Ocean, belonging to France. The total land area is 6 sq. m. Pop. 500.

GAMBIER, GAMBR, OR PALE CATECHU. Extract prepared from the leaves and young shoots of *Uncaria gambier*, a climbing shrub of the Malay Archipelago. It is used chiefly for tanning, the purer qualities being employed in medicine as an astringent.

GAMBLING. Staking money or other valuable commodity upon the as yet undecided issue of an event, particularly of a sporting event or of a game. See Betting.

GAMBOGE. Gum resin of a rich brownish yellow tint, obtained from *Garcinia Hanburii*, a tree which grows in Siam, near the S.W. coast of Cambodia, whence its name. It is used in medicine as a drastic purgative and in water-colour painting.

GAME. Name given to certain undomesticated animals taken in field sports by coursing or shooting, and to their flesh when used for food. Game includes hares, pheasants, partridges, grouse, heath or moor game, black game, and bustards, and, for some legal purposes, woodcock, snipe, quails, landrails, and rabbits. Gamekeepers are servants employed by landowners to rear and preserve game, prevent poaching, and check the depredations of vermin and birds of prey. A licence is required to shoot or to deal in game.

Game fowl are domestic fowls descended from those used in the cockpits for fighting purposes. See Cockfighting.

Game laws in England are the Acts which deal with poaching and trespassing in pursuit of game; and those which impose restrictions on the killing of game. See Poaching.

GANDHI, MOHANDAS KARAMCHAND (b. 1869). Indian Nationalist leader. Born Oct. 2, 1869, he practised law in Bombay. In 1893 in S. Africa he organized an opposition to anti-Asiatic legislation by passive resistance, which resulted in the Indians' Relief Act. In 1919 he launched a crusade against the British raj by means of non-cooperation and the boycott of British goods, but advocated peaceful methods. Arrested in 1922 on a charge of promoting sedition, he was sentenced, March 18, to six years' imprisonment. In 1924 he was released. In 1930 Gandhi began another campaign against the British rule, leading to serious disorder. In May he was arrested.

GANGES. Most important river of India. It rises in two headstreams—the Bhagirathi and the Alaknanda—on the southern slopes of the Himalayas. From its source to Allahabad, except in the rainy season, it is a series of pools and shoals, with occasional rapids. At Allahabad it receives the waters of its largest tributary, the Jumna. Its course is now through the United Provinces and Bengal to the Bay of Bengal. Its length is 1,537 m.

The Ganges is navigable as far as Garmuttesar, 850 m. from the sea, and is the most sacred river of India. The vast region embraced by its delta is from 80 m. to 220 m. in breadth. The drainage area is estimated at 391,100 sq. m. See Allahabad; Hooghli; India.

Ganges was the name of a naval training ship at Shotley, broken up Feb., 1930.

GANGLION (Gr. tumour under the skin). In physiology, a collection of nerve cells. Instances are the spinal ganglia on the posterior roots of the spinal nerves, and the gasserian ganglion lying deep in the temporal region of the skull.

In pathology, a ganglion is a cyst-like swelling which forms in connexion with a tendon sheath or joint, most frequently the tendons at the back of the wrist or the fingers. See Brain; Nervous System

GANGRENE (Gr. gangraina) or MORTIFICATION. Death of a mass of tissue. Clinically, gangrene is divided into two forms: dry gangrene, in which there is little fluid in the tissues and the part becomes dry, hard, shrunken, and black; and moist gangrene, in which the affected part is swollen with fluid and is putrescent.

GANNET or SOLAN GOOSE (*Sula bassana*). Group of large and widely distributed sea fowl. The European gannet, which nests in vast numbers on the Bass Rock, is almost 3 ft. in length and has pure white plumage with the exception of some black feathers on the wings and a slight yellowish buff tinge on the head and neck. Gannets work havoc in the herring and pilchard fisheries.

GANYMEDES or GANYMEDE. In Greek mythology, a Phrygian youth. He was carried off to heaven to be the cup-bearer of Zeus. Later, he was identified with the spirit of the sources of the river Nile.

GAPES. Common disease in poultry affecting young chickens, in which it produces a heavy mortality. It is due to the presence of a worm, which is found sometimes in great numbers in the wind-pipe. See Poultry

Gannet or Solan Goose, *Sula bassana*

GAPON, GEORGE (c. 1870-1906). Russian labour leader. Becoming a priest at St. Petersburg (Leningrad), he founded an organization for factory workers, and in 1904 organized a general strike at the Putiloff works. Escaping the massacre at Narva Bridge (Jan. 22), he fled the country, and visited Paris and London. On April 14, 1906, he was found dead at St. Petersburg, having been assassinated as a traitor by the revolutionaries.

GARCIA, MANUEL DEL PÓPOLO VICENTE (1775-1832). Spanish singer and composer and teacher of singing. Born at Seville, Jan. 22, 1775, he was a chorister in the cathedral there, and soon made himself known as a composer, conductor, singer, and actor. He died June 2, 1832. His daughters, Mmes. Malibran and Viardot, became famous singers.

His son Manuel (1805-1906), a noted teacher of singing, invented the laryngoscope.

Manuel's son, Gustav (1837-1925), had a noted operatic career, and his son Albert also adopted a musical career as singer and teacher.

GARDA, LAGO DI (Lat. Lacus Benacus). Lake of Italy. It is the easternmost of the Italian lakes, and lies between Lombardy and Venetia, running a few miles into Tirol. Some 34 m. long and from 3 m. to 10 m. broad, with a maximum depth of 1,900 ft., it has an area of about 180 sq. m.

GARDELEGEN. Town of Germany, in Prussian Saxony. It came into prominence during the Great War on account of its prisoners-of-war camp, which was notorious by reason of an epidemic of typhoid which broke out there in Feb., 1915. The pestilence lasted four months, involving 2,000 cases. Pop. 9,073. See Wittenberg.

GARDEN. Enclosed ground, wherein flowers, shrubs, fruit, and vegetables are grown. There are two main divisions of gardens, ornamental and useful, many of the latter being known as market gardens. Ornamental

M. K. Gandhi, Indian leader

or flower gardens are classified according to the way in which they are laid out, e.g. in the Dutch or Italian style, or according to what flowers and shrubs they contain, e.g. a rose garden. Public places of amusement which are ornamented with flowers and shrubs are sometimes called gardens (e.g. the old Cremorne Gardens, in London), and there are zoological gardens and botanical gardens. Rows of houses, especially in the west of London, are often known as gardens, e.g. Sussex Gardens.

According to modern usage the complete garden should include an exotic house, a temperate house, and a cool greenhouse. In addition, there should be one or two houses for the cultivation of such things as grapes and tomatoes, supplemented by a number of cold frames. The outdoor arrangements should provide for a tennis lawn or bowling green, formal beds and borders near the house, rock garden, wild garden, water garden, kitchen garden, and shrubbery. Of gardens within gardens the rose garden is the most popular form.

GARDENING When planning gardens of modest dimensions, the lawn as a playground disappears, and its surface is cut up and studded with flower beds, the shrubbery is dispersed, and shrubs grown only as specimens. As far as glass is concerned, one heated house, supplemented by cold frames, must do all that is necessary. Speaking generally, it is more profitable to grow vegetables than fruit in a small garden. The small back garden of the suburban house gives the best results if devoted entirely to the culture of flowers.

That portion of the garden devoted to fruit and vegetables should have a S. or W. aspect, but where this not possible protection from N. winds should be furnished by a wall or fence. See Flower.

GARDEN CITY. Industrial town in which overcrowding is avoided and residents enjoy the benefits of country life. The garden city movement owes its origin to Ebenezer Howard's book *To-morrow: a Peaceful Path to Social Reform*, published in 1898.

The first attempt to build a garden city in England was made in 1904, when Letchworth Garden City was established in Hertfordshire, 35 m. from London. Here the workers have good houses, with adequate sunlight and air space, gardens, and allotments; the factories are within walking distance; there are good shops and schools; an active social and civic life; and the open country is ten minutes' walk from the centre of the town. The industrial features are sufficient space in a specially planned factory area, with sidings, roads, power, etc.; great reduction of loss of time among workmen, and healthy buildings.

The development of the movement is now in the direction of satellite towns like Welwyn around the great cities. The movement is growing throughout the British Empire, and there are garden city associations in France, Germany, Austria, Poland, and Spain. See Bournville.

GARDENIA. Genus of evergreen trees and shrubs. Of the natural order Rubiaceae, they are natives of tropical Asia and S. Africa. They have sweet-scented, white funnel-shaped or salver-shaped flowers.

GARDINER, SAMUEL RAWSON (1829-1902). British historian. Born at Ropley, Hants, March 4, 1829, he was educated at Winchester and Christ Church, Oxford. He wrote the *History of England from the Accession of James I to the outbreak of Civil War, 1883-84*; *History of the Great Civil War, 1886-91*; and *History of the Commonwealth and Protectorate, 1894-1903*, the last-named un-

finished. He collected and edited *Constitutional Documents of the Puritan Revolution, 1889*; wrote *What Gunpowder Plot Was, 1897*; *Oliver Cromwell, 1899*; *A Student's History of England, 1890-91*, new ed. taking the work down to 1910. He died at Sevenoaks, Feb. 14, 1902.

GARDINER, STEPHEN (c. 1493-1555). English prelate and statesman. Son of a Bury St. Edmunds cloth worker, he was educated at Trinity Hall, Cambridge, and in 1528 was sent by Henry VIII to Rome to conduct negotiations for his divorce from Catherine of Aragon. In 1531 he became bishop of Winchester. Under Edward VI he spent over five years in prison for his opposition to doctrinal changes, but on Mary's accession he was made lord chancellor. He died in London, Nov. 12, 1555, and was buried in Winchester Cathedral.

Stephen Gardiner.
English prelate.

GARELOCH. Arm of the Firth of Clyde, Dumbartonshire. Around it are pleasure resorts, among them being Garelochhead, Rosencath, and Shandon.

GARFIELD, JAMES ABRAM (1831-81). American statesman. Born at Orange, Ohio, Nov. 19, 1831, in humble circumstances, he

began his active political career in 1856, and after distinguished service in the Civil War was in March, 1881, elected president. His advocacy of civil service reform and selection of his Cabinet almost entirely from his own section of the Republican party aroused hostility. He was shot at Washington, July 2, 1881, but survived until Sept. 19, when he died at Elberon, New Jersey. His assassin, who was hanged, was Charles J. Guiteau, a Chicago lawyer of French Canadian extraction, who had asked for, but failed to obtain, the American consulship at Marseilles.

James Garfield,
American statesman

GAR-FISH (Belone). Group of fishes of long and slender form. They have the jaws produced to form a sword-like beak, and bones of a green colour. They include about 50 species, one of which is quite common around the British coasts.

GARGANTUA. Central figure of Rabelais's *Les horribles faictz et prouesses es-pouventables de Pantagruel*, 1535. Gargantua, father of Pantagruel, is a huge giant with a vast capacity for eating and drinking. From his name is derived the adjective gargantuan. See Rabelais.

GARGOYLE (Fr. gargouille, throat). Projecting spout attached to the gutter of a roof for shooting rainwater clear of the walls. In Gothic architecture it was made of stone fashioned into a grotesque animal or human face. See Gothic Architecture; Notre Dame.

GARIBALDI, GIUSEPPE (1807-82). Italian patriot. A fisherman's son, he was born at Nice, July 4, 1807. In 1834 he flung himself ardently into the Young Italy movement initiated by Mazzini, joined in an insurrection, and barely escaped with his life. From 1836-48 he was in S. America. In 1848 he returned to Italy, raised troops of volunteers, and performed brilliant feats of arms. In 1854 he returned to Italy after another exile and settled in Caprera, under the Sardinian government. In 1859 Garibaldi fought for Sardinia

against Austria and, protesting against the cession to Napoleon III of Nice, he led the Sicilian insurgents against the Bourbon monarchy of Naples. Openly discountenanced but secretly encouraged by Cavour, he gathered a small army of volunteers, his "red shirts," known as Garibaldi's Thousand, threw himself into Sicily, and cleared it of the 20,000 Bourbon regular troops. Passing over into Italy, he marched to Naples, whence Francis, II took flight. When Victor Emmanuel entered Neapolitan territory, Garibaldi hailed him as king of united Italy.

In 1862 he attempted to wrest Rome from the pope; but the Italian government turned against him, and he was defeated at Aspromonte, Aug. 29. After a temporary retirement, he again commanded his irregular troops in the war with Austria, 1866; and in 1867 again attempted to capture Rome, but was defeated by its French defenders at Mentana Nov. 3. He died at Caprera, June 2, 1882. Consult Garibaldi and the Making of Italy, G. M. Trevelyan, 1920.

Giuseppe Garibaldi
Italian patriot
From a photo c. 1860

GARLIC. Pungent flavoured bulbs of the onion family, of the order Liliaceae, genus Allium. A native of the East, probably S.W. Siberia, it grows to a height of 2 ft., bearing at the top an umbel of a few whitish flowers. The plant is cultivated in a similar way to the shallot, and only the bulb part is eaten. It is used as a condiment, chiefly in S. Europe. Wild garlic, *Allium oleraceum*, is occasionally used in England as a pot-herb.

Garlic. Flowers and foliage
of *Allium oleraceum*

GARNET, GROUP of precious stones, composed of three molecules of silica, one of sesquioxide, and three of monoxide. The two last differ widely in their chemical make-up. The crystalline form is cubic; all are fairly hard. This last quality makes them of value for technical purposes—for instance, in watch-making—while garnet powder is used for polishing hard gems. Colour is always distributed uniformly in garnets. Red, brown, green, yellow, and black varieties are found in various parts of the world.

GARNETT, OR GARNET, HENRY (1555-1606). English Jesuit. Educated at Winchester, he joined the Jesuits in 1575, and in 1587 was made superior of the English province. He became involved in the Gunpowder Plot (q.v.), and after hiding in Hindlip Hall, near Droitwich, gave himself up, maintaining to the end that he did not approve of the plot, though admitting his knowledge of it. He was executed in London, May 3, 1606.

Gargoyle. Example from the church
at Horsley, Derbyshire, c. 1450

GARNISHEE (Old Fr. garnir, to warn). Term used in English law. It is the procedure whereby a judgement creditor can obtain an

order from the court directing a person who owes money to the judgement debtor to pay it over to the judgement creditor.

GARONNE. River of France. Rising in the Pyrenees and flowing for a few miles in Spain, it enters France in the dept. of Haute Garonne, and, flowing mainly N.W., reaches the sea just below Bordeaux. There it receives the Dordogne, and the two unite to form the estuary of the Gironde. Its length is about 350 m.

GARRICK, DAVID (1717-79). English actor. Born at Hereford, of Huguenot descent on Feb. 19, 1717, he was educated at Lichfield grammar school, and later at Samuel Johnson's academy there. Becoming close friends, Johnson and Garrick came to London in March, 1737. Until 1741 Garrick engaged, with scant success, in a wine business, but his main interests were in the stage. His play *Lethe* was produced in 1740, and in March, 1741, he made his first appearance on the stage as Harlequin, appearing at Goodman's Fields Theatre in Oct. of that year as Richard III.

From 1742-45 he played at Drury Lane, and after a season in Dublin with Sheridan appeared at Covent Garden during 1746-47. After this Garrick became the chief proprietor of Drury Lane, where he henceforth appeared. Specially noteworthy were his Shakespearean productions. *Hamlet*, *Lear*, *Macbeth*, and *Richard III* were among his most distinguished performances. His death on Jan. 20, 1779, called forth Johnson's famous remark that the event had "eclipsed the gaiety of nations."

The Garrick Club was founded in 1831. The original club house was at 35, King Street, Covent Garden; the premises at 15, Garrick Street, London, W.C.2, were opened in 1862.

The Garrick Theatre is in Charing Cross Road, London, W.C. It was opened April 24, 1889, by Sir John Hare.

GARRISON, WILLIAM LLOYD (1805-79). American abolitionist. Born at Newburyport, Massachusetts, Dec. 12, 1805, before he was 20 he was writing articles, under the pseudonym of Aristides, attacking the institution of slavery. In 1826 he became editor of *The Newburyport Free Press*, and in 1827 of *The National Philanthropist*, the first paper founded in America to advocate temperance. In 1829 he was imprisoned for expressing his views on the slavery question. From 1831-65 he published at Boston a weekly journal, *The Liberator*. Meanwhile, he wrote *Thoughts on African Colonization*, 1832, and helped to found the Anti-Slavery Society in Philadelphia in 1843. He died May 24, 1879.

W. Lloyd Garrison, American abolitionist

GARROTTE (Span. garrote, cudgel). Spanish method of execution by strangulation. Originally the condemned person was seated in a chair fixed at the back to an upright post. A cord was placed round his neck and also round the post. Strangulation was produced by twisting the cord with a stick after the manner of a tourniquet. Later the chair was provided with a hinged iron collar, in the back of which was a sharp-pointed screw, or a lever. Death was caused by dislocation of the spinal column.

GARSTIN, SIR WILLIAM EDMUND (1849-1925). British engineer. Born Jan. 29, 1849, in 1872 he entered the India public works dept. and was employed for a time in Egypt. From

1892-1904 he was inspector-general of irrigation in Egypt, being also under-secretary for public works. Knighted in 1897, in 1904 Garstin was appointed a director of the Suez Canal Co. He died Jan. 8, 1925.

GARTER, ORDER OF THE. British order of knighthood, the most ancient and illustrious in the world. It was originally instituted as a purely military order by King Edward III in or about 1348, but in modern times is more generally bestowed on royal personages and on leading representatives of the British peerage. Each knight is allotted a stall in S. George's Chapel, Windsor Castle, on which is set up a plate engraved with his titles and coat of arms. Above each are placed his banner, sword, helmet, and crest.

The habits and insignia of the order are the garter, mantle, surcoat, hood, star, collar, George and lesser George, two jewelled figures, representing S. George and the dragon. On the death of a knight companion his insignia are returned to the sovereign. The order has the following officers: prelate, the bishop of Winchester; chancellor, the bishop of Oxford; registrar, the dean of Windsor; herald, garter king of arms; gentleman usher of the black rod; and secretary. The practice of encircling arms and crest with a garter bearing a private motto is incorrect.

Garter. Insignia of the Order. Top, star; centre, the garter; below, collar and George

GARUA. Town of French Cameroons, W. Africa. Some 40 m. E. of the Nigerian border, it is on the Benue river. It is an important station on the Benue route to the Niger. It surrendered to the Allies, June 10, 1915. Pop. about 5,000. See Cameroons.

GARY. City of Indiana, U.S.A. At the head of Lake Michigan, 30 m. S.E. of Chicago, it owes its prosperity to the United States Steel Corporation, which in 1906 selected it as the site for its chief works. Gary also has tinplate works, locomotive and car shops, and cement and tube factories. Pop. 55,378.

GAS. Gas or vapour is matter in a perfectly fluid state. Oxygen, hydrogen, and nitrogen are common gases. Both solids and liquids may change into gas by the application of heat, as gases may be transformed into liquids and solids by cold. Gases are easily soluble in many liquids, the quantity dissolved being proportional to the pressure. Gases absorb light in different ways, and have consequently absorption bands in the spectrum. They are poor conductors of heat, and as conductors of electricity vary according to their temperature, pressure, etc. When gases are subjected to an electrical discharge, or are exposed to rays given out by radio-active substances, the gases become ionised and acquire conductivity.

Through the researches of Sir J. J. Thomson and others on the behaviour of gases when exposed to cathode rays the electron theory of the atom was propounded and the whole aspect of physics was altered. (See Atom.) In the kinetic theory of gases it is assumed that the molecules of a gas are in

constant motion along straight lines; during such motion they impinge upon other molecules—gaseous, liquid or solid—and suffer a change of direction and an alteration of speed. Under similar conditions of temperature and pressure equal volumes of all gases contain an equal number of molecules. See Avogadro's Law; Boyle; Dalton.

GAS MANUFACTURE. The use of coal gas for illuminating purposes was first practically demonstrated by William Murdock in 1779. In 1798 Murdock used gas as an illuminant in Boulton and Watt's works at Soho, near Birmingham, and a few years later he applied it to cotton mills in Manchester. In overcoming technical difficulties he was assisted by Clegg (1781-1861), to whom are due the invention of the water meter and the first processes of purification. In 1810 the Gas Light and Coke Company was formed.

The process of making coal gas consists in strongly heating coal in closed tubes or retorts, thus liberating the gas, which is cooled, throwing down tar oils and water, scrubbed, to take out ammonia, benzol, and other components, and purified by means of lime and iron oxide. Finally the gas is measured in the station meter and stored in gas-holders, ready for use when required.

Water gas is made by forcing steam through a mass of glowing coke. The gas is usually carburetted—i.e. enriched by oil vapours—and is supplied for domestic purposes mixed with coal gas. Oil gas is made chiefly from heavy oil, which is heated in a retort, condensed, and purified much in the same way as coal gas. Producer gas is the gas made by passing a current of air through glowing anthracite or coke. Natural gas, which escapes from the ground in some regions, is used, where available, for lighting and heating. (See Acetylene.)

The incandescent gas mantle was introduced in 1885 by Baron von Welsbach. The mantle is woven of ramie fibre, cotton, or cellulose, and is impregnated with thorium and ceria. When the fabric is "burned off" on first lighting, a skeleton of the oxides is left, and this is raised to incandescence by the Bunsen burner (q.v.), yielding a powerful light.

Before the Great War the regular illuminating gas in use was unmixed coal gas, but this has been very largely displaced by water gas or a gas consisting of a mixture of the two. Since practically all gas lighting is by means of the incandescent mantle, which utilises the heating power of the gas, the fuel value is now the primary consideration. The Gas Regulation Act of 1920 made it obligatory for suppliers to charge consumers at a price which was based on this value. For the cubic foot a

Gas; Suction Gas Plant for Gas Engine. 1, Gas generator, filled with glowing coke or anthracite; 2, Vaporiser to raise steam; 3, Scrubber and filter; 4, Gas outlet to engine; 5, Air and steam inlet. Steam and air are drawn into generator by the suction of the engine

new unit, the gas therm (100,000 British thermal units) was substituted.

GAS WARFARE The term gas is used collectively to describe the poisonous and irritating chemicals discharged against hostile troops as one phase of modern warfare. Gas

Gas Warfare. British anti-gas respirator. 1. Military pattern, in position. 2. Detail of facepiece, aural pattern. 3. Canister containing chemicals which absorb and neutralise toxic gases

was first used in the Great War, the first attack being that made by the Germans at Ypres in April, 1915. The method employed was to discharge clouds of gas against the enemy from cylinders kept in the trenches. This method has been largely superseded by the use of shell charged with "gas," which is released when the shell explodes. The chemicals used may be lethal in their effect, or incapacitate troops either by a lachrymatory effect or by causing violent sneezing. The anti-gas mask fits to the face and is connected by tubing to a box containing chemicals which absorb the gas.

GASCOIGNE, GEORGE (c. 1525-77). English poet. Born at Cardington, Bedfordshire, he was M.P. for Bedford, fought in the Low Countries, and took part in the famous festival at Kenilworth. He died Oct. 7, 1577.

To him is due the first English prose comedy, *The Supposes*, 1566 (an English adaptation of Ariosto's *Gli Suppositi*), which supplied the underplot of Shakespeare's *The Taming of the Shrew*; one of the earliest English satires in blank verse, *The Steel Glass*, 1576; the first critical essay on English versification, *Certain Notes of Instruction in English Verse*, 1575; and *Ferdinando Jeronimi*, 1572

GASCONY. One of the old provs. of France. Bounded W. by the Atlantic, Gascony lay contiguous with Languedoc and Foix on the E., Navarre and Béarn on the S., and Guienne on the N. Gascon territory would thus fall within the modern depts. of Landes, Hautes-Pyrénées, Gers, and parts of Haute-Garonne, Lot-et-Garonne, Ariège, and Tarn-et-Garonne. The centre of government was Auch. The name comes from the Iberian tribe of the Vascones.

The Gascon dialect still prevails in the district. The exuberant and vaunting character of the Gascon people is proverbial, the term *gasconnade* being applied to bragging, flamboyant speeches, or actions. See *Aquitaine*; France; Hundred Years' War.

GAS ENGINE. Type of internal combustion engine in which gas is used as the fuel. A practical engine in which coal gas was used as a source of power was designed by a French inventor, Étienne Lenoir, in 1860. Improvements were added to Lenoir's design by Dr. Nicholas A. Otto and Eugen Langen, and in 1878 the former embodied the principle of compression in a design of engine which was

the first to attain real success. The Otto engine works on what is called a four-cycle principle, that is to say there is one impulse (explosion) in the engine cylinder to every four strokes of the piston, two forward and two back, or in two complete revolutions of the crank.

In 1886 Clerk invented a two-cycle engine, in which he introduced an extra cylinder, the purpose of which was to draw in and compress the charge and to sweep out the burnt gases from the power cylinder by a blast of air. The principle of the Clerk cycle has been embodied in many of the large gas engines of to-day, some of which have an individual rating of 5,000 h.p. See *Internal Combustion Engine*.

GASKELL, ELIZABETH CLEGHORN (1810-65). British novelist. Born at Chelsea, Sept. 29, 1810, she married William Gaskell, a Unitarian minister and professor of English literature at Manchester. Her first novel, *Mary Barton*, 1848, met with wide success, and was followed by *Ruth*, 1853, and by her best known work, *Cranford*, 1853, a charming picture of village life founded on her recollections of Knutsford, where she had lived as a child. Other works were *North and South*, 1855, *Sylvia's Lovers*, 1863, several volumes of short stories, and the excellent life of her friend, *Charlotte Brontë*, 1837. Mrs. Gaskell died Nov. 12, 1865.

Elizabeth C. Gaskell
British novelist

GASOLINE or **GASOLINE.** One of the products of fractional distillation of petroleum. The refined oil is used for burning in vapour lamps, as a fuel in internal combustion motors, and as a solvent for oils and fats. See *Petroleum*.

GASPÉ. Peninsula forming the eastern part of the prov. of Quebec, Canada. It lies between the St. Lawrence and Chaleur Bay. The interior is forest land and on the coast are a few fishing villages. The name is also borne by a cape and a bay at the eastern end; on the latter is Gaspé Basin, where Jacques Cartier landed July 24, 1534.

GASQUET, FRANCIS AIDAN (1846-1929). British cardinal. Born in London, Oct. 5, 1846, from 1878-85 he was prior of Downside.

In 1886 he began that systematic historical research which resulted in such works as *Henry VIII and the English Monasteries*, 1888; *The Eve of the Reformation*, 1900; *The Greater Abbeys of England*, 1908; and *Monastic Life in the Middle Ages*, 1922. From 1900-14 he was abbot-president of the English Benedictine Congregation. In 1907 he was appointed president of the commission for the revision of the Vulgate. He was created a cardinal priest, by the title of St. George in Velahro, in May, 1914. He died April 5, 1929.

Francis A. Gasquet,
British cardinal
Russell

was appointed president of the commission for the revision of the Vulgate. He was created a cardinal priest, by the title of St. George in Velahro, in May, 1914. He died April 5, 1929.

GASTRIC JUICE. Fluid secreted by the mucous membrane of the stomach. Its action is fivefold. (1) It acts as an antiseptic in virtue of the hydrochloric acid it contains, tending to prevent putrefactive processes occurring in the stomach. (2) It acts on cane sugar, converting it into simpler forms. (3) It eurdles milk. (4) It splits fat up into simpler bodies. (5) It converts protein—the principal nitrogenous constituent of animal food—into proteoses which, after further change into peptones, are absorbed in the process of digestion. See *Stomach*.

GASTRITIS. Inflammation of the mucous membrane which lines the interior of the stomach. Two forms are recognized, acute and chronic. Acute gastritis is a common complaint most often caused by eating unsound or indigestible food. Irritant poisons may also give rise to it.

The symptoms are those of pain and feeling of distension in the stomach, nausea, vomiting, gaseous eructations, and headache. In most cases a purgative should be given. No food should be taken until the symptoms are abating, and then only the lightest diet.

Chronic gastritis may follow the persistent eating of unsuitable or indigestible food, or excessive taking of tea, coffee, or alcohol, or the habit of hastily taking meals and holling food which is insufficiently masticated. It may also be a symptom of constitutional disorders such as anaemia, gout, diabetes, and tuberculosis. Treatment consists in careful dieting and allowing plenty of time for meals.

GASTROPODA (Gr. *gaster*, stomach; *pod.* foot). Division of the sub-kingdom Mollusca. It includes those molluscs which have the ventral or under side of the body developed in a gliding hase. Gastropods may be roughly defined as comprising snails and slugs, terrestrial, fresh-water, and marine. The underside of a gastropod is its organ of locomotion. The body is slowly propelled forwards by a peculiar ripple or wave-like movement of the foot. Economically, certain marine gastropods are of value as food for man, as the whelk and periwinkle; and several species of land snails are consumed. Some aquatic gastropods do useful work as scavengers, while many of the terrestrial ones do great mischief in gardens by eating the plants. See *Snail*.

GATEHOUSE. Structure above and on each side of a gateway. It was used to guard the solid bridge or drawbridge that gave access to the medieval castle or fortified manor house. The Gatehouse of Westminster was built in 1370 by Walter de Warfield within the precincts of the abbey on a site now occupied by the Crimean Memorial. Used as a prison by Whitgift in connexion with the eccles. courts, and by the Star Chamber, it later served as a debtors' prison. It was demolished in 1776.

GATESHEAD. County bor. and seaport of Durham. It stands on the S. bank of the Tyne, opposite Newcastle, on the main line of the L.N.E.R. The buildings include the 15th century church of S. Mary, rebuilt in the 18th, the town hall, erected in 1868, the public library, the Shipley Gallery, mechanics' institute, and Abbot memorial industrial school. The industries include shipbuilding, iron and engineering works, and the making of glass and chemicals. The L.N.E.R. has large shops in the town. There are important shipping interests, coal being exported. Five bridges (one a swing bridge) span the river. In the vicinity, on the Team, are Ravensworth, opposite Gateshead Fell; Stella Hall, an Elizabethan mansion; and the ruins of Prudhoe Castle. Pop. 127,400.

GATH (Heb. wine-press). One of the chief cities of the Philistines, on the borders of Judah. It was famed as the birthplace of Goliath. At one time under the rule of the Egyptian kings, at another it had kings of its own. It was fortified by the Crusaders, captured by Saladin in 1191, and retaken the next year.

GATLING, RICHARD JORDAN (1818-1903). American inventor. Born in N. Carolina, Sept. 12, 1818, he invented the revolving machine gun known by his name. He also invented a hemp-breaking machine and a steam plough. He died Feb. 26, 1903.

The Gatling Gun was invented in 1862. It had six barrels mounted round a central axis,

and belongs to the class known as non-automatic, since the operations of feeding cartridges, firing, and ejecting shells were effected by the operation of a crank by the operator, and not by the force of the explosion or recoil. These guns were adopted by the British army and navy in 1871, but soon after the S. African War they were superseded.

GATTON. Village of Surrey. It is 2 m. from Reigate and was once a borough. The small town hall still stands. Gatton Park is crossed by the Pilgrims' Way. Gatton House was built by Lord Monson. In the church are wood carvings from Belgium and Nuremberg and stained glass from Aerschot.

Gatwick. Racecourse in Surrey. It is 6 m. from Reigate, and there is a station on the Southern Rly.

GAUCHOS (Araucanian, friends). Natives of Spanish paternity in Uruguay and the Argentine pampas. One strain claimed descent from the Spanish conquistadores modified in their native environment. Another is largely mixed with Guaycuru blood in Uruguay, with Araucanian on the pampas. Daring horsemen, wielding bola and lasso, they were nomad cattlemen. Pron. Gow-chôse. See illus. p. 120.

GAUDEAMUS. Title and first word of an old German students' song in dog-Latin. The theme of it is "let us rejoice while we are young" (Gaudemus . . . juvenes). It is also the title of a collection of students' and school songs by John Farmer, 1890, and is included in the Scottish Students' Song-book.

GAUGE OR GAGE. Term used for various types of measuring instruments, e.g. water gauge, pressure gauge, wire gauge, and also as a standard, e.g. railway gauge. There is a great variety of gauges. Among them are wire gauges, used for the measurement of the external diameters of wires; a marking gauge, a tool used by carpenters for scribing a line parallel to the edge of a piece of wood, etc.; rain gauges, used for measuring the rainfall; and water and steam pressure gauges attached to steam boilers, enabling the engineer to ascertain the quantity of water in the boiler and the head of steam. Railway gauge is the width between the lines.

GAUGUIN, PAUL (1848-1903). French artist. Born in Paris, June 7, 1848, he worked for a time in Brittany. In 1891 he went to the South Seas and lived for many years in Tahiti. He died May 9, 1903. Influenced by Van Gogh and Cézanne, and also by his residence in the tropics, Gauguin's work is remarkable for its decorative qualities and rich colouring, and is highly valued by collectors.

GAUL. Old name for France. It is derived from Gallia, the name given to that country by its Roman conquerors. This Gaul was larger than the modern France, as it included Belgium and parts of Germany, Holland, and Switzerland. Gaul was conquered by Julius Caesar. Its inhabitants were mainly Celts. See France.

GAUNTLET (Fr. gantelet, little glove). In armour, a glove of leather covered with scale work or overlapping metal plates which permitted the hand to close. It was originally made without separate fingers, and with a metal extension over the wrist. Throwing down a gauntlet was a recognized form of challenge in medieval times. See Armour.

GAUTIER, THÉOPHILE (1811-72). French author. Born at Tarbes, Aug. 31, 1811, and admitted young to Hugo's circle, he gained

Théophile Gautier,
French author

notoriety with two brilliant but licentious romances, *Albertus*, 1830, in verse, and *Mlle. de Maupin*, 1835, in prose. In verse his principal volumes are *La Comédie de la Mort*, 1838, and *Émaux et Camées*, 1852. His prose includes many tales and stories; a remarkable piece of archaeological fiction, *Le Roman de la Momie*, 1856; *Le Capitaine Fracasse*, 1863, a dashing historical novel of adventure; some picturesque records of travel; the semi-autobiographical *Paradis des Chats*, and *Ménagerie Intime*, 1869; and numerous volumes on the history of literature and art. He died Oct. 23, 1872.

Gautier's daughter Judith, who died in 1917, wrote historical novels and poetry, and was a distinguished Oriental scholar. She collaborated with Pierre Loti in the play *La Fille du Ciel*, 1912.

GAVARNI (1804-66). French caricaturist. He was born in Paris, Jan. 13, 1804, his real name being Guillaume Sulpice Chevalier. He adopted the pseudonym of Gavarni from the village of Gavarnie, Hautes-Pyrénées, of which he showed a drawing at the Salon, 1829. Settling in Paris, he soon became known for his drawings of fashionable women in *La Mode*. Joining the staff of *Charivari*, he disclosed his remarkable talent for caricature. In 1849 he visited England, producing Gavarni in London for *The Illustrated London News*, and his lithograph, *The Highland Piper*, his masterpiece in this style. He illustrated Eugène Sue's *The Wandering Jew*, Balzac's novels, and other books. He died Nov. 24, 1866.

GAVELKIND (A.S. gafol, trihue, eynd, kind). English name for a form of land tenure formerly found in Kent and sometimes elsewhere. Its main feature was that in cases of intestacy the land passes to all the sons equally. Land held in gavelkind could be disposed of by will and was not forfeited by treason. The widow's dower was one-half, not one-third, as was usual under other systems.

GAVIAL OR GHARIAL. Member of the crocodile family, distinguished from the others by its very long and slender snout. It is common in India, where it sometimes attains a length of twenty feet, and lives in the larger rivers. It feeds upon fish and is rarely known to attack land animals. See Crocodile.

GAVOTTE (Fr.). Graceful old dance in duple time, beginning on the second half of the bar. Many examples are to be found in the suites of Bach and other 18th century composers. The gavotte was the dance of the Gavots—or people of the Pays de Gap. It was danced at the French Court in the 16th century.

GAWSWORTH. Village of Cheshire. It is 3 m. S.W. of Macclesfield. Here is situated the old hall, once the seat of the Fytton or Fitton family. The interesting church, parts of which are attributed to the 11th century, was restored in 1851. It contains many monuments to generations of the Fytton family, the Mary of which has been, though probably with scant warrant, identified with the Dark Lady of Shakespeare's Sonnets.

GAY, JOHN (1685-1732). English poet and dramatist. Born in Devonshire, his first real success was a pastoral, *Shepherd's Week*, 1714.

This was followed by *Trivia*, 1716, a description of the moving panorama of the London streets, and by his *Fables*, 1727, which were a notable success. His best work, however, is *The Beggar's Opera*, 1728, a lyrical drama of thieves and highwaymen. It had a great vogue, and Gay followed it up with a sequel, *Polly*. Both were successfully revived at the Lyric Theatre, Hammersmith, after the Great War, by Sir Nigel Playfair. He died Dec. 4, 1732.

GAYAL (Bos frontalis). Species of ox found in the hilly regions of N.E. India. It

Gayal. Domesticated ox kept by the natives of north-east India
W. S. Berridge, F.Z.S.

is smaller than the gaur, with which it is said to interbreed, and has straighter horns without any crest between them. It has been domesticated and is kept by the natives of N.E. India.

GAZA. Town of Palestine, the modern Guzze or Guzzeh. Recognized as the key to Palestine from the south, it was always strategically important. In Biblical times it was one of the five chief cities of the Philistines. In 332 B.C. it was captured by Alexander the Great, and afterwards figured in the chronicles of Maccabees and Moslems, Crusaders and Turks. Napoleon took it in 1799. Pop. 17,480.

Gaza gives its name to a series of battles fought between the British and the Turks in the Great War. The first was an attempt to capture the town as a preliminary to the conquest of S. Palestine. On Mar. 26, 1917, the British cavalry crossed the Wadi Ghuzze, and prepared to envelope Gaza from the N. and E., while the 53rd Division attacked the town frontally. The Turks, heavily reinforced, caused the British to fall back to the Wadi Ghuzze on March 28. On April 17 the second battle of Gaza began. The British, although they carried the Turks' outer defence, failed to carry Ali Muntar and were checked elsewhere, and the battle was broken off. It was not until Nov. 7, 1917, that the British under Allenby were able to capture Gaza, a victory that made possible the subsequent conquest of Palestine.

GAZEBO.

Summer-house built to command a wide view over the surrounding country, corresponding to the Italian belvedere. The word is the future form of a supposed Latin verb and means I will survey. A

bow window is sometimes called a gazebo.

GAZELLE (Arab. ghazal). Name given to a large number of species of small antelopes, chiefly found in the desert regions of the E. hemisphere. They are the lightest and most graceful of the antelopes, and usually

John Gay,
English poet

Gauntlet. Specimens of Italian work, early 16th century
Wallace Collection, London

Gazelle. Dorcas gazelle, a native of North Africa
W. S. Berridge, F.Z.S.

have remarkably slender legs. The majority of the species are less than 30 ins. high. The upper molar teeth resemble those of the sheep.

GDYNIA (Ger. Gdingen). Polish seaport on the Gulf of Danzig. It lies just outside the free city of Danzig. Dissatisfied with the establishment of Danzig as a free city, Poland decided to build a purely Polish port at Gdynia, originally a small fishing village. Work was begun in 1921, and trade was soon passing through the port. Pop. 2,500. See Danzig.

GEAR. Toothed wheel or series of connected tooth wheels for the transmission of motion from one machine to another, or from part of a machine to another part.

Gear wheels are of varying shapes and sizes, with many different kinds of teeth cut upon them according to the speed and the direction they are required to transmit motion. A multiplying gear, as of a clock or bicycle, causes the driven part to move faster than the driving part; a reducing, or de-multiplying gear, as of a crane, acts the reverse way; a change speed gear enables the relative speeds of the driving and driven parts to be varied at will; a reversing gear alters the direction of motion.

GECKO. Family of small lizards, common throughout the tropics. They are of dull colour,

Gecko. The S. European wall gecko, *Tarentola mauritanica*

with many tubercles on the skin. In most species the toes act like suckers and enable the animals to ascend the window panes and run about the ceilings. The lizards live on insects and are harmless.

GEDDES, SIR AUCLAND CAMPBELL (b. 1879). British politician. A son of Auckland C. Geddes and a brother of Sir Eric Geddes, he became a doctor, and was professor of anatomy at McGill University, Montreal, and at the Royal College of Surgeons, Dublin. In 1916 he became director of recruiting at the War office, and minister of national service in Aug., 1917; he was then knighted and obtained a seat in Parliament. Under Mr. Lloyd George he was president of the local government board, minister of reconstruction, and president of the board of trade (1918-20). From 1920-24 he was ambassador at Washington, and on his retirement entered on a business career.

GEDDES, SIR ERIC CAMPBELL (b. 1875). British politician. Born in India, Sept. 26, 1875, he held posts in the service of railway companies in America and India, and then entered that of the North Eastern Ry. Co. In 1915 Geddes was given a post in the ministry of munitions, and in 1916 was sent to France as director-general of military rlys. Early in 1917 Lloyd George made him controller of the navy, and, later in the year, first lord of the admiralty. Geddes, who was minister of transport 1919-1921,

Sir Eric Geddes, British politician

presided over a committee on national expenditure 1922, and became chairman of the Dunlop Rubber Co. 1923. In 1916 he was knighted.

GEDDES, JENNY. Edinburgh kail-wife or vegetable seller. She is famed for having started a riot in St. Giles's Cathedral by hurling a stool at the dean who read Laud's liturgy there for the first time, July 23, 1637.

GEDDES, PATRICK (b. 1854). British scientist and social reformer. He became demonstrator in physiology at University College, London, was lecturer in zoology at Aberdeen and botany at Edinburgh, on natural history in the school of medicine,

Gear. 1. Double helical gear. 2. Spur gear. 3. Worm gear. 4. Bevel gear. 5. Skew gear

Edinburgh, and then professor of botany at Dundee. He travelled widely and took a leading part in educational and social work in Scotland. Geddes was director of the Cities and Town-Planning Exhibition. His writings were mainly articles on these subjects and works on biology and botany.

GEELONG. City and seaport of Victoria, Australia. Near the head of Geelong Harbour, 45 m. by rly S.W. of Melbourne, it is the port for the products of the western plains, and has some manufacturing industries. Pop. 42,300.

GEFFRYE MUSEUM. London museum of furniture design and craftsmanship. Opened in 1914, it is situated in the Kingsland Road, near Shoreditch Church, and is housed in the old Geffrye, or Ironmongers' Almshouses, founded by Sir Robert Geffrye (1613-1703), lord mayor of London and master of the Ironmongers' Company. The collection includes specimen rooms of various periods, carved mantelpieces, doorways, and grates, and much beautiful furniture.

GEHENNA. Name in Biblical and post-Biblical literature of a place of fiery torment. It is derived from Ge-Hinnom, the Valley of Hinnom, a valley on the W. of Jerusalem in which the refuse of the city and the bodies of animals and criminals were burned.

GEIKIE, SIR ARCHIBALD (1835-1924). British geologist. Born in Edinburgh, Dec. 28, 1835, he entered the geological survey in 1855, and became director of the geological survey of Scotland in 1867.

From 1871-82 he was Murchison professor of geology and mineralogy in Edinburgh University. His main life work was as director-general of the geological survey of the United Kingdom and director of the museum of practical geology, 1882-1901. His numerous works included a Text-book of Geology, 1882; Class-book of Geology, 1886; Geological Map of England and Wales, with Descriptive Notes, 1897; Scottish Reminiscences, 1904; Landscape in History, 1905; and Lives of R. I. Murchison and A. C. Ramsay. He was knighted in 1891, created K.C.B. in 1907, and given the O.M. in 1914. He died Nov. 11, 1924.

Sir Archibald Geikie, British geologist

GEISHA. Girl in Japan trained as an entertainer. Taught music, dancing, singing, and the art of conversation from an early age, these girls are engaged to provide entertainment at dinner parties and receptions, and to amuse their hosts by witty repartee.

Geisha or dancing girl of Japan, in typical costume

GELATIN OR **GELATINE.** Constituent of animal tissues, bones, hoofs, etc., which forms a transparent jelly when dissolved in water. Gelatin is essentially a purified form of glue. It is largely used for culinary purposes; as a basis for photographic sensitive surfaces; in bacteriology; as a size for paper; in dyeing; and in making printers' ink rollers. When gelatin solution is treated with a bichromate salt, allowed to solidify and exposed to light, the gelatin becomes insoluble. This property is utilised in the carbon process of photography, and in the manufacture of washable distempers.

GELDERLAND, GUELDERLAND, OR **GUELTERS.** Province of Holland Bounded N.W. by the Zuider Zee and S.E. by Prussia, it is watered chiefly by the Lower Rhine, Waal, and Yssel, while the Meuse forms the S. boundary. The good pasturage supports large numbers of cattle, small estates predominate in the agricultural districts, and corn, flax, beet, and tobacco are important crops. The capital is Arnhem.

In 1543 Gelderland passed to the emperor Charles V, and became one of the United Provinces in 1578. In 1814 it became part of the kingdom of the Netherlands (q.v.).

GELÉE, CLAUDE (1800-82). French painter, usually known as Claude Lorraine. Born in Lorraine, he spent most of his life in Italy. His works are marked by a richness of detail and grandeur of composition that few of the classical landscape painters have approached. There are good examples in the National Gallery, London. He died Nov. 21, 1882. Gelée's *Libri di Verità* (Books of Truth), which contain sketches of his pictures made in order to prevent forgeries of them, were reproduced in 1777.

Claude Gelée, French painter

GELIGNITE. Industrial high explosive. It contains about 65 p.c. of nitroglycerin, which has been made to the consistency of thin jelly by the solution in it of collodion cotton, 27 p.c. of potassium nitrate, and 7 p.c. of wood meal. A little calcium carbonate is present, and a small quantity of moisture. See Dynamite; Explosive; Nitroglycerin.

GELIMER. Last Vandal king. A descendant of Gaiseric, he ruled over the Vandal kingdom in Africa for about four years. In 533 a Roman force under Belisarius landed in Africa and met the Vandals in battle 10 m. from Carthage. There Gelimer's force was routed and Carthage was entered. However, the king assembled a new army, and a second time gave battle to Belisarius, but was again defeated. Gelimer walked as a captive in the procession of Belisarius at Constantinople, afterwards disappearing from history.

GELLERT. Hound given according to tradition by King John to his son-in-law, Llewellyn, in 1205. The story runs that

Llewellyn, returning from a hunt, was met by the dog covered with blood. Hurrying into his castle he found his infant heir's cradle overturned and blood-stained, and slew the dog, believing that it had killed his child; only to find that the faithful dog had killed a wolf that had attacked the boy. Gellert's grave is shown at the village of Beddgelert, in Wales, near Snowdon.

GELLIGAER OR **GELLYGAER**. Urban district and colliery centre of Glamorganshire. It is 14 m. N. of Cardiff, on the Monmouthshire boundary. Its Norman church of S Cadocus was restored in 1867. Gelligaer is near the site of a Roman hill-fort of the 1st century A.D. Its four-gated, turreted ramparts enclose 2½ acres, with headquarters, six barracks, two granaries, and extramural baths. Pop. 48,379.

GEM. Name given to precious stones, especially diamonds, rubies, sapphires, topazes, and emeralds after they have been cut and polished. It is used in a secondary sense for cameos and the less precious stones, e.g. agates, garnets, jaspers, onyxes.

CUTTING THE GEMS. There are various styles of cutting: (1) Brilliants have a flat, octagonal table, surrounded by 32 smaller facets sloping to the girdle: the lower part is pyramidal, 24 facets sloping to the flat culet. A half-brilliant is only faceted from girdle to table, having a flat base. (2) Roses are rather like the half-brilliant, the top surface being cut with six or more triangular facets of equal size, with flat back. (3) Briolettes are pear-shaped, covered with triangular facets, but without table, girdle, or culet. (4) Star cut stones are combinations of the brilliant and rose, with facets grouped in multiples of six. (5) Step or trap cut stones are often nearly rectangular. The facets are long and flat, placed parallel to the girdle. (6) Table cut stones are either four-sided double pyramids or regular octahedra, with large table, table and culet either equal or varying in size. (7) The dome-shaped cabochon is one of the oldest styles. A cabochon may be more or less convex, the convexity being equal or dissimilar on both faces, or the base may be flat.

The great art of gem cutting is to bring out the special beauty of individual specimens, removing or minimising blemishes, with as little loss to the bulk of the stone as possible.

Gemsbok. Long horned antelope found in South-West Africa
W. S. H. Riddell. F.Z.S.

regions of S.W. Africa. It has long straight horns, which sometimes reach a length of 45 ins. The animal is about 4 ft. high, and is grey on the back and sides, with white below. There are black markings on the face, throat, and upper parts of the limbs.

GENDARME (Irregular singular of gens d'armes, men-at-arms). Member of a military constabulary formed in France in Jan., 1791. It exists also in other countries. The gendarmes, under the control of the various ministers of the interior, are employed for the

protection of villages and country places, and for the enforcement of certain state and national legislation, and are generally subject to the orders of the civil authority. See Carabiniers.

Gendarme. French military constabulary

GENERAL OR **GENERAL OFFICER**. Name given to a military officer of the second highest rank, field-marshal being above it. It is used loosely for all officers above the rank of colonel-commandant, as well as for those who are full generals. In the British army there are major-generals, lieutenant-generals, and generals, in order of seniority. The equivalent rank in the navy is admiral. During the Great War the commanders of armies were given the rank of general, either temporary or substantive. The term is common to most armies. Generalissimo is the unofficial title conferred upon a general in supreme command of two or more allied armies or forces of different nationalities, each under the command of its own general.

Gemmi Pass. One of the gorges in the Bernese Alps threaded by a mule track

In the Roman Catholic Church the title of general is used to designate the heads of some religious orders.

GENERAL ASSEMBLY. Name given to the governing body of most of the Presbyterian churches in the world. As a rule it meets once a year, consists of both ministers and laymen representing the presbyteries of the church, and is presided over by a moderator. It is the final authority on all matters of church discipline and order. See Presbyterianism; Scotland, Church of.

GENERAL PARALYSIS OF THE INSANE. Disease of the brain characterised by progressive mental and physical deterioration, terminating in insanity and paralysis. By far the most frequent cause of the disease is syphilis. Contributory causes are worry and long-continued occupation involving severe mental strain. Medical treatment is rarely of much avail, but the effect of potassium

iodide may be tried and drugs of the salvarsan class may be administered. Within the last few years many cases have been treated by inoculation with malaria, and cured when this was done at an early stage.

GENERAL SERVICE MEDAL, NAVAL. Instituted by King George V, in 1915, to be awarded for service in minor naval warlike operations. The riband of the medal is red (four strips) and white (three strips). It was first awarded, with a clasp inscribed "Persian Gulf, 1909-14," to officers and men who were employed in operations for the suppression of arms traffic in the Arabian Sea or Persian Gulf, between Oct. 19, 1909, and Aug. 1, 1914. An earlier naval general service medal was issued in 1847.

General Service Medal issued in 1847

GENESIS (Gr. origin). First book of the Pentateuch, or rather Hexateuch. The name is taken from the Septuagint title, the Generation of the World. The Hebrew title is In the Beginning. The book falls into two main divisions: (a) Creation stories and primeval history, Gen. 1-11, 26; (b) History and stories of the patriarchs, Gen. 11, 27-50, 26. It is composed of a number of narratives, more or less independent in origin, based upon tradition.

GENETICS (Gr. genesis, origin). One of the aspects of the problem of organic evolution. It seeks to describe the characteristics—likenesses and differences—as well as the variations which occur in animals and plants which are related to each other, and to furnish theories and explanations of the origin of these. Research in genetics may be carried out by four methods: (1) The biometric method. Observers of this school deal with the facts of heredity from a statistical standpoint. (2) The Mendelian method. This is also in part statistical, but in this case the attention is directed not to the ancestry, but to the progeny. The biometric method looks backward, the Mendelian forward. (3) The cytological method, which attacks the problem from the aspect of the cell. (4) The embryological method, which has assumed greater prominence in recent years. See Biology; Cell; Embryology; Heredity; Mendelism.

GENEVA. Crescent-shaped lake between Switzerland and France, called by the French Léman. Its length is 45 m., its maximum width is 10 m., and where narrowest it is 2 m. The area is 225 sq. m. Most of the S. shore belongs to the dept. of Haute-Savoie, France. The surface is 1,220 ft. above sea level, the depth varying between 240 ft. and 1,094 ft. It is an expansion of the Rhône. See Chillon.

GENEVA (Fr. Genève; Ger. Genf). City of Switzerland. It stands at the S.W. extremity of the lake of Geneva, near the confluence of the Arve with the Rhône, 40 m. N.E. of Chambéry. The old part of the city, which is also the commercial centre, lies on the left bank of the Rhône, which divides the city into two portions, connected by bridges.

Geneva is a famous religious, scientific, and literary centre. The Protestant cathedral, founded in the 10th century and consecrated in the 11th, was rebuilt in the 12th and 13th centuries and added to in the 18th. The adjoining Gothic chapel of the Maccabees was built in 1406 and restored in 1874-88. The town hall dates from the 16th century. The academy, founded by Calvin in 1559, has a fine library. The university buildings are modern. There are manufactures of watches, clocks, gold and silver goods, and motor cars.

Geneva, which in 1815 joined the Swiss Confederation, is the seat of the League of Nations.

(whose first assembly opened in the Reformation Hall, Nov 15, 1920), of the International Labour Office, and of the International Red Cross organization. The work of the League, which has its headquarters in the Palace of the Nations, has added much to the population and prosperity of the city. In 1929 it was decided to build a headquarters for the League in Ariana Park at an estimated cost of £1,000,000 to house the secretariat and library. The new building for the International Labour Office is near the Parc Mon Repos. Pop. 126,700.

The Geneva Convention is an international agreement signed at Geneva in 1906, having for its object the amelioration of the condition of the sick and wounded in war. As a compliment to Switzerland the heraldic emblem of a red cross on a white ground, formed by reversing the federal colours, was adopted as the distinctive sign of the medical service of all armies. See Red Cross.

GENEVA SPIRIT (Fr. *genièvre*, from *genévrier*, juniper). Distilled spirit flavoured with juniper berries. Quantities are made in Holland, notably at Schiedam, whence gin is often called Hollands or Schiedam. See Gin.

GENEVIEVE (c. 422-c. 512). Patron saint of Paris. Born at Nanterre, the daughter of a shepherd, she came under the influence of S. Germanus, and at 15 devoted herself to the religious life. She founded the church of S. Denis, and encouraged the people to resist Attila's invasion. Her tomb is in the church of S. Etienne-du-Mont, Paris.

GENIE. Good or evil spirits or manifestations between the spiritual and the animal. In the Hindu Vedas they are benevolent, but in the stories of The Arabian Nights and other Eastern tales they are often either evil powers or vaguely monstrous slaves of those possessing some power over their services. The plural is *genii*.

GENIPAP (*Genipa americana*). Small evergreen tree of the natural order Rubiaceae. Natives of tropical America and W. Indies, the leaves are opposite, leathery, and lance-shaped; the flowers are bell-shaped, white, in clusters. The juicy fruit is as large as an orange, but tapering to each end, with a rather thick, greenish-white rind.

GENIUS (Lat. *genere*, to produce). In Roman mythology, the god of productivity, in a special sense a tutelary divinity. Every man was supposed to be accompanied from the cradle to the grave by his genius, his higher and better self, by whom he was protected and influenced.

GENOA (Ital. *Genova*). City and seaport of Italy. It stands at the head of the Gulf of Genoa, 74 m. S.E. of Turin. The walls, erected in 1626-32, nearly 12 m. in circuit,

are pierced by eight gates. The old city has short, narrow, dark streets; the modern quarters have broad, straight thoroughfares and fine parks and squares, while suburbs stretch for miles on each side. The cathedral, founded in 985, and rebuilt early in the 12th century, has since

Geneva. Mont Blanc bridge across the Rhône
Above, the Palace of the Nations

been much altered. There are many other old churches in the city which date from the 11th to the 15th centuries. Among the Renaissance

palaces are the Palazzo Municipale, the Doria, the Rosso, the Bianco, the Durazzo-Pallavicini, the Royal, the Balbi-Senarega, and the old palace of the former doges.

The city, which is the seat of an archbishop, has a university, a public library, an academy of fine arts, a handsome theatre, and a Verdi institute of music. The cemetery is remarkable for its wealth of sepulchral monuments. The harbour covers about 600 acres. There is a large export trade, and a number of manufactures in the city.

An independent city in the 11th century or earlier, Genoa began about that time to take neighbouring towns and districts under its protection. It prospered greatly, and from about 1300 to 1500

its merchants shared with the Venetians the lucrative trade between Europe and Asia. In 1815 it was given to the king of Sardinia, and with Sardinia was included later in the kingdom of Italy. Pop. 624,659

Genoa. View of the harbour and city from the church of Santa Maria di Carignano

GENTIAN (*Gentiana*). Large genus of annual and perennial herbs of the order Gentianaceae, natives of all temperate and alpine regions. The leaves are mostly opposite and undivided; the flowers funnel-shaped, purple, yellow, or white. The flowers are very beautiful, the blues often being intensely vivid. Of this kind is the gentianella (*G. acaulis*) of the Alps and Pyrenees. Another exquisite flower is the spring gentian. Gentian root is used in medicine. See illus. above.

GENTILES (Heb. *gôyim*, Gr. *ethnē*, Lat. *gentes*). Scriptural terms used variously in the O.T. and N.T. Sometimes rendered "nations" and sometimes "heathen," it was originally employed by the Jews in a general sense to mean any nation. With the development of the Hebrew idea of "the chosen people" the term Gentiles was applied by them to nations other than themselves.

GENTLEMAN-AT-ARMS.

Personal bodyguard of gentlemen "extracte of noble blood," established by Henry VIII in 1509 under the title of Gentlemen Speers and reorganized in 1539 as Gentlemen Pensioners. Except the Yeomen of the Guard it is the oldest military corps in England. In 1834 William IV altered its name to the King's Bodyguard of the Honourable Corps of Gentlemen-at-Arms, and in 1862 it was reorganized on a military basis. Its officers attend the royal person on all occasions of public solemnity.

Gentleman-at-Arms. Dress of officer in the corps

GEODESY

(Gr. *geo*, daisia, land division). Science of the measurement of the globe, i.e. of geodetic surveying as distinct from the surveying of plots of land for farms, railways, etc. The system of triangulation, used for this purpose, consists in measuring a succession of angles and sides of triangles on the earth's surface. A base line is chosen, and its length measured. From this the distances of other

points can be calculated by measuring angles.

GEOGRAPHY.

Geography includes, primarily, what we may call gazetteer information, and, secondarily, the application of certain scientific conclusions to human activities; it is the study of the earth as the "home of man," of "man's place in nature," and "man and his work." From astro-

Gentian. Root, leaves, and flowers of *Gentiana lutea*. See below

nomy the geographer borrows facts to explain the consequences for man of the daily march of the sun and the rhythmic swing of the

Genipap. Foliage and flower head of this tropical tree

The geographer takes each country and describes it, so as to specify (1) the type or types of its physical conditions; (2) the kinds of people who inhabit it; (3) the way in which these people react to their environment in comparison with the lives of similar peoples elsewhere and with the lives of different peoples in similar areas. and (4) the relation it bears to the world as a whole.

Among the most significant geographical events of the past few years are the conquest of both poles, the reconstruction of the interiors of Asia and Australia, the partitioning of Africa, and the advances in oceanography. Side by side with the extensive work of the explorers has been the intensive study of the more advanced countries, leading to generalisations based on detailed and precise knowledge of the conditions obtaining in regions of which we have relatively trustworthy historic records for hundreds of years back.

The Royal Geographical Society, formed in 1830, has a house at Lowther Lodge, Kensington Gore, S.W. The Map Room and Museum are open to the public. Its organ, The Geographical Journal, is issued monthly.

GEOLOGY. Science which interprets the evidence afforded by the earth's crust as to its composition, structure, and history. By the aid of mineralogy and petrology it studies the minerals and rocks of the earth's crust. By tectonic or structural geology it determines the relation of the constituent layers or strata. Physical or dynamic geology deals with the effect of earthquakes, volcanic eruptions, denudation, and glacial action. Historical or stratigraphical geology compiles the history of the earth from its origin to the earliest human records. This branch of geology is largely dependent on the evidence of the animal and plant remains. The fossils themselves are the subject of palaeontology.

Rocks supply the materials for the history of the earth; they are of two main kinds. Primary or igneous rocks are formed by the solidification of molten materials. Rocks formed at a considerable depth are known as plutonic rocks; those formed by volcanic action are termed volcanic rocks. Primary rocks are unstratified and devoid of fossils.

Secondary or sedimentary rocks are formed from broken fragments of primary rocks, deposited in strata or layers, generally by water. They are often fossiliferous. Metamorphic rocks, intermediate in character, are those that have been altered by heat, or the injection of veins of molten rock, or by intense pressure.

Historical geology depends on two main principles. The first is that of superposition. As the secondary rocks of the crust are laid down in layers, one on top of the other, it follows that the lowest rock in a series is the oldest and the uppermost is the youngest. Superposition cannot, however, be implicitly trusted, since series of tilted rocks are inverted by earth movements, and it is also inapplicable to the comparison of rocks in distant parts of the world. The final determination of the age of rocks depends on the second method—the use of fossils.

The main time scale used in geology is based upon the succession of life. Sir Charles Lyell termed the group of rocks containing the oldest fossils then known the Palaeozoic or period of ancient life. It was succeeded by the Mesozoic or period of middle life, and that in turn by the Kainozoic or period of recent life. Before the Palaeozoic there are two great groups of rocks formerly classed as Azoic, or lifeless. The older of these two groups is known as the Archaean: its rocks are igneous or metamorphic. It was succeeded by the Proterozoic, a period mainly composed of unaltered secondary rocks. Together known as Precambrian—since the

oldest Palaeozoic rocks are the Cambrian—these formations were long thought to be devoid of fossil remains, but in recent years remains of annelids, arthropods, algae, and sponge-like forms have been found in Precambrian rocks of N. America.

Research in radio-active materials has led to the conclusion, based on the time needed for the transmutation of certain elements, that the age of the earth must be from 1,000,000,000 to 2,000,000,000 years.

The Geological Society has its quarters at Burlington House, Piccadilly, London, W.

The Geological Survey is a British government department. It maintains a geological collection, housed in the Museum of Practical Geology, Jernyn St., London, S.W.1.

GEOMETER MOTH. Group of moths. Their caterpillars, often called loopers, have only two pairs of pro-legs, placed close to the rear of the body, and walk by alternately drawing up the body into a loop and then extending it again. See Caterpillar.

GEOMETRY. Branch of mathematics which deals with the properties of space. Two-dimensional geometry treats of figures on plane or spherical surfaces. Solid geometry is concerned with three-dimensional figures. Euclid's Elements of Geometry were long used as a text book in the schools. The axioms and postulates on which Euclid based his system are accepted with slight modification as the foundation of trigonometry (q.v.); of analytical geometry, of graphic or projective geometry, the branch which deals with the relations and properties of figures that are not changed by projection.

GEORGE, THE. Part of the insignia of the order of the Garter. It is an enamelled gold pendant, representing S. George slaying the dragon, and is suspended from the collar. There is a "lesser George" with the same device on an enamelled ground, surrounded by an oval garter. See Garter.

GEORGE. Lake of Africa. It is in the S.W. of the Uganda protectorate, forming a north-east extension of Lake Edward, with which it is connected by a narrow channel.

GEORGE. Patron saint of England. He is generally identified with George of Cappadocia, who was put to death by Diocletian, April 23, 303. According to the Golden Legend having slain the dragon, he put off his knightly habit, gave all he had to the poor and went forth to preach Christianity, and was martyred in 287. S. George first became recognized as England's patron saint under the Norman kings. He is also the patron saint of Portugal and of Aragon.

GEORGE I (1660-1727). King of Great Britain and Ireland. Born at Hanover, March 28, 1660, he was the son of Ernest Augustus, afterwards elector of Hanover, and Sophia, a granddaughter of James I. In 1698 he became elector of Hanover and in 1701 the Act of Settlement recognized his mother and then himself as heir to the throne of Great Britain. On August 1, 1714, he became king. His ignorance of English compelled him

George I,
King of Gr. Britain
After Kneller

to leave much to his ministers, but in European politics he was constantly active. The king died at Osnabrück, June 11, 1727.

GEORGE II (1683-1760). King of Great Britain and Ireland. The son of George I, he was born at Herrenhausen when his father was only electoral prince of Hanover, Nov. 10, 1683.

George II,
King of Gr. Britain
After Zeeman

His early life was passed in Hanover, but in 1714 the prince followed his father to England, and for thirteen years he was prince of Wales. The relations between the two had been bad for some time, and in London the prince set up a court which became the centre of all opposition to George I and his ministers.

In 1727 George became king, and he reigned for 33 years, although until 1742 the government of the country was in the hands of Walpole. His own quarrels with his father were repeated in the case of himself and his son Frederick, who, driven from court, formed his own circle of opposition to the king and the ministry. George had the sense to heed the wise advice of his wife Caroline, whose influence over him was considerable. In addition to Frederick, George had a son, William Augustus, duke of Cumberland, and five daughters. He died at Kensington Palace, Oct. 25, 1760.

GEORGE III (1738-1820). King of Great Britain and Ireland. The eldest son of Frederick, prince of Wales, he was born June 4, 1738. His father died in 1751, and he was educated under the eyes of his mother, Augusta, a princess of Saxe-Coburg, and the earl of Bute, who became the head of his household when this was set up in 1756. In Oct., 1760, he became king.

His reign began with an attempt to secure power for himself, and by 1770 the king had formed his own party, the king's friends, and Lord North became premier. For twelve years George directed, through him, the affairs of the country, the period being marked by the independence of America. In 1780 the king's mind had given way, and a regency was necessary.

but he soon recovered and was able to throw his influence into the prosecution of the war against France, but fresh attacks of insanity came on, and in 1811 he was finally incapacitated. He died Jan. 29, 1820.

George was neither a wise nor a constitutional king, but in his later years his popularity was great, due in part to his homely ways, seen in his name of Farmer George. He married Charlotte, princess of Mecklenburg-Strelitz, and his family consisted of nine sons and six daughters.

GEORGE IV (1762-1830). King of Great Britain and Ireland. The eldest son of George III, he was born in London, Aug. 12, 1762. As prince of Wales he became prominent politically owing to his father's insanity, during the attacks of which he was regent.

George III,
King of Gr. Britain
After Lawrence

S. George, the patron saint of England.

Sometimes rendered "nations" and sometimes "heathen," it was originally employed by the Jews in a general sense to mean any nation. With the development of the Hebrew idea of "the chosen people" the term Gentiles was applied by them to nations other than themselves.

GENTLEMAN-AT-ARMS. Personal bodyguard of gentlemen "extract of noble blood," established by Henry VIII in 1509 under the title of Gentlemen Speers and reorganized in 1539 as Gentlemen Pensioners. Except the Yeomen of the Guard it is the oldest military corps in England. In 1834 William IV altered its name to the King's Bodyguard of the Honourable Corps of Gentlemen-at-Arms, and in 1862 it was reorganized on a military basis. Its officers attend the royal person on all occasions of public solemnity.

Gentleman-at-Arms. Dress of officer in the corps

GEODESY (Gr. *geo*, daisia, land division). Science of the measurement of the globe, i.e. of geodetic surveying as distinct from the surveying of plots of land for farms, railways, etc. The system of triangulation, used for this purpose, consists in measuring a succession of angles and sides of triangles on the earth's surface. A base line is chosen, and its length measured. From this the distances of other points can be calculated by measuring angles.

GEOGRAPHY. Geography includes, primarily, what we may call gazetteer information, and, secondarily, the application of certain scientific conclusions to human activities; it is the study of the earth as the "home of man," of "man's place in nature," and "man and his work." From astronomy the geographer borrows facts to explain the consequences for man of the daily march of the sun and the rhythmic swing of the

Gentian. Root, leaves, and flowers of *Gentiana lutea*. See below

Genipap. Foliage and flower head of this tropical tree

Ossetia. Tiflis is the capital. Other centres are Batumi, Sukhum, Kutais, and Poti. The area is 26,381 sq. m. Pop. 2,660,963.

Georgia comprises the rich and sheltered land along the rivers Rion and Kura and the highlands N. and S. that enclose the valley. Wheat, maize, barley, cotton, and tobacco are grown, and cattle are reared. The vine flourishes, fruit abounds, and silk is extensively produced. There are rich manganese and coal deposits and mineral springs. Oil is present. A railway runs from Batumi to Baku, with branches to Poti and other centres.

After keeping its independence for 2,000 years, Georgia was annexed by Russia in 1801. In 1918 it regained its independence, but in 1921 a Soviet government was set up, and in the following year Georgia, together with Armenia and Azerbaijan, was formed into the Transcaucasian Federation of Socialist Soviet Republics. See Caucasus.

GEORGIAN. Style of architecture which prevailed in Great Britain during the reigns of the first three Georges (1714-1820). A product of the later Renaissance, it owed its inspiration mainly to Sir Christopher Wren. Its best characteristic was simplicity of plan and elevation. Contemporary with Wren were William Kent, who designed the Horse Guards, Whitehall; Isaac Ware, who built Chesterfield House; and Sir William Chambers, who was responsible for Somerset House (q.v.), one of the best creations of Georgian classicism in London.

It is chiefly in the smaller houses that the significance and charm of Georgian may be found. In plan the Georgian house is a plain rectangle, solidly constructed, very frequently of red brick. Its façade is always of the plainest description, and is pierced by rows of tall "sash" windows symmetrically disposed. The typical Georgian doorway was enclosed by classic columns carrying their correct entablature, and surmounted by a hood which varied in shape and in the extent of its projec-

join Georgian Bay with the St. Lawrence at Montreal, thus bringing the Canadian Lake wheat ports 800 m. nearer to Liverpool.

Georgian Bay Canal. Map of the course of the projected canal, which will bring the Canadian lake wheat ports 800 miles nearer Liverpool

GEORGICS (Gr. *georgikē*, husbandry). Didactic poem by Virgil in four books. Composed 37-31 B.C., it deals with agriculture, fruit trees, domestic animals, and bees. It abounds in passages of great beauty.

Geranium. Foliage and flowers of *Geranium lucidum*

specimens of geranium. Garden geraniums belong to a different family, and are really pelargoniums (q.v.).

GERARD, JAMES WATSON (b. 1867). American diplomatist. Born Aug. 25, 1867, he became a lawyer in 1892, and practised in New York. In 1908 he was chosen associate justice of the Supreme Court, an appointment he held until 1913, when he was sent to Berlin as ambassador. After 1914 it fell to his lot to look after British interests in Germany, especially those of the prisoners of war. He left Berlin when the United States entered the war, early in 1917, and wrote *My Four Years in Germany, 1917*, and *Face to Face with Kaiserism, 1918*, severe indictments of Germany.

J. W. Gerard, American diplomatist

GERIZIM. Hill of Samaria. Near Shechem or Nablus, it is associated with an adjoining hill, Ebal. The curses and blessings in connexion with the law were pronounced respectively from these two hills, and the Samaritan temple was built on the former.

GERMAN, SIR EDWARD (b. 1862). British composer. Born at Whitechurch, Salop, Feb. 17, 1862, he became musical director at the Globe Theatre, London, in 1888, and while there produced the incidental music to Richard III (1889) which first made his reputation, enhanced by his music to Henry VIII, written for The Lyceum in 1892. He completed Sullivan's unfinished opera, *The Emerald Isle* (1901), and composed *Merric England* (1902), *A Princess of Kensington* (1903), and *Tom Jones* (1907), as well as orchestral symphonies, suites, and songs. He was knighted in 1928.

Sir E. German, British composer

GERMANIA. Latin name for Germany. It is the title of the work of Tacitus on the tribes of Germany about the opening of the

Christian era. It is also used as a personification of the German people. An example of this is the gigantic statue of Germania, on the Niederwald, overlooking the Rhine, commemorating the war of 1870-71 and the consequent union of Germany.

GERMANICUS, CAESAR (15 B.C.-A.D. 19). Roman general. A son of Nero

Germanicus

From head of marble statue found at Gubbio, 1792, now in the Louvre, Paris

Claudius Drusus, Germanicus was nephew of the emperor Tiberius. Having distinguished himself against the Pannonians (A.D. 7-9), in 12 he was consul, and as commander in Gaul and on the Rhine distinguished himself against the Germans. Recalled to Rome by the jealous Tiberius, he was sent with extensive powers to settle affairs in the East. His mission was successful, but he died at Daphne, near Antioch, probably by poison. Among his children were the future emperor Caligula and Agrippina, who became the mother of Nero.

GERMANIUM. Rare metal. Its existence was predicted and its principal physical characters described by Mendeleeff, fifteen years before its actual discovery by Winkler (1886) in argyrodite, a rare mineral found near Freiberg, Germany. The metal has also since been found in euxenite. Its chemical symbol is Ge; atomic weight, 72.5; atomic number, 32; melting point 900° C. Silver white in colour, brittle, in many respects resembling tin, it resists atmospheric influences, and is insoluble in hydrochloric acid.

GERMAN MEASLES, RUBELLA, OR RÔTELIN. Acute infectious fever occurring among both children and adults. The organism responsible for the disease has not been identified. Slight headache and chilly feelings are followed by the appearance of a rose-red rash, first on the chest, which afterwards spreads over the whole body. The throat is sore, and the glands in the neck may be swollen. The rash disappears in a few days and the symptoms abate. Treatment consists in keeping the patient in bed and feeding him on a light diet. He should be kept isolated for a fortnight after the attack.

GERMAN SILVER. Alloy of copper, nickel, and zinc. The best proportions are probably 51.6 p.c. copper, 25.8 p.c. nickel, and 22.6 p.c. zinc, the alloy formed having a bluish white, silver colour, and being largely used for the manufacture of spoons, forks, candlesticks, and personal ornaments.

GERMANY. Republic of central Europe. The new Germany is considerably smaller than the old German Empire. Alsace-Lorraine has been ceded to France; other parts are now included in Belgium, Denmark, Poland, and Czechoslovakia; Danzig, with the surrounding territory, is a free city under the League of Nations; the Memel territory belongs to Lithuania; and the Saar basin has been placed under the control of the League of Nations until 1934. The component states of the federation are Prussia, Bavaria, Württemberg, Baden, Saxony, Mecklenburg-Schwerin, Thuringia, Hesse, Oldenburg, Brunswick, Mecklenburg-Strelitz, Anhalt, Lippe, Schaumburg-Lippe, Hamburg, Lübeck, and Bremen. Berlin is the capital. Except in the S. and E. the surface is flat. The chief rivers are the Rhine, Elbe, Weser, Oder, and Vistula. The area is 182,200 sq. m., and the population is 62,592,575.

Georgian. Mompesson House, in the Close, Salisbury, typical of this style of domestic architecture

By courtesy of Country Life

tion. The roof invariably sloped backwards from each side, and the front slope was pierced by a row of dormer windows. The interior decoration of Georgian houses culminated in the work of Robert Adam (q.v.) and his brother.

GEORGIAN BAY. Opening of Lake Huron. The N.E. arm of the lake, it is almost cut off from the main waters by a peninsula which is part of Ontario, and Grand Manitoulin Island, the opening between the two being about 30 m. wide. It is about 120 m. long and 50 m. broad. A canal has been suggested to

Germany. General map of the republic after the adjustment of frontiers in 1919. Inset, East Prussia, now separated from the main part of the country

Agriculturally, Germany is a land of small estates and peasant proprietors in the W. and S., and of large estates in the N.E. Potatoes, hay, sugar beet, oats, rye, wheat, and barley are grown, as well as vines, tobacco, and fruit. Dairy farming is important, as also is forestry. Coal and iron are obtained chiefly in Westphalia, Rhenish Prussia, Silesia, and Saxony, lignite in central Germany, and copper and silver in the Harz. Potash, rock salt, zinc, and lead are also widely found.

There are upwards of 36,000 m. of rly. In 1924 the control of the rly. system was transferred under the Dawes plan to a private company, the rlys. themselves remaining the property of the state. Rivers and canals are largely used for inland transport.

HISTORY. The history of Germany, or Deutschland, as the Germans call it, begins in the 9th century, when the empire created by Charlemagne fell to pieces. Its eastern part came to Louis, called the German, and its people began to speak a language which was quite different from that spoken by the Franks living across the Rhine. This marks the beginning of Germany's nationhood.

Germany was included in the empire restored by Otto the Great in 962, and remained its most important unit until it was dissolved in 1806. During these centuries it was divided between 300 or more rulers, whose lands, tiny as many of them were, were repeatedly

owed allegiance to the emperor, but this obligation sat very lightly upon them, especially as that potentate, from his residence in Vienna, was usually either unwilling or unable to protect them when need arose.

This state of affairs was made much worse by the Reformation, which introduced a further element of discord, not only between ruler and ruler, but often between prince and people. Moreover, the strife about the ownership of the rich lands which had been taken by the Protestants from the church was bitter and continuous. Attempts at a comprehensive settlement were made by Charles V and others, but there was no real solution save the sword, and this took shape in the Thirty Years' War.

Of the German rulers, apart from the emperor, the most important were the six electors. Three of these, the archbishops of Mainz, Cologne, and Treves, were the rulers of ecclesiastical principalities, but the other three, who ruled the Palatinate, Saxony, and Brandenburg, were temporal princes. The Reformation broke the power of the ecclesiastical electors, but it increased that of the

three lay electors, together with Bavaria, whose ruler was made an elector in 1623, and Austria, where the emperor had a real, not merely a nominal authority.

The Thirty Years' War, after inflicting incalculable miseries upon the German people, was ended by the treaty of Westphalia. By permitting the princes to make alliances with foreign powers it made them, for all practical purposes, independent rulers. Quickly they took advantage of this, but none more so than the elector of Brandenburg, whose astute policy made his country larger and stronger, and made it possible, in 1701, for him to become king of Prussia.

Prussia had long had the will, and soon had the power, to challenge the authority of the nominal ruler of all Germany, the emperor himself. The latter's strength was chiefly drawn from his hereditary duchies of Austria and his kingdoms of Bohemia and Hungary, the whole being loosely described as Austria. The struggles between Austria and Prussia, with Frederick the Great as the central figure, occupied Germany during the 18th century.

When the Napoleonic Wars, in which Napoleon dealt with the country as he willed, came to an end, Germany was only a geographical expression. Its sole bond of union, the Holy Roman Empire, had vanished in 1806. A new spirit, however, had come into the land with the rising of Prussia against Napoleon, and this found expression in 1815 in a confederation or bund. In this there were only 39 states, the remaining 270 or so having disappeared. Austria and Prussia were the most important; others were four whose rulers had been made kings—Bavaria, Hanover, Saxony, Württemberg.

German Language. Script forms of the 26 characters in the German alphabet, the capitals and small letters side by side

lay ones, and in the 17th century, the time partitioned to provide for the various sons of the Thirty Years' War, the most powerful of the princely house. Each of these rulers states in Germany were those ruled by the

The confederation survived the revolution of 1830 and, with more difficulty, that of 1848. In the latter year a national parliament met at Frankfurt to draw up a new constitution. It was there proposed to make the Prussian king the head of a new empire, but he declined the honour. In 1866, after the German powers had taken Schleswig and Holstein from Denmark, came the inevitable war between Austria and Prussia. This was closed by the utter defeat of Austria, and the confederation of 1815 came to an end. Its place was taken by a new confederation confined to the states of N. Germany with Prussia at its head. Austria and the states of S. Germany were left without a union.

In 1871, after the war with France, Prussia called into being a new empire, wholly German. From this Austria was excluded, but it was joined by Bavaria and other states of the south, in spite of a traditional hostility to Prussia. Its first emperor was the king of Prussia, William I, and its first chancellor Bismarck, and it had only two other rulers until its fall in 1918.

In Nov., 1918, the rulers of all the German states were deposed or abdicated and republics were set up. For the whole country a federal republic was declared. Its members were the states that had formed its empire of 1871-1918, less a few of the smaller ones who had been absorbed into Thuringia and other states. The constitution was mainly that of the empire: even the word Reich was retained.

The first few years after the changes of 1919 were marked by depression and disorder. The extreme socialists called Spartacists engineered a brief revolution, and there were plans for making the Rhineland a separate republic. The mark fell until it was quite worthless and the finances were in a state of chaos, while French troops occupied the Ruhr. Friedrich Ebert, elected in 1920, was president of the republic, and a socialist ministry was in office.

In 1923 Gustav Stresemann, the leader of the people's party, became head of a coalition, and in 1924, after two general elections, a more stable government was formed with him as foreign minister. The mark was stabilised and the currency reformed: Germany accepted the Dawes scheme and a loan was raised for her needs. In 1925 the pact of Locarno was signed, and in 1926 Germany entered the League of Nations. In 1925, too, Ebert having died, Hindenburg was elected president. The country had regained much of its former prosperity when Stresemann, having signed the peace pact in Paris in Aug., 1928, died in Oct., 1929. In that year at the Hague the amount of German reparations was fixed and arrangements were made for the withdrawal of British and French troops from the Rhineland.

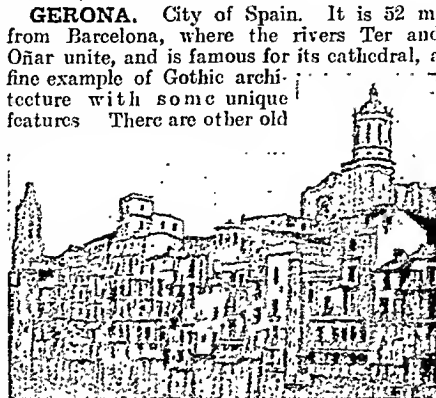

The government is in the hands of a president elected for seven years and a cabinet with a chancellor at its head. Its legislature consists of the Reichstag, the members of which are elected by the votes of all adults on a system of proportional representation, and the Bundesrat of 68 members, chosen by the various states. The colours of the republic are black, red, and gold. See Reparations.

LANGUAGE. The language spoken by the Germans is known as High German and forms a branch of the Germanic, or Teutonic, family of Indo-European languages. The separation of High German, that is to say, the speech of the "high" lands of the S. from the parent stock, probably took place in the 7th century, and was marked by a change in the consonantal system, known as sound shifting, or, in English, as Grimm's Law. This change is exemplified by the consonants in such words as the English *ten*, German *zehn*; English *do*, German *tun*. See Grimm, J.L.K.

GERMISTON. Town of the Transvaal, S. Africa. It is 9 m. by rly. S.E. of Johannesburg, and 36 m. S. of Pretoria. It is an important gold-mining centre and rly. junction and the seat of the Government gold refineries. Here is a station of the Victoria Falls and Transvaal Power Co. Pop. 19,495 Europeans.

GERÔME, JEAN LÉON (1824-1904). French painter. Born at Vesoul, May 11, 1824, he studied under Paul Delaroche, making a successful début at the Salon in 1847 with *The Cook Fight*. Many of his subjects were classical, with a touch of modernity in the treatment. In 1863 he became professor of painting at the *École des Beaux Arts*, and in 1865 was elected a member of the Institute. Later he turned to sculpture, achieving success with figures of *Bellona*, *Napoleon*, *The Gladiator*, and *Tanagra*. He died in Paris, Jan. 12, 1904. See *Gladiator*.

GERONA. City of Spain. It is 52 m. from Barcelona, where the rivers Ter and Oñar unite, and is famous for its cathedral, a fine example of Gothic architecture with some unique features. There are other old

Gerona. Old houses seen from the bridge over the Ogar. Left, unfinished spire of the church of S. Felix churches, including S. Felix, and remains of the town walls. Pop. 17,700.

GERRARD'S CROSS. Village of Buckinghamshire. It is 3 m. S.E. of Beaconsfield. Formerly known as Jarret's Cross, and sometimes spelled Gerard's Cross, it is served by the G.W. and L.N.E. Rlys. The church of S. James was built in 1859 by Sir W. Tite, in the Lombardo-Byzantine style. Pop. 2,208.

GERRY, ELBRIDGE (1744-1814). American politician. Born in Massachusetts, July 14, 1744, he was one of the leaders of the colonists in their revolt against Great Britain, and his name is on the Declaration of Independence. From 1810-12 he was governor of Massachusetts, where he was largely responsible for a law which divided the state into districts in such a way that the government had an advantage at election times. From this comes the word gerrymander. In 1813 until his death, Nov. 23, 1814, Gerry was vice-president of the United States.

Elbridge Gerry, American statesman

GETHSEMANĒ. Retired spot on the slope of the Mt. of Olives, about $\frac{3}{4}$ m. from Jerusalem. A garden in GethsemanĒ was a

GethsemanĒ. The garden near Jerusalem which tradition marks as the scene of Christ's betrayal

favourite resort of Christ, and it was there, or near by, that He was betrayed by Judas. A garden, preserved as the actual one, is considered to be too near the city walls. Excavations have revealed remains of a 4th century and a 13th century church. See Jerusalem.

GETTYSBURG. Borough of Pennsylvania. 70 m. N. of Washington. It was the scene of one of the decisive conflicts of the American Civil War, fought July 1-3, 1863, in which the Federal Army of the Potomac, 82,000 men, under General Meade, defeated the Confederate Army of North Virginia, 73,000 men, under General Lee. The Confederate leader escaped by a masterly retreat across the Potomac. The losses were estimated as follows: Federals, 3,072 killed; 14,497 wounded; 5,434 prisoners and missing; Confederates, 2,592 killed; 12,709 wounded; 5,150 prisoners and missing. In Nov., when the battlefield was dedicated as a National Cemetery, Lincoln made the speech which has become immortal. See American Civil War.

Geum. The variety Lady Stratheden. Courtesy of Carters

GEUM. Handsome hardy dwarf perennial herbs of the order Rosaceae. Natives of Britain, India, and N. America, their height varies from one to two ft. The flowers are red, white, and yellow.

GEYSER (Icelandic, geysir). Hot spring in which the water is forced into the air like a fountain. Geysers are characteristic of vol-

Geysir. Diagram illustrating the principles which cause the geyser at rest, left, to spout boiling water, as seen on the right

canic areas. There are many in the Yellowstone National Park, Wyoming, U.S.A.; and in Geysersland, near Rotorua, in New Zealand.

GEYSER. Domestic appliance for the rapid supply of hot water. It consists of a long coil or spiral of copper, brass, or iron tubing through which water continually flows from the source of supply to the container. The tube is exposed to a gas or other flame, a large surface of water thereby being heated at one time. The water flows through the tube, thus constantly presenting fresh water to the heated metal surface.

GEZER. City of Palestine, 16 m. W.N.W. of Jerusalem, commanding the Philistine plains. It was the dowry of the Egyptian princess whom Solomon wedded. R. A. S. Macalister's excavations (1902-9) have revealed many interesting objects. Some pertain to thick-skulled neolithic cave-dwellers living before 3000 B.C., who practised cremation, kept domesticated animals, and used bone implements.

GHAT (Hindu, path of descent). Flight of steps upon a river bank in India. Designed primarily to facilitate bathing, drinking, and other ritual acts, they served as landing places, and are found along the Ganges at every city from Calcutta to Hardwar. At Benares (q.v.) there are 47 ghats.

GHATS. Two mt. ranges in India, called respectively the Eastern Ghats and the Western Ghats. Between them lies the Deccan. The Eastern Ghats, a line of small ranges, begin in Orissa, and continue through Ganjam to the Nilgiri plateau, where they join the Western Ghats. They approach the Bay of Bengal in Ganjam and Vizagapatnam, but afterwards their course lies inland. The Western Ghats 1,000 m. long, form a sea-wall for the W. side of the peninsula, the Palghat Gap being the main route through this barrier.

GHAZNI, GHIZNI, OR GHUZNEE. Town of Afghanistan. It is about 80 m. S.W. of Kabul, and is still of some commercial importance. Though it is over 7,300 ft. above sea level, wheat and barley are grown in the neighbourhood. In the 10th and 11th centuries it was the capital of the Ghaznavids, a race of princes whose empire included most of Afghanistan and Persia, as well as a large part of India. They gave place to the princes of Ghur, one of whom burned Ghazni, and became head of an empire even larger than that of the Ghaznavids. The ruins of the old town lie about 3 m. N.E. of the present town, which is on the caravan route from Persia to India, by the Gomal Pass. An old castle dominates the town, which was prominent in the fighting in the first Afghan war. Pop. 10,000.

GHELUVELT. Village of Belgium, in the prov. of W. Flanders, 4 m. S.E. of Ypres on the Ypres-Menin road. It was the scene of desperate fighting in the Great War, especially in the first battle of Ypres, Oct. 24-31, 1914, and no position was more hotly disputed. Captured by the British in Oct., 1917, it was lost in the spring of 1918, and finally taken at the end of Sept., 1918, in the battle for the Belgian coast. See Ypres.

GHENT (Fr. Gand). City of Belgium, capital of E. Flanders. It lies 31 m. N.W. of Brussels, at the confluence of the Schelde and Lys. A ship canal connects it with Terneuzen on the Schelde estuary. Its excellent rail and water communications make Ghent an important trade centre. The city has cotton and linen manufactures, engineering works, sugar refineries, breweries and tanneries, and trades in timber, phosphates, flax, and cement. Flowers are largely cultivated. The university was founded in 1816. In 1929, after a long agitation, it was made an educational centre for the Flemings. Pop. 208,539.

Ghent is one of the most picturesque of Belgian cities. The cathedral, founded about 940, has a 13th century choir and 16th century nave and transepts. The panels of its famous altar-piece of The Adoration of the Lamb (see illus. p. 584), dispersed in 1816, were brought together

again in 1920. The hôtel de ville dates in part from the late 15th century. The castle of the counts of Flanders is a typical medieval stronghold.

During the 13th-15th centuries Ghent became one of the greatest marts of W. Europe. The arts, too, flourished in Ghent, which the Van Eycks made a great centre of Flemish painting. The first international congress on town planning was held in Ghent in the exhibition year, 1913. The city was occupied by the Germans during the Great War on Oct. 12, 1914, and it was in their possession until recaptured by the Belgians, Nov. 11, 1918. See Belgium; Flanders.

Ghetto (Ital.). Word translated into English as Jewry, and meaning a part of a town inhabited entirely by Jews. See Jewry.

GHIBELLINES. Italian political faction. It originated in Germany, and the name was derived from Waiblingen, the castle of Conrad III. See Florence; Guelph.

GHIRLANDAIO, DOMENICO (1449-94). Italian painter. Born at Florence, his name was Domenico Tommaso Corrado Bigordi, the adopted sobriquet indicating that he was a maker of garlands. Between 1480 and his death, Jan. 11, 1494, he produced many important works in tempera and fresco, and in mosaic. Among his most notable paintings are S. Jerome and The Last Supper, 1480, in Florence; the fresco of S. Peter and S. Andrew in the Sistine Chapel, 1483, Rome; Adoration of the Magi, 1488, Florence; the Tornabuoni frescoes, 1490, in S. Maria Novella, Florence; The Visitation, 1491, in the Louvre. His mosaic of the Annunciation, in Florence Cathedral, is justly celebrated. His son, Ridolfo (1483-1560), was also a painter of ability. Pron. Gear-lan-di-yo.

GHOST. Spirit of a dead person manifesting itself in some form perceptible to the senses of the living. Some measure of belief in such posthumous manifestations has been held in all times and by all peoples. See Psychical Research.

GHOST MOTH (*Hepialus humuli*). Common British moth. The male has shining white wings with reddish fringes, the female yellow-

Ghost Moth. Upper pair English and lower pair Shelland, form of *Hepialus humuli*

Ghent. 1. Cathedral of St. Bavo. 2. Château du Diable, 13th century. 3. North façade of the Hôtel de Ville, dating from the 15th century

ish wings with brown spots and streaks. The under surface of the wings in both sexes is brown. This moth is often seen at night,

when its peculiar flight causes the white upper side of the wings to appear and disappear at intervals, whence its name.

GIANT. Abnormally tall human being. European folklore is much concerned with stories of giants such as Blunderbore and Grim. It attributed to their activities such natural formations as the Giant's Causeway and the Giant's Kettle.

The tallest races, pre-eminently the Patagonians and the Galloway Scots, who are normally 5 ft. 10 ins., seldom reach 6 ft. 4 ins. The conventional limit of spectacular gigantism is 7 ft. The Royal College of Surgeons in London possesses the skeleton, 7 ft. 9 ins. long, of O'Brien Charles Byrne, the 18th century Irish giant. The tallest authentic measurement was the 9 ft. 3 ins. of the Russian Machnov. See Dwarf.

GIANT'S CAUSEWAY. Promontory of columnar basalt on the N. coast of co. Antrim, Northern Ireland. It consists of some 40,000 closely packed polygonal pillars, chiefly pentagonal and hexagonal. The causeway is 2½ m. N.E. of Bushmills and is divided into three natural platforms, the Little Causeway, Middle or Honeycomb Causeway, and Grand Causeway. The pillars have a diameter of from 15 to 20 ins., each consisting of several perfectly fitting joints, concave and convex at the extremities. The formation is generally ascribed to the cooling and cracking of the lava. On the neighbouring cliffs are the "Wishing Chair," "Lady's Fan," "Giant's Loom," and "Giant's Organ," presenting the appearance of organ pipes.

Giant's Causeway, composed of polygonal columns of basalt

GIBBET (Fr. gibet, crooked stick). Type of gallows having a projecting bar, and used principally for hanging malefactors in chains as a warning to passers-by, hence the term "to gibbet." These gibbets or gallows were at one time very common, and the name still survives in Galloway Hill. See Gallows; Hanging.

GIBBON (*Hylobates*). Smallest of the anthropoid apes. Rarely more than 3 ft. high, it is readily distinguished from the other anthropoids by its small slender build, its remarkably long arms, and by small naked callosities on the buttocks. There are several species, all found in Malay and the surrounding countries. They live in the trees, their food consisting of fruit and young shoots, insects, and the eggs and nestlings of birds.

Gibbon. The silver gibbon, a small anthropoid ape. Gambier Bolton, F.Z.S.

GIBBON, EDWARD (1737-94). English historian. The eldest son of Edward Gibbon, an M.P. in the time of Sir Robert Walpole, he

was born at Putney, April 27, 1737. In 1752 he went to Oxford, entering Magdalen College, and in 1753 he joined the Roman Church. His angered father took him away from Oxford and sent him to Lausanne, where for five years he lived with a Calvinist pastor. There he read widely and steadily, his retentive memory serving him well. In 1758 he returned to England, and in 1761 he published in French his first book, *An Essay on the Study of Literature*. In 1763 he set out upon a tour of Europe, and in Rome the idea of the *Decline and Fall* came to him.

Edward Gibbon,
English historian
After Sir Joshua Reynolds

In 1765 Gibbon returned home from Italy, and during the next five years he wrote on miscellaneous subjects. In 1772 he began to write, and in Feb., 1776, the first volume of the *Decline and Fall* was published. It was an instant and complete success, and he continued, pausing only in 1779 to reply, in a Vindication, to those who had criticised chapters 15 and 16 on Christianity. In 1783 he joined a Swiss friend, Georges Deyverdun, at Lausanne, and there he lived until 1793. The earlier part of this time he spent on his history, which he finished on June 27, 1787. The last three volumes were published in 1788.

He died Jan. 16, 1794. Besides the *Decline and Fall*, Gibbon wrote an *Autobiography*.

Grinling Gibbons,
English wood carver
After Kneller

GIBBONS, GRINLING (1648-1720). English wood carver. Born at Rotterdam, April 4, 1648, he came to England as a boy and did much work for Wren. His carvings in St. Paul's and other Wren churches, and at Blenheim, Chatsworth, and other great houses, are particularly fine, and there is a throne carved by him at Canterbury. He produced also some noted statues. He died Aug. 3, 1720.

GIBBONS, JAMES (1834-1921). American cardinal. Born July 23, 1834, at Baltimore, he entered the Roman Catholic priesthood in 1861, and in 1872 was appointed bishop of Richmond. In 1877 he became archbishop of Baltimore and primate of the U.S.A., and was made cardinal by Leo XIII in 1886. His chief work, *The Faith of Our Fathers*, 1871, has had a wide circulation in Britain and America. Cardinal Gibbons died Mar. 25, 1921.

James Gibbons,
American cardinal

GIBBONS, ORLANDO (1583-1625). English composer. Born at Cambridge, he was organist at the Chapel Royal, 1604, and of Westminster Abbey, 1623. His compositions, which include much church music, madrigals, and instrumental music, place him amongst the greatest of early English composers. He died at Canterbury, June 5, 1625. His son Christopher (1615-76) was organist of Winchester Cathedral and Westminster Abbey.

Orlando Gibbons,
English composer

GIBBS, SIR PHILIP HAMILTON (b. 1877). British author. Born May 1, 1877, he became a journalist, serving on *The Daily Mail*, *The Tribune*, about which he wrote *The Street of Adventure*, and *The Daily Chronicle*. He was a special correspondent with the Bulgarian army in 1912, and was a war correspondent in France during the Great War. His numerous writings include *The Soul of the War*, 1915; *Realities of War*, 1920; volumes of essays, including *Ten Years After*, 1924; *The Day after To-morrow*, 1928; novels, including *The Reckless Lady*, 1925; *Darkened Rooms*, 1929, and many other works. In 1920 he was knighted, and in 1921-22 was editor of *The Review of Reviews*.

Sir Philip Gibbs,
British journalist
Russell

Gibeon. Ancient Hivite city, now known as El-Jib; 5 m. N.W. of Jerusalem; also a township of the S.W. Africa Protectorate.

GIBRALTAR (anc. Calpē). Town and rock fortress at the S. extremity of Spain, ceded to the British by the treaty of Utrecht,

Gibraltar. View of the Rock from Spain. About 2½ m. in length, its highest point is 1,408 ft.

1713. It is connected with the mainland by an isthmus 1½ m. long and ¼ m. broad. Between the British Lines and the Spanish Lines is a tract of neutral ground. S. of the British Lines are rifle ranges, a racecourse, and cemeteries. A mole affords secure anchorage for the largest vessels; and the harbour can accommodate the Mediterranean Fleet. The town is a coaling station. The population is estimated at 18,700.

Gibraltar underwent many sieges before it was taken from Spain by a combined British and Dutch force under Sir George Rooke, July 24, 1704 (O.S.) during the war of the Spanish succession. Aided by the French, Spain attempted to retake it in the following autumn and again in 1736. Then came the siege of 1779-83. Gibraltar at this time was defended by Sir G. A. Eliott, afterwards Lord Heathfield. Great loss was inflicted on the attacking forces, and the siege was raised on Feb. 6, 1783. Gibraltar is a free port, and in recent years a tourist centre. The governor is aided by an executive council of seven.

The Strait of Gibraltar is the channel separating the S. of Spain from the N. of Africa, and leading from the Atlantic to the Mediterranean. It is proposed to make a tunnel under the strait to connect Europe and Africa by rail.

GIBSON, CHARLES DANA (b. 1867). American draughtsman and painter. Born Sept. 14, 1867, he made a great hit by introducing the type of American girl known as *The Gibson Girl* to illustrated literature. Later he took up portraiture.

GIDEA PARK. Suburb of Romford, Essex. It is 13½ m. E. by N. of London, with a station on the L.N.E.R. About 80 acres, with lake and wooded land adjoining, given by Sir Herbert Raphael to Romford, is known as Raphael Park. See Romford.

GIDEON. Hebrew judge and warrior. The son of Joash, he overthrew the altars and groves of Baal, routed the Midianites, and judged Israel for 40 years (Judges 6-8).

GIFFEN, SIR ROBERT (1837-1910). British economist. Born at Strathaven, Lanarkshire, July 22, 1837, after serving in a lawyer's office he took to journalism. From 1876-97 he was head of the statistical department of the board of trade. In 1895 he was knighted, and he died April 12, 1910. His works include *The Growth of Capital*, 1890; *Economic Enquiries and Studies*, 1904.

GIFFORD, WILLIAM (1756-1826). British writer. Born at Ashburton in April, 1756, he was soon an orphan. He earned a casual living until his abilities and knowledge attracted attention and he was sent to Oxford. After a period of travel he settled in London, where he died, Dec. 31, 1826. Gifford is chiefly known as a vigorous champion of Toryism and a classical scholar. He edited *The Anti-Jacobin*, 1797-98, and *The Quarterly Review*, 1809-24; wrote satires, popular in their day, translated Juvenal and Persius, and edited the works of the Elizabethan dramatists.

William Gifford,
British writer
After Hoppner

GIG. Word, suggesting lightness and speed, applied to a two-wheeled vehicle drawn by one horse. It is also used of a clinker-built racing boat, and of a narrow ship's boat propelled either by oars or sails. See Carriage.

GIGGLESWICK. Village of Yorkshire (W.R.), England. It is 14 m. N.W. of Skipton on the L.M.S. Rly. and has stone and slate quarries, and a large public school, founded in 1512. Pop. 954.

GILBERT. Group of small islands and atolls in the Pacific Ocean, belonging to Great Britain. Eighteen are inhabited; they yield pandanus fruit and coconuts, and export copra and phosphates. The total area is 166 sq. m.

GILBERT, ALFRED (b. 1854). British sculptor. Born in London, Aug. 12, 1854, he became R.A. in 1892, but retired in 1909, having been professor of sculpture since 1900. His first serious composition was *The Kiss of Victory*, 1882. Then followed *Icarus*, 1884, *The Enchanted Chair*, 1886, *The Eros* (or *Shaftesbury*)

Alfred Gilbert,
British sculptor
Elliott & Fry

Sir Humphrey Gilbert
English navigator

Fountain, Comedy and Tragedy, 1892, the Duke of Clarence Memorial at Windsor, statue of Queen Victoria at Winchester, and of John Bright at Westminster, and many busts.

GILBERT, SIR HUMPHREY (c. 1539-83). English navigator. Born at Dartmouth, he was

Raleigh's stepbrother. In 1583, with two vessels, he sailed to Newfoundland, landed at St. John's, and founded the first English colony in America. He set out on the return voyage aboard the smaller of his two vessels, the Squirrel, which foundered off the Azores with all hands, Sept. 9, 1583.

Sir John Gilbert,
British painter

GILBERT, SIR JOHN (1817-97). British artist. Born July 21, 1817, he became an artist and soon made a reputation by his illustrations for books and periodicals. He did much work for *The Illustrated London News*, and his illustrations for H. Staunton's edition of Shakespeare are notable. His pictures, several of which are in the London Guildhall, include King Charles leaving Westminster Hall. In 1871, when president of the society of painters in water colour, he was knighted; in 1872 he was elected A.R.A. and in 1876 R.A. Gilbert died at Blackheath, Oct. 5, 1897.

GILBERT, SIR WILLIAM SCHWENK (1836-1911). British dramatist. Born in London, Nov. 18, 1836, he was educated at London University. He is chiefly remembered for the remarkable series of operas in which he was associated with Sir Arthur Sullivan as music composer and Richard D'Oyly Carte as theatrical manager, 1875-96, first at the Royalty, then at the Opéra Comique, and afterwards at the Savoy Theatre. The wit and finish of his dialogue and lyrics the urbanity of his satire, and the topsy-turvydom of his humour probably contributed as much to the success of these operas as the charm of Sullivan's music. Gilbert, who was knighted in 1907, died May 29, 1911. In 1924 a Gilbert and Sullivan Society was started in London.

Sir W. S. Gilbert,
British dramatist
Russell

GILBEY, SIR WALTER (1831-1914). British merchant. Born at Bishop's Stortford, May 2, 1831, he founded, with one of his brothers, the firm of W. & A. Gilbey, wine merchants. In 1893 Gilbey was made a baronet, and on his death, Nov. 12, 1914, the title passed to his son. Gilbey was a sportsman and an agriculturist, writing books on both subjects.

Gilead. Mountainous district in Palestine E. of the Jordan. See Balm.

Gilgamesh, the
Babylonian Hercules,
strangling a lion
Louvre, Paris

Giles (Lat. Aegidius). Patron saint of lepers and beggars. Said to have been born at Athens at the end of the 7th century, he founded an abbey at Nîmes.

GILGAMESH. Hero of a Babylonian epic, by some identified as Nimrod (q.v.). He is a man of mighty strength, a great hunter, and ruler of Erech. The epic narrates the Babylonian stories of the Flood. Gilgamesh has parallels with Hercules.

GILL. Organ of respiration in animals that habitually live in water. They are found in fishes, crustaceans, many molluscs, the larval stages of batrachians, and in certain lower forms of life. They present the largest possible surface containing capillary blood vessels to the water in order that the contained oxygen may come into contact with the blood.

GILL. In engineering, the term used for the flat plate or fin fitted to the tubes of a radiator or water cooler, in order to facilitate the dissipation of heat.

GILL. Dry and liquid measure of capacity, used in Great Britain and the U.S.A. The gill equals one quarter of a pint, and contains 7.219 cubic ins. Pron. jill.

GILL, ARTHUR ERIC ROWTON (b. 1882). British sculptor. Born at Brighton, Feb. 22, 1882, he was articled to an architect, but turned his attention to another branch of art. He studied in Chichester, and soon began to exhibit in London. His chief works are the Stations of the Cross in Westminster Cathedral and several war memorials, including one for the university of Leeds.

GILL, SIR DAVID (1843-1914). British astronomer. Born in Aberdeen, June 12, 1843, he was educated there. Devoting his time to astronomy, he made observations which added a good deal to the body of scientific knowledge. In 1879 he was appointed astronomer-royal at the Cape of Good Hope, and there he made a catalogue of the stars in the southern hemisphere, his greatest work. Knighted in 1900, Gill died Aug. 27, 1914.

Sir David Gill,
British astronomer
Swaine

GILLINGHAM. Market town of Dorset. It stands on the Stour, 23 m. W.S.W. of Salisbury, with a station on the S.R. It is an agricultural centre. Market day, Monday (alternate). Pop. 3,294.

GILLINGHAM. Borough of Kent. On the Medway to the E. of Chatham, of which it is virtually a suburb, it is 36 m. from London on the S.R. The industries include the making of bricks and cement. With Chatham it returns one member to Parliament. Gillingham was one of the chief stations of the navy until supplanted by Chatham. Pop. 54,038.

GILLOW, ROBERT (d. 1773). English furniture maker and designer. He came from Lancaster and opened a London house in 1761. The business was greatly developed by his sons, Richard, Robert, and Thomas, for whom designs were made, among others, by Hepplewhite and Sheraton.

GILLRAY, JAMES (1757-1815). British caricaturist. Born probably at Chelsea, he attended the R.A. Schools and studied engraving under W. W. Ryland and Bartolozzi. Between 1779, when his plate of Paddy on Horseback was published, until he died, June 1, 1815, he produced 1,500 caricatures, mostly caustic. He spared no one. His illustrations of manners and customs are invaluable to the historian.

James Gillray,
British artist

GILLYFLOWER. Name originally applied to the carnation (*Dianthus caryophyllus*), but now used chiefly for stocks (*Matthiola*) and wallflower (*Cheiranthus*).

GILMOUR, SIR JOHN (b. 1876). British politician. Born May 22, 1876, he was educated at Glenalmond, in Edinburgh, and at

Trinity Hall, Cambridge. He served in S. Africa and later in the Great War, winning the D.S.O. In 1910 he was elected to Parliament as a Unionist for East Renfrewshire and in 1918 for a Glasgow division. In 1919 he was made Unionist whip for Scotland, and in 1921-22, having just succeeded to his father's baronetcy, he was a lord of the treasury. In 1924 he was made secretary for Scotland, a post he retained until 1929.

Gill. Cast-iron gilled pipe as used for heating churches, public buildings, etc.

GILOLO OR HALMAHERA.

Island of the Malay Archipelago. One of the Moluccas or Spice Islands, it belongs to the Netherlands. Spices, fruits, sago, coconuts, and edible birds' nests are produced. Gilolo is the capital. Subdivided into petty states, the coastal districts are inhabited by Malays, while in the interior is a race called Alfuras. Pop. 100,000.

GIMBALS (Fr. jumelle, Lat. gemellus, twin). Brass rings in which a ship's compass is hung. They are so arranged that the compass remains horizontal, no matter how the vessel rolls and pitches. See illus. below.

GIMCRACK CLUB. English racing club. Founded in 1767, its name commemorates that of a famous racehorse. At its annual dinner the chief guest is the owner of the horse that has won the Gimcrack Stakes, a race which is run every August at York.

GIN. Colourless spirit flavoured with juniper berries and other aromatic herbs. It is distilled in a patent still, the grain used being maize, to which a little barley malt is added. The gin rectifier buys the neutral spirit, and then rectifies it. Each gin rectifier has his own recipes for flavouring, and very often in addition to juniper, almonds, cardamoms, cassia, orris-root, coriander seeds, or other aromatics are added. What is called Geneva (or hollands or schnapps) is a kind of gin made principally in Schiedam, Holland. The name Geneva has nothing to do with the city of that name. See Distillation; Juniper.

Gimbals, device of brass rings for keeping a mariner's compass horizontal. See above.

GINCHY. Village of France, 7 m. E. of Albert and 2 m. N.W. of Comblès. It was prominent in the battles of the Somme (q.v.). In Oct., 1928, a British memorial to the Guards who fell in the Great War was unveiled here.

GINGER (*Zingiber officinale*). Perennial herb of the order Scitamineae. It is a native of the E. Indies. It has a horizontal root-stock, which forms the ginger of commerce. The leaves are narrow, lance-shaped, up to 1 ft. long. The yellow and blue flowers are clustered in a dense oval spike on a tall, leafless stem.

Ginger. Horizontal root-stock with flowering shoots

GINNING. Separation of cotton fibre from cotton seed by the gin (a corruption of engine), an industry revolutionised in 1793, when Eli Whitney invented the saw-gin.

GINSENG (*Panax schinseng*). Plant of the order Araliaceae. A native of N. Asia, it has compound leaves and greenish flowers in umbels. By the Chinese ginseng root is regarded as a remedy for most diseases and a rejuvenator.

GIOLITTI, GIOVANNI (1842-1928). Italian statesman. Born Oct. 27, 1842, and educated at the university of Turin, he became minister of finance in 1889. He was prime minister for the fourth time 1911-14, and again in 1920-21. He tried to keep Italy neutral in the Great War. He died July 17, 1928.

G. Giolitti,
Italian statesman.

GIORGIONE, GIORGIO (1477-1511). Venetian painter. Born at Castelfranco, he studied under Giovanni Bellini. Among his most celebrated works are *The Sleeping Venus* (Dresden), *Evander and Pallas* (Vienna), *The Fête Champêtre* (Louvre), *The Golden Age* (National Gallery, London), and three in Venice, *Adrastus* and *Hypsipyle* (Palazzo Giovannelli), *Apollo and Daphne* (the Seminario), and *S. Mark Stilling the Storm at Sea* (the Accademia). His landscape work was distinguished, as was his portraiture.

Giorgio Giorgione,
Venetian painter
Self-Portrait

GIOTTO (c. 1266-1337). Italian painter. He was born at Colle, near Florence. About 1298 he painted a famous altar piece for S. Peter's, Rome. The frescoes of the Life of S. Francis at Assisi were painted shortly after, and in 1303 he decorated the chapel of the *Annunziata dell' Arena* at Padua with frescoes of the History of the Virgin and Son. One of his last works was the design for the beautiful campanile of Florence Cathedral. He died at Florence, Jan. 8, 1337. See illus. p. 608.

GIPPSLAND. District in S.E. Victoria, Australia. Its area is 13,900 sq. m. Formerly well timbered with giant eucalyptus, it is now extensively cleared and settled. It is rich in dairy produce, and coal, gold, and other minerals are produced. The chief town of Gippsland is Sale.

Gipsy Hill. Residential district of London, S.E. It is 8 m. S. of London Bridge on the Southern Rly. and forms a part of Norwood.

GIRAFFE (Arab, zaraf). Member of the even-toed ungulate or hoofed mammals, remarkable for the great length of its legs and neck. The body is comparatively short, the forequarters standing much higher than the hind ones, and the tawny pelt is handsomely marked with a network of light lines. The long, narrow head is surmounted by a pair of short horn-like outgrowths, bony cores covered by the skin. The tongue is long and used to grasp the twigs and leaves of trees. Giraffes are found only in Central and S. Africa, chiefly in desert regions.

Giraffe in captivity. The males are sometimes as much as 20 feet high

GIRASOL (Ital. girasole, from girare, to turn, sole, sun). Gem which reflects bright red or yellow light apparently coming from its interior. The most remarkable form is the fire opal, which gives bright hyacinth, yellow, or fire-red reflections: the finest examples have been found at Zimapán, Mexico, and in the Faroe Islands. See Opal.

GIRDER. In buildings and bridges, a beam of steel, iron, or concrete and steel supported on walls or piers to bear the stress or weight of a superstructure. See Bridge.

GIRDLE. Belt worn round the waist to draw in loose outer garments, to keep up breeches or petticoats, or to carry weapons or other articles in constant employment. In time an article of apparel developed that has lent itself to rich decoration by armourer, brooderer, and goldsmith, and that led to the formation of the Girdlers' Company of London, incorporated in 1449. See Baldrick.

Girdle from brass in
S. Stephen's, Nor-
wich, 1460

GIRGENTI (anc. Agrigentum). City of Sicily. Situated near the coast, 84 m. by rly. S. of Palermo, its chief glories are its numerous remains of Greek temples. There is a large export trade, Porto Empedocle being the port. Pop. 20,735. See Agrigentum.

Girl Guide.
Dress of Tenderfoot

GIRL GUIDES. Organization for the training and welfare of girls. Founded by Lord Baden-Powell (q.v.), it was developed by his sister Agnes Baden-Powell. Girls between 8 and 16 are eligible for membership; those from 8 to 11 being known as Brownies. Physical training and instruction in useful arts and crafts are important features. The world membership is 894,000, of whom 518,000 are in the British Isles. See Scouting.

GIRONDE. Department of S.W. France. Named after the estuary formed by the union of the Garonne and Dordogne, its area is 4,140 sq. m. Cereals are grown, but the chief industry is the cultivation of the vine and the production of the wines known as Graves, Médoc, Sauterne, and others. Bordeaux is the capital. Pop. 827,973.

GIRONDINS or **GIRONDISTES**. Name given to a moderate political party of the French Revolution. Several of its early members had represented the dept. of Gironde in the legislative assembly. Brissot (q.v.) was their leader. Other members were Condorcet, Barbaroux, and Vergniaud, while Madame Roland was a great influence in the party. The Girondins originated in a salism in the Jacobin Club in 1791, and were overthrown in 1793 by the Jacobins (q.v.).

GIROUARD, SIR EDUARD PERCY CRANWILL (b 1867). British soldier. Born in Montreal, Jan. 26, 1867, he was educated at the R. Military College, Kingston, and entered the army in 1888. He served in the Sudan in 1896, was railway traffic manager at Woolwich, 1890-95, and director of railways in the Sudan and S. Africa, 1896-1904. He was high commissioner of N. Nigeria, 1907-8, and governor of E. Africa, 1909-12. In May, 1915, he was director-general of munitions supply.

GIRTIN, THOMAS (1775-1802), English painter. Born in Southwark, Feb. 18, 1775. he received lessons

Thomas Girtin,
English painter
After J. Opie

from Edward Dayes (1763-1804), and frequently accompanied J. M. W. Turner to sketch on the Thames side. He was the founder of the modern school of painters in water colours. Most of his best works, such as the White House, Chelsea, and Battersea Reach, are in private hands, but he is adequately represented at the British Museum. He died in London, Nov. 9, 1802.

GIRTON COLLEGE. College at Cambridge for the higher education of women. Founded in a house at Hitebin, Oct. 16, 1869, it was removed to Cambridge, Oct., 1873.

GIRVAN. Police burgh and market town of Ayrshire. It is 63 m. S.W. of Glasgow on the L.M.S. Rly. The chief industry is fishing. The town is 5 m. from the Turnberry golf courses. Market day, Mon. Pop. 7,272.

GISBORNE. Port of North Island, New Zealand, in Cook co. It stands on Poverty Bay, and is the centre of a rich pastoral and

Girton College, Cambridge. The main buildings,
designed by Alfred Waterhouse, 1872. See above

agricultural district. Here Captain Cook first landed in New Zealand in 1769. Pop. 15,540.

GISSING, GEORGE ROBERT (1857-1903). British novelist. He was born at Wakefield, Nov. 22, 1857, and educated at Owens College, Manchester. In 1882 he became tutor to Frederic Harrison's sons, and wrote three novels, *The Unclasssed*, *Demos*, and *Thyrza*, all concerned with the suffering of sensitive souls in sordid environment. More able, but equally joyless, were *The Nether World*, *New Grub Street*, *Born in Exile*, and *The Odd Women*. A scholar of parts, his qualities and tastes are revealed in his monograph on Charles Dickens, in *By the Ionian Sea*, *The Private Papers of Henry Ryecroft*, and the posthumous *Veranilda*. He died Dec. 28, 1903.

George Gissing,
British novelist

GIVENCHY. Village of France, in the dept. of Pas-de-Calais. It is 2 m. W. of La Bassée and 1 m. S.E. of Festubert. Prominent in the Great War, it was the scene of a considerable battle, Dec. 16-22, 1914. Although the objective of the Germans throughout the war, it was firmly held by the British. Fierce fighting took place here in 1915. In April, 1918, the Germans unsuccessfully attacked it. A village known as Givenchy-en-Gohelle is in the dept. of Pas-de-Calais, 5 m. S.W. of Lens. The French were engaged here with the Germans, Sept., 1915, and Jan.-Feb., 1916. It was captured by the British on April 13, 1917, in the third battle of Arras (q.v.).

GIZEH or **GIZA**. Town of Egypt. It is on the left bank of the Nile, just above Cairo. Here is the palace of Gizeh, erected by the khedive Ismail. In the neighbourhood are the Pyramids. Pop. 26,921. The prov. of the same name contains the districts of Ayat, Es Saff, Embaba, and Gizeh. The area is about 409 sq. m. Pop. 591,390.

GIZZARD (Lat. gigeria, poultry entrails). Term used in comparative anatomy for that portion of the alimentary canal which is

specially designed for grinding food. Hence it is usually found in such animals as swallow food whole without mastication.

GLACE BAY. Town and port of Cape Breton Island, Nova Scotia. It is 14 m. from Sydney. Around it are coal mines, and its industries include machino and railway shops and fishing. Pop. 17,007.

GLACIER (Fr.). Moving mass of ice. The snow-line varies in elevation from sea level in Antarctica to 2,500 ft. in Alaska, 8,500 ft. on the Alps, and 16,000 ft. on the S. side of the Himalayas. As the snow above the snow-line accumulates the lower portions slowly change into ice, and when the mass of ice and snow becomes sufficiently thick it begins to move downwards. When the moving mass follows a definite path down a mountain valley it is a glacier. In its passage a glacier accumulates quantities of rocks. Some of these sink into the mass; others are moved to the margins.

Glaciers have been classified into four types: (1) valley glaciers, as in the Alps, Caucasus, Andes, Himalayas, and coast mts. of Alaska; (2) piedmont glaciers, when a valley glacier pushes out on to a nearly level area at the base of the mountains; (3) ice caps, as in Iceland, Greenland, and Antarctica; and (4) continental glaciers, as in Greenland, where the continental glacier is steadily pushing seawards.

The glacial period is the earlier of the two subdivisions of quaternary time. See *Avalanche*; *Geology*; *Ice Age*.

GLACIS (Fr. *glace*, ice). Sloping ground in front of a fortification and within close rifle range. The term is also used to describe a sloping protective plate on a battleship.

GLADIATOR (Lat. *gladius*, sword). Term applied among the ancient Romans to a professional fighter who engaged in combat

Caesar, those about to die salute thee). When one combatant was overcome but not killed by another, the spectators, by turning their thumbs up (or against the breast) or down, determined the fate of the beaten gladiator. See *Amphitheatre*; *Colosseum*.

GLADIOLUS (Lat. *little sword*). Flowering bulbs of the order Iridaceae. Most of them are natives of South Africa. They flower from June to Oct., bearing a number of blossoms on stiff, almost upright, spikes.

Glacier. The Mer de Glace, which moves down the north side of Mont Blanc

GLADSTONE, HERBERT JOHN GLADSTONE, 1st Viscount (1854-1930). British politician. Born Jan. 7, 1854, the youngest son of W. E. Gladstone, he was for a few years a lecturer at Keble College, Oxford. In 1880 he entered Parliament as M.P. for West Leeds, and from 1881-85 he held a minor position in his father's ministry, as he did in 1886. From 1892-94 he was under-secretary for home affairs, and in 1894-95 first commissioner of works. From 1899-1905, when the Liberals were in opposition, he was the chief whip, and in 1905 he was rewarded by being made home secretary.

In 1910 he became governor-general of S. Africa, and was made a viscount. He returned to England in 1914, and died March 6, 1930. In 1928 he published *After Thirty Years*, reminiscences of his father.

GLADSTONE, WILLIAM EWART (1809-98). British statesman. Born at Liverpool, Dec. 29, 1809, he was the youngest son of Sir John Gladstone, Bart. (1764-1851), M.P. and merchant, by his marriage with Anne Robertson. He was educated at Eton and Christ Church, Oxford, and in Jan., 1833, he took his seat in the first reformed parliament as Tory member for the borough of Newark.

Gladstone began his long career in the public service as a junior lord of the treasury under Peel in 1834. He was under-secretary for the colonies, 1835, and vice-president of the board of trade 1841. In 1843 he became president of the board, and in 1845-46 was colonial secretary. He left office in 1846, and soon had broken with the Tory party. In 1852 he joined the coalition ministry of Lord Aberdeen and was chancellor of the exchequer till 1855. He was again chancellor, 1859-66, and on Palmerston's death, in 1865, became head of the ministry in the House of Commons. From 1847 to 1865 he represented Oxford University in Parliament. From 1865-68 he was M.P. for S. Lancashire; from 1868-80 for Greenwich, and from 1880 to the end for Midlothian.

Catherine Gladstone, wife of the Premier
London Stereoscopic Co.

William Ewart Gladstone, British statesman
London Stereoscopic Co.

Viscount Gladstone, British politician
Russell

and until 1874 filled, in addition, the office of chancellor of the exchequer. He then retired, but returned to denounce the Bulgarian atrocities, and in 1880, after the Midlothian campaign, again took office as premier. He was also chancellor until 1882.

In 1885 came a general election and his sudden declaration for Home Rule. In Feb., 1886, he took the premiership for the third time, but was soon defeated, and until 1892 led the opposition. The next election came in 1892, and he was premier for the fourth time until March, 1894, when he retired from office and Parliament. He died at Hawarden Castle, May 19, 1898, and was buried in Westminster Abbey.

By his marriage in 1839 to Catherine, sister and heiress of Sir Stephen Glynne, 9th baronet, the castle and estate of Hawarden passed into the Gladstone family. There were four sons and four daughters of the marriage. Consult *Life*, John Morley, 1903 and 1905; *Religious Life of Gladstone*, D. C. Lathbury, 1910.

GLADWYN (*Iris foetidissima*), Perennial herb of the order Iridaceae. It is a native of W. Europe. The root-stock is thick and creeping, the leaves 2 feet long, sword-shaped, erect, and dark green, the flowers dull blue-purple, with darker veins. In late autumn the round bright orange seeds make the plant more conspicuous than when in flower. It is also called by the names of foetid iris and roast-beef plant.

GLAMIS.

Village of Angus, Scotland. It is 6 m. W.S.W. of Forfar, on the L.M.S. Rly. Here is Glamis Castle, a seat of the earl of Strathmore, one of the oldest castles in Scotland. Pron. *Glahms*.

GLAMORGANSHIRE. Co. of S. Wales. It is bounded by the Bristol Channel and the cos. of Carmarthen, Brecknock, and Mon-

Glamis Castle. The Angus seat of the earl of Strathmore. It dates mainly from the 17th century

mouth. Owing to the development of the rich coalfields of Rhondda, Merthyr Tydfil, Aberdare, and Pontypridd it has become a great industrial centre. Between Rhymney and Neath is the agricultural region known as the vale of Glamorgan. The chief rivers are the

Gladiator. Scene in the arena, by J. L. Gérôme. The spectators are giving the signal "thumbs down"
Stewart Collection, New York

in amphitheatres with others or with wild beasts. Schools existed for training them. The bestiarius fought with wild beasts; the retiarius was armed with a trident and a net; the mirmillo, whose helmet was adorned with the figure of a fish, was usually opposed by the threx, carrying a round shield and a short sword; the andabala fought on horseback and wore a helmet which entirely covered the face; the laquearius carried a lasso.

A display began with a procession, and as they passed the emperor's seat the gladiators cried *Ave Caesar, morituri te salutant* (Hail,

Taff, Tawe, Cynon, Ogwr, Rhondda, Rhymney. In the north of the county are mts. (highest point nearly 2,000 ft.). There is some beautiful scenery, especially in the vale of Neath. Cardiff (the capital), Swansea, and Merthyr Tydfil are the largest towns. In addition to coal mining and agriculture there are tinplating, smelting, and oil-refining industries. The ruined castles include Caerphilly, Oystermouth, Llanblethian, Penarth, and Swansea. Cardiff, St. Donats, Dunraven, and Penrice have been restored. The area is just over 800 sq. m., and the pop. 1,252,481.

Gland (Lat. glans, acorn). Organ of the body which secretes fluid or material essential for the maintenance of health.

GLANDERS (Lat. glandulae, glands). Disease of horses due to infection by a bacillus (*B. mallei*). In rare instances it is communicated to man by contagion, usually through an abrasion of the skin.

GLASGOW. Royal burgh, co. of a city, commercial capital, and largest city of Scotland, in the co. of Lanark. With an area of 29,511 acres and a pop. of 1,147,000, it is 47 m.

There are fine hospitals and infirmaries, libraries, an observatory, and botanic gardens. In addition to the university, there are several colleges for higher education, and special ones for art, technology, and theology, while schools of every size and variety abound.

Of the many parks, Kelvingrove is the most noteworthy. Others are Queen's, Bellahouston, and Alexandra, and Cathkin Braes. Rouken Glen Park is outside the city boundaries. Glasgow Green is the home of popular demonstrations. The Necropolis is a large cemetery finely placed on a hill. The boundaries

have been extended from time to time and just before the Great War Govan and Partick, previously separate municipalities, were included in the city. There is an abundant supply of water from Lochs Katrine and Arklet. The harbour, which includes extensive docks along the Clyde, is accessible for the largest vessels afloat. See Clyde; Dock.

The Glasgow School is a name associated since 1886 with a group of painters living in Glasgow. Its members have included Sir D. Y.

Glamorganshire. Map of the county containing the chief coalfields of S. Wales

Cameron, Sir James Guthrie, P.R.S.A., Sir John Lavery, P.A., and E. A. Walton.

THE UNIVERSITY OF GLASGOW. Founded in 1450 by William Turnbull, this is housed in a magnificent pile of buildings on Gilmore Hill opened in 1870. It unites with the three other Scottish universities to send three members to Parliament.

The earl of Glasgow is a title borne since 1703 by the family of Boyle. The earl sits in the House of Lords as Baron Fairlie, a title dating from 1894, and his eldest son is known as Viscount Kelburn. The family seat is at Kelburn, Ayrshire.

Glasgow. British light cruiser. Completed 1911, she belonged to the Bristol (q.v.) class. She took part in the battle of the Falkland Islands, Dec. 8, 1914.

GLASS. A non-crystalline, transparent mixture of fused silicates. The glasses known as "sheet" and "plate" are mixtures of the silicates of soda and lime, the ingredients being sand, carbonate of lime, and sulphate or carbonate of soda. Table or "flint" glass is usually a mixture of the silicates or potash and lead, the ingredients being sand, red lead, and carbonate of potash. The temperature at which glass mixtures melt ranges from about 1,200° C. to 1,500° C. The place where glass was first made is not known, but its origin in Egypt is dated about 1550 B.C. Much of

Glasgow. The Cathedral of St. Mungo, built 1197-1446, and, on the left, the Royal Infirmary and Barony Church. Above, the University, on Gilmore Hill, designed by Sir Gilbert Scott, 1868

W. of Edinburgh, 23 m. from the open sea at Greenock and 405½ m. from London, on the L.M.S. and L.N.E. rlys. It is governed by a town council under a lord provost and it sends 15 members to Parliament. Its chief industries are shipbuilding, coal and iron mining, engineering, spinning and weaving, distilling, tobacco, chemicals, dyeing, etc.

Glasgow. George Square, with the Municipal Buildings, the Scott Monument and the Cenotaph. Courtesy of L.M.S. Railway

style. The Art Galleries in Kelvingrove Park contain a notable collection of old masters.

The cathedral, dedicated to St. Mungo (also known as St. Kentigern), was built 1197-1446, and afterwards restored. On George Square are the municipal buildings, a magnificent block in the Italian Renaissance

Glasgow. Plan of the city, showing the principal buildings, railway stations and docks

modern glass is machine made. A department of glass technology was opened at Sheffield University in 1915. The Glass Sellers' Company of the city of London was incorporated in 1664.

GLASSITES. Scottish sect. It was founded about 1730 by John Glas (1695-1773), who taught that church establishments were unscriptural. He founded several congregations, better known as Sandemanians, after one of the more conspicuous elders, Robert Sandeman. The sect adopted community of goods and abstinence from certain kinds of food.

GLASS SNAKE (*Ophisaurus ventralis*). Popular name for the Scheltopusik, a genus of lizards found in parts of Europe, N. America, and Asia. It is snake-like in form, the limbs being either absent or rudimentary, and the body is covered with scales. It is perfectly harmless, and feeds on mice and snails. See Lizard.

GLASSWORT (*Salicornia europaea*) or **MARSH SAMPHIRE**. Annual leafless herb of the order Chenopodiaceae. A native of Europe, N. Africa, W. Asia, and N. America, it has juicy, jointed stems and branches, joints spindle-shaped. The minute flowers are in pairs, sunk in a pit in the joints of the branches, and have no petals. Glasswort grows in salt marshes, and was burnt formerly to obtain soda from its ashes for use in glass-making.

GLASTONBURY. Borough and market town of Somerset. It is 5½ m. from Wells, on the G.W. Rly., and is famous for its remains of a great Benedictine abbey, which flourished here until the Reformation.

Until 1907 the ruins were in private hands; they were then transferred to the diocese of Bath and Wells. Tradition ascribed the foundation to Joseph of Arimathea, who, it is said, built a church here and planted the thorn which bloomed once a year on Christmas Day. It was long a place of pilgrimage. The town, which grew up around the abbey, was given municipal privileges in 1706. Market day, Tues. Pop. 4,456.

The Glastonbury lake villages are two late Celtic settlements of the crannog (q.v.) type near Glastonbury.

GLAUCOMA (Gr. *glaukos*, bluish green). Disease of the eye characterised by an increase of tension or pressure of the fluids within the eyeball. See Blindness; Eye.

GLAUCUS. Name of three personages in Greek mythology. They are the builder of the Argo, the ship of the Argonauts (q.v.); the father of Bellerophon; and a Lyeian hero slain by Ajax.

GLAZE. Layer of pure or mixed transparent colour thinly applied to a painting to improve its tone, to impart mellowness, to

protect the surface, and to facilitate its being cleaned without risk of injury. Glaze also plays an important part in the manufacture of pottery and porcelain. See Tiles.

GLAZE BROOK, SIR RICHARD TETLEY (b. 1854). British physicist. Born at Liverpool, Sept. 15, 1854, in 1890 he became director of the Cavendish Laboratory, Cambridge; in 1898 he was chosen principal of University College, Liverpool; and from 1899-1919 director of the National Physical Laboratory. His work lay chiefly with optics and electricity. He wrote text-books on physical optics, heat and electricity, and was knighted in 1917. In 1920 Glazebrook became foreign secretary of the Royal Society.

Glass Snake, a legless lizard, over a yard in length

GLEANNING OR **LEASING.** Gathering what is left after harvest, usually corn, but sometimes grapes or other produce. In England the public are not legally entitled to glean, but are seldom turned off.

GLEBE (Lat. *gleba*, clod, land). Term in ecclesiastical law for land belonging to a benefice. It was formerly held that each parish should possess a house and glebe land for the support of the parson. See Tithe.

GLEE. English vocal concerted work in three or more parts. It is for solo voices, unaccompanied and usually male, the style being non-contrapuntal.

GLLENALMOND. Glen or valley of the Almond river, Perthshire. Here is Trinity College, the first school in Scotland modelled after the English public schools. In the glen is the reputed grave of Ossian.

GLLENCAIRN, EARL OF. Scottish title borne by the family of Cunningham from 1488 to 1796. The first earl was Alexander Cunningham, a lord of parliament, killed when fighting for James III against some rebels in 1488. William, the 9th earl (d. 1664), was responsible for the rising in Scotland in favour of Charles II and became lord chancellor of Scotland in 1661. The 14th earl, James, who died childless in 1791, was a friend of Burns. His brother, the 15th earl, died childless in 1796, and the title became extinct.

GLLENCOE. Glen in Argyllshire. It extends for 10 m. W. from Buehaille Etive to Loch Leven, an E. arm of Loch Linnhe. It lies among magnificent mountain scenery with peaks rising to 3,800 ft. Here took place in Feb., 1692, the massacre of the Macdonalds. The Master of Stair, an old enemy of the chief of the Macdonalds, obtained an order from William III for the extirpation of the Macdonalds as dangerous irreconcilables. The order was treacherously carried out by the Campbells, who were also enemies of the Macdonalds.

The name Glencoe is given to a village of Natal, S. Africa, near which took place the opening operations of the South African War in the autumn of 1899.

GLLENDALOUGH. Valley of the Irish Free State, in co. Wicklow. It is 8 m. N.W. of Rathdrum, a station on the Gt. Southern Railway, and is famous for its beauty and its eccles. ruins. The glen, 2 m. long, is enclosed by mts. and is traversed by the Glencalo, which in it forms two lakes. Glendalough was the seat of a bishop from the 6th century to the 13th, and the ruins are known as the Seven Churches. Most of them were founded by S. Kevin. There is a fine round tower.

GLLEN EAGLES. Pleasure resort in Perthshire, Scotland. It is 9 m. from Crieff, with a station on the L.M.S. Rly. There are excellent golf links. Pop. 486.

GLLENELG. Seaport and watering place of South Australia. It is 6 m. by rly. S.W. of Adelaide. Pop. 5,000. There is a river of this name in Victoria. Its length is 260 m. Charles Grant, Baron Glenelg (1778-1866), was colonial secretary under Melbourne, 1835-39. His title, conferred on him in 1835, was taken from his estate in Scotland.

GLLENFINNAN. Glen and hamlet of Inverness-shire, Scotland. A monument marks the spot where Prince Charles Edward unfurled his banner in 1745.

GLLENGARIFF. Village of co. Cork, Irish Free State. It stands on Glengarriff Harbour, an arm of Bantry Bay, 7 m. N.W. of Bantry and is a noted beauty spot.

Glengarry bonnet

Glengarry. Glen of Inverness-shire, Scotland. It gives its name to the Highland bonnet worn by some Scottish regiments.

GLLEN INNES. Chief town in the rich New England plateau of New South Wales. It is 423 m. N. of Sydney and is an important tin-mining centre. Bismuth, wolfram, and molybdenite are also found. Pop. 4,580.

GLLENLIVET OR **GLLENLIVAT.** Valley of Banffshire, Scotland, celebrated for its whisky. Glenlivet is also the name of a parish, situated 6 m. S.E. of Ballindalloch.

GLLENMORE. Valley of Inverness-shire, Scotland. About 60 m. long, it extends from the Moray Firth to the head of Loch Linnhe. In it are the Caledonian Canal and lochs Ness, Lochy, Oich, and others. Another glen of this name is in Perthshire.

GLLENROY. Valley of Inverness-shire, Scotland. About 14 m. long, it is remarkable for its three parallel roads, thought to be of glacial origin, which extend in terraces on both sides of the glen, which is watered by the river Roy.

GLLENSHIEL. Valley of Ross and Cromarty, Scotland. It was formerly part of the Seaforth country, and is 26 m. in length. Glenshiel is also the name of a parish, which includes Letterteam. Pop. 339.

GLIDER. Name for any heavier-than-air vessel without a motor. It is so designed that when launched from a height, or with certain velocity, it pursues a path of gentle descent

Glendalough, Ireland. The glen with Round Tower and remains of the Seven Churches

through the air. By their experiments with gliders, Lilienthal, Chanute, the Wrights, and other pioneers opened up the way to the power-driven aeroplane.

Gliding was revived in Germany in 1920, and has since made great progress. The two

chief centres are the Wasserkuppe, in the Rhön mountains, and Rossitten, East Prussia. In 1929 Dinort made a glide lasting 14 hours 43 minutes at Rossitten, and Kronfeld flew on a glider from the Wasserkuppe to Baireuth, a distance of about 93 m. In England a

Glider. Member of the London Gliding Club making a successful flight at Aldbury, Herts

gliding meeting was held at Itford in 1922, when Maneyroll won The Daily Mail prize of £1,000 with a flight lasting 3 hrs. 21 mins. After this little was done for some years. Early in 1930 the British Gliding Association was formed and many gliding clubs were organized.

The gliders resemble those used in Germany. To launch the glider a cable of indiarubber is passed through a ring hooked to the machine, the tail of the glider is held down, and the launching party, taking hold of the two ends of the cable, advance with the cable until it is drawn out to about twice its length. The tail of the glider is then released, and the machine moves forward until it attains flying speed, the cable and ring falling to the ground.

In April, 1930, a prize of £1,000 was offered for the first pilot to cross the English Channel in a glider during the ensuing twelve months. A prize of £50 for a straight flight of 50 miles, offered in 1922, still remains unclaimed. The Daily Mail announced its intention to institute an important gliding competition for the summer of 1931. See Aeronautics; Aeroplane.

GLOBE FISH. Marine fish of the didontidae and tetrodontidae families. They are found in the tropic seas, and have the power of distending their bodies with air. The largest species are about 2 ft. in length, and most are beautifully coloured.

Globe Fish. The lesser spotted variety with distended body

GLOBE FLOWER (*Trollius europaeus*). Perennial herb of the order Ranunculaceae. It is a native of Europe. The leaves are round in general outline, but divided into five toothed lobes. The fine yellow flowers are globular, and their rich appearance is due to the numerous sepals, which are petal-like, while the true petals are small and narrow. It is cultivated in flower gardens.

Globe Flower. Leaves and flowers of this European herb

GLOBE THEATRE, THE. Former London playhouse, built on Bankside (q.v.), Southwark, in 1599, by the Burbages, Shakespeare, and four other actors. It held 1,200 spectators, and was partly open to the sky. Shakespeare acted in this theatre.

GLOBE THISTLE (*Echinops*). Genus of biennial and perennial herbs. Of the order Compositac, they are natives of Europe and W. Asia. Their long, strongly lobed and spiny leaves give them a resemblance to thistles. The flower-heads are gathered into large globular masses, each standing on a long stalk. The flowers are white or blue.

Globe Thistle. Flower heads and leaves of the Echinops

GLOBULARIA. Small genus of perennial herbs and shrubs, of the order Selaginaceae, natives of the Mediterranean region. They have leathery, lance-shaped leaves, and numerous small flowers gathered into flattish heads. *Globularia vulgaris* and *G. nudicaulis*, with blue flowers, are frequently grown in gardens, and *G. alypum*, a shrubby species, in the greenhouse.

GLOBULIN. Class of protein substances which occur both in the plant and animal kingdoms. As a rule insoluble in water, they dissolve in dilute neutral salt solutions. Globulins in solution are precipitated by the process of adding a large excess of water; on beating they coagulate.

GLOCHIDIUM. Larval stage of the fresh-water mussel (*Anodonta cygnaea*). This mussel retains its eggs until they hatch, and the glochidia are found at first attached to the gills of their parent. They are cast out in the outgoing current of water and attach themselves to the fins of sticklebacks and other fishes, being thus distributed to other parts of the pond or stream. The shell develops, and the young mussels then drop to the bottom of the pond.

GLORIANA. Titular character of Spenser's allegorical poem, *The Faerie Queene*. Introduced in canto 1, 3, as "That greatest Glorious Queene of Faeryland," she personifies both Glory and Queen Elizabeth.

GLORIOUS. British aircraft carrier. Originally a cruiser, she was laid down in 1915. In 1924 alterations were begun, and in 1930, as a carrier, she joined the Mediterranean fleet. She displaces 18,600 tons, and can accommodate six flights of aircraft. She carries 16 4.7 guns.

GLOSSITIS (Gr. glōssa, tongue). Inflammation of the tongue. Acute glossitis may arise from injuries, bites, stings of insects, or over-administration of mercury, and is occasionally seen in acute fevers. The tongue becomes swollen and painful, and speech, swallowing, and respiration are interfered with.

Globe Theatre, the old London playhouse associated with Shakespeare. From an engraving c.1612

GLOSSOP. Borough and market town of Derbyshire. It is 13 m. S.E. of Manchester, on the edge of the Peak district, on the L.N.E. Rly. The chief industry is the manufacture of cotton. The principal building is All Saints' church, a modern edifice. Glossop Hall, formerly the seat of the Howards, resembles a French château in style. Glossop was made a borough in 1866. Market days,

Globularia alypum, a greenhouse species of the herb

Fri. and Sat. Pop. 20,870.

GLOUCESTER. City, co. bor., port and co. town of Gloucestershire. It is on the left bank of the Severn, 114 m. N.W. of London on the G.W. and L.M.S. Rlys. and the Berkeley Canal. Gloucester has engineering

Gloucester Cathedral. The oldest part dates from about 1100, while the tower was built in 1450
D. McLeish

and rly. works and machine shops. There is an important cattle market.

An abbey was established here in 681, and in 1022 a Benedictine monastery, the church of which became the cathedral in 1541, when Gloucester was constituted a separate see. Substantially Norman, the cathedral contains the shrines of Edward II (see illus. p. 546) and Osric, king of Northumbria. Other buildings include the 12th century church of S. Mary de Crypt, the episcopal palace, guildhall, prison, and the King's School. The centre of the city is the Cross, the intersection of the four main streets, the Eastgate, Northgate, Westgate, and Southgate. Remains of the ancient walls exist, and there are memorials to Hooper, the martyr, and Raikes, the founder of Sunday schools. Market days, Mon. and Sat. Pop. 53,560.

Gloucester. British light cruiser of the Bristol (q.v.) class. She became famous for her effort to prevent the escape of the Goeben.

GLOUCESTER, EARL AND DUKE OF. English titles. Like other counties, Gloucester had its earls in Norman times. The family of Clare secured the title about 1218, and retained it until Earl Gilbert was killed at Bannockburn in 1314. In 1385 Thomas of Woodstock (1355-97), a younger son of Edward III, was made duke of Gloucester. His public life almost covered the reign of his nephew, Richard II, and he virtually ruled England from 1386-89. In 1397 he was arrested on a charge of plotting against Richard, and was put to death. In 1414 Humphrey (1391-1447), youngest son of Henry IV, was created duke of Gloucester. He

acted as regent during the king's absence in France, 1420-21, and was protector during the minority of his nephew, Henry VI. He died at Bury, Feb. 23, 1447, after arrest on a doubtful charge of treason. A patron of learning, he made many gifts to Oxford. Later holders of the title were Henry, a son of Charles I; William (d. 1700), the eldest son of Queen Anne; and George III's brother, William Henry, created duke in 1764. It became extinct in 1834, but was revived in 1928.

GLOUCESTER, HENRY, DUKE OF (b. 1900). British prince. Third son of King George V, he was born at York Cottage, Sandringham, March 31, 1900, and was christened Henry William Frederick Albert. The prince was a pupil at a private school at Broadstairs. Thence he proceeded to Eton, where he joined the Officers' Training Corps. He became a captain in the 10th Hussars, and in 1928 was created duke of Gloucester. He visited S. Africa in 1928.

Prince Henry,
Duke of Gloucester
Vandyk

GLOUCESTERSHIRE. County of England. In the W., between the Severn and the Wye, is the forest of Dean; the centre district is that of the Severn valley, and the E. that of the Cotswolds. The chief rivers are the Severn, Wye, Upper and Lower Avon, and Thames. The chief range of hills is the Cotswolds. Gloucester is the county town, but Bristol is much the largest. Cirencester and Tewkesbury are noted for their architectural and historical associations. Cheltenham is a watering place and educational centre. A feature of the county is the number of picturesque market towns. Its area is 1,259 sq. m. Pop. 757,668.

Gloucestershire. Map of the irregularly shaped West of England county

Gloucestershire is mainly an agricultural county, although coal is mined in the forest of Dean. The Severn valley is noted for its

pasture land, while here much wheat is grown. Cheese is made, cattle are reared, apples and pears are grown for cider and perry. Sheep are plentiful on the Cotswolds. Cloth is manufactured. The county is served by the L.M.S. and G.W. Ryas. and by the Thames and Severn Canal. It supports several packs of hounds. It is in the Oxford circuit and mainly in the dioceses of Gloucester and Bristol.

GLOUCESTERSHIRE REGIMENT.

Regiment of the British army. Known by this name since 1881, it represents the old 28th and 61st regiments of foot. It helped to win the battle of Ramillies in 1706, and was present at the battle of Fontenoy in 1745, at Louisburg in 1758 and Quebec in 1759. In the battle before Alexandria (1801) the regiment repulsed the French attack on both sides, in commemoration of which the men wear the regimental badge on both front and back of their caps.

It fought in the Peninsular War, and later won distinction at Waterloo, in the Punjab campaign, the Crimean War, and the Indian Mutiny. During the S. African War the Gloucesters shared in the defence of Ladysmith, the relief of Kimberley, and in the operations which led to the occupation of Bloemfontein, March 14, 1900. The regiment fought with distinction in the Great War. The regimental depot is situated at Bristol.

GLOVE. Covering for the hand. The custom of wearing gloves goes back to immemorial times. Xenophon refers to their use by the Persians.

Gloucester Regimental badge

They were familiar to the Romans, and were worn by the Anglo-Saxons in the 7th century. In those days there was only a separate division for the thumb. In the 13th century gloves reaching to the elbow began to be worn for ornament as well as for warmth or protection. Leather gauntlet gloves were used for hawking, and knights in full armour had gloves with metal entirely covering the back of the hand and overlapping the fingers. Gloves were part of the imperial insignia in the Middle Ages, and are still worn ceremonially by the Pope and the Roman Catholic hierarchy. In the 15th, 16th, and 17th centuries perfumed, jewelled, and embroidered gloves made their appearance.

In medieval times it was the custom to wear gloves in the hat as the favour of a mistress, the memorial of a friend, and as a mark to be challenged by an enemy; and a glove was thrown down as a challenge to an enemy, who accepted battle by picking it up.

Gloves are believed to have been first made in England on a large scale by the monks of Bath. In the 14th century a guild of gloves came into existence in London, and the trade of making them was already a profitable calling. Modern gloves are largely made from sheep, lamb, and kid skins, dressed and finished in various ways. After having been stamped out, the sewing process is carried out by machines.

The Glovers' Company, a London city livery company, was first mentioned in 1349. Incorporated with the Leathersellers in 1502, it was separately incorporated in 1638. The offices are at 28, Sackville St., London, W.1.

GLOW-WORM. Name given to the female of the beetle *Lampyrus noctiluca*. It is common in many parts of Great Britain and throughout central and southern Europe. While the male possesses large elytra, the female is wingless and grublike in form. It derives its name from the presence of luminous spots on the abdomen.

GLOXINIA. Hothouse plants of the order Gesneriaceae. They are natives of Central Asia and India, and were introduced into Britain in 1739.

Gloxinia. Foliage and trumpet-shaped flowers of *G. sinningia*

They reach an average height of 1 ft. and have elongated, bell-shaped blossoms of every possible shade and colour. There are about six species in general cultivation but the hybrids are innumerable.

GLOZEL. Village of France, near Vichy. Here in 1926-27 a number of alleged remains of prehistoric man were found. In 1927 the International Institute of Anthropology appointed a commission to inquire into the discoveries and this came to the unanimous conclusion that the remains were not genuine.

GLUCK, CHRISTOPH WILLIBALD VON (1714-87). German composer. Born in Bavaria, July 2, 1714, he studied music at Prague and later at Milan. After producing a number of operas of the conventional type, he realized the need of drastic reforms in the character of opera, and introduced these into his works. His *Orfeo ed Euridice*, produced in 1762, is a landmark in the history of opera. Another notable one was *Iphigénie en Aulide*. He died Nov. 15, 1787.

C. W. von Gluck,
German composer

GLUCOSE, DEXTROSE, OR GRAPE SUGAR. Carbohydrate present in many fruits, and in honey. It is the form of sugar which is present in the blood in the disease diabetes. Under the influence of yeast it is converted into ethyl alcohol and carbonic acid. It is made artificially on a large scale by heating starch under pressure with weak sulphuric acid. Glucose is employed in the manufacture of beer. It is used as an addition to jam to prevent crystallisation, and in confectionery.

GLUCOSIDE. Class of substances found in the vegetable kingdom. They yield glucose on fermentation or by the action of dilute acids. Several are employed in medicine, as digitalin, obtained from foxglove, and salicin, from the willow. Some glucosides yield hydrocyanic (prussic) acid, and have caused the death of cattle.

GLUE. Impure gelatin used for its adhesive qualities to hold together various substances, chiefly wood. It is prepared from both the skins and bones of animals, the skins producing a far stronger glue than the bones. Fish

glue is prepared by boiling the skin and tissue of cod and other fish. Liquid glue is glue which has been treated with nitric or acetic acid to prevent it from gelatinising. Marine glue, which resists moisture, is a solution of rubber and shellac in naphtha or benzene.

GLUTEN. Tough, elastic substance obtained from wheat flour by washing it with water. The starch is washed away, and the gluten, about 10 to 12 p.c. of the flour, remains.

GLUTTON OR WOLVERINE (*Gulo luscus*). Carnivorous mammal of the weasel group. It is found in the northern districts of Europe, Asia, and N. America. It is nearly 3 ft. in length, has dark brown fur, and a short, bushy tail. Of heavy build, it walks with something of the action of a bear, is found in forests, is nocturnal in habit, and devours any animal which it can catch.

GLYCERIN OR GLYCEROL ($C_3H_7(OH)_3$). Thick colourless liquid with a sweet syrupy taste, obtained by the decomposition of fats and oils in the process of making soap and candles. When fats and oils are saponified with a caustic alkali, the fatty acids combine with the soda or potash, and glycerin is formed as a by-product. Much distilled glycerin is used in the manufacture of high explosives. The purest glycerin is employed for medicinal purposes. Glycerin is also used for filling gas-meters and hydraulic jacks, for giving body to light wines, in liquors, and in the manufacture of copying inks, shoe polishes, and numerous toilet preparations.

GLYCOGEN. Carbohydrate related to dextrin. It was first discovered by Bernard in the liver, and is found in small quantities in other organs of the body. Glycogen is looked upon as a reserve food deposited in the liver which is transformed into fat and sugar.

GLYPTODON

(Gr. glyptos, carved; odous, tooth). Genus of extinct armadilloes. Their fossil remains have been found in the post-tertiary deposits of S. America. Some of these fossils represent an animal 9 ft. in length. The armoured carapace was solid and continuous, like the carapace of a tortoise. The head, feet, and tail emerged from under this dome, but the head was protected by a bony cap and the tail covered by tubercled bony rings. The name was suggested by the deep ridges and grooves in the surface of the molar teeth.

GNAT. Popular name for certain small dipterous insects of the Culicidae family. Some nine species occur in Great Britain. The larval stage is passed in stagnant water, and the adult insects are most abundant in marshy districts. Blood-sucking in habit, they are also known as mosquitoes (q.v.).

GNEISENAU, AUGUST WILHELM ANTON NEIDHARDT, COUNT VON (1760-1831). German soldier. Born Oct. 27, 1760, he was in America in the British service during the war of independence, and then he entered the army of Prussia. Gneisenau helped in the work of reorganizing the Prussian army, and in the war of liberation served Blücher as chief of the staff. He was responsible for the plan of campaign of 1814, and for that of the battles

around Waterloo, and to him was due the ruthless pursuit of the French. In 1818 he was made governor of Berlin and a member of the council of state. He died Aug. 24, 1831.

The Gneisenau was a German battle cruiser, the flagship of Admiral von Spee that, after sharing in the victory of Coronel, was sunk at the battle of the Falkland Islands.

GNEISS (German). Composite rock consisting of quartz, felspar, and mica in varying proportions and arranged in parallel layers (schistose). It may be fine-grained in thin layers, or the latter may be so thick and uneven that the laminated structure is obscured. Often one of the constituent minerals predominates greatly over the others. There are many varieties.

GNOME. Small legendary being in the folk-tales of many peoples, supposed to dwell in the earth and guard the treasures hidden there. They are akin to the black dwarfs of North European folklore.

GNOSTICISM

(Gr. gnostikos, knowing). Term usually applied to the heresy with which were concerned sects that sprang up in the 1st century A.D., the members of which claimed mystical knowledge denied to the rest of the world. Gnosticism is characterised by association with the idea of emanation, a theory of creation which postulates One Supreme Being from whom lesser beings or aeons have emanated as light emanates from the sun. From the fall of one of these lesser beings into the outer void arose a Demiurge, which was regarded as the embodiment of evil.

Gnosticism assumed a new form after the rise of Christianity; and gained a strong foothold in the 2nd century, one result being the formulation by the Catholic Church of its standards of orthodoxy, of dogmatic theology based upon what could be shown historically to be derived from Christ and His apostles. Gnosticism died out in the 6th century.

GNU OR WILDEBEEST. Genus of large antelope. Its heavy head and neck somewhat suggest the appearance of a small bison. There are two species, the white-tailed and

the brindled, both natives of Africa. The horns curve downwards and then upwards. The muzzle is wide, the neck has an erect mane, and the tail has long thick hair. The animal stands rather more than 4 ft. high at the shoulder, and lives in the open country.

GOA. Portuguese colony on the W. coast of India. Near the S. end of the Bombay presidency, its area is 1,301 sq. m. It contains the town of Panjim or New Goa, the capital of Portuguese India since 1843. Except for some of its churches, Old Goa, once the wealthiest city in India, is now a city of ruins. The colony has belonged to Portugal since its capture in 1510. Pop. of settlement, 508,053.

GOAT. Genus of the family Bovidae, which includes also oxen, sheep, and antelopes. The goats are placed between sheep and antelopes. Goats differ from sheep in the bony structure of the skull, and the horns are placed close together immediately above the eyes. The males are usually bearded, and have a strong odour. While they live in herds, they associate less intimately and are of more independent disposition than sheep. The goat in its wild state inhabits the Eastern hemisphere exclusively, the so-called Rocky Mountain goat of N. America not being a true goat, but belonging to a genus approaching the antelopes. About ten species of wild goat are recognized by naturalists, and of these three or four are more generally known by the name of ibex (q.v.).

Goats are kept in many countries, both for the sake of their hides and hair and as a source of dairy produce. The Angora and Cashmere breeds are noted for their valuable silky hair. See Angora; Cashmere Goat.

GOATHLAND.

Parish and village of N.R., Yorkshire, England. It is 8 m. S.W. of Whitby, on the L.N.E. Ry. A colony for disabled officers was established here after the Great War. Goathland Moor is situated 2 m. S. of the village, and is noted for its cataracts. Pop. 519.

GOAT MOTH. Large moth of the genus *Cossus*, common in most parts of Great Britain. The fore wings, often over 3 ins. in expanse, are pale grey clouded with brown, with a kind of network of fine brown lines. The hind wings are grey, with very fine reticulations. The caterpillar is flesh colour, with reddish brown patches, and has an offensive goatlike smell. It lives in the wood of willow and other trees and is about 3 ins. long.

GOAT'S BEARD

(*Tragopogon pratensis*). Perennial herb of the order Compositae. A native of Europe and N. and W. Asia, it has a tap-root with milky juice, and the slender, alternate leaves, which clasp the stem at their bases, taper to a long point. The solitary flower head is yellow, with 7 or 8 slender bracts. The head opens about 4 a.m. and closes as soon as pollinated, whence the popular name John-go-to-bed-at-noon.

Glutton or wolverine, a species of weasel
W. S. Herridge, F.Z.S.

Goat. 1. Toggenburg, a hornless, short-coated animal. 2. Nubian. 3. Anglo-Nubian, a good milking breed. 4. Irish.

Glyptodon. Skeleton of *G. clavipes* from the Pampa formation of Buenos Aires
British Museum

Gnu, the white-tailed variety. The animal is found only in Africa
Gambier Bolton, F.Z.S.

Goat Moth. Specimen of *Cossus ligniperda*

GOAT'S-RUE (*Galega officinalis*) Perennial herb of the order Leguminosae. A native of S. Europe, it has a stout, creeping root-stock, and the compound

Goat's Rue, a South European herb

leaves consist of about 15 lance-shaped leaflets. The leafy stems are about 4 ft high, with a flowering branch at the base of each of the upper leaves. The pea-like flowers are blue, but there is a variety with pure white flowers.

GOBELIN. Tapestry named from Jean Gobel. He was a French dyer who, in 1450, founded a dye-works and cloth factory in St. Marcel, a suburb

of Paris. About 1603 Henry IV purchased from the Gobelin family part of the land adjoining the dye-house, and here two tapestry sheds were erected. In 1667 Louis XIV consolidated the royal Parisian tapestry workshops in the Hôtel de Gobelins and Charles Le Brun and eminent artists provided magnificent designs such as *The History of the King*. After a period of suspension, work was resumed in 1697. Smaller tapestries were made under Louis XV, but prosperity returned with the beautiful designs of Boucher. The Revolution crippled the industry, but later the designs of Baudry brought success. Modern tapestries from designs by Galland adorn the Comédie Française. See *Tapestry*.

GOBI. Eastern section of the desert of Central Asia, known to the Chinese as Shamo. Mainly in Mongolia, it extends S.W. into Sinkiang. The climate is one of great extremes and is practically rainless. Nomad tribes are the chief inhabitants. See *Asia*; *Desert*.

GOBLETS, THE. Pair-oared boat race rowed annually at Henley-on-Thames. It was inaugurated in 1845, and its full title is *The Silver Goblets*. See *Henley*.

GOBLIN. Mischievous or evil being. The word is supposed to derive from the Gr. kobalos, a sprite, a rogue, and to be the same as the Ger. Kobold, spirit or demon of the mine. Gohlin has come to be applicable to any mysterious or frightening phantasm.

Godalming, Surrey. Buildings of Charterhouse School, which was moved from London in 1872

Frith

GODALMING. Borough of Surrey. It stands on the Wey, 35 m. S.W. of London on the Southern Rly. The church of SS. Peter and Paul contains some Norman work. There are some 17th century half-timbered houses. The place, which is mentioned in *Domesday Book*, became a borough in 1574. It was long a centre of cloth manufacture. Pop. 9,275.

Near Godalming is the Charterhouse School, removed here in 1872. See *Charterhouse*, *The*.

GODERICH. Town and port of Ontario, Canada. It stands where the river Maitland falls into Lake Huron, 135 m. W. of Toronto. It

is a terminus of the C.P.R. and a station on the C.N.R. Steamers ply to ports on the Great Lakes and the St. Lawrence. Pop. 4,107.

GODETIA (*Oenothera*). Section of the evening primrose genus, of the order Onagraceae. They are natives of the warm parts of America. Evening primroses all have yellow flowers, and do not open in sunshine; but the godetias do. They are annual herbs.

GODFATHER. Sponsor for an infant presented for baptism, required as an assurance to the Church that the child will be brought up in the faith in which it is baptized. His duty is to answer the interrogatories put to him at the font, and afterwards to see that the child is instructed according to the promises made in his name and in due time brought to the bishop for confirmation. The custom derives from the primitive church, when guarantors of the character of persons brought for baptism were a necessary precaution. See *Baptism*.

GODFREY. Family of British conductors. Charles Godfrey (1790-1863) was bandmaster of the Coldstream Guards, 1828-63. His

Sir Dan Godfrey, British bandmaster

eldest son Daniel, or Dan (1831-1903), was bandmaster of the Grenadier Guards, 1856-96. Another son, Adolphus Frederick (1837-82), was bandmaster of the Coldstream Guards, and a third son, Charles (1839-1919), was bandmaster of the Royal Horse Guards, 1859-1904, and professor of military music at the R. College of Music.

A grandson, Dan Godfrey, who was director of music to the Bournemouth corporation, was knighted in 1922.

GODIVA, LADY. Wife of the 11th century Leofric of Mercia. According to legend, Leofric made harsh exactions on his people of Coventry; his wife begged for their removal, which he promised to grant if she rode naked through the town. Lady Godiva accepted the terms. The people of Coventry kept close within doors, their windows shuttered, during the ride; all save a certain tailor who, peering through a chink, was struck blind, and has ever since been known as Peeping Tom.

GODLEY, SIR ALEXANDER JOHN (b. 1867). British soldier. Born Feb. 4, 1867, he joined the Dublin Fusiliers, and in 1896 saw active service with mounted infantry in S. Africa. In 1900 he assisted in the defence of Mafeking. In 1910 Godley was sent out to New Zealand as major-general to command the defence forces there. On the outbreak of the Great War he went to Egypt and Gallipoli at the head of a division of Australians and New Zealanders and was in command of the New Zealand Expeditionary Force throughout the war. He was commander of the British Rhine army, 1922-24. He held the Southern Command from 1924 to 1928 and was appointed governor of Gibraltar in 1928.

GODMANCHESTER. Borough and market town of Huntingdonshire. It stands on the Ouse, 1 m. from Huntingdon, and has a station on the L.N.E. Rly. The chief building is S. Mary's Church, a fine Perpendicular edifice, and here are some old timbered houses. Market day, Sat. Pop. 2,035.

GODOLPHIN, SIDNEY GODOLPHIN, 1ST EARL OF (1645-1712). English politician. In 1679 he became a member of the Treasury board and one of the king's chief advisers. In

1684 he was made a secretary of state, and a little later first lord of the treasury. In 1690, after a brief absence, Godolphin returned to the treasury, but he was not loyal to William, and his secret intrigues with James II led to his resignation in 1696. In 1700, however, he was again in office. In 1702 he was made lord treasurer, and he remained in power until 1710, when he was dismissed from office. In 1706 he was made an earl. He died Sept. 15, 1712.

1st Earl of Godolphin, English politician After Kneller

GODWIN or **GODWINE** (d. 1053). English earl. In 1020 he was earl of the West Saxons, and for fifteen years he appears to have been one of Canute's chief supporters. He forwarded the selection of Hardicanute as king in 1035, as in 1042 he did that of Edward the Confessor. His daughter was married to Edward, and with his sons also in high positions he was the most powerful man in the kingdom. In 1051, however, there was a serious quarrel between the earl and the king, and Godwin and his sons were exiled. In 1053, however, he returned, and was restored to his estates and dignities. He died April 15, 1053. His name is perpetuated in the Goodwin Sands (q.v.).

GODWIN, MARY (1759-97). English writer. Born at Hoxton, London, April 27, 1759, daughter of Edward John Wollstonecraft, in 1783 she opened a school at Islington, later removed to Newington Green, but in 1787 she became assistant editor of *The Analytical Review*. In 1792 she issued her *Vindication of the Rights of Woman*. In Paris, where she witnessed the Terror, she met Gilbert Imlay, and bore him a daughter, Fanny, 1794. She tried to drown herself from Putney Bridge as a result of Imlay's desertion; married William Godwin, March 29, 1797; and on Aug. 30 in the same year bore him a daughter, Mary, who became the second wife of the poet Shelley. She died Sept. 10, 1797.

Her husband, William Godwin (1756-1836), became a freethinker and a republican, and in 1793 obtained considerable reputation by the publication of his *Enquiry concerning Political Justice*, a gospel of the purest anarchism. In 1794 he brought out *The Adventures of Caleb Williams*, a novel of extraordinary power. He died in London, April 7, 1836. Consult Shelley, Godwin and *Their Circle*, H. N. Brailsford, 1913.

GODWIT (*Limosa*). Genus of wading birds belonging to the snipe group. Two species, the har-tailed (*L. lapponica*) and the black-tailed (*L. helgica*) godwits, occur in Great Britain as birds of passage. They have long legs and beaks, the plumage barred with white and brown, and are usually found about shores and estuaries.

GOEBEN. German battle cruiser. When the Great War broke out the two ships Goeben and Breslau (q.v.) were in the Aegean Sea. On Aug. 6, 1914, the British fleet gave chase, but they escaped into the Dardanelles. Later the Goeben became very active in the Dardanelles, and for some time led the Turkish fleet. On Jan. 20, 1918, in company

Godwit. The black-tailed variety, *Limosa helgica*

Mary Godwin, English writer After Opie

with the Breslau, she made a dash from the Dardanelles and attacked the British ships off Mudros. As a result both enemy vessels were driven into minefields, where the Breslau sank and the Goeben sustained much injury. After the Armistice she was surrendered to the Allies.

GOETHALS, GEORGE WASHINGTON (1858-1928). American soldier and engineer. Born at

G. W. Goethals,
American soldier

Brooklyn, he entered the army and specialised in military engineering. In 1907 Goethals was given charge of the construction of the Panama Canal, a task which he fulfilled with such success that the canal was virtually completed some six months before the scheduled date of June 1, 1915. He died Jan. 21, 1928.

GOETHE, JOHANN WOLFGANG VON (1749-1832). German poet. Born at Frankfurt-on-Main, Aug. 28, 1749, he studied at Leipzig and subsequently at Strasbourg, where he was influenced by Herder. With his *Götz von Berlichingen*, 1773, Goethe gave the Storm and Stress movement its first tragedy, and with *Werthers Leiden*, 1774, its typical novel. To this period also belongs the drama *Clavigo*, 1774, and other works, including the earliest form of the drama of *Faust*. At the end of 1775 Goethe visited the duke of Saxe-Weimar, and Weimar remained his home for life.

J. W. von Goethe,
German poet
After J. K. Stieler

The years 1786-88 Goethe spent in Italy, and here the dramas of *Iphigenie auf Tauris*, 1787, and *Egmont*, 1788, were completed, and *Torquato Tasso*, 1790, in great part written. Having returned to Germany, in 1794 began his lasting friendship with Schiller. Goethe produced his greatest novel, *Wilhelm Meisters Lehrjahre*, 1795-96. In 1797 he published *Hermann und Dorothea*. He also threw himself zealously into scientific pursuits. In 1806 he married Christiane Vulpius.

The first part of *Faust* appeared in 1808; then came *Die Wahlverwandtschaften*, 1809, a psychological problem novel; and *Der Westösliche Divan*, 1819, a collection of poetry. In 1811 he began to publish his autobiography, *Aus meinem Leben: Dichtung und Wahrheit*, which was not carried beyond 1775, although other works, such as *Die Italienische Reise*, 1816, etc., may be regarded as a continuation. In the last year of his life he completed the second part of *Faust*. He died March 22, 1832, at Weimar, where are memorials of him.

GOG AND MAGOG. Two names in Biblical and post-Biblical literature. In Ezekiel 38, 2, God is spoken of as opposing "Gog, of the land of Magog, the prince of Rosh, Meshech and Tubal"; and in chapter 39 a battle on the mountains of Israel is predicted in which Gog is overthrown.

Gog and Magog are the names given to two huge carved figures which stand on octagonal pedestals at each angle of the wall at the west end of Guildhall, in the City of London. Each is 14 ft. 6 ins. high. They were carved in 1708, by Richard Saunders. Until recently similar figures adorned a clock in Cheapside.

GOGH, VINCENT VAN (1853-90). Dutch painter. Born at Zundert, Holland, he was at first profoundly influenced by the work of Millet, was drawn later to the Impressionists, and then became one of the three leaders of the Post-Impressionist group, being associated with Cézanne and Gauguin. Van Gogh's art aimed at expressing that aspect of a subject which most strongly appealed to his senses. Some of his best pictures were painted at Arles during three years of detention in an asylum, and he died by his own hand in 1890.

GOGMAGOG HILLS. Range of hills in Cambridgeshire. To the S.E. of Cambridge, they are a continuation of the chalk formation which runs up from the Chilterns.

GOGOL, NIKOLAI VASSILIEVITCH (1809-52). Russian novelist and dramatist. Born at Sorochintsi, Poltava, March 31, 1809, he went to St. Petersburg in 1828, and in 1831 published anonymously *Evenings at a Farmhouse near Dikanka*. In 1834 *Mirgorod*, another volume of stories, established his fame. In 1836 his comedy *Revizor* was produced, its satire on the conditions of Russian life, passing unnoticed in general appreciation of its humour. In April, 1920, under the name *The Government Inspector*, it was produced at the Duke of York's Theatre. From 1836-46 the author lived abroad, mostly in Rome. In 1842 he published *Dead Souls*, presenting Russian provincial life in a clear and brilliant manner and with a rare humour. Gogol died at Moscow, March 3, 1852.

Nikolai V. Gogol,
Russian novelist

Goidel. Earlier branch of the Celtic-speaking peoples, who carried to Britain the Goidelic or C-Celtic speech. This developed into the Irish and Scottish Gaelic and the Manx dialects. The term displaced the earlier Gadhelic or Gaelic. The Goidels either preceded or accompanied the bronze-age culture, with the practice of cremation.

GOITRE (Fr. *goître*, Lat. *guttur*, throat). Enlargement of the thyroid gland, situated in the lower part of the front of the neck. Two chief forms are recognized, simple goitre and exophthalmic goitre. Simple goitre, also known as bronchocoele and Derbyshire neck, occurs most frequently in hilly regions, in Derbyshire and Gloucestershire in England, and abroad in Switzerland, Northern Italy, and Central Asia. The disease is probably due to the presence of an organism in drinking water. The administration of thyroid extract or of iodine may be tried, but with increase of the growth an operation is generally advisable.

Exophthalmic goitre, also called Graves's or Basedow's disease, is characterised, in addition to swelling of the thyroid gland, by cardiac palpitations, protrusion of the eye-

GOLBORNE. Urban dist. of Lancashire. It is 5½ m. S.E. of Wigan, on the L.M.S. Rly. The chief industry is the cotton manufacture, while around are coal mines. Market day, Sat. Pop. 7,600.

GOLCAR. Urban district of Yorkshire (W.R.). It is 3 m. S.W. of Huddersfield, and has a station on the L.M.S. Rly. It is a centre of the woollen manufacture. Pop. 10,360.

GOLCONDA. Ruined city of India. About 7 m. W. of Hyderabad city, Golconda was the capital of a kingdom that flourished from 1512 until its conquest by Aurungzebe in 1687. Huge mausoleums of the former kings surround the fort, which is used by the nizams of Hyderabad as a treasury and prison. From the fact that the diamonds from the Nila Hulla mts. were cut and sold at Golconda, the name of the city has come to be associated with fabulous wealth.

GOLD. Elementary metal, chemical symbol Au (Lat. *aurum*); atomic weight 197.2, atomic number 79, specific gravity 19.32, melting point 1,061° C. Its colour when pure is bright yellow, slightly reddish, with high metallic lustre; it takes a brilliant polish; in hardness it is nearly as soft as lead, but differs from the latter in its extraordinary malleability and ductility, in which it surpasses any other metal. It may be hammered out into exceedingly thin leaves; a single grain in weight may be spread by hammering over 56.5 sq. ins. of surface, or drawn into a piece of wire 500 ft. in length. In tensile strength gold comes after iron, platinum, silver and copper. It does not combine directly with oxygen, is unaffected by air or moisture at any temperature, and resists almost all the mineral acids.

Gold is found in nearly all parts of the earth, mostly, however, in minute proportions. It chiefly occurs native in the state of metal, occasionally pure, but more generally alloyed with silver, sometimes with copper, and occasionally with palladium, rhodium, and other metals. The gold of commerce is obtained from three sources: (1) alluvial deposits, (2) quartz rock, and (3) telluride ores, the great bulk from the first two, and mostly from the second. The chief sources of supply are the Union of S. Africa, United States, Canada, Australia, and India.

In 1929 the world's production of gold was £83,500,000, of which £44,236,149 came from the Transvaal. The greater portion of the gold produced annually is consumed in the arts, in the preparation of jewelry, plate, and for gilding chiefly; about one-fourth is coined in normal times. See *Amalgam*.

GOLD STANDARD. The position of gold was entirely changed by the events of the Great War. Paper money was created on an immense scale, and over the greater part of Europe gold, as a circulating medium, disappeared. Large stocks were accumulated by the various governments, but these were nothing like sufficient to cover the great amount of paper money put into circulation. The old gold standard virtually disappeared, this being not without its effect on the great rise in prices that took place in 1918-20.

In 1925 Great Britain returned to the gold standard, though not to gold coinage for currency purposes. Other countries, too, put their coinage on a gold basis, and in 1930 China abandoned her silver standard in favour of gold. There was, however, no return to the use of gold for coinage purposes, though there were great accumulations of it in the state banks of France and the United States.

GOLD COAST. British territory of W. Africa, between French Togoland and the Ivory Coast. Stretching inland from the Gulf

Gog and Magog, the wooden figures, carved in 1708, in Guildhall, London
London Stereoscopic Co.

balls and muscle tremors. It is a serious disease and requires skilled treatment.

of Guinea for about 480 m., with a coastline of 334 m., it comprises Gold Coast Colony proper (area, 23,490 sq. m.; pop. 1,171,913), Ashanti (area, 24,560 sq. m.; pop. 407,000), Northern Territories (area, 30,660 sq. m.; pop. 530,355), and British Togoland (area, 13,040 sq. m.; pop. 187,940). It is administered by a governor with an executive and a legislative council. The capital of the Gold Coast Colony is Accra, other important centres including Sekondi and Cape Coast. There are rlys. from Sekondi and Accra to Kumasi and from Huni Valley to Kade. See Ashanti; Togoland.

GOLDEN AGE. In classical mythology, the period when Saturn or Cronos, after being dethroned by Zeus, reigned in Latium as king. Saturn taught agriculture and the arts of civilization to his people, and the period of his reign came to be known as the Golden Age.

GOLDEN BULL (Lat. bulla, knob, seal). Name given to charters of unusual importance sealed or stamped with a golden seal or bull. The name is specially given to the document that regulated the election of the German kings from 1356 to 1806. To determine disputes the emperor Charles IV ordered a bull to be drawn up, and the princes, meeting at Metz, accepted it in Dec., 1356. Written in Latin, this Golden Bull fixed the numbers of electors at seven, nominated the seven, and prescribed their respective precedence and duties. It remained operative until the dissolution of the Empire in 1806. See Elector; Empire, Holy Roman.

GOLDEN CALF. Image made by Aaron, in response to popular appeal, during the absence of Moses on the mount (Exodus 32). It was in the form of a young bull and made from carvings of gold. Divine honours were paid to it. Jeroboam set up similar images at Dan and Bethel (1 Kings 12).

GOLDEN FLEECE. In Greek mythology, the object of the quest of Jason and the Argonauts. Phrixus and Helle, children of Athamas, king of Thebes, escaped from the wrath of their stepmother on a ram with a golden fleece and wings. Helle fell into the sea, but Phrixus arrived at Colchis, where he sacrificed the ram. Aëtes, king of the country, hung up the fleece in the sacred grove of Arès. See Argonauts; Jason.

Golden Fleece. Badge of the order

The Order of the Golden Fleece is one of the premier European orders of knighthood. It was founded Jan. 10, 1429, by Philip the Good, duke of Burgundy. The grandmastership passed by marriage to the Hapsburgs, was claimed in 1700 by the emperor Charles VI, who established the order in Vienna in 1713, and after then it existed independently in both Spain and Austria. In Austria it lapsed with the fall of the empire in 1918. The badge is a golden fleece attached by fursions, or flint-stones, emitting flames, to a red ribbon worn round the neck, or, on high occasions, to a chain of alternate flint-stones and steels intertwined to represent B (Burgundy).

GOLDEN GATE. Channel connecting San Francisco Bay, California, U.S.A., with the Pacific Ocean. It is 5 m. long and from 1 m. to 2 m. broad. See San Francisco.

GOLDEN HORN. THE. Narrow inlet of the Bosphorus (q.v.). It divides the main part of Istanbul (Constantinople) from the Galata and Pera quarters. See Istanbul.

GOLDEN ROD (*Solidago virgaurea*). Perennial herb of the order Compositae. A native of Europe and N. America, its stems

are erect and slightly branched, clad with narrow lance-shaped leaves and terminating in clusters of small yellow flower-heads. It grows on stony banks and dry ground. The golden rod of gardens (*S. canadensis*) is a N. American species.

Golden Rod. Flower heads of the wild variety

Lent, hence called Dominica rosa, originated at a very early date. Consecrated roses, as symbols of silence, were set over the doors of confessionals, and from this practice arose the phrase sub rosa, under the rose, meaning anything in confidence.

GOLDER'S GREEN. Residential district of Middlesex. On the main road between Hampstead and Hendon, it is 1½ m. N.W. of Hampstead on the Hampstead Tube Rly., the river Brent forming its N. boundary. Adjoining West Heath, Hampstead, is Golder's Hill Park, with mansion, now used as a refreshment room, lakes, enclosures for red deer, peafowl, etc. About ½ m. from the rly. station is Golder's Green Crematorium, to the N.W. of which is Hampstead Garden Suburb.

Golden Rose given by Pius II to Siena in 1458

Goldfinch, a song-bird of the British hedgerows W. S. Berridge, F.Z.S.

lays four or five eggs. It is a popular cage-bird.

Golden Horn. View from the cemetery of Eyub, looking towards Istanbul and Galata

GOLDFISH (*Carassius auratus*). Small fish of the carp family. It is a native of China and Japan. Originally brown in colour, the golden hue of the domesticated variety is the result of selective breeding in captivity. It is said to have been introduced into Great Britain late in the 17th century. Its handsome appearance and hardy constitution make it a favourite species for the aquarium. See Carp.

Goldfish. Variegated breed of this small exotic fish

GOLD LEAF. Thin sheet of gold chiefly used for gilding. It is prepared by first casting the metal in small ingots, rolling down the ingots each into a ribbon 10 ft. in length by 1½ ins. wide to the oz. of metal, cutting the ribbon into small pieces; piling the little squares between sheets of special paper, 150 at a time, and beating with a heavy hammer till each piece is about 4 ins. square; cutting the pieces each into four; piling and beating again, the separating material being gold-beater's skin; cutting again into four; piling again and beating finally till the pieces are about 3½ ins. square. Thus the 150 original small squares become 2,400 leaves, and the thickness one 290,000th part of an inch.

GOLDONI, CARLO (1707-93). Italian dramatist. Born at Venice, Feb. 25, 1707, he took to play-writing, and in a quick succession of comedies revolutionised the Italian stage. His works are more remarkable for their wit than their morality, such as *The Twins of Venice*, *The Weak-Headed Lady*, *The Lady of Merit*, *The Obedient Daughter*, and *The Landlady*. He died Feb. 6, 1793.

GOLDSBOROUGH. Village of Yorkshire (W.R.). It is three miles from Knaresborough with a station on the L.N.E. Rly. The hall is the property of the Earl of Harewood (formerly Viscount Lascelles), and after his marriage with Princess Mary was their country home.

GOLDSMITH. One who works in gold. The term is also applied to workers in precious metals generally and to dealers in gold and silver plate. Goldsmiths were among the earliest of the great craftsmen. The craft was brought to a high perfection in Italy, France, and Germany.

The Goldsmiths' Company is the fifth of the twelve great London city livery companies. The first hall, in Foster Lane, E.C., was built about 1407, was destroyed in the Great Fire, and rebuilt by Wren.

The existing hall was opened in 1835. In the court room is a small altar of Diana, found when the foundations were being made. The company assays plate, its hall mark being a leopard's head, and keeps the pyx (q.v.). The company built and endowed a technical institute at New Cross, London, S.E. in 1891.

GOLDSMITH, OLIVER (1728-74). Irish writer. Born at Pallas, co. Longford, Ireland, Nov. 10, 1728, the son of a clergyman, most of his boyhood was spent at the village of Lissoy, in West Meath, the Sweet Auburn of The Deserted Village. He went to Trinity College, Dublin in 1744, but failed to make progress, and later studied

Goldsmiths' Company arms

Oliver Goldsmith, Irish writer. Portrait by Reynolds. Nat. Port. Gall.

medicine in Edinburgh with unsatisfactory results. From 1754-56 he wandered over Europe, and his experiences during these years are reflected in his poem *The Traveller*.

Settling in London in 1756, Goldsmith tried many ways of earning a living, without success. At last he determined to settle down as a book-seller's hack, writing on an amazing variety of subjects. This class of work he continued more or less all the rest of his life. A hook on *Natural History* and histories of England and Rome are the most notable of his hack productions. His first real contribution to English classics was the *Letters of a Citizen of the World*, published in 1762. In 1766 appeared *The Vicar of Wakefield*. His plays, *The Good Natured Man*, 1768, and *She Stoops to Conquer*, 1774, are noteworthy.

In 1761 Goldsmith became a regular member of the Johnsonian circle. His last piece of work was the satirical poem *Retaliation*. He died April 4, 1774.

GOLD STICK. British court official. In England the appointment is held in turn by the colonels of the regiments of household cavalry, each of whom is in waiting for a month at a time. The captain-general of the Royal Company of Archers is Gold Stick for Scotland.

GOLF. Game played upon a course 4 m. or more in length, laid out on links, i.e. sandy

ground by the sea, or over land set with obstacles. These links contain 18 holes of a statutory diameter of 4½ ins., into each of which it is the player's object to strike his ball successively in fewer strokes than his opponent. Sometimes two, playing alternate strokes with one ball, will play against two others doing likewise. In this form the match is called a foursome. The national game of Scotland, golf was brought to England by James I, who played it on Blackheath, near his palace of Greenwich.

representatives from England, Scotland, Ireland, and Wales. The wide popularity of golf dates from about 1860, after which grounds and links were laid out and clubs formed all over the country. Professionalism was recognized and professionals were attached to most of the clubs. Competitions of various kinds were arranged, some for two players, others for four. Soon ladies took up the game, and a little later it spread among boys, although the public schools have never encouraged it.

In the golfing world the chief matches are the open and the amateur championships. The former dates from 1860 and was played at Prestwick until 1870. It is played over 72 holes in two days. The amateur championship was started in 1886, and, like the open, can now be played on any links. In addition there are a number of other open and amateur championships—American, Irish, French, etc. International matches are regularly played by teams of amateurs and professionals. The Walker Cup, instituted in 1922, is competed for each year by teams of eight from Great Britain and the United States. It was retained by the United States in 1930.

GOLGOTHA (Heb. skull). Hill outside Jerusalem where Christ was crucified. See Calvary; Jerusalem.

GOLIATH. Philistine of Gath. He was a man of gigantic stature who challenged Saul's soldiers to single combat, and was slain by David with his sling. There appears to have been another Goliath of Gath, who was killed by Elbanan, one of David's men (1 Sam. 17, 22).

GOLIATH. British battleship. She was launched at Chatham in 1898 and carried four 12-in. and twelve 6-in. guns on a displacement of 12,950 tons. On May 13, 1915, she was attacked and destroyed by a Turkish destroyer inside the Dardanelles. See Canopus.

GOLIATH BEETLE

(Goliathus). Large tropical beetle, found in Central and Southern Africa. It frequently measures 4 ins. in length. Its colour is usually black, but it is often variegated with white. It feeds on the sap of forest trees. See Beetle.

Goliath Beetle of tropical Africa

GOLTZ, KOLMAR VON DER (1843-1916).

German soldier. Born Aug. 12, 1843, he entered the Prussian army and served on the staff during the Franco-German war. In 1883 he went to Turkey, where for the next 12 years he was occupied in re-organizing the sultan's army. Made a field-marshal in 1908, he was appointed governor-general of Belgium after its occupation in 1914, and in 1915 went to Turkey. He was directing the Turkish armies when he died, Aug. 19, 1916.

the Briarmains of Charlotte Brontë's novel *Shirley*. Pop. 3,828.

GOMMECOURT. Village of France. It is on the road from Albert to Arras, 13½ m. N. of Albert. It came into prominence in the first battle of the Somme, when on July 1, 1916, the British 46th and 56th divisions were repulsed. The failure to capture it had marked effect on the result of the battle. It was yielded up by the Germans on Feb. 27, 1917, in their retreat to the Hindenburg line. There are British cemeteries here. See Somme.

GOMORRAH. With Sodom (q.v.) one of the two cities of the plain where Lot dwelt (Gen. 18, 19). They were notorious for vice, and were destroyed by fire. See Abraham.

GOMPERS, SAMUEL (1850-1924). American labour leader. Born in London, of Jewish origin, Jan. 27, 1850, he went to the U.S.A. in 1863. There he founded the union of cigar makers. The great work of Gompers was done in connexion with the American Federation of Labour, which he founded in 1881. He was its president for many years, and under his guidance it became a very large and powerful organization. He died Dec. 13, 1924.

GOMUTI (Arenca saccharifera). Tree of the order Palmae, native of the Moluccas. The trunk grows to about 40 ft., and the large leaves are divided featherwise into long, narrow leaflets. The horse-hair-like fibres that cover the leafstalks are used for thatching and cordage. The juice of the flower-spikes contains much sugar, and can be converted into toddy or vinegar.

GONCOURT. Name of two brothers, famous French novelists. Edmond was born at Nancy, May 26, 1822; and Jules in Paris, Dec. 17, 1830. They collaborated at first in books of social history, *Histoire de la Société Française pendant la Révolution*, 1854; and *Histoire de Marie-Antoinette*, 1858. As collaborators in fiction (1860-70) they produced *Sœur Philomène*, 1861; *Renée Maupérin*, 1864; *Germinie Lacerteux*, 1865; *Manette Salomon*, 1867; and *Mme. Gervaisais*, 1869.

Edmond, independently, wrote *Watteau*, 1876; *Prudhon*, 1877; *L'Art Japonaise au XVIIIe Siècle*, 1891-96; and some novels. He also edited *Les Lettres de Jules de Goncourt*, 1885, and the *Journal des Goncourt*, 1887-92. Jules died June 20, 1870; and Edmond, July 16, 1896.

The Académie des Goncourt was founded to help struggling authors by money resulting from the sale of the Goncourt art collection.

GONDOLA (Ital.). Long, low, narrow, flat-bottomed boat used on the lagoons and canals of Venice. Both prow and stern curve high off the water; each end is decked, the rowers, or gondoliers, standing up to wield their sweeps. Usually, in the centre is a carriage-like cabin, with doors and windows.

Gondola. The small cabined boat used on the lagoons and canals of Venice

Golf. Cast from Harry Vardon's hands, showing overlapping grip. Reproduced from the original at South Heris Golf Club, by courtesy of the Committee

ground by the sea, or over land set with obstacles. These links contain 18 holes of a statutory diameter of 4½ ins., into each of which it is the player's object to strike his ball successively in fewer strokes than his opponent. Sometimes two, playing alternate strokes with one ball, will play against two others doing likewise. In this form the match is called a foursome. The national game of Scotland, golf was brought to England by James I, who played it on Blackheath, near his palace of Greenwich.

In Scotland the senior club is at St. Andrews, where golf was played in 1553, and probably a century earlier. A club was founded there in 1754, and in 1834 this was given the title of the Royal and Ancient Golf Club of St. Andrews. The club is recognized by all golfers as the governing body of the game, and from its members there is appointed a Rules of Golf Committee which interprets and, if necessary, alters the laws of the game. There is also a British Golf Union Joint Advisory Committee which consists of repre-

Golf. Clubs used in playing the game. 1, driver; 2, brassie, similar to driver, but with brass sole and face more laid back; 3, baffle or spoon, with larger and more sloping face than brassie; 4, cleek; 5, mid-iron; 6, mashie; 7, jigger; 8, niblick; 9, cleek putter; 10, wooden putter with lead face

chief industries are the making of worsted, cloth, and blankets, while in the neighbourhood are coal mines. The Red House here is

In aeronautics, the term gondola is used to describe the boat-shaped car fitted to an airship. The usual term now is nacelle.

GONFALON. Banner used in the Middle Ages. Formed after the fashion of the vexillum, or standard of the Roman cavalry, it consisted of a flag

Gonfalon. Banner used by medieval cities

attached to a crossbar and suspended by cords at right angles to the pole. Though at first a war banner, it subsequently became peculiar to the Church. In Florence, Venice, and other Italian cities the standard bearer, or gonfaloniere, was an influential officer.

GONORRHOEA (Gr. gonorrhoea). Acute infectious disease affecting the organs of generation. The specific organism responsible is known as the gonococcus or diplococcus gonorrhoeae. In the male the symptoms usually commence in from two to eight days after infection, frequency of micturition is increased, and the act is accompanied with pain. If the condition is neglected chronic inflammation of the urethra may be set up and lead to persistent and highly infectious discharge, lasting for months, or even years.

Treatment of the disease should always be supervised by a doctor. There are free clinics in all populous centres where skilled treatment is given under conditions of secrecy. No man who has suffered from gonorrhoea should marry before submitting himself to special tests of his freedom from the disease.

GOOD FRIDAY (Gr. Pascha Staurosmon, Pasch of the Cross; paraskeuē, Holy Friday; Lat. dies absolutiois). Name given in the R.C. and Anglican Churches to the Friday in Holy Week (q.v.) on which the Crucifixion is commemorated. In England, to which the name was for a long time peculiar, it superseded that of Long Friday, an allusion to the fast. In England and Ireland Good Friday is observed as a Sunday. See Easter.

GOOD HOPE. British armoured cruiser of the Drake (q.v.) class, completed in 1902. On Nov. 1, 1914, as flagship of Rear-admiral C. Cradock, in the action off Coronel (q.v.), she was sunk with all hands.

The Cape of Good Hope, known as the Cape, from its importance in navigation, is a promontory of S. Africa, about 30 m. from Cape Town. Its height is about 1,000 ft.

Good King Henry. Popular name of one of the goosefoots (Chenopodium bonus-henricus). See Goosefoots.

GOODWILL. Term used for the advantages, other than the material assets, buildings, furniture, etc., which go with a business or profession. It is regarded as property, and stamp duties must be paid when it is transferred from one person to another. It is also valued for death duties, and, moreover, a person is entitled to compensation if the goodwill of his business is injured. Professional goodwill means a recommendation of the purchaser by the seller to the clients, and an undertaking to refrain from competition.

GOODWIN SANDS. Dangerous sandbanks off the E. coast of Kent. They extend from N. to S. for 10 m., about 6 m. from the mainland. At low water they rise some feet above sea level, while at high water they lie 15 ft. below the sea. The extreme limits are marked by four lightships. See Godwin.

GOODWOOD. Sussex residence of the duke of Richmond and Gordon, erected during the first half of the 18th century. It is 3½ m. N.E. of Chichester. The Goodwood horse races, inaugurated in 1802, are held annually at the end of July, the chief race being for the Goodwood Cup. The course is situated on the downs adjoining Goodwood Park.

GOOLE. Market town, urban district, and seaport of Yorkshire (W.R.). It stands at the confluence of the Ouse and Don, 25 m. S.W. of Hull. It is served by the L.N.E. and L.M.S. Rlys., and has extensive docks. Steamers go from here to Hull and other European ports. The buildings include the church of S. John, a free library and market hall. Goole owes its growth to the opening of a canal, part of the Aire and Calder Navigation system, in 1826. In 1929 a new bridge across the Ouse near Goole was opened, called Boothferry bridge. Market days, Wed. and Sat. Pop. 19,118.

GOOSANDER (Mergus merganser). Diving duck. It visits the N. of Scotland, and occasionally breeds there. The male is black on the back and white beneath, with a greenish head, red beak, and pinkish breast, and is about 26 ins. long. In winter the goosander migrates to Southern Europe and Asia. See Merganser.

Goosander. Specimen of Mergus castor, a diving duck

usually kept. The former is the Michaclmas goose, while the latter is the favourite bird for Christmas, as it attains a great weight. The down is a valuable article of commerce, and its quills are still of value. A tailor's goose is a flat iron used by tailors and so named from a resemblance of the handle to the neck of a goose. See Brent Goose.

GOOSEBERRY. Fruit of a shrub of the order Grossulariaceae and genus Ribes. The parent species is R. grossularia, but varieties are numerous. Gooseberries are propagated by autumn-struck cuttings, or by seeds from ripe fruit sown just underneath the surface of the soil. Careful pruning is needed.

Gooseberry, the fruit and leaves

Goose. Bean goose, a British wild species. Above Toulouse goose

GOOSEFOOTS (Chenopodium). Genus of annual and perennial herbs of the order Chenopodiaceae, natives of all climates. Good King Henry (C. bonus-henricus) is used as a substitute for asparagus and spinach. Chenopodium ambrosioides of tropical America (the so-called Mexican-tea) and C. quinoa of Chile and Peru are employed medicinally.

Goose Grass. Variant name of cleavers (Galium aparine). See Cleavers.

GOOSE STEP. Popular name for a military exercise called the balance step. The body is balanced upon one leg, while the other is advanced without a jerk, the knee straight, the toe pointed out, and the shoulders square to the front. The advanced leg is then planted firmly on the ground, while the other leg is advanced in like manner. This march is in slow time, i.e. 75 paces to the minute.

GOPHER (Geomys). Genus of small rodents belonging to the squirrel family. The European gopher is known as the suslik, and is common in Central and Eastern Europe and Siberia. It lives in burrows in which it hibernates, and feeds upon seeds and roots, and occasionally upon birds and small mammals.

Gopher. The European species, also called the suslik

GOPHER WOOD. Material of which the ark built by Noah was constructed (Gen. 9, 14). The weight of authority favours its identification with the cypress (q.v.).

GORAL. Ruminant mammal placed by zoologists between the goats and the antelopes. Found only in the Himalayas, it somewhat resembles a goat with very short horns and no beard. It stands about 27 ins. high at the shoulder, and is brown with black stripes.

GORDIAN (Lat. Gordianus). Name of three Roman emperors, father, son, and grandson. Antonius Gordianus Africanus, a kinsman of the emperor Marcus Aurelius, was invited to assume the throne in 238. Duly recognized by the senate, he associated his son with him as joint-emperor. In the same year the younger Gordian lost his life in an engagement, whereupon the father committed suicide. The son of the younger Gordian, a boy of 12, was proclaimed emperor by the soldiery (238). He proved to be a capable general, but was murdered in a mutiny (244).

GORDIAN KNOT. In Greek legend, a knot made by Gordius, a Phrygian king. An oracle declared that whoever should loose the knot should be ruler of Asia. Alexander the Great fulfilled the oracle by cutting the knot with his sword. "Cutting the Gordian knot" has become proverbial for prompt dealing with a baffling problem.

GORDON. Name of a Scottish family. Its head is the marquis of Huntly, another branch being represented by the marquis of Aberdeen, while the duke of Richmond is a Gordon in the female line. Aberdeenshire is their special area, but there are many others throughout Scotland. Many bearers of the name have distinguished themselves.

Gordon is supposed to be taken from Gorden, in Berwickshire, where a certain Norman settled in the 11th century and took the name. His descendant, Adam Gordon, obtained from Robert Bruce, Strathbogie in

Aberdeenshire, the castle of which was long the family residence. He called this Huntly. From one of his descendants, made earl of Huntly in 1450, come the earls and marquesses of Huntly. A dukedom of Gordon was in existence from 1684 to 1836, being held by the marquesses of Huntly. Alexander, the 4th duke, was made earl of Norwich in 1784. At the death in 1836 of his son George, the 5th duke, the dukedom became extinct.

Gordon Castle, near Fochabers, was the chief seat of the dukes of Gordon until their extinction. It was built in the 18th century, and passed in 1836 to the duke of Richmond.

GORDON, ADAM LINDSAY (1833-70). Australian poet. Born in the Azores and educated in England, he left in 1853 for S. Australia, where he became successively trooper in the mounted police, horse-breaker, livery-stable-keeper, and member of the House of Assembly.

In 1867 he published two volumes of poems, *Sea Spray* and *Smoke Drift*, and *Ashtaroth*, and in 1870 *Bush Ballads* and *Galloping Rhymes*. On June 24, 1870, he shot himself at New Brighton, Melbourne. His collected poems (1880) secured him a high place in the history of Australian literature.

GORDON, CHARLES GEORGE (1833-85). British soldier. Born at Woolwich, Jan. 28, 1833, he entered the Royal Engineers in 1852.

He served in the Crimean War in 1855, and took part in the Chinese expedition of 1860, when he won the sobriquet of Chinese Gordon. In 1873 his services were lent to the khedive of Egypt, Ismail, for the organization of the district known as the Egyptian Sudan. After a brief withdrawal, he returned thither in 1877 as governor, resigning in 1880.

In 1884 the Egyptian garrisons at Suakin, Berber, and Khartoum were in danger owing to the Mahdi's rebellion, and Gordon returned to the Sudan, at the request of the British Government, to organize their withdrawal. He was shut up in Khartoum by the rebels, and defended the city for nearly a year. The relief expedition sent out under Wolsley arrived too late, the city having been captured, and Gordon killed, two days earlier.

A national monument was erected to his memory in Trafalgar Square in 1888. Other memorials are at Chatham, Rochester Cathedral, and Westminster Abbey, and his character and work are fitly commemorated in the Gordon Boys' Home for destitute lads. It is situated at West End, Woking, Surrey, and accommodates 250 boys, chosen from the homeless and destitute, between the ages of about 14 and 15½, and gives them training up to the age of 17, or thereabouts, which will fit them alike for civil life in Great Britain or its colonies, and for service in the army, navy, or mercantile marine.

GORDON, LORD GEORGE (1751-93). Son of the 3rd duke of Gordon. Born in London, Dec. 26, 1751, he entered Parliament in 1774, and took the lead in working for the repeal of the Catholic Relief Act of 1778. Following the "No-Popery" agitation and Gordon Riots of 1780, Lord George was tried for high treason, but was acquitted. In 1788, for libelling the British government and Marie Antoinette, he was imprisoned in Newgate, where he died, Nov. 1, 1793.

GORDON HIGHLANDERS. Regiment of the British army. The first battalion was raised in 1788 by Colonel Robert Abercromby, and the second in 1794 by the duke of Gordon. The Gordons fought in Egypt in 1801, and distinguished themselves at Corunna, Vittoria, Quatre Bras, and Waterloo. They took part in the Indian Mutiny, marched with Lord Roberts from Kabul to Kandahar, and won

Gordon Highlanders' badge

fresh glories in the S. African War. In the Great War the Gordons were in the retreat from Mons, at the first battle of Ypres, at Neuve Chapelle, 1915, at Festubert and Loos, 1915, at Arras, 1917, and in many other leading battles. The depot is at Aberdeen.

GORE, CHARLES (b. 1853). British prelate. Born Jan. 22, 1853, he was a son of Hon. C. A. Gore and a nephew of the 4th earl of Arran.

After a brilliant career at Oxford he went to Cuddesdon as vice-principal of the college there in 1880, and in 1884 became the first head of Pusey House, Oxford. In 1893 he left Oxford to become vicar of Radley, and in 1894 he was made canon of Westminster. In 1902 Gore was chosen bishop of Worcester, where he worked hard to found the new diocese of Birmingham, of which in 1905 he became the first bishop. From 1911 to 1919 he was bishop of Oxford. He founded the Community of the Resurrection at Mirfield; and wrote numerous theological and expository works.

GORELL, JOHN GORELL BARNES, 1ST BARON (1848-1913). British lawyer. Born May 16, 1848, he was educated at Cambridge, and became a barrister in 1876. In 1892, having made a great reputation as an advocate, he was appointed a judge, and from 1905-08 he was president of the probate, divorce, and admiralty division. Made a peer in 1909, he died April 22, 1913.

His son, Ronald Gorell Barnes (b. 1884), became the 3rd baron on the death of his brother in action in 1917. An authority on education, he became chairman of the Teachers' Registration Council and a partner in the publishing firm of John Murray. He is also the author of poems and novels.

GORGET (Fr. gorge, throat). In armour, a metal covering for the throat, protecting the gap between the breastplate and helmet. It was the last remnant of body armour worn by the infantry in England. See *Armour*.

GORGONS. In Greek mythology, three monsters named Stheno, Euryale, and Medusa, who dwelt in Libya. Instead of hair, their heads were covered with crawling serpents, and they had the property of turning into stone anyone who looked upon them. Medusa, who alone was mortal, was killed by Perseus, who struck off her head, looking at her reflection in a mirror while he did so, in order to avoid being turned into stone. Perseus presented the head to Athena, who set it in the middle of her shield.

GORGONZOLA. Town of Italy, 12 m. N.E. of Milan, with which it is connected by steam tramway. It is best known for its cheese. Pop. 3,675. See *Cheese*.

GORHAMBURY. Seat of the Earl of Verulam. It is 2 m. W. of St. Albans. The mansion, standing in a fine park, was built 1778-85, and is notable for its hall and pictures. In the grounds are ruins of the house in which Francis Bacon lived. The manor originally belonged to the abbey of St. Albans.

GORILLA. Largest of the anthropoid apes, but not so nearly related to the human genus as the chimpanzee. It is found only

in Western Equatorial Africa, where it inhabits the forests. A fine male may attain a height of slightly over 6 ft., but the female seldom exceeds 4½ ft. The gorilla is distinguished from the chimpanzee (q.v.) by its greater size, larger teeth, heavy brow ridges over the eyes, and great length of the arms—the bands reaching well below the knees when the animal stands erect. The colour is black, though some specimens show a slightly reddish tinge on the head and shoulders, and the body is covered with coarse hair. The gorilla does not walk erect, but supports itself with its hands, which are usually partly closed so that the weight is borne on the knuckles. See *Monkey*.

GORING. Village of Oxfordshire. It is on the Thames, opposite Stratley Village, 9 m. N.W. of Reading. For the two there is a station on the G.V. Rly. It is a boating and angling centre. There is a church with a Norman tower. It gives its name to the gap between the Chilterns and the Marlborough Downs through which the Thames flows. Here Icknield Street (q.v.) crossed the river. Pop. 1,989. Goring Heath is a village 3½ m. away.

Another Goring is a village of Sussex, 2½ m. W. of Worthing, in which it is now included.

GORIZIA. Town of Italy, formerly capital of the Austrian crownland of Görz and Gradisca. Picturesquely placed on the Isonzo, 23 m. N.N.W. of Trieste, it is dominated by an eminence crowned by the ancient stronghold of the Counts of Görz, now barracks. The old part of the town is enclosed in a triple shield of walls. Noteworthy buildings are the 17th century cathedral, the municipal offices, the archbishop's palace, the Jesuit college, and the house of the provincial diet. Pop. 47,010.

Gorizia was one of Italy's important objectives in the Great War. It was captured by the Italians Aug. 8, 1916, abandoned by them Oct. 28, 1917, and recovered in the autumn of 1918. See *Isonzo*.

GORKY, MAXIM (b. 1869). Russian author. He was born at Nijni Novgorod, Mar. 14, 1869, his real name being Alexei Maximovitch

Pyeshkov. He adopted a vagabond life, which later provided him with almost inexhaustible material for his pen. In 1892 his first story, *Makar Chudra*, appeared in a Tiflis journal. *Chelkash*, 1893, and other short stories were rapidly produced, and the young author became immediately popular. From 1901 collections

of his tales appeared, many volumes being translated into English. His play, *The Lower Depths*, was produced in London in 1903. On the outbreak of the Great War he served with the Russian Red Cross, and after the revolution became president of a committee for safeguarding artistic property. He later threw in his lot with the Bolsheviks, but definitely severed his connexion with them in 1920. His *Fragments from my Diary* appeared in 1924, and *Bystander* in 1930.

Gorilla. One of the four types of anthropoid ape

A. Lindsay Gordon, Australian poet

Charles Gore, British prelate Russell

General Gordon, British soldier

Maxim Gorky, Russian author

GORLESTON. Watering place of Norfolk. It is part of the borough of Great Yarmouth, 122 m. N.E. of London, and is reached by the L.N.E. Rly. See Yarmouth.

GORST, SIR JOHN ELDON (1835-1916). British politician. Born at Preston, May 24, 1835, he entered the House of Commons in 1866 as Unionist M.P. for Cambridge and sat for Chatham, 1875-92, and for Cambridge University, 1892-1906. Gorst was knighted in 1885, was solicitor-general 1885-86, under-secretary for India 1886-91, financial secretary to the treasury 1891-92, and minister of education from 1895-1902. He died April 4, 1916.

His elder son, Sir Eldon Gorst (d. 1911), succeeded Lord Cromer in 1907 as British consul-general in Egypt.

GOSCHEN, GEORGE JOACHIM GOSCHEN, 1ST VISCOUNT (1831-1907). British statesman. Born August 10, 1831, he was of German descent. After a fine career at Rugby and Oriel College, Oxford, he became a partner in the London firm of Fröhling and Goschen. In 1863 he entered Parliament as Liberal member for the City of London. From 1868-71 he was president of the poor law board, and from 1871-74 first lord of the admiralty under Gladstone. As a Liberal Unionist Goschen alone of his party took office under Salisbury in 1886, being chancellor of the exchequer until 1892. From 1895 to 1900 he was again first lord of the admiralty. In 1900 he retired and was made a viscount. He died Feb. 7, 1907. Goschen wrote a standard book on the Foreign Exchanges, and edited the Life and Times of his grandfather, a bookseller at Leipzig.

His son, George Joachim, 2nd viscount (b. 1866), was Conservative member for East Grinstead 1895-1906 and was governor of Madras, 1924-29.

Goschen's brother, Sir William Edward Goschen (1847-1924), entered the diplomatic service. In 1898 he was sent as British minister to Belgrade, and from 1900 to 1905 he was minister at Copenhagen. From 1905 to 1908 he was ambassador at Vienna. In 1908 Goschen was transferred to Berlin, and it was his lot to conduct the negotiations immediately preceding the outbreak of the Great War. He died May 20, 1924.

GOSFORTH. Urban district of Northumberland. It is 2 m. N. of Newcastle-upon-Tyne, having a station on the L.N.E. Rly. Here is Gosforth Park, where race meetings are held. Pop. 15,719.

GOSHAWK (*Astur palumbarius*). Bird of prey, resembling a large sparrow hawk. It is found in many parts of Europe and Asia, but is now very rare in Great Britain, where it was once used in the sport of hawking. The plumage is bluish grey on the back, and white barred with brown beneath.

GOSHEN. Land of ancient Egypt. It was given by Pharaoh to Joseph and his kinsmen as a dwelling place. It probably lay between the delta of the Nile and Suez.

Goshen was the name of a Boer republic, founded in Bechuanaland, beyond the borders of the Transvaal, in 1881. Its capital was Rooi Grond. Goshen and the neighbouring republic of Stellaland came to an end when Bechuanaland was annexed by the British in 1885.

GOSLING, HARRY (b. 1861). British politician. He began life as a lighterman on the Thames, and soon became an active worker in the trade union movement. In 1893 he was elected to the L.C.C., and he remained a member until 1925, for some years being leader of the Labour party therein. From 1923 he was M.P. for Whitechapel, and in 1924 he was minister of transport. In 1916 Gosling was president of the trade union congress. He wrote Up and Down Stream, and was made a companion of honour, 1917.

GOSPEL. Anglo-Saxon compound word, god-spel, meaning good news. The word is now used in various senses. It is the name of the biographies of Christ in the N.T.; signifies the message of redemption contained in those books; and is further used as a term for the entire Christian system of religion.

Gospellers was the name formerly applied to the followers of Wycliffe and other pioneers of the Reformation in England, who laid stress on preaching the Gospel to the people.

GOSPELS, THE FOUR. Name given to the first four books in the N.T., which are ascribed to Matthew, Mark, Luke, and John. The three first stand together and form a striking contrast to the fourth. They are called "the Synoptics," because they follow the same lines and deal with the narrative from a similar point of view. Mark is the earliest of the three and gives the story of the life of Jesus in its simplest form. Matthew adapts his narrative for Jewish readers, while Luke, being a Greek, strives to make his portrait of Jesus appeal to the Greek-speaking world. The fourth Gospel was written thirty years later than the others, and is obviously an interpretation of Christ rather than a record of events. See Bible; New Testament.

GOSPORT. Borough and seaport of Hampshire. Standing on the W. side of Portsmouth harbour, it is 86 m. from London with a station on the Southern Rly. A ferry and floating bridge connect it with Portsmouth. Here are naval establishments. Pop. 33,588.

GOSSE, SIR EDMUND WILLIAM (1849-1928). English man of letters. Born in London, Sept. 21, 1849, his father being Philip H. Gosse, the naturalist, and his mother a Hebrew and Greek scholar, he became assistant librarian of the British Museum, 1867-75, and translator to the Board of Trade, 1875-1904. He was librarian to the House of Lords, 1904-14, and was knighted in 1925. He died May 16, 1928.

Gosse's works include Gossip in a Library, 1891; Questions at Issue, 1893; Critical Kit-Kats, 1896; French Profiles, 1905; and Portraits and Studies, 1912. Father and Son, 1907, a vivid autobiographical study, was crowned by the French Academy in 1913. His Collected Essays appeared in 1913; and his Diversions of a Man of Letters in 1919. He was also the author of a number of biographical studies, Gray, Congreve, Ibsen, etc.

GOTHA. German aeroplane. It was the type of heavier-than-air craft mostly used in raiding London, Paris, and other large centres during the Great War, and was capable of a speed of about 70 m. to 80 m. an hour. It was a biplane fitted with twin engines, with pusher or tractor air-screws. See Aeroplane.

GOTHAM. Village of Nottinghamshire. It is associated with the phrases "wise men of Gotham" and "mad men of Gotham," once used as synonyms for rustic simpletons.

GOTHENBURG or **GÖTEBORG.** City and seaport of Sweden, 5 m. from the mouth of the Göta, 285 m. by rly. S.W. of Stockholm. The city is traversed by numerous canals, and is served by six railways. It has a cathedral, town hall, exchange, museum, and a university and library. Exports include timber, wood pulp, joinery, paper, iron, glass, and matches. There are shipbuilding yards, saw and flour mills, tanneries, sugar refineries, and other industries. Pop. 233,303.

The Gothenburg System is a plan for dealing with the liquor traffic introduced at Gothenburg about 1871. Adopted in Stockholm in 1877, it has spread to Norway and other countries, and has been adapted in Great Britain by the Public House Trust. Under the system a company may buy up licences and open in place of the old licensed houses a limited number of establishments for the sale of pure liquor, the salaried managers of which have no pecuniary interest in the sales. Each company is under municipal control.

GOTHIC ARCHITECTURE. Manner of building practised in Western Europe, especially in France, from about 1150-1550. It developed from Romanesque as a solution of the problem of vaulting in the vast cathedrals then being built. The higher central vaults of the nave were usually sustained on either side by lower vaults over the aisles, and arched stone props, called flying buttresses, were built from the other walls of these aisles to the clerestory. These arched props were placed only at intervals between the windows; at the outer ends they rose from strong buttress masses built out from the aisle walls. At the middle point of all, over the intersection of the nave and transepts, a tall lantern tower was frequently built. The whole plan and design turned on this question of constructive balance. Pillars became very tall, and large windows spread over the walls between the supporting points.

The great springtime of Gothic art was the hundred years from 1150-1250; then came a century or so of strong maturity, and then a gradual decline. In England, Canterbury Cathedral was built by a French master-mason from about 1175. At the middle of the 13th century, Westminster Abbey and Salisbury Cathedral were being built, and great works were in progress at most of the other cathedrals and at scores of abbeys. In England the style of work most characteristic of the 13th century has been called Early English, that of the 14th century is Decorated, and that of the 15th century is Perpendicular. (See illus. p. 668.) Although the perfecting of the vaulted cathedral was the great task of Gothic architecture, yet all other building problems, as the castle, town hall, and house, were dealt with in the same spirit. See Architecture; illus. p. 688; illus. also under Amiens; Beauvais; Beverley; Canterbury; Chartres; Cologne; Westminster; York; etc. Consult Gothic Architecture in France, England, and Italy, Sir T. G. Jackson, 2 vols. 1915.

GOTHLAND or **GOTTLAND.** Island in the Baltic Sea, belonging to Sweden. It lies about 58 m. off the S.E. coast of the Scandinavian peninsula, and is 76 m. long and 30 m. broad, with an area of 1220 sq. m. From its form and situation it has been called the Eye of the Baltic. The capital is Visby. Pop. 56,752.

GOTHLANDIAN. System of stratified rocks, named after the island of Gothland, where they are typically developed. They consist of two main types: a great thickness of limestones, sandstones, and shales; and beds of fine-grained deposits—dark shales and mudstones.

GOTHS. Teutonic people of the Scandinavian branch. In the 1st century A.D. they appear to have been dwelling in the neighbourhood of the Baltic and the river Vistula. In the 3rd century they had migrated southwards and were spreading along the N. of the Black Sea and the Lower Danube. In the second half of that century they annihilated the army of the emperor Decius, were heavily defeated later by Claudius, and were finally allowed by Aurelian to settle in Dacia. There they were known as the Visigoths or Western Goths, while the tribes which remained in the E. were called Ostrogoths.

Under Alaric, the Visigoths rose in rebellion, and in 400 invaded Western Europe by way of N. Italy. In 410 Rome was captured and sacked. In 411, under Ataulf, Alaric's successor, they withdrew into southern Gaul and set up the Gothic kingdom of Toulouse. At the beginning of the 6th century the kingdom was overthrown by the Franks. In Spain the Gothic dominion continued until the 8th century, when the Saracens invaded Spain, and the last Gothic king, Roderic, was overthrown in the great battle of the Guadalete in 711.

The Ostrogoths had fallen under subjection to the Huns, but on the death of Attila they reappeared on the middle Danube. Thence about 470 they descended into the Balkan peninsula. Under Theodoric they invaded Italy and overthrew Odoacer, the Teutonic chief who had deposed the last of the Roman emperors. Justinian's general Belisarius (q.v.) temporarily wrested the supremacy from the Goths; after his departure they recovered their ascendancy under Totila. Belisarius failed to overthrow him, but the task was finally accomplished by Narses.

GÖTTINGEN. Town of Germany. It stands on the Leine, 67 m. from Hanover. Above the town rises the Hainberg. Among interesting buildings are the Rathaus, built in the 14th century and restored in the 18th, and the churches of S. John and S. James. In the market-place, in front of the Rathaus, is the goose-girl fountain. The chief industries are the making of chemicals, scientific instruments, and textiles, while it is a publishing centre. Göttingen is chiefly famous for its university, founded by the English King George II in 1734. The main building is on the Wilhelmsplatz. The university library is one of the richest in Germany. Pop. 41,228.

Gouda. The Gothic Stadhuys, built in 1449-59, with a Renaissance staircase, 1603

and the Stadhuys, built 1449-59. It is famed for its cheese. Pop. 28,000.

GOUGH, HUGH GOUGH, 1st Viscount (1779-1869). British soldier. Born at Woods-

town, co. Limerick, Nov. 3, 1779, he entered the army in 1794, and fought with distinction in the Peninsular War. He went to China as commander-in-chief during the war of 1840-41. In 1845 he was made commander-in-chief in India. He crushed the Sikhs, but in 1848 they rose again in arms. A victory at Gujarat put an end to their resistance and led to the surrender of the Punjab. In 1846, being already a baronet, he was made a baron, and in 1849 a viscount. He died March 2, 1869.

GOUGH, SIR HUBERT DE LA POER (h. 1870). British soldier. Born Aug. 12, 1870, of a famous Irish family of soldiers, he served in the Tirah

Sir Hubert Gough, British soldier

expedition, 1897-98, and afterwards went through the S. African War. In the Great War Gough took the 3rd cavalry brigade to France in Aug., 1914, and was later given the command of a division, and in July, 1915, of the 1st corps. In July, 1916, he was placed at the head of the 5th army, which he had led during the battle of the Somme. In 1917 his tactics at the third battle of Ypres were criticised as unduly costly, and when the Germans broke through the British line in March, 1918, he was held responsible for the disaster and recalled. Gough was knighted in 1916, and made a lieutenant-general in 1917.

GOUIN, SIR LOMER (1861-1929). Canadian politician. Born March 19, 1861, in 1884 he became a barrister, and in 1897 was returned to the provincial legislature by a division of Montreal. In 1900 he took office as minister for public works in Quebec, and in 1905, having just resigned, he was recognized as the man to form a strong government acceptable to the French Canadians and Roman Catholics. He did this, and remained premier of Quebec until July, 1920. In 1921-3 he was minister of justice for the Dominion. He died March 28, 1929.

GOULBURN. Town of New South Wales. A rly. junction 134 m. S.W. of Sydney on the main line to Melbourne, it stands on the Wollondilly river, in an agricultural, dairying district. It has tanneries, hoot factories, and flour and woollen mills. Pop. 12,140.

The Goulburn river, in Victoria, 345 m. long, is a tributary of the Murray, which it joins 9 m. E. of Echuca.

GOULD, SIR FRANCIS CARRUTHERS (1844-1925). British caricaturist. Born at Barnstaple, Dec. 2, 1844, after being for many years a member of the London Stock Exchange, he embarked upon the profession of caricaturist, working for The Pall Mall Gazette. Later he transferred his services to The Westminster Gazette, of which his cartoons soon became an outstanding feature. His other publications include Froissart's Modern Chronicles. He was knighted in 1906, and died Jan. 1, 1925.

GOULD, JAY (1836-92). American capitalist. He was born at Roxbury, New York, May 27, 1836, and entered an ironmongery store, but later became interested in railways. In 1856 he became president of the Erie railroad, of which he had obtained the controlling interest, and manipulated the stock to enormous profit. The Union Pacific, Missouri Pacific, Wabash, Texas Pacific, St. Louis and Northern, and St. Louis and San Francisco Rlys. were all controlled by him, whilst in 1881 he formed the Western Union Telegraph System. He died Dec. 2, 1892.

GOUNOD, FRANÇOIS CHARLES (1818-93). French composer. Born in Paris, June 17, 1818, he entered the conservatoire there in 1836, and won the Grand Prix de Rome

in 1839. His first opera, *Sappho*, was produced in 1851, and *Le Médecin malgré Lui* in 1858. Gounod's version of Goethe's *Faust*, which set him in the forefront

Charles Gounod,
French composer

of operatic composers, was brought out in Paris in 1859. Its first performance in London was in 1863. Then came *Philémon et Baucis*, 1860, and *La Reine de Saba*, 1862. Mireille, on a libretto of the Provençal poet Mistral, appeared in 1864, and his fine rendering of the story of *Romeo and Juliet* in 1867. Meanwhile he had also been writing much other music, sacred and secular, notably the *Mass* of S. Cecilia, 1855, two other *Messes*, 1876 and 1887, and the two oratorios *The Redemption* and *Mors et Vita*. Gounod died Oct. 18, 1893.

GOURAUD, HENRI JOSEPH EUGÈNE (b. 1867). French soldier. Born at Paris, Nov. 17, 1867, he saw active service in the Sudan in 1898, and in the Congo, Senegal, and Morocco, being promoted brigadier-general, June 4, 1912. He was at the head of the 1st Colonial Army Corps in Feb., 1915. In July, 1915, he was severely wounded while in command of the French forces in Gallipoli. Returning to France, in Dec., he was given command of the Fourth Army. In July, 1918, he repulsed the Germans from Reims and in the Argonne. In 1919 he became high commissioner of France in Syria and Cilicia, and commander-in-chief of her army of the Levant. In 1923 he was appointed military governor of Paris.

Henri J. Gouraud
French soldier

GOURD (Lat. cucurbita). Half-hardy annual trailing plant of the order Cucurbitaceae, mostly native of India. Some, such as pumpkins and marrows, bear edible fruits, while others are grown merely for decorative purposes, and trained to climb over arches and upon poles and other garden structures. The rind of several varieties of gourd, including the bottle gourd (q.v.), is used by natives to form bottles for carrying liquids.

GOURMONT, RÉMY DE (1858-1915). French literary critic and scholar. Born at Bazoches, Orne dept., France, he is remembered as a champion of the symbolist movement in modern French poetry, a scholar, and a writer of distinction. From 1883-91 he held an appointment at the Bibliothèque Nationale, Paris. Afterwards he became editor of *Le Mercure de France*. Among his works were *Les Français au Canada*, 1888; *Le Pèlerin du Silence*, 1896; *Le Livre des Masques*, 1896-98; *Esthétique de la Langue Française*, 1899; *Promenades Littéraires*, 1904-6; *Promenades Philosophiques*, 1906-8; a volume of verse, *Divertissements*, 1912. His *Lettres à l'Amazone* and *Pendant la Guerre* were published posthumously, 1916. He died Sept. 27, 1915.

GOUROCK. Burgh and watering place of Renfrewshire. On the S. side of the Firth of Clyde, 3 m. from Greenock, with which and with Port Glasgow it is connected by electric trams, it is a station on the L.M.S. Rly. The industries are mainly connected with

shipping. The chief public building is the Gamble Institute. Legendary and historical associations cling to a stone called *Granny Kempoch*. Pop. 10,128.

GOUT (Lat. gutta, drop, humour) Constitutional disorder characterised by excess of uric acid in the blood and deposit of urate of sodium in the joints and their vicinity. Hereditary influences are an important predisposing cause; alcoholism and over-eating are frequent antecedents. Workers in lead are particularly liable to the disease.

Three forms are recognized: acute, chronic, and irregular gout. The acute attack most often begins in the early hours of the morning, with violent pain in the joints of the big toe, which rapidly become hot and swollen. The temperature rises to 102° or 103°. The pain lessens in a few hours, but recurs towards evening for the next two or three days. Repeated attacks result in more or less stiffness and swelling of the joints. Ultimately the condition passes into the chronic form, the joints being permanently enlarged.

In an attack of acute gout the affected limb should be raised, and the pain may be relieved by warm fomentations. Colchicum is a valuable remedy, and the administration of citrate of potash or lithium is often useful. Chronic gout must be kept under control by carefully regulated living.

Goutweed, or **Goatweed**. Variant name of the bishopweed. See *Bishopweed*.

GOVAN. Suburb of Glasgow. It lies on the S. side of the Clyde opposite Glasgow proper. It is served by the L.M.S. Rly., and is also connected with Glasgow by electric tramways and a district rly. that goes under the Clyde. The principal buildings are the parish church, with early Christian monuments in its churchyards, and S. Mary's church. Here is Elder Park. The growth of ship-building in the 19th century turned Govan from a village into a populous town, and when it was united with Glasgow in 1912 it had a pop. of about 90,000. See *Glasgow*.

GOVERNNESS CART.

Small, two-wheeled, one-horse carriage holding four persons. It has two seats, facing inwards, and a small door at the rear. Usually it is drawn by a pony or quiet cob. See illus. below.

GOVERNMENT. (Lat. gubernare, to steer, direct). Term for the work of those who guide the ship of state, determining its course and controlling its rate of progress. The numerous services performed on behalf of the modern state are usually classified as legislative, or the making of laws; executive, or the enforcing of laws; and judicial, or the interpretation of laws.

The form of government of a state is known as its constitution, which may be defined as the sum of the principles, usages, and laws that determine who is to exercise the supreme legislative, executive, and judicial authorities respectively, together with the relations of these authorities to each other and to individual citizens. To define the relations between the legislature and the executive is the first problem under every form of constitution, and in Great Britain the solution has been found in cabinet government.

The great rival of cabinet government as a system of popular control is presidential government as exemplified in the U.S.A., where the president, appointed by an elaborate method of what is nominally double election, is not responsible to Congress. In Switzerland, again, a democratic form of polity has been established on a federal basis that seems to be entirely independent of the party system, and includes as its main feature the possibility of frequent appeals from the decisions of its houses of legislature to the people by the expedients known as the referendum and the initiative. See *Cabinet*; *Referendum*.

GOVERNOR. Apparatus for regulating the working speed of an engine under varying conditions of load. Most governors for steam engines follow the original ball governor of James Watt, and a diagram of a modern example is given S.

Governor for regulating the speed of an engine. See text.

S is a vertical shaft, rotated by the engine. Four links, L L L L, connect two metal balls, B B, with the top of S and with a weight, W, able to move freely up and down S. When the speed of the engine exceeds a certain limit, B B move outwards and raise W, which brings with it lever D, connected to the throttle. The supply of steam is decreased, and the speed falls. B B now move inwards; the motion of D is slightly reversed, and the supply of steam is increased.

GOVERNOR (Lat. gubernare, to steer) Representative in a province or colony of the supreme authority of a state. Under the British system of colonial administration governors are classified as governors-general, governors, and lieutenant-governors. The governor-general of the Empire of India is also known as the viceroy.

In the U.S.A. each state elects a governor as its chief official.

GOW, NIEL (1727-1807). Scottish violinist. Born at Inver, near Dunkeld, March 22, 1727, his skill in playing reels made him famous. Gow, who died March 1, 1807, had four sons who were all musicians, and his and their compositions are found in *The Gow Collection* of old Scottish songs.

GOWBARROW PARK. Estate in the Lake District, now public property. It is on the N. side of Ullswater, on the slopes of Gowbarrow Fell. It contains a shooting lodge called *Lyulph's Tower*, and the beautiful waterfall of *Aira Forea*. Gowbarrow was bought by the National Trust and opened in 1906.

GOWER. Peninsula of Glamorganshire. It lies between the rivers Tawe and Loughor, being about 27 m. long and 7 m. across. It contains Swansea and Oystermouth, is almost surrounded by the Bristol Channel, and retains certain customs of its own. The Welsh call it Gwyr. Gower was conquered by the Normans in the 12th century, and therein some of them settled, built castles, and introduced the feudal

Governess Cart. Low, two-wheeled vehicle used on country roads.

the system. In 1535 the peninsula was included in Glamorganshire.

GOWER, JOHN (c. 1325-1408). English poet, contemporary and friend of Chaucer. His chief works are *Speculum Meditantis*, written in French, which was lost for centuries and discovered at Cambridge in 1895; *Vox Clamantis*, in Latin, which deals with the rising of Wat Tyler; and *Confessio Amantis*, in English, a collection of tales after the model of Chaucer's *Canterbury Tales*.

GOWRIE, EARL OF. Scottish title borne from 1581 to 1600 by the family of Ruthven. The 1st earl was William Ruthven, 4th Lord Ruthven. He was active in the reign of Queen Mary, and was concerned in the raid of Ruthven, as the seizure of James VI at Ruthven Castle in 1582 was called. The earl was executed for treason in 1584. John Ruthven, who became the 3rd earl, is chiefly known for his share in the Gowrie conspiracy, a plot against the person of James VI in 1600. During the attempt to seize the king he was killed, Aug. 5, 1600, and the title became extinct.

GOYA Y LUCIENTES, FRANCISCO JOSÉ DE (1746-1828). Spanish painter and etcher. Born at Fuendetodos, in Aragon, he studied art under José Martínez at Saragossa. In 1775 he married the sister of Bayeu, the court painter, through whose interest he was commissioned to design the famous tapestries now in the Prado. In 1785 he became deputy director of the San Fernando Academy. He died April 16, 1828.

Goya's three most famous sets of etchings, *Los Caprichos*, the *Tauro-maquia*, and *Los Desastres de la Guerra*—the last inspired by Napoleon's invasion—express his mordantly satirical genius almost better than any of his paintings. The best of his work is at Madrid, but there are four examples in the National Gallery, London.

Francisco Goya y Lucientes, Spanish painter
Self-portrait

GOZO or **Gozzo**. British island of the Maltese group. It lies 4 m. N.W. of Malta, and has an area of 26 sq. m. Lae is made. There are remains of cyclopean walls, and a tower and Roman monuments. The chief towns are Victoria, formerly Rabato, in the centre of the island, and Fort Chambray on the S.E. coast. Pop. 22,000.

GRAAFF, SIR DAVID PIETER DE VILLIERS (b. 1859). South African politician. Born March 30, 1859, he became a successful business man in Cape Town. In 1891 he entered the legislative council of the Cape, and in 1910 was elected to the first parliament of the Union of S. Africa. Under Botha he was minister of public works, 1912-14, and then minister without portfolio. In 1914 he was high commissioner in London, and in 1915-16 minister of finance. In 1911 he was made a baronet, and he retired from public life in 1920.

Sir David Graaff, S. African politician
Russell

GRACCHUS. Name of two reformers in ancient Rome. They were the sons of Cornelia, daughter of Scipio Africanus the Elder, by Tiberius Sempronius Gracchus, governor of Ithier Spain in 181 B.C.

The elder, Tiberius Sempronius Gracchus (163-133 B.C.), was present at the siege of Carthage and served in Spain. As tribune for the year 133 B.C. he brought forward a measure allotting public lands to the poor. This brought Tiberius into conflict with the senate and with large numbers of the wealthy classes, and he was killed in a riot.

Ten years after his death the agitation was renewed by his brother Gaius Sempronius Gracchus (133-121 B.C.), who was tribune in 123 and 122 B.C. He, too, was killed in a riot.

GRACE, WILLIAM GILBERT (1848-1915). English cricketer. Born July 18, 1848, at Downend, Gloucestershire, Grace became a member of the Gloucestershire county team. He captained the English team in its test matches against Australia until 1899, and to that country he took teams in 1873-74 and 1891-92. In 1899 he severed his connexion with Gloucestershire, and became manager of the London County club. He died Oct. 23, 1915.

W. G. Grace, English cricketer
Russell

Grace's highest score in first-class cricket was 344, while on ten occasions he scored over 200. He played in a long series of Gentlemen v. Players matches from 1865 to 1899. As a bowler he took over 2,800 wickets, while in seven seasons he scored over 1,000 runs and took over 100 wickets. Two of his brothers, Henry Mills and George Frederick, also played for Gloucestershire. Grace wrote *Cricketing Reminiscences*, 1899.

GRACES. In classical mythology, the three deities of grace and beauty, called Charites by the Greeks and Gratiæ by the Romans. They were the children of Zeus. See Charites.

GRADING. In 1928, by Act of Parliament, Great Britain adopted a scheme of grading and marketing agricultural produce, and a committee, with Lord Darling as chairman, was appointed to supervise it. It was first used for apples and pears, and arrangements were made to apply it in 1929 to eggs, potatoes, tomatoes, and cucumbers.

GRAFFITI. Italian word meaning ancient scribbling. Written or drawn upon walls, rocks, potsherds, and other surfaces, graffiti were scratched with sharp implements, drawn in charcoal or chalks, or painted. They are universal in range, from neolithic drawings on cave walls at Gezer and rocks in the Nile valley, to scratchings by 2nd century Chinese pilgrims on Shantung tombs.

GRAFTING. Method of transferring a branch or bud of a choice variety of tree to a vigorous foster-parent. This bud is known as a "scion," the stem to which it is transferred as the "stock." The chief object of the operation is to increase the supply of a desirable variety of fruit. It is generally confined to roses and fruit trees. Various forms of grafting are known as "cleft," "tongue," and "slip." A shoot of the scion is cut down to a point and an aperture of suitable capacity prepared in the stock. The scion is firmly embedded in the stock, and is protected by a covering of clay or wax.

Grafting: 1. Crown or rind grafting. 2. Splice. 3. Cleft. 4. Saddle. 5. Inarching. 6. Whip. 7. Notch

able variety of fruit. It is generally confined to roses and fruit trees. Various forms of grafting are known as "cleft," "tongue," and "slip." A shoot of the scion is cut down to a point and an aperture of suitable capacity prepared in the stock. The scion is firmly embedded in the stock, and is protected by a covering of clay or wax.

GRAFTING. Transference of portions of skin from one area to another to replace skin destroyed by burn or injury. In Reverdin's method small pieces of cuticle are removed from the healthy area and dotted over the denuded area, thus serving as centres of repair. In Thiersch's method large strips of cuticle are applied to the raw surface. In the Wolfe graft the whole thickness of the skin is employed. Bone-grafting has also been applied with success in modern surgery. See Autoplasty.

GRAFTON. Town of New South Wales. On the Clarence river, 45 m. from its mouth, it is the chief port of the Northern Rivers dist., 350 m. N. of Sydney. Pop. 6,000.

GRAFTON, DUKE OF. English title borne by the family of FitzRoy since 1675. Henry, son of Charles II by Barbara Villiers, duchess of Cleveland, was called FitzRoy and made duke of Grafton in 1675. His descendant, Augustus Henry, the 3rd duke, figured in the politics of the 18th century, being made first lord of the treasury in 1766, head of the ministry during Pitt's illness, and lord privy seal in 1771 and again in 1782. The duke's eldest son is known as earl of Euston, and his chief seat is Euston Hall, Thetford. His estates are mainly in Suffolk and Northamptonshire.

The Grafton Gallery is a London picture repository. It is in Grafton Street, Piccadilly, and derives its name from the dukes of Grafton.

GRAHAM, PETER (1836-1921). British artist. Born in Edinburgh, he was first successful at the R.A. with *A Spate in the Highlands*. Many other successes followed in which he showed his remarkable skill in painting Highland cattle. He was equally successful with marine pictures of rocks and sea-birds. Elected R.A., 1881, he died Oct. 19, 1921.

Cunningham Graham, British author
Hoppe

GRAHAM, ROBERT BONTINE CUNNINGHAM (b. 1852). British author and politician. Belonging to an old Scottish family, he was educated at Harrow. Having passed some years in Mexico and S. America, he returned to England and became a prominent member of the Social Democratic Federation. From 1886-92 he sat in Parliament as M.P. for North Lanarkshire, but his later attempts to secure a seat failed. His writings include essays, novels, and sketches, the best of his works dealing with life in S. America.

GRAHAM, STEPHEN (b. 1884). British author. Son of P. Anderson Graham, and attracted to Russia by its literature he spent some years among the Russian people. After extensive travel in Asia he returned to England, and in 1916 joined the Scots Guards, with which unit he served 1917-18. His books include *A Vagabond in the Caucasus*, 1911; *Undiscovered Russia*, 1912; *A Tramp's Sketches*, 1912; *Changing Russia*, 1913; *With Russian Pilgrims to Jerusalem*, 1913; *Through Russian Central Asia*, 1916; *Priest of the Ideal*, 1917; *A Private in the Guards*, 1919; *Children of the Slaves*, 1920, a study of the American negro question; and *London Nights*, 1925.

Stephen Graham, British author
Russell

GRAHAM, WILLIAM (b. 1887). British politician. Born at Peebles, July 29, 1887, he was elected to the Edinburgh city council in 1913. In 1918 he was returned as Labour M.P. for

William Graham, British politician

central Edinburgh. He was financial secretary to the Treasury, Jan.-Nov., 1924. In 1929 he was appointed President of the Board of Trade, and he was responsible for much important legislation. He wrote *The Wages of Labour*, 1921 and other books.

GRAHAME-WHITE, CLAUDE (b. 1879). British aviator and aeronautical engineer. Born Aug. 21, 1879, he became interested

C. Grahame-White,
British aviator
Elliott & Fry

in aeronautics in 1909, making his earliest flights in France, and was the first Englishman to be granted an aviator's certificate. He started a school of aviation at Pau in 1909, and in 1910 won for Great Britain the international Gordon Bennett aeroplane race in America. He formed the Grahame-White Aviation Co., which became proprietors of the aerodrome at Hendon. He wrote *The Aeroplane, Past, Present, and Future*, 1911, and several other works on aviation.

GRAHAM LAND, Island of the Antarctic. It lies due S. of Tierra del Fuego, N. of Alexander I Land and S. of Danco Land. It was discovered by John Biscoe in 1832. Norden-skjöld remained two years here in 1901-3, and it was visited by Chareot in 1904-5. On the W. coast a meteorological station was erected at the expense of the Argentine Republic. In Dec., 1928, Sir H. Wilkins discovered that it was an island, and not, as had been supposed, part of the Polar continent. See map p. 95.

GRAHAMSTOWN, City and health resort of S. Africa, in the Capo prov. The legal centre of the eastern provs., it is 40 m. by rail from the sea at Port Alfred and 106 m. from Port Elizabeth. Its buildings include the Anglican and Roman Catholic cathedrals, the town hall, public library, museum, Albany Hall and the court house. The botanic gardens cover 100 acres. Educational institutions include Rhodes university college and S. Andrew's College. Pop. 7,652 (European).

GRAIL, THE HOLY. Name given in legend to the cup used by Christ at the Last Supper. Several versions of the story of this vessel exist, some saying that it came into the hands of Joseph of Arimathea, who used it to collect the Blood which flowed from Christ on the Cross. By other authorities it is described as the sacred cup from which Christ drank while hanging on the Cross. In Arthurian romance it figures as the object of quest by the Knights of the Round Table. In the *Morte d'Arthur* of Sir Thomas Malory (15th century), the Siege (seat) Perilous at the Round Table is reserved for the perfect sinless knight who shall achieve that quest of the Grail.

GRAIN. Unit of weight. The average weight of a grain of corn taken from the middle of a ripe ear; the 1/7000 part of a pound avoirdupois. In Troy weight, 480 grains equal an ounce, while 24 grains are called a pennyweight.

GRAIN, ISLE OF, OR ST. JAMES. Parish and village of Kent. At the junction of the Thames and the Medway, it was formerly an island, but has now roadway communication with the mainland.

GRAINING. Art of imitating woods such as oak, mahogany, walnut, etc., by means of paint. Upon a ground colour is painted a coat of graining colour, and while this is still wet it is manipulated in such a manner as to remove part of it and expose the ground beneath. Oak graining is perhaps the most popular of the several processes.

GRAM. Herb of the order Leguminosae a native of India. Commonly cultivated in

India and the Nile Valley for its edible seeds, it resembles a vetch, and has many varieties. See Chick Pea.

GRAMME. Unit of weight in the metric system. It is the thousandth part of the weight of a litre of distilled water. It equals 15.43248 grains. See Metric System.

GRAMONT, PHILIBERT DE (1621-1707). French courtier, subject of the *Mémoires* written by Anthony Hamilton. Of noble descent, Gramont served with distinction under Condé and Turenne in Flanders and Spain. Banished from the French court, he came to London, 1662, and mixed freely in the court of Charles II. There he married Elizabeth Hamilton, sister of Anthony. His exile ended in 1664, but he revisited England on diplomatic missions in 1670-71, 1676, and 1688. He died Jan. 10, 1707.

The *Mémoires de la Vie du Comte de Gramont*, published in 1713, were actually written by his brother-in-law, and give an intimate account of the more scandalous aspects of the court of Charles II.

GRAMOPHONE (Gr. gramma, letter; phōnē, sound). Talking machine allied to the phonograph and based upon the same general principles. The fundamental con-

Gramophone. Diagram illustrating the principal parts and the method of reproducing sound. Vibrations are conveyed through the tone arm into the sound box, whence they issue through the louvers, shown broken off to expose the interior of the sound box.

structional difference between the two consists in replacing the hollow cylindrical record of the phonograph by a disk upon which the sound record is cut as a spiral. The record is mounted upon a spindle rotated uniformly by a spring or electric motor controlled by a ball-governor. The chamber or reproducer containing the diaphragm carrying the stylus is supported by a tubular arm delicately poised on a bracket so that it can be readily turned aside and follow with ease the movements of the stylus in the spiral track.

In some types of sound-film apparatus a gramophone device in conjunction with thermionic valve amplifiers is used to reproduce the speech and music incidental to a talking picture. See Cinematograph.

GRAMPIANS. Mt. range in Scotland serving as the barrier between the Highlands and the Lowlands. They stretch from the coast of Aberdeenshire S.W. to Dumbarton-shire, touching also the counties of Banff, Inverness, Forfar (Angus), Perth, Stirling, and Argyll. Their highest point is Ben Nevis, other high peaks including Ben Macdui, Ben Lawers, Ben Lomond, Cairngorm, Ben Alder, Ben Cruachan, and Cairntoul. Among rivers flowing from them are the Forth, Tay, Don and Dee. The mts. enclose some of the finest

scenery in Britain. In 1929 about 12,000 acres were acquired for afforestation.

There is a mountain range in W. Victoria, Australia, called the Grampians. Its N.E. extension is called the Pyrenices.

GRAMPOUND. Village of Cornwall. It is on the Fal, 9 m. from Truro and 6 from St. Austell, and has a station (G.W.R.) at Grampound Road, 2 m. away. Its old town hall still stands. The place became a town in the Middle Ages, and in 1553 began to send two members to Parliament. It had a mayor and corporation. The venality of the electors became such a scandal that in 1818 an inquiry was held, and in 1821 the borough was disfranchised. Pop. 419.

Grampus. Specimen of the large and pugnacious dolphin.

GRAMPUS OR KILLER WHALE (*Orca gladiator*). Large and ferocious cetacean of the dolphin family which attains a length of 20 ft. It ranges all over the world, and has even been found in the Thames at Chelsea. It preys upon fishes and seals, and has been known to attack the whale. See Dolphin.

GRANADA. Moorish kingdom in Spain that lasted from 1238 to 1492. The city of Granada and the district around was long ruled by the caliphs of Cordova, and was at one time the capital of an independent principality. The kingdom, however, dates from about 1238, when a certain Moor began to rule over Granada, Malaga, and other places, making this former his capital. Gradually the Christians won back Spain from the Moors. Their last ruler, Boabdil, resigned his kingdom to the Christians, who, Jan. 2, 1492, entered the city of Granada.

GRANADA, City of Spain, capital of the prov. of Granada. This old Moorish city, the last seat of the Moslem rulers of Spain, stands on the slopes of two hills and on the plain connecting them, 63 m. N.E. of Malaga. It contains in the Alhambra (q.v.) a unique memorial of Moorish power and art. The old town, Albaicin, although the poorest part, is most picturesque. There are remains of the Moorish walls and towers, the Alcázar, the Casa del Cabildo (old university), the water conduits and other buildings which once made Granada a great trading city and a seat of arts and learning. The modern town contains the cathedral, public buildings, promenades, plazas, gardens, fountains, etc. The university dates from 1531. Pop. 107,124.

Granada, Spain. The centre of the city and the cathedral, begun in 1529, from San Jeronimo.

GRANARD. Urban district of Longford, Irish Free State. The station is Ballywillan, 3 m. away. Much damage to buildings was done in Nov., 1920. Pop. 1,269.

The place gives name to the title of earl, borne since 1684 by the family of Forbes. George, the 6th earl, was made a baron of the United Kingdom in 1806. The family seat is Castle Forbes, co. Longford, and the earl's eldest son is known as Viscount Forbes.

GRANBY, MARQUESS OF. Title borne by the eldest son of the duke of Rutland. Granby being a village in Nottinghamshire, not far from Belvoir. Its most notable bearer was the English soldier John Manners (1721-1770). The eldest son of the third duke, he was born Aug. 2, 1721. In 1758, during the Seven Years' War, he went to Germany in command of a brigade of cavalry, and in 1759 became commander of the British contingent. He became commander-in-chief in 1766, his conduct in this position being attacked by Junius. For many years Granby was M.P. for Grantham, and he represented Cambridgeshire from 1754 until his death, Oct. 18, 1770. Granby is the marquess whose name is borne by many public houses in England.

John Manners.
Marquess of Granby
After Reynolds

chief in 1766, his conduct in this position being attacked by Junius. For many years Granby was M.P. for Grantham, and he represented Cambridgeshire from 1754 until his death, Oct. 18, 1770. Granby is the marquess whose name is borne by many public houses in England.

GRAND, SARAH. Pen-name of Frances Elizabeth M'Fall, British novelist. Daughter of Edward Clarke, R.N., she was married at the age of 16 to Surgeon Lieut.-Col. M'Fall. Her first novel was *Ideala*, but her reputation chiefly rests upon *The Heavenly Twins*, 1893, memorable for its uncompromising handling of certain sex problems, a subject skilfully developed in *The Beth Book*, 1898. Other publications include *Babs the Impossible*, 1900, *Adnam's Orehard*, 1912, *The Winged Victory*, 1916, *Variety*, 1922.

Sarah Grand,
British novelist.
Russell

GRAND BANK. Submarine elevation, extending about 200 m. to 300 m. S. by E. of Cape Race, Newfoundland. The area is about 500,000 sq. m.; the depth varies from 10 to 160 fathoms. The waters swarm with fish, especially cod. See *Fisheries*; Newfoundland.

GRAND DUKE. Title ranking above that of duke. It first appeared in 1557, when Pius V gave it to the duke of Tuscany. It was held by the Medici family and later by the Hapsburgs. The other grand dukes mainly date from the reorganization of Europe in 1815. There were several in Germany before 1918, and the word was used to translate the title borne by members of the imperial family of Russia before 1918. See *Duke*.

GRANDEE (Span. grande). Spanish title. Borne by the highest nobles, it carried many privileges. Grantees were exempt from taxes, and from arrest in the ordinary way. Their privileges were gradually curtailed and the title abolished. It was revived in 1834, though shorn of all its privileges.

GRAND FALLS. Town of Newfoundland. On the Exploits River, about 22 m. from its mouth, it is connected by railway with the port of Botwood. It takes its name from the falls, and owes its origin to the development of the water power there by the Anglo-Newfoundland Development Company, Limited, for its huge pulp and paper mills. Pop. 3,769.

The town of New Brunswick, Canada, known as Grand Falls or Colebrook, stands on the St. John river, near its falls, 200 m. N.W. of St. John. Pop. 1,327.

The Grand Falls of Labrador, on the Grand or Hamilton river, is one of the finest cataracts in N. America. It descends over 315 ft. and has a breadth of 200 ft.

GRAND JURY. In English law, a body of men, fixed between 12 and 23, who at the assizes and quarter sessions are summoned to inquire into the charges against supposed criminals. They decide whether or not there

is a prima facie case against each prisoner. If they think so they return a true bill and the prisoner goes to trial. See *Jury*.

GRAND NATIONAL. The Principal cross-country horse-race. Inaugurated in 1839, it takes place annually at Aintree, near Liverpool, on the Friday of the Liverpool Spring Meeting. The course is 4 m. 856 yds., and includes 30 jumps. The water jump is 15 ft. broad, and two other difficult obstacles are Valentine's and Becher's Brooks.

GRAND PRÉ. Village in King's co., Nova Scotia. On the shores of the basin of Minas, 46 m. N.W. of Halifax, it was the scene of the expulsion of the Acadians by the British in 1755, which forms the theme of the first part of Longfellow's poem *Evangeline*. The C.P.R. secured control of the well beside the willows on the farm tradition associates with *Evangeline's* story, and here in September, 1920, a statue of *Evangeline* was unveiled.

GRAND RAPIDS. City of Michigan, U.S.A. On the Grand river, at the head of navigation, it is 65 m. W.N.W. of Lansing, and is served by the Michigan Central and other rlys. It contains a federal building, the city hall and the county court house. Grand Rapids trades in timber, agricultural produce and fruit, and manufactures furniture, lumber products, and agricultural implements. Gypsum is worked. Pop. 164,200.

GRAND UNION CANAL. Canal system of England. It was formed in 1928, and is a union of the Grand Junction, Regent's Park, and other canals, altogether 240 m. long. It serves to unite the Thames at Brentford with the waterways in the Birmingham area.

GRANGE OR GRANGE OVER SANDS. Urban dist. and watering place of Lancashire. It stands on Morecambe Bay, 9 m. from Carnforth, and has a station on the L.M.S. Rly. It has a hydropathic establishment. Pop. 2,920.

GRANGEMOUTH. Burgh and seaport of Stirlingshire. It stands on the south side of the Firth of Forth, 3 m. from Falkirk, and is served by the L.N.E. and L.M.S. Rlys. Two streams, the Grange and the Carron, fall into the Forth here. Mainly a modern town, it owes its prosperity largely to its position at the E. end of the Forth and Clyde canal. It has extensive docks. Coal and iron are shipped, while the ore for the ironworks of the Falkirk district is landed here. The industries include shipbuilding and rope-making. Pop. 11,000.

GRANITE (Ital. granito, grained, speckled). Granular crystalline rock normally composed of the minerals felspar, quartz, and mica or hornblende, with a number of other minerals in varying small percentages. The usual colour is a shade of grey, though pink, red, greenish, and yellow are found and all variations of texture. Granites are found in large masses, known as bosses, sometimes extending over hundreds of square miles. On account of its great strength and hardness the rock is largely used in all stone construction. The granites of Cornwall, the red Peterhead granite, and granites of Aberdeen are considered the best in Great Britain.

GRANT, ULYSSES SIMPSON (1822-85). American soldier and president. Born April 27, 1822, near Clermont, Ohio, he fought in

the Mexican War (1845-48), and in the Civil War he was made a brigadier-general. The event which brought him into prominence was his capture of Fort Donelson, in Tennessee, in Feb., 1862. Defeated at Shiloh, he successfully besieged Vicksburg in 1863, and defeated the confederates at Chattanooga in the same year. In March, 1864, Grant was made commander-in-chief and established his headquarters with the army of the Potomac, operating in Virginia. The battles of this campaign, The Wilderness, Spottsylvania, Cold Harbour, and others, were among the most terrible of the war. Petersburg and Richmond, the Confederate capital, fell on April 2 and 3, 1865, and with the surrender of Lee's shrunken remnant at Appomattox Court House on April 9, the war was virtually finished.

In 1868 Grant became president of the U.S.A. and held office for two terms. During his presidency the Alabama claims against Britain were settled. In 1884 he suffered financial misfortune, and in order to provide for his wife and family he began to write his *Personal Memoirs*, which enjoyed great popularity. He died July 23, 1885.

GRANTCHESTER. Village of Cambridgeshire. It stands on the Cam, 2½ m. from Cambridge, of which it is practically a suburb. Its famous mill was burned down in Oct., 1928. It is mentioned by Chaucer and probably influenced Tennyson's well-known poem entitled *The Miller's Daughter*.

GRANTHAM.

Borough and market town of Lincolnshire. It stands on the Witham, 25 m. S.S.E. of Lincoln and 105 m. from London, and is a junction on the L.N.E.R.; it is also served by a canal. The church of S. Wulfram, mainly 13th century, is noted for its window tracery, crypt, and chained library. The grammar school dates from the time of Edward VI. There are a modern guildhall and an exchange. The ancient market cross was re-erected in the large market place in 1910. The Angel Inn once belonged to the Templars. The industries include the manufacture of agricultural implements. Pop. 18,902.

GRANT LAND. Ice-bound tract within the Arctic Circle. It is the northernmost part of Ellesmere Island, in British North America, W. of Lincoln Sea and E. of Nansen Sound. It was discovered in 1875.

GRANTON. Seaport of Midlothian, forming part of the city of Edinburgh. It has a good harbour, and is a landing place for the North Sea trawlers. See *Edinburgh*.

Ulysses S. Grant,
American president

Grand Pré. The Evangeline statue unveiled in 1920

Grantam. Parish church of S. Wulfram, showing the 14th century spire, 280 ft. high

GRANTOWN. Burgh and health resort of Moray (Elginshire). It stands on the Spey, 23 m. S. of Forres, on the L.M.S. and L.N.E. Rlys amid magnificent forests of pine and birch. Distilling is carried on, and there is trade in cattle. Pop 1,660.

GRANVILLE, EARL. British title borne since 1833 by the family of Leveson-Gower. The first earl was Lord Granville Leveson-Gower (1773-1846), a younger son of the 1st marquess of Stafford. He was secretary at war and ambassador in turn to Russia and France. His son, the 2nd earl (1815-91), was a leading Liberal politician in the time of Gladstone, being colonial secretary 1868-70, and foreign secretary 1870-74, and again 1880-85. He followed Gladstone on Homo Rule, and in 1886 was for a short time colonial secretary. He died March 31, 1891.

2nd Earl Granville
British statesman

GRAPE. Fruit of the vine (*Vitis vinifera*), a shrub of the order Ampelideae. The vine, which is a native of the Mediterranean region, was apparently introduced into Britain at the time of the Christian era. In the S. and W. of England grapes will ripen in the open air, on sunny borders, but they are more generally grown under glass. See Vine; Wine.

GRAPE FRUIT (*Citrus decumana*). Evergreen tree of the natural order Rutaceae, also called shaddock. It is not known in a wild state, but is believed to be a native of Polynesia.

Grape. Black Hamburgh dessert variety

Grape Fruit. Leaves and fruit. Inset, flower and buds

GRAPE HYACINTH (*Muscari racemosum*). Bulbous herb of the order Liliaceae. A native of Europe and S. Africa, it has long, slender, half-rounded leaves, and a short flower stem, bearing many round dark blue flowers.

GRAPE SHOT (Fr. *grappe*, bunch of grapes). Projectile at one time much used for smooth-bore guns. It consisted of a large number of cast-iron bullets packed in layers between thin iron plates, and then arranged in tiers (generally three), the whole being held together by an iron bolt passing through the centre of the plates, thus resembling a bunch of grapes. When fired the shot broke up and distributed the bullets in a shower. This projectile has been replaced by shrapnel (q.v.).

Grape Hyacinth, a bulbous herb

GRAPH (Gr *graphein*, to write). Diagrammatic representation of statements, formulae, etc. Graphical methods are increasingly employed in the solution of problems, and the presentation of the results of analysis, not only in science, but in everyday affairs. Simple examples of such diagrams are charts showing variation of temperature, the rise and fall of exports and imports over a given period, etc. In mathematics, graphical methods are very largely used for the solution of problems.

GRAPHITE OR **BLACK LEAD.** Mineral form of carbon, soft, grey or black in colour, with greasy touch. It occurs in nature in various parts of the world. The deposits at Borrowdale in Cumberland were for many years the chief source of the graphite used for black-lead pencils. Large quantities are found in Ceylon and the United States of America. For making pencils, finely sifted graphite is blended with other substances according to the hardness of the pencil required. Plumbago crucibles are made largely from Ceylon graphite mixed with Stourbridge clay. Their advantage in metallurgical operations is that they stand changes of temperature without cracking, and do not absorb any of the metal which is melted in them. The use of graphite as a stove polish is familiar. See Carbon.

GRAPPA. Mt. of Italy, the highest in a range between the valleys of the Brenta and the Piave. The Grappa region was prominent in the Great War, and fighting took place here between the Italians and the Austro-Germans in 1917-18.

GRAPPLE PLANT (*Harpagophytum procumbens*). Prostrate perennial herb of the order Pedaliaceae. A native of S. Africa, the leaves are hand-shaped, the purple flowers funnel-shaped. The large fruits are armed with strong, sharp hooks which cling to the skins of animals. When the fruits come in contact with the lips of browsing animals they cause intolerable pain.

GRASMERE. Lake and urban district of Westmorland. The lake, one mile long and about half a mile wide, is beautifully situated in a valley in the centre of the Lake District. The district is 4 m. from Ambleside and 12 from Keswick, where the Rothay falls into the lake. It is noted for its associations with Wordsworth and other literary men. A festival, called the rush-bearing, takes place here on the Saturday after S. Oswald's Day, Aug. 5. The place has also an athletic meeting every August and a dialect play every year. S. Oswald's Church is partly of the 13th century. Grasmere is a good centre for the Lakes. Pop. 1,173. See Lake District, The.

Grasmere, Westmorland. The lake and village from the south

GRASS. Term strictly applied to species of the order Gramineae, but in farming language also used of clovers and other kinds of herbage growing together in a field. A distinction is drawn between temporary grass, or ley, intended to be ploughed up after a certain interval, and permanent grass, which occupies the land continuously, either as pasture, which is entirely devoted to grazing, or as meadow, that may yield a hay crop every year or at regular intervals. See Bent Grass; Canary Grass; Fescue Grass, etc.

GRASSHOPPER. Orthopterous (straight-winged) insects of the Locustidae and Aecididae families. Remarkable for their long hind legs and jumping powers, they are common in fields during summer. They vary in colour

from green to brown, and the species vary much in size. The familiar chirp is produced in the former family by rubbing the wings together, and in the latter by drawing the edge of the wing along the inner side of the femur. Most of the species feed upon plants, but a few eat caterpillars and small insects. See Locust.

GRASS OF PARNASSUS (*Parnassia palustris*). Perennial herb of the order Saxifragaceae. A native of Europe, N. Africa, N. and W. Asia, and N. America, it is a bog plant with long-stalked heart-shaped leaves and large solitary white flowers which are borne on tall stems.

Grass of Parnassus, leaves and flower

GRASS SNAKE OR **RINGED SNAKE** (*Tropidonotus natrix*). Common non-poisonous snake of Europe, part of Asia, N. Africa, and England, being unknown in Scotland and Ire-

Grass Snake. Harmless snake common in England. It is brownish-grey above and light underneath

land. Greenish-grey to brown above, with black bands, it is black and white underneath. It has two white or yellowish-white spots behind its head which distinguish it some distance away. Growing to a length of three to four feet, the grass snake feeds chiefly on frogs, toads, and fish, and is usually found in damp places. See Snako.

GRASS TREE (*Xanthorrhoea*). Genus of perennials of the natural order Juncaceae. Natives of Australia, they are also known as black boy and grass gum-tree. They have short, thick trunks like those of palms, rough with the bases of former leaves, consolidated by red or yellow gum produced by the plant. The long, wiry leaves are like those of the rushes, and form a great tuft. Cattle eat the leaves. The fragrant resin exuded is known as Botany Bay resin and black boy gum.

Grasshopper. Great green grasshopper, *Locusta viridissima*. Above: *Meconema thalassinum*

GRATIAN (A.D. 359-383). Roman emperor. In 375 he succeeded his father, Valentinian I, but was quite unfitted to deal with the barbarian peril. In 383 Maximus was proclaimed emperor, and Gratian was murdered by his own soldiery. Another Gratian was a 12th century Italian jurist

GRATTAN, HENRY (1746-1820). Irish orator and statesman. Born in Dublin, July 3, 1746, he was called to the Irish bar in 1772, and in 1775 nominated to represent Charlemont in the Irish Parliament. He soon became the leader of the popular or patriot party, and in 1782 procured the passing of legislation which made the Irish Parliament independent; but failed to procure Catholic emancipation. From 1805 until his death he represented Malton and Dublin in the British Parliament. He died in London, June 4, 1820, and was buried in Westminster Abbey. Grattan's reputation rests chiefly upon his oratory.

Henry Grattan,
Irish statesman
After F. Wheatley, R.A.

GRAVE. Name of a place of burial. A collection of graves is called a cemetery. The excavation of early graves and the careful examination of their contents has been of great value in throwing light upon the manners and customs of early civilizations.

WAR GRAVES. To care for the graves of the British soldiers who fell in the Great War a commission was appointed in May, 1917. This has in its charge over 1,600 cemeteries and perhaps 600,000 graves, mainly in France and Flanders, but also in Gallipoli, Italy, Palestine, Macedonia, Egypt, Mesopotamia, and E. Africa. In each cemetery building is kept the register of each man's parentage, age, birthplace, and other particulars. The offices of the commission are at 82, Baker Street, London, W.1.

It was decided to adopt a uniform pattern of tombstone for all ranks, plain headstones measuring 2 ft. 6 ins. by 1 ft. 3 ins. They are inscribed with the soldier's regimental number, rank and name, date of death, the Cross or other symbol of his faith, the badge of his corps, and a text or other inscription chosen and paid for by his relatives. See Burial; Catacomb; Cemetery, etc.

GRAVELINES. Town and seaport of France. It stands on the Aa, 15 m. from Dunkirk, and has a trade in timber, coal, etc. Other industries include sugar refining and fish and food preserving. Pop. 2,027.

On July 13, 1558, the Spaniards under Egmont here defeated the French; and in 1588 the Armada was dispersed off Gravelines.

GRAVELOTTE. Village of Lorraine, now part of France. Here, on Aug. 18, 1870, during the Franco-Prussian War, about 200,000 Germans under King William of Prussia defeated about 120,000 French under Bazaine, who retired to Metz. The battle is also known as that of St. Privat or Rezonville.

GRAVES, ALFRED PERCEVAL (b. 1846). Irish author. Born in Dublin, July 22, 1846, he was one of the sons of Charles Graves (1812-1899), bishop of Limerick. After graduating at Dublin University he entered the home office, was H.M. inspector of schools (1875-1910), founded London educational councils, and helped to found the Irish literary and Irish and Welsh folk-song societies. Father O'Flynn, the poem by which he was first known, was written in 1872, but not published as a song until 1882. His many works include Songs of Old Ireland, Songs of Irish Wit and Humour, The Irish Song Book, and A Celtic Psalter.

GRAVES, CHARLES LARCOM (b. 1856). Author and journalist. A brother of Alfred Perceval Graves, he was born Dec. 15, 1856, and educated at Marlborough and Christ Church, Oxford. He was assistant editor of The Spectator, 1899-1917, and joined the staff of Punch in 1902. He is author of The Life and Letters of Sir George Grove, 1903;

Life and Letters of Alexander Macmillan, 1910; Life of Sir Hubert Parry, 1926; Mr. Punch's History of the Great War, 1919; and numerous other works in a light vein.

GRAVES, CLOTILDE INEZ MARY (b. 1864). Irish novelist and playwright. Born at Buttevant, co. Cork, June 3, 1864, she won popularity under the name of Richard Dehan, in 1910, with The Dop Doctor, a realistic story of life in S. Africa during the Boer War. She also wrote plays.

GRAVESEND. Borough, river port, and market town of Kent. On the right bank of the Thames estuary, 24 m. E. of London by the S.R. and L.M.S. Rly, it is opposite Tilbury, with which there is ferry communication. It is a customs and pilot station, a port under the P.L.A., and the headquarters of the Royal Thames Yacht Club. There are large paper-making works and the Amalgamated Press has large printing works here. Market day, Sat. Pop. 31,171.

GRAVITATION (Lat. gravitas, weight). Law governing the motions of all material bodies. The simplest manifestation of gravitational force is the property of a body known as its weight, in virtue of which it falls to the earth, or if supported, exerts a downward pressure. Sir Isaac Newton showed mathematically that the paths of the planets round the sun could be accounted for by ascribing to the planets a tendency to fall to the sun; and he proved that this tendency varied in intensity inversely as the square of the planet's distance from the sun. He assumed the existence of an attraction exerted by the sun on the planet, and likewise varying as the inverse square of the distance; and this attractive force is known as the force of gravity. A similar attraction accounted for the motion of the moon around the earth. Newton also showed how the small attractions of the earth's particles would combine to form the joint attraction to the centre of the earth.

Since Newton's time the theory of relativity has had a revolutionary effect on the fundamental ideas of mechanics and physics, and Einstein obtained a new law of gravitation, derived not from observation, but from pure reasoning. See Atwood's Machine; Ether; Matter; Relativity.

George Gray, Australian billiard player

He came to England in 1910. While playing against Harverson in London on March 17-18, 1911, he compiled, using crystallate balls, an unfinished break of 2,196 (1,944 being off the red). See Billiards.

GRAY, THOMAS (1716-71). English poet. Born in London, Dec. 26, 1716, he was educated at Eton and Peterhouse, Cambridge, where in 1768 he became professor of modern history. The inspiration of his best-known poem, Elegy Written in a Country Churchyard, came from the churchyard at Stoke Poges (q.v.). Small in bulk, all Gray's work is that

of a consummate artist. He died at Cambridge, July 30, 1771, and was buried in Stoke Poges churchyard. Here is a memorial to him.

GRAYLING (*Thymallus vulgaris*). Fish of the salmon family. Easily recognized by its large and many-rayed dorsal fin, it occasionally attains a weight of 4 lb., and is a good table fish. It is fairly common in English rivers, but less common in those of Scotland.

Grayling, a British fresh-water fish of the salmon family

GRAYLING BUTTERFLY (*Satyrus semele*). British butterfly of heathy and uncultivated lands, found also in temperate Europe, N. Africa, and W. Asia. The wings are smoky brown in tint, with a broad zigzag ochreous band near the blackish margin. The brown-striped, drab-coloured caterpillar feeds upon various wild grasses.

GRAYS OR GRAYS THURBOCK. Urban dist. of Essex. It stands on the Thames, 20 m. from London, on the L.M.S. Rly. The industries are brick and cement making. Here is the training ship known as Exmouth. Pop. 17,364. See illus. p. 582.

Gray's Inn, London. The 16th century hall with its fine panelling and hammer-beam roof

GRAY'S INN. One of the four inns of court, London. It lies in the angle formed by Holborn and Gray's Inn Road. In the hall, erected 1555-60, Shakespeare's Comedy of Errors was acted, 1594. The chapel is thought to occupy the site of the old chantry of Port-pool. The library, rebuilt 1883-84, contains 30,000 volumes and MSS. A new library was added in 1929. The walks and gardens were laid out under the supervision of Bacon.

GRAZ OR GRATZ. Town of Austria, the capital of Styria. It is situated on both banks of the Mur, here crossed by seven bridges, 90 m. S.W. of Vienna. The university was founded in 1573. The buildings include some old churches and a modern town hall. The industries include steel works. Pop. 152,706.

GREAT BARRIER REEF. Coral reef 1,200 m. long, off the N.E. coast of Australia. It covers an area of 100,000 sq. m., and is the greatest oceanic feature of its kind. It acts as a vast natural breakwater, the channel separating it from the Queensland coast—10 m. to 30 m. wide—providing a safe sea passage of extraordinary tropical beauty, studded with islands. See Coral Reef.

GREAT BEAR. Lake of the N.W. Territories, Canada. It has a length of 176 m., and breadth varying from 25 m. to 46 m.; its area is 11,200 sq. m., and its average depth 270 ft. Frozen over for the greater part of the year, it abounds in fish, and discharges into the Mackenzie river by the Great Bear river.

Great Bear. Popular name of the northern constellation Ursa Major. See Constellation.

GREAT BRITAIN. Name used for England, Wales, Scotland, and the adjacent small islands. Its official use dates from 1603,

Thomas Gray,
English poet
After J. G. Eccardt
in the Nat. Port. Gal.

when James I united the crowns of England and Scotland and called himself king of Great Britain. See Britain; England; Scotland; United Kingdom.

GREAT CIRCLE. Line on the earth's surface which lies in a plane through the centre of the earth, or any circle on the earth's surface which divides the world into two equal parts. The shortest line joining any two points on the earth's surface is on a great circle, hence the ascertaining of great circles is of great importance in navigation.

GREAT DANE. Breed of German boarhounds. It stands 34 inches high at the shoulder, and is employed in the Black forest for hunting purposes; but its general use is as a watchdog. It is friendly and faithful, but its great strength and determined will make it often difficult to control. See Dog.

Great Dane. Champion of this breed of German boarhound

GREAT DIVIDING RANGE. General name of the vast mountain system of E. Australia. It extends from the N. of York Peninsula in Queensland, and trends S. and S.E. to the borders of New South Wales; it then turns S.S.W. through that state and Victoria, terminating at its S.E. extremity. The westerly extension from here is known as the Australian Alps, and also as the Great Dividing Range. The highest summit is found in New South Wales, Kosciusko (7,300 ft.).

Great Eastern. The vessel on her first voyage to New York, June, 1860

From a contemporary drawing

GREAT EASTERN. British steamship, built in 1858 from the designs of Isambard Brunel. The largest steamship built to that date, she was first called the Leviathan. Her dimensions were: length 692 ft., beam 83 ft., draught 25 ft., and gross tonnage 18,915 tons. She was a screw and paddle vessel and cost about £750,000. She was employed in laying the first, fourth, and fifth Atlantic cables, the French Atlantic cable, and the Bombay-Suez cable. Sold by auction for £16,000, she was later broken up.

GREAT FIRE. London fire which lasted four days and nights, beginning about 2 a.m. on Sunday, Sept. 2, 1666, near London Bridge. See London.

GREAT FISH. River of Canada, also called the Back. It rises near the N. shore of Lake Aylmer, N.E. of Great Slave Lake, and discharges into an inlet of the Arctic Ocean after a course of about 500 m. Sir George Back explored its shores.

The name is also given to an inlet of the Atlantic off S.W. Africa, and to a river of Cape Province, S. Africa.

Great Gable. Mt. peak of Cumberland. It is about 7 m. S. of Keswick and is 2,950 ft. in alt. Near is Green Gable, 2,500 ft. high.

GREAT HARRY. English warship. Built by Henry VIII, she was the first double-decked ship constructed in England, and was of 1,000 tons burthen. She is considered to mark the beginning of the Royal Navy.

GREAT LAKES, THE. Chain of five fresh-water lakes in N. America. Situated between Canada and the U.S.A., they belong to the basin of the St. Lawrence river, by which they are drained to the Atlantic Ocean. In order of size they are Superior, Michigan, Huron, Erie, and Ontario, and their entire water expanse is about 94,100 sq. m.

The region surrounding the Great Lakes is one of the most productive in North America, and the cheapness of transport afforded by these waterways has enabled the farming, fruit-growing, and mining industries to be developed on a greater scale. See Erie; Huron; Michigan; Ontario; Superior.

GREAT POWERS. Term used in the 19th century for the dominating countries of Europe. In 1815 they were Britain, France, Russia, and Austria. Later Italy and Germany, having become unified, were added, and these six were the Great Powers of the Congress of Berlin and afterwards. Towards the end of the century, as European problems became world problems, the United States and Japan entered the circle. The Great War destroyed the power of Austria and Russia and impaired that of Germany, and at the peace conference of 1919 the Great Powers were Britain, United States, France, and Italy. Japan joined in the world conferences of Washington (1921-22) and London (1930) and these five, with Germany, may be considered as the world's Great Powers.

GREAT REBELLION. Name given to the civil war in England which ended in the execution of Charles I in 1649, or, according to another point of view, in the restoration of Charles II in 1660. See Civil War.

GREAT SALT LAKE. Extensive water expanse in Utah, U.S.A. It is about 75 m. long by from 20 m. to 50 m. broad, and has a mean depth of 20 ft. Its waters contain about 13 p.c. of mineral salts, principally chloride of sodium, and the production of salt by evaporation is a considerable industry. See Salt Lake City.

GREAT SCHISM. Period from 1378 to 1417 during which two rival popes claimed each to be the sole head of the Church. In 1378 Urban VI was elected pope, the papal court having just returned to Rome after its exile at Avignon. Against him the French party elected an anti-pope, Clement VII. In general the former was recognized by all Christendom save France, Scotland, and parts of Germany and Italy under French influence. Each party elected successors on the deaths of

Great Harry. English double-decked warship of 1514

From a picture by Holbein

the two popes. Various attempts to heal the breach failed, until in 1415 the Council of Constance ended the schism by the deposition of the anti-pope John XXIII. The rightful

pope, Gregory VII, Urban's successor, resigned, and in 1417 a new pope, Martin V, was elected and recognized by both parties.

GREAT SEAL. Emblem of sovereignty, customarily used in some monarchical countries when the will of the sovereign is expressed.

In the United Kingdom a new seal is made at the beginning of each reign, the old one being destroyed. Edward the Confessor had one, and its custody was entrusted to the chancellor. Later there was a separate official called the lord keeper, who was responsible for the seal. Since 1760 it has been in the keeping of the lord chancellor. There was a separate seal for Scotland until the union of 1707. In 1930, owing to the alteration made in the king's title consequent on the formation of the Irish Free State, a new seal was made. See Chancellor; Seals.

Great Seal of King George V: the new design of 1930

GREAT SLAVE. Lake of Canada, in the N.W. Territories. Its area is 10,719 sq. m., and it is about 300 m. long. The Slave and other rivers flow into it, and the Mackenzie carries its water to the Arctic.

GREAVES (old Fr. grève, shin-bone). Armour for the lower part of the legs. Bronze or pewter greaves were worn by the ancient Greeks and Romans. See Armour.

GREBE (Podiceps). Genus of diving birds, five species of which occur in Great Britain. They are remarkable for their curiously lobed feet, rudimentary tail, and the backward position of the legs, which causes them to assume on land an upright position like a penguin. They frequent ponds and lakes in summer, and some go to the sea in winter. The little grebe is known as the dabchick.

GRECO, EL. Name by which the painter Domenico Theotocopuli (q.v.) is known.

GREECE. Maritime republic of S.E. Europe. It is bounded N. by Albania, Yugoslavia and Bulgaria; S. and W. by the Ionian Sea; E. by the Aegean and Turkey. The area is estimated at 50,000 sq. m. and the pop. at 6,500,000. The capital is Athens (q.v.). There is a Senate of 120, and a Chamber (Boule) elected for three years by universal manhood suffrage. Military service is compulsory between 21 and 57. Education is free and compulsory. The chief harbours are the Piræus, Syros (Hermoupolis), Patras, Salonica, Volos, Corfu, Kalamata, Lavrion, Kavala, and Canea (Crete).

Mountains divide the country into small districts. Most of the rivers dry up in summer.

Greece. Morean shepherd in winter coat of straw

There are many lakes of moderate depth; but only a few forests and little wooded country. The climate generally is subject to extremes of heat and cold.

Whether the present inhabitants are descended from the ancient Greeks is disputed. Many of the peasants wear the short white kilt (fustanella), though coats and trousers and hard felt hats are becoming more general wear.

The chief crop is currants, which are exported all over the world. Olives are grown extensively, as are figs and oranges, tobacco is an increasing crop, and wine is made in large quantities, mainly for home consumption. There are textile factories, and smelting and ship-building are carried on. The exports also include

Greece. Mahomedan peasant in fustanella

hides, lead and iron ores, emery, marble, sponges, and carpets.

Of the cultivated lands half are given up to growing food for the population, wheat, barley, rice, and maize. There are about 1,500 m. of railways, good steamer services, and about eight hundred trading vessels. The Corinth canal, for ships up to 1,500 tons, was completed in 1893.

Among the more highly educated religion is neglected or is a form, but among the peasantry attachment to the Greek Church is as strong as ever. Its bishops receive the same salary as members of Parliament; archbishops slightly more. The Moslem religious leaders are also paid by the state.

Peasant woman of Morea (Peloponnese)

HISTORY. In prehistoric times, before the Hellenes appeared, an earlier race, having Crete as its centre, attained a high degree of civilization known as Minoan. In the 13th century the Minoans established the Mycenaean civilization within the Morea or Peloponnese. The most inclusive name of the Hellenes at this era was Achaeans or Danaans, with Aeolians and Ionians as subdivisions. About the 12th or 11th century, a new and ruder Hellenic wave, the Dorian, rolled down from the N.W., and in the eastern Morea and on the Isthmus of Corinth effected a conquest, destroying the Minoan ascendancy and carrying their arms eastwards, across

Greece. Map of the country showing the areas in Europe and the islands in the Aegean Sea

Crete and the southern islands, to the south-western coast of Asia Minor.

By the 6th century B.C. Hellas was composed of a great number of small city states, most of them independent. Meanwhile the Persian Empire had been created. Darius crossed into Europe, 513 B.C., and demanded from all the Hellenic states recognition of Persia's sovereignty. Had Athens and Sparta elected to submit, or been wiped out, the future of the world might have been entirely changed; but the victories of Marathon (490), Salamis and Himera (480) and Plataea and Mycale (479) shattered oriental ambitions and made Athens the Athens of Pericles, Aeschylus, Sophocles, Euripides, and Pheidias.

Nearly fifty years after the Persian débâcle almost all Hellas was involved in the great

conflict between Athens and Sparta which is called the Peloponnesian War. Then arose Philip of Macedon, under whom Hellas might have been unified as a military empire. But in 336 Philip was assassinated and his crown passed to his son, Alexander the Great, who, failing to fuse East and West, failed no less to fuse Hellas; and Greece was eventually swallowed up in the Roman Empire. When the Roman empire was divided, Greece fell to the eastern or Byzantine portion. Then a few years after the fall of Constantinople the Turks conquered practically the whole of the land.

Greece regained its independence in 1830, and after a succession of monarchical rulers was declared a republic March 25, 1924. See Constantine; Corfu; Salonica; Venizelos.

GREEK ART. The very early civilization and art in the Aegean which the discoveries at Mycenae and Cnossus have revealed came to an end about 1000 B.C., and left but doubtful traces in the Greek art that followed. This early period produced masterpieces of decoration and some remarkable naturalistic works such as the gold cups unearthed at Vaphio; but the sobriety and symmetry of the Greek art are lacking. The latter in its earliest form is represented by pottery. First the designs were geometrical, then rudely drawn figures made their appearance, and were followed by a wealth of plant and animal forms. Corinth and Chalcis were the main centres of production. Soon there were subjects from myth and saga. Ionia, Rhodes, and Melos developed their own styles.

The early 6th century brought the beginnings of Greek sculpture. Rude images, such as the Apollo statue at Amyclae, rapidly gave

Greek costume, as recorded in mural painting and sculpture. Left to right: peplos or outer garment; girl fastening chiton with brooch; basket carrier at a festival, showing girdle and sandals; youth in chlamys or short mantle, with a pilos on his head; warrior in field dress

place to intimate studies of the human form. A mythical sculptor, Daedalus, is said to have founded a school. Better authenticated early

its clergy to be celibate; all except bishops and monks may marry. It allows communion in both kinds. It does not accept the Apostles,

Greek alphabet as finally adopted in 403 B.C. Three older letters, F, the digamma, having the sound of v or w; Q, the hard k; and S, representing s, were dropped as being of no further use, although they were retained as numerals

practitioners were Achermus of Chios, Dipocnus and Scyllis of Crete, and Rhoecus and Theodorus, the inventors of bronze casting. To the 5th century belong the sculptures of the Parthenon and the paintings of Polygnotus. Vase painting was developed at Athens by Euphronius, Duris, and Hieron. With the 4th came Praxiteles, Scopas, and Lysippus of Sicyon in sculpture, Apelles, Protogenes, Zeuxis, and Parrhasius in painting. The best known sculptures of the Hellenistic Age (following the death of Alexander) were the Colossus of Rhodes by Charos, the Victory of Samothrace, Apollo Belvedere, and Laocoon. This also was the age of the Tanagra statuettes in terra cotta.

ARCHITECTURE. Not till the 5th century did Greek architecture assume the combined stability and grace which are its characteristic. Its chief expression was the hexastyle temple, an oblong structure enclosed by rows of columns, of a single storey with a low-pitched roof ending in a pediment. The exterior was decked out in bright primary colours, sometimes gilded; the sculpture was painted and fine marble often covered with coloured stucco. Greek architecture was dominated at successive periods by three orders, Doric, Ionic, and Corinthian. The Doric was the simplest form of column and capital, and is illustrated by the finely preserved temple of Theseus at Athens, and by structures excavated in the archipelago, Crete, Asia Minor, and Southern Italy. Ionic is known by its volute capitals, and Corinthian by its foliated capitals, the latter being a late Hellenistic development. Theatres were built on a magnificent scale, that at Dionysus being 443 feet in diameter. See *Aeropolis*; *Aegina*; *Athens*; *Corinth*, etc.

GREEK CHURCH. Name given to the Eastern or Oriental church, the full title of which is The Holy Orthodox Catholic Oriental Church. The name Greek is given to it because it was Greek in origin.

In primitive times the eastern and western divisions of Christendom formed a single church. When Constantine transferred the capital of the Empire from Rome to Constantinople it was inevitable that the Roman Empire would split into two divisions and that the political rivalry between them would be reflected in the church. The actual division, however, did not take place until the 9th century, when it came about as the result of a controversy on the Filioque clause in the Nicene creed.

The chief points of difference between the Roman and the Greek Church may be summarized. The Greek Church maintains the equality of the various patriarchs and has therefore no single head. It does not compel

Of these 120,000,000 are in Europe and 20,000,000 in Asia. In Europe they are found chiefly in Russia and the Balkan countries, including Greece. Until the revolution of 1917 Russia was the great stronghold of the Greek Church, but under the Bolshevik regime its position has been assailed and its numbers reduced.

GREEK FIRE. Inflammable composition used by the Byzantine Greeks for defensive warfare. According to many accounts it was inextinguishable and was able to burn under water. Aeneas Tacticus gives its composition as a mixture of sulphur, pitch, charcoal, incense and tow, while Vegetius adds naphtha.

GREELEY, HORACE (1811-72). American journalist. Born on a New Hampshire farm, Feb. 3, 1811, he founded The New Yorker in 1834, and in 1841 The Tribune, an unflinching advocate of abolition. Greeley helped forward the nomination of Lincoln for the presidency. He died Nov. 29, 1872.

GREELEY, ADOLPHUS WASHINGTON (b. 1844). An American explorer. Born at Newburyport, Mass., March 27, 1844, he served in the Civil War (1861-65). Appointed, in 1881, to command a polar expedition, with a party of 25 men he reached the then farthest North (83° 24'). His *Three Years of Arctic Service*, 1883, gives an account of his expedition.

GREELEY, JOHN RICHARD (1837-83). British his-

torian. Born in Oxford, Dec. 12, 1837, he was educated at Magdalen College School and Jesus College. He became a clergyman and held an incumbency at Steney, but ill-health compelled him to abandon parish work, and for a little time he was librarian at Lambeth. From about 1868 to his death he devoted himself to historical study. He died at Mentone, March 7, 1883. Green's great work is his *Short History of the English People*, perhaps the most popular book of its kind. His wife, Alice Sophia Amelia (1848-1929), was also a historical writer.

GREEN, THOMAS HILL (1836-82). British philosopher. Born at Birkin, Yorkshire, April 7, 1836, he was educated at Rugby and Balliol College, Oxford. His father was a clergyman, and he claimed descent from Oliver Cromwell. In 1860 he was elected to a fellowship at Balliol, and in Oxford he remained all his life. He was on the tutorial staff at Balliol, and from 1878 was professor of moral philosophy in the university. The most penetrating influence in the Oxford of his day, he died March 26, 1882.

GREENAWAY, KATE (1846-1901). British artist. Born in London, March 17, 1846, her father was a wood engraver. She studied art and began by designing Christmas cards, but the work with which her name is chiefly identified consists of drawings, chiefly in colour, but often in black and white, illustrating stories and poems for children. The girls and boys are garbed in the costume of the early 19th century, and the resulting pictures are quaint and attractive. She wrote *Marigold Marsh*, 1885, and died at Hampstead, Nov. 6, 1901.

Kate Greenaway,
British artist

GREENE, HARRY PLUNKET (b. 1865). British singer. Born in Dublin, June 24, 1865, a grandson of Lord Plunket, he was educated at Clifton College. In 1888 he appeared in London as a baritone in *The Messiah*, and afterwards took leading parts in oratorio and opera, while his interpretation of the great classical songs revealed high artistic power.

GREENFINCH, OR **GREEN LINNET** (*Ligurinus chloris*). Common British song-bird. Usually found in fields and hedgerows, it is greenish yellow on the back, with yellow underparts, and is one of the handsomest of the smaller birds. It feeds upon grain and seeds.

Greenfinch, a British hedgerow song-bird

GREEN-FLY, OR **APHIS**. Large group of insects of the bug family (Hemiptera).

Soft-bodied, usually wingless, with prominent eyes and a powerful sucking beak which is kept thrust into the tissues of the plant infested by them, they spend their whole time in sucking the juices. "Honeydew," a saccharine substance, is secreted by two small tubes on the upper part of the extremity of the abdomen, and is voided also as an excrement. This falls as a kind of varnish on the leaves and stem of the plant, choking its breathing pores. The remedy for the ravages of green-fly is to spray the plants with a powerful insecticide or to fumigate with strong tobacco or pyrethrum. See *Insect*.

GREENFORD. Village of Middlesex. It is 8 m. W.N.W. of London by the G.W.R. In the adjacent hamlet of Greenford Green is the factory, on the Grand Union Canal, in which Perkin perfected his production of aniline dyes from coal tar. Pop. 1,461.

GREENGAGE. Fruit tree of the natural order Rosaceae and genus *Prunus*. The greengage, a variety of plum, was introduced into Great Britain from France by a member of the Gage family in the 18th century. See *Plum*.

GREENHEART (*Nectandra rodiaei*). Timber-tree of the natural order Lauraceae. A native of British Guiana, its timber is of great strength and durability.

GREEN HOWARDS. Official name since 1920 of the Yorkshire Regiment, the 19th of the line. It was given to the regiment

Horace Greeley,
American journalist

Adolphus W. Greeley,
American explorer

John Richard Green,
British historian
After J. Sandys

because after it was raised it had Sir Charles Howard for its colonel and the men wore grass-green facings. See Yorkshire Regiment.

GREENLAND. Large island, mainly within the Arctic Circle, the only colonial possession of Denmark. Its area is about 826,000 sq. m. Lying N.E. of British N. America, its most northerly point is about 1,600 m. from its S. extremity in Cape Farewell. Its extreme breadth is 700 m. The coast is characterised by rugged cliffs rising sheer from the ocean, with indentations, piercing inland in some cases for nearly 100 m. The inhabitants are Eskimos. The trade consists of whale and seal oil, furs, cryolite, and eiderdown. There are extensive fishing grounds round the coasts, with cod and haddock as the principal catch. See Arctic Exploration; Denmark.

GREENOCK. Burgh and seaport of Renfrewshire, Scotland. It is 22 m. from Glasgow, and is served by the L.M.S. Rly. In addition to shipbuilding and shipping the town is a centre for sugar refining, while engines, boilers, and other requirements of ships are made, as are textiles, paper, aluminium, etc. Distilling and oil refining are carried on. Greenock became a burgh in 1635, and sends one member to Parliament. Pop. 81,120.

Greenock. Municipal Buildings, opened in 1887.
T. & R. Annon & Sons

In 1928 the old west kirk was reopened. It had been removed to Seafield Esplanade, at the cost of Harland & Wolff, to make room for an extension of their shipyard. The bodies from the churchyard, including that of Burns's Highland Mary, were removed to the cemetery.

GREENORE. Seaport of co. Louth, Irish Free State. It stands on the N. side of Carlingford Lough. The L.M.S. Rly. has made it the terminus of a service from Holyhead. There are golf links. Pop. 337.

GREEN PARK. Open space in London. It covers 54 acres between Piccadilly and St. James's Park and Constitution Hill. It was a favourite resort of Charles II. See Chiswick.

Green Room. Room in a theatre set apart for the social use of actors and actresses. See Acting; Theatre.

GREENSAND. Two series of beds (upper and lower) of sands and sandstones which form the lower part of the Cretaceous system. Greensand makes good building stone.

GREENSHANK (*Totanus canescens*). Wading bird of the snipe family, so called from its olive legs. It visits Great Britain in autumn and winter, and feeds on small crustaceans and molluscs.

GREENWICH. Metropolitan borough of London. It lies along the right bank of the Thames, 6 m. from the city, and has stations on the Southern Rly. It is connected with the other side of the river by the Blackwall Tunnel, and a smaller tunnel for foot passengers. The parish church of S. Alphege has interesting memorials. The Ship is a notable inn. Greenwich sends one member to Parliament. The industries include the making of cables, chemicals, and lineoleum. There are also engineering works, power stations, and a fuel research station. Pop. 100,500.

The chief building is the hospital, fronting the river. Built as a palace, this is now used

for the Royal Naval College and other purposes. The finest apartment is the painted hall, with pictures and Nelson relics. The chapel is worthy of mention. The Queen's House, built by James I for Anne of Denmark, is now a naval museum.

In Greenwich Park, once the park of the palace, is the Observatory. The buildings consist of an old and a new block. The standard time is recorded here. A statue to General Wolfe was unveiled here in June, 1930.

Greenwich Royal Observatory. The new building, opened in 1897

GREENWOOD, HAMAR GREENWOOD, 1ST BARON (b. 1870). British politician. Born in Canada, Feb. 7, 1870, he was for a time in the civil service of Ontario. Having settled in England and become a barrister, he was elected for York in 1906, and with brief intervals he remained a Liberal M.P. until 1929. He served in the Great War, and in 1915 was made a baronet. Having held minor offices in the Coalition Ministry, he was chief secretary for Ireland 1920-22, a time of special difficulty and danger. He abandoned politics for business, and in 1929 was raised to the peerage.

GREENWOOD, ARTHUR. British politician. Educated at Manchester University, he lectured on economics at Huddersfield and the university of Leeds, and gradually became known as an authority on the subject. In 1917-19 he was secretary of the Ministry of Reconstruction, and in 1922, having served on various committees, he was made secretary of the research and information bureau of the Labour Party. Greenwood entered Parliament in 1922 as M.P. for the Nelson and Colne division. In 1924 he was parliamentary secretary to the ministry of health, and in 1929 he became head of that department.

Arthur Greenwood, British politician
James Maycock

GREENWOOD, FREDERICK (1830-1909). British journalist.

Frederick Greenwood, British journalist
Russell

REGARINES. Parasitic single-celled animals, protozoa, found in the alimentary canals of invertebrates, chiefly the arthropods. There are a large number of species, among the more important being those found in the earthworm, lobster, cockroach, and cuttlefish.

GREGORIAN CALENDAR. Calendar introduced by direction of Pope Gregory XIII in 1582. It was a reform of the Julian calendar, but was not adopted in Great Britain until 1752. See Calendar.

GREGORIAN CHANT. Term applied to the plainsong system used in the rendering of the music of the services of the Church as supervised and settled by pope Gregory I.

GREGORY. Name of 16 popes. The outstanding ones were Gregory I and Gregory VII, who are noticed separately.

Gregory II, who was pope 715-31, was succeeded by Gregory III, pope 731-41. Gregory IV reigned 827-44, and Gregory V, notable as the first German pope, 996-99. Gregory VI was pope in 1045-46.

Gregory VIII, pope for a few months in 1187, had previously, as papal legate, absolved Henry II for the murder of Becket. Gregory IX became pope in 1227, and his reign was mainly passed in a struggle with the Empire represented by Frederick II. Gregory X, pope 1271-76, was memorable for his efforts to strengthen the position of Christianity in Palestine, where it was struggling hard for existence. Gregory XI was the pope who ended the period of papal rule at Avignon. He was pope 1370-78. Gregory XII was one of the anti-popes deposed by the council of Constance.

Gregory XIII succeeded Pius V as pope in 1572. He is notable as the pope who reformed the calendar, substituting the Julian one by the one now in use over most of Europe. Gregory XIV was pope 1590-91, and Gregory XV 1621-23, but there was not another Gregory for over 200 years. In 1831 Cardinal Cappellari was elected pope and took the name of Gregory XVI. His reign, which ended June 9, 1846, was marked by a revolution in his domains which was only put down by the aid of Austrian soldiers.

Gregory XIII, Pope, 1572-85

Gregory XVI, Pope, 1831-46

GREGORY I, CALLED THE GREAT (c. 540-604). Pope 590-604. Born at Rome, he was the son of Gordianus, a Roman patrician. About 574 he threw up a promising worldly career to become a monk. In 578 Pelagius II ordained him one of the seven deacons of Rome, after which he went on a mission to Constantinople. On his return to Rome after six years' absence, he devoted himself to teaching and literary work; this period is also marked by the incident, related by Bede, of his meeting the English youths. In 590 Gregory became pope, and in 596 he sent Augustine to Britain. He gave his name to the Gregorian Chant (q.v.).

The weight and influence lent to the papacy by Gregory's pontificate gained Gregory his title of Great. He was canonised immediately after his death, March 10, 604. His festival is kept March 10.

GREGORY VII. Pope 1073 to 1085, known also as Hildebrand. Born in Tuscany, he was educated in Rome and made cardinal deacon by Leo IX. As administrator of the papal estates he showed great ability and energy and soon became the most influential person at the papal court. So great indeed was his power that four successive popes, Victor II, Stephen IX, Nicholas II and Alexander II, owed their elections to his dominating personality, which overcame

Gregory VII, Pope, 1073-85
After Raphael

bitter and often militant opposition. During these reigns, as papal chancellor, nominally a subordinate, he directed the papal policy.

On the death of Alexander II, Hildebrand was chosen by popular acclamation, subsequently was canonically elected, and ascended the papal throne as Gregory VII. His first care was thus to secure peace with the secular authority in order to further the aims which he put forward at a synod held in Rome, March, 1074. A decree of the synod excommunicated any lay person, emperor or king, who should confer an investiture in connexion with any ecclesiastical office, and the long struggle between pope and emperor began. The emperor Henry IV was summoned to appear before a council at Rome to answer for his conduct. Henry's answer was to summon a meeting of his supporters at a council held at Worms, January, 1076, when the pope was declared deposed. Gregory responded by excommunicating the emperor at a synod in Lent (1076), deposing him and absolving his subjects from their allegiance. Henry, compelled to submit, hurried to Italy and made his famous surrender at Canossa.

Yet the triumph of Hildebrand was more apparent than real; at the price of an outward show of mortification Henry was able to obtain all he desired. Having set up an anti-pope in the person of the excommunicated archbishop of Ravenna, who took the name of Clement III, he marched on Rome, where, on March 21, 1084, he caused himself to be crowned by the pseudo-pope. Meanwhile, Gregory, obliged to leave Rome, took refuge first at Monte Cassino, and then at Salerno, where he died May 25, 1085.

GREGORY, AUGUSTA, LADY. Irish writer. The youngest daughter of Dudley Perse of Roxborough, co. Galway, she married Sir William Gregory, M.P. (d. 1892). Lady Gregory was an enthusiastic promoter of the Irish literary revival.

Lady Gregory,
Irish author
Berensford

Cuchulain of Muirtemne, 1902, and Gods and Fighting Men, 1904, are capable renderings of Irish sagas into the idiom of the Irish peasantry. Her own plays, produced by the Irish Literary Theatre, which she helped to found, include Spreading the News, The White Cockade, The Rising of the Moon, The Workhouse Ward, and The Full Moon.

GRENADA. Island of the W. Indies, in the Caribbean Sea, belonging to Great Britain. It is the southernmost of the Windward group, which forms a united colony 86 m. due N. of the W. end of the island of Trinidad. Its area is 133 sq. m. St. George's, the capital and the seat of the governor of the Windward Islands, is an important coaling station.

Discovered by Columbus on Aug. 15, 1498, Grenada was settled by the French. It became British in 1783. Pop. 71,621.

GRENADE. Small missile containing an explosive charge, frequently termed bomb. A kind of grenade was used during the 15th century. It was filled with gunpowder and made of earthenware or of brass, the fuses being primitive and uncertain. In the 17th century the fuse problem was fairly well solved. This development reached its zenith towards the end of the 18th century, after which grenades fell into disuse until the Russo-Japanese War, when there was a revival. The Great War brought the weapon into prominence again, many varieties being introduced. See Ammunition; Bomb.

GRENADE. Literally, a soldier who throws a grenade. They appeared first in the 17th century, the early custom being for each regiment to have its company of grenadiers.

After a time the grenade fell into disuse, and soon after 1850 grenadier companies ceased to exist in the British regiments. The grenadier's special head-dress was a pointed cap of embroidered cloth, having peaks and flaps; or a loose fur cap similar in shape. By an army order of March, 1916, men in the British army trained or employed in the use of hand grenades were designated bombers.

GRENADE GUARDS, THE. Regiment of the British army. Raised in 1660 by Colonel Russell, it became the bodyguard of Charles II. The premier regiment of the Foot Guards, the Grenadier Guards fought under William of Orange and were engaged in the four great victories of Marlborough. They fought at Fontenoy, and with Sir John Moore in the retreat from Corunna. After Waterloo the Prince Regent bestowed upon them the title of the first or Grenadier Regiment of Foot Guards. Later distinguished services include the campaigns of the Crimea, Egypt, and S. Africa.

In the Great War the Grenadier Guards had four battalions in the field in France, which, in Sept., 1915, were brought together, their history thenceforth being that of the Guards Division. Seven V.C.'s were won. The Grenadiers have the privilege of guarding the royal palaces and the Bank of England and marching through the City of London with colours flying, drums beating, and bayonets fixed.

Grenadier Guards.
Guardsmen in Review
order

Grenada. Area 14 sq. m. Pop. 7,104.

GRENELL. Town of New South Wales, Australia. It is the terminus of a branch line from Koorowatha, on the main line from Sydney to Melbourne. It stands 180 m. W. of Sydney. Pop. 3,000.

GRENELL, FRANCIS WALLACE GRENELL, 1st BARON (1841-1925). British soldier. Born April 29 1841, he entered the 60th Rifles in 1859. His connexion with Egypt began in 1882; in 1884 he was with the force that went up the Nile, and in 1885 he was made sirdar of the Egyptian army. In 1886 he commanded the frontier field force at Ginnis, and in 1888-89 the expedition that fought at Suakin and Toski. In 1897-98 he commanded the British troops in Egypt, and from 1899-1903 was governor and commander-in-chief at Malta. He commanded the 4th Army Corps 1903-04, and was commander-in-chief in Ireland 1904-08. Made a baron 1902, and in 1908 a field-marshal, he died Jan. 27, 1925.

GRENELL, JULIAN HENRY FRANCIS (1888-1915). British soldier and poet. The eldest

1st Baron Grenell,
British soldier
Russell

Grenadier Guards
cap badge

son of Lord Desborough, he was born March 30, 1888. In 1909 he entered the Royal Dragoons, with which he went to the front early in the Great War. He had won the D.S.O., when on May 13, 1915, he was seriously wounded, and on the 26th he died in hospital at Boulogne. Grenell is chiefly known by the verses, Into Battle, which appeared in The Times.

His brother, Gerald William (1890-1915), was killed in action at Hooze, July 30, 1915.

GRENELL, SIR WILFRED THOMASON (h. 1865). British medical missionary. Born Feb. 28, 1865, he became house surgeon at the London Hospital, under Sir Frederick Treves. Being interested in the North Sea fishermen, he fitted out the first hospital ship, and established land missions and homes for their use. In 1892 he went to Labrador, built four hospitals, and started various institutions for the fishermen. His many books on his missionary work among the fishermen include the autobiographical A Labrador Doctor, 1919. He was knighted in 1927.

Sir Wilfred Grenfell
British medical
missionary
Elliott & Fry

GRENOBLE. City of France, the old capital of Dauphiné. On the Isère, 75 m. S.E. of Lyons, it is beautifully situated at the foot of Mont Rachais. The chief buildings are the cathedral of Notre Dame, partly of the 11th century; the church of S. André, with a monu-

Grenoble, France. Pont d'Hôpital over the Isère.
Behind the city lie the snow-covered French Alps

ment to Bayard, and the old church of S. Laurent. It is noted for its manufacture of gloves. Pop. 85,621.

GRENVILLE, WILLIAM WYNDHAM GRENVILLE, BARON (1759-1834). British statesman. Born Oct. 25, 1759, he entered Parliament as M.P. for Buckingham in 1782, and became paymaster-general under Pitt in 1783. In 1786 he was made vice-president of the committee on trade; in 1789 he became home secretary, and in 1791 foreign secretary. He had been a peer since 1790. Grenville remained in office with Pitt until the two resigned in 1801.

Lord Grenville,
British statesman
After J. Jackson, R.A.

In 1806, on Pitt's death, he and Fox formed a coalition ministry, but this only lasted until March, 1807, as Grenville, who was premier, refused to pledge himself against relief to Roman Catholics. He took part in public life, acting mainly with the Whigs, until his death, Jan. 12, 1834, when the peerage became extinct.

His father, George Grenville (1712-70), was M.P. for the borough of Buckingham from 1740 until his death. He was made a lord of the admiralty in 1744 and a privy councillor in 1754, and first lord of the

George Grenville,
British statesman

admiralty in 1762. He was prime minister from 1763-65, his administration being chiefly notable for the prosecution of John Wilkes and the passing of the American Stamp Act. He died Nov. 13, 1770.

GRENVILLE OR GREYNVILLE, SIR RICHARD (c. 1541-91). English sailor. In 1591 he was appointed vice-admiral of a squadron sent to the Azores to intercept the homeward-bound Spanish treasure fleet. For some reason the *Revenge*, Grenville's flagship, was cut off from the rest of the fleet. Grenville thereupon tried to pass through the Spanish line, but was becalmed under the lee of the enormous galleons, whose men boarded her, and after a fierce fight of 15 hours captured and overwhelmed the few survivors. Mortally wounded, Grenville was taken aboard the Spanish admiral's flagship, where he died a few hours later. The story is vividly told in Tennyson's poem, *The Revenge*.

Sir Richard Grenville,
English sailor

GRESHAM, SIR THOMAS (c. 1519-79). English merchant. Born in London, he was the second son of Sir Richard Gresham (d. 1549), lord mayor of London in 1537. Knighted by Queen Elizabeth, he acquired lands in Norfolk and Suffolk, and had mansions at Mayfield, in Sussex, and Osterley, in Middlesex. Having lost his only son in 1564, he carried out, in 1566-68, a project of his father's by founding the Royal Exchange. He died Nov. 21, 1579.

Sir Thomas Gresham,
English merchant
After Holbein

Gresham left some money to the Mercers' Company in trust for the foundation of the Gresham Lectures, also his house in Bishopsgate Street, and here in 1597 the Gresham Lectures were organized and begun. Gresham College was built for the lectures in 1843. There are seven lectures, and each delivers twelve lectures a year.

Gresham's Law, so called by H. D. Macleod in 1858 in the belief that Sir Thomas Gresham was responsible for its formulation, is an economic law that may be roughly stated as "bad money drives out good."

GRETA. River of Cumberland. It is a tributary of the Derwent, which it joins near Keswick. Its length is 4 m. Overlooking it is Greta Hall, where Southey and also Coleridge lived. There are two rivers of this name in Yorkshire, one being a tributary of the Tees.

GREYHOUND GREEN. Village and parish of Dumfriesshire, Scotland. It is 9 m. N.W. of Carlisle on the L.M.S. Rly., near the river Sark, which divides England from Scotland. Owing to its situation it was convenient for runaway marriages. The marriages were usually celebrated by the blacksmith or innkeeper in his smithy or inn.

Greyhound Green. The smithy where clandestine marriages were celebrated

residence in Scotland for at least 21 days necessary for one of the parties. Pop. 2,969.

On the English side of the Sark, with a station on the L.M.S. Rly., is the village of Gretna, which was used as a munitions centre during the Great War.

Gretna Tavern is a model public house near Carlisle. It was the first started by the Central Control Board in July, 1916. See Carlisle; Control, Board of.

GREUZE, JEAN BAPTISTE (1725-1805). French painter. Born at Tournus, near Mâcon, Aug. 21, 1725, his first exhibited picture, *A Father Expounding the Bible to his Family*, gave promise of a highly successful career, and in 1755 his *Blind Man Duped* secured his election to the Academy. He is known chiefly for his portraits and single heads, more especially of women and girls. He died March 21, 1805. See illus. p. 131.

J. B. Greuze,
French painter

GREVILLE, CHARLES CAVENDISH FULKE (1794-1865). British diarist. Born April 2, 1794, he was a member of the family of the earl of Warwick. From 1821 until 1859 he was clerk of the privy council. He kept a valuable diary throughout his official career. The first part was published in 1875; the whole, known as *The Greville Memoirs*, appeared in seven volumes between that date and 1887. A later edition was published in 1927. He died Jan. 18, 1865.

Charles Greville,
British diarist

Greville's brother Harry (1801-72) also kept a diary, which appeared in 1882-84.

GRÉVY, FRANÇOIS PAUL JULES (1807-91). President of the French Republic, 1879-87. Born at Montous-Vaudrey, Jura, Aug. 15, 1807, he was a strong republican while a law student in Paris. After the revolution of 1848 he was elected deputy in the constituent assembly. Under the third republic, he was president of the national assembly, 1871-73, and of the chamber of deputies, 1876-79. Grévy succeeded MacMahon as president of the republic, Jan. 30, 1879, and was re-elected for a further seven years, Dec., 1885. He resigned in 1887 on account of his son-in-law's (Daniel Wilson) trafficking in honours and offices. He died Sept. 9, 1891.

GREY, EARL. British title borne by the family of Grey since 1806. In 1746 Henry Grey was made a baronet. His eldest son succeeded to the baronetcy, but a younger son, Charles (1729-1807), was more distinguished. He fought with distinction in the War of American Independence. In 1801 he was created Baron Grey, and in 1806 an earl. From him the later earls are descended, as is also Viscount Grey of Falloodon. The earl's seat is Howick House, Lesbury, and his eldest son is known as Viscount Howick.

Charles (1764-1845), the 2nd earl, entered Parliament in 1786 as M.P. for Northumberland, and in the coalition ministry of 1806-7 he was first lord of the admiralty and then foreign secretary. He succeeded Fox as the leader of the Whigs, and his ministry was responsible for the great Reform Act of 1832.

His son Henry (1802-94), the 3rd Earl, entered Parliament in 1826, and in 1830

2nd Earl Grey,
British statesman
After Lawrence

became under-secretary for the colonies. From 1835-39 he was secretary for war, and from 1846-52 colonial secretary.

GREY, ALBERT GEORGE GREY, 4TH EARL (1851-1917). British administrator. Born Nov. 28, 1851, the son of General Charles Grey, private secretary to Queen Victoria and nephew of the 3rd earl, he was M.P. for S. Northumberland 1880-85, and Northumberland (Tyneside) 1885-86. He became administrator of Rhodesia in 1896, and was a director of the South African Company, 1898-1904. From 1904 to 1911 he was governor-general of Canada. He died Aug. 29, 1917.

GREY OF FALLODON, EDWARD GREY, 1ST VISCOUNT (b. 1862). British statesman. Born April 25, 1862, he came of the family of which Earl Grey was the head. In 1882 he succeeded his grandfather, Sir George Grey, the Liberal politician, in the family baronetcy and estates. In 1885 he was returned to Parliament as Liberal M.P. for Berwick-on-Tweed and in 1892 was made under-secretary for foreign affairs. In 1905 Campbell-Bannerman chose him as foreign minister, in which office he remained for eleven years.

In 1914 it fell to Grey to conduct the last negotiations with Germany, and those with France, and to explain the British position to the House of Commons and the country. He remained in office during the earlier part of the war, and also after the Coalition government was formed; but in Dec., 1916, he resigned with Asquith. Already a K.G., an earldom was conferred on him July 6, 1916, which at his request was altered to a viscountcy. In 1922 he married, as his second wife, Lady Glencorner, who died in 1928. In early life he was a fine tennis player, and throughout fly-fishing, on which he wrote a book, and the observation of birds, were his hobbies. His memoirs, entitled *Twenty-Five Years (1892-1916)*, appeared in 1925, *Falloodon Papers* in 1926, and *The Charm of Birds* in 1927.

GREY, LADY JANE (1537-54). Nine days queen of England. Daughter of Henry Grey, duke of Suffolk, great-granddaughter of Henry VII., and cousin of Edward VI., she was remarkable for her beauty and accomplishments. In pursuance of a project to alter the royal succession from the Tudor to the Dudley family, she was married May 21, 1553, to Guildford Dudley, son of the duke of Northumberland, and her accession was announced July 10. On July 19 her short reign ended, and she was beheaded on Tower Hill, Feb. 14, 1554.

Queen of England
From a contemp. portrait

GREY, ZANE (b. 1875). American story writer. He was born at Zanesville, Ohio, Jan. 31, 1875, and in 1904 turned to story writing, winning wide popularity by his romances of adventurous life in the American wild. His later books included *The Man of the Forest*, 1920; *The Thundering Herd*, 1925; and *Fighting Caravans*, 1929.

GREYHOUND. Breed of dog of Eastern origin, famed for its great speed. One of the oldest breeds of domesticated hunting dogs, it

is represented on ancient Egyptian monuments. It is distinguished by its slender form, long legs, and long rat-like tail. Its muzzle is long, and well adapted to seize an animal going at great speed. The English greyhound is smooth-coated, probably the result of breeding, for most other hounds of this type have rough coats.

GREYHOUND RACING. The sport of chasing a mechanical hare by greyhounds in an enclosed track, originated in Chicago in 1917. In a short time greyhound racing became enormously popular. Charles A. Munn acquired the exclusive rights to the electric hare and built the first track at Manchester in 1925. In June, 1927, the first London track was opened at the White City, followed by those at Harringay, West Ham, and Wembley. The sport is controlled by the National Greyhound Racing Club, which in 1928 had licensed 51 tracks, including those in Manchester, Edinburgh, Birmingham, and other large centres. There is also a National Greyhound Racing Society.

The mechanical hare is carried on a rail round the track, controlled electrically and is set in motion just before a lever raises the front of the trap containing the dogs. The latter never catch the hare, whose speed is regulated mechanically. See Coursing.

GREYMOUTH. Chief town of Westland, South Island, New Zealand. At the mouth of the Grey river, it has a good harbour, carries on gold-mining, brick-making and saw-milling, and is in the chief coal-mining area in the country. Pop., with suburbs, 8,373.

GREYWETHER. Name given to blocks of sandstone found thickly strewn over the surface of the country in Dorset, Wiltshire, Surrey, N. France, etc.

GRID. Name given to a grating in which the bars are parallel. Specific uses are for the perforated lead plate of a secondary battery, and for the third electrode of a triode thermionic valve. In the latter the grid is usually a spiral of wire, or a cylinder of wire mesh, enclosing the filament. The voltage applied to the grid to affect its potential as regards the filament is called the grid bias. A resistance connected in the circuit between grid and filament is known as the grid leak. Its function is to permit charges to leak away and so prevent any accumulation of charge.

GRID. Diagram of a thermionic valve, showing connections to grid, filament, and plate.

GRIEG, EDVARD HAGERUP (1843-1907). Norwegian composer. Born at Bergen, of Scottish origin, Jan. 15, 1843, he studied music at Leipzig and Copenhagen. Returning to Norway, he founded a musical union at Christiania in 1867, and was its conductor until 1880. He died Sept. 4, 1907. Grieg's work includes the familiar music to Peer Gynt, a piano concerto, orchestral and chamber music, and many songs.

Edvard Grieg, Norwegian composer

GRIFFIN or **GRYPHON** (Gr. gryps, Lat. gryphus). Mythical monster, part lion, part eagle, supposed to typify strength and vigilance. It figures in Persian sculpture as a guardian of treasure, on Greek coins, and in

Greyhound. Left, typical winner of the Waterloo Cup. Right, greyhounds in fall cry after a mechanically controlled dummy hare

classical architecture. It is represented in heraldry with the body, tail, and hind legs of a lion, and head, neck, breast, fore legs, and wings of an eagle, and with forward ears.

The armorial crest of the city of London is a griffin's sinister wing argent, charged with a cross gules. The Temple Bar Memorial, at the junction of Fleet Street and the Strand, is surmounted by a griffin, designed by C. B. Birch.

GRIFFITH, ARTHUR (1872-1922). Irish politician. Born in Dublin, March 31, 1872, he became one of the leaders of the Sinn Féin movement from its very start, and his journalistic efforts had much to do with its steady, but secret, growth. He was in prison when, in 1919, he was elected vice-president of the Irish republic. Griffith was the leader of those who negotiated the Irish treaty of 1922. Meanwhile he had been chosen president of the republic, and he acted as its head until his sudden death, Aug. 12, 1922.

GRIFFITH, SIR SAMUEL WALKER (1845-1920). Australian lawyer and politician. Born at Merthyr Tydvil, June 21, 1845, he went to Australia and became a barrister in Sydney. Later he settled in Queensland and became associated with political life there. He filled a succession of offices in the ministry, and from 1883-88 and again in 1890-93 was premier of the state. From 1893-1903 he was chief justice of Queensland. Griffith had a large share in the foundation of the Commonwealth, and in 1903 became its chief justice. He resigned in 1919 and died Aug. 9, 1920.

GRIFTON. European breed of dog. A rough-coated animal, it is somewhat taller than the setter and of a grizzled liver colour. The dogs are used in hunting game birds. The Brussels griffon is a Belgian dog.

Griffon. Copthorne Wiseacre, a champion Brussels griffon

GRILLE. French word meaning literally a grating of metal or wood, used to screen a window or other aperture. The close iron grating in prison cells, through which prisoners converse with visitors, is called a grille. It was also the name given to the barrier behind which lady visitors heard debates in the House of Commons. This was removed in 1918. Notable tombs are often protected by grilles.

GRILLPARZER, FRANZ (1791-1872). Austrian dramatist. He was born in Vienna, Jan. 14, 1791, and at the age of 25 he made his first great dramatic hit with *Die Ahnfrau* (The Ancestress). It was followed by a succession of pieces that made the author's name the most notable in Austrian literature. These included *Sappho*, 1819; a trilogy on *Das Goldene Vlies* (The Golden Fleece), 1821; *König Ottokar*, 1825; *Ein treuer Diener seines Herrn* (A Faithful Servant), 1828; and *Der Traum ein Leben* (The Dream, a Life), 1835. He also published poems. His chief prose story is *Der arme Spielmann* (The Poor Fiddler). He died Jan. 21, 1872.

GRIMALDI, JOSEPH (1779-1837). English clown. Born in London, Dec. 18, 1779, and belonging to a family of clowns and dancers, he danced at Drury Lane and Sadler's Wells when an infant, and made his greatest success in the pantomime of Mother Goose at Covent Garden in 1806. He died in London, May, 31 1837.

Jakob Grimm, German philologist

he became librarian to Jerome Bonaparte at Cassel in 1808. His first book, on the Meistersingers, 1811, was followed in 1812 by the first collection of *Kinder- und Hausmärchen*, made by him and his brother, Wilhelm (1786-1859) and continued in 1814 and 1822. These tales, translated into many languages, in English as Grimm's Fairy Tales, have immortalised the brothers Grimm. In 1829 Jakob went to Göttingen as librarian and lecturer, accompanied by his brother, but political changes led to their dismissal. In 1840 both were invited to professorships in Berlin. Among Jakob's most important works are *Deutsche Grammatik*, 1819; *Deutsche Mythologie*, 1835; and *Geschichte der deutschen Sprache*, 1848, which revolutionised the study of Teutonic philology. Jakob Grimm died Sept. 20, 1863.

Grimm's Law is the name given in philology to the regular sound-shifting or consonantal inter-change between (1) Sanskrit, Greek, and Latin; (2) Low German; (3) High German. It takes its name from Jakob Grimm, who first

Grille once in front of Ladies' Gallery, House of Commons

Wilhelm Grimm, German philologist

definitely formulated it, although the principle had already been enunciated by a Danish scholar named Rask.

GRIMSBY OR GREAT GRIMSBY. County and mun. bor. of Lincolnshire. Near the mouth of the Humber, 15 m. from Hull and 155 from London, it is served by the L.N.E. Railway. The buildings include the 13th century parish church of St. James, the town hall, exchange, and custom house, a 16th century grammar school, a free library, technical school, and benevolent institution for seamen. The principal industry is fishing, herring being the chief catch. Coal and machinery are among the chief exports; the imports include timber and dairy produce. During the Great War the trawlers and fishermen were employed in mine sweeping and the like. It is called Great Grimsby to distinguish it from Little Grimsby, a village 4 m. from Louth. Market days, Mon. and Fri. Pop. 92,740.

Grimsby. The Royal Dock and Hydraulic Tower 300 ft. in height

GRIMSPOND. Prehistoric stronghold on Dartmoor, Devonshire. Having an area of four acres, it contains the remains of 24 Bronze-age hut-circles, and is enclosed by two irregularly oval walls of coursed granite, with three entrances. They served to defend the village flocks and herds against attack by animal and human foes.

GRINDAL, EDMUND (c. 1520-83). English prelate. He was born at St. Bees and educated at Cambridge. Ordained in 1544, he became known as a religious reformer. In 1559 he was consecrated bishop of London, in succession to Bonner. Grindal showed little desire to punish Nonconformists, and is usually regarded as a weak ruler of his diocese, which he left in 1570 to become archbishop of York, where again he was less zealous than the extremists liked. In 1575 he was chosen archbishop of Canterbury, but was suspended for refusing to obey Elizabeth when she ordered him to suppress the prophesyings or meetings of Puritan clergy. Grindal died July 6, 1583.

GRINDELWALD. Valley and tourist resort of Switzerland, in the Bernese Oberland. It is 13 m. long by 4 m. broad, and its station is 11 m. S.E. of Interlaken. The Black Lüt-schne river flows through the valley, which is enclosed by the peaks of the Wetterhorn, Schreckhorn, Mettenberg, Eiger, and Faulhorn.

Grindelwald. The Bernese valley, looking east towards the Wetterhorn

Two glaciers descend almost to the river. A wooden church was replaced by a stone one about 1180, which was superseded by the

present church, erected in 1793. The valley lies at an altitude of 3,410 ft. Pop. 2,942.

GRINDING. Term applied to the sharpening of tools, cutlery, etc., or the smoothening of any hard substance by rubbing away its surface; and also to crushing and pulverising by machinery. The grinding and sharpening of tools, cutlery, etc., is carried out on rapidly revolving power-driven stones. Most of the grinding is wet grinding, i.e. a plentiful supply of water is used with the emery or other stone. Dry grinding is used for pointing needles and prongs of forks, etc. Grinding is an essential operation in the extraction of many metals from their ores, and in the preparation of Portland cement, corn, etc. See Milling.

GRINNELL LAND. Eastern portion of Ellesmere Island, British N. America. It is separated from Greenland by the Kennedy and Robeson channels. Largely an ice-covered, mountainous, and desolate tract, it rises in Mt. Arthur to nearly 5,000 ft. Discovered by Hayes in the second Grinnell Expedition, in 1854, it was explored by Greely in 1882.

GRINSTEAD, EAST. Urban dist. and market town of Sussex, 30 m. from London on the Southern Ry. The High Street contains some old timber-built houses, and here is Sackville College, an almshouse dating from 1608. Market day, Thurs. Pop. 7,319.

Some 18 m. S.W. is the village of West Grinstead, on the Southern Ry. Its parish church retains part of the Norman structure. The ruins of Knepp Castle are near.

GRIQUALAND. District of the Cape Province, S. Africa. Named from the Griquas, a race descended from Dutch settlers and native women, East Griqualand lies S.E. of Basutoland and S.W. of Natal, and was annexed to Cape Colony in 1875. The chief town is Kokstad. Its area is 6,602 sq. m. Pop. 264,827, including 7,065 whites.

Griqualand West is a district of the Cape Province, north of the Orange river. It was annexed by Great Britain in 1871, and incorporated in the Cape in 1880. The discovery of diamonds at Kimberley in 1867 attracted immigrants. De Beers, Belmont, Barkly West, and Griquatown are other important mining centres. The district has an area of 15,197 sq. m. Pop. 85,000.

GRISON OR HURON (Galiotis). Carnivorous mammal of the weasel family found in S. America and Mexico. It is about as large as a marten, and is grey on the back and dark brown on the under-parts, with yellow tips to the tail and ears. It lives in hollow trees and clefts in the rock, and preys upon small birds and mammals.

GRISONS (Ger. Graubünden). Canton of Switzerland. It is bounded N. and E. by Austria and S. by Italy, and has an area of 2,746 sq. m. Composed of the basins of the Upper Rhine and the Inn, with that of two tributaries of the Ticino and one of the Adda, it is almost wholly mountainous. There are many mineral springs, forests, and mt. pasturages. The capital is Chur or Coire, while other important towns are Davos and Arosa. The canton includes the Engadine. Pop. 122,750.

GROAT (Low German, grote, great). English silver coin, now demonetised. It was first issued in England in 1351, coming to have the value of fourpence, but was discontinued in 1662. It was revived as a silver fourpenny piece by William IV in 1836, but the issue was dropped in 1856, and it was demonetised in 1887.

GROCCER. Modern form of grosser, one who dealt wholesale (en gros). In modern usage the word is applied to a retailer of tea, sugar, coffee, spices, etc. In medieval times he was known as a spicer.

The Grocers' Company is the second of the 12 great livery companies of the city of London. Its founders, known as Pepperers and Spicers, met as a fraternity of S. Anthony as early as 1345, when they were granted letters patent of incorporation by Edward III. Its first hall was built in Old Jewry c. 1427. The existing building in the Poultry, E.C., was erected in 1798-1802. The company built a new wing to the London Hospital in 1876, founded Oundle School, Northants, and middle-class schools at Hackney Downs in 1876. It has contributed largely to the City and Guilds of London Technical Institute, and established scholarships, which are allocated for research in sanitary science.

Grocers' Company arms

GRODNO. Town of Poland. It stands on the Nieman and the Leningrad-Warsaw rly., 160 m. N.E. of Warsaw. It is a busy industrial centre, with manufactures and a trade in corn and timber. In 1921 its possession was in dispute between Poland and Lithuania, but in the settlement of the frontiers in March, 1923, Grodno became Polish territory. Pop. 61,600.

GROG. Name applied by sailors in the royal navy to their ration of unadulterated rum. The word is said to be derived from old Grog, a nickname of Admiral Vernon, so called from his coarse, or program cloak.

Grogging is the name given to an evasion of excise dues by the extraction of spirit absorbed into the wood of casks. By the Finance Act of 1898 grogging and the possession of a cask so treated, or of any spirit obtained by the process, are offences punishable by a fine of £50.

GROIN. In architecture, the angle formed by the intersection of arches or vaults. Groined vaulting is so called to distinguish it from barrel or other forms of arch construction in which no such intersection takes place. See Gothic Architecture.

GROLIER, JEAN, VICOMTE D'AGUISE (1479-1565). French book collector. Born at Lyons, he was ambassador in Milan and Rome and later treasurer under Francis I. He began collecting books, which he had splendidly bound and generally lettered in Latin with the legend "Jean Grolier and his friends." Ten years after his death his famous library of about 3,000 volumes was sold; a number of the books from it are in the Bibliothèque Nationale, Paris, and the British Museum. The Grolier Club, New York, founded in 1834 to encourage the application of art to book production, was named after him.

GRONINGEN. Town of the Netherlands. At the confluence of the Hunse and the Drentsebe Aa, 32 m. by rly. E. of Leeuwarden, it is intersected by numerous canals, has wide streets and 17th century gabled houses, and is surrounded by boulevards on the site of the ramparts. Among its buildings are the Gothic church of S. Martin, mainly of the 13th and 16th centuries; the university, founded in 1614; a museum; the Stadhuis, which was restored in 1787; the 16th century law courts; and the 13th century Gothic 'Aa-Kerk, restored 1500, with a baroque tower added in 1712. Groningen is an important trade centre

Groat. Two sides of the coin minted by Edward III, 14 in. diameter

and manufacturing town, with large printing and lithographic establishments. There are several educational establishments in addition to the university, and there is a large market. Pop. 101,310.

Groom. Typical English livery

GROOM (old Fr. *gromet*, boy). Term applied to a manservant in charge of horses. From its earlier and more general use for any male attendant, the word survives as the title of certain officials in the lord chamberlain's department of the British royal household whose duties are to attend the sovereign.

GROOMBRIDGE.

Village of Sussex, $3\frac{1}{2}$ m. S.W. of Tunbridge Wells, $34\frac{1}{2}$ m. from London on the Southern Rly., which has a junction here. It is in the parishes of Speldhurst (Kent) and Withyham (Sussex). Groombridge Place has a moat. Pop. 790

GROOTE SCHUUR. Official residence of the premier of the Union of S. Africa. It is near Rondebosch station, about $3\frac{1}{2}$ m. from Cape Town, Observatory Road connecting the two. The house was formerly the residence of Cecil Rhodes, who built it. Near it is the Rhodes Memorial, which includes the statue of Physical Energy, by G. F. Watts.

Groote Schuur, near Cape Town, the official residence of the premier of South Africa

See Rhodes, Cecil.

GROS, ANTOINE JEAN, BARON (1771-1835). French painter. Born in Paris, March 16, 1771, he won the approval of Napoleon by his picture of The Battle of Arcola, and made him the central figure of many of his canvases, now in the Louvre and at Versailles, among them Napoleon Visiting the Plague-stricken at Jaffa, 1804, The Battle of Aboukir, 1806, Napoleon at Eylau, 1808, and The Battle of the Pyramids, 1810. After the Restoration

Grosbeak. Bird of the finch family

Gros lost his hold on the public, and took this so much to heart that he drowned himself in the Seine, his body being found at Meudon, June 26, 1835.

GROSBEEK. Bird of the finch family, nearly related to the hawfinch. It is common in the pine forests of N. Europe, and is a rare winter migrant to Great Britain. The male is rosy crimson, the female grey. The bird has a large and massive beak, whence its name.

GROSSMITH, GEORGE (1847-1912). British actor and entertainer. Born Dec. 9, 1847, he became an entertainer in 1870. In 1877 he began his career as actor and singer in Gilbert and Sullivan opera by appearing in The Sorcerer at the Opera Comique, afterwards taking a leading part in these operas at The Savoy, London. In 1889 he resumed his career as entertainer. He died March 1, 1912.

His son, George Grossmith, junr. (b. 1874), made his first appearance on the stage in Haste to the Wedding, at The Criterion, July 27, 1892. From 1901-16 he appeared in musical comedy at The Gaiety, winning success as singer and dancer. He was part lessee and manager of His Majesty's, The Winter Garden and Shaftesbury theatres, and sole lessee of the Strand Theatre.

Weedon Grossmith (1853-1919), a brother of George Grossmith, senr., made his first appearance in London at The Gaiety in 1887. In 1891 he produced and acted in A Pantomime Rehearsal, which ran for two years. His other plays included The Night of the Party, 1901. He created many famous parts, notably the Duke of Killcrankie. He was also an artist of repute. With his brother George he wrote for Punch The Diary of a Nobody, 1892. In 1913 he published his reminiscences, From Studio to Stage. He died June 14, 1919.

GROSVENOR. Name of a family that holds three British peerages. The earliest Grosvenors were found in Cheshire in the 12th century. One was made a baronet in 1622, and was the ancestor of Sir Richard Grosvenor, made Earl Grosvenor in 1784. The earl's descendants became marquesses and then dukes of Westminster (q.v.). The second peerage is the barony of Ebury, conferred in 1857 on Lord Robert Grosvenor, a son of the 1st marquess of Westminster. The third, the harony of Stalbridge, was bestowed in 1886 on Lord Richard Grosvenor, a son of the 2nd marquess. He was chief Liberal whip, 1880-85.

Grosvenor House, the former London house of the duke of Westminster, was built for the duke of Gloucester, brother of George III, in 1842. It had a fine exterior colonnade, and in its western wing was a superb collection of pictures. The house was demolished in 1928, and on part of the site a block of service flats and shops has been built.

The family name is seen in Grosvenor Square, Grosvenor Street, Grosvenor Place, and Grosvenor Road, all in W. or S.W. London.

GROTESQUE. Ancient form of decorative painting or sculpture, in which nature was distorted, parodied, or exaggerated. Thus, in one variety, human and animal forms were combined in fantastic fashion and interwoven with flowers and foliage. The Romans often introduced it into the decorations of their buildings. The word is French, from Ital.

Geo. Grossmith, senr. British actor

grottesca, curious painted work found in grottoes.

GROTIUS, HUGO (1583-1645). Dutch jurist, known in Holland as Huig van Groot. Born at Delft, April 10, 1583, he studied at Leiden and in France, and became a practising lawyer, but found time to write Latin verses and dramas. In 1603 he was appointed historiographer of the United Provinces; other public positions were also given to him; but his share in the politics of the time led to his fall. Having joined Barneveldt and his party, Grotius was sentenced to imprisonment for life in 1619. He escaped in 1620, and lived for some time in

Weedon Grossmith, British actor Russell

poverty in France. After a time his fortunes mended, and having entered the Swedish service in 1634 he was made ambassador to France. He died Aug. 28, 1645.

In exile Grotius wrote his monumental work, *De jure belli et pacis*, published in 1625, in Paris, which is the foundation of modern international law.

The Grotius Society was founded in 1915, its object being to discuss the problems of international law arising out of the Great War. The membership of the society is confined to British subjects, although foreign lawyers are admitted as honorary and corresponding members.

GROTTO (Fr. *grotte*; Lat. *crypta*). Cave or recess in the earth, particularly one made or enlarged artificially for use as a shrine or retreat. One of many notable grottoes is the Dog's grotto, Grotta del Cane, by the lake of

Emmanuel, Marquis de Grouchy, French soldier

Agnano, near Naples. Over the floor of this carbonic acid gas rises to a height of some 18 ins.; stupefying dogs taken into the grotto.

GROUCHY, EMMANUEL, MARQUIS DE (1766-1847). French soldier. Born in Paris Sept. 5, 1766, he fought in Italy in 1798, and becoming one of Napoleon's most trusted leaders, took part in the battles of Hohenlinden, Friedland, and Wagram. He served in the Russian campaign of 1812, and did good service in the retreat after Leipzig in 1813. After Waterloo, at which he and his division failed to appear, he was proscribed and took refuge in the U.S.A., but was permitted to return in 1819, and in 1830 received again his old style of marshal. He died May 29, 1847.

GROUND IVY

(*Nepeta hederacea*). Perennial prostrate herb of the order Labiatae, a native of Europe and N. and W. Asia. The trailing stems are 2 ft. or more in length, with opposite, kidney-shaped leaves, round-toothed at the edges. The tubular, blue-purple flowers are produced in whorls of from three to six at the base of the leaf-stalks. The ground ivy is no relation to the ivy (*Hedera helix*). The plant is bitter and aromatic, and was formerly employed in the manufacture of beer and other beverages, but the introduction of hops superseded it.

Ground Nut, showing lengthened flower stalks and burying fruits

Hugo Grotius, Dutch jurist After M. J. Mirevelt

Over the floor of this carbonic acid gas rises to a height of some 18 ins.; stupefying dogs taken into the grotto.

GROUCHY, EMMANUEL, MARQUIS DE (1766-1847). French soldier. Born in Paris Sept. 5, 1766, he fought in Italy in 1798, and becoming one of Napoleon's most trusted leaders, took part in the

Ground Ivy. Foliage and bluish flowers

GROUND NUT

(*Arachis hypogaea*). Annual herb of the order Leguminosae, a native of S. America and the W. Indies. The leaves are broken up into four oval leaflets, and the pea-like flowers are yellow. After pollination the flower-stalk lengthens and curves to the ground, in which it buries the incipient fruit, which then develops into the

yellowish wrinkled pods which contain two seeds. These are of great value, not only as a food, but as a source of a liquid oil. Other names are earth nut, monkey nut, and pea nut.

GROUND RENT. Name given to the rent paid for the ground on which a house or other building stands, as distinct from that paid for the building. Builders and others often take land on lease, paying usually a fixed annual sum for a fixed term of years. Income tax is paid upon ground rents, and although the ground landlord pays no part of the rates, yet this consideration affects the contract.

GROUNDSEL (*Senecio vulgaris*). Annual herb of the order Compositae. A native of Europe and N. Africa, it has succulent stems

Groundsel. Stem with flowers and leaves

1 ft. or 2 ft. in height, with slender leaves cut into irregular lobes and coarsely toothed. The drooping flower-heads are yellow, succeeded by a small globe of fluffy, silky hairs which carry the fruits everywhere.

Group Captain. Title of the rank in the Royal Air Force equivalent to that of a full colonel in the army and captain in the navy.

GROUSE. Name applied to all the members of the family of game birds known as Tetraonidae, which includes more than 30 species; but popularly used in a more restricted sense. Four species of grouse occur in the N. of Great Britain: the ptarmigan; the blackcock; the capercaillie, which became extinct in Great Britain in the 18th century but was re-introduced in 1837; and the red grouse, or moorcock, by far the most plentiful, and the bird commonly implied when speaking of grouse. The red grouse (*Lagopus scoticus*), which measures about 15 ins. in length and weighs from 20 oz. to 30 oz., is found only in the British Isles. The plumage is usually a reddish chestnut, rarely black, and may be spotted with white on the breast. The shooting season extends from Aug. 12 till Dec. 10. See Close Time.

Grouse. The red grouse, one of the few species exclusively British. W. S. Berridge, F.Z.S.

GROYNE. Projection built out to sea to obstruct the continuous drift of shingle or sand. The drift sometimes results in certain localities being denuded of their share of detritus and rendered more liable to erosion. To check this action groynes are projected from the shore, generally down to about low-water mark, against which detritus such as shingle or sand heaps itself on one side. Groynes are usually constructed of heavy timber planks bolted to, and supported by, piles and struts. See Breakwater.

GRUB STREET. Old name of a London thoroughfare in Cripplegate (q.v.), E.C., running N.E. from Fore Street to Chiswell Street, and known since 1830 as Milton Street. It was satirised by Pope and Swift as the home of the poorest and most helpless of literary drudges—whence the application of its name to writers and literary efforts of a mean character. To-day it has business establishments.

GRUYÈRE, LA. District of Switzerland, in the canton of Fribourg. It lies in the Saane

valley and is celebrated for its cheese. The chief town is Bulle, with a 13th century castle, but the historic capital is Gruyères, on a hill at an alt. of 2,713 ft., with a fine old castle.

GUACHARO or **OIL BIRD** (*Steatornis caripensis*). Bird, related to the nightjars, native of the N. part of S. America. It feeds

Guacharo. Specimen of the Trinidad species

on hard nuts and fruits, and is entirely nocturnal, sleeping during the day in dark caverns. The young are extensively used as a food by the S. American Indians, and also as a source of oil. The guacharo is brownish grey in colour, about the size of a crow, and is found in Trinidad and Ecuador.

GUADALAJARA. City of Mexico. Lying 5,095 ft. above sea level, it is 280 m. W.N.W. of the city of Mexico, and is served by a branch of the Mexican Central rly. The cathedral,

Guadalajara, Mexico. The cathedral, built in the early 17th century

completed in 1618, is one of the most magnificent ecclesiastical structures in the country and contains a celebrated painting by Murillo. Other buildings are the university, bishop's palace, government building, public library, and academy of fine arts. It trades in agricultural produce. Pop. 145,000.

The town in Spain of the same name stands on the left bank of the Henares, 33 m. E.N.E. of Madrid. It has two 15th century palaces and the old Mendoza palace. Pop. 13,536.

GUADALQUIVIR (Arab Wad-al-kebir, great river). River of S. Spain, the ancient Bætis. It rises by various headstreams in the mts. in the E. of the prov. of Jaen, and flows N.E. then W. and S.W., emptying into the Atlantic about 20 m. N. of Cadiz. Its length is 360 m. Among its tributaries are the Genil, Guadiana Menor, Guadajoz, and Guadalimar.

GADELOUPE. Two islands of the Lesser Antilles, W. Indies, forming a French colony. In the W. Atlantic. S. of Antigua and N. of Dominica, the two islands are separated by a narrow strait called Rivière Salée. The large western island, Guadeloupe proper, is called Basse-terre, the eastern being known as Grande-terre. The seat of the government is at Basse-terre (q.v.). Total area, 688 sq. m. Pop. 243,243.

GUANACO or **HUANACO** (*Aucubia huanaco*). Species of llama. Ranging from Peru to Patagonia, it is rather larger than the vicuña, a good specimen being rather more than 4 ft. high at the shoulder. Guanacos live in large herds in the mountains and are difficult to approach, though in captivity they are easily domesticated. The term llama is usually applied to a domesticated breed of this species. See Llama.

GUANCHES. Aboriginal people of the Canary Islands. Descended from a prehistoric Libyan immigration into Teneriffe, they were subsequently affected by other arrivals. Mastered by Spain in the 15th century, they form the latent substratum of the present population. See Canary Islands.

GUANO. Name originally given to the accumulated excreta of birds found principally upon the shores and islands of the South American coast and little-frequented islands in the Pacific Ocean. The original deposits have been much depleted by commercial demand, and artificial substitutes are largely employed. The principal ingredients of guano are phosphorus and ammonia.

GUARANA (*Paullinia sorbilis*). Climbing shrub of the order Sapindaceae. It is a native of Brazil, and has small whitish flowers in sprays. The pear-shaped fruit is three-celled, each cell containing a single seed. The seeds are pulverised and made into a dough. This, when rolled into sticks, is grated into sugar and water to make a beverage.

GUARANTEE (old Fr. garantie, warranty). Term of English law. It means a promise to be answerable for the debt, default, or misarrangement of another. The obligation guaranteed may be a mere debt, or it may be the performance of a contract, e.g. when someone guarantees that another shall do certain work in a certain way, or in a certain time. A guarantee must, under the Statute of Frauds, be evidenced by writs signed by the guarantor. A guarantee is a contract requiring the utmost good faith.

A guarantee association is a society for guaranteeing persons against loss. In the United Kingdom the most usual kind are those that, in return for annual payments, undertake to make good any defalcations on the part of persons occupying positions of trust, e.g. a cashier. See Insurance; Lloyd's.

GUARDIAN (old Fr. gardier, to guard). Word meaning literally one who guards or protects another.

In English law a guardian is a person appointed by the father or by the court to look after the person of an infant. If the ward is refractory the guardian can make him a ward of court by making application to the Chancery Division.

In England, guardians of the poor were the men and women elected by the ratepayers to look after the poor, educate the children, manage the workhouses, etc. In each union of parishes they formed a board of guardians. By an Act that came into force in April, 1930, the boards of guardians were abolished, their duties being handed over to the county and county borough councils. See Poor Law.

GUARDS. In the military sense, soldiers of superior type, prestige, and privilege. They were originally the bodyguard of emperors and kings, and in Britain and other countries the nucleus of the standing army.

In England the existing Guards date from the time of Charles II, and were then divided into horse and foot. The horse guards consist now of the Life Guards and the Royal Horse Guards, collectively known as the household cavalry. The foot guards are the Grenadier, Coldstream, and Scots Guards, to which the

Guanaco, the wild llama found in various parts of South America. Gambier Bolton, F.Z.S.

frish Guards were added in 1902 and the Welsh Guards in 1915. During the Great War a new unit, the Machine Gun Guards, was established. Together they form the brigade of Guards. The depot for the Foot Guards is at Caterham, where recruits are trained. The national memorial to the Guards' services in the Great War was unveiled Oct. 16.

1926, on the Horse Guards Parade, London. In 1928 a monument to the Guards was unveiled at Ginchy (q.v.). See Coldstream Guards, etc.

Guards. Memorial to the Guards' services in the Great War, on the Horse Guards Parade, London

GUATEMALA. Republic of Central America, a member of the League of Nations. It lies S. and E. of Mexico, and is bounded S.W. by the Pacific, E. by British Honduras and the Gulf of Honduras, and S. by Salvador and Honduras. The capital is Guatemala City—the fourth of the name, three having been destroyed by earthquake and volcanic eruption, the third by earthquake in 1918. In 1920 the building of the fourth capital was started 12 m. S. of the destroyed one, and in 1928 was completed. Its pop. is 115,928.

Other important towns include Quezaltenango, Coban and Totonicapán. The area of the republic is 42,456 sq. m. Pop. 1,600,535.

The Atlantic slope is thinly peopled, the bulk of the population inhabiting the more fertile Pacific area. The climate is hot near the coast, temperate in the higher regions. Earthquakes are frequent. Coffee is the staple product. There are some 600 m. of rly., and three wireless stations. The unit of currency is the gold quetzal, equal to a dollar. A central bank was established in 1926.

GUAVA (*Psidium guava*). Small tree of the order Myrtaceae, a native of the W. Indies. The branches are four-sided, the leaves opposite, oval, and downy beneath, and the flowers white. The fruit is apple or pear-shaped, with thin, yellow rind filled with pulpy flesh, of acid-sweet flavour, in which are numerous hard, kidney-shaped seeds. The fruit is made into guava jelly and guava chutney.

Guava. Flower and fruit of the West Indian tree

telegraphic communication. The city is the seat of a university. There is a good harbour, protected by a breakwater. The Guayaquil-Quito rly. terminus is on the opposite side of the estuary, but there is another line to the coast. The port, which has a wireless station, is visited by European steamers via the Panama Canal. Manufactures include, soap, candles, liquors, mineral waters, and food products, and there is a trade in tobacco, rubber, etc. Pop. 100,000.

GUDGEON (*Gobio*). Genus of small fresh-water fishes, of which one species is common in most British rivers. It is related to the carp, and has two small barbels on the snout. It is usually found on the gravelly bed of the stream, is easily caught, and is fairly good eating.

GUELDER ROSE (*Viburnum opulus*). Small tree of the order Caprifoliaceae. A native of Europe, N. and W. Asia, and N. America, the smooth leaves are cut into three toothed lobes. The flowers form a cluster, of which the central mass are small and perfect, of a creamy tint, while those of the outer ring are three times the size, quite white, and without pistil or stamens. The garden guelder rose, or snowball tree, is a variety in which all the flowers are sterile like this outer row. In the wild plant the fertile flowers are succeeded by large juicy berries of a translucent red.

GUELPH OR **GUELF**. Italian form of the German word *Welf*, and as such that of one of the parties in the noted medieval struggle between Guelphs and Ghibellines. Meaning wolf, it began as the Christian name of a race of nobles who were powerful in Bavaria in the 11th and 12th centuries, and the word became the battle cry of their followers.

The two political factions, Guelph and Ghibelline, denoted primarily the division into imperialist and anti-imperialist parties, that is, supporters respectively of the emperor as head of the Holy Roman Empire in Italy, and of his opponents, at the head of whom was the pope. The feud, which was especially strong in Florence, was carried into almost every relation of life, and each party had its distinct habits and customs in dress, manners, and the like. See Ghibellines; Hohenstaufen. Guelph was also used as the name of the family to which the electors of Hanover and, therefore, the sovereigns of Great Britain from 1714 to 1837 belonged, these being descended from the early Welfs.

The Royal Guelphic Order was a Hanoverian order of knighthood, instituted by George IV when Prince Regent.

GUELPH. City of Ontario, Canada. On the Speed river, about 50 m. W. by S. of Toronto, it is served by the C.P.R. and the C.N.R. Power for the city's manufactures is derived from the falls of the Speed; it is a market for the agricultural produce of the district. Here is the Ontario Agricultural College, with experimental farm. Pop. 18,128.

GUERNSEY. One of the Channel Islands. Second in size to Jersey, it is about 9 m. long and 5 m. broad, and has an area of 24½ sq. m. The capital is St. Peter Port, from which regular communication is maintained with Southampton, Weymouth, and other English ports, and with various ports in France. The Guernsey breed of cattle is famous. Granite is quarried. The chief industry is market gardening, large quantities of potatoes, grapes,

The city is the seat of a university. There is a good harbour, protected by a breakwater. The Guayaquil-

Gudgeon, a small fresh-water fish

flowers, tomatoes, etc., being grown, mainly for the English market. Pop. (with Herm and Jethou), 38,315. See Channel Islands.

GUERNSEY LILY (*Nerine sarniensis*). Bulbous herb of the natural order Amaryllidaceae. A native of S. Africa, it has strap-shaped leaves, which appear later than the flowers. These, which are lily-like, form a large cluster at the top of a stout stem.

GUESCLIN, BERTRAND DU (1320-80). French soldier. Born in Brittany, he fought in the civil war then raging there and became a renowned opponent of England. When peace was made in 1360 he marched into Spain at the head of an army of mercenaries, and there was taken prisoner by the English at Navarre. On the renewal of the war between England and France he was one of the French leaders. He died July 13, 1380.

Guernsey Lily. Flower-head and strap-like leaves

GUEST, SIR JOSIAH JOHN (1785-1852). British ironmaster. Born Feb. 2, 1785, he entered the ironworks at Dowdals, of which he became manager in 1815. He had already introduced considerable improvements in making iron, and under him the works became the largest of their kind. He became their sole proprietor in 1849. Guest was M.P. for Honiton, 1826-31, and for Merthyr Tydvil from 1832-52. He was made a baronet in 1838, and died Nov. 26, 1852. His eldest son became Lord Wimborne (q.v.).

His wife, Lady Charlotte Guest (1812-95), was a noted Welsh scholar. In 1838-49 she issued a three-volume version of the medieval Welsh tales, commonly known as *The Mabinogion* (q.v.), which marked an epoch in the study of Celtic literature.

GUIANA, BRITISH. Colony of S. America. Bounded N. by the Atlantic, S. by Brazil, W. by Venezuela, and E. by Dutch Guiana, it includes the settlements of Essequibo, Berbice, and Demerara, and has an area of 89,480 sq. m. Georgetown is the capital. Pop. 308,473. The coastal strip is the only part under cultivation, and virtually the only part inhabited. The chief rivers are the Essequibo, Berbice (400 m.), and Demerara (250 m.). In the Kaieteur Falls the colony has a valuable asset for generating power. The climate is hot and the rainfall heavy. The staple product is sugar. There are about 100 m. of rly. In 1928 a new constitution came into force. The court of policy and the combined court were abolished and a single legislative body was set up.

GUIANA, DUTCH, OR SURINAM. Colony of S. America, belonging to the Netherlands. The area is 49,845 sq. m. It lies between British Guiana on the W. and French Guiana on the E., and is bounded N. by the Atlantic and S. by Brazil. In the S. are impenetrable forests and savannahs. About one-tenth only of the territory is settled, and most of the plantations lie along the shores of the Surinam river. The capital is Paramaribo. Pop. 145,763.

GUIANA, FRENCH. Colony of S. America, belonging to France. It lies between Dutch Guiana on the W. and Brazil on the E. and S., while the Atlantic washes its shores on the N. The colony includes the so-called island of

Cayenne, on which stands the capital of the same name. It is only separated from the mainland by the forking of a river. Its area is about 34,000 sq. m. Pop 47,341.

GUICCIOLI, TERESA, COUNTESS (1801-73). Mistress of Lord Byron. A daughter of Count Gamba, a nobleman of Ravenna, she married in 1817 an elderly man, Count Guiccioli. Shortly afterwards she was introduced to Byron, and she was more or less closely associated with the poet from then until his death in 1824. Later she married a French marquis, and she died in Florence, having published in 1868 a book on Byron, of which there is an English translation.

GUIDES, CORPS OF. Unit of the Indian army. It owes its existence to Sir Henry Lawrence, who, in 1846, decided to raise for service on the frontiers a body of troops more mobile than the regulars. Among the incidents in the history of the Guides are the march to Delhi during the Mutiny, the massacre at Kabul in 1879, their share in the Afghan War, 1878-80, and at the relief of Chitral. The headquarters are at Mardan.

GUILBERT, YVETTE (b. 1869). French singer and actress. Born in Paris, she first made her name in café-concert engagements, and in 1890 appeared at the Eldorado and Ambassadeurs, Paris. She was enthusiastically received in London, Rome, Vienna, Berlin, and elsewhere. She toured the U.S.A., 1906-7, 1909-10, and 1915-17, becoming teacher of dramatic diction at New York. She wrote two novels, *La Vedette* and *Les Demi-Vieilles*, 1902, and published *How to Sing a Song*, 1919; *Memoires*, 1927; and *The Song of My Life*, 1929.

Yvette Guilbert, French singer

Corps of Guides. Private of infantry company

is a Jacobean building founded in 1619 as an almshouse by Archbishop Abbot, and famous for its oak; the 16th century grammar school has a library and chained books. The town has the keep of its Norman castle, a museum, county hall, county hospital, and institute. The guildhall is a 17th century brick and timber building. In 1927 a new diocese of Guildford was formed. In 1928 it was proposed to erect a cathedral, and a site was selected on a hill above the town. In 1930 the assizes were transferred from Guildford to Kingston. Market day, Tues. Pop. 26,000.

Guildford is a town in Western Australia 9 m. N.E. of Perth. Pop. 2,530.

GUILDHALL. In medieval architecture, a hall for the meeting of the guild merchants.

Its origin was a roofed booth for collecting market tolls. A room for business purposes was generally built over the toll booth, and the practice of placing the council chamber of the guildhall on an upper floor, with access to the market place, was retained long after the original rough toll booth had become a structure of stone or brick.

THE LONDON GUILDHALL. This building, which is situated at the end of King Street, Cheapside, was built, 1411-35, on the site of an earlier structure. Most of the medieval timber work was destroyed by the Great Fire of 1666, but parts of porch and hall remain, while the crypt escaped almost unscathed. Wren replaced the open roof with a flat ceiling. The S. front was restored in 1789, and a complete

Guildhall, London. The fifteenth century porch, restored in 1789

Guillemot. Specimen of Uria troile

restoration was undertaken in 1864, when Sir Horace Jones modelled the open oak roof on that destroyed in 1666, and added a metal spire. Great Hall is used for the election of the lord mayor and sheriffs and for banquets. The library and reading-room, free to the public, date from 1871-72. There is a museum, devoted to London antiquities, and an art gallery.

GUILLEMOT (Uria).

Genus of sea birds belonging to the auk family. The guillemot is common around the British coasts, but spends nearly all its time at sea. The plumage is white on the under parts, with dark head, back, and wings. No nest is made, the single large egg being laid on a bare cliff-ledge.

Guildford, Surrey. The High Street of this beautiful and historic town

GUILDFORD. City, borough, and market town of Surrey, for some purposes the county town. On the river Wey, it is 29 m. from London on the Southern Railway. Abbot's Hospital

its use to the Constituent Assembly in 1789. It is still the means of capital punishment in France. The name is applied to a machine which is used for cutting paper.

Guillotine is also used to indicate the procedure by which the discussion of a measure in Parliament is cut short by fixing a time at which the discussion must end.

GUINEA. Obsolete gold coin of the English currency. It was first struck in 1663, when it was coined of gold imported from Guinea. Its nominal value was 20 shillings, but owing to depreciation of the silver coinage it rose to be worth 30 shillings by 1694. In 1717 its value was fixed at 21 shillings. The last issue was that of 1813, and in 1817 its place as the standard gold coin was taken by the sovereign. As a monetary unit the guinea has survived.

GUINEA, FRENCH. French colony on the coast of W. Africa. It lies between Portuguese Guinea and Sierra Leone, by which it is bounded on the N.W. and S.E. respectively. On the N. Senegal and Upper Senegal-Niger, on the S. Liberia, and on the E. the Ivory Coast form the boundaries. The capital is Konakri. Area, 92,640 sq. m. Pop. 2,185,697.

Portuguese Guinea, in W. Africa, is completely surrounded by French territory, except where it faces the Atlantic. It includes the adjacent archipelago of Bissagos, the capital being Bolama, on the island of Bolama. Cattle are numerous. Area, 14,000 sq. m. Pop. about 800,000.

Spanish Guinea, or Rio Muni, is a colony belonging to Spain to the S. of Cameroons, and entirely surrounded by that territory except where it borders on the sea. The colony is administered from Santa Isabel in the island of Fernando Po (q.v.). Besides the territory on the mainland (known as Rio Muni), the colony consists of the islands of Annobon, Little and Great Elobey, Corisco, and Fernando Po. The area of Rio Muni is about 10,000 sq. m. Pop. about 140,000.

The Gulf of Guinea, on the W. coast of Africa, stretches from Liberia to Cape Lopez in French Equatorial Africa. Its bays include

Guinea Fowl, a member of the pheasant tribe

GUINEA FOWL (Numida meleagris). Member of the pheasant tribe, in general appearance more suggestive of a small turkey than a pheasant. In its wild state the guinea fowl is well distributed over S. and Central

Guillotine used by the French revolutionaries. From a contemporary print

Guinea of George III, known as the spade guinea, from the shield. Actual diameter 1 inch

of Benin, Bight of Biafra, Corisco Bay, and Nazereth Bay, and it receives the waters of the Volta, Niger, and Ogowe.

Africa, but is absent from the northern countries. The birds live in large flocks and run with great swiftness, seldom flying. The guinea fowl was appreciated by the Greeks and Romans.

GUINEA PIG. Small domesticated rodent belonging to the cavy tribe, and nearly related to the pacas and agutis. It is believed to have descended from the black Cutler's cavy of Peru, long ago domesticated by the Incas. These cavies were usually self-coloured, the tortoiseshell coat of the modern guinea pig and the long hair of certain varieties being the result of careful selective breeding. See Cavy.

Guinea Pig. Specimens of the rodents often kept as pets

GUINEVERE. Character in the *Morte D'Arthur*. The daughter of Leodegrance, king of Camelot, she married King Arthur. She fell in love with Sir Lancelot, and their relations served to bring about the last great battle and the death of Arthur. She retired to a nunnery at Amesbury and there died. See Arthur.

GUINNESS. Irish family of brewers. Arthur Guinness, in the 18th century, had a brewery at Leixlip, which he transferred to Dublin. Under his grandson, Benjamin Lee Guinness (1798-1868), the business was much enlarged, and in 1886 it was made a limited company. Benjamin Lee Guinness, made a baronet in 1867, was an M.P. and a great benefactor to Dublin. His eldest son became Baron Ardilaun, 1880, and died without sons in 1915. The other, Edward Cecil, was made a baronet in 1885, Baron Iveagh in 1891, viscount in 1905, and earl in 1919. He died Oct. 7, 1927. See Iveagh, Earl of.

The Guinness Trust is a fund established by 1st Earl of Iveagh in 1889 for the provision of houses for the poorer classes in London and Dublin. The sum set aside was £250,000.

GUIBOROUGH. Market town and urban district of Yorkshire (N.R.). It is 9 m. S.E. of Middlesbrough, on the L.N.E. Rly.

Guisborough. Ruins of the 12th cent. Augustinian priory

The chief buildings are the Perpendicular church of S. Nicholas, the town hall, and the grammar school. The industries are mainly connected with the iron found in the Cleveland district. Market day, Tues. Pop. 7,105.

GUISE. Town of France, on the Oise, 30 m. N. of Laon. The castle dates in part from the 16th century. Here are works for making stoves and similar goods, conducted on the cooperative principle; in connexion with them is a large building where the workmen live on the communistic plan. The town was taken by the Germans in 1914, in their first onrush towards Paris, but was recovered during the final advance of the Allies in Oct., 1918. Pop. 6,185.

THE GUISE FAMILY. The earldom of Guise was brought to Rudolph of Lorraine by his wife Marie of Blois, in 1333, and passed to René II of Lorraine, from whom it came to his second son Claude (born Oct. 20, 1496), in whose hands it was converted into a duchy. Claude was made governor of Champagne, and became a peer of France. He died April 12, 1550. François, 2nd duke, was born Feb. 17, 1519. His defence of Metz against

Charles V, 1552, made him famous as a general, and under Francis II he was virtually supreme ruler of France. He took the field in the religious wars of 1562, and was shot by a fanatic, dying Feb. 24, 1563. Henri, 3rd duke (1550-88), son of François, was prominent in the massacre of S. Bartholomew, 1572. He was assassinated by order of Henry III, Dec. 25, 1588. Henry, 5th duke (1614-64), became archbishop of Reims while still a young man, but renounced orders on his father's death. Mary of Guise (1515-60), who married James V of Scotland, was mother of Mary Queen of Scots. François Joseph (1670-75) was the 7th and last duke. See Mary Queen of Scots.

GUISELEY. Urban district of Yorkshire (W.R.). It is on the L.M.S. Rly., 2 m. from Otley, and has factories for making woollens. Every year, on the eve of S. Oswald's day (Aug. 4), there is a service in the church, followed by a pageant dealing with the story of Oswald. Pop. 5,353.

GUITAR. (Gr. kithara, Lat. cithara). Stringed instrument, with a neck and fretted finger-board. The true Spanish guitar has six strings, played by plucking with the fingers. Many other forms and sizes may be seen in museums.

GUITRY, LUCIEN (1860-1925). French actor. He first appeared at the Gymnase in *La Dame aux Camélias*, 1878. He became best known by his successful management of the *Théâtre de la Renaissance*, 1902-9. The death of Constant Coquelin in 1909 left Guitry the foremost French actor. He appeared in London in 1902, 1909, 1920, and died June 1, 1925.

His son Sacha (b. 1885) is both actor and dramatist. Among his numerous plays, witty, cynical, and sparkling, are *Nono*, 1905; *La Clef*, 1907; *La Prise de Berg-op-Zoom*, 1912; *Pasteur*, 1919; *Mozart*, 1929. With his wife, Yvonne Printemps, he took part in his own plays in London.

GUIZOT, FRANÇOIS PIERRE GUILLAUME (1787-1874). French statesman, historian, and academician. He was born on Oct. 4, 1787, of Huguenot parentage. In 1812 he was appointed professor of modern history in the university of France. Under Louis XVIII he held several administrative offices. On the accession of Louis Philippe he became minister of the interior and afterwards of public instruction. As prime minister his refusal to yield to popular demands was largely instrumental in bringing about the revolution of 1848. He died Oct. 12, 1874. Guizot's most important historical works are *Histoire de la Révolution d'Angleterre* and *Histoire de la Civilisation en Europe*. Pron. Ghee-zo.

GUJARAT. Town of the Punjab, India, famous for the battle fought between the British and the Sikhs, Feb. 21, 1849. Lord Gough, the British commander, attacked the 60,000 Sikhs first with his artillery. Later an advance was made, and the Sikh ranks broke into flight. The result was the annihilation of the Sikh army and the cap-

ture of its guns and baggage. The British army of 24,000 lost about 800. Gujarat was taken and the Punjab surrendered.

GULDEN. Silver coin current at various times in Germany and the Netherlands. In Austria and the S. German states it was in use until 1876, and is current as the guilder or gulden in Holland. See Florin.

GULES. One of the seven heraldic tinctures, red. It is represented in drawings by a series of thin vertical lines close together. See Heraldry.

Gulf Stream. Chart of the North Atlantic Ocean, showing origin and directions of the current

GULF STREAM. Warm ocean current flowing from the Gulf of Mexico along the S.E. coast of the U.S.A. The N.E. trades cause a great drift of waters from E. to W. across the Atlantic Ocean N. of the equator. Part of this current skirts the W. Indies, but the greater portion enters the Caribbean Sea and passes to the Gulf of Mexico. Here the piling up of waters causes a stream current to issue from the Gulf of Mexico between Florida and Cuba. This current unites with the branch which keeps outside the W. Indies to form the Gulf Stream.

On reaching the latitudes of the prevailing westerlies the Gulf Stream loses its stream character and becomes a great drift, called the Gulf Stream drift or N Atlantic drift. It influences the climate of W. Europe by raising the winter temperature.

GULFWEED (*Sargassum bacciferum*). Sea-weed of the class Phaeophyceae. It has narrow, stalked leaves, with stalked air-bladders at their base. It floats on the sea, forming vast

Gulfweed. Leaves and fruit of the Sargasso Sea seaweed

fields that impeded shipping. Its colorated headquarters is in the Atlantic, where it covers a vast area known as the Sargasso Sea.

GULL. Order (Laridae) of sea birds, comprising

about 50 species. It includes the various genera commonly known as gulls, terns, kittiwakes, and skuas. Most are grey and white in colour, have long and powerful

wings, and are web-footed. All are fine swimmers and fliers, and many of them divers. The majority haunt the coasts, usually in flocks, but are frequently found far inland during severe weather. When at sea they feed on fishes and small crustaceans. Gulls are all migratory, either wholly or partially. Most species nest on the cliffs; some, as the black-headed gulls, in the marshes.

GULLANE. Watering place of Haddingtonshire. It is on Gullane Bay, an opening of the Firth of Forth, 4 m. from N. Berwick and 19½ from Edinburgh on the L.N.E. Rly. There are golf links. Pop. 1,441.

GUM (Eucalyptus). Large genus of tall evergreen trees of the order Myrtaceae. With few exceptions they are natives of Australia, where they are the dominant trees of the forests. They have undivided, leathery leaves. The upper part of the calyx and the corolla are shed when the flower opens, so that the great number of stamens form the most conspicuous feature of the expanded blossom. Eucalyptus oil is obtained from the leaves of *E. globulus*. Among other products is a kind of kino, which exudes from the tree as a resinous juice and has astringent qualities.

GUM (Lat. gummi). Adhesive and thickening agent. True gum is the exudation and sometimes the juice of trees and plants. It is soluble in water. The best is gum arabic, obtained from the stem and branches of various species of *Acacia*, the finest kind being obtained from *Acacia Senegal*. Gum resins are also the products of plants, and consist of a mixture of gum—soluble in water—and resin, only soluble in alcohol—such as ammoniacum, myrrh, etc. Many are used in medicine. Gum substitute, or British gum, is made by converting starch into dextrin either by heating or treating with acids, and is largely used as an adhesive.

Gum arabic, flowers of *Acacia Senegal*

GUM or **GINGIVA**. Fleshy tissue which surrounds the margin of the upper and lower jaws. The gums are covered by mucous membrane which is continuous with that of the mouth. Inflammation of the gums generally arises from a neglect of the teeth. Chronic inflammation may eventually lead to loosening and falling out of the teeth. An abscess at the root of a tooth may break through on the surface of the gum, the condition then being known as a gumboil. Pyorrhoea alveolaris is an inflammatory state of the gums associated with the formation of pus between teeth and gum. See *Pyorrhoea*; *Teeth*.

GUMBINNEN. Town of E. Prussia, Germany. It is about 66 m. from Königsberg, and stands at the junction of the rivers Rominte and Pissa. The industries include the making of machinery, weaving, and tanning. Gumbinnen was made a town by Frederick William I of Prussia, who settled some religious refugees here in the 18th century. During the early part of the Great War the district was invaded by the Russians, who on Aug. 20, 1914, defeated the Germans here. Pop. 18,948.

GUN (Anglo-Saxon *gonne*, machine for throwing missiles). Term loosely employed to describe several widely different varieties of firearms. Amongst the smaller varieties the term gun is chiefly confined to long-barrelled, smooth-bore sporting weapons, and the automatically operated rifles termed machine guns. Among the larger firearms gun is the designation of the long-barrelled rifled weapons with a long range, greater muzzle velocity, and comparatively flat trajectory—in contradistinction to the more lightly con-

structed howitzers, which work at a lower pressure, have a shorter range, and attain this by a very steep or high trajectory.

SPORTING GUNS. Modern sporting guns are essentially designed to throw a charge of small shot to an effective range of 50 to 90 yards, the barrels being smooth-bored. Most guns are double-barrelled. The size of the bore is designated by a number, the most usual size being 12 bore. But 8 and 4-bore guns are employed for duck shooting, and 16, 20, and 28-bore guns are used when an exceptionally light weapon is desired. All modern weapons are breech-loading. (See *Breech-loader*; *Rifle*.)

ARTILLERY. The ordnance used in land warfare includes field guns, medium and heavy artillery. The field gun weighs about 30 cwt., has a calibre of about 3 ins., and fires a projectile of 15 lb. to 18 lb. Its range is 10,000 to 15,000 yards. Field guns were formerly drawn by teams of horses, the gunners being accommodated on the limbers, but mechanical traction is now the rule. In horse artillery the gunners were mounted. Other types are the 4.7 in. gun, firing a 50-lb. shell to a distance of 15,000 yards, and the 6 in. weapon with a 100-lb. projectile and a range of 15 miles. Still larger guns, on railway mountings, include the 9.2 in., with a 380-lb. shell, and others of 12 in. and 14 in. calibre. The latter can project a shell weighing over half a ton to a distance of 20 miles or more. Howitzers range in calibre from 4.5 in. to 20 in. Anti-aircraft guns are constructed to fire at a high elevation with a flat trajectory.

NAVAL ORDNANCE. The standard type of big gun for the British navy was for many years the 12 in. The gun weighed over 57 tons, and fired a projectile of 850 lb. with a cordite charge of 309 lb. The complete gear for working two guns of this character would represent a weight of about 600 tons, enclosed in a barbette mounting or gun-house. With the installation of the 13.5 in., 15 in., and 16 in. heavy guns, the weights have been increased enormously.

A few 18 in. guns were mounted in monitors during the Great War, but the largest gun now in the British service is the 16 in. This fires a projectile weighing 2,461 lb., and is credited with a range of 35,000 yards. The armament of a typical modern battleship includes nine 16 in. guns, mounted in triple turrets; twelve 6 in. guns, and six 4.7 in. anti-aircraft guns. The lesser guns of the British navy are analogous in make to the larger ones. The 9.2 in. fires a projectile of 380 lb. The 6 in. discharges ten aimed rounds of 100 lb. per minute. There are also the 5.5 in., the 4.7 in., and the 4 in. semi-automatic gun for flotilla leaders; also the 4.7 in. and 4 in. high-angle fire guns for anti-aircraft practice.

GUN LICENCE. This is a permit necessary for the possession of firearms. In Great Britain the licence permits the owner to carry firearms. It costs 10s. a year, and expires on July 31. Holders of game licences are exempt. See *Artillery*; *Howitzer*, etc.

GUNBOAT. Term properly applied to small craft capable of operating in shallow waters and limited areas, and in which the gun assumes an unusual importance. River gunboats of the British navy, originally designed for service on the great rivers of China, were revived in the Great War for the Mesopotamian campaign. The smaller monitors built for service in the Great War were officially classed as gunboats. See *Condor*.

GUNCOTTON. Nitrocellulose of the highest possible degree of nitration, containing about 13 p.c. of nitrogen in commercial practice. Cotton waste is the raw

material generally employed. The nitrating acid contains about 75 p.c. sulphuric acid, 17 p.c. nitric acid, and 8 p.c. water. When nitration is complete the guncotton is thoroughly washed to remove the bulk of the acids, and is then boiled in about 10 series of waters to remove unstable products. In the dry state guncotton is very sensitive to friction and percussion, and must be handled with great care. It is used as an ingredient of cordite (q.v.). See *Explosive*.

GUNMETAL. Alloy of copper and tin, usually in proportion of 90 parts of the former and 10 of the latter. It thus belongs to that class of alloys known as bronzes. Gunmetal was for a long period the chief metal used in the manufacture of cannon, its place now in that connexion being taken by steel. Its uses to-day lie chiefly in the construction of parts of machinery where steel or iron cannot be employed, as in certain classes of pumps. See *Alloy*; *Bronze*.

GUNNER. Private soldier in the artillery who serves a gun, as distinguished from a driver, who is in charge of horses. The rank of master gunner is peculiar to the garrison artillery. The 3rd class master gunner holds the highest rank of non-commissioned officer, and master gunners of the 1st or 2nd class are warrant officers. There are also gunners in the navy and marines.

GUNNERSBURY. District of Middlesex. It is between Ealing and Acton on the N and Brentford, Kew, and Chiswick on the S., and is served by the District and L.M.S. Rlys. The estate was purchased in 1761 for Princess Amelia, daughter of George II. Gunnersbury House was pulled down in 1801, rebuilt on a smaller scale, and superseded in turn by a mansion belonging to the Rothschild family, into whose hands the estate came about the middle of the 19th cent.

GUNNERY. Science and art of shooting with heavy guns. It is based on a knowledge of internal ballistics—the behaviour of gun and projectile under pressure of the gases of explosion—and external ballistics, which are concerned with the flight of the projectile at various ranges and in various conditions. The chief school of naval gunnery, known as H.M.S. Excellent, is situated on Whale Island in Portsmouth Harbour. Artillerymen are trained at Woolwich and in the military gunnery schools at Shoeburyness and Salisbury Plain. See *Artillery*; *Ballistics*; *Gun*.

GUNNING. Name of two noted beauties, Elizabeth and Maria. The daughters of an Irish squire, they went to London in 1751

Elizabeth Gunning, Duchess of Hamilton and of Argyll
From a print in the British Museum

intending to go on the stage. The beauty of the pair made an extraordinary impression in society and among the populace. In 1752 Elizabeth married the 6th duke of Hamilton (d. 1758), and in 1759 she married the marquess of Lorne, who, in 1770, became 5th duke of Argyll. She died May 20, 1790. Maria, the elder of the two, married the 6th earl of Coventry in 1752. She died of consumption, Oct. 1, 1760.

GUNPOWDER. Oldest known explosive, a mechanical mixture of saltpetre, charcoal, and sulphur. Military powder generally contains saltpetre, 75 p.c.; charcoal, 15 p.c.; and sulphur, 10 p.c.; but for blasting the variations of composition are considerable. Gunpowder has been largely displaced as a propellant by smokeless powder but finds considerable use for blasting in certain types of shell and cheap sporting cartridges.

and as an igniter for smokeless powder in cannon. See Explosivo.

GUNPOWDER PLOT. Plot to blow up the Houses of Parliament on Nov. 5, 1605, on which day Parliament was to be opened by King James I. A search under the buildings was made, and Guy Fawkes, one of the conspirators, was found there. The ceremony of searching the vaults of Parliament at its annual opening is a legacy of the Gunpowder Plot. See Fawkes, Guy.

GUN ROOM. Room in warships so called because it was formerly situated at the end of the gun deck. The modern gun room is a mess shared by sub-lieutenants, engineer sub-lieutenants, officers of the accountant branch, junior to assistant paymasters of four years' seniority, and midshipmen.

GUPTA. Empire that flourished in India from between 300 and 500 A.D. It was founded by a certain Chandragupta and enlarged by his successor Samudragupta. The real Gupta empero was in northern India, where was its capital Pataliputra, but Samudragupta conquered almost the whole of the peninsula.

*Sergeant of Gurkha regiment

After 450 it was attacked by the Huns, and when Skandagupta died, about 450, it came to an end, although princes of the family ruled for some 350 years longer over a smaller area, known as Magadha. The Gupta era, long used in Indian chronology, dated from Feb. 23, 320.

GURKHA. Name usually applied by Europeans to those tribes in Nepal whence the British Gurkha regiments are recruited. The Gurkhas, who form part of the Indian army, aided by their loose observance of caste rules, fraternise freely, especially with Highland regiments. Their characteristic weapon, the kukri, is a curved knife. Faithful, fearless,

self-reliant, they rendered valuable service during the Great War, both in France and on other fronts. Pron. Goorka.

GURNARD (Trigla). Fish of a genus which includes about 40 species. Gurnards are distinguished by their large, ugly heads, which are covered with angular plates. The three front rays of each pectoral fin are modified into feelers, which are used in finding prey and in creeping on the sea bottom. Most gurnards make good table fish. Seven species are found around the British coasts, the red gurnard (*T. cuculus*) being most frequently seen in the markets. It is bright red in colour, tinged in parts with silvery white.

Gurnard. Red gurnard, *Trigla cuculus*, a good table fish

GURNEY. English family, known for its association with banking and Quakerism. John Gurney (1688-1741), prominent as a merchant in Norwich and as a Friend, was the father of John and Henry Gurney, who, in 1770, set up a bank in Norwich. This became a little later the firm of Gurney & Co., of which another John Gurney, father of Elizabeth Fry, became the head. One of his sons was Joseph John Gurney (1788-1847), a philanthropist. An associated banking firm was Overend, Gurney & Co., which in 1866 failed with huge liabilities. The Norwich bank continued to flourish, and was absorbed by Barclays in 1896.

GUSTAVUS. Name of five kings of Sweden. The first was Gustavus Vasa (1496-1560), the founder of the Vasa dynasty. He led the Swedes in their revolt against the Danish rule and, having driven out the Danes, was chosen king in 1523. In 1544 the crown was made hereditary in his family. He died Sept. 29, 1560. Gustavus II is better known as Gustavus Adolphus.

Gustavus III (1746-92) was king from 1771 to 1792, when he was killed. His son, Gustavus IV (1778-1837), was king from 1792 to 1829, when he was dethroned. He died Feb. 7, 1837.

GUSTAVUS ADOLPHUS (1594-1632). King of Sweden. Born Dec. 9, 1594, he was the son of Charles IX, and succeeded his father in 1611. Between

Gustavus Adolphus, King of Sweden. After Van Dyck

1611 and 1630 he reorganized the government, and waged successful wars with Denmark, Russia, and Poland for the recovery of Swedish territory. Meanwhile the Thirty Years' War had broken out in Germany and the Catholic and Imperial party had established an ascendancy. Intervening as champion of the Protestant cause, Gustavus landed in Pomerania in 1630, and opened those brilliant campaigns which swept back the Catholic tide and established his own position among the greatest captains of history. He was killed at the battle of Lützen, Nov. 16, 1632.

GUSTAVUS V (b. 1858). King of Sweden. Born June 16, 1858, a son of Oscar II, he entered the Swedish army in 1875. In 1881 he married Victoria, daughter of the grand duke of Baden. He succeeded to the throne in 1907. Gustavus V has two sons. The elder, Gustavus Adolphus (b. 1882) married first Princess Margaret of Connaught, who died in 1920, and second Lady Louise Mountbatten. He has four sons and a daughter. See Sweden.

Gustavus V, King of Sweden

GUT. Intestines of animals, which when prepared are used for various commercial purposes. The entrails from freshly-killed sheep or other animals are washed, trimmed, and scraped free of the softer surface layers. The gut is then sold for sausage coverings. The process of gut-spinning is employed where the gut is to be made into fiddle strings or cords for rackets, etc. The various lengths of scraped gut are sewn together, and the gut twisted on a spinning wheel. Silk-worm gut, as used by anglers for fishing tackle, is made from the silk glands of the caterpillar. See Catgut.

GUTENBERG or GENSFLEISCH, JOHANN (c. 1400-c. 1468). German inventor of printing from movable types. Born at Mainz, he lived between 1420 and 1426 at Strasbourg, where he is believed to have perfected his invention. He returned, about 1444, to Mainz, where he was assisted financially by a partnership with Johann Fust, a goldsmith, and technically by Fust's son-in-law, Peter Schoeffer, an engraver, who is credited with the invention of punches and matrices. He died at Mainz. A Gutenberg museum was founded in 1901 at Mainz, where a statue was erected in 1837, and where festivals were held in honour of Gutenberg in 1837, 1840, and 1900. See Fust, J.; Printing.

GUTHRIE, SIR JAMES (b. 1859). Scottish painter. Born at Greenock, June 10, 1859, he became prominently identified with the Glas-

Sir James Guthrie, Scottish painter Russell

gow school, though his work is more cosmopolitan than Scottish. Elected A.R.S.A. in 1888, and R.S.A. four years afterwards, he was chosen president of the Scottish Academy in 1902. His finest pictures include Funeral Service in the Highlands, 1882; To Pastures New, 1883; and Schoolmates, 1886, in the Ghent Municipal Gallery.

He was also a noted portrait painter.

GUTHRIE, THOMAS (1803-73). Scottish divine. Born at Brechin, Forfarshire, July 12, 1803, he became minister of Arbirlot, near Arbroath, 1830; of Old Greyfriars, 1837; of S. John's, Edinburgh, 1840-43; and, after the disruption, of Free S. John's, 1843-64. He took a leading part in the promotion of a national system of education, of ragged schools, temperance, and social work among the poor. He died Feb. 24, 1873.

GUTHRUM (d. 890). Danish king of E. Anglia. He gained a victory over Ethelred and his brother Alfred at Reading in 871, and after Ethelred's death marched to Cambridge in 875, occupied Wareham in 876, and in 877 was bought off by a treaty. In 878 he was defeated by Alfred at Ethandune (Edington), Wilts, and by the peace of Wedmore he agreed to become a Christian, to give hostages, and to leave Wessex to Alfred.

GUTTA PERCHA. Substance resembling rubber, prepared from the juice of various trees of the genus *Palaquium*, natives of the Malay Archipelago.

Incisions are made in the bark of the tree, which causes the juice to exude. It quickly coagulates and is scraped off with a knife. Although resembling rubber closely, gutta percha is less elastic, becomes plastic at the temperature of boiling water, and cannot be vulcanised. Owing to its special electrical properties, gutta percha is employed as an insulator for cables. See Rubber.

Gutta Percha. Leaves and flowers of *Palaquium gutta*

GUYNEMER, GEORGES (1894-1917). French aviator. He entered the air service in 1915, and soon became one of the most successful fighters of the day. Early in 1917 he was promoted captain, having brought down 30 machines, and other victories made him the champion ace of the French service. When he was killed, Sept. 11, 1917, he had 53 victories to his credit. His many honours included the burial of his body in the Panthéon.

GUYON, MADAME (1648-1717). French mystical writer whose maiden name was Jeanne Marie Bonvier de la Motte. Born at Montargis, April 13, 1648, she early came under the influence of Father Lacombe, a prominent Quietist teacher, and began in 1676 to advocate Quietism in Savoy and later at Paris. In 1688 and 1695 she suffered terms of imprisonment for teaching the heresies of Molinos. She taught that the essence of religion consisted in the passive contemplation of God, and that good deeds were of less moment. Madame Guyon died at Blois, June 9, 1717. See Mysticism.

GUY'S CLIFFE. Estate on the Avon, 1½ m. from Warwick, the seat of Lord Algermon Percy. In the grounds are the cave said to have been hewn for himself by Guy of Warwick and the chapel of S. Mary Magdalen, founded to his memory by Richard Beauchamp, earl of Warwick (d. 1439). There were hermit residents at Guy's Cliffe under Edward III and Henry IV, and another occupant of the hermitage was John Rous the antiquary (d. 1491).

GUY'S HOSPITAL. London hospital. It was founded in 1721 by Thomas Guy (c. 1645-1724), a printer and bookseller, chiefly of bibles, who amassed a large fortune, which he devoted to philanthropic ends. The hospital, which is in Southwark, has 646 beds, and departments for providing treatment in all branches of medicine and surgery. The Wills library was built in 1902 and the Gordon Museum in 1905. In 1910 new laboratories were built for the study

Thomas Guy, founder of Guy's Hospital

of chemistry and physics, and departments of pathology and pharmacology have been established. There is an excellent medical school and a residential college and a club for the students.

GWALIOR. Stato of Central India. It covers 26,382 sq. m. and is ruled by a maharajah, who is entitled to a salute of 21 guns. Lashkar is the capital. Pop. 3,186,000.

Near Lashkar is Gwalior, the former capital. It contains Jain and Hindu antiquities and a magnificent palace dating from the 16th century. Its famous fort stands on a hill above the town, and on it are buildings of historic interest. Pop. 14,700.

Gwalior City. The palace, begun in the early 16th century, a magnificent example of Hindu architecture

GWYNN, GWYN OR GWIN, NELL OR ELEANOR (1650-87). English actress, mistress of Charles II. Born Feb. 2, 1650, she early attracted notice as an orange-seller at the Theatre Royal, Drury Lane, where in 1665 she made her first stage appearance as Cydaria in Dryden's Indian Emperor. Until 1682, when she left the stage, she played a variety of parts, and was specially successful in broad comedy and in daring prologues and epilogues. She became the king's mistress about 1669, and retained his affection until his death. The elder of her two sons by him was created duke of St. Albans in 1684.

Nell Gwynn, actress and favourite of Charles II
After Sir Peter Lely

GYMKHANA (Pers. gandkhana, ball house). Name for a mixed sports and athletic meeting. It originated about 1860 in India, when horse and pony races were introduced as a means of recreation and amusement for British soldiers and officials. Further interest was given by including athletic events and military sports.

GYMNASTICS (Greek, gymnastikē, training). The art of developing the body by means of suitable exercises. The Greeks fully understood the value of all-round physical culture, and in the gymnasia the youth of Athens strove to approach the ideal of finely proportioned beauty as revealed in marble by their famous sculptors.

In modern times two opposing theories of gymnastics have developed. The first, based upon German practice, regards free movements merely as preliminary to the more strenuous exercises performed with the help of apparatus, such as the horizontal bar, parallel bar, ladder and rings, weights, etc., involving feats of strength as well as of agility. The Swedish system claims that apparatus of any kind may be dispensed with by those who desire full and all-round bodily development with the sense of physical well-being which this involves. In recent years Swedish methods, with adaptations, have become increasingly popular in Great Britain. See Dumb Bell; Eurhythmics; Physical Training; Swedish Drill.

GYMPIE. Town of Queensland, Australia. It is 90 m. N. of Brisbane and 40 m. S. of Maryborough, its port. It is the centre of a rich gold mining area which also produces silver, nickel, bismuth, antimony, and coal. Pop. 9,570.

GYPSIES. The people known in England as Gypsies, and in other countries by a variety of names (Gitanos, Zigeuner, Tehinghianés, Zingari), call themselves Romá men. Large bands of these nomads appeared in Western Europe about 1417. They came from the Balkan peninsula, but their ultimate origin is India. Interest in gypsies was fostered by the writings of George Borrow.

Persecuted in former days, gypsies are today comparatively free from control. They are a handsome race, noted for their olive complexions, lustrous eyes, fine teeth, lithe figures, and dignified carriage. The chief occupation of the males is horse-dealing; of the women fortune-telling and basket-making. They have an oriental love of display and are very superstitious. One of their customs is to burn the van and all the belongings of a dead gypsy.

GYPSUM. Mineral, a hydrous calcium sulphate, containing 32.5 p.c. of lime, 46.6 p.c. sulphur trioxide, and 20.9 p.c. of water. It occurs in nature as a soft, white rock, usually associated with rock salt, and consisting of a confused mass of small crystals, mixed usually with silica and clay. Selenite is a variety of gypsum which occurs in distinct crystals. Satin spar is the name given to a fine fibrous variety of gypsum having usually a pearly, opalescent appearance. Alabaster is a fine-grained, compact variety, resembling marble in appearance. Gypsum is found in England; in France, near Paris; in numerous places in the U.S.A., and in smaller deposits in Europe and Africa. The variety found near Paris is extensively used in the preparation of plaster of Paris. See Alabaster.

GYPSY WORT (*Lycopus europaeus*). Perennial herb of the order Labiatae, a native of Europe, N. Africa, Asia, Australia, and N. America. It has a creeping root-stock, tough, four-angled stem, and opposite elliptical

leaves with deeply toothed margins. The small bluish-white flowers, dotted with purple, are crowded in whorls round the stem. It grows on banks of streams and ditches.

Gypsy Wort. Stem with flower whorls situated above each pair of leaves

right angles to the plane of the wheel. Its motions and applications depend on the fact that if any body, symmetrical about an axis of greatest or least moment of inertia, is set rotating about that axis, then the direction of the latter remains unchanged in space unless external forces are applied. As examples of gyroscopic motion may be cited the wheels of a bicycle when in motion, and the spinning of a rifle bullet or shell, enabling it to keep its general direction unaltered. The applications of the principle are numerous and important. The gyro-compass depends upon the stability of the motion, and the directing of torpedoes is due to the gyroscope. The gyro turn indicator used in aeroplanes gives warning of the machine turning. See Monorail.

Gyroscope, elementary. The spinning top keeps steady on the cord

H. Eighth letter of the English and Latin alphabets. By some it is regarded as a consonant, by others as a mere aspiration. In English, initial h is silent in some words, as honest, honour, hour; in others, as herb, humble, custom varies. In certain words, generally of foreign origin, after e and g, it is used to indicate the hard sound of those letters, as chemistry, ghetto. In what, when, which, the digraph wh is in certain parts of Great Britain pronounced hw. See Alphabet.

HAAKON. Name of seven kings of Norway, sometimes spelled Haco. The first six were kings before the union with Sweden. When, in 1905, Norway again became independent, its crown was offered to Prince Charles of Denmark, and he accepted it and took the title of Haakon VII. Born Aug. 3, 1872, he was the second son of Frederick VIII. In 1896 he married Maud, youngest daughter of Edward VII. Their only child, Olaf, the heir to the throne, was married in 1929 to Martha, princess of Sweden.

Haakon VII, King of Norway

HAARLEM. Town of Holland, capital of the prov. of N. Holland. It lies about 14 m. W. of Amsterdam, on the river Spaarne, and is chiefly famous for its trade in bulbs. Among notable buildings are the Groote Kerk, late 15th century, with a tower over 250 ft. high; the town hall, containing a superb collection of paintings by Frans Hals and other notable Dutch pictures; the Teyler Museum; and the old Meat Market, built 1602-3. Pop. 113,304. See illus. p. 692.

HABAKKUK. One of the minor prophets. His work was contemporaneous with that of Jeremiah. He lived at the time when Judah was invaded by the Chaldeans, and taught that they were the instruments of God to punish the Jews for their lawlessness.

Haarlem. The Weigh-house and quays on the spaarne, looking towards the Groote Kerk (on left). See p. 691

HABEAS CORPUS (Lat. have the body). Term of English law. It forms the opening words of various writs, and is addressed to one who detains or imprisons another, and commands him to "have the body" of the person in the Court of King's Bench on a certain day, together with the cause of his detention. It is also used where, for instance, a child is detained from its father or mother.

HABERDASHER. Word used for a retail trader who sells accessories of dress, or what are known as small wares.

Haberdashers' Company arms

The Haberdashers' Company is the eighth of the twelve chief London city livery companies. Incorporated 1447, it was originally a branch of the Mercers. Haberdashers' Hall, in Gresham Street, E.C., is built on a site bequeathed in 1478 by William Baker. The first hall was burnt with the archives in 1666; the second, by Wren, was, with the exception of part of the court room, burnt down in 1864. The company manages several almshouses and schools. The latter are at Acton, Hampstead (Westbere Road), and Hatchingham.

HABITANT (Lat. habitare, to inhabit). Name given to original settlers at Quebec and still applied to farmers. They have a marked individuality of their own, which includes a patois of their original French.

HACKENSCHMIDT, GEORGES (b. 1878). Russian wrestler. After a successful career on the Continent he came to England about 1901, and appeared at the Tivoli and other music-halls, where his immense strength and magnificent physique made him extremely popular. In 1906 he won the championship from Madrali, the Turk, at Olympia, but lost it to Frank Gotch at Chicago in 1908.

HACKER, ARTHUR (1858-1919). British artist. Born in London, Sept. 25, 1858, he exhibited his first picture at the R.A. in 1880. In 1886 he joined the New English Art Club, but continued to exhibit at the Academy. He became A.R.A. 1894, R.A. 1910, and died in London, Nov. 12, 1919. His early reputation was made by cottage interiors with figures; for a time French influence was marked.

HACKLE, RED. Plume worn in the feather bonnets of the Black Watch (q.v.) since 1793. During the campaign of that year in Flanders the 11th Light Dragoons were driven back by the French. The Black Watch retrieved the position. For this exploit the Red Hackle worn by the 11th Dragoons was given by General Dundas to the 42nd.

HACKNEY. Breed of horse originating from a cross between the race-horse and the cart-horse. From the practice of hiring them

out the word acquired its application to vehicles plying for hire, as, for example, hackney coach or hackney cab. See Cab.

HACKNEY. Metropolitan borough of London. Covering an area of 5½ sq. mi., it is served by the L.N.E. and L.M.S. Rlys., and is bounded S. by Shoreditch, Bethnal Green, and Poplar. It has developed rapidly since the middle of the 19th century around Mare Street, Church Street, Grove Street, and Well Street. There are a town hall, 1897, technical institute, and free libraries, and also large confectionery works and an electric power station. Hackney includes part of Victoria Park (q.v.), London Fields, Hackney Marshes, and Hackney Downs. Of the ancient church of S. Augustine, supplanted by the parish church of S. John, only the tower and chapel of Sir Henry Rowe remain. Pop. 222,142.

HADDINGTON. Burgh and the co. town of Haddingtonshire. It stands on the Tyne, 17 m. E. of Edinburgh on the L.N.E.R. The 13th century church of S. Mary has a square tower, 90 ft. high, and the choir contains the tomb of Jane Welsh, the wife of Thomas Carlyle. It has one of the principal grain markets in Scotland. Pop. 4,053.

The Scottish title of earl of Haddington has been borne since 1627 by the family of Hamilton. Sir Thomas Hamilton, who held a number of high positions in Scotland under James VI, was made a baron in 1616 and earl of Melrose in 1619. In 1627 he exchanged his title of Melrose for that of Haddington. The 9th earl was made a peer of the United Kingdom in 1827. He left no sons, so his Scottish titles passed to a cousin, George Baillie, who took the additional name of Hamilton. In 1917 George, the 11th earl, died and was succeeded by his grandson George as 12th earl. The family seat is Tynninghame, Haddingtonshire.

Haddingtonshire. Map of the maritime county in the south-east of Scotland, also called East Lothian

HADDINGTONSHIRE OR EAST LOTHIAN. County of Scotland. With about 40 m. of coast on the Firth of Forth and North Sea, its area is 267 sq. m. Along the S. border are the Lammermuir Hills (Lammer Law, 1,733 ft.). Isolated eminences include Garleton Hill (590 ft.), Traprain Law (700 ft.), and North Berwick Law (612 ft.). The Tyne is the chief stream. Agriculture, the pasturage of sheep, and fishing are industries. The Dunbar red lands are exceptionally fertile. Coal and limestone are obtained. The L.N.E. Rly. serves the county. Haddington (co. town), Dunbar, and North Berwick are the largest towns. Pop. 48,400.

HADDOCK (*Gadus aeglefinus*). Common British fish of the same genus as the cod, which it resembles. It may be distinguished by the black line running along each side

and the black patch on either side of the body. The haddock is usually less than 2 ft. in length, though 3 ft. is occasionally reached.

Haddock, a common British fish

Haddocks are found in shoals, and are taken in the trawl net and also on lines baited with mussels. Economically the haddock is a most important food fish. The haddock is largely eaten fresh, but is also split and smoked. See Findon; Fisheries.

HADDON HALL. Residence in Derbyshire. Picturesquely situated above the left bank of the Wye, 2 m. S.E. of Bakewell, it passed, in the 12th century, to the Vernons. Towards the close of the 16th century, by the marriage of Dorothy Vernon to Sir John Manners, it passed to the Rutlands.

Haddon Hall. Terrace steps associated with Dorothy Vernon's elopement with Sir John Manners

Haddon consists of two quadrangles on different levels. Features are the 12th-15th century chapel, 14th-17th century banqueting hall, tapestried drawing room, Elizabethan Long Gallery or ballroom, and Eagle or Peveril's Tower and terrace. With the terrace steps is associated the legend of Dorothy Vernon's elopement with Sir John Manners. In 1927, after certain internal improvements, the hall again became a residence of the duke of Rutland.

HADEN, SIR FRANCIS SEYMOUR (1818-1910). British etcher and surgeon. Born in London, Sept. 16, 1818, he studied surgery in Paris and at Grenoble, and settled in private practice in London in 1847. He did not take up etching seriously till 1853, when he made the acquaintance of Whistler, whose half-sister he had married in 1847. In 1880 he founded the Society of Painter Etchers. He was knighted in 1894, and died June 1, 1910.

HADES (Gr. the invisible). In Greek mythology, properly the name of the god who ruled the underworld, also called Pluto. He was the son of Cronos and Rhea, and brother of Zeus and Poseidon. His wife was Proserpine or Persephone (q.v.), daughter of Demeter.

In later mythology, the name Hades came to be used for the realms of the god. The river Styx was the boundary, and over it the dead were ferried by Charon. On the opposite shore was the three-headed dog Cerberus, the vicious guardian of Pluto's realm. Three judges judged the dead, namely Minos, Rhadamanthus, and Aeacus.

HADFIELD, SIR ROBERT ABBOTT (b. 1859). British metallurgist. He initiated and carried out a series of investigations on the micro-structure of steel and its alloys, chromium steel, silicon steel, high-speed tool steel, etc. His discovery of manganese steel in 1882 increased the prosperity of his Sheffield steel works and brought him recognition from every steel-producing country. He was made a knight in 1908 and a baronet in 1917.

HADLEIGH. Urban district and market town of Suffolk. It is on the Brett, 9 m.

W. of Ipswich, with a station on the L.N.E.R. Market day, Mon. Pop 3,000.

Hadleigh, a village of Essex, 5 m W.N.W. of Southend-on-Sea, has fragmentary remains of Hadleigh Castle. The church of S. James is Norman, with a wooden tower. The Salvation Army farm colony here was founded in 1891. Pop. 2,246.

HADLEY WOOD. District of Barnet, Middlesex, on the Hertfordshire border. It has a station on the L.N.E.R. The cruciform Perpendicular church of S. Mary, with turreted tower containing an old iron beacon, dates from the 15th cent. See Barnet.

HADRIAN. Roman emperor, A.D. 117-138, whose full name was Publius Aelius Hadrianus. Born (76) at Rome or at Italica in Spain, he was

brought up, adopted, and designated successor by the emperor Trajan. He made peace with the Parthians, Trajan's campaign against whom had ended so disastrously, and is said to have contemplated retirement from Dacia. The greater part of Hadrian's reign was spent in travel. He inaugurated reforms, both civic and legal.

Hadrian was a man of wide culture, and a leader in the movement which sought its literary models in the past. During the last years of his reign occurred the last revolt of the Jews, which ended with their virtual extermination in Judaea. He died July 10, 138.

HADRIAN'S VILLA. This is 2 m. S.W. of Tivoli, the ancient Tibur, and 15½ m. by tramway E.N.E. of Rome. The grounds, covering several square miles, and the ruins some 170 acres, are a marvel of landscape gardening, and contain the remains of Hadrian's palace, of temples, baths, theatre, a stadium, colonnaded gardens, and imitations of various other famous buildings.

HADRIAN'S WALL. Roman rampart. It is 73½ m. long, between Bowness on Solway Firth and Wallsend-on-Tyne, England.

Erected by the Roman emperor Hadrian about 122, and repaired by Severus about 208, it was mainly of freestone blocks with a rubble core, and was flanked by a ditch. A military road ran more or less parallel on the S. side, with an outer ditch and earthen mound—the vallum. At intervals of a Roman mile were about 80 smaller castella. Between these were some 300 recessed watch towers. In 1928 Hadrian's Wall was scheduled as an ancient monument. In 1929 a stretch of it, part of the Chesters estate, was sold.

HAECKEL, ERNST HEINRICH (1834-1919) German scientist. Born at Potsdam, Feb. 16, 1834, he became professor of comparative anatomy and director of the zoological institute at Jena in 1862. Three years later he was appointed professor of zoology at Jena. Haeckel became an enthusiastic convert to the Darwinian theory of evolution, and in his

Natural History of Creation, 1868, he traced the descent of man from protoplasm to the chimpanzee in 26 stages. With Darwin, he

Ernst Haeckel, German scientist

HAEMATITE (Greek haimatētēs, blood-like). Ore of iron, so named from its red, metallic lustre. It usually occurs in kidney-shaped, granular, or amorphous masses. Most red rocks contain haematite, and red ochre is an earthy, impure form. The mineral is found in most parts of the world. See Iron.

HAEMOGLOBIN (Gr. haima, blood; Lat. globus, ball). The colouring matter of the blood. In bright red arterial blood it is loosely combined with oxygen. During the circulation of the blood the body tissues abstract the oxygen, and leave the colouring matter as haemoglobin. See Blood.

HAEMOPHILIA (Gr. haima, blood; philia, friendship, tendency to). Congenital tendency to bleeding even from quite trivial wounds. The condition is strongly hereditary, and is transmitted only through the female line. The blood is peculiarly constituted, so that the ordinary clotting which arrests bleeding is delayed owing to the slowness with which fibrin ferment is produced. See Bleeding.

HAEMORRAGE (Gr. haimorrhagia, bloody flux). Internal or external discharge of blood from a blood vessel. Blood vomited from the lungs is bright and frothy: from the stomach it is dark in colour, often resembling coffee grounds. The patient should be laid flat, fresh air provided, ice given to suck, and cold dressings, preferably in the form of ice, applied to the seat of the haemorrhage if known. No stimulant should be given.

External haemorrhage may be arterial, venous, or capillary. Arterial haemorrhage is recognized by the bright red colour of the blood, which escapes in pulsating jets, corresponding in rhythm to the heart-beat. Venous blood is dark in colour, and escapes in a steady stream. Capillary haemorrhage is recognized by the steady oozing of bright red blood from all parts of the wound.

In some cases a tourniquet is essential, and this may be extemporised by lightly bandaging a hard pad on the pressure point and then twisting the bandage with a stick so as to tighten the bandage. Bleeding from a vein or the capillaries can usually be stopped by a pressure upon the wound.

Hadrian's Wall. Map indicating the course of the Roman wall and the stations of the Roman army.

HAFIZ (d. c. 1388). Name used by the Persian poet Shams-ud-din Mohammed. He was born at Shiraz, where he appears to have

spent most of his life. His fame as a poet, philosopher, and student of the Koran was such that a college was specially established for him, where he taught for many years. His great work was the Diwan, a collection of short lyrical poems in the form known as the ghazal. He is regarded as the most finished of the Persian lyricists, and exercised a lasting influence on the forms of Persian verses.

HAFNIUM. Metallic element, symbol Hf; atomic weight 178.3, atomic number 72. It was discovered in the mineral zircon by Coster and Hevesy in 1923, and has affinities with zirconium.

HAGAR. Egyptian handmaid to Sarai. By her Abraham (q.v.) became the father of Ishmael (Gen. 16). Sarai's jealousy caused her to flee with her son to the wilderness, where, in a vision, she learnt the future of Ishmael. She returned to Abraham, but at a later date was finally sent away, and afterwards married her son to an Egyptian woman (Gen. 21, 9-21).

HAGEN, WALTER (b. 1893). American golfer. Born at Rochester, New York, he won the open championship of the U.S.A. in 1914 and again in 1919. On four occasions, 1922, 1924, 1928 and 1929, he won the British open championship, and his other successes include the Belgian open championship and the professional championship of his own country.

HAGENBECK, CARL (1844-1913). German dealer in wild animals. He was born at Hamburg. A skilled trainer of animals, he was the first to exhibit performing Polar bears. He started the Zoological Gardens at Stellingen, near Hamburg, in 1897, and introduced the system of displaying animals out of doors. See Zoological Gardens.

HAG-FISH OR HAG (Myxine glutinosa). Order of marine animals belonging to the lamprey group. In appearance they resemble small round eels, but have no side fins and no lips. They have teeth on the tongue and palate, and tentacles on the head, which seem to assist them in boring their way into the bodies of the fishes on which they feed. These animals are not true fish, and are classed by zoologists as evelostomata, round-mouthed.

HAGGAI. One of the minor prophets. He returned from the Babylonian captivity with Zerubbabel, and began to prophesy in his old age. His short book in two chapters was designed to encourage the people in rebuilding the temple.

HAGGARD, SIR HENRY RIDER (1856-1925). British novelist and agricultural economist. Born at Bradenham, Norfolk, June 22, 1856, he held various official posts in S. Africa, 1875-79. He published his first work, Cetewayo and His White Neighbours, in 1882. South

Africa figures prominently in his novels. In addition to King Solomon's Mines, 1885, his most successful adventure story, and Jess, 1887, his novels include She, 1887, in which mystery is blended with adventure; Allan Quatermain, 1887; Maiwa's Revenge, 1888; Cleopatra, 1889; Allan's Wife, 1890; Nada the Lily, 1892; The Heart of the World, 1896; Lysbeth, 1901;

Sir H. Rider Haggard, British novelist

Hadrian's Wall. Part of the wall near Haydon Bridge, Northumberland

Ayesha, 1905; Fair Margaret, 1907; Red Eve, 1911; When the World Shook, 1919; and The Ancient Allan, 1920.

Haggard, who was knighted in 1912, also became prominent as a farmer. His journeyings through England in 1896-98 resulted in a book, Rural England, 1902. He died May 14, 1925.

HAGGERSTON. Suburb of N.E. London. Mentioned in Domesday as Hergotestane, and once a hamlet in the parish of S. Leonard's, Shoreditch, it stretches from the N. side of Hackney Road to Dalston, and from Kingsland Road on the W. to London Fields. Goldsmith Square, S. of the Regent's Canal, is a public recreation ground. There are several almshouses founded by city companies. Near the Hackney Road is the Great North-Eastern Hospital for Children, built 1868. The district is well served by the L.M.S. Rly. and by buses and trams.

HAGGIS. Ancient Scottish dish, supposed to have been adapted from the French. The chief ingredients are the heart, liver, and lungs (pluck) of a sheep, boiled in the stomach of the animal.

HAGIOLOGY (Gr. hagia, holy things; logos, account). Term applied to literature dealing with the saints of the Christian Church. It includes all the martyrologies and biographies of saints and martyrs. The earliest hagiology is that of Eusebius, The Assembly of the Ancient Martyrs. The researches of the Flemish Father Rosweyde (d. 1629) led to the compilation of the Acta Sanctorum and the establishment of the Bollandists (q.v.). See Saint.

The Hague. The Palace of Peace opened in 1913 as a seat for The Hague Tribunal and the peace conferences

HAGUE, THE (Dutch, 'S Graven Hage or Den Haag). Capital of the kingdom of the Netherlands and of the prov. of S. Holland. It lies about 14 m. N.W. of Rotterdam and 24 m. from the North Sea at Scheveningen. The chief industries are printing works, distilleries, and furniture and earthenware works.

In the Mauritshuis, erected 1633-44 and rebuilt 1704-18, is housed a famous collection of pictures. In the Binnenhof, a group of buildings round a square, are the Hall of the Knights, used by the chambers in joint session, and the halls in which the first and second chambers sit. The town hall, built about 1565 and restored in the 17th century, is a characteristic Dutch building of its period. The most notable churches are the 17th century Nieuwe Kerke, where lie the remains of the De Witts; the Groote Kerk, a 15th century Gothic building. The royal palace, an 18th century edifice enlarged during 1816-17, has extensive private gardens. In the Willem's Park is a large national monument, erected in 1869 to commemorate the achievement of independence in 1813. Other places of interest in the capital are the Steengracht Gallery, the municipal museum, the royal library, the Mesdag Museum, and the museum of industrial art.

To the N.E. of the town lie the zoological gardens and the beautiful Haagsche Bosch, a large wooded park which contains the royal villa known as the Huis ten Bosch, built about 1645, in which the first international peace conference met in 1899. The Palace of Peace, built largely at the expense of Andrew Carnegie to house the international peace conferences and the court of arbitration, was opened in Aug., 1913. Pop. 425,000.

HAGUE CONFERENCE. The first was held in 1899 at the suggestion of Tsar Nicholas II representatives from European countries and from the U.S.A. being present. Among the conventions signed was one for the establishment of an international court of arbitration, See Blockade; International Law: London, Declaration of.

HAGUE TRIBUNAL. This is an international court of justice established at the Hague in 1899, when sixteen powers signed the agreement by which each power nominated four members to serve for six years. Among the cases referred to the tribunal have been that of Great Britain, Germany, and Italy against Venezuela, and that of German reparations and the evacuation of the Rhineland. See Arbitration.

HAHNEMANN, SAMUEL CHRISTIAN FRIEDRICH (1755-1843). German physician. Born at Meissen, April 10, 1755, his reputation rests upon his system of homoeopathy. His theory was first put forward in 1796. He died July 2, 1843. See Homoeopathy.

HAIDER ALI OR **HYDER ALI** (c. 1722-82). Ruler of Mysore. In 1763 he conquered Kanara. In alliance with the nizam of Madras he fought the British at Chengam, 1767, and was signally defeated. In 1769 he effected a treaty with his victors, but being unable to induce them to help him against the Maharattas in 1772 he took advantage of the war with France to march on Madras, 1779. After some initial successes, however, he was routed by Sir Eyre Coote near Porto Novo.

HAIG, DOUGLAS HAIG, 1ST EARL (1861-1928). British soldier. He was born June 19, 1861, educated at Clifton and Brasenose College, Oxford, and gazetted in 1885 to the 7th Hussars. After serving with distinction at Khar-toum (1898) and in South Africa (1900-2) he was inspector-general of cavalry, India (1903-6), director of military training (1906-7), director of staff duties (1907-9), chief of staff, Indian Army (1909-12) and in command at Aldershot (1912-14). He crossed over to France in Aug., 1914, in command of the 1st corps, and took part in all the earlier battles, passing in Jan., 1915, to the command of the 1st army. In Dec., 1915, he succeeded Sir John French as commander-in-chief of the British forces in France and held this position till the close of the war.

Haig had the gift of calm and resolution in the darkest hours. When he took the offensive on Aug. 8, 1918, he won such a series of victories against forces not inferior in strength and commanded by the most experienced soldiers as no general had gained in the war. His assault on the Hindenburg line (Sept. 27-Oct. 1) was the greatest feat in his career. On Jan. 1, 1917, he was promoted field-marshal; and in 1919 he was created earl and received a grant of £100,000 from the nation. He was

Earl Haig of Bemerseyde, British soldier
Russell

mado a Knight of the Thistle in 1917, and awarded the Order of Merit in 1919. He died suddenly in London, Jan. 29, 1928, and was buried in Dryburgh Abbey. He married in 1903 the Hon. Dorothy Vivian, daughter of the 3rd Lord Vivian, and a son and heir was born to him in March, 1918.

Haileybury College, famous public school founded in 1862

HAILEYBURY COLLEGE. English public school. It was founded in 1862, and took over the college at Haileybury, near Hertford, maintained by the East India Company from 1806 until its dissolution. During the Great War, 2,814 old Haileyburians served with H.M. forces, of whom 566 lost their lives, and four were awarded the V.C. The number of boys in the school is about 530.

HAILSHAM. Market town of Sussex. It is 7 m. N. of Eastbourne on the S.R. The curfew has been rung here for seven centuries. The town has a trade in agricultural produce, cattle and sheep markets. Market day, Wed. (alternate). Pop. 4,907.

HAILSHAM, DOUGLAS MCGAREL HOGG, 1ST VISCOUNT (b. 1872). British lawyer. Eldest son of Quintin Hogg (q.v.), he was educated at Eton, and called to the bar in 1902. K.C. in 1917, he entered Parliament as Conservative member for St. Marylebone in 1922, when he became attorney-general and was knighted. He was appointed lord chancellor and created a baron in 1928. He left office and was made a viscount in 1929.

Viscount Hailsham, British lawyer
Russell

HAINAUT OR **HAINAUT.** Province of Belgium. It contains the rich coal and steel districts centring on Mons and Charleroi. In the N. it is mainly agricultural, cereals and beetroots being important crops. There are numerous rly. lines, and the Mons-Condé canal and the canalised Sambre, with its water connexion to Brussels from Charleroi, are the main outlets to France. The prov. is intimately connected with the coalfields and industries of N.E. France. The inhabitants are almost entirely French-speaking Walloons. As an independent county Hainaut was of some importance in earlier times. It had a long line of counts of Hainaut, the first being Reginar I (d. 916). Its area is 1,437 sq. m. Pop. 1,263,033. See Belgium; Netherlands.

HAINAUT FOREST. Open space in Essex. Lying to the S.E. of Epping Forest (q.v.), it formed part of the ancient Forest of Waltham, and its 805 acres (551 arable land and 245 acres forest) were acquired for the public in 1903 at a cost of £21,830, and opened July, 1906. It is the largest open space under the control of the L.C.C.

HAIR. Outgrowth or development of the skin. It includes not only fur and hair like that of the human body, but also the bristles of the pig, the vibrissae or whiskers of the cat.

and the spines of the hedgehog and porcupine. Its object is to keep the body warm, mammals like the whales, which have little hair, being provided with a thick layer of fat.

Hair. Left, of stinging nettle; A, large hair; B, smaller hairs with broken tips, growing from veins. Right, human hair; 1, epidermis; 2, mouth of hair follicle; 3, sebaceous follicle; 4, arrector pili muscle; 5, papilla of hair; 6, adipose tissue

from the papilla. Permanent baldness is due to the atrophy or destruction of these papillae. The body of the hair is covered with minute scales, and forms a kind of tube containing pigment or colouring matter. The white or grey hair of old age is due to the failure of pigment. See Baldness.

HAIRDRESSING. Method of arranging and ornamenting the hair. The hair has been the object of special attention in all ages and among all nations, savage and civilized.

Ancient Britons and Saxons wore long hair, and Saxon ladies twisted their locks and curled them with an iron. The Normans introduced the short cut into England, and from that time fashion has swung from one extreme to another. False hair, dyes, and pomatums have been in use through the ages; Roman ladies scattered gold dust on their heads; Mary Queen of Scots ordered false additions to her hair while in prison.

A new fashion in hairdressing came in during the Great War. Women on active service began to cut the hair short either by bobbing or shingling, and this became fashionable all over the country, one result of the practice being a great increase of trade to hairdressers. See Barber.

HAIRSTREAK BUTTERFLY. Name given to small butterflies of the genus *Thecla* and family Lycaenidae. Species include the black, brown, green, and purple hairstreak. The wings are marked on the under side with fine lines on a darker background, hence the name hairstreak. See Butterfly.

Hairstreak Butterfly. The purple species, *Thecla quercus* J. J. Ward

HAITI, HAYTI, or SANTO DOMINGO. Island in the W. Indies, one of the Greater Antilles. The Mona Passage separates it from Porto Rico on the E. and the Windward Passage from Cuba on the W. The Atlantic washes its northern shores and the Caribbean Sea its southern. Haiti is 400 m. long and from 60 m. to 160 m. broad; its area is 29,536 sq. m. It is politically divided into two republics—Haiti on the W. and Santo Domingo (q.v.), or the Dominican Republic, on the E.

Haiti is extremely fertile, lofty, and heavily forested, mountain ranges alternating with rich valleys, watered by numerous rivers, and diversified by plains and extensive lakes. The climate is hot and humid. Valuable woods are obtained. Haiti was first touched by Europeans on Dec. 6, 1492, when Columbus landed on its shores. He named it Hispaniola.

HAITI. Republic embracing the W. portion of the island of Haiti. Its area is 10,204 sq. m. The capital is Port-au-Prince and the other ports are Port de la Paix, Gonaïves, Jacmel, St. Marc, Cap-Haïtien, Jérémie, Aux Cayes, and Miragoane.

Pending the creation of a senate and chamber, legislation is in the hands of a council of state of 21 members appointed by the president, who is elected for four years. Repeated revolutions have greatly interfered with the commerce of the republic over which, by a treaty of Nov., 1915, the U.S.A. established a protectorate. Education is free and compulsory. The religion is Roman Catholicism. The estimated pop. is 2,500,000, mostly negroes, but with a large number of mulattoes. French is the official language, but the lower classes speak a patois known as Creole French.

HAKE (*Merucius vulgaris*) Large fish of the cod family, fairly common around the British coasts, and especially off Cornwall, where it preys upon the pilchards. It is rarely over 3 ft. in length, and is dark grey on the back and lighter below. The head is somewhat flattened. The hake is an important food fish, as its flesh is white and of good flavour.

Hake, one of the cod family, caught off the British coasts

HAKLUYT, RICHARD (c. 1552-1616). English geographer. Of remote Dutch extraction, he was born in Herefordshire and educated at Christ Church, Oxford. In 1589 he published *The Principall Navigations, Voiages, and Discoveries of the English Nation*, enlarged ed. in 3 vols., 1598-1600. He used his influence to encourage the colonisation of Virginia. He left behind a large number of MSS. Many of these were printed by the Hakluyt Society, which was founded in 1846 to print "the most rare and valuable voyages, travels, and geographical records." -Pron. Hakloot.

HAKODATE or HAKODADI. Seaport of Japan, at the S. extremity of the island of Hokkaido. Matchboxes are manufactured, and the exports include beans, peas, pulse, sulphur, charcoal, furs, lumber, and the produce of the extensive fisheries. Pop. 163,972.

HALBERD OR HALBERT (old Fr. *halebarde*). Late medieval weapon consisting of a combined pick and axe with a pike-head, attached to a shaft 5 ft. or 6 ft. long. Its bearers were known as halberdiers. The weapon, in a somewhat modified form, is carried by the Yeomen of the Guard.

Halberd. 1. Swiss, 14th cent. 2. German, 16th cent.

HALBERSTADT. Town of Germany, in Prussian Saxony. It stands on the Holzemme, 30 m. S.W. of Magdeburg, has considerable trade and manufactures, including woollen goods, leather, tobacco, soap, oil refineries, and breweries, and has preserved many of its old architectural features. The most important building is the 13th-15th century cathedral, dedicated to S. Stephen, and consecrated in 1491. Pop. 48,125.

HALDANE, RICHARD BURDON HALDANE, 1st Viscount (1856-1928). British politician and lawyer. Born July 30, 1856, the son of Robert Haldane of Cloan, he was educated at Edinburgh Academy and university, and afterwards in Germany. In 1879 he became a barrister, and in 1885 he entered the House of Commons as Liberal

M.P. for Haddingtonshire. An influential private member, with imperialistic ideas which made him suspected by many radicals, he remained until 1905, when he entered the Cabinet as secretary for war. He was responsible for the creation of the Territorial Army and the readiness of the Expeditionary Force in 1914. In 1912 he became lord chancellor and a peer, but resigned early in 1915. Gradually drifting away from his old associates, Haldane joined the Labour Party and in 1924 took office as lord chancellor, acting also as leader of the House of Lords. He died at his Scottish residence, Cloan, Perthshire, Aug. 19, 1928. Haldane was a philosopher of distinction, and his writings include *The Pathway to Reality*. His *Autobiography* appeared in 1929.

1st Visct. Haldane, British politician Russell

Two brothers survived him: Sir William Stowell Haldane (b. 1864), a Scottish lawyer, and John Scott Haldane (b. 1860), a scientist. The latter's son, J. B. S. Haldane, is also a scientist of distinction. Lord Haldane's sister Elizabeth Sanderson (b. 1862), was made a Companion of Honour in 1918. Pron. Halldane

HALE, SIR MATTHEW (1609-76). English lawyer. Born Nov. 1, 1609, at Alderley, Gloucestershire, he became a barrister. He was soon engaged in some of the great cases of the time, appearing, for instance, on behalf of Laud. Never a partisan, he accepted the dominance of the parliamentarians, and his prosperity continued after the death of Charles I; in 1653 he was made a judge, the first appointed by Cromwell, and in 1655 was elected to Parliament. In 1671 Charles II made him chief justice of the common pleas. He died Dec. 25, 1676.

Sir Matthew Hale, English lawyer From a portrait in Lincoln's Inn

HALESOWEN. Urban district and market town of Worcestershire. The chief industries are the making of iron and steel goods. Market day, Sat. Pop. 28,212.

HALÉVY, JACQUES FROMENTAL ÉLIE (1799-1862). French composer. Born in Paris, May 27, 1799, of Jewish parentage, his real name was Levi. He wrote many operas, including *The Jewess*, and died March 17, 1862.

HALÉVY, LUDOVIC (1834-1908). A French dramatist. He wrote many operettas, vaudeville pieces, and comedies, in collaboration with Henri Meilhac (1831-97), including *Orphée aux Enfers*. He died May 8, 1908.

Halévy's son Élie, born at Etretat, Sept. 6, 1870, was educated in Paris, and in 1898 became professor at the school of political science there. In 1900 appeared his *Foundation of Philosophic Radicalism*, but he is best known by his *History of the English People* in the 19th Century.

HALF-TONE. Photo-mechanical process of making typographic printing blocks from full-tone originals such as photographs, wash-drawings, and the like, as distinguished from those in line. The process came into use about 1880. The original is photographed through a glass screen ruled with cross lines, the screen varying in fineness with the quality of the paper upon which the block is printed. For newspaper half-tones, one of 65 to 80 lines per inch is used, and for printing on fine art paper, 150 to 175 lines. A screen of 120 is

used for the illustrations in The Concise Universal Encyclopedia.

The action of the screen consists in the formation on the photographic negative of a dot from every aperture produced by the crossing of the lines of the screen, these dots ranging from mere points in the shadows, to larger units which unite to form a honeycomb pattern in the middle tones, and an almost solid black in the high lights. These tones are reversed when the negative is printed on metal. An examination of an illustration through a

Halibut, the largest flat fish

lens will make this quite clear. From this screen-negative a resist-image is printed on sensitised copper or zinc. The light affected parts of the coating are rendered insoluble, the soluble areas being afterwards washed away. The plate is then heated, whereby the image is converted into a hard enamel-like substance which is an effective resist of the etching fluid. The latter is perchloride of iron for copper, nitric acid for zinc. The plate is next etched, certain parts being lightened by further (local) treatment in the etching bath, a process known as fine etching. The plate is then mounted type-high on hard wood ready for the printer.

the coloured original, one for each of the primary colours, a suitable colour filter being placed in front of the camera lens. Three blocks are then prepared in accurate register, so that when a print is taken of each in turn on one sheet of paper, in yellow, red, and blue ink, the colours combine. Thus a reproduction of the coloured original is produced.

HALIBURTON, THOMAS CHANDLER (1796-1865). Canadian judge and author. Born at Windsor, Nova Scotia, he was called to the bar in 1820, and was judge of the supreme court, 1842-56, when he settled in England. He was M.P. for Launceston, 1859-65. The Haliburton Society was founded at Windsor, N.S., and its first publication was a memoir of Haliburton by F. B. Crofton, 1889.

HALIBUT (*Hippoglossus vulgaris*). Largest of the flat fishes. It occasionally attains a length of over 7 ft., but is usually between 4 ft. and 5 ft. The body is thick and narrow, and brown on the upper side. Generally found at some distance from the shores, to a depth of 100 fathoms, it is taken by trawling. The halibut is an important food fish.

HALICARNASSUS. Greek city in Asia Minor. In the 4th century B.C. it was the seat of a dynasty. On the death of Mausolus, one of the dynasty, his widow Artemisia (q.v.) raised a magnificent monument to his memory known as the Mausoleum (q.v.), which was considered one of the seven wonders of the ancient world. The historians Herodotus and Dionysius of Halicarnassus were natives. It is the modern Budrum.

HALIFAX, County borough of Yorkshire (W.R.). It is 7 m. S.W. of Bradford, and has stations on the L.M.S. and L.N.E. Ryhs. The buildings include the town hall, a 19th century edifice designed by Sir Charles Barry, and the royal infirmary. The Piece Hall, now a market, dates from the 13th century.

Of the churches S. John the Baptist is the chief; All Souls' is a fine modern church designed by Sir Gilbert Scott. There is a public library and museum; also the Aekroyd museum and art gallery. There are several parks, one having been given by Sir F. Crossley. To the same benefactor and his brother the town owes the Crossley almshouses and orphanages. There are technical schools, Heath grammarschool, and the Waterhouse school. A bridge connects the two parts on either side of the river valley. Halifax is a centre for the manufacture of woollen and worsted goods,

carpets, and blankets. One member is returned to Parliament. Pop. 99,129.

Halifax, Nova Scotia. The town and harbour seen from the Citadel

HALIFAX. City of Nova Scotia, Canada, a seaport and the capital of the prov. The harbour is one of the finest in the world and has ample docks, etc. Halifax is 837 m. from Montreal, is the terminus of two trans-continental lines of rly., C.P.R. and C.N.R., and is Canada's chief winter port. Its exports are fish, lumber, etc., and its industries include shipbuilding, founding, sugar and oil refining, and the making of furniture, soap, paint, tobacco, etc. There are also factories for making cotton and woollen goods, agricultural implements, etc. Pop. 58,372.

HALIFAX, EARL OF. English title borne by the families of Savile and Montague. The first holder was the statesman George Savile, but when his son William died in 1700, all the titles, save an old baronetcy, became extinct. Then the Whig statesman, Charles Montague, was made Baron Halifax, and in 1714 an earl. Previously he had been one of the Whig leaders under William III, holding office as chancellor of the exchequer and first lord of the treasury, 1695-99. On his death in 1715 the earldom became extinct, but the barony passed to his nephew George, who in the same year was made earl of Halifax. He was succeeded in 1739 by his son George, and on his death in 1771 the titles again became extinct.

HALIFAX, GEORGE SAVILE, 1ST MARQUESS OF (1633-95). British statesman and author. The son of Sir William Savile, a Yorkshire baronet, his political career only began about 1668, when he was made a viscount. In 1679 he was made an earl, and in 1682 a marquess. As the nation's spokesman he formally offered the crown to William and Mary and was appointed lord privy seal, an office he had previously held under Charles II. In 1689, however, he resigned, and he died April 20, 1695. His great work as an author is *The Character of a Trimmer*, written in 1684. *Maxims of State* is another, while he wrote *The Character of Charles II*, *Some Political, Moral, and Miscellaneous Thoughts and Reflections*, and *The Anatomy of an Equivalent*.

Halifax, England. The town hall, built in 1862

1st Marquess of Halifax, British statesman

Half-tone. The same subject as reproduced through six different screens. (1), 150 lines per inch; (2), 135; (3), 120, the screen used for The Concise Universal Encyclopedia blocks; (4), 100; (5), 80; (6), 64; 5 and 6 being commonly used for newspaper reproduction. See Text

Half-tone blocks for colour printing are prepared by a similar method. In the three-colour process three photographs are taken of

of the town, which lie in the three-river valley. Halifax is a centre for the manufacture of woollen and worsted goods,

HALIFAX, Viscount. English title borne since 1866 by the family of Wood. Sir Charles Wood (1800-85), a Yorkshire baronet, became a Liberal M.P. in 1826. He was chancellor of the exchequer 1846-52, first lord of the admiralty 1855-58, and secretary for India 1859-66. In 1866 he was made a viscount, and he died Aug. 8, 1885.

The 2nd viscount, Charles Lindley Wood, was born June 7, 1839, and educated at Eton and Christ Church, Oxford. For 50 years he was the recognized leader of the High Church party, and from 1867-1919 was president of the English Church Union. His son Edward (b. 1881) became viceroy of India in 1920. Made a peer, he took the title Baron Irwin (q.v.).

HALL. Word used originally for a large room. It was specially applied to the room in which kings and others in authority received suppliants, hence the phrase, the hall of justice. The same room was also used in castles and other large residences as a dining-room, a use which persists in the halls of colleges and public schools. It was also given to the place where the burgesses of a town or the members of a guild met, hence comes the town hall and the guildhall. A further use was for a manor house. This was the hall in which justice was dispensed, and so in time the house itself became known as the hall. A hall of fame is a building erected for the purpose of commemorating great men. One such hall, which was finished in 1900, is part of the buildings of New York University. See Guildhall.

HALL, CHRISTOPHER NEWMAN (1816-1902). British preacher. Born at Maidstone, May 22, 1816, he was the son of a newspaper owner there. He entered his father's business, but soon decided to enter the Congregational ministry, and studied for it in London. Having been a minister in Hull, 1842-54, he was minister of the Surry Chapel, London, 1854-76. In 1876 his congregation built for him a new church, Christ Church, Westminster Bridge Road, where he remained until 1892. He died Feb. 17, 1902. One of the most popular preachers of his time, Newman Hall's devotional writings had an enormous sale.

HALL, EDWARD (c. 1500-1547). English chronicler. A Shropshire man, he is known as the author of a Chronicle published in 1548. This, called in full The Union of the noble and illustrious families of Lancaster and York, gives an account of the history of England from 1399 to 1547, when Henry VIII died. It was continued by other hands, and the part dealing with Hall's own lifetime has been edited by C. Whibley, 1904.

HALL, JOSEPH (1574-1656). English prelate and author. Born at Bristow Park, Ashby-de-la-Zouch, he was dean of Worcester, 1616, bishop of Exeter, 1627-41, and bishop of Norwich, 1641-47. Accused by Laud of puritanical leanings, his defence of episcopacy, 1640, caused an attack by five Puritans whose initials formed the joint pseudonym of Smectymnus, and involved him in controversy with Milton. Impeached and imprisoned 1642, his estate was sequestered and his house plundered. He described his trials in *Hard Measure*, 1647. He died Sept. 8, 1656.

Charles L. Wood, 2nd Viscount Halifax
Lafayette

HALL, OLIVER (b. 1869). British artist. A son of John Hall, a Londoner, he studied art at the Westminster School of Art and abroad. In 1893 and 1897 he won medals at Chicago and Munich for his lithographs and etchings; in 1920 he was elected A.R.A. and in 1927 R.A. Hall is chiefly a painter of landscapes, and one of them, *Shap Moors*, bought by the Chantry Trustees, is in the Tate Gallery, London.

HALL, ROBERT (1764-1831). English preacher. Born in Leicestershire, May 2, 1764, he became a Baptist minister at Bristol in 1785. Later he was at Cambridge and Leicester, and he died Feb. 21, 1831.

A Calvinist after the type of Andrew Fuller, though opposed to Fuller on the subject of communion, and an ardent supporter of missions, his sermons remain among the classics of the modern pulpit. Consult memoir, E. P. Hood, 1881.

HALLAM, HENRY (1777-1859). British historian. The son of John Hallam, dean of Bristol, he was educated at Eton and Christ Church, Oxford. A strong Whig, he is remembered chiefly by two monumental works: a *View of the State of Europe during the Middle Ages, 1818*, and his *Constitutional History of England for the period 1485-1760*. He also edited the *Remains in Prose and Verse of his son, Arthur Henry Hallam (1811-33)*, whose early death inspired *In Memoriam*. He died Jan. 21, 1859.

Hallamshire. Name given to a district around Sheffield.

HALLE. Town of Germany, in Prussian Saxony. It stands on the Saale, 23 m. by rly. W.N.W. of Leipzig.

An old town, Halle owes its importance to the salt industry, which still survives, though other manufactures, e.g. machinery, sugar, lubricants, etc., flourish. Its chief glory is the university, founded by Frederick I of Prussia in 1694. Pop. 193,722.

HALLÉ, SIR CHARLES (1819-95). British pianist and conductor. Born at Hagen, Westphalia, he came to England in 1848, and in Manchester, 1893, founded the Royal College of Music, of which he was the first principal. He was knighted in 1888. Hallé was highly gifted as both pianist and conductor. He died Oct. 25, 1895. His wife, Wilma Normann-Neruda, Lady Hallé (1839-1911), won a position among the greatest violinists of her time.

HALLELUJAH OR **ALLELUIA** (Heb. Praise the Lord or Praise to the Lord). Ascription of praise in the Psalms and Jewish hymns. In the N.T. it occurs only in Rev. 19.

The Hallelujah Chorus is a name specially applied to the concluding chorus of Part II of Handel's oratorio *The Messiah*. See Oratorio.

HALLEY, EDMUND (1656-1742). English astronomer. Born in London, Oct. 29, 1656, the son of a soap boiler, he was educated at S. Paul's School, where he distinguished himself in mathematics and classics. He helped Newton in the publication of the *Principia*, succeeded Flamsteed as astronomer royal, and

made important discoveries relative to the movements of Saturn and Jupiter and other heavenly bodies. He died at Greenwich, Jan. 14, 1742, and was buried at Lee.

HALLEY'S COMET. This is the most notable of all the comets whose periods are known. It takes 76 years (approximately) to travel round its orbit. At its return in 1682 Halley computed its orbit and found that it was identical with the comet that had appeared in 1607 and before that in 1531, and he predicted its return. Crommelin, of Greenwich Observatory, has carried back its history with definiteness to 240 B.C. See illus. p. 437.

HALL MARK. Set of marks stamped upon gold and silver articles at the Goldsmiths' Hall, London, or assay offices, to attest the genuineness of the metal and the date of its testing. The series consists usually of five marks: (1) the standard mark, indicating the standard of the metal, e.g. 18 for gold of 18 carats; (2) the hall mark, indicating the town where the assaying has been done, e.g. a leopard's head crowned for London, an anchor for Birmingham; (3) the duty mark (used 1784-1890), showing that the necessary duty had been paid; (4) the date mark, a letter of the alphabet for each year, varying in design in cycles; (5) the maker's mark, now his initial letters, though early pieces have sometimes emblems, as a rose or a star.

STANDARD		DUTY MARK
		
1300-1697	1704-1697	1784 1786 1786 1820
		
1697 TO 1720		1821 TO 1830
		
1721 TO 1812		1831 TO 1836
		
Since 1822		1837 TO 1890

Hall Mark. London marks from 1300 to present day

showing that the necessary duty had been paid; (4) the date mark, a letter of the alphabet for each year, varying in design in cycles; (5) the maker's mark, now his initial letters, though early pieces have sometimes emblems, as a rose or a star.

HALLOW-E'EN. Popular Scottish name for Oct. 31, the eve of All Saints' Day. Also called All Hallows Eve, Holy Eve, Cake Night (in Yorkshire), and, in the N. of England, Nutcrack Night, from early times it has been associated with many superstitions and customs, a number of which are referred to in Burns's poem of this name.

HALLSTATT. Village of Austria. It lies at the S. end of Hallstätter Sec, and is famous for its salt mine. In the vicinity a cemetery of 3,000 graves, discovered 1846, contained the human remains and grave-goods of prehistoric settlers. Pop. 1,355.

HALLUCINATION (Lat. hallucinari, to wander in mind). Condition of mind in which a person sees something that has no real existence within his range of vision. It should be carefully distinguished from illusion, in which a real object is seen, but is wrongly interpreted. See Dream.

HALMA (Gr. leap). Game played by two or four persons on a board divided into 256 squares, with men in the form of chess pawns. The men are placed in four spaces, termed yards, one at each corner of the board, and the object of the player is to get his own men into his adversary's yard, the player or side first accomplishing this winning the game.

Edmund Halley, English astronomer
From a portrait owned by the Royal Society

Robert Hall, Baptist preacher
After J. Flowers

Halle. The market place with the 16th cent. Marienkirche and the Roter Turm

Hallé. Sir Charles Hallé, pianist and conductor, and Lady Hallé, violinist

HALO. Luminous ring round the sun or moon. Halos, when clearly defined, are seen to be coloured, red on the inside and blue on the outside. Usually about 44° in diameter, they are due to the sun or moon being seen through a thin sheet of cirrostratus clouds, which owing to their elevation are composed of tiny ice crystals. Halos have no definitely determined significance in connexion with the weather.

Halo with mock suns on each rim of the circle, a phenomenon seen in 1924

In art the halo or nimbus is a disk or circle of light surrounding the head in representations of divine personages and saints in sacred and legendary art. See Saint.

HALS, FRANS (c. 1580-1666). Dutch painter. He was born probably at Antwerp, the son of Pieter Hals Clarz. His extraordinary gift of seizing and expressing a fleeting human emotion is nowhere better shown than in *The Laughing Cavalier*, in the Wallace Collection. The National Gallery possesses five pictures by Hals, but the greatest works of his brush are in Dutch galleries, and it is often said that Hals cannot be appreciated without a visit to Haarlem, where there are ten paintings in the municipal museum, representing all periods of his activity. See illus. p. 502.

Frans Hals, Dutch painter. a self-portrait
Haarlem Museum

HALSBURY, HARDINGE STANLEY GIFFARD, 1ST EARL OF (1823-1921). British lawyer. Born Sept. 3, 1823, of a Devonshire family, he became a barrister. He sat in the House of Commons as a Conservative from 1877 until 1885, when he was made a peer. He was solicitor-general under Disraeli and was lord chancellor throughout the Unionist ministries of 1885, 1886-92, and 1895-1905. In 1898 he was made an earl, and he died Dec. 11, 1921. When over 80 Halsbury edited *The Encyclopaedia of the Laws of England*. Consult Life, Mrs. A. Wilson-Fox, 1929. Pron. Halsbury.

Earl of Halsbury, British lawyer
Fry & Son

HALSEY, SIR LIONEL (b. 1872). British sailor. Born Feb. 26, 1872, he was educated at Fareham and joined H.M.S. Britannia in 1885. He commanded H.M.S. New Zealand in the action in the Heligoland Bight, Aug., 1914, and in the action off the Dogger Bank, Jan. 24, 1915, and was on Jellicoe's staff in the Iron Duke in the battle of Jutland, May 31, 1916. He was knighted in 1918 and promoted vice-admiral in 1921. In 1920 he became controller of the household of the Prince of Wales.

HALSTEAD. Urban dist. and market town of Essex. It stands on the Colne, 15 m. N.W. of Colchester, on the L.N.E. Rly. Silk and crape are manufactured, and there are iron foundries, etc. Market day, Tues. Pop. 5,916.

HALTON. Village of Buckinghamshire. It is 4 m. S.E. of Aylesbury, and has a camp of the R.A.F. At one time the staff college was here, but this is now at Andover. Halton remains an administrative centre.

HALTWHISTLE. Market town of Northumberland. It is 16 m. W. of Hexham, on the L.N.E. Rly. The Roman wall runs near it, and many antiquities have been found in the neighbourhood. The chief industry is coal-mining. Market day, Thurs. Pop. 4,500.

HAM. In anatomy, the back part of the leg behind the knee joint, and, secondarily, the thigh and buttock of any animal. The word is applied particularly to the thigh of a pig, salted, smoked, and cooked. Wiltshire and Yorkshire hams are the best. Large numbers of hams are exported from Westphalia and Chicago.

HAM. Urban dist. of Surrey. A residential suburb of London, it stands between Twickenham, N., and Teddington, S., and is bounded on the E. by Richmond Park. Facing the Thames, in the parish of Petersham, is Ham House, seat of the earl of Dysart, built 1610. The meadows known as Ham Walks extend from Ham House to Twickenham Ferry. Ham Common covers 20 acres. Pop. 1,512.

Ham is not to be confused with East Ham or West Ham. See East Ham; West Ham.

HAM. One of the sons of Noah (Gen. 9 and 10). He is said to have been the ancestor of the Ethiopians, Egyptians, and the nations of N. Africa generally. The name means hot or black, and is also the ancient name for Egypt, to which it is applied in Psalms 105 and 106.

HAMADRYAD or **KING COBRA.** Large species of cobra, found in India, Malaya, and the Philippines. It is venomous and rather aggressive.

Hamadryad. Head of the poisonous snake

In colour yellow or yellowish brown, with black bands, it attains a length of about 14 ft. It feeds to a large extent on other snakes. See Snake.

In Greek mythology Hamadryads were nymphs that presided over trees. See Nymph.

HAMAN. Chief minister and favourite of Ahasuerus, king of Persia. Because Mordecai, a Jew, paid him no reverence, he resolved to destroy Mordecai and all Jews in the kingdom. The plot, however, was exposed by Esther, with the result that Haman himself was hanged. See Esther; Mordecai.

HAMBLE. Flying centre on Southampton Water. It is 5 m. from Southampton and has an aerodrome. Near the little river Hamble enters the sea, forming Hambledon Creek.

HAMBLEDEN, WILLIAM FREDERICK DANVERS SMITH, VISCOUNT (1868-1928). British business man. Eldest surviving son of W. H. Smith (q.v.), he was born Aug. 12, 1868, and educated at New College, Oxford, where he distinguished himself as an oarsman. After his father's death in 1891 his mother was created Viscountess Hambleden, and on her death in 1913 their son succeeded to the title. He succeeded his father as head of W. H. Smith & Son and as Unionist M.P. for the Strand division 1891-1910. An officer of the Devon Yeomanry, he served during the Great War. He died June 16, 1928. His elder son succeeded to the title and to the control of the business of W. H. Smith & Son.

HAMBLEDON. Village of Hampshire, famous for its cricket club. It is 6 m. N.E. of Fareham. Formed about 1750, this club was the first of its kind in England. The games are played on two downs, Windmill and Broad-halfenny.

HAMBURG, MARK (b. 1879). British pianist. Born at Boguchar, S. Russia, May 30, 1879, he studied in Vienna. He made his first public appearance in Moscow in 1888, and has toured the world. Hamburg became a naturalised British subject and married a daughter of Lord Muir-Mackenzie.

HAMBURG. City and seaport of Germany. It stands on the Elbe, 75 m. from Cuxhaven and 178 from Berlin. On the Elbe is an enormous extent of docks and harbours mainly constructed since 1888. Huge granaries and emigrant sheds are features.

Hamburg has an old town and a new, formerly divided by the river Alster, which has been transformed into two lakes, the Inner and the Outer Alster. These are divided by the Lombards Bridge and by remains of the old fortifications. The Inner Alster is used largely by pleasure steamers. Around the Inner Alster lies modern Hamburg, its fine broad streets lined with handsome hotels, banks, shops, etc. The chief church is S. Nicholas, with a lofty spire. Secular buildings include the Rathaus; the Johanneum, housing a library and a collection of antiquities; custom house, and law courts. Public monuments include the Hansa Fountain. A university was opened in 1918.

The little state of which Hamburg is the capital is a republic within the German Reich. It is governed by a house of burgesses consisting of 160 members, to which an executive of 18 members is responsible. The existing constitution dates from March, 1919. The area of the state is 160 sq. m., and the pop. is 1,130,000. Outside the city of Hamburg the territory consists of several small detached portions in Holstein and Hanover, and islands in the Elbe. The only towns are Bergedorf

Hamburg Fowl, noted for handsome plumage
Chas. Reid

Hamburg fowl is the name given to breeds of poultry mainly of English origin. Varieties include some with black plumage, and others with spangled and pencilled

markings on a white or bay ground. All are handsome birds and prolific layers of eggs.

HAMEL, GUSTAV (1889-1914). British aviator. Educated at Westminster, in 1913 he won The Daily Mail prize in the Greater London race, covering 94½ m. in 75 mins. 49 secs. In May, 1914, he was returning on a new monoplane from Paris to London when he was lost, no trace of himself or his machine ever being found.

HAMELN. Town of Germany. It stands on the Weser, 25 m. from Hanover by rail. The chief building is the minster, a 14th century church restored in the 19th century. There are some manufactures and a trade along the river. Hameln is the Hamelin of Browning's poem about the piper. This is based upon a legend associated with a rat-catcher of the town.

HAMERTON, PHILIP GILBERT (1834-94). British critic and etcher. His book on The Intellectual Life, 1873, was one of the classics of the Victorian era. Etching and Etchers, 1868, and The Graphic Arts, 1885, are two of his many works that stand out beyond the mass of art criticism of his time. Married to a Frenchwoman, Eugénie Gindriez, he lived many years in France, and wrote with authority on that country and its people.

HAMILCAR. Name of several famous Carthaginians. The most notable was Hamilcar Barca (c. 270-228 B.C.), soldier and statesman, the father of Hannibal. He commanded the Carthaginian forces in Sicily during the first Punic War. On his return to Carthage he had to deal with a revolt of mercenaries, which he crushed after three years' fighting. He then turned his attention to Spain, and in nine years established Carthaginian dominion over a great part of the country. He was killed in battle in 228 B.C.

HAMILTON. Burgh of Lanarkshire. It is the centre of a rich coal and ironstone district, mining being the chief industry. There are also cotton and other manufactures, while the place is a centre for the produce of numerous market gardens. Hamilton Palace, the third of this name, built in 1820-30, has been pulled down. Pop. 39,420.

HAMILTON, EMMA, LADY (c. 1761-1815). British adventuress. A daughter of Henry Lyon, she is believed to have been born in humble circumstances at Ness, Cheshire. In 1782 she became the mistress of the Hon. Charles Greville, and four years later of his uncle, Sir William Hamilton (1730-1803), British ambassador at Naples and a grandson of the third duke of Hamilton. In 1791 Sir William married her, and in Naples she became the confidante of the queen. In 1793 she and Nelson first met, but it was five years later that they became intimate. Their child, Horatia, was born in 1801. Hamilton died in 1803, Nelson in 1805, and Lady Hamilton on Jan. 15, 1815. She is remembered mainly for her liaison with Nelson and for her remarkable

Another Hamilton is a town of North Island, New Zealand. This is the centre of a grazing and dairying district. Pop. 17,360.

Hamilton is also the name of the capital of the Bermuda Islands. It is a winter resort for American visitors. Pop. 3,000.

HAMILTON, DUKE OF. Scottish title, the oldest of its kind in the peerage. Sir James Hamilton, of Cadzow, and his wife, Mary, daughter of James II of Scotland, had a son who, in 1503, was made earl of Arran. His son, another James, known as the Regent Arran, was made duke of Châtellerauld, in France, in 1549, and John, one of the regent's younger sons, was created marquess of Hamilton in 1599. The marquess, who died in 1604, was succeeded by his son James, who, in 1619, was made an English peer as earl of Cambridge. The latter's son James was the first duke, created in 1643.

The semi-royal position of the dukes of Hamilton passed with the death of the 12th duke in 1895. He was succeeded by a cousin, Alfred Douglas, but his daughter, the marchioness of Graham, inherited Brodick Castle and most of the isle of Arran. Hamilton Palace and the estates in Lanarkshire went to the new duke. The duke's eldest son is known as marquess of Douglas and Clydesdale.

HAMILTON, ALEXANDER (1757-1804). American statesman. He was born Jan. 11, 1757, on the island of Nevis, West Indies, of which his mother was a native; his father was a Scotsman. At the age of 20 he was a lieutenant-colonel and aide-de-camp to George Washington. In 1780 he married a daughter of General Schuyler, who survived him 50 years. He had much to do with the framing of the constitution of the U.S.A., and as secretary to the Treasury, 1789-95, he established the National Bank, and proved himself a great financier. In 1798 he was appointed second in command of the provisional army in anticipation of a French invasion, and on the death of Washington he was in chief command. In July 11, 1804, he was fatally wounded in a duel with Aaron Burr (q.v.).

HAMILTON, CECILY (b. 1872). British author, playwright, and actress. Born in London, her fame as a playwright rests chiefly on Diana of Dobson's, 1906. She also wrote several other plays. With Lilian Baylis she wrote a history of the Old Vic, 1926. Her other publications include three novels based on her plays, Diana of Dobson's: Just to Get Married; and A Matter of Money, 1916. In 1928 appeared Lest Ye Die.

HAMILTON, EMMA, LADY (c. 1761-1815). British adventuress. A daughter of Henry Lyon, she is believed to have been born in humble circumstances at Ness, Cheshire. In 1782 she became the mistress of the Hon. Charles Greville, and four years later of his uncle, Sir William Hamilton (1730-1803), British ambassador at Naples and a grandson of the third duke of Hamilton. In 1791 Sir William married her, and in Naples she became the confidante of the queen. In 1793 she and Nelson first met, but it was five years later that they became intimate. Their child, Horatia, was born in 1801. Hamilton died in 1803, Nelson in 1805, and Lady Hamilton on Jan. 15, 1815. She is remembered mainly for her liaison with Nelson and for her remarkable

beauty, to which over twenty portraits of her by George Romney bear witness.

HAMILTON, LORD GEORGE FRANCIS (1845-1927). British politician. Younger son of the 1st duke of Abercorn, he was born in Dec., 1845, and entered the House of Commons as a Conservative in 1868. He held minor offices in the ministry of 1874-80. In 1885-86 and again 1886-92 he was first lord of the admiralty, and from 1895-1903 secretary for India. A free trader, he left office in 1903 and Parliament in 1906. He wrote Parliamentary Reminiscences and Reflections.

HAMILTON, SIR IAN STANDISH MONTEITH HAMILTON (b. 1853). British soldier. The son of a soldier, he was born at Corfu, Jan. 16, 1853. Educated at Cheam School and Wellington College, he entered the Gordon Highlanders in 1873, and first saw active service in the Afghan War of 1878-79. He served in the Boer War of 1881; with the expedition up the Nile in 1884-85, in Burma, 1886-87, in the Chitral campaign, 1895, and the Tirah, 1897-98. During part of the South African war he was chief of the staff to Lord Kitchener.

In 1915, having just been made a full general, Hamilton was chosen to command the force that landed on the Gallipoli peninsula. He led it in its terrible fighting until he was superseded. A charming personality, Hamilton is a writer with distinct gifts of style, shown not least in his dispatches. His works include Icarus and Fighting of the Future, and A Gallipoli Diary, 1920. See Gallipoli.

HAMILTON, PATRICK (c. 1504-28). Scottish martyr. For commending Tyndale's translation of the N.T. in 1526 he was charged with heresy. He escaped to Marburg, where he came under the influence of Luther and other reformers and composed his Loci Communes, known as Patrick's Pleas, in which he set forth the doctrine of justification by faith. He returned to Scotland in 1527, was seized Feb. 28, 1528, tried for heresy in St. Andrews Cathedral, sentenced by Archbishop Beaton, and burnt at the stake, Feb. 29, 1528.

HAMILTON, SIR WILLIAM (1788-1856). Scottish philosopher. Born at Glasgow, March 8, 1788, he gave a new turn to Scottish philosophy. He especially insists upon the relativity of knowledge; the absolute is not only unknowable, but also inconceivable; it is an object of faith, not of science. His chief work is Lectures on Metaphysics and Logic, 1859-61. He died at Edinburgh, May 6, 1856.

HAMMER. Tool, consisting of a heavy head of metal usually fixed on a shaft of wood, and used for striking blows. Hammers vary in size from small hand hammers, weighing only a few ounces, to giant power hammers weighing many tons. In hand hammers the wood of the shaft is usually of ash or hickory. The striking part of the iron or steel head is called the face,

1st Duke of Hamilton,
Scottish politician
After Van Dyck

Alexander Hamilton,
American statesman
After Trumbull

Sir Ian Hamilton,
British soldier
Russell

The city is an important industrial centre
Courtesy of the Canadian Government

HAMILTON. City and port of Canada. It stands at the western end of Lake Ontario, 40 m. from Toronto. Sometimes called the Birmingham of Canada, Hamilton has manufactures of iron and steel goods, including railway stock and agricultural implements, as well as textiles, tobacco, and furniture. It is a railway centre. The city was founded about 1778, its first inhabitants being loyalists from the U.S.A. Pop. 127,447.

Several other places in the British Empire are named Hamilton. One is the chief town of a district of Victoria, Australia. It is the centre of a pastoral area. Pop. 5,300.

the opposite end the peen. The latter is often split and curved to enable nails to be withdrawn. The word hammer is widely used for any part of a mechanism which strikes as, for example, the hammer of a gun, the hammers in the action of a pianoforte, etc., as well as for objects that are hammer-shaped. See Steam Hammer.

Throwing the hammer is an event at many athletic sports, including the Olympic Games and the British amateur athletic championships. The record throw is 189 ft. 6½ in., by P. Ryan of New York in 1913.

HAMMERFEST. Town of Norway, in the fylke or county of Finnmark. There is a harbour, which is the base of the Spitsbergen and Kara Sea whale fisheries. Here the sun does not set from May 13 to July 29, and does not rise from Nov. 18 to Jan. 23. Pop. 3,338.

HAMMERKOP or **HAMMERHEAD.** African bird, related to the heron. It is about 2 ft.

long and has brown plumage. When the crest of feathers at the back of the head is raised, it gives the head a certain resemblance to a hammer. The bird is found near water, and feeds chiefly on fish, frogs, and lizards.

HAMMERSMITH. Metropolitan borough of the co. of London. It is bounded S. by Fulham and the Thames, where it is fringed by the Upper Mall and Lower Mall; W. by Chiswick and Acton; E. by Kensington; and N. by Kensal Green. It is on the main road from London to Brentford, and is served by the G.W., West London Extension, District, Piccadilly Tube, and L.M.S. Rlys. It was constituted a separate borough in 1899 and covers about 3½ sq. m. It possesses a fine town hall, 1897, a public library, and many churches, almshouses, and schools, the last named including St. Paul's, removed here from the city in 1883, the Godolphin School, dating from the 16th century, and those of the Latymer foundation, 1824. Another building is the Lyric theatre. Two members are returned to Parliament. Pop. 134,400.

HAMMER TOE. Condition in which the first phalanx of the toe is bent upwards, and the second phalanx downwards, the third or terminal phalanx being bent either downwards or upwards.

HAMMERTON, JOHN ALEXANDER (b. 1871). British editor and writer. Born at Alexandria, Dumbartonshire, he took to journalism in Glasgow, 1888, and edited newspapers at Blackpool, Nottingham, and Birmingham before settling in London as a writer and editor of books and periodicals in 1900. His name is associated as editor with many noteworthy publishing enterprises, such as Peoples of All Nations, the Universal Encyclopedia, and the Universal History of the World. Among his books are Stevensoniana, 1903, George Meredith, 1909, Memories of Books and Places, 1928, and Barrie: The Story of a Genius, 1929.

HAMMOCK (Span. hamaca). Swinging bed of netting, canvas, fibre, skins, etc., suspended at each end to supports. On ship-board, and particularly on warships, the hammocks are made of canvas.

HAMMOND, WALTER REGINALD (b. 1903). English cricketer. Born at Dover, June 3, 1903, he first played for Gloucestershire in 1922. He became prominent as batsman and bowler, and by the end of 1927 had established himself as, next to Hobbs, the most popular batsman in England.

HAMMURABI, KHAMMURABI or **HAMMURABI.** King of Babylon about 2100 u.c. Identifiable with Amraphel, king of Shinar (Gen. 14), he left a remarkable code of laws and letters which illuminate the political and economic conditions of his age. It was inscribed upon a black diorite stele for the temple of the sun-god Shamash at Sippara, and carried thence about 1200 u.c. to Susa. It was found here in three fragments in 1901-2, and is now in Paris.

HAMPDEN, JOHN (1594-1643). English statesman. The eldest son of William Hampden, of Hampden, Bucks, he became member of Parliament for Gram-pound, Cornwall, in 1621; later he sat for Wendover and for Buckinghamshire. In 1627 Hampden was imprisoned for refusing to pay a share of a forced loan raised by Charles I, and in 1635, on the attempt to raise ship-money from inland places, he refused again and was prosecuted. He took part in the impeachment of Strafford, 1641, and in 1642 was one of the Five Members whose attempted arrest by the king led to the out-

John Hampden, British statesman

break of the Civil War. When the war began Hampden raised a regiment of infantry, and took part in the relief of Coventry and the siege of Reading. He was wounded at Chalgrove, and died at Thame, June 24, 1643.

HAMPSHIRE.

County of England, officially the county of Southampton. It has a coastline on the English Channel, where are Southampton Water and Portsmouth Harbour. The Isle of Wight forms part of the county, but has a separate county council. In the N. are the downs, and in the W. is the New Forest. The chief rivers are the Itchen, Test, Avon, Hamble, and Lymington. Area, 1,645 sq. m.

Hammurabi Code. Stone inscribed with the code
Louvre, Paris

Sheep, as well as pigs, are reared. Wheat, barley, and oats are grown, but there is a considerable area of waste or forest land, including, in addition to the New Forest, the forests of Bere, Woolmer, and Alice Holt. Winchester is the county town. Other large towns include the two seaports, Southampton and Portsmouth, and Bournemouth, Southsea, Aldershot, and Eastleigh. The chief rly. line is the Southern Railway, but the G.W.R. also serves the county. Hampshire is partly in the diocese of Winchester and, since 1927, partly in the diocese of Portsmouth.

In the county are the abbey ruins at Beaulieu and Netley, the beautiful old churches at Christchurch and Romsey, old castles at Porchester and Hurst, and the ruins of Basing House. Notable houses include Heron Court, near Christchurch, and Broadlands, which was once the residence of Lord Palmerston. See New Forest; Wight, Isle of.

LITERARY ASSOCIATIONS. Hampshire was first notably used as a literary background in Gilbert White's Natural History of Selborne. Jane Austen described the comfortable classes of the county (Steventon and Chawton). Charles Kingsley dealt with Hampshire in Yeast, described the road to Winchester in Hereward the Wake, and the Hartford Flats in Madam How and Lady Why.

HAMPSHIRE. British cruiser. The first Hampshire fought under Blake in 1655. The last ship to bear the name was a cruiser of the Devonshire class. On June 5, 1916, off the Orkneys, in extremely rough weather, the Hampshire, which was conveying Lord Kitchener to Russia, ran into a minefield and sank. There were only twelve survivors of the disaster, among those lost being Lord Kitchener and his staff.

HAMPSHIRE REGIMENT. Formerly the 37th and 67th Foot. Raised in 1702 and 1758 respectively, this regiment took part in Marlborough's battles. At Dettingen, 1743, and Minden, 1759, it played a notable part,

Hampshire Regimental badge

Hampshire. Map of the southern county, which includes the Isle of Wight

and distinguished itself at Tournai, 1794, and Barossa, 1811. Later campaigns include the

Indian Mutiny, the China War, 1860-61, the Afghan War, 1878-80, and the Burmese War, 1885-87. After the S. African War it saw field service in Somaliland. In the Great War battalions of Hampshires, regular and territorial, served in every theatre of war. The depot is at Winchester.

HAMPSTEAD. Metropolitan borough of N.W. London. Occupying about 3½ sq. m., it is served by the Hampstead (Tube), L.M.S., L.N.E., and Metrop. Rlys. Its chalybeate wells are said to have been known to the Romans. In the 18th century it was a fashionable spa. The church of S. John, 1747, replaced a structure pulled down in 1745, and contains a bust of Keats, by Anne Whitney, presented by Americans. Here are the Haberdashers', Aske's, and University College schools.

Hampstead. Church Row, leading to the 18th century church of S. John
Humphrey Joel

Long a favourite residence of artists and literary men, Hampstead is full of interesting associations. Dr. Johnson wrote *The Vanity of Human Wishes* at Priory Lodge, 1749; Keats, who wrote *Hyperion* and *The Eve of St. Agnes* at Lawn Bank, lived in Well Walk.

The Hampstead Garden Suburb, situated N. of Hampstead Heath Extension, of which it was an outcome, and E. of Golder's Green (q.v.), was founded by Mrs. Henrietta Octavia Barnett, and is owned and managed by a trust. Mrs. Barnett set out the scheme in Feb., 1905, and a company was formed in March, 1906, when the 240 acres were purchased from the Eton College trustees. The first sod was cut May 4, 1907. The scheme aimed at doing something to meet the housing problem, to lay out the suburb on an orderly plan, to provide houses for all classes, and to preserve natural beauty. See Garden City.

HAMPSTEAD HEATH. Open space in N.W. London. It occupies the summit and N. slopes of Hampstead Hill, at an elevation of 430 ft. above sea level. The heath, famous for its firs, broken hillocks, wild gorse, grassy glades, extensive views, and old inns, covers 288 acres, Parliament Hill (271 acres) and Golder's Hill (36 acres) adjoining. The greater part was acquired as a public recreation ground in 1870, additional ground being added in 1907.

HAMPTON. Urban dist. of Middlesex. It stands on the Thames, 15 m. S.W. of London on the Southern Rly. Hampton Court (q.v.) 1 m. to the S.E., and Bushey Park (q.v.) are within its boundaries. In the churchyard of the parish church of S. Mary lies buried Huntington Shaw (d. 1710), who wrought the iron gates at Hampton Court. At Garrick Villa, formerly Hampton House, E. of the church, David Garrick lived, 1754-79. There is a 16th century grammar school. To the W. of the village are large waterworks under the London Water Board. Near are Kempton Park and Hurst Park racecourses; Hampton has a ferry to Molesey Hurst. The manor is mentioned in Domesday, and was once held by Wolsey. Pop. 10,677.

HAMPTON COURT. Palace on the left bank of the Thames, between Hampton and Hampton Wick, Middlesex, 15 m. S.W. of London Bridge. Built by Cardinal Wolsey in 1515, and surrendered by him to Henry VIII in 1526, it remained a royal residence until the time of George III.

The E. and S. wings were built by Wren; the gardens were laid out for Charles II and William and Mary. The state apartments were opened to the public in 1839; the Haunted Gallery and the Chapel Royal in 1918. Many paintings and tapestries and an astronomical clock are to be seen. Features of the gardens are the grape vine, planted 1768, the Maze, and the Long Water. The Home Park covers 600 acres; adjacent is Bushey Park (1,110 acres), famous for its chestnut avenue and tame deer. The old moat was opened up in 1910. Present residents are principally royal pensioners.

The Hampton Court Conference was a conference arranged by James I in 1604 at Hampton Court between the bishops and four representatives of the Puritan clergy. The Puritans had petitioned James to recognize their views as to certain changes in the prayer book and upon ceremonies and vestments. Their proposals were rejected, and James administered a scolding to their representatives. See Puritans

Hampton Court. The Gatehouse built by Cardinal Wolsey in 1515. The bridge dates from 1535

HAMPTON WICK. Urban district of Middlesex. It is on the Thames opposite Kingston, with which it is connected by a bridge, and is 2½ m. E. of Hampton on the Southern Rly. The duc de Nemours lived at Bushey House. Steele lived at Hampton Wick, and Timothy Bennet, who secured the public way through Bushey Park, was a native. Pop. 2,799.

HAMSTER (*Cricetus frumentarius*). Small rodent, common in Asia and northern Europe. It is about a foot long, and has about 2 ins. of tail. The thick glossy fur is yellowish brown in colour. It lives in elaborate burrows, consisting of a dwelling chamber and a granary connected by galleries. Sometimes several granaries are found in a burrow. These are used for storing corn for consumption in winter, during which season the hamster keeps below ground and spends most of its time in a state of profound sleep.

Hamster, a North European rodent

HAMSUN, KNU (b. 1859). Norwegian author. Brought up as a cobbler in the Lofoten Isles, he later obtained employment in the Newfoundland fisheries. In 1888, however, his *Sult*, a novel, was published in a Danish magazine, and immediately brought him fame. His output thenceforward was considerable. *Hunger* (*Sult*), 1899, and *Growth of the Soil*, 1914, are his best known novels in English translations. They were followed in 1921 by

Konerne ved Vandposten (*The Women at the Well*). In 1920 he was awarded a Nobel prize.

Hand. Left, of a negro; right, of an aged gorilla, showing the shorter thumb typical of the apes

HAND. Prehensile extremity of the arm. It consists of three divisions—the carpus or wrist, consisting of eight small bones; the metacarpus, having five long bones; and the phalanges, of which there are three for each finger and two for the thumb. The hand is supplied with blood vessels derived from the radial and ulnar arteries of the forearm. The palm is protected by a dense layer of tissue lying beneath the skin, known as the palmar fascia. In middle-aged persons, particularly those who suffer from gout, this fascia may become contracted, seriously crippling the hand. This condition, known as Dupuytren's contraction, as a rule requires operative treatment.

There is no fundamental difference between the hands of the higher apes and those of man. The chief difference is in the thumb, always shorter in the ape.

The English measure of length called the hand was originally the breadth of a man's palm. After a time a fixed length was given to it and it is now 4 ins. It is only used for measuring horses.

HANDCUFFS. Devices for fastening the wrists of prisoners. Modern handcuffs consist of two metal rings adjustable to various sizes by means of a ratchet, and fastened together by a short length of chain. Snap handcuffs enable a policeman to imprison one wrist of an offender with a single movement.

Handcuffs. Pair of handcuffs in common use by the British police

HANDEL, GEORGE FREDERIC (1685-1759).

German musician. He was born at Halle, in Saxony, Feb. 23, 1685. He became organist at Halle, and in 1703 he went to Hamburg and played the violin in the orchestra of the Opera House; there his first opera, *Almira*, was produced in 1705. He studied for three years in Italy, and whilst there produced several operas with great success.

In 1710 Handel returned to Germany, and was appointed chapel-master to the elector of Hanover, afterwards George I of England. The same year he came to England, where he spent the remainder of his life, being at one time the organist at Edgware. After the successful production of several operas, he turned to oratorio, and began that series of sacred works upon which his fame rests. *Saul* and *Israel in Egypt* were composed in 1739, the *Messiah* and *Samson* in 1741, *Judas Maccabeus* in 1746, and his last oratorio, *Jephtha*, in 1751. Shortly after this he became totally blind, and died April 14, 1759.

G. F. Handel, German musician
From a picture in Windsor Castle

HANDICAP. In sporting contests, term denoting the bringing together, by means of penalties and allowances, the various competitors in such a manner as to afford an equal chance to each. In foot-racing, billiards, etc., this is accomplished by giving a start to the runner or player who is the inferior performer. In horse-racing, handicapping is effected by apportioning different weights to the various horses entered.

HANDSWORTH. Coal mining centre of Yorkshire (W.R.). It is 4 m. S.E. of Sheffield, the nearest rly. stations being Woodhouse and Darnall on the L.N.E. Rly. Pop. 15,889.

Another Handsworth is an industrial suburb of Birmingham, lying to the N.E. of the city proper. See Birmingham.

HANGAR (Fr. shed). Shed or shelter for aircraft. At first the term was applied to a temporary shelter, such as that erected on the field in wartime. It now denotes also the permanent buildings in which aeroplanes are housed at an aerodrome (q.v.), or the compartment on a naval aircraft carrier in which the machines lie until carried up by the lift to the flying deck.

HANG-CHOW or HANG-CHAU. Treaty port of China, capital of Che-kiang prov. On the Tsien-tang river, and opened to foreign trade in 1896, it is 118 m. S. of Shanghai, with which it is connected by rly. and waterways. It is the seat of a university. The tide in Hang-chow bay, at mouth of the Tsientang, forms a bore twice daily. Pop. 729,950.

HANGING. Death from constriction of the neck, the constricting force being the weight of the body. In modern judicial hanging, in which a long drop is allowed, death is practically instantaneous, being due to fracture or dislocation of the upper cervical vertebrae, which produces compression or rupture of the spinal cord (breaking the neck).

HANKAU or HANKOW. Treaty port of China, in Hu-peh prov. It is on the Yang-tse, 600 m. from its mouth, at the junction of the

Han river.

Founded during the Ming dynasty, it was left in ruins by the Taipings, but was opened to foreign trade, 1862. Hankau is connected by rly. with

Peking, 755 m. distant, and is accessible to ocean-going steamers during summer.

With Hanyang, across the Han river, and Wuchang, it forms an important trading centre. Pop. of the three cities 1,583,900.

HANKEY, SIR MAURICE PASCAL ALERS (b. 1877). British civil servant. Born April 1, 1877, he entered the Royal Marine Artillery in 1895, and in 1902 joined the naval intelligence department, which led to his becoming secretary to the committee of imperial defence. In 1919 he was made secretary to the Cabinet. Created a K.C.B. in 1916, Sir Maurice had much to do with the preparations for the peace conference of 1919, and was the British representative on its secretariat. In 1923 he became clerk of the privy council, retaining his position as secretary to the Cabinet.

Sir Maurice Hankey, British civil servant
Russell

HANLEY. District of Stoke-upon-Trent, formerly a county borough. It is 18 m. from Stafford and 148 m. from London, being served by the L.M.S. Rly. The buildings include the town hall, Victoria Hall, public library, school of art, and technical museum. The staple industry is the manufacture of pottery. There are also foundries and iron-works, while around are extensive coal mines. See Potteries; Stoke-upon-Trent.

HANNAH. Wife of Elkanah, and mother of the prophet Samuel (1 Sam. 1 and 2), who was born in answer to prayer. Fairly common as a Christian name, Hannah means, in Hebrew, grace. See Samuel.

HANNEN, JAMES HANNEN, Baron (1821-94). British lawyer. Born in London, he became a barrister and did some law reporting. In 1868 he was made a judge of the queen's bench, and in 1872 judge of the probate and divorce court. He was president of the admiralty and divorce division, 1875-91, when he was appointed a lord of appeal and created a life peer. In 1888 he presided over the Parnell Commission, and in 1892 was an arbitrator in the dispute concerning the Bering Sea fisheries. Hannen died in London, March 29, 1894.

HANNIBAL (c. 247-183 B.C.). Carthaginian soldier. He was the son of Hamilcar Barca, on whose death he became commander

of the Carthaginian armies. Soon, by laying siege to the allied town of Saguntum, he roused Rome to declare war upon Carthage. With extraordinary skill Hannibal led his army from Spain through the south of Gaul in 218, defeated in the Rhône valley a Roman expedition sent to hold him in check, carried his army over the Alpino passes, descended into the Lombard plain, and routed the Roman armies at the battles of Ticinus and Trebia. In the spring of 217 he pushed southwards, and annihilated the great army of Flaminius at the battle of Lake Trasimene. In 216 he met the Romans again at Cannae in Apulia. This army was also annihilated, with the political effect of bringing over the S. Italians to Hannibal's side. He failed to capture Rome. In 207 the Carthaginians threw another army under Hasdrubal into Northern Italy, but this was destroyed by the Romans on the Metaurus. The battle was decisive. Hannibal remained on the defensive in the S., while the Romans crushed the Carthaginian power in Spain and in Sicily, and prepared a great expedition against Carthage itself. Thither Hannibal was recalled in 203, but the Carthaginian army was crushed at Zama, 202, and in the following year Rome dictated terms of peace. Hannibal then withdrew to Bithynia in Asia Minor, where in 183, finding that his protector Prusias could not resist the Roman demands for his surrender, he took poison.

HANNINGTON, JAMES (1847-85). English bishop. Born Sept. 3, 1847, he was ordained, and was a curate for some years. In 1882 he went out to Uganda as a missionary, and in June, 1884, after a stay in England, he was consecrated bishop of Eastern Equatorial Africa. He reached Mombasa in Jan., 1885. In July he started for Uganda, and when almost at his goal his party was suddenly attacked by the forces of King Mwanga. Together with the men of his caravan, Hannington was murdered, Oct. 29, 1885.

Hannibal, Carthaginian soldier
From a bust found at Capua, now in Naples Museum

HANNO. Name of several eminent Carthaginians. Hanno, surnamed the Great (c. 220 B.C.), was for 35 years the leader of the aristocratic party at Carthage, which favoured peaceful relations with Rome, as opposed to Hamilcar Barca, Hannibal, and Hasdrubal, who advocated war. He was eventually superseded by Hamilcar. Another Hanno was a navigator who lived about 500 B.C. Having passed the Straits of Gibraltar, he undertook a voyage of discovery along the west coast of Africa, an account of which has been preserved in a Greek version, entitled *The Periplus* (Eng. trans. Thomas Falconer, 1797). Another Hanno took part in the battle of Cannae (216) and in later operations in lower Italy.

HANOI. Town of Tongking, capital of French Indo-China. It is on the right bank of the Song-ka or Red river, about 100 m. from its mouth in the China Sea, and in 1902 superseded Saigon as the seat of the governor-general of French Indo-China. A fine rly. bridge, opened in 1902, spans the river, and there are remains of an ancient royal palace. A school of medicine for natives was opened in 1902, and together with a European college formed into the university of Indo-China in 1917. The twin-towered cathedral is a prominent landmark. The citadel, perched on an eminence, is a square, 1,200 yds. to each side, surrounded by a brick wall, and contains many of the public buildings. Near the city is the Great Lake, on the shore of which are a Buddhist temple and a huge bronze image of Buddha. Pop. 103,235.

HANOTAUX, ALBERT AUGUSTE GABRIEL (b. 1853). French historian and statesman. He was born at Beaurevoir, Aisne, Nov. 19, 1853. Entering political life, he was deputy for the Aisne, 1886-89, when he became conspicuous by his opposition to Boulanger. After having been director of the French foreign office, 1892, he was foreign minister 1894-95 and 1896-98. Hanotaux was a firm supporter of the policy that brought about the Franco-Russian alliance; while out of his policy in Africa developed the Fashoda incident of 1898. Hanotaux wrote a *History of the Great War* in 18 vols. and several other historical works.

HANOVER. Province of Prussia, formerly an independent kingdom. The bulk of it lies between the Weser and the Elbe, while another part is between Oldenburg and Holland. In 1873 the territory of Jade was added to it. The capital is Hanover. It has a coastline on the North Sea, and contains the ports of Emden and Wilhelmshaven. Its area is 14,897 sq. m.; pop. 3,190,619.

Hanover developed from an electorate created in 1692, and this in turn was preceded by a duchy of Brunswick-Lüneburg. Ernest Augustus, the first elector, made Hanover his capital, whence his little state was also known as Hanover. His son George married the heiress of Lüneburg-Cellé, and in 1705 added this land to his own. He had succeeded his father as elector in 1698, and in 1714 he succeeded, through his mother Sophia, to the throne of Great Britain.

In 1814 Hanover was constituted a kingdom, and certain changes were made in its area. In 1837 it was separated from Great Britain, and Ernest Augustus, duke of Cumberland, became its king. In 1866 Hanover, a member of the German Bund, decided to take the side of Austria against Prussia. Prussia asked for her neutrality and, this being refused, invaded Hanover. In June the Hanoverian army surrendered, and the country was formally annexed in Sept. See Europe; Germany.

Gabriel Hanotaux, French historian

Hankau. The native quarter of the Chinese treaty port

HANOVER. Town of Prussia, formerly the capital of the kingdom of Hanover and now of the province. It stands at the junction of the Leine

Hanover. Town Hall, built 1803-11, overlooking Masch Park

and the Ihme, 112 m. from Hamburg and 163 m. from Berlin. It is a railway junction, and has many manufactures. Pop. 442,435. In the old town are the market church, dating from the 14th century, and restored in the 19th, and the old town hall, of somewhat later date. The palace, built in 1635-40, is a reminder of the time when Hanover had its own sovereigns. Just before the end a more magnificent residence was erected for them, known as the Guelph Palace; this now houses the technical high school. Modern buildings include the town hall, built 1903-11, and several museums.

HANSARD. Official record of parliamentary proceedings. It was named after Luke Hansard (1752-1828), a Norwich compositor, who, as printer to the House of Commons, continued Cobbett's Parliamentary History under the title of Hansard's Parliamentary Debates. In 1889 Hansard became a public company, and when this was wound up the work was done by contract, the reports from 1895 to 1908 being supplied by The Times staff. Then the state took control, and the debates were reported by a government staff.

HANSEATIC LEAGUE OR **HANSA.** Association for commercial purposes of the commercial towns of N. Germany in the later Middle Ages. Trading towns, while retaining their mutual jealousies, realized the advantages of combination for the purposes of trading in foreign lands, exacting concessions and acting in concert against piracy. In 1282 the German Hansa, which included Cologne, Hamburg, and Lübeck, was permanently established; this prepared the way for a more general combination into the Hanseatic League of the North German commercial towns. The league became so powerful that it was able to dominate the foreign trade of Norway, Sweden, Denmark, and even to some extent of London.

At the end of the 15th century its power was waning; by the middle of the 16th century it had lost all its privileges in England; and by the opening of the 17th century had ceased to be of great account.

HANSOM. Name given to a cab, an improved form of the cabriolet. It was invented in 1834 by J. A. Hansom, a Yorkshire architect, who in 1834 patented the cab which was eventually named after him. It had two enormous wheels, with sunk axle-trees, and a seat for the driver at the side. Subsequent improvements reduced the size of the wheels, fixed the dickey at the back, and provided a pair of double doors in front, with sliding glass folding panels, lowered from the roof by the driver; the hansom could thus be used open, half, or totally closed. See Cab.

J. A. Hansom, inventor of the cab

HANWAY, JONAS (1712-86). English traveller and philanthropist. Born at Portsmouth, Aug. 12, 1712, he was first in business at Lisbon and then at St. Petersburg, which latter city he left, in Sept., 1743, to sell woollen goods in Persia, returning, after many adventures, Jan. 1, 1745. In 1750 he returned to England and published an account of his travels in 1753. From 1762-83 he was a com-

missioner of the victualling office. He founded the Magdalen Hospital for women, and was the first man to use an umbrella in London. He died Sept. 5, 1786.

HANWELL. District of Middlesex. Formerly an urban district, it was included in 1926 in the enlarged borough of Ealing. It has a station on the G.W. Rly., being 7 m. from the terminus at Paddington. Here is the large mental hospital of the London County Council, and cemeteries for Kensington and S. George's, Hanover Square. The Brent and the Grand Union canal flow by here on their way to the Thames.

HANWORTH. District of Middlesex. Situated N. of Kempton Park (q.v.), 1½ m. N.E. of Sunbury and 1½ m. S. of Feltham stations on the Southern Rly., it is on the King's or Cardinal's river, made by Wolsey for the supply of Hampton Court. In 1929 the London Air Park was opened at Hanworth.

HAPSBURG OR **HAESBURG.** Name of the family that ruled over the empire of Austria-Hungary until 1918. The first great Hapsburg was Rudolph, who, in 1273, was chosen German king. Wrestling Austria and Styria from the king of Bohemia and giving them to his own sons, he began the family's long connexion with Austria. In 1437 Albert of Hapsburg, who had married a daughter of the emperor Sigismund, inherited his father-in-law's kingdoms of Hungary and Bohemia. In 1438 he was chosen German king and then became emperor. The two kingdoms were lost when Albert's son Ladislaus died without sons in 1457, but Frederick, another member of the Hapsburg family, had already secured the German throne.

Frederick's son, Maximilian I, married Mary, daughter of Charles the Bold, duke of Burgundy, and his son Philip married the heiress of Castile and Aragon. In this way his grandson, Charles V, the greatest of the Hapsburgs, received a vast inheritance. Charles' brother Ferdinand, who succeeded him, secured by marriage the kingdoms of Hungary and Bohemia for the Hapsburgs, this time permanently until 1918. Henceforward there were two main branches of the Hapsburgs, the Austrian and the Spanish.

When Charles II of Spain died in 1700 the Spanish line became extinct, the throne passing to the Bourbons, and with the death of Charles VI the male line of the Austrian Hapsburgs came to an end in 1740. The existing Hapsburgs are descended from Maria Theresa, the daughter of Charles VI, and her husband, Francis of Lorraine, who brought Tuscany into the family possessions. The so-called Hapsburg empire ended in 1918. See Austria; Bohemia; Hungary.

HARA-KIRI (Jap. belly-cut). Suicide by disembowelment in Japan. The custom originated as a means of honourable death among the medieval feudal nobles, and in the 14th century obligatory hara-kiri was recognized by the mikado as the privileged form of execution for a samurai convicted of disloyalty or breaking the law. Obligatory hara-kiri was abolished in 1868, but the voluntary form continued to survive.

HARBIN OR **KHARBIN.** Town of Manchuria. It stands on the Sungar river, 325 m. N.E. of Mukden. Here the Trans-Siberian, or that section known as the Chinese Eastern Rly., branches S. to Mukden and thence to Peking, Dairen and Korea, while the main line continues to Vladivostok. Harbin was opened to foreign trade in 1909. Pop. 250,400.

Jonas Hanway, English traveller

HARBOUR. Water area partially enclosed and so protected from storms as to provide safe accommodation for shipping. Other essential features of a good harbour are a sufficient area and depth of water for the number and size of the vessels to be accommodated, and safe and easy access to and from the open sea in any weather.

A natural harbour is an inlet or arm of the sea protected from storms by the configuration of the coast, and with an entrance so formed and located as to facilitate navigation whilst ensuring comparative tranquillity within. Cork and Rio de Janeiro are examples. An artificial harbour is one which is protected from the effect of sea waves by means of breakwaters. Sometimes an outer breakwater is constructed upon which the main force of the waves is expended. This forms an outer silting basin, which may also serve as a refuge, while the basin which is contained within the inner breakwaters or moles constitutes a commercial harbour.

A harbour of refuge may be either natural or artificial, and may be used solely as a refuge for ships in a storm, or may also constitute a commercial harbour. A commercial harbour may be either a natural or artificial harbour within which docks, quays, wharves, and piers are constructed and equipped with the necessary appliances for the loading and discharge of cargoes. See Breakwater; Dock.

HARBOUR GRACE. Port of entry of Newfoundland. It stands on Conception Bay and the Reid rly. It has a Roman Catholic cathedral, a court house, and a large, exposed harbour. Pop. 3,825.

HARCOURT, SIMON HARCOURT, 1ST VISCOUNT (c. 1662-1727). English lawyer. Born at the manor house of Stanton Harcourt, Oxon, he was a successful lawyer, and in 1710 was made lord keeper of the great seal. In 1711 he was created a baron and in 1721 a viscount. He died July 23, 1727.

Harcourt, the ancestor of the later Harcourts, bought Nuncham, which is still their seat. His son, Simon (1714-77), was viceroy of Ireland, 1772-77. In 1749 he was made an earl. His two sons succeeded in turn to the titles and estates. The younger, William, the 3rd earl (1743-1830), became a field-marshal. When he died the title became extinct.

HARCOURT, SIR WILLIAM GEORGE GRANVILLE VENABLES VERNON (1827-1904). British statesman. The son and grandson of clergy-men, his grandfather being Edward Harcourt, archbishop of York, he was born at York, Oct. 14, 1827. He was called to the bar in 1864, and from 1869-87 was Whewell professor of international law at Cambridge. Harcourt joined the Liberal party, and in 1868 entered the House of Commons as M.P. for Oxford city. He lost his seat in 1880, but was member for Derby 1880-95, and for W. Monmouthshire from 1895 until his death. He was solicitor-general under Gladstone in 1873, and from 1880-85 he was home secretary.

In 1894, as chancellor of the exchequer, he was responsible for the Budget which established a graduated system of death duties. He succeeded Gladstone in that year as leader of the House of Commons, but not as prime minister. From 1895-98 he led the party in opposition. He died Oct. 1, 1904, having just inherited Nuneham Park and the estates of the Harcourts. He was twice married, and left two sons, Lewis and Robert.

Lewis Harcourt (1863-1922), was born Feb. 1, 1863, and entered the House of

Sir William Harcourt, British statesman

Commons for the Rossendale division of Lancashire in 1904. In 1905 he joined the Liberal ministry as first commissioner of works. Later he entered the Cabinet, and from 1910-15 was colonial secretary, reverting to his former post when the Coalition Government was formed in 1915. He resigned with Asquith in 1916, and was made a viscount. He died Feb. 24, 1922.

Maximilian Harden,
German journalist

onym of Apostata. In Oct., 1892, he founded the weekly paper *Die Zukunft* (The Future). He helped to found a free theatre in Berlin in 1889, and two of his books, *Word Portraits*, and *Monarchs and Men*, appeared in English. He died Oct. 30, 1927.

HARD FERN

(*Blechnum spicant*). Fern of the natural order Polypodiaceae. It is a native of Europe, N.E. Asia, the Canaries, and N.W. America. The fertile fronds have the divisions narrower and more distant; the barren fronds are broader, evergreen, and more or less prostrate. See *Fern*.

Hard Fern, *Blechnum spicant*,
one of the polypody ferns

HARDICANUTE OR **HARTHACNUT** (c. 1018-42). King of Denmark and England. The son of King Canute, he succeeded on the latter's death to the throne of Denmark, while England was divided between him and his half-brother Harold. He remained in Denmark until 1040, when Harold died, and he crossed to England, where he died, says the Anglo-Saxon Chronicle, as he stood at drink, June 9, 1042.

HARDIE, JAMES KEIR (1856-1915). British labour leader. Born in Scotland, Aug. 15, 1856, he worked in the mines from the age of seven until his 24th year, when he was elected secretary to the Lanarkshire Miners' Union. From 1882-86 he was editor of *The Cuckoo News*. He became one of the founders and the chairman of the Independent Labour Party, 1893, and was Labour M.P. for West Ham, 1892-95, and for Merthyr Tydfil from 1900 till his death. He started and edited *The Labour Leader*. He died Sept. 26, 1915.

J. Keir Hardie,
Labour leader
Russell

HARDING, WARREN GAMALIEL (1865-1923). American president. Born Nov. 2, 1865, in a farmhouse near the village of Blooming Grove, in Morrow co., Ohio, he represented Marion in the senate of Ohio from 1899-1903, and from 1904-6 was lieutenant-governor of the state. In 1912 he nominated W. H. Taft, and followed him when Roosevelt split the Republican party. In 1914 he was elected to the senate at Washington. In the early stages of the Great War

W. G. Harding,
American President
Henri Manuel

he backed Roosevelt in trying to arouse President Wilson to a sense of impending emergencies, and when the U.S.A. entered the war he favoured the plan for sending a volunteer division to France without delay.

Harding was elected president on Nov. 2, 1920, by 16,181,289 votes to 9,141,750 cast for Governor Cox, his Democratic opponent, carrying 37 out of 48 states and the entire country outside the traditionally Democratic south. The most important act of his administration was the calling of an international conference on the limitation of armaments. Harding died suddenly, Aug. 2, 1923. See *Washington Conference*.

HARDINGE, HENRY HARDINGE, 1ST VISCOUNT (1785-1856). British soldier and administrator. Born at Wrotham, March 30, 1785, he entered the army and served in the Peninsular War, and in 1815 with the Prussian army at Ligny. In 1820 he entered Parliament as M.P. for Durham, and became in turn secretary of war, chief secretary for Ireland and governor-general of India. He carried through the wars against the Sikhs and was rewarded in 1846 with a viscounty. From 1852 to 1856 he was commander-in-chief. Hardinge died Sept. 24, 1856.

His grandson, Charles Hardinge (b. 1858), a younger son of the 2nd viscount, entered the diplomatic service, and gained experience in several capitals, especially St. Petersburg, 1898-1903. He went to St. Petersburg as ambassador in 1904, returning to London in 1906 to become under-secretary at the foreign office. From 1910-16 he was viceroy of India, being raised to the peerage as Baron Hardinge of Penshurst. He was made a K.G. and in 1920-22 was ambassador to France.

HARDINGSTONE. Village of Northamptonshire, 2 m. from Northampton. Here is the Northampton cross, the best preserved of those erected by Edward I to the memory of his wife Eleanor. The battle of Northampton, at which in 1459 Henry VI was defeated and taken prisoner, was fought on Hardingstone Fields. See *Northampton*.

HARD LABOUR. Term used in English penology to describe a particular kind of imprisonment. Prisoners sentenced to imprisonment with hard labour pass the first 28 days in strict separation and without a mattress to sleep on. They are usually employed during this time in breaking stones, making heavy coal sacks, or picking oalum. After the 28 days they are put on ordinary industrial labour, and for the rest of their sentence are treated in the same way as prisoners without hard labour. See *Penal Servitude*; *Prison*.

HARDWICKE, EARL OF. British title borne since 1754 by the family of Yorke. The 1st earl, Philip Yorke, was born at Dover, Dec. 1, 1690. In 1719 he was chosen M.P. for Leves, and in 1720 became solicitor-general and a knight. In 1723 he was promoted attorney-general. In 1733 Yorke was made lord chief justice and created a peer, and from 1737-56 was lord chancellor. In 1754 he was made an earl. He died March 6, 1764, and the title has since been held by his descendants. The earl's eldest son is called Viscount Royston.

The Hardwicke Society is a legal debating society established about 1835.

1st Earl of Hardwicke,
British lawyer

HARDWICK HALL. Seat of the duke of Devonshire. It is 6 m. from Chesterfield, in Derbyshire. Built by Elizabeth, countess of

Hardwick Hall. One of the seats of the Duke of Devonshire seen from the south-west

Shrewsbury, between 1590 and 1597, it is remarkable for the number and size of its glass windows. Notable features are the picture gallery and the chapel.

HARDWOOD. Term used for a timber that is heavy and close-grained and therefore strong. The opposite term is soft wood. In forestry the term is used for the wood of a broad-leaved tree, such as the beech. See *Forestry*; *Timber*.

HARDY, DUDLEY (1867-1922). British artist and illustrator. Born at Sheffield, Jan. 15, 1867, he had much to do with the exhibitions of the Royal Society of British Artists, the Royal Institute of Water Colour Painters, and other London exhibitions. To the general public he was better known as an illustrator in *The Sketch*, *Graphic*, *Punch*, and by his work in books and poster work. Hardy died Aug. 11, 1922.

HARDY, THOMAS (1840-1927). British novelist, poet and dramatist. Born at Upper Bockhampton, near Dorchester, June 2, 1840, he became the pupil of an architect. His first known appearance in print was with an article, *How I Built Myself a House*, in *Chambers's Journal* for March 18, 1865. In 1871 appeared his first novel, entitled *Desperate Remedies*.

Hardy's output of work was very regular. Among his best work were the following books: *Under the Greenwood Tree*, 1872; *Far From the Madding Crowd*, 1874; *The Return of the Native*, 1878; *The Mayor of Casterbridge*, 1886; *The Woodlanders*, 1887; *Tess of the D'Urbervilles*, 1891; and *Jude the Obscure*, 1896. His last full-length story, *The Well-Beloved*, appeared in 1897.

Verses was Hardy's earliest literary activity and his latest. In 1898 he published *Wessex Poems*, including some dating from his activity in the 'sixties. Four other volumes of verse, *Poems of the Past and the Present*, *Time's Laughing-Stocks*, *Satires of Circumstance*, and *Moments of Vision*, succeeded. The most amazing of his works, *The Dynasts*, an epic-drama of the Napoleonic Wars, began to appear in 1904. Two further instalments came in 1906 and 1908. As poetry, drama, and history, *The Dynasts* is a noble contribution to world-literature.

Thomas Hardy was given the Order of Merit in 1910. He was twice married, first, in 1874, to Emma Lavina Gifford, and next, in 1914, to Florence Emily Dugdale. He died at Max Gate, Dorchester, Jan. 11, 1927. Consult the *Early Life*, 1928, and *The Later Years of Thomas Hardy*, 1930, both by his widow.

Thomas Hardy, British poet,
novelist, and dramatist
Russell

HARDY, SIR THOMAS MASTERMAN (1769-1839) British sailor. Born at Kingston, Dorset, April 5, 1769, he served under Nelson in 1796, and was present at the battle of the Nile. In command of the *Victory* in 1805, he was by Nelson's side when the admiral was struck, was witness to his will, and attended him until his death. Made a baronet in 1806, Hardy was promoted rear-admiral in 1825, and in 1830 became first sea lord. In 1834 he was made governor of Greenwich Hospital, where he spent the remainder of his life. He died Sept. 20, 1839.

Sir Thomas Hardy,
British sailor.
After R. Evans

HARE. Name applied generally to a large family of rodents, which includes the hares proper and the rabbits. They are all remarkable for their long hind legs and ears and their short curved tails, and are capable of great speed. The common hare is distinguished from the rabbit by its larger size, longer limbs and ears, and the reddish-brown hue of its fur. It also differs greatly in its habits. The hare lives usually

Hare. The common red-brown hare, *Lepus europaeus*
Chas. Reid

in the open, crouching in a furrow or in a hollow in the grass, and only takes shelter in the undergrowth of thickets in wet weather. It feeds on corn and vegetables

HARE, SIR JOHN (1844-1921). British comedian and actor-manager. Born in London, May 16, 1844, in 1865 he began to appear in London in the leading parts of the Robertson series of comedies. From 1875-95 he was successively manager of the old Court Theatre, manager with W. H. Kendal of the St. James's Theatre, and lessee of the Garrick. He brought out and played in many of Arthur Pinero's plays, from *The Money Spinner*, 1881, to that of *The Gay Lord Quex*, 1899. One of his most popular parts was Benjamin Goldfinch in *A Pair of Spectacles*, 1890. He was knighted in 1907, and died Dec. 28, 1921.

Sir John Hare,
British actor
Foulsham & Banfield

HARE AND HOUNDS. Variation of cross-country running. One or two of the fleetest runners participating are selected as the hares, the remainder, unlimited in number, being the hounds. The hares set off at a fast pace laying a trail of paper-cuttings as they go, and the pack, who follow at an interval of about ten minutes, try to overtake them.

HAREBELL (*Campanula rotundifolia*). Perennial herb of the order Campanulaceae. It is a native of Europe, N. Africa, N. Asia, and N. America. Near the root-stock the leaves are heart-shaped or kidney-shaped, but up the stem become more slender. The stems have blue bell-shaped flowers.

HAREFIELD. Village of Middlesex. It lies above the Colne, between Uxbridge and Rickmansworth. The church of S. Mary, founded 1300, is rich in monuments. There are remains of Moor Hall, a camera or cell of the priory of S. John, Clerkenwell; also some almshouses founded by the countess of Derby. Pop. 2,812.

HARE-LIP. Congenital deformity in which the upper lip is fissured. Usually there is a central fissure in the margin of the lip. The defect may involve the nose and the hard and soft palate. Hare-lip can be improved by surgical treatment.

HAREM (Ar. hareem, sacred, set apart, i.e. forbidden). Name applied in Mahomedan countries to that part of the house in which the women are secluded. The meaning of the word has been extended to include all the women thus kept apart. In India and Turkey the inmates have more liberty than elsewhere, and the rule of the eunuchs, in whose charge the harems are frequently placed, is less evil. The adoption of western ideas is having its effect on the harem.

HARE'S EAR (*Bupleurum rotundifolium*). Annual herb of the natural order Umbelliferae. It is a native of Europe and W. Asia. The stem is hollow, appearing to run through the base of the thick, oblong or roundish, glaucous leaves. The minute yellow flowers form tiny umbels in the centre of a cup of bracts whose edges are united. A shrubby perennial from Spain is grown in gardens.

HARE'S-FOOT FERN (*Davallia canariensis*). Fern of the natural order Polypodiaceae. It is a native of W. Europe and the Canaries. The rootstock creeps above ground, densely clothed with shaggy brown scales; the frond is wedge-shaped, cut up into leaflets (pinnae) which are much divided.

HARE'S-TAIL GRASS (*Lagurus ovatus*). Annual grass of the natural order Gramineae. It is a native of W. and S. Europe, N. Africa, and W. Asia. It has numerous stems, broad, flat leaves, and flower spikelets crowded into a white, hairy, oval head which suggested the name.

HAREWOOD, EARL OF. British title borne since 1812 by the family of Lascelles. Edward Lascelles, the head of a well-known Yorkshire family, was created Baron Harewood in 1796, an earlier creation of this name having become extinct when its first holder died. In 1812 he was made an earl. The family estates are in Yorkshire (W.R.), the chief seat being Harewood House, near Leeds.

In 1929 Henry George Charles Lascelles became the 6th earl. Born Sept. 9, 1882, he was educated at Eton and Sandhurst and served with the Grenadier Guards during the Great War, winning the D.S.O. When Viscount Lascelles he married Princess Mary (q.v.), on Feb. 28, 1922. He succeeded to the title on the death of his father in 1929. Pron. Harwood.

HARFLEUR. Seaport of France. It stands on the Lézarde, near where it falls into the Seine. The chief building is S. Martin's Church, a Gothic building with a high steeple and fine portal. There are ruins of the old castle; a 17th century château occupies the

site. The port was rendered useless by accumulation of sand in the Lézarde, but in 1887 a canal was cut connecting it again with Havre and the Seine, and a new harbour was built along the canal. The port has a trade in coal and timber, and some fishing.

Harfleur was taken by Henry V of England in 1415, being at that period the chief port of Normandy. Pop. 2,700.

HARGREAVES, JAMES (d. 1778). British inventor. A carpenter and weaver of Standhill, near Blackburn, in 1760 he invented an improvement of the carding machine, and about

James Hargreaves. Model of his Spinning Jenny, now in the Science and Art Museum, S. Kensington

four years later built a machine which contained eight spindles in a row. This was called the spinning jenny, and its invention marks the beginning of an era in industrial history. After his death it was asserted that he had appropriated the invention of Arkwright, and the matter was the subject of a lawsuit. See Arkwright; Spinning.

HARICOT, FRENCH BEAN OR KIDNEY BEAN. Seed of *Phaseolus vulgaris*. The green pods, called by the French haricots verts, when boiled form a wholesome vegetable. The beans, either dried or fresh, are

boiled. Pron. harryko. See Bean.

HARINGTON, SIR CHARLES HARINGTON (b. 1872). British soldier. Born at Chichester, May 31, 1872, he served on the staff in the S. African War, when he won the D.S.O. During the Great War he was brigadier-general on the general staff, 1915-16, and later chief of staff to General Plumer. He was appointed deputy chief of the Imperial General Staff, War Office, in April, 1918. In Sept., 1920, he was appointed G.O.C. the army of the Black Sea, in 1923 the Northern command, and the Western command, India, 1927. He was knighted in Jan., 1919, and was promoted general in 1927.

HARLECH. Town of Merionethshire. It is 10 m. from Barmouth, on the G.W. Railway, and is famous for its ruined castle. In 1468 the castle was taken by the Yorkists after a long siege, this incident having, it is said, given rise to the Welsh song of *The March of the Men of Harlech*. The town was long the county town of Merionethshire. Pop. 1,000.

Harlech. Castle crowning a rock on the coast of Merionethshire

HARLEQUIN (Ital. arlecchino). Stock character in pantomime. The origin of the name is uncertain. The harlequin of English pantomime is a mischievous character who plays tricks on the clown and the pantaloon,

to whom he is supposed to be invisible, owing to the possession of a wand, and who makes love to and engages in acrobatic dances with the columbine. He wears a tight-fitting spangled dress and is sometimes masked. See Columbine; Pantomime.

HARLEQUINS, Rugby football club. It was established in 1871, and soon ranked as one of the chief of those playing around London. Its first ground was at Wandsworth Common. In 1908 its headquarters were removed to Twickenham.

HARLESSEN. District of Middlesex, in the urban district of Willesden. It lies between Kensal Green and Stonebridge Park, on the Harrow Road. It is served by the L.M.S. and Bakerloo (Tube) Rlys. and has a wharf on the Paddington branch of the Grand Union Canal. Once known as Harlesden Green, a hamlet of Willesden, it is now built over.

HARLEY STREET. London thoroughfare connecting Marylebone Road and Cavendish Square, W. It is named after Edward Harley, 2nd earl of Oxford. Many of the leading medical specialists and physicians have consulting rooms here.

HARLINGTON. Parish of Middlesex. It is NW of Hounslow and 1 m. S. of Hayes and Harlington station on the G.W.R. It gave its name, short of the first letter, which was omitted by an oversight in the patent, to Henry Bennet, 1st earl of Arlington (q.v.). The church of S. Peter and S. Paul contains interesting monuments. Pop. 2,643.

HARLOW. Village of Essex. It is 24 m. from London on the L.N.E. Rly. Excavations in 1928 revealed remains of a Roman temple and other relics of Roman times. Pop. 2,962.

HARMATTAN. Dry, dust-laden wind which blows away from the Sahara between Oct. and March. It brings cool dry weather to the steaming jungles of West Africa, and is health-giving.

HARMODIUS AND ARISTOGITON. Two devoted Athenian friends. When the sister of Harmodius had been insulted by Hipparchus, brother of the tyrant Hippias, they resolved to murder Hipparchus at the festival of the Panathenaea in 514 B.C. Hipparchus was slain, but Harmodius was killed and Aristogiton died under torture. The two friends were honoured as martyrs by later generations of Greeks.

HARMONDSWORTH. Village of Middlesex. It is 1½ m. S. of West Drayton station on the G.W.R. between Harlington and Colnbrook. The manor once belonged to the Benedictine abbey of Holy Trinity at Rouen, from which it passed to William of Wykeham, who settled it upon Winchester College. There is a tithe barn, with three floors and an open timber roof. The ancient church of S. Mary the Virgin was restored in 1863-64, when the old brasses were stolen. Pron. Harmsworth.

HARMONICA. Musical instrument. It consists of glass vessels either selected for their intrinsic notes, or tuned by having water poured into them. Penetrating tones are produced by rubbing the glasses with the moistened finger. First known in the 17th century, the harmonica was improved by Richard Pockrich, and became a fashionable musical instrument in the middle of the 18th century.

HARMONIUM. Musical instrument with a keyboard or keyboards controlling the access of the wind from the bellows to the reeds which produce the sound. The reeds are metal tongues of varying curve and thickness, for quality and of varying size, for pitch. They are free reeds passing through and through their frames as they vibrate. The reeds are fixed above the soundboard in rows parallel with the keyboard, each reed being over a wind hole controlled by its appropriate key. See American Organ.

HARMONY. Art of combining two or more sounds of definite musical pitch, according to accepted rules. Harmony is based upon the scale. Its study presupposes an accurate knowledge of intervals, or the distance from one note to another. Intervals are reckoned (1) from the number of names of notes they contain: (2) inclusively, i.e. counting both limits; and (3) upwards, i.e. from the lower to the higher note. Intervals are either concords or discords. Concords are either perfect (4th, 5th and 8th) or imperfect (major and minor 3rd, and major and minor 6th). 2nds, 7ths, and all augmented or diminished intervals are discords. Intervals one semitone more than perfect or major are augmented and one semitone less than perfect or minor are diminished.

Musie may be described as the resolution of discord into concord. In the following: the first chord contains the note F, which as a 7th from G is discordant with it. It is also a discord with the B, as they form a diminished 5th, which is a discord. The first chord, then, can give no sense of finality, and must be followed by a chord in which no discordant interval appears. That condition is fulfilled in the second chord, which is called the resolution of the first, and this is a simple example of a principle of which the possibilities of extension are endless.

Systems of harmony and art dating from the Middle Ages have been devised from time to time, but the developments of composition leave them successively out of date.

HARMSWORTH. Family name of Viscount Northcliffe (q.v.) and Viscount Rothermere (q.v.). Two other brothers became known as Liberal politicians: Cecil Bisschopp Harmsworth and Sir Robert Leicester Harmsworth, (b. 1870). The latter was M.P. for Caithness 1900-18, and was made a baronet in 1918. Esmond, son of Viscount Rothermere, was M.P. for Thanet, 1919-29.

HARMSWORTH, CECIL BISSHOFF (b. 1869). British politician. Born Sept. 28, 1869, he joined the firm of Harmsworth Bros., later The Amalgamated Press. Turning his attention to politics, in 1906 he was returned to Parliament as Liberal M.P. for the Droitwich division of Worcestershire. He lost his seat in 1910, but in 1911 was elected for S. Bedfordshire, and early in 1915 entered the government as under-secretary for home affairs. In 1918-22 he was under-secretary for foreign affairs, being acting minister of blockade in 1919, but he left Parliament in 1922. Later he became associated with several leading newspaper undertakings.

HARNACK, ADOLF VON (1851-1930). German theologian and church historian. Son of Theodosius Harnack (1817-89), professor of

theology at Dorpat, where he was born May 7, 1851, he began his career as lecturer in church history at Leipzig in 1874. He was appointed professor of ecclesiastical history at Leipzig, 1876. From 1887 to 1905 he was professor at Berlin. He died June 10, 1930.

The most eminent German Protestant theologian of his day, he was the author of many influential works, including *Gnosticism*, 1873; *Ignatius*, 1878; *Monasticism: Its Ideals and Its History*, Eng. trans. 1903; *The Apostles' Creed*, 1901; *What is Christianity?*, Eng. trans. 1901; and *Studies in the New Testament*, Eng. trans. 1907-12.

HAROLD I, CALLED HAREFOOT (d. 1040). King of the English, 1037-40. A son of Canute the Great, on his father's death he disputed the succession of Hardicanute. The Witan divided England between them, Harold being allotted the district N. of the Thames. In 1037, however, he became king of all England, but his reign was disturbed by invaders. He died at Oxford, March 17, 1040.

HAROLD II (c. 1026-66). King of the English. A son of Earl Godwin, he became earl of East Anglia in the time of his brother-in-law, Edward the Confessor, and earl of Wessex when Godwin died in 1053. Henceforward he was the most powerful man in the land. When Edward died he was chosen and crowned king, whereupon his brother Tostig came from Norway with Harold Haardraade, the king of that country, to recover his lost earldom of Northumbria, and William of Normandy claimed the crown which, he alleged, Harold had promised to secure for him when shipwrecked off the coast of France. Harold crushed the Norwegians at Stamford Bridge, but was killed at Hastings, Oct. 14, 1066. See Hastings, Battle of.

HAROUN AL RASCHID (763-809). Caliph of Bagdad. Haroun was born at Rai, March 29, 763. He succeeded his brother Musa as fifth caliph of the Abbasside line in 786, and opened a reign proverbial for its magnificence and prosperity. Haroun made his court a great centre of art and literature. He waged successful wars against the Greek Empire, 797, and suppressed various provincial revolts. At first he ruled with the powerful aid of the Barmecides, but sudden jealousy made him order their wholesale murder in 803. In the same year he marched against the emperor Nice-

Harp. 1. Modern form for orchestra. 2. Harpist from an Egyptian tomb painting

phorus, invading Phrygia and destroying Hecaleia, and exacted heavy tribute from him. He died in March, 809. Haroun's name is still remembered, if only as a central figure in The Arabian Nights.

HARP. Musical instrument with strings plucked by the fingers. Employed in some form or other by all races and from remote ages, its earliest forms seem to have been suggested by the

Harmonica. A favourite musical instrument of the 18th century. From Old English Instruments of Music. Methuen & Co.

hunting bow, whose string emitted a musical note. Bow-shaped and two-sided harps were limited in power by the inability of their material to stand the strain of the strings. A third side was added in the next primitive form, and in a few centuries this type was raised to the finished modern form.

In the eighteenth century mechanism was added to shorten some of the strings at will, and thus allow changes of key. About 1810 Sebastian Erard built a double-action harp of six and a half octaves in the key of C flat, with seven pedals to be depressed halfway or entirely, raising each string respectively a semitone or a tone. At the close of the 19th century Messrs. Pleyel brought out a new form of chromatic harp, requiring no pedals. It has a string for each semitone in two sets, representing respectively the black and the white keys of the pianoforte.

HARPENDEN. Urban dist. of Hertfordshire. It is 25 m. N.W. of London on the L.M.S. and L.N.E. Rys. Here are the S. George's co-educational school, and Dr. Stephenson's Home for Waifs and Strays. The 12th century church was, with the exception of the tower, rebuilt in 1862, and contains interesting glass and brasses. Near is Rothamsted, with its agricultural experimental station. Pop. 8,000.

HARPER'S FERRY. Town of W. Virginia, U.S.A. It lies at the junction of the Shenandoah and Potomac rivers, 55 m. N.W. of Washington. It was the scene, on Oct. 16, 1859, of a raid by John Brown (q.v.), the abolitionist, and a few followers, on the armoury, which was held until the following day, when it was recaptured by General Lee. In 1862 the town, together with 12,500 prisoners, was surrendered by the Federals to the Confederates under Stonewall Jackson. Pop. 706.

Harpoon. Gun with bomb-nosed harpoon. Above, harpoon with barbs extended

HARPOON (Fr. harpon, grappling iron). Weapon used for the capture of whales. In the early days of the whale fishery the harpoon was thrown from the hand by a harpooner; rowed in an open boat, but the modern harpoon is fired by a gun. See Anthropology; Bone Implements; Whaling.

HARPSICHORD. The most important of the stringed instruments with keyboards before the invention of the pianoforte. In the latter the strings are struck by hammers, whereas in the harpsichord they are plucked by quills or leather plectra inserted in "jacks" or up-rights, which are caused to pass the strings when the keys are depressed. In the 18th century instruments had elaborate contrivances for securing variety, such as an extra keyboard, stops controlling plectra of various degrees of hardness, and a swell. See Pianoforte.

HARPY (Gr. harpyiai, snatchers). In Greek mythology, a monstrous bird with a woman's head and long claws. They were sent by the gods to torment the blind Phineus by snatching his food as he raised it to his lips.

HARPY EAGLE (*Thrasaetus harpyia*). Large and powerful bird of prey, found in Central and S. America. Its general colour is white with a black back and tail and grey wings. It will kill animals much larger than itself. It nests either in a tall tree or on the ledge of an inaccessible cliff.

Harpy Eagle, a large S. American bird of prey W. S. Burridge, F.Z.S.

that hound and the beagle, standing about 20 ins. high at the shoulder. In Wales the pure-bred strain is still to be found.

HARRIER (Circus). Genus of hawks, including about 13 species. They are slender

in form, with unusually long legs and wings and comparatively short and small beaks. They are usually found in marshy districts, where they prey upon fish and frogs, in addition to small birds and mammals. Three species occur in Great Britain, though they are rare, namely, the hen harrier (*C. cyaneus*), Montagu's harrier (*C. cinereus*), and the marsh harrier (*C. aeruginosus*), the largest of the three. See illus. below.

HARRINGAY. District of N. London. Built over the country called Green Lanes, a name now given to a main thoroughfare, it lies between Finsbury Park and Hornsey. There are stations on the L.M.S. and L.N.E. Rlys.

HARRIS. Name given to the southern portion of the island of Lewis (q.v.), one of the Outer Hebrides. It is about 20 m. long and of varying breadth, and forms part of the county of Inverness. The parish includes a number of adjacent islands, St. Kilda among them. Sheep are reared and hand-loom weaving is carried on, hence the term Harris tweed. The Sound of Harris divides it from North Uist on the S. Tarbert is the chief place. Pop. 5,500.

HARRIS, GEORGE HARRIS, 1ST BARON (1746-1829). British soldier. Born at Brasted, Kent, March 18, 1746, the son of a clergyman, he entered the artillery and was severely wounded at Bunker Hill in 1775. Proceeding to India he served in the campaigns against Tippoo Sahib, being in command of the force which in 1798-99 stormed Seringapatam and conquered Mysore. In 1815 he was created Baron Harris. He died in May, 1829.

George, the 4th Baron (b. 1851), succeeded to the title in 1872. He was famous as a cricketer, playing for Oxford against Cambridge in 1871, 1872, and 1874. He joined

the Kent county team, and in 1875 became its captain, retaining that post until 1889. Harris played for England against Australia in a test match in 1880, and captained a team that went to Australia. As a Conservative politician he was under-secretary for India, 1885-86, and for war, 1886-89. From 1890-95 he was governor of Bombay.

HARRIS, SIR AUGUSTUS HENRY GLOSSOP (1852-96). British actor and theatrical manager. Born in Paris, he made his first

appearance at the Theatre Royal, Manchester, in 1873. In 1879 he became lessee of Drury Lane, and was part author of *The World* (produced July 31, 1880), the first of the spectacular melodramas which helped to revive the prosperity of the house. He also staged pantomimes at Drury Lane. He was knighted in 1891, and died at Folkestone June 22, 1896.

Sir Augustus Harris. Theatrical manager

HARRIS, JAMES RINDEL (b. 1851). British scholar. Born at Plymouth, he was professor at Johns Hopkins University, Baltimore, 1882-85; at Haverford College, Pennsylvania, 1886-92; lecturer in palaeography at Cambridge, 1893-1903; and professor of theology, Leiden, 1903-4. He was director of studies, Friends' Settlement, Woodbrooke, near Birmingham, 1903-18; and curator of MSS. at the John Rylands Library, Manchester, 1918-25. He travelled widely in the East, where he discovered important MSS. bearing on the Bible. His numerous writings show the wide range of his learning.

HARRIS, JOEL CHANDLER (1848-1908). American writer popularly known as Uncle Remus. Born at Eatonton, Georgia, Dec. 8, 1848, in 1878 he joined the staff of *The Atlanta Constitution*, of which he was editor, 1890-1905, and to which he contributed the first of his Uncle Remus stories concerning the adventures of Brer Rabbit and Brer Fox. These stories, derived from his knowledge of negro folklore, were first collected in 1880 as *Uncle Remus: His Songs and His Sayings*. This volume had a number of successors, including *The Tar-Baby and Other Rhymes*, 1904. He died July 3, 1908. Consult *Life and Letters of Joel Chandler Harris*, by his daughter-in-law, Julia Collier Harris, 1918.

HARRISBURG. City of Pennsylvania, U.S.A., capital of the state. On the Susquehanna river, 105 m. W.N.W. of Philadelphia, it is served by the Pennsylvania and other rlys. It is the see of a Roman Catholic bishop. Its buildings include the capitol, court house, state arsenal and hospital for the insane, and county prison. It has large iron and steel works, repair shops, and carriage works, and manufactures of bedding, boots and shoes, clothing, and flour. Pop. 83,522.

HARRISMITH. Town of the Orange Free State, S. Africa. It is 60 m. from Ladysmith, and stands on the river Wilge at a height of over 5,000 ft. It is an important trading centre and a popular health resort. It was occupied by the British forces on Aug. 4, 1900. Pop. 6,200, of whom 2,546 are whites.

Harrier. A winning hound in a harrier and beagle show

Harrier. Specimen of *Circus cyaneus*

Harpsichord with double keyboard, 5-octave range. English 17th cent. model Victoria & Albert Museum, S. Kensington

HARRISON BENJAMIN (1833-1901). American statesman. Born at North Bend, Ohio, Aug. 20, 1833, grandson of President William Henry Harrison, he joined the Federal army and distinguished himself in the Civil War. Senator 1881-87, he was elected president on the Republican ticket in 1888. During his term of office the treaty of the annexation of Hawaii was negotiated, afterwards withdrawn by Cleveland when president; the first pan-American Congress was held, the McKinley tariff introduced, and the Bering Sea seal fisheries controversy with Great Britain settled by arbitration. Defeated in his candidature for re-election, he abandoned politics for the law. Harrison died March 13, 1901.

HARRISON, FREDERIC (1831-1923). British author and publicist. Born in London Oct. 18, 1831, he was called to the bar in 1858, and from 1877-89 was professor of jurisprudence at the Inns of Court. He was one of the founders of English Positivism (q.v.), and president of the English Positivist committee. Harrison wrote *The Meaning of History*, 1862, enlarged ed. 1894; and *Lives of Oliver Cromwell, 1688, and William the Silent, 1897*. On literature he wrote *The Choice of Books*, 1886; *Victorian Literature*, 1895; and *A Life of Ruskin*, 1902. In 1911 appeared *Autobiographical Memoirs*. He was a noted climber, and in 1908 published *My Alpine Jubilee*. He died Jan. 14, 1923.

His son Austin (1873-1928) was editor of *The English Review* in 1910-23.

HARRISON, THOMAS (1606-60). English puritan and regicide. He was born at New-castle-under-Lyme, Staffs, and became clerk to a London solicitor. In 1642 he joined the body-guard of the earl of Essex, and distinguished himself at Marston Moor. He was in command of the force that took King Charles from Hurst Castle to London, was one of the court that tried him, and signed the death warrant. During Cromwell's absence in Ireland Harrison was in supreme military command in England, 1650-51. He took part in the expulsion of the Long Parliament in 1653, in which year he lost his offices. Refusing to flee the country after the Restoration, he was tried and executed on Oct. 13, 1660.

HARRISON, WILLIAM HENRY (1773-1841). American statesman. Born at Berkeley, Charles City County, Virginia, Feb. 9, 1773, he entered the army and fought with distinction against the N.W. Indians. From 1801-13 governor of Indiana territory, he was responsible for several treaties with the Indians. Member of Congress, 1816-19, and senator, 1825-28, he was elected president in 1840. He died at Washington a month after his inauguration, April 4, 1841.

HARROGATE. Borough and watering place of Yorkshire (W.R.). It is 203 m. from London on the L.M.S. and L.N.E. Rlys., and is noted for its medicinal springs. There are several bathings and pump-rooms, hospitals and hydropathics, as well as the Royal Hall, concert rooms, opera house, and public gardens. The Stray is a large open space, as is Harlow Moor. Harrogate was originally two villages, Low and High Harrogate. It was made a borough in 1884. Since 1928 an annual musical festival has been held here. Near the town are

Ripon, Fountains Abbey, and Ripley Castle. The district around is known as Knarborough Forest. Pop. 45,000. See Baths; Spa.

HARROW. Raking machine for shallow cultivation of the soil, differing from the cultivator in the absence of wheels. Drag-harrows may have curved tines. Light harrows possess tines arranged on the zigzag principle. The term seed harrow is applied to a light kind by which a coating of soil is drawn over the seeds.

HARROW OR HARROW-ON-THE-HILL. Urban district of Middlesex. It is 10 m. by road N.W. from Hyde Park Corner, and is served by the L.M.S., L.N.E., Met., District, and Bakerloo (Tube) Rlys. On the summit and slopes of a hill rising abruptly 200 ft., it has grown rapidly since the in-

Harrow. 1. 14th cent. parish church, restored by Sir Gilbert Scott. 2. Harrow School; left to right, Old School, Memorial Hall and Speech Room

crease of rly. facilities. Harrow High Street retains much of its old character and contains an inn, the King's Head, dating from 1553. The parish church of S. Mary, founded by Lanfranc, was restored by Sir Gilbert Scott in 1840. It contains old brasses, among them that of John Lyon, founder of Harrow School, monuments and coloured glass. Pop. 21,740. See Middlesex.

HARROW SCHOOL. English public school. Founded by a yeoman named John Lyon, it was opened in 1611, and was long a school for poor children. By the end of the 18th century it had developed into a leading public school. Most of the buildings are modern, these including chapel, library, and speech room, but the original room still remains. Extensions and additions include the fine memorial hall.

The school numbers about 670 boys. There are eleven school houses and a few private boarding houses. It has an upper and a lower school, but is not divided into sides.

HART, SIR ROBERT (1835-1911). Civil administrator in China. Born in co. Armagh, and educated at Queen's College, Belfast, he was in the British consular service in China, 1854-59, and from 1859-1908 in the service of China. He largely created the Chinese imperial maritime customs service and had charge of the lighting of the coast and inland waterways and of the imperial post. Created a baronet in 1893, he died Sept. 20, 1911.

HARTAL. Indian word meaning a day of mourning or humiliation. Hartals have been used as a means of passive resistance to British authority, as in 1930.

HARTE, FRANCIS BRET (1839-1902). American novelist and poet. Born Aug. 25, 1839, he went at the age of 15 to California, where he was a gold-miner, schoolmaster and editor. He is remembered for his *Condensed Novels*, his

Bret Harte
American writer

inimitable verses on *The Heathen Chinee* and his stories, *The Luck of Roaring Camp*, *The Outcasts of Poker Flat*, *Miggles*, and *Tennessee's Partner*. He died at Camberley, May 5, 1902.

HARTEBEEST (Bubalis). Genus of large antelopes found in S. Africa. The hartebeest is one of the swiftest of the antelopes. It is reddish brown or bay in colour, and has ringed horns which first diverge from the forehead like a V and then turn backwards at right angles. See illus. below.

HARTFORD. City of Connecticut, U.S.A. The capital of the state, it stands on the Connecticut river at the head of navigation for large ships, 125 m. W.S.W. of Boston. Its manufactures consist of typewriters, steam-engines, printing machinery, motor vehicles, and hosiery. Pop. 172,288.

HARTINGTON, MARQUESS OF. English title borne by the eldest son of the duke of Devonshire. Hartington is a village in the Peak district. See Devonshire. Duke of.

Hartland Point. Headland on the N. coast of Devon. It forms the S.W. extremity of Barnstaple Bay and has a lighthouse.

HARTLEBURY. Village of Worcestershire. It is a junction on the G.W.R., 6 m. S.E. of Bewdley. The castle is the residence of the bishop of Worcester. Pop. 2,219.

HARTLEPOOL.

Municipal bor. of Durham. It is 18 m. from Durham on the L.N.E.R. The chief industries are shipping and shipbuilding. There is a large fishing trade. The town originated round a monastery founded about 640 and was made a borough in 1590. Known as the Hartlepoons, Hartlepool and W. Hartlepool unite in sending one member to Parliament. Pop. 21,000.

HARTLEPOOL.

Westr. Co. bor. of Durham. It stands just S. of Hartlepool on the L.N.E.R., and includes Seaton Carew, a watering-place. With Hartlepool, it has a fine harbour, and its docks cover over 350 acres. Large shipbuilding yards, engineering works, saw and flour mills are among the other industries. It is entirely a modern seaport, dating from the opening of the Durham coal-fields. Market day, Sat. Pop. 68,641.

Great damage was caused by a German naval bombardment on Dec. 16, 1914. The casualties were 113 killed, including 30 women and 15 children, and 300 wounded.

HARTMANN, KARL ROBERT EDUARD VON (1842-1906). German philosopher. Born in Berlin, Feb. 23, 1842, he was for a time an officer in the Prussian army. In 1865 he went lame and, forced to retire, he turned to the study of philosophy. In 1869 he published *The Philosophy of the Unconscious*, and later appeared *Modern Psychology*, *The Philosophy of the Beautiful*, and other books which have been translated into English. Hartmann died June 6, 1906. A monist, his Philosophy of the Unconscious is based on an amalgamation of Schopenhauer's doctrine of will with the metaphysics of Hegel and the positiveness of Schelling.

Hartebeest. Specimen of Bubalis caama. See above

HARTSHORN, VERNON (b. 1872). British labour leader. Born in 1872, he became president of the South Wales Miners' Federation. He was M.P. for the Ogmore division of Glamorganshire in 1918, retaining his seat at subsequent elections, and was postmaster-general in the first Labour govt., 1924. From 1927-30 he was a member of the Simon commission on Indian reforms, and in June, 1930, succeeded J. H. Thomas as lord privy seal. His services were mainly in connexion with the government's unemployment plans.

HARTSHORN. Popular name for ammonia water, ammonium carbonate. The name originally referred to the preparation made by distillation from the antlers of the red deer, *Cervus elaphus*. See Ammonia.

Hart's-tongue Fern
Phyllitis scolopendrium

shaped, with a heart-shaped base. The spore clusters are in thick parallel lines at right angles to the thick midrib. See Fern.

HART TRUFFLE (*Elaphomyces granulatus*). Subterranean fungus of the order Ascomycetes. It is a yellow tuber of depressed spherical form, attached to the roots of conifers, and filled, when ripe, with a purplish-brown mass of spores. Another fungus, *Cordyceps capitata*, is parasitic upon the hart truffle. See Fungus.

HARTY, SIR HERBERT HAMILTON (b. 1880). British musical conductor. Born at Hillsborough, Co. Down, Dec. 4, 1880, he studied music and soon made a name as a composer and a conductor. In 1920 he was appointed permanent conductor of the Hallé Orchestra at Manchester, and in 1925 he was knighted. His *An Irish Symphony* is noted.

HARVARD, JOHN (1607-38). One of the founders of Harvard University. Born in Southwark, London, he was a son of Robert Harvard (d. 1625), a butcher, and educated at the local grammar school and at Emmanuel College, Cambridge. He was married at South Malling to Ann Sadler, of Ringmer, Sussex. In 1637 he went to America, and became second minister of the church at Charlestown, Mass. Dying Sept. 14, 1638, he left half of his estate to a college named after him in New Towne, now Cambridge. There is a Harvard Memorial Chapel in S. Saviour's, Southwark. Harvard House, Stratford-on-Avon, was built in 1596 by John Harvard's grandfather, Alderman Thomas Rogers.

HARVARD UNIVERSITY. Senior university of the U.S.A. It was founded at Cambridge, Mass., and includes the original Harvard College. There is a staff of about 800 and over 5,000 students.

Harvard University. Austin Hall, seat of the law school founded in 1817

HARVESTMAN. Popular name for group of spiderlike arachnids (*Phalangium*), common in autumn. They are distinguished from spiders by absence of a waist and their remarkably long legs. See Arachnida.

HARVEST MITE. Name given to the larvae of a group of mites of the family Trombididae. The common

Harvest Mite,
greatly enlarged

harvest mite, which is covered with scarlet hairs, is found in large numbers on grass and low herbage in summer and autumn. It bores under the thin skin of man and other animals. The best remedy for its bite is to paint the affected part with tincture of iodine, turpentine, or ammonia.

HARVEY, SIR GEORGE (1806-76). Scottish painter. Born at St. Ninian's, Stirlingshire, he was an original associate of the Scottish Academy, 1827, becoming president in 1864. Scottish genre, portraits, and landscapes were treated by him. He died Jan. 22, 1876.

HARVEY, SIR JOHN MARTIN (b. 1867). British actor. Born at Wyvenhoe, Essex, June 22, 1867, he made his first appearance in 1881 at the Court Theatre, and from 1882-96 was with Irving. In 1898 he took over the management of The Lyceum, producing in Feb., 1899, the popular drama, *The Only Way*. As Sydney Carton in that play he became famous. He was knighted in 1921.

Sir John Martin Harvey
British actor

HARVEY, WILLIAM (1578-1657). English physician, discoverer of the circulation of the blood. He was born at Folkestone, Kent, April 1, 1578, and educated at the King's School, Canterbury, Caius College, Cambridge, and the university of Padua, taking his doctor's degree in physic at Padua and at Cambridge in 1602. He settled in practice in London, and in 1607 became fellow of the College of Physicians, and in 1609 physician to St. Bartholomew's Hospital. He died in London, June 3, 1657. See Blood.

William Harvey,
English physician
After C. Jansen

HARWICH. Seaport and borough of Essex. It stands at the mouth of the Orwell and the Stour, 70 m. from London, and is served by the L.N.E.R., which has made it the port for its continental traffic. The industries include fishing, shipbuilding, and the making of fertilisers and cement. It is a yachting centre. A train ferry service to Zeebrugge, Belgium, was inaugurated in 1924. The watering place of Dovercourt is within the borough. Pop. 13,036.

HARWOOD, GREAT. Market town and urban dist. of Lancashire. It is 5 m. N.E. of Blackburn, on the L.M.S. Rly. The chief industries are the manufacture of cotton and the mining of coal in the neighbourhood. Market day, Fri. Pop. 13,596.

HARZ. Mountain range of N. Germany lying between the Leine and the Saale and crossed by the waterparting between the Weser and the Elbe. The Brocken, 3,730 ft., is the highest point. The Upper Harz is a thickly forested district where silver is mined. In the Lower Harz agriculture prevails, and copper is mined at Mansfeld. The whole region is associated with legend and is much frequented by tourists and invalids.

HASAN (625-669) AND **HUSSEIN** (629-680). Sons of Ali (q.v.), adopted son of Mahomet and Fatima, the Prophet's daughter. Hasan is believed to have been poisoned by his wife, Hussein, who married a daughter of Yazdigerd, the last Sassanian king of Persia, was slain in battle at Kerbela. The brothers are venerated by the Shiites as martyrs.

HASDRUBAL OR **ASDRUBAL**. Carthaginian soldier. Left in Spain by his brother Hannibal (q.v.), when setting out on his expedition against Rome in 218 a.c., Hasdrubal carried on the war against the two Scipios, whose object it was to prevent him from reinforcing Hannibal. In 208 he crossed the Pyrenees, and in 207 the Alps, and reached Italy with his army. It was defeated, however, at the battle of the Metaurus, Hasdrubal being killed.

HASELDEN, WILLIAM KERRIDGE (b. 1872). British cartoonist. Born at Seville, Spain, he began his career as a clerk in Lloyd's, London. About 1902 he took up drawing professionally, and in 1904 was appointed cartoonist to *The Daily Mirror*. See Caricature.

HASHISH (Arab. herbage). Confection of Cannabis Indica, or Indian hemp. Made from the dried leaves and small stalks of the plant, it is a drug which produces a mild, pleasurable sense of intoxication. It is also a narcotic and is smoked, drunk, or eaten. The word assassin is derived from hashish. See Hemp.

HASLAR. Royal naval hospital at Gosport, Portsmouth. It was opened in 1753, and has been several times enlarged. It has accommodation for 1,116 patients. Attached to the hospital are a fine medical library and museum.

HASLEMERE. Urban district of Surrey. It is 13 m. from Guildford on the S.R. It stands in a valley between Blackdown Hill and Hindhead; around is some of the finest scenery in Surrey. Near is Aldworth, where Tennyson died. Pop. 3,865.

HASLINGDEN. Borough and market town of Lancashire, England. It is 19 m. N.W. of Manchester on the L.M.S. Rly. Cotton, silk, and woollen goods are manufactured, and there are coal mines, stone quarries, and iron foundries. Market days, Tues. and Sat. Pop. 17,485.

HASSALL, JOHN (h. 1808). British artist. Born at Walmer, and educated at Heidelberg, he began life on a farm in Manitoba; then studied art at Antwerp and at Julian's, Paris. A master of poster work, he has also produced many humorous sketches and designs in black-and-white, and several compositions in water-colour.

HASTINGS. County borough and watering place of Sussex. It is one of the Cinque Ports, and includes St. Leonards. It is 62 m. S.E. of London on the Southern Rly. There is a fine promenade, and the grounds include Alexandra Park, 75 acres. There are remains of a castle built on West Hill soon after 1066, and some interesting churches.

Hastings. Ruins of the Castle which overlooks this seaside town

Fishing is the chief industry. Hastings was made a bor. in 1589, and returned two members to Parliament from 1366 to 1885, since when it has sent one. Pop. 66,496

HASTINGS. Town of North Island, New Zealand. It is 12 m. by rly. S.W. of Napier, in Hawke's Bay dist., and has refrigerating and fruit canning works. Pop. 15,290.

HASTINGS, BATTLE OF. Fought Oct. 14, 1066, between the Normans under William, called after this victory the Conqueror, and the English under Harold II. It took place on a hill to which a later writer gave the name of Senlac, about 6 m. from Hastings. Fighting to the last, Harold and his two brothers were killed and his army was totally destroyed.

HASTINGS, FRANCIS RAWDON-HASTINGS, 1st MARQUESS OF (1754-1826). British soldier and administrator. Born Dec. 9, 1754, son of Sir John Rawdon, afterwards earl of Moira, he served in the American War of Independence. He was governor of Bengal, and commander-in-chief in India, 1813-21, and in 1824-26 governor of Malta. He died Nov. 28, 1826. Created marquess of Hastings in 1817. He married Flora Campbell, in her own right countess of Loudoun. On the death of Henry, the 4th marquess, in 1868, the estates in Leicestershire and Ayrshire passed to his sister, the countess of Loudoun.

HASTINGS, WARREN (1732-1818). British statesman. Born at Churchill, Oxfordshire, Dec. 6, 1732, son of the rector of the parish, he went to India in the service of the E. India Co.

Warren Hastings, British statesman. After T. Kettle

He served Clive well in diplomatic work, and in 1773 became governor-general. Despite harassing difficulties, he reorganized the administration of Bengal, and laid the foundations of the Indian civil service. Blunders of the authorities in Bombay and Madras forced him into wars, but the boldness with which he faced these emergencies saved the

British power in India from destruction.

Recalled in 1785, his trial began in 1788 and lasted over seven years. He was charged with hiring out British troops to exterminate the Rohillas, robbing the begums of Oudh, and being responsible for the judicial murder of Nuncomar. The House of Lords unanimously acquitted him on every charge, and the verdict of successive governors-general was emphatically in his favour. He was ruined financially by the trial, but the E. India Company made tardy reparation by conferring a pension on him, and before his death the House of Commons acknowledged formally his distinguished services. He died at Daylesford, Aug. 22, 1818. See India.

Haswell. Village of Durham. It is 9 m. S. of Sunderland on the L.N.E.R. Coal-mining is the chief industry. Pop. 6,199.

HAT. A covering for the head, distinguished from the cap by having a brim. The modern hat has been traced to the Greeks. In England the silk hat dates from about 1840. Straw hats first became popular about 1850, when the so-called bowler hat, made of hard felt, also came into vogue. In the 20th century soft hats known as the Homburg and Trilby came into favour for men, while the bonnet was superseded by hats for women.

The main types of hats in civilized countries are made of felt, straw, silk and velour, etc. In England the industry is carried on most largely at and near Stockport and in Nuneaton. Formerly the straw plaits from which hats are formed were made at Luton, Dunstable, and other English centres, but now the majority are imported.

Genuine panama hats are imported from Colombia in plateau form, and are blocked in England. Otranto, or simulated panama, comes from Japan. See Costume.

HATCHMENT. Lozenge-shaped panel used to display the armorial bearings of a deceased person. Hatchments were formerly

affixed to the residences of deceased persons and also carried in the funeral procession, to be subsequently hung up in the church. Many country churches in England still retain hatchments. The word is said to be a corruption of achievement. See Heraldry.

HATFIELD. District of Hertfordshire. It stands on the Lea, 17½ m. N. of London, on the L.N.E.R., and is remarkable for its picturesque old houses and handsome church of S. Egheldreda, which dates from Norman times, and was extensively restored in 1872. Pop. 5,695.

HATFIELD HOUSE. This is the magnificent seat of the Cecil. Built of red brick and Caen stone, and one of the most notable examples of Jacobean architecture in the kingdom, it stands in the parish of Hatfield or Bishop's Hatfield.

Erected by Robert Cecil, 1st earl of Salisbury, it was completed in 1611, contains part of the old palace of the bishops of Ely, and stands in a park measuring upwards of 10 m. in circumference. In the park is preserved the oak tree under which, according to tradition, Elizabeth was seated when she received news of her accession to the throne; and in the house are a remarkable collection of MSS. and state papers, many relics of Tudor and Jacobean times, and a number of historical portraits.

Hatfield House. South front of the mansion built in 1611 by Robert Cecil, first earl of Salisbury

HATHAWAY, ANNE (1556-1623). Maiden name of the wife of William Shakespeare (q.v.) She was daughter of Richard Hathaway, yeoman farmer of Shottery, near Stratford-on-Avon, and married Shakespeare Nov. 28, 1582, being eight years older than her husband. In 1928 Burman's Farm, next to Anne Hathaway's cottage, was renamed Hathaway Farm and thrown open to the public.

HATHOR (dwelling of Horus). Egyptian goddess. A sky-deity, cow-headed, or cow-horned, she was the great mother of the early dynastic people. When the goddess was represented in human form, with horned disk, she became identified with Aphrodite. The seven Hathors were benignant fates. Hathor-headed capitals are an architectural motive.

HATRY, CLARENCE CHARLES (b. 1890). British financier. For some years he had a successful career as a company promoter, but in 1920 the Commercial Bank of London which he directed failed for a large sum. In 1929 he entered into heavy engagements, to meet which he and his associates raised money by pledging with the banks forged stock certificates. In Sept. the shares of the Austin Friars Trust and other Hatry companies fell heavily; on the 19th he confessed and on the 20th the Stock Exchange suspended dealings in certain securities. In Jan., 1930, Hatry was tried and found guilty, his sentence being penal servitude for 14 years. The total deficiency was stated to be £13,500,000.

HATTON, SIR CHRISTOPHER (1540-91). English courtier. Born at Holdenby, Northamptonshire, he was admitted to the inner Temple in 1559. Queen Elizabeth employed him in the trials of Babington and Mary Queen of Scots, and he was lord chancellor from 1587 to his death, Nov. 20, 1591. Hatton Garden, London, where his home was, is named after him.

HAUBERK (O.H.G. Hals, neck; bergan, to protect). Coat of chain mail or closely linked iron or steel rings. The Norman hauberk was put on over the head like a modern sweater; other forms were fastened up in front. See Armour.

HAUPTMANN, GERHART (b. 1862). German dramatist and poet. Born at Salzbrunn, Nov. 15, 1862, he studied art, but began playwriting in 1889, producing *Vor Sonnenaufgang*, followed in 1890 by *Erdensfest*; *Einsame Menschen*, 1891; and *Die Weher*, 1892. With an almost repellent naturalism and realistic depiction of the meannesses and ugly trivialities of modern life, he struck a new chord in contemporary literature and art. From 1892 his outlook broadened. His *Eminenz Quint* appeared in 1910, *Atlantis*, 1912, and *Island of the Great Mother*, 1926. He received a Nobel prize in 1912.

Gerhart Hauptmann, German dramatist

HAUSA. Negroid people, mostly N. of the Benue and Niger rivers, Nigeria. Their culture, based on settled husbandry, handicrafts, and trade, advanced under Libyan impetus and the adoption of Islam

by the upper classes. Their political power was overthrown by the Fula chief Dan Fodio in 1810, but since the British occupation of Sokoto in 1903 their virile temperament has again emerged. There are vigorous colonies in Tunis and Italian Libya. The Hausa military police regiments in British and Belgian territory are largely recruited from Hausa-speaking W. African negroes. See Negro.

The Hausa language is spoken in Africa by 15,000,000 people of Mahomedan faith, whose original home appears to have been between Sokoto and Bornu. It has been adopted as the trade language from Lake Chad to the Guinea coast, and a readership in the language has been established at Cambridge.

HAUSSMANN, GEORGES EUGÈNE, BARON (1809-91). French administrator. Born in Paris, March 27, 1809, his family was of German extraction. Educated in Paris, he entered the civil service, and became famous as the rebuilder of Paris, being responsible for the fine system of boulevards and the planning of the Bois de Boulogne. He also built bridges and provided Paris with a system of water supply and sewerage. He died in Paris, Jan. 11, 1891. The fine Boulevard, completed in 1928, preserves his name.

HAUTBOY (Fr. hautbois, high-wood). Wood-wind instrument consisting of a conical tube, with side holes, as in the clarinet and flute. It is played vertically with a double

Hausa woman with feet and arm bandaged after the ceremonial application of henna. Above, Hausa man

Baron Haussmann, French administrator

reed, and it first "overblows" at the octave. The tone has a peculiar nasal ring, very pleasant at its best, but harsh when forced. Hautboys were amongst the earliest of wind instruments to secure permanent places in the stringed orchestra. See Bassoon.

Hautboy,
military
model

HAVANA (Span. La Habana). Largest city of the W. Indies. The capital of Cuba, it is a busy commercial centre, linked by rly. with all the chief towns on the island. The bay forms one of the securest harbours in the world. There are many fine buildings, including the magnificent new capitol opened in 1929. The staple industry is the manufacture of cigars and tobacco. Sugar is produced in large quantities, and other manufactures include barrels and cases for the cigar and tobacco supplies, and carriages, wagons, and machinery. Pop. 528,700.

Founded in 1515 on the S. coast, Havana was removed to its present site in 1519, when it was known as San Cristóbal de la Habana or Savanna. On Feb. 15, 1898, the U.S. battleship Maine was blown up in the harbour, and the incident led to the Spanish-American War. See illus. below.

HAVANT. Market town and urban district of Hampshire. It stands on Langstone Harbour, 7 m. N.E. of Portsmouth on the S.R. The industries consist of tanning, malting, and brewing. Market day, Tues. Pop. 4,405.

HAVELOCK, Sir HENRY (1795-1857). British soldier. The son of a shipbuilder, he was born at Sunderland, April 5, 1795. Educated at Charterhouse, he studied law until 1815, when he entered the Rifle Brigade. In 1823 he transferred to an Indian regiment, and saw active service in Burma, Afghanistan, and Persia. He distinguished himself during the Mutiny, but was unable to relieve Cawnpore, and only got through to Lucknow when reinforced by troops under Outram. He had just taken that city and been knighted when he died there of dysentery, Nov. 24, 1857. His services were recognized by a baronetcy to his son, Sir H. Havelock-Allan.

Havana. The new Capitol, opened in 1929.
See article above

Sir Henry Havelock,
British soldier

HAVFORDWEST (Welsb, Hwlfordd). Co., municipal bor., market town, and river port of Pembrokeshire, of which it is the co. town. It is on the W. Cleddau river, 8½ m. from Milford, and is served by the G.W.R. Its dominating feature is the keep of the 12th century castle. There is a trade in coal and agricultural and other produce. Market day, Sat. Pop. 5,750.

HAVERGAL, FRANCES RIDLEY (1836-79). British poet and hymn-writer. Born at Astley, Worcestershire, Dec. 14, 1836, daughter of the Rev. William Henry Havergal, writer of sacred music, she began to write verse at the age of seven. She is chiefly remembered as a writer of hymns, one being "Take my life, and let it be." She died June 3, 1879.

HAVERHILL. Market town and urban district of Suffolk. It is 16 m. from Cambridge on the L.N.E.R., and is the terminus of the Colne Valley line. The industries include the making of cloth, boots, and bricks, and there is a trade in agricultural produce. Market day, Friday. Pop. 4,083.

The American Haverhill is in Essex co., Massachusetts, on the Merrimack river, 32 m. N. of Boston. An industrial town, it has hoot and shoe factories. Pop. 49,232.

HAVERSACK (Ger. hafer, oats). The canvas bag in which soldiers carry their rations and personal effects. In the British army it is carried at the left side, either suspended from the belt or from a shoulder sling, the latter worn under the belt.

HAVERSTOCK HILL. London thoroughfare. It connects Chalk Farm with Rosslyn Hill, Hampstead. Belsize Park station on the Hampstead (Tube) Rly. is here; Haverstock Hill station on the L.M.S. and L.N.E. Rlys. is at Lismore Circus on the E. Near Belsize Park station is Hampstead town hall, built in 1877. See Hampstead.

Havre. The Bourse and swing-bridge across the commercial dock

HAVRE or LE HAVRE. Seaport town of France, chief town of the dept. of Seine Inférieure. A modern, well laid out town, it is on the N. bank of the Seine estuary, 49 m. W. of Rouen, and has important engineering works, shipbuilding yards, oil refineries, chemical and dye works, a state tobacco manufactory, and many miscellaneous industries.

Havre is one of the greatest of French seaports, the main centre of trade with N. America, and the docks are extensive and well constructed. There is a regular steamer service between Southampton and Havre. The main block of warehouses covers about 60 acres. The chief trade is in coal, cotton, cereals, woods, sugar, coffee, and cocoa. Pop. 158,000.

Louis XII founded the chapel of Notre Dame de Grâce in 1509, whence came the town's old name of Havre-de-Grâce. During the Great War, Havre was an important base of the British Expeditionary Force, and from Oct., 1914, to Nov., 1918, the seat of the Belgian government.

HAWAII. Name given to a scattered chain of islands in the Pacific Ocean. Formerly called Sandwich Islands, they constitute a territory of the U.S.A. They are of volcanic

Hawaii. Map of the chain of islands which constitute a territory of the U.S.A.

origin, and cover an area of 6,449 sq. m. The inhabited islands are Hawaii, or Owyhee, 4,015 sq. m.; Maui, 728 sq. m.; Oahu, 600 sq. m.; Molokai, 261 sq. m.; Kauai, 544 sq. m.; Lanai, 135 sq. m.; Niibau, 97 sq. m.; Kahului, 69 sq. m.; and Kaula. Hawaii, of which Hilo is the capital, produces sugar, coffee, fruit, and rice, and contains in Mauna Kea (13,805 ft.) and Mauna Loa (13,760 ft.) two of the greatest active volcanoes in the world. There are 342 m. of rlys. Honolulu (q.v.) is the capital and chief port. The indigenous population, of the brown Polynesian race, are of good physique, but little inclined to industry. In language and religion they are related to the Tahitians. Japanese represent two-fifths of the population, which is about 255,000.

In 1865 a leper settlement was established on Molokai island. The islands were discovered, or re-discovered, in 1778 by Captain Cook, who was killed by natives in 1779. Ruled by native kings down to 1891, then by Liliuokalani (1838-1917), they were annexed by the U.S.A. in 1898, and in 1900 organized as a territory.

HAWARDEN. Village of Flintshire, Wales. It stands on a tributary of the Dee, 6 m. W.S.W. of Chester, on the L.N.E.R. There are remains of a 13th century castle, close to which is the modern Hawarden Castle, long the residence of W. E. Gladstone. The church, dedicated to S. Deiniol, has memorials to the Gladstones, and here are a 17th century grammar school and S. Deiniol's Hostel for theological students, founded by Gladstone. Coal mines have been opened. The Welsh name is Penarlwg. Pop. 8,016. Pron. Harden.

HAWES. Village of Yorkshire (N.R.). On the L.M.S. and L.N.E. Rlys., it has a trade in dairy produce, and there is a butter market. Market day, Tues. Pop. 1,430. Hawes Junction, 6 m. away, was the scene of a terrible railway accident, Dec. 24, 1910.

HAWESWATER. Lake of Westmorland. It is 25 m. N. of Kendal, and lies 700 ft. above sea level. It is about 2½ m. long. In 1918 Haweswater was purchased by Manchester as a reservoir for its water supply.

HAWFINCH (*Coccothraustes vulgaris*). Bird of the finch family, closely related to the grosbeak (q.v.). Common in S. Europe, it is frequently seen in England. It is about 7 ins. long, and is a handsome bird with light pinkish-brown breast, dark-brown back, wings banded with black, brown and white, large yellowish-brown head, and large blue beak.

HAWICK. Burgh of Roxburghshire, Scotland. It stands at the junction of the Slitwith the Teviot, 53 m. S.E. of Edinburgh on the L.N.E.R.

Near by are Branxholme and Harden, old residences of the Scotts. The annual festival, known as the "common riding," has been celebrated for upwards of 300 years. The hosiery and woollen manufactures are important, and a noted livestock market is held. The Hawick Burghs formerly returned an M.P. but they are now merged into the co. of Roxburgh. Pop. 16,353. Pron Haw-ick.

HAWK. Popular name for all birds of prey that are not eagles, vultures, or owls. The term should be restricted to some nine genera, which include the sparrow-hawks, goshawks, and harriers. See Kestrel.

HAWKBIT (*Leontodon*). Genus of perennial herbs of the order Compositae, natives of Europe and W. Asia. In appearance they are much like small dandelions. The flower-heads are yellow.

HAWKE, EDWARD HAWKE, 1ST BARON (1705-81). British sailor. Born in London, he entered the navy in 1720. Knighted for his

services in defeating a French squadron off Rochelle 1747 and elected M.P. for Portsmouth, his great exploit was in 1759 when, blockading Brest, he defeated the French admiral de Conflans in Quiberon Bay. He was first lord of the admiralty 1766-71 and was made a baron in 1776. He died at Sunbury Oct. 17, 1781.

Martin Bladen Hawke the 7th Baron (b. 1860), a famous cricketer, was born Aug. 16, 1860. Educated at Eton and Magdalene College, Cambridge he was Yorkshire's captain 1883-1910, during which period Yorkshire won the county championship eight times. He took out cricket teams to America in 1891 and 1894; to India, 1892-93; and to South Africa, 1895-96.

Lord Hawke,
English cricketer
Russell

HAWK EAGLE. Term best restricted to the genus *Nisaetus*, which comes nearest to the true eagles. The hawk eagles, of which there are several species, are found in S. Europe, Africa, India, and Australasia. Bonelli's hawk eagle (*N. fasciatus*) is often found about the Mediterranean, and is known in India as the peacock killer. It is extremely destructive in the poultry yard. The booted hawk eagle (*N. pennatus*) is no larger than a kite, and has a similar range. It commonly breeds in Spain.

HAWKER. Itinerant dealer or vendor. In law, a hawkier is distinguished from a pedlar as one who conveys his goods by horse or other beast, whereas the pedlar conveys his goods on foot. Hawkers and pedlars must take out licences, the former costing £2, the latter 5s.

HAWKER, HARRY GEORGE (1891-1921). British airman. Born in Australia, he settled in England, where he qualified as an air pilot. His flights became noted, and in some of them he set up world records for height and duration. In 1919 he competed for the prize of £10,000 offered by The Daily Mail for a flight across the Atlantic. He was forced to descend before he reached Europe, but was given a consolation prize of £5,000. Hawker was killed while flying, July 12, 1921.

HAWKER, ROBERT STEPHEN (1803-75). British poet and antiquary. He was born at Stoke Damerel, Devonshire, Dec. 3, 1803, and educated at Pembroke College, Oxford, where he won the Newdigate prize for a poem on Pompeii in 1827. He was vicar of Morwenston, Cornwall, 1834-75. His best known poems are *The Quest of the Sangraal* and *Cornish Ballads*, including *Trelawney*. He died at Plymouth, Aug. 15, 1875.

HAWKESBURY. River of New South Wales. It is formed by the junction of the Nepean and the Grose, is 330 m. long, drains a basin of 9,000 sq. m., and falls into Broken Bay, 25 m. N.N.E. of Sydney. It is proposed to dam its headstream, the Warraganda, to provide irrigation and electric power for the Sydney district.

HAWKING OR FALCONRY. The art of hunting with trained hawks or falcons. One of the oldest and most universal of sports, it was known in China about 2000 B.C., and is men-

tioned as prevalent in Europe by Aristotle, Pliny, and Martial. In Great Britain, hawking was practised in Saxon times, and was probably at the height of its popularity during the reign of Elizabeth.

The hawks employed are of two groups, the long-winged or "hawks of the hire," and the short-winged, or "hawks of the fist." The long-winged comprise the peregrine, the northern falcon, and the Iceland and Greenland varieties; the short-winged consist of the goshawk and sparrowhawk. Hawks are trained to kill grouse, partridges, and woodcocks, and occasionally hares and rabbits. A good dog is essential to assist in starting and retrieving the game. See Falcon.

HAWKINS OR HAWKINS, SIR JOHN (1532-95). English sailor. Second son of William Hawkins, a sea captain, he was born at Plymouth. After a number of voyages in which he seized negroes and exchanged them for merchandise, he was returned M.P. for Plymouth in 1572. Against the Armada, 1588, he was in command of one of his own vessels, the *Victory*, and was afterwards knighted. In 1592 he founded the Sir John Hawkins Hospital at Chatham, and in 1595, under Drake, he sailed to the Spanish Main.

Sir John Hawkins,
English sailor

He died of fever, off Puerto Rico, Nov. 12, 1595, and was buried at sea.

His only son, Sir Richard (c. 1562-1622), commanded the *Swallow* in the fight against the Armada, 1588, and in 1593 set sail in the *Dainty* for a voyage round the world. He plundered Valparaiso, 1594, but, caught by two Spanish galleons, he was sent to Spain and kept captive until 1602. He died in London, April 17, 1622.

The British light cruiser, *Hawkins*, completed in 1919, was built at Chatham. Her length is 563 ft., tonnage 9,750, and engine power 60,000 h.p. She carries seven 7.5-inch and eight 3-inch guns, and is oil-burning. Sister ships are the *Effingham*, *Frobisher*, and *Vindictive*. Another, *Raleigh*, was wrecked, 1922.

HAWK MOTH. Popular name for the moths belonging to the family Sphingidae, of which about ten species are natives of Britain.

They have long, narrow fore-wings and small hind ones, and mainly fly in the evening. Their caterpillars are always smooth, and usually have a horn-like process on the hindmost segment of the body. See *Death's Head Moth*.

Hawk Moth. *Sphinx ligustri*, the privet hawk moth

Hawking. Falcon with Dutch hood, bells and jesses, as carried on glove

Europe and the Canaries. The leaves chiefly grow from the root, with few bold teeth: the stem leaves are broader at the base, with ears. The stem is branched, bearing small yellow flower-heads with the florets all strap-shaped. The fruits have a parachute of unbranched silky hairs.

HAWKSHAW, SIR JOHN (1811-91). British engineer. Of a Yorkshire yeoman family, he was educated at Leeds Grammar School. He constructed the Charing Cross and Cannon Street stations and bridges, and built the E. London Railway and the tunnel under the Severn. Made F.R.S. 1855, and knighted in 1873, in 1875 he was president of the British Association. He died June 2, 1891.

HAWKSHEAD. Village of Lancashire. It is picturesquely situated in a valley between Windermere and Conistone. In the grammar school, founded in 1585, the poet Wordsworth was a pupil. Pop. 575.

HAWKSMOOR. Estate in Staffordshire. Near Cheadle, it is a beautiful tract of country covering 207 acres, rich in flora and fauna. In 1927 it was acquired by the National Trust.

HAWKSTONE. Parish of Shropshire, 4½ m. N.E. of Wem. Hawkstone Park, once a seat of Viscount Hill, is situated under the N. slope of the Hawkstone hills, in extensive and beautiful grounds.

HAWKWEED (Hieracium). Large genus of perennial herbs of the order Compositae. Natives of the N. temperate and Arctic regions, they have milky juice and alternate leaves. The flower-heads are yellow or orange in colour.

HAWKWOOD, SIR JOHN (d. 1394). English soldier. His birth and parentage are uncertain, but he was probably a London apprentice. He won fame in the wars of Edward III, being made a knight. After the peace of Brothigny, in 1360, he became the captain of a band of mercenaries, called the White Company, at the head of which he won his great reputation. In 1375 Florence bought his services, and he died in that city. Later his remains were carried to England, and were probably buried at Castle Hedingham, in Essex.

HAWORTH. Urban district of Yorkshire (W.R.). It is 3½ m. S.W. of Keighley, on a branch of the L.M.S. Its chief associations are with the Brontës (q.v.). Penden Hall is regarded as the original of Emily Brontë's *Wuthering Heights*. The 14th century parish church, of which Patrick Brontë was curate, 1820-61, was, with the exception of the tower, rebuilt in 1879-81. In 1927 the parsonage was given by Sir James Roberts to the Brontë Society to serve as a Brontë museum. Pop. 6,605.

H.M.S. Hawkins, British light cruiser, completed in 1919
Cribb, Southsea

HAWTHORN, WHITETHORN OR MAY (Crataegus oxyacantha). Small spiny tree of the order Rosaceae. It is a native of Europe, N. Africa, and W. Asia. The leaves are wedge-shaped, variously cut into lobes; the flowers are white, in numerous clusters, fragrant, almost hiding the foliage by their abundance. See illus. p. 713.

HAWTHORNDEN. Village of Midlothian. It is 8 m. S.E. of Edinburgh, on the L.N.E.R., and is famous for its beautiful glen, through which the Esk flows, and for the fact that the house here was long the seat of the Drummonds. The poet William Drummond (q.v.) was born in it, and here he died, Dec. 4, 1649.

The Hawthornden Prize is a prize of £100 given every year by Miss Alice Warrender for a work of imagination by an author who is not over 40 years old. In 1928 it was won by Henry Williamson for *Tarka the Otter*, in 1929 by Siegfried Sassoon for *Memoirs of a Fox-Hunting Man*. In 1930 it was awarded to Lord David Cecil for *The Stricken Deer*.

Hawthorne. Clusters of blossom. See p. 712

HAWTHORNE, NATHANIEL (1804-64). American novelist. Born at Salem, Massachusetts, July 4, 1804, he was for many years an official in the customs service and from 1853-57 was American consul in Liverpool. In 1837 he brought out his first book of short stories, *Twice Told Tales*; *Mosses from an Old Manse*, in 1846; and *The Snow Image and Other Tales*, 1851. Many of these stories are tinged with the emotional residuum of the author's Puritan ancestry. In 1850 appeared his masterpiece, *The Scarlet Letter*, a study of the ravages made by a secret sin of adultery in the hearts and consciences of husband, wife, and lover. This was followed in 1851 by *The House of the Seven Gables*, a story of the decay of a family doomed to bear an hereditary curse. In 1852 Hawthorne brought out *The Blithedale Romance*, a satire, and in 1860 appeared his last romance, *Transformation, or The Marble Faun*. He died at Plymouth, New Hampshire, May 19, 1864.

Nathaniel Hawthorne. American novelist

HAWTREY, SIR CHARLES (1858-1923). British actor. Born Sept. 21, 1858, he was educated at Eton and Rugby. His first appearance was in 1881 at the Prince of Wales's Theatre, under the name of Bankes, and he was manager of the Globe. His Majesty's, and the Comedy. He produced many successful plays, and acquired great popularity, especially as Douglas Cattermole in *The Private Secretary*. Knighted in 1922, he died July 30, 1923.

Sir Charles Hawtreay. British actor. Foulsham & Banfield

Hawtreay was a grandson of Rev. Edward Craven Hawtreay (1789-1862) who was headmaster of Eton, 1834-52. He died Jan. 27, 1862.

HAY, IAN (b. 1876). Pen-name of John Hay Beith, Scottish novelist and dramatist. Born April 17, 1876, he was educated at Fettes College and St. John's College, Cambridge. For a time he was language master at his old school. For his services in the Great War he was awarded the M.C. and became a major. His books, characterised by both vigour and humour, include *Pip*, *The First Hundred Thousand*, *Carry On*, and *The Last Million*. His plays include *Tilly of Bloomsbury*, and *A Safety Match*, adapted from his books; also *The Sport of Kings*, produced 1924.

Ian Hay. Scottish novelist Russell

HAY, JOHN (1838-1905). American diplomat, journalist, and author. Born at Salem, Indiana, Oct. 8, 1838, he was secretary to Lincoln and then editor of *The New*

York Tribune. He was in the diplomatic service at Madrid, Paris, and Vienna, and from 1897-98 was ambassador in London. He was secretary of state from 1898 until his death, July 1, 1905, being responsible for the Hay-Pauncefote and other important treaties. Hay's chief works are the standard life of Abraham Lincoln (with J. G. Nicolay), 1890, and *Pike County Ballads*, 1871.

HAYDN, FRANZ JOSEPH (1732-1809). Austrian composer. The son of a wheelwright, he was born at Rohrau, near Vienna, March 31, 1732. His oratorio, *The Creation*, was produced at Vienna in 1798, and *The Seasons* in 1801. Notable for his great skill in the treatment of the orchestra he composed about 150 symphonies, 77 quartets, and some 40 trios with a large body of religious music and songs. The national anthem of Austria, also familiar as a hymn tune, was composed in Vienna in 1797. He died in Vienna, May 31, 1809.

F. Joseph Haydn. Austrian composer

HAYDOCK. Urban district of Lancashire. It is 3 m. S.E. of St. Helens, on the L.N.E.R. The chief industries are coal-mining and iron-founding. Race meetings are held in Haydock Park. Pop. 10,333

HAYDON, BENJAMIN ROBERT (1786-1846). British painter and author. Born at Plymouth, Jan. 26, 1786, he jeopardised his prospects by quarrelling with the Academy, and after a stormy career he committed suicide, June 22, 1846. Haydon's work as an historical painter was far above the level of his time. One may cite his *Christ's Entry into Jerusalem*, 1820; *Wellington at Waterloo*, 1839; *Banishment of Aristides*, 1846; *Nero playing during the burning of Rome*, 1846. He was the author of an autobiography, published by his widow in 1847; and *Lectures on Painting and Design*, 1844, and other books on art.

B. R. Haydon. British painter After G. M. Zornlin

HAYES. Urban dist. of Middlesex. It is 1 m. N. of Hayes and Harlington station on the G.W.R. Gramophones, printing presses, aeroplanes, seaplanes, and pianos are made. The parish church of S. Mary, restored in 1873-74, has a 13th century tower, a 16th century wooden roof to the nave, a lych gate, and some interesting monuments. Pop. 11,500.

HAYES. Village of Kent. It is 15 m. from Charing Cross, on a branch of the S.R. Hayes Place, pulled down in 1928, was the favourite residence of the 1st earl of Chatham, who died there, and the birthplace of his son, William Pitt. The Early English church of S. Mary, built on the site of a Roman structure, and containing brasses and other monuments of interest (including one to Chatham) was restored in 1861-62. Hayes Common, a breezy stretch of uplands, 220 acres in extent, was secured to the public in 1869. Pop. 1,010.

HAYES, RUTHERFORD BIRCHARD (1822-93). American president. Born in Delaware, Ohio, Oct. 4, 1822, he served with distinction throughout the Civil War. Member of Congress 1865-67, and governor of Ohio, 1868-72 and 1876-77, he stood for the presi-

R. B. Hayes. American statesman

dency in 1876 on the Republican ticket and was elected by one electoral vote. He did much to improve the financial position of the country and pursued a conciliatory policy towards the southern states. He died at Fremont, Ohio, Jan. 17, 1893.

HAY FEVER. Catarrhal affection of the mucous membrane of the eyes, nose, mouth, and air-passages due to irritation by the pollen of various grasses and plants. The disease is common all over Europe and N. America, and chiefly occurs during the hay season. The symptoms are those of a heavy cold with much sneezing and headache. Sufferers from hay fever should avoid agricultural districts during the summer months.

HAYLING. Island of Hampshire. It lies between the harbours of Langstone and Chichester, and has an area of 10 sq. m. It is popular as a seaside resort, and there are golf links. The village of S. Hayling, on the S.R., has a church dedicated to S. Mary. There is a station at N. Hayling, 2½ m. from Havant and 69 from London. Pop. 2,722.

HAYMARKET. London street extending from the E. end of Piccadilly to Pall Mall, S.W. It was so named from the market for hay and straw held here before 1830. The Carlton Hotel and His Majesty's Theatre, on the W. side, cover the site of the King's Theatre or Italian Opera House, later Her Majesty's Theatre, demolished in 1893. The Haymarket Theatre on the E. side was opened July 4, 1821 on the site close to that of one dating from 1720. At the close of Buckstone's management in 1879, it passed to the Bancrofts, under whom it enjoyed great popularity, which continued undiminished under Beerbohm Tree, 1887-95; Cyril Maude and Frederick Harrison, 1896-1905; and later under Frederick Harrison alone.

HAYTER, SIR GEORGE (1792-1871). British artist. Born in London, Dec. 17, 1792, his reputation as a portrait and miniature painter was established when he was appointed portrait and historical painter to Queen Victoria, 1837. In 1838 he exhibited at the R.A. The Queen seated on the Throne in the House of Lords, now in the Guildhall, London. His picture of the Coronation and the Marriage are now in the royal collection at Windsor. His appointment in 1841 as principal painter to the queen was followed next year by a knighthood. He died Jan. 18, 1871.

Haymarket Theatre. Showing the new theatre, opened 1821, replacing the old theatre (left). See above From an old print

HAYWARD, TOM (b. 1871). English cricketer. Born at Cambridge, March 29, 1871, he joined the ground staff at the Oval in 1891. He first played for Surrey in 1893, and for twenty years was one of the mainstays of the county team. Altogether he scored over 100 runs on 104 occasions.

HAYWARD'S HEATH. Urban dist. and market town of Sussex. It is 38 m. S. of London on the S.R. An important cattle market is held here. The council owns two parks. Market day, Tues. Pop. 5,090.

HAZARA. District of India, in the N.W. Frontier Province. The district contains extensive forests. Maize, wheat, and barley are the chief crops. Mineral resources include

coal, limestone building stone, gypsum, and iron. It exports grain and imports piecgoods, indigo, salt, etc. The area is 3,062 sq. m. Pop. 146,656.

HAZEBROUCK. Town of France. An important rly. junction, it lies on the canalised river Bourro, 32 m. W.N.W. of Lille. It was an important British centre and railroad in the Great War. Pop. 11,564.

Hazel. Leaves, nuts, catkins, and female flower

oily nut, enclosed in a woody shell, and: this in a large, leathery bract. Filberts, cob-nuts, Barcelona, and Spanish nuts are all varieties of this species.

HAZEL GROVE. Urban dist., in full Hazel Grove and Bramhall, of Cheshire. It is 2 m. S.E. of Stockport, on the L.M.S.R. There are silk throwing and cotton industries. Stockport provides the district with water and gas. Pop. 10,125

HAZLITT, WILLIAM (1778-1830). British essayist and critic. Son of William Hazlitt (1737-1820), a Unitarian minister of Irish descent, he was born at Maidstone, Kent, April 10, 1778. In the first rank of literary critics, and a writer who varied his style in harmony with his subject, he is chiefly remembered for his essays, including his *Characters of Shakespeare's Plays* and his *Lectures on the English Poets, English Comic Writers, and The Dramatic Literature of the Age of Elizabeth*. He also wrote a piquant series of personal sketches, *The Spirit of the Age*.

William Hazlitt, British essayist
From a miniature by his brother John

The years 1822-23 were notable for his temporary if passionate attachment to Sarah Walker, which inspired his morbidly egotistical *Liber Amoris*, or the *New Pygmalion*, 1823. Ill-health and monetary troubles darkened his later years, and he died in Frith Street, London, Sept. 18, 1830. He was buried in the churchyard of St. Anne's, Soho.

He left a son, William (1811-93), who was a registrar of the court of bankruptcy, and edited an edition of Montaigne.

HAZLITT, WILLIAM CAREW (1834-1913). British author. Born in London, Aug. 23, 1834, he was the son of William Hazlitt the younger. Educated at Merchant Taylors' School, and called to the bar at the Inner Temple, 1861, he devoted most of his life to literary and antiquarian pursuits. He died Sept. 8, 1913. A voluminous writer, he compiled *English Proverbs and Proverbial Phrases*, 3rd ed. 1906; was the author of *Memoirs of William Hazlitt*, 1867; and *Shakespeare: Himself and His Work*, 3rd ed. 1908.

HAZOR or **HAZUR.** Name of several places in Palestine. The most important was a city in Naphtali (Josh. 11, 1), a little S. of Kedesh,

which was taken and destroyed by Joshua, but having been rebuilt was fortified by Solomon (1 Kings 9, 15). It was afterwards taken by Tiglath Pileser, king of Assyria (2 Kings 15, 29).

HEADACHE. Pain in the head. It is a symptom of a large number of pathological conditions. The simple form is usually the result of fatigue. In dyspepsia it is associated with furred tongue, offensiveness of the breath, constipation, and discomfort after meals. In young girls the condition is often associated also with chlorosis or simple anaemia. Headache is also common in many forms of nervous breakdown such as neurasthenia, anxiety neurosis, and shell shock. Migraine is a form of severe headache, the exact cause of which is unknown.

Errors of refraction leading to eye-strain are another common cause of headache. Frequently recurring headaches indicate that there is some constitutional cause which should be remedied.

HEAD HUNTING. Custom among some primitive peoples of slaying strangers or enemies in order to utilise their heads as cult-objects or trophies. As developed out of human sacrifice by the Austriac-speaking peoples of S.E. Asia and its archipelagoes, its animistic purpose was partly spirit worship, partly a productive rite.

HEADLAM, ARTHUR CAYLEY (b. 1862). British prelate. Born at Whorlton, Durham, Aug. 2, 1862, the son of Rev. A. W. Headlam, he was educated at Winchester and New College, Oxford. He became fellow of All Souls College and was ordained. From 1896-1903 he was rector of Welwyn, and from 1903-1912 principal of King's College, London. In 1918 he returned to Oxford as regius professor of divinity, and in 1923 was made bishop of Gloucester. From 1901 to 1921 he was editor of *The Church Quarterly Review*, and he has written a great deal on theological subjects. In 1927-28 the bishop was among the strongest and ablest supporters of the revised prayer book.

Arthur C. Headlam, British prelate
Russell

HEALTH: Sound condition of the entire animal organism in which all the organs function perfectly. The widespread custom of drinking healths derives from the ancient religious ceremony of pouring libations to the gods, originally at the time of offering sacrifice, and afterwards on solemn occasions, as at ceremonial feasts. This custom was practised by the Greeks and Romans, and with other heathen customs was adapted to their own use by many Christianised peoples. The heathen tribute of honour to the gods, followed by one to the memory of the dead, became among Christians invocations to God and to the saints. From thought of the blessed dead it was a natural transition to tender thought of absent but living friends, and from them again to the friends present in the flesh.

HEALTH INSURANCE. Scheme introduced into Great Britain in 1911 when the first Health Insurance Act was passed through Parliament. Other Acts making minor alterations followed until in 1924 a consolidating and amending Act was passed. This, together with an Act of 1928, now embodies the law on the subject. In 1922, on the establishment of the Irish Free State, that part of Ireland withdrew from the scheme, which now applies only to Great Britain and Northern Ireland.

Except certain classes of workers, all employed persons between 16 and 65 years of age are insured. The contributions are paid by the employer, the employee, and the state. For men the premium is 10d. a week,

and for women it is 9d. The employer pays 5d. and the insured person 5d. if a man, and 4d. if a woman. Those figures are for Great Britain only. In Northern Ireland, where the benefits are somewhat less, the premiums are 8d. and 7d. The employer pays 4d. and an insured person 4d. or 3d., according to sex. These payments are estimated to provide 7/9ths of the total cost of the scheme, leaving 2/9ths as the share of the state. The only exceptions are in the case of workers who receive unduly low wages.

The contributions are paid by putting national health insurance stamps, which can be bought at any Post Office, on a contribution card. Contributions are not required for any week during which the insured person is prevented by illness from doing any work. The whole of the weekly contributions are paid in the first instance by the employer, but he is entitled to deduct the employee's share from his or her wages. Employers should remember that they must pay their share of contributions for any employee who is among the insured class but who, because of the possession of private means, or for some other reason, is exempt from the scheme.

The ordinary benefits to which insured persons are entitled are medical, sickness, disablement and maternity. There is no medical benefit in Northern Ireland, but sanatorium benefit is there provided. At one time this was also provided in Great Britain. In addition approved societies can give additional benefits to their members.

The ordinary rate of sickness benefit is 15s. a week for a man and 12s. a week for a woman, but until a person has been insured for 104 weeks and has paid 104 weekly contributions, the rates are 9s. for a man and 7s. 6d. for a woman. The normal rate of disablement benefit is 7s. 6d. a week for men and women alike, but all those rates are subject to reduction if the person is in arrears with his or her contributions. Qualified insured persons may apply to join the panel of any doctor for medical treatment, though the latter has the right to refuse to accept them. The panel chosen is usually in the insured's own district. See Pensions; Unemployment.

HEALTH, MINISTRY OF. British Government Department. The Act establishing it was passed in 1919, and on July 1 of that year the ministry took over the duties formerly performed by the home office and the local government board, and the work of the national health insurance commission, with their staffs; also certain duties with regard to the health of the children from the board of education. Its authority is confined to England and Wales. Its head is a minister, with a salary of £5,000 a year. The offices are in Whitehall, London, S.W. The Scottish Board of Health became the department of health in 1928.

HEALY, TIMOTHY MICHAEL (b. 1855). Irish lawyer and statesman. The son of Maurice Healy of Bantry, he was called to the Irish bar in 1884. He entered the House of Commons in 1880 as Nationalist M.P. for Wexford, and sat for co. Monaghan, 1883-85; S. Londonderry, 1885-86; N. Longford, 1887-92; N. Louth, 1892-1910; and N.E. Cork, 1910-18. He became an anti-Parnellite after the split of 1890, but in 1900 supported reunion under John Redmond. He was made a Q.C. in 1899 and called to the English bar in 1903. He was first governor-general of the Irish Free State, from Dec., 1922, to Dec., 1927. In 1928 he published *Letters and Leaders of My Day*.

Timothy M. Healy, Irish politician
Russell

HEANOR. Urban dist. and market town of Derbyshire. It is 3½ m. N.W. of Ilkeston on the L.M.S. and L.N.E. Rlys. The industries are coal-mining, iron-founding, and the making of hosiery. Market day, Sat. Pop. 21,436.

HEARING. Term used for the physiological sensations caused by vibrations exciting the auditory nerve. Sensations of sound are distinguished by three characters—loudness, pitch, and quality. Loudness depends on the extent of movement of the sound waves. The pitch of a sound depends on the number of vibrations occurring per second. It is possible to detect a sound whose pitch is so low as to be produced by 16 vibrations per second; or so high as to be produced by 30,000. There is reason to believe that some animals can hear sounds of a higher pitch, but the sensory cells along each side of the fish, which correspond with the mammalian ear, are only capable of perceiving vibrations of very low frequency—6 per second. The quality of a sound depends on the manner in which the vibrations succeed one another. If these are irregular a noise is produced, if regular and orderly, a musical note. See Acoustics; Audiometer; Ear.

HEARN, LAFCADIO (1856–1904). Author. Born in Leueadia (Santa Maura), one of the Ionian Islands, he was the son of an Irish Army doctor by a Greek mother. He became a journalist in the U.S.A., but in 1891 went to Japan, where he was professor of English in the university of Tokyo, 1896–1903. He married a Japanese wife and became naturalised as a Japanese subject. Hearn wrote with singular acuteness and charm on the people, manners, customs, and spirit of his adopted country. He died Sept. 23 1904.

HEARST, WILLIAM RANDOLPH (b. 1863). American newspaper proprietor. Born at San Francisco, son of Senator George Hearst, he secured control of The San Francisco Examiner in 1886, and made it a remunerative property. In 1895 he bought The New York Morning Journal, ran it in opposition to The New York World, renamed it The New York American, and became owner of similar "yellow" journals in the leading cities of the U.S.A. in addition to weekly and monthly periodicals.

HEART. In anatomy, the chief organ of the circulatory system of the blood. The human heart is a hollow, muscular organ of roughly conical shape, enclosed in a membranous bag called the pericardium. It is placed obliquely in the chest, lying behind the middle part of the breast-bone between the lungs. It consists of two upper chambers or auricles, and two lower chambers or ventricles. The right side of the heart is completely partitioned off from the left, but each auricle communicates with the ventricle of the same side. Into the right auricle open two great veins, the superior vena cava and the inferior vena cava, which return the blood from the body to the heart. The blood passes from the right auricle into the right ventricle, where is also the opening of the pulmonary artery.

The left auricle receives the four pulmonary veins, conveying the blood from the lungs, and opens into the left ventricle, from which springs the aorta or main blood vessel, through which blood is distributed all over the body. The communicating openings between the blood vessels are guarded by flaps, called valves, which prevent any backward flow of the blood.

Heart. Diagram showing left auricle and left ventricle, and other principal parts of the human heart

The heart goes through a series of contractions and relaxations, producing the familiar heart beat, the contraction being known as systole, the relaxation as diastole. In a healthy adult the heart beats on the average 72 times in a minute.

DISEASES OF THE HEART. The following are the main forms of acquired disease:

Endocarditis, or inflammation of the lining membrane of the heart, usually affecting the valves. The disease is due to infection by a micro-organism. Any valve of the heart may be affected by disease. The valve may not close properly (incompetency), with the result that the blood flows back into the chamber from which it has just passed; or the valve may be permanently narrowed (stenosis), so that the passage of blood from one chamber to another is impeded.

Besides changes in the valves, the muscular wall of the heart may suffer from disease. Acute dilatation of the heart (hypertrophy) may be the result of severe muscular effort, or may occur with valvular disease of the heart. Fatty degeneration of the heart may follow wasting diseases and prolonged fever. Pericarditis, that is, inflammation of the membranous sac surrounding the heart, most commonly occurs after acute rheumatism.

Angina pectoris (q.v.) is a term applied to sudden attacks of agonising pain in the heart. They are relieved by inhaling nitrite of amyl. Functional affections of the heart form an important class of disorder. The symptoms include pain over the heart, shortness of breath, dizziness, and palpitation. See Blood; Cardiograph; Pulse

HEARTH. Word generally used to signify the part of the floor of a room on which the fire is laid. It has come to mean the house itself, in such expressions as "hearth and home." In 1662 a tax of 2s on every hearth was introduced in England. The impost was very oppressive, and was abolished in 1689, although then producing £170,000 a year.

In metallurgy the term hearth is applied to the most elementary forms of furnace used for the extraction of metals, and to the beds of more elaborate structures. See Furnace.

HEART'S CONTENT. Port of Newfoundland, on the E. side of Trinity Bay. Here is the terminus of the cable from Valentia, Irish Free State. Pop. 1,000.

HEARTSEASE OR WILD PANSY (*Viola tricolor*).

Herb of the order Violaceae, native of Britain, N. Europe, N. Africa, and Asia. It differs conspicuously from the violets in the lyrate form of leaf with leafy stipules, and in the sepals having earlike processes. The small flowers are whitish, yellow, and purple, the tints sometimes combined in one flower, sometimes distinct. See Pansy.

HEARTSEED (*Cardiospermum halicacabum*). Climbing herb of the natural order Sapindaceae. A native of the tropics, its leaves are divided into coarsely toothed, lance-shaped leaflets. The small

greenish-white flowers form short sprays. The seed vessel is a bladder-like capsule, and the round seeds bear a heart-shaped scar.

Heartsease, flower and foliage

HEAT. Form of energy produced by the transformation of some other form of energy, e.g. by combustion, friction, or chemical action. When a body is heated its temperature increases, the body expands or increases in volume, and if the heating is carried far enough the body changes its state, e.g. from a solid to a liquid, or from a liquid to a gas. Latent heat is the heat needed to bring about such a change of state. Thus the latent heat of melting ice at 0°C. is 80 calories per gramme melted. Similarly when water is vaporised heat becomes latent, and is reconverted into sensible heat when the vapour is condensed. Heat is transferred by conduction, passing from molecule to molecule through the conducting body; by convection, as when the heated air round an incandescent mass expands and rises, giving place to colder air; and by radiation, or wave motion. Specific heat is the amount of heat needed to raise the temperature of a unit mass of a substance through one degree. The specific heat of an elementary substance bears a more or less constant relation to the atomic weight of the element. See Atom: Energy; Temperature; Thermometer

HEATH (*Erica*). Genus of wiry evergreen shrubs of the order Ericaceae, natives of Europe, Africa, and N. Asia. The slender, rigid leaves are much like small pine-needles, and are disposed mostly in whorls. The four petals are always united to form an egg-shaped, bell-shaped, or tubular corolla. Four species are natives of Britain, including purple heath (*E. cinerea*); the cross-leaved heath (*E. tetralix*); the crimson flowered heath (*E. ciliaris*) of S.W. England; and the Cornish heath (*E. vagans*). Many of the exotic forms are grown in English greenhouses.

HEATHCOAT, JOHN (1783–1861). British inventor. Born at Duffield, Derbyshire, Aug. 7, 1783, he started a business as a lace and net manufacturer in Loughborough, and in 1808 produced his great invention, a machine for making imitation pillow lace. In 1816 his factory at Loughborough was destroyed by the Luddites (q.v.); consequently he moved to Tiverton, where he set up as a lace manufacturer. From 1832–59 he was M.P. for Tiverton, and there he died, Jan 18, 1861.

HEATHER (*Calluna vulgaris*). Gregarious shrub of the order Ericaceae, native of Europe, W. Siberia, Azores, and N. America. The leaves are three-sided and minute, overlapping in four rows; the flowers rosy-purple, the four stiff sepals being much larger than the bell-shaped corolla. The plant covers vast extents of heath and moorland. The wiry stems and branches are useful for thatching, making brooms, and for fuel.

HEATHFIELD. Village of Sussex. It is on the Cuckmere, 15 m. from Tunbridge Wells with a station on the Southern Rly. It once had a cannon foundry.

Heartseed, foliage, flower and seed pod

HEATHFIELD, GEORGE AUGUSTUS ELIOTT, 1st BARON (1717–90). British soldier. Born at Stobs, Roxburghshire, Dec 25, 1717, he

The church of All Saints is mainly a 15th century building. Lord Heathfield took his title from here; he lived at Heathfield House, the old seat of the Deacres, and is buried in the church. From Gibraltar Tower, erected to his memory, there is a fine view of the hamlet of Cade Street adjoins Heathfield. Pop. 3,178

joined the 2nd Life Guards in 1739, served with his regiment in the war of the Austrian Succession and was wounded at Dettingen and Fontenoy. Colonel of the 1st Light Horse in 1759, he distinguished himself in the Seven Years' War under Prince Ferdinand in the campaign of 1759-61. Promoted major-general in 1759, and lieutenant-general in 1765, he was sent in 1775 to command Gibraltar. In 1779 the Spanish opened the siege of the fortress, which Eliott held stubbornly for four years. On his return he was knighted, and in 1787 was raised to the peerage. He died July 6, 1790.

1st Baron Heathfield,
British soldier
After Reynolds

HEATING. In climates subject to low temperatures it is necessary for health and comfort to produce artificial warmth. The open coal-fire is an inefficient means of heating, while the closed coal-stove, standing in the room and connected with the chimney by a pipe, is probably the cheapest and most economical. Oil, gas, and electric stoves are efficient, but comparatively costly to run. The many systems of central heating are superior to any form of isolated heating, and one or other of them is almost invariably adopted for large buildings.

In the hot-water system the water heated in a boiler circulates through pipes and radiators in various parts of the building. In the steam-heating system the radiators are supplied with steam and the water of condensation drains back to the boiler. In the hot-air system the air, after being heated in a casing surrounding the furnace, rises through pipes to registers in different parts of the building, where it may be tempered with cold air admitted to the flue from outside.

HEATON. Common topographic term in the Manchester dist., S.E. Lancs. Heaton Norris, Heaton Mersey, Heaton Chapel, Heaton Moor all lie S.E. of Manchester near the Mersey, and are interested in the cotton industry. Heaton Norris (pop. 10,846) is separated from Stockport by the Mersey.

Heaton Park, in the urban dist. of Prestwich, formerly the seat of the earls of Wilton, was bought by the Manchester corporation in 1902, and the mansion houses collections of pictures and Oriental arms and armour.

HEATON, SIR JOHN HENNIKER (1848-1914). British postal reformer. Born at Rochester, he was Conservative M.P. for

Sir J. Henniker
Heaton, postal
reformer
Elliott & Fry

Canterbury in 1885-1910, and was created a baronet in 1912. He had large interests in Australia and, though never holding an official position in the government, he accomplished, as a private member, universal penny postage for letters within the British Empire, 1898, penny postage between the U.S.A. and the United Kingdom, 1908, money orders by telegraph in Great Britain, and a parcel post to France. He died Sept. 8, 1914.

HEAVEN. In Christian theology, the dwelling-place of God, the abode of the ascended Christ and the final home of the righteous. Belief in a future life is found in most primitive religions. It assumes various forms, some of which are inconsistent with the idea of a happy state after death. Both Hinduism and Buddhism have evolved complex doctrines of the hereafter. According to the Buddhist theology the state of final

blessedness consists in Nirvana, which involves the loss of individual existence. The highest heaven is a condition in which desire and pleasure have no place. The Koran teaches the resurrection of the body and represents the beatitude of the faithful as consisting of enjoyments of a sensual character. See Immortality.

HEAVISIDE LAYER. Ionised region of the upper atmosphere having a high degree of electrical conductivity. It is believed to exist at a height of about 60 miles above the earth. The layer is named after Dr. Oliver Heaviside, who suggested its existence in 1901. Wireless waves sent out by a transmitter may take a direct course over the earth's surface, or may strike the Heaviside layer and be deflected at an angle, reaching the earth again at some distant point. The reflecting power of the layer is much greater during the hours of darkness. Short-length waves travelling over the ground are soon absorbed and dissipated, and thus have a relatively short range, but if they are inclined upwards the waves are deflected by the Heaviside layer and reach a distant station with comparatively little loss of strength.

In broadcasting the effects of the Heaviside layer are apparent in the increased range of a receiver during the hours of darkness, both ground waves and deflected waves then reaching the receiver. During daylight hours it is chiefly the groundwaves which are received. See Wireless Telegraphy.

HEBBURN. Urban dist. and town of Durham. It stands on the Tyne, and is virtually a suburb of Jarrow. Shipbuilding, engineering, and chemical, rope, and sail manufactures are the chief industries. Pop. 25,000.

HEBDEN BRIDGE. Urban dist. and town of Yorkshire (W.R.). It stands on the Hebdon and Calder rivers, 8 m. W.N.W. of Halifax, on the L.M.S. Rly. The manufactures consist of cotton, silk, and fustians, and there are dye-works. Pop. 6,459.

HEBDOMADAL. Derived from the Greek word for seven, the name is given to a council in the university of Oxford, first appointed in 1631.

HÉBÉ (Gr. youth). In Greek mythology the goddess of youth. She was the daughter of Zeus and Hera, and was given in marriage to Heracles when he became a god. She was the cup-bearer of the gods before Ganymede. Her Roman counterpart was Juventas.

Hēbé, goddess of youth:
statue by Thorwaldsen
Thorwaldsen Museum,
Copenhagen

HEBER, REGINALD (1783-1826). British prelate and hymn-writer. He was born April 21, 1783, at Malpas, Cheshire. From 1804 until 1807 he was a fellow of All Souls, Oxford, and then became incumbent of Hodnot, Shropshire. He was Bampton lecturer, 1815; preacher at Lincoln's Inn, 1822; and second bishop of Calcutta 1822-26. He died April 3, 1826. He was the author of a number of hymns, including Holy, Holy, Holy, Lord God Almighty, and From Greenland's icy Mountains.

Reginald Heber,
British prelate
After T. Phillips

His half-brother, Richard Heber, born at Westminster, Jan. 5, 1773, was M.P. for Oxford University, 1821-26, and was one of the founders of the Athenaeum Club. He died Oct. 4, 1833. Scholar and book collector, he amassed more than 146,000 volumes, many of which he annotated.

HEBREW. The Hebrew language, belonging to the Middle Semitic or Canaanitic branch of the Semitic language, is closely related to Arabic, Aramaic, and Babylonian. Its characteristics include: two genders: three consonant roots and a comparative scarcity of adjectives. Originally consisting only of consonants, a system of vowel sounds, now in common use, was introduced by the Masoretes in the 7th century.

Hebrew is the original language of most of the O.T., outside which few examples of old Hebrew literature have survived. There is remarkably little variation between the earlier and later writings when it is considered that they cover nearly a thousand years. Differences of vocabulary, however, point to two periods in the language, probably divided by the return from the Exile.

Revivals of Hebrew letters include that which began in Italy in the 18th century, and is associated with the poet M. H. Luzzatto. This movement spread to Germany and later to Galicia. By the middle of the 19th century Russia took the lead, producing such writers as Abraham Mapu (1808-67), a creator of the Hebrew novel, Peretz Ben Moshe Smolenskin (1839-84), the essayist and novelist, and Constantine A. Shapiro (1840-1900), the poet. To more recent times belong poets like H. N. Bialik, Saul Tschernihovsky, Jacob Cohen, and Z. Schner.

The Hebrew religion, founded by Moses, claims exceptional consideration as the parent of two other great and world-wide monotheistic faiths, Mahomedanism and Christianity. Its wonderful development was carried on by a series of great men—among whom the patriarch Abraham is outstanding—who suddenly appeared as leaders and prophets. Regarded as the spiritual father of Israel, Abraham's migration from Mesopotamia (Ur of the Chaldees) to Palestine was due essentially to a religious impulse: it was a protest against degeneration in the Babylonian moon-worship. See Alphabet.

HEBREWS, EPISTLE TO THE. One of the canonical books of the N.T. In the English versions it bears the title The Epistle of Paul the Apostle to the Hebrews, but can hardly have been written by S. Paul, since it differs radically in language, style, and thought from the other Pauline writings. The use made of the O.T. by the writer suggests that his purpose was to save his readers from a relapse into Judaism. It would seem to have been written towards the end of the 1st century A.D.

The Gospel according to the Hebrews is one of the more important of the N.T. Apocrypha, which has survived only in fragments found in the writings of the fathers of the Church. It seems to have been written originally in Aramaic, and to have been intended for the Jewish Christian congregations of Palestine.

HEBRIDES. Group of islands off the W. coast of Scotland. Usually divided into the Inner and Outer Hebrides, the two groups are separated from each other by the Little Minch. The Inner Hebrides include Skye, Mull, Islay, and Jura. The Outer Hebrides, known as gneiss islands, include Lewis, with Harris, N. and S. Uist, Benbecula, and Barra. St. Kilda lies 40 m. west of N. Uist; the Flannan Islands are an isolated group W. of Harris.

The islands number over 600, but only about 100 are inhabited. They fall within the counties of Ross and Cromarty, Inverness and Argyll. In most parts the soil is sparse. Sheep-rearing and fishing are the staple industries. Stornaway, on Lewis, is a herring centre;

whisky is distilled in Skye, Mull, and Islay; tweeds are made in Harris; and slate is quarried in some of the smaller islands. In 1918 Lord Leverhulme (q.v.) purchased the island of Lewis with part of Harris to develop the fishing and weaving industries. The total area is about 2,800 sq. m.; pop. 80,000.

HEBRON (anc. Kirjath-Arba; Arab. El Khalil). Town of Palestine. It stands in the valley of Mamre, and partly on the slopes of two low hills, 16 m. S.S.W. of Jerusalem. A sacred city, it is one of the oldest in Palestine. It was the abode of Abraham, Isaac, and Jacob, besides other patriarchs, and its old walled mosque of Machpelah, opened to the public in 1928, is supposed to cover the tomb of Abraham. When Moses sent spies to view the Promised Land, they went to Hebron. Joshua gave it to Calch, and it was afterwards made a city of refuge. Here David was anointed king, and he chose it for his first capital.

In 1187 Hebron fell into the hands of the Saracens, and it remained in Mahomedan hands until the end of the Great War. It was occupied by the British under Allenby, Dec. 7, 1917, in the campaign in Palestine. Pop. 16,577.

HECATE. In Greek mythology, the goddess of night, the moon, child-birth, and of magic. In art she is represented in triple form, probably symbolic of her different spheres. Pron. Hek-a-tec.

HECKMONDWIKE. Urban district and market town of Yorkshire (W.R.). It is 8 m. S. by E. of Bradford on the L.M.S. Rly. Blankets, rugs, and carpets are manufactured, and there are iron foundries, machine shops, and dye works. In the neighbourhood are collieries. Market day, Tues. Pop. 9,031.

HECTARE (Gr. hekaton, hundred; Lat. area, area). Superficial or land measure of the French metric system. It is equal to 100 ares, or 10,000 sq. metres, being thus equal to 2.471 English acres.

ECTOGRAPH. Device for making a number of copies of a document, etc. It consists of a slab of gelatin material. The original document is prepared with a special aniline ink, and firmly pressed for a time on the gelatin, which absorbs the ink. From this a large number of duplicates may be obtained.

HECTOR. In Greek legend, son of Priam, king of Troy, and Hecuba, and husband of Andromachē. He was the chief champion of the Trojans during the war with the Greeks. He met his death at the hands of Achilles, to whose chariot his body was tied, and dragged off to the Greek camp. At the personal entreaty of the aged Priam, Achilles gave back the body for burial. See Andromachē; Iliad; Troy.

Hector, the Trojan champion, as sculptured by Canova

HECUBA (Gr. Hekabē). Wife of Priam, king of Troy, by whom she was the mother of Hector, Paris, Cassandra, and many other children. At the taking of Troy she was carried away captive by the Greeks to the Thracian Chersonese. Eventually she was metamorphosed into a dog, and threw herself into the sea. The events of her later life are the subject of Euripides' tragedy Hecuba.

HEDGE. Live fence in a garden or between fields. The best quick-growing plants for hedges are privet, whitethorn, laurel,

myrobella plum, and euonymus. All these should be planted in the autumn in country gardens; in the spring in towns or suburban areas. The most handsome permanent hedges are formed by box, yew, or holly, but all these are of slow growth.

HEDGEHOG (Erinaceus europaeus). Common British mammal, belonging to a genus with many species in various parts of the world. It is about 10 ins. long, and has a short tail of about 1½ in., a snout somewhat like that of a pig, and short limbs. Hedgehogs have the power of rolling themselves into a ball with the head and limbs tucked in so that nothing but their defensive armour of sharp spines is presented to an enemy. They are nocturnal in habit, and feed on insects, snakes, worms, snails, and birds' eggs, varied occasionally by small birds and mammals, together with fruit and roots.

HEDGEHOG MUSHROOM (Hydnum). Genus of fungi of the natural order Hymenomycetaceae. They are characterised by the spore-bearing surface taking the form of fleshy, awl-shaped spines instead of the plate-like gills of the common mushroom. Several species are among the best of the edible fungi, notably H. repandum, which grows in woods, sometimes forming rings or a segment of a circle. Another good esculent is H. imbricatum, with rough scaly top of a warm brown colour.

HEDGE MUSTARD (Sisymbrium officinale). Annual herb of the natural order Cruciferae. It is a native of Europe, W Asia, and N. Africa. The leaves are deeply cut into lance-shaped lobes; the flowers are pale yellow and minute, in a spray. Another species is the Garlic mustard (S. alliaria) with kidney-shaped lower leaves, and larger, white flowers, with a strong odour of garlic when bruised.

Hedge Mustard. Flowers and lobed leaves

HEDIN, SVEN ANDERS (b. 1865). Swedish explorer. Born at Stockholm, Feb. 19, 1865, from 1885 he made many adventurous journeys in Asia, including three in Tibet, during which he attempted to enter Lhasa. In the last of these Tibetan explorations, in 1906, his two years' stay enabled him to construct the first detailed map of that district. His works include Adventures in Tibet, 1904; Trans-Himalaya, 1909; The War Against Russia, 1915; My Life as an Explorer, 1925; The Gobi Desert, 1929.

Hednesford. Colliery centre of Staffordshire, 10 m. N. of Walsall. Pop. 5,768.

HEDON. Borough of Yorkshire (E.R.). It stands near the Humber, 5 m. from Hull, and has a station on the L.N.E. Rly. Before the foundation of the port of Hull it was a flourishing port. It has a notable cruciform church, S. Augustine's. Hedon received a charter from Henry II. There is an aerodrome. Pop. 1,321.

HEDONISM (Gr. hēdonē, pleasure). View of life which regards pleasure (bodily or mental) as the greatest good. It was the chief doctrine of the Cyrenaics, and to a certain extent of the Epicureans. A refined form of hedonism, represented by Bentham, James and John

Stuart Mill, Herbert Spencer, and others, has been associated with the doctrine of utilitarianism, which, while upholding the hedonistic theory, sought the greatest happiness of the greatest number. See Utilitarianism.

Hedgehog. Specimen of the common British variety

both in variety of his still-life subjects and in technical equipment. Examples of his work are to be found in many German galleries and at the Louvre, Amsterdam, and The Hague, and the Wallace Collection has two.

His son was Cornelis de Heem (1631-95), who also carried on the style of his family in painting, working at Antwerp and The Hague.

HEGEL, GEORG WILHELM FRIEDRICH (1770-1831). German philosopher. Born at Stuttgart, Aug. 27, 1770, he was appointed in 1801 to a professorship at Jena, which he was obliged to relinquish owing to the political upheaval. In 1808 he became rector of the academy at Nuremberg, in 1816 professor of philosophy at Heidelberg, and succeeded Fichte at Berlin in 1818, where he died Nov. 4, 1831.

The style of Hegel's writings is extremely involved and obscure. His system is divided into three parts: logic, the science of the pure ideas, of universal notions; the philosophy of nature, the development of the real world; the philosophy of spirit (mind), the development of the ideal world, the concrete spirit that attains actuality in ethics, politics, art, religion, and science.

HEGESIAS. Greek philosopher. Belonging to the Cyrenaic school, he flourished in Alexandria about 320-280 B.C. He regarded the attainment of positive enjoyment as impossible, and declared that death was preferable. According to him, the prevention of pain and indifference to externalities were the objects the wise man should set before him.

Another Hegesias was a sophist and rhetorician, a native of Magnesia at the foot of Mt. Sipylus in Asia Minor. He is considered the originator of the Asiatic or florid school of oratory.

HEIDELBERG. Town of Baden, Germany. On the Neckar, 12 m. from its junction with the Rhine, it is an important rly. centre, and has manufactures of surgical and other scientific instruments, and cigars. A cable

rly. runs from the corn market to the castle. The university, founded in 1386 by the elector Rupert, became a stronghold of Protestantism. The present buildings date from 1712. Heidelberg's most interesting building is the castle.

G. W. F. Hegel, German philosopher: From a print

Heidelberg. The 13th century castle on a hill above the town

begun in the 13th century. The chief portions are the 16th century Otto Heinrichsbau, richly decorated with sculptures, and the 17th century Friedrichsbau, restored 1897-1903. The great tun of Heidelberg, holding 47,000 gallons, is in the cellars. Pop. 74,892.

The Heidelberg Catechism is a summary of the reformed evangelical faith, published at Heidelberg, 1563. It was approved by the Synod of Dort in 1619, and has been translated into many languages.

The Heidelberg jaw is the name of a fossil mandible of primitive man found in a sand-pit at Mauer, near Heidelberg, in 1907. See Anthropology: Ethnology; Man; and illus. p. 98.

HEILUNG KIANG. Province of China. It is one of the three provinces of Manchuria, and is traversed by the Chinese Eastern Rly. The area is 167,000 sq. m., and the capital Tsitsihar. The Amur river is sometimes called the Heilung Kiang. See Amur.

HEINE, HEINRICH (1797-1856). German poet. Born at Düsseldorf, Dec. 13, 1797, of a poor Jewish family, he studied law at the universities of Bonn,

Heinrich Heine.
German poet
After F. Eugler

Göttingen and Berlin. In 1822 he published a collection of Poems, followed in 1823 by Tragedies, which, although they contained some of the most familiar poems later incorporated in his Book of Songs, were appreciated by only a few. In 1825, he became a convert to Christianity. Owing to the great success of his two

volumes of *Pictures of Travel*; *The Journey in the Harz Mountains*, 1826; *The North Sea*; *Buch Le Grand*, 1827, he decided to devote himself to literature; and with the appearance of *The Book of Songs* in 1827 he became the most popular German poet of his day.

Like all young men of letters of the time, Heine was stirred by the revolution of 1830, and in 1831, disappointed and embittered by the treatment meted out to him at home, he settled in Paris, which remained his home for the rest of his life. There he did some journalistic work and wrote the four volumes entitled *The Salon*. In 1844 he published two volumes of *New Poems*, and a satiric epic, *Germany, a Winter Tale*. These were followed in 1847 by *Atta Troll*, generally recognized as his finest sustained poem, and in 1851 by the collection of poems entitled *Romanzero*. But in 1845 Heine fell a victim to creeping paralysis, and he died in Paris, Feb. 17, 1856.

HEIR. One who has the right of succession to an estate. Before the changes made in the Law of Property Acts of 1925 there was to most landed estates an heir at law, usually the eldest son, who succeeded to it. This relic of primogeniture is now abolished, and the succession to landed estates, if not settled by will, passes to the relatives according to the rules governing the property of intestates. The word heir is still used, however, in a general way for one who will succeed.

In English law an heirloom is something, a picture or piece of silver, for instance, that goes with a settled estate. See Intestacy.

HEJAZ or **HEDJAZ**. Formerly a Turkish vilayet, now a component part of the Arab kingdom of Hejaz and Nejd. It lies to a depth of some 200 m. along the E. coast of the Red Sea for about 800 m. N. of Asir. It contains the holy cities of Mecca and Medina, its principal source of wealth being the annual pilgrimage to Mecca. Jidda (Jedda), the port of Mecca, is the chief port. Yenbo is the port of Medina. The Hejaz rly. runs from Medina to Damascus and Beirut. The area of the united state is about 112,500 sq. m. Pop. between 350,000 and 400,000.

In 1916 the grand sherif of Mecca proclaimed his independence of Turkish rule, and was formally recognized by the Allies as Hussein, King of the Hejaz. An army was organized, which fought against the Turks and proved of great assistance to Allenby in his campaign in Palestine. In 1924, following an unsuccessful war with Ibn Saud, sultan of Nejd, Hussein abdicated in favour of his son. The latter was forced to abdicate in 1925, when the ruler of Nejd captured Mecca and proclaimed himself king. In 1927 Great Britain recognized the independence of Ibn Saud and the united state of Hejaz and Nejd. See Arabia; Hussein; Nejd.

HEJIRA or **HEGIRA** (Arab. hijra). Word meaning flight applied specially to the flight of Mahomet from Mecca to Medina in A.D. 622, from which event the Mahomedan era is reckoned. The Mahomedan era was inaugurated by the caliph Omar in 639, and is reckoned from July 16—the first day of the first month of the year in which the flight took place. Dates of the Mahomedan era are indicated by the letters A.H. (anno hegirae, in the year of the flight).

HEKLA or **HECLA**. Volcano of Iceland. In the S. of the island, about 20 m. from the coast and 70 m. E. of Reykjavik, it is 5,109 ft. high, and has one large crater, 1½ m. in circumference, and several subsidiary ones. It has been active frequently.

Hecla. The great active volcano of Iceland, which is over 5,000 feet high.

HEL. In Norse mythology, daughter of Loki. She is described in the Prose Edda as purely evil, care being her god, hunger her dish, and starvation her knife. In other myths she was the guardian of the plains under the earth peopled by the happy dead, as well as of the caves of punishment.

HELDER. Seaport of the Netherlands, in the prov. of N. Holland. It stands at the northern extremity of the prov. and is separated from the island of Texel by the Mars Diep, a channel 2 m. in width. It owes its importance to its position at the entrance to the Zuyder Zee. About a mile E. of the town is the harbour of Nicuwe Diep, where are docks and shipyards and a naval cadet school. Pop. 29,192.

HELEN (Gr. Helenē). In Greek legend the woman of surpassing beauty whose seizure by Paris was the cause of the Trojan War. According to the earlier stories she was the daughter of Tyndareus and Leda, Castor and Pollux being her brothers. In a later version, Leda was visited by Zeus in the form of a swan, and gave birth to an egg, from which Helen, Castor and Pollux came forth. Helen became the wife of Menelaus, king of Sparta, and when Paris, son of Priam, king of Troy, came there on a visit, Aphrodite, in fulfilment of a promise to give Paris the most beautiful woman in the world, caused her to fall in love with the handsome visitor. After the capture of Troy Helen returned to Sparta with her husband, though, according to some legends, they sojourned for eight years in Egypt before reaching home.

HELENA, FLAVIA JULIA (d. 328). Wife of the Roman emperor Constantius Chlorus and mother of Constantine the Great. She was born of humble origin in Nicomedia, and

became famous for her devotion to Christianity. In her old age she made a pilgrimage to Jerusalem, and, according to a legend which first appears at the end of the 4th century, she discovered there the sepulchre of Our Lord and the wood of the Cross.

HELENSBURGH. Burgh and watering place of Dumbartonshire. On the N. bank of the Firth of Clyde, 4 m. N. of Greenock and 24 m. N.W. of Glasgow on the L.N.E. Rly., it was founded in 1777 by Sir James Colquhoun, after whose wife it was named. There is a monument to Henry Bell, a pioneer of steam navigation, who died here. The grounds of the Hermitage have been laid out for public use.

HELICON (mod Zagará). Mt. in S.W. Boeotia, ancient Greece. Its beautiful scenery caused it to be regarded as the home of the Muses, to whom there was a temple and in whose honour games were celebrated. The well of Aganippē at its foot, and the fountain of Hippocrēnē were also sacred to them.

HELICOPTER (Gr. helix, spiral; pteron, wing). Name for a type of flying machine which can raise itself vertically by means of horizontally revolving propellers or air-screws. Many attempts have been made to construct such a machine, but without success. In 1921 Oehmichen tested a helicopter in France which lifted 584 lb with a 25-h.p. engine. No attempt was made, however, to provide a method for balancing or moving forwards.

In a type of flying machine invented by Señor de la Cierva in 1920-23, and called by him the autogiro, a rotor or windmill revolving freely on a vertical axis at the centre of gravity of the aircraft is substituted for the supporting planes of the conventional aeroplane. Unlike the lifting air-screw of the helicopter, however, the rotor of the autogiro is not driven by mechanical power, but turns with the air pressure set up on its vanes when the aircraft is driven forward by the traction air-screw. The rotor has usually four blades, which are linked to the vertical shaft.

An initial impulse must be given to the rotor to cause it to revolve at the minimum speed necessary for support and flight. This is done by deflecting the slip stream from the traction air-screw on to the rotor blades while the aircraft is kept at a standstill. In this way the machine can take off with quite a short run. In making a landing the autogiro glides down to within a short distance from the ground and then drops vertically. If necessary an almost vertical descent may be made from a height, the rotor turning as the aircraft slowly comes to the ground, and in this way acting as a parachute. See Aeronautics; Aeroplane; Autogiro; Flight.

Autogiro light two-seater biplane, a machine which embodies features of the helicopter. See text.
Courtesy of The Cierva Autogiro Co.

HELIGOLAND or **HELGOLAND**. Island in the North Sea, belonging to Germany. It is about 44 m. from the mouths of the Weser and Elbe. Its circumference is about 3 m., having been steadily reduced by erosion. Its cliffs rise sheer from the ocean on all sides but the S.E., where there is a flat bank of sand. It is ½ sq. m. in area, and at one time was peopled mainly by Frisian fisher-folk and pilots.

Heligoland was taken from Denmark by Britain in 1807. Ceded by Britain to Germany

in 1890 in exchange for certain rights on the E. coast of Africa, it was strongly fortified by Germany, who by the peace treaty (1919) was compelled to dismantle the whole fortress.

Heligoland, as it appeared when the Great War was at its height; this war harbour, which was practically impregnable, full of war vessels

BATTLE OF HELIGOLAND. This battle was a naval engagement between the British and the Germans, Aug. 28, 1914. Acting on information received from their submarines as to enemy movements in the light of Heligoland, the British decided to carry out a sweep. The Germans were completely surprised, and their 1st flotilla of destroyers was broken up by Tyrwhitt's light cruisers *Arctusa* and *Fearless* and 33 destroyers and Keyes's submarines.

Later the battle cruisers *Lion*, *Queen Mary*, *Invincible*, and others opened fire on the *Mainz*, leaving her helpless and sinking. The German *Cöln* was shelled till she burst into flames and was later sunk. From the *Mainz* the British rescued 350 men. The result of the battle was the loss by the Germans of 3 light cruisers and 1 destroyer, with 712 killed, 140 wounded, and 379 captured. The British casualties were 31 killed and 52 wounded.

HELIOGRAPH. Instrument consisting of a mirror capable of revolution, and so of reflecting the rays of the sun or of some artificial source of light over considerable distances. It is used principally for military signalling, especially in mountainous districts, and its messages are conveyed by long and short flashes in the Morse code. It was used in the S. African war.

Heliograph. Cavalry type with 3-inch mirrors
Courtesy of J. H. Steward

HELIOPOLIS (City of the Sun). Town of ancient Egypt, the chief seat of religious learning, formerly containing a famous university for the education of the priests. Called On in the Bible (Gen. 41, 45), it was known to the Egyptians as Annu. Portions of the great temple of the sun remain. Cleopatra's needles formerly stood here. Near is New Cairo, a residential suburb, connected with Cairo by electric railway.

HELIOS. In Greek mythology, god of the sun, identified in later times with Apollo, and sometimes called Hyperion. He crossed the sky day by day from east to west in a chariot drawn by four horses. See Apollo.

HELIOSTAT. Mirror mounted on an axis parallel to the axis of the earth and moved by clockwork so that it rotates with the same angular velocity as the sun, the image of which it reflects. In short, it follows the sun, and in consequence the rays of the sun when

reflected from it pass always in a fixed direction. See Spectroscopy

HELIOTROPE (*Heliotropium peruvianum*). Perennial plant with shrubby stem, of the order Boraginaceae a native of Peru. It has broad lance-shaped, wrinkled, and hairy leaves and clusters of lilac or dark-blue salver-shaped flowers which are pleasantly scented, whence its name of cherry pie. Heliotropin is a white crystalline substance with the odour of heliotrope, used as a perfume for soaps and toilet preparations. Chemically it is the methylene ether of pyrocatechinic aldehyde, and is also known as piperonal. Heliotropin is used in medicine.

HELIUM. Inert colourless gas of the argon family. It was first detected in 1868 by Lockyer in the spectrum of the sun's chromosphere during an eclipse. It is an element, with the symbol He, atomic weight 2, and atomic number 4. Helium is found in many minerals, chiefly those which contain uranium. It exists in the atmosphere to the extent of four parts in a million, and is contained in several natural gas supplies, also in many mineral springs. The density of helium is 1.98, and next to hydrogen it is the lightest gas known. As it is not inflammable, helium is used as the lifting gas in airships. See Atom: Gas; Radium.

HELL. In modern English, place or condition of punishment for impenitent sinners after death or after the final judgement. In the Authorised Version of the Bible it had the wider meaning of the place of the departed. The R.V. has distinguished between Hell and Hades. It should be noticed that the clause in the Apostles' Creed, "He descended into Hell," should be "He descended into Hades."

The Roman Catholic Church still holds to the doctrine of Hell developed by the medieval church which was greatly influenced by Augustine. According to this even unbaptized infants and virtuous pagans are in Hell. The severity of this view is, however, greatly mitigated by the belief that there are different regions in Hell, that of limbo, which is assigned to unbaptized infants, not being a place of torment.

HELLAS. Originally a small district of Thessaly inhabited by Hellenes, the supposed descendants of the legendary king Hellen, son of Deucalion. The name afterwards came to be applied by the Greeks to all places inhabited by those of their race. See Greece.

HELLEBORE (*Helleborus*). Genus of perennial herbs of the order Ranunculaceae, natives of Europe and N. and W. Asia. They have large leaves deeply cut into lobes which are arranged finger-fashion. The showy parts of the flowers are the sepals which are coloured, whilst the petals are converted into small nectar-tubes. Owing to their cathartic and narcotic properties they were formerly used in medicine. *Helleborus niger* is the so-called Christmas Rose (q.v.); *H. foetidus*, stinking hellebore or setterwort; and *H. viridis*, the bear's-foot.

Hellebore. Flowers and leaves of *H. foetidus*

formerly used in medicine. *Helleborus niger* is the so-called Christmas Rose (q.v.); *H. foetidus*, stinking hellebore or setterwort; and *H. viridis*, the bear's-foot.

HELLENISM. Term applied to the school of culture which sought models of

artistic expression in the art of ancient Greece. Its chief characteristics in the best period of its development, both in art proper and in literature, were restraint and a sense of proportion and harmony. See Greece; Greek Art.

Heliotrope. Flower clusters of the sweet-scented herb

HELLESPONT (mod. Dardanelles) In ancient geography, strait separating the Thracian Chersonese from Asia. It was supposed to have derived its Greek name *Helle-spontos* (sea of Helle) from Helle, daughter of Athamas, who in her flight from her step-mother, Ino, on the ram with the golden fleece, fell into the sea and was drowned. See Dardanelles; Leander

Helmet. 1. Ancient Greek helmet. 2. Roman gladiator's helmet. 3. Norman helmet, 11th cent. 4. Heaume and crest of the Black Prince, 14th cent. 5. Visored bascinet, and camail, French c. 1400. 6. Salade, German, second half of 15th cent. 7. Tilting heaume, German, c. 1485. 8. Comb morion, English, 16th cent. 9. Helmet of trooper of Lie Guards, 1815. 10. Modern British helmet

HELMET. Defence for the head in fighting. Helmets were worn by fighting men from very early times, and we know something about the kind of helmet worn by the Egyptians, Assyrians, Greeks and Romans. They were part of the armour of the knights.

In the 18th century a helmet based somewhat on the Greek form was adopted for heavy cavalry by most European armies, and this in turn gave place to the helmets of the dragoons and household cavalry worn only for ceremonial parade. The modern shrapnel helmet is based upon the 15th-century chapel de fer. Anti-gas helmets were used in the Great War.

HERALDIC HELMETS. In early art the helmet was represented as large as compared with the shield, and was placed indifferently full face or in profile. Modern practice enjoins that the sovereign and princes of the blood should have a helm of gold, with seven-barred

visor (grillos) placed full face, or affrontée. Various other types of helmets are used to denote lesser degrees of rank. See Armour; Casque; Heraldry; also illus. p. 642.

HELMHOLTZ, HERMAN LUDWIG FERDINAND VON (1821-94). German scientist. Born at Potsdam. Aug. 31, 1821, Helmholtz was a descendant of William Penn. He made a study of medicine, and from 1843-47 served as a surgeon in the Prussian army. He held the chair of physiology at Königsberg, Bonn, and Heidelberg universities, 1849-71, and in 1871 became professor of physics at the university of Berlin. His most important post was that

H. von Helmholtz,
German physicist

of director of the Physico-technical Institution of Charlottenburg, to which he was appointed in 1887. Helmholtz was responsible for many advances in the study of the eye and the nervous system. The invention of the ophthalmoscope is due to him. In 1856-66 was published his work *Physiological Optics*, one of the greatest advances in the theory of vision, etc., of the 19th century. His work on hearing, entitled *Sensations of Tone*, published in 1863, holds a like position in acoustics. He died at Charlottenburg Sept. 8, 1894.

Héloïse (c. 1101-64). French abbess, famous for her relations with Abélard (q.v.).

HELOT (Gr. *heilōtes*). Lowest section of the community in Sparta. Their position was analogous to that of the medieval villein in England and of the Russian serf before his emancipation, though they belonged to the state, and not to any individuals, and could not be removed from the land. The ruling class of Spartans employed them to cultivate their farms, and they had to hand over a fixed quantity of the produce of the farm each year, being allowed to keep any surplus. In time of war they served as light-armed infantry, and sometimes as oarsmen.

HELPS, SIR ARTHUR (1813-75). British essayist. Born at Streatham, July 10, 1813, and educated at Eton and Trinity College, Cambridge, in 1860 he became clerk to the privy council, a post which he held until his death. In this capacity he came much into contact with Queen Victoria, and at her request edited *Prince Albert's Speeches and Addresses*, and *Leaves from a Journal of Our Life in the Highlands*. His original works are numerous and included the popular *Friends in Council*. He was knighted in 1872, and died in London, March 7, 1875.

HELSINGFORS (Finnish Helsinki). Capital of Finland. It stands on the Gulf of Finland, 250 m. by rly. W. of Leningrad. Besides being an educational, scientific and industrial centre, it is an important commercial city and port. The university, founded at Åbo (Abo) in 1640, was moved to the capital in 1827 when Åbo was burned down. The port consists of three harbours and a roadstead with a good anchorage. Pop. 220,004. See Finland.

HELSTON. Borough and market town of Cornwall. It stands on the Cober, 10 m. W.S.W. of Falmouth on the G.W. Rly. and is noted for the annual celebration on May 8 of a festival known as the Furry or Flora Dance.

Helsingfors, Lutheran church
of S. Nicholas

It was one of the stannary towns, and tin and copper were extensively worked. Near is Looe Pool, into which legend says the sword Excalibur was thrown. Market day, Mon. Pop. 2,930. See Flora Day.

HELVETIY. N. Mountain of the Lake District. It is on the borders of Cumberland and Westmorland overlooking Ullswater. Its height is 3,118 ft. See Lake District.

HELVETIA. Old name for Switzerland. It comes from the Helvetii, a tribe who lived there about 200 B.C. In 58 B.C. they invaded Gaul, but were defeated by Julius Caesar. The name Helvetic Republic was given to the republic set up in Switzerland by the French Directory in 1793. Its capital was Lucerne, but it only lasted until 1803. See Switzerland.

HEMANS, FELICIA DOROTHEA (1793-1835). English poet. Born at Liverpool, Sept. 25, 1793, she was the daughter of George Browne, a merchant. In 1812 she married Captain Alfred Hemans, but they separated four years later. As a child Mrs. Hemans had shown much precocity, and a volume of her poems was published when she was 14. Her chief works are *The Siege of Valencia*, 1823, an unacted play; *Lays of Many Lands*, 1825; *The Forest Sanctuary*, 1825; her own favourite *Songs of the Affections*, 1830; *Hymns for Childhood*, 1834. She died May 16, 1835.

HEMEL HEMPSTEAD. Borough and mkt. town of Hertfordshire. The old town is on the river Gade, 24 m. N.W. of London, and near the Grand Union Canal, with a station on the L.M.S. Rly. In the High Street are fine houses and some old inns. Gadebridge Park is on the west. The name is also given to a rural district. The ancient church of S. Mary, partly rebuilt in 1846 and restored in 1863, has 14th and 15th century roofing and interesting monuments. Market day, Thurs. Pop. 13,832.

HEMIMORPHITE. Important ore of zinc, containing over 50 p.c. of the metal. A hydrous zinc silicate, it is remarkable for its form of crystallisation and for the electric character of the crystals with variation of temperature. The crystals are colourless or slightly yellow, blue, red, brown, or green. It is found with other zinc ores in Carinthia and Westphalia, and in parts of England and the U.S.A. See Zinc.

HEMIPTERA. Order of insects, including bugs, plant lice, water scorpions, lice, and others. There is a beak for piercing or sucking. There are generally four wings, the fore ones being horny. See Bug; Insect.

HEMLOCK (*Conium maculatum*). Biennial herb of the order Umbelliferae. A native of Europe, N. Africa, N. and W. Asia, it has a stout, furrowed stem, spotted with purple, and is 2 ft. to 4 ft. high. The leaves are wedge-shaped, finely divided, fern-like; flowers small, white, in compound umbels. All parts of the plant, but especially the fruits, contain an oily, poisonous fluid, the active principle of which is an alkaloid, coniine. Poisoning by hemlock was the usual death for condemned criminals among the ancient Greeks, and Socrates died in this way.

HEMLOCK SPRUCE (*Tsuga canadensis*). This is an evergreen timber tree of the order Coniferae. A native of N.E. America, it attains a height of 60 ft. to 80 ft. It is a timber tree and the bark is used for tanning.

HEMP. Commercially, a general name for textile fibres produced by a number of unrelated plants. African bow-string hemp is

yielded by *Sansevieria guineensis*; Indian bow-string hemp by *Calotropis gigantea*; Bengal, Bombay, Madras, Brown, and Sunn hems by *Crotalaria juncea*; Jubbulpore

Hemp, or Cannabis
sativa

hemp by *Crotalaria tenuifolia*; Indian hemp by *Apocynum cannabinum*; brown Indian hemp by *Hibiscus cannabinus*; Manila hemp by *Musa textilis*; and sisal hemp by *Agave sisalana*. True hemp (*Cannabis sativa*) is cultivated for its fibre in most European countries. The fibre is used in the production of strong ropes and twines, and woven into wear-resisting wrappers, conveyer belts, sail-cloth, and fire-hose. Hemp is used as a drug or intoxicant under the names of bhang, ganja, and charas. Hashish is the Arabic name given to a preparation of the leaves.

HEMP AGRIMONY OR BLACK ELDER (*Eupatorium cannabinum*). Perennial herb of the order Compositae, a native of Europe, N. Africa, and N. and W. Asia. It has a branching stem about 4 ft. high, and the leaves are divided into three or five lance-shaped toothed leaflets. It is one of the simplest of the composite flowers, each head consisting of five or six pale purple tubular florets, but the heads are gathered into large clusters.

Hemp Agrimony
or Black Elder

HEMP NETTLE (*Galeopsis tetralix*). Annual herb of the order Labiatae, a native of Europe and N. and W. Asia. It has a bristly stem, with swollen joints, and oval-lance-shaped leaves with coarsely toothed edges. The rosy or white flowers are in whorls.

HEMSWORTH. Urban district of Yorkshire (W.R.). It is 8 m. S.E. of Wakefield on the L.N.E. Rly. Mining and stone quarrying are the chief industries. The hospital and free grammar school were founded in the 16th century. Pop. 12,940.

HENBANE (*Hyoscyamus niger*). Biennial herb of the order Solanaceae, a native of Europe, N. Africa, and N. and W. Asia. The leaves are oval, lobed or toothed, the upper ones clasping the stem; the flowers are large, funnel-shaped, and dull yellow, veined with purple (see illus. p. 456). The fruit is a many-sided capsule with a distinct lid. The dried leaves are used in medicine. The active principles are poisonous alkaloids known as hyoscyamine and hyoscyne or scopolamine.

HENDERSON, ARTHUR (b. 1863). British politician. Born in Glasgow, Sept. 13, 1863, he became a moulder at Newcastle and was soon a leading trade unionist. He was on the town councils of Newcastle and Darlington, and in 1903 was mayor of Darlington. His name was mentioned as a parliamentary candidate for Newcastle in 1895, but it was not until 1903 that he entered the House of Commons as Labour M.P. for Barnard Castle. He was chairman of the party in Parliament 1908-10 and 1914-17. In May, 1915, he joined the coalition ministry as minister for education, and in Dec., 1916 became minister without portfolio. In 1917 he visited Russia, and on his return differences with Lloyd George led to his resignation in Aug.

In 1918 at the general election, Henderson

Arthur Henderson,
British politician

lost his seat at Barnard Castle, but was returned for Widnes in 1919. In Jan., 1923, he was elected for East Newcastle, but in a few months he lost his seat there, so in 1924 one was found for him in Burnley. In the first Labour Government (1924) he was home secretary and in the second, formed in 1929, secretary for foreign affairs. In the interval he acted as chief whip of the Labour party.

HENDON. Urban district of Middlesex. It stands on high ground, near the river Brent, 8 m. N.W. of London, with stations on the L.M.S. Rly and the Hampstead Tube. The main street, called The Burroughs, runs S.W. to Station Road, which leads to the Edgware Road, by the Brent Reservoir, where are the Upper Welsh Harp and the Old Welsh Harp, holiday resorts. There is an aerodrome, where the annual R.A.F. display takes place.

The old Perpendicular parish church of S. Mary has a battlemented tower. In 1928 the rural district council bought Headstone manor farm, at one time a residence of the archbishops of Canterbury, to make a recreation ground; in the grounds is a 15th century tithe barn. In 1928-9 University College, London, erected an observatory in Mill Hill Park. Pop. 75,747. See Aerodrome.

HENGIST. Anglo-Saxon chief, reputed the leader of the first Anglo-Saxon invaders of England. The story is that the British king Vortigern invited the Anglo-Saxons, or some people of kindred race, to come over and help him against his enemies. Under Hengist and his brother Horsa, they came in or about 450, landing at Ebbsfleet in Kent. They settled in Thanet, becoming little kings. Hengist reigned until 488.

HENGIER'S CIRCUS. Amphitheatre, formerly in Argyll Street, Regent Street, London, W. It was built by Frederick Charles Hengier in 1871, and rebuilt in 1884, on the site of Argyll House. The site is now occupied by the Palladium, a variety theatre.

HENLEY, WILLIAM ERNEST (1849-1903). British writer. Born at Gloucester, Aug. 23, 1849, he was educated there. Settling in

W. E. Henley,
British poet
Elliott & Fry

London in 1877, he edited successfully the weekly paper *London, The Magazine of Art, The Scots (afterwards the National) Observer, and The New Review*. Meantime he obtained recognition as poet with *A Book of Verses*, 1888. He edited, with T. F. Henderson, the *Centenary Burns, 1896-97*, to which he contributed a noteworthy critical appreciation of the poet; also *Lyra Heroica*, 1891, a book of verse for boys. With his close friend, R. L. Stevenson, he collaborated in four plays. He died at Woking, July 11, 1903.

HENLEY-ON-THAMES. Borough and market town of Oxfordshire. It stands on the N. side of the Thames, 36 m. from London, and is served by the G.W. Rly. A fine bridge, built in 1786, crosses the river here. The church of S. Mary, with a lofty tower, is an old building. Market day, Thurs. Pop. 6,841.

Henley Regatta, the famous sporting fixture, consists of rowing and sculling races for amateurs. It takes place annually in July.

HENNA. Powdered leaves of *Lawsonia alba* or *inermis*, a shrub that grows in tropical Asia. It is used for dyeing the hair a reddish-brown colour.

HENRIETTA MARIA (1609-69). Queen of Charles I. (q.v.). The youngest daughter of Henry IV of France, she was born in Paris, Nov. 25, 1609. Betrothed to Charles in 1624, after he had failed to secure a Spanish bride,

she was married to him by proxy in May, 1625, just after Charles's accession. The queen was fond of gaiety and extravagant, but her partiality for the Roman Catholics governed almost all she did in English politics, and her activities just before the outbreak of the Civil War did much to fan the flame of discontent. In 1644, she left England and never saw Charles again, although she urged him continually to resist, and was always scheming in his interests and those of their children.

She returned to England in 1660, living for some time at Somerset House, London. She died at Colombes, Aug. 31, 1669.

HENRY. Unit measurement of inductance (q.v.). When the inducing current is changing at the rate of one ampere per second and produces in an adjacent circuit a pressure difference of one volt, the degree of inductance is equal to one henry. See Henry, Joseph.

HENRY I (1068-1135). King of England. Born at Selby, Yorkshire, he was the third surviving son of William the Conqueror. On the death of William II he promptly secured the throne in the absence of his elder brother Robert of Normandy. In the course of his reign of thirty-five years (1100-1135) he won for himself the name of the lion of justice. His only son, William, was drowned in the White Ship. He left his throne to his only daughter, Matilda; but on his death, Dec. 1, 1135, the crown was claimed by his nephew Stephen.

HENRY II (1133-89). King of England, the first of the Plantagenets. He was born at Le Mans, March 5, 1133, the son of Geoffrey, count of Anjou, who was the second husband of the Empress Matilda or Maud, daughter of Henry I of England. He succeeded his father as count of Anjou, received his mother's duchy of Normandy, and married Eleanor, duchess of Aquitaine, in 1152. In 1154 he succeeded Stephen on the English throne in place of his mother, who still survived. His later years were vexed by the disobedience of his sons, and he was fighting against one of these, Richard, when he died at Chinon, July 6, 1189. His sons were Henry and Geoffrey, who predeceased him; Richard, and John who became kings of England. See illus. p. 167.

HENRY III (1207-72). King of England. Born at Winchester, Oct. 1, 1207, he succeeded his father, John, in 1216, while the struggle with the barons was still in progress. During the years of his minority the country was well governed, first by Pembroke and then by Hubert de Burgh. In 1227 Henry's personal reign began.

This was largely occupied with struggles with the barons who were irritated and the country impoverished by the riches heaped by the king upon his foreign friends, some of whom came over with his wife, Eleanor of Provence, whom he married in 1236. In 1264 he was defeated by Simon de Montfort, after whose death in 1265 he was dominated by his son, afterwards Edward I. Henry died Nov. 1, 1272.

HENRY IV (1367-1413). King of England. Born near Spilsby, Lincolnshire, April 3, 1367, he was the son of John of Gaunt, duke of Lancaster, grandson of Edward III, and cousin of Richard II. During Richard's reign he was one of the lords appellant who opposed the king's early policy. In 1398, being then known as duke of Hereford, he was sent into exile. On his father's death he returned to England in 1399, nominally to claim his estates, actually to depose Richard and set

himself on the throne. With him began the rule of the house of Lancaster. Henry died March 20, 1413. He had six children, including Henry V and the dukes of Bedford, Clarence and Gloucester.

HENRY V (1387-1422). King of England. Born Aug. 9, 1387, as prince of Wales, Henry acquired training as a soldier in the campaign against the Percys and in Wales, and he played an active part at the council table during his father's last years. At the beginning of his reign he turned his mind to the project of reviving the untenable claim of the English kings to the French crown. In 1415 an expedition set sail for Normandy, laid siege to Harfleur, and captured it. Leaving a garrison there, Henry, with a small force, won the victory of Agincourt, Oct. 25, 1415. On May 21, 1420, the treaty of Troyes was signed which recognized Henry as heir to Charles and regent during his life, while it gave him the hand of the princess Catherine in marriage. Henry died of dysentery at Vincennes, Aug. 31, 1422. See Agincourt.

Nat. Port. Gallery

HENRY VI (1421-71). King of England. Born Dec. 6, 1421, the only son of Henry V, he succeeded to the thrones of England and France, Aug. 31, 1422. During his childhood the government was in the hands of a council, while his uncle, the duke of Bedford, acted as regent in France. The second section of the reign, 1435 to 1453, witnessed the gradual expulsion of the English from France.

The third period of the reign was marked by the rivalry between the Yorkists under Richard, duke of York, on the one side, and the Beauforts, the descendants of John of Gaunt, duke of Lancaster, aided by the queen, Margaret of Anjou, on the other. York was recognized as protector during the king's temporary madness. In 1460 Henry was taken prisoner, and it was agreed that he should retain the crown, but that his successor should be Edward duke of York. York was killed at Wakefield, Dec. 31, 1460, and soon Henry escaped from his captors and found refuge in Scotland. In 1465 he was caught again and imprisoned in the Tower. In 1470 Warwick revolted against Edward, drove him out of the country, and again set Henry on the throne. But in 1471 Edward returned, and finally crushed the Lancastrians at Barnet and Tewkesbury. Henry was put to death, May 21, 1471.

To Henry England owes Eton College and King's College, Cambridge.

HENRY VII (1457-1509). King of England. Born at Pembroke Castle, Jan. 28, 1457, his father, Edmund Tudor, married Margaret Beaufort, a descendant of John of Gaunt, duke of Lancaster, and it was through his mother that Henry claimed the English throne. Edmund, who had been made earl of Richmond, died just before his son's birth and Henry spent his early days mainly in France. In 1485 he landed in Wales and marched to

Bosworth where a decisive battle was fought, and Richard III was killed. Parliament recognized Henry as his successor and he secured his position by marrying Elizabeth, daughter of Edward IV.

Henry's great task was the re-establishment in England of a strong government, which he did by destroying the power of the remnant of the nobles left by the War of the Roses. He died April 22, 1509, leaving his successor an unprecedented accumulation of wealth. Henry had two sons, Arthur, his successor Henry, and two daughters, Margaret and Mary. Margaret's marriage to James IV of Scotland was responsible for the union of the two crowns in 1603.

HENRY VIII (1491-1547). King of England. Born at Greenwich, June 28, 1491, he succeeded his father in 1509, his elder

Henry VIII,
King of England
After Holbein

brother Arthur having died in 1502. After obtaining a papal dispensation, he married his brother's widow, Catherine of Aragon. His reign falls into two definite periods, the first, that of Wolsey's ascendancy, ending in 1529. The second is marked by the complete establishment of the royal supremacy, in which Henry's principal

agent was Thomas Cromwell.

The last six years of his reign were marked by a desultory war with France, and by the overthrow of an invading Scots army at Solway Moss in 1542. Henry married six times. The marriage with Catherine of Aragon was annulled; Anne Boleyn was executed on charges of treasonable infidelity; Jane Seymour died in giving birth to the future Edward VI; the marriage to Anne of Cleves was pronounced void within a few weeks of its celebration; Catherine Howard suffered the same fate as Anne Boleyn; but the sixth wife, Catherine Parr, survived her husband. Henry died Jan. 28, 1547. His three children all succeeded him on the throne. See England.

HENRY. Name of seven rulers who were German kings and heads of the Holy Roman Empire. Henry I, duke of Saxony, was chosen German king in 919. Known as the Fowler, he reigned until 936, when his son Otto became king and later emperor.

Henry II, duke of Bavaria, was elected king in 1002 and in 1014 was crowned emperor. He died in 1024 and his interest in the affairs of the church led to his canonisation in 1146. Henry III, son of Conrad II, became king in 1039 and was crowned emperor in 1046. He died Oct. 5, 1056. Henry IV, son of Henry III, was born Nov. 11, 1050 and was only six years old when he became king on his father's death. At first under regents, his own reign began in 1069 and was mainly occupied by his struggle with Gregory VII on the subject of investitures. His later years were troubled by the revolts of his sons, and he was taken prisoner and forced to abdicate. He died Aug. 7, 1106.

Henry V, recognized as the successor of his father Henry IV in 1099, became king in 1106 and was crowned emperor in 1111. In his reign the investiture controversy was settled by the concordat of Worms (1122).

Henry VI, son of the great emperor Frederick I, reigned from 1190 to 1197. He married Constance, daughter of the king of Sicily, and became king of that island. He died Sept. 28, 1197, leaving a young son, the emperor Frederick II. Henry VII was crowned emperor in 1312 and died Aug. 24, 1313. His son was John, the blind king of Bohemia.

HENRY. Name of four kings of France, of whom Henry IV was the most notable.

Henry I, a son of Robert I, was king from 1031 to 1060. Henry II, a son of Francis I, married Catherine de Medici, and was the father of three sons who became kings of France—Francis II, Charles IX and Henry III. A daughter married Henry of Navarre. He was wounded in a tournament and died July 10, 1559.

Henry III was king of Poland for a few weeks before he succeeded his brother Charles IX as king of France in 1574. After a reign passed in civil war he was murdered Aug. 1, 1589.

HENRY IV (1553-1610). King of France. Born at Pau, Dec. 14, 1553, he was a son of Antony of Bourbon and his wife Jeanne d'Albret, queen of Navarre. He was brought up as a Protestant, and spent part of his youth at the French court, where he was educated. In 1572 he married Margaret, sister of Charles IX; six days later the massacre of St. Bartholomew occurred. In the same year Henry became king of Navarre.

The absence of children to the French king and his brothers made Henry an important person in France, and for the next thirteen years he was concerned in its various intrigues. The Guises and their party were determined to prevent his accession, but events compelled Henry III to recognize the king of Navarre, who became titular king of France on Aug. 1, 1589. Henry had now to conquer his kingdom, which he did by a wise mixture of diplomacy and force. On May 14, 1610, he was assassinated by Ravallac. His lawful issue included Louis XIII, Gaston, duke of Orleans, and Henrietta Maria (q.v.), the queen of Charles I.

HENRY (1862-1929). German prince. The younger son of the emperor Frederick, he was born at Potsdam, Aug. 14, 1862. Educated partly at Cassel, he was trained for the navy, which he entered, after a voyage round the world, in 1880. In 1901 he was made admiral, and later became inspector-general of marine. When the Great War broke out he was commander-in-chief of the navy. He died April 20, 1929.

HENRY, GEORGE. Scottish painter. Born at Ayrshire, he studied at the Glasgow School of Art. In 1890 a picture of The Druids, executed in collaboration with E. A. Hornel, called attention to both painters, and in the same year Henry's Galloway Landscape, at the Glasgow Institute, marked a new departure. Rich colouring and tone distinguish The Blue Gown, now in the Cape Town Gallery. The Mirror, Gold-fish, and The Blue Veil are representative of his nameless portraits. He was elected R.S.A. in 1902, and R.A. in 1920.

HENRY, JOSEPH (1799-1878). American physicist. Born at Albany, New York, Dec. 17, 1799, he became professor of mathematics and natural philosophy at Albany Academy in 1826. There he at once showed a remarkable ability in electrical research and experiment, improving the electro-magnet to such an extent that his experiments marked a definite epoch in the practical applications of the electric current. In 1831-32 Henry carried out a series of important experiments in the transmission of electric current which was the forerunner of the telegraph. His discovery in 1842 that the discharge of a Leyden jar induced discharges in other circuits some distance away was a fundamental discovery of wireless telegraphy. In 1846 Henry was appointed secretary to the Smithsonian Institution. He died May 13, 1878.

Henry IV,
King of France
After Pourbus, Louvre

HENRY, MATTHEW (1662-1714). Non-conformist minister and commentator. The son of Philip Henry, he was born at Broad Oak, Flintshire, Oct. 18, 1662, and studied for the law. In 1687, having been ordained, he became a Presbyterian minister at Chester, where he was extraordinarily successful and influential. He remained there until 1712, when he became minister of a church in Hackney. He died at Nantwich, June 22, 1714. Henry wrote much, but is especially noted for his Exposition of the Old and New Testament, frequently republished, which was completed by several nonconformist divines.

HENRY, O. (1862-1910). Pen-name of William Sydney Porter, American writer. Born at Greensboro, N. Carolina, Sept. 11, 1862, he became editor of a humorous weekly called The Rolling Stone, in Austin, Texas; afterwards he joined the staff of The Post in Houston. In 1898 he began to write short stories for the magazines, of which twelve volumes have been collected. Among the best of his stories are The Trimmed Lamp, The Last of the Troubadours, The Passing of Black Eagle, The Furnished Room, The Defeat of the City, The Cop and the Anthem, The Last Leaf, The Lost Blend, Vanity and Some Sables, Lost on Dress Parade, Roses, Ruses and Romance, and Little Speck in Garnered Fruit. Henry died in New York, June 5, 1910.

O. Henry,
American author

HENRY, PATRICK (1736-99). American orator. Born at Studley, Virginia, May 29, 1736, he was of Scottish-Welsh descent. Unsuccessful as a farmer and tradesman, he took up law, and rapidly built up an extensive practice. As a member of the Virginia House of Burgesses, he attacked the Stamp Act of 1765. He died June 6, 1799.

HENRY (1394-1460). Portuguese prince, called the Navigator. Son of King John I, he was born at Oporto, March 4, 1394. His mother was a daughter of John of Gaunt. He began to send out sailors on voyages of discovery, with intervals continuing his work for nearly 50 years. He himself went on one or two voyages, but was mainly occupied with organizing and financing the expeditions. He made his home at Sagres, where he erected an observatory and set on foot something like a college of navigation. He died Nov. 13, 1460.

HENSON, HERBERT HENSLEY (b. 1862). British prelate. Born Nov. 8, 1862, he was educated at Oxford. Having been ordained

he became head of Oxford House, Bethnal Green, where he worked until made vicar of Barking, and incumbent of St. Mary's Hospital, Ilford. From 1900-12 he was canon residentiary of Westminster and rector of St. Margaret's. Appointed dean of Durham in 1912, he took an active interest in the university there. In 1917 he was

Herbert H. Henson,
British prelate
Russell

consecrated bishop of Hereford, and in 1920 was translated to Durham. Henson was the leading exponent of broad church ideas, including a liberal theology and a close cooperation with Nonconformists. Later he came forward as an advocate of disestablishment.

HENTY, GEORGE ALFRED (1832-1902). British writer. Born Dec. 8, 1832, he served in the army purveyor's department in the Crimean War. In 1866 he became correspondent for The Standard, and saw much fighting.

These experiences he turned to good account in his long series of books for boys. Among the best are *The Young Franc-Tireurs*, *With Clive in India*, and *By Pike and Dyke*. Henty died Nov. 16, 1902.

HEPHAESTUS. In Greek mythology, god of fire and the working of metals. He was the son of Zeus and Hera, but was so disliked by his mother that she threw him out of Olympus. He is represented as having been lame from birth or lamed by a fall. In art he is depicted as a stoutly-built man with a beard, holding a smith's hammer and tongs. Hephæstus was identified by the Romans with Vulcan. See Aeschylus; Vulcan.

HEPPLEWHITE, GEORGE (d. 1786). English furniture maker. After serving his apprenticeship with Robert Gillow at Lancaster, he started a business in London which his widow carried on after his death as A. Hepplewhite & Co. Hepplewhite's name is identified with the style in furniture which followed the Chippendale period, and was a cautious revolt against the solidity of the latter. Its characteristic was the curvilinear. In the tracery of cabinets and bookcases straight rather than curving lines were used, cabinets being placed on tall legs. The chairs had shield, oval, circular, hoop, and interlaced heart, fretwork backs. See illus. p. 384.

HEPTARCHY. Word denoting the seven kingdoms into which Anglo-Saxon England was supposed to have been divided before 800. The seven were Kent, Essex, Sussex, Wessex, Mercia, East Anglia, and Northumbria.

HERA. In Greek mythology, sister and wife of Zeus and daughter of Cronos and Rhea. One of the major deities of ancient Greece, by Zeus she became the mother of Arts, Hephæstus, and Hēbē. She is represented as being of a jealous disposition. Hera had frequent quarrels with her husband and on one occasion plotted with Athena and Poseidon to put him in chains. For this she was beaten by Zeus and herself put in chains. Her annoyance with Paris (q.v.) for his judgement against her led her to side with the Greeks in the Trojan War. In art Hera is represented as a woman of stately beauty. The Romans identified her with Juno (q.v.).

Hera, Greek goddess
From a bust in the
British Museum

HERACLIAN (d. A.D. 413). Roman general and usurper. For the murder of Stilicho (408), he was made count of Africa by the emperor Honorius, whom he assisted in putting down the usurper Attalus. Having been raised to the consulship he proclaimed himself emperor and landed in Italy, but after a severe defeat returned to Carthage, where he was put to death by the emperor's orders.

HERACLIUS (575-641). East Roman emperor, 610-641. The son of the governor of Africa, he seized the throne when the empire was threatened by Persians in the E. and by Avars and Slavs in the W. After defeating the Avars, Heraclius took the field against the Persians, and gained a decisive victory (627) over Chosroes II. This success was counterbalanced by losses in the W. After this Heraclius was chiefly occupied with religious disputes. While thus engaged, new foes arose, the Arabs, who made themselves masters of Syria and Egypt. Overwhelmed by anxieties Heraclius left the empire at his death, which took place in 641, in a deplorable condition.

HERALD (old Fr. *herault*). Name given to certain officials in ancient and modern times. In the Homeric age of ancient Greece, this

herald or *kéryx* acted as confidential servant to the kings and princes. In historical times his functions were religious, political, and judicial. His person was sacred; he had free meals in the Prytaneum, a seat of honour in the theatre, and received a salary. In Rome, the herald was a public or private crier.

In early mediæval times the heralds acted as messengers of sovereign princes. Soon they were appointed to look after armoury, register pedigrees, and see that knights observed conduct becoming their dignity. In England they were made into a college of arms. See College of Arms.

HERALDRY. In systematic form heraldry cannot be traced back further than the 12th century. Artistically at its height in the Middle Ages, heraldry began to decline under the Tudors, reaching its lowest point in the 19th century. Coats of arms are displayed on shields, roundels, ovals, lozenges (now reserved for spinsters and widows, and unaccompanied by crests), banners etc.

Heraldry. Armorial achievement (imaginary), showing method of impaling a man's arms (chevron) with those of his wife (bar or fess)

An achievement of arms usually consists of shield and crest, often with a motto, and sometimes supporters flanking the shield. Anciently a device surmounting a knight's headpiece, the crest should strictly be placed on a helmet over the shield. Its modern separate use on livery buttons, etc., usurps a function of the badge. Though shields exist without a crest, possession of the latter may be taken as arguing the existence of a cor-

Heraldry. System of indicating metals, and principal colours and furs. Others include tenné (tawny), ermines (reverse of ermine), erminois (like ermine, but with gold field), pean (reverse of erminois), counter-potent, and potent-counter-potent

responding shield. Besides being granted by, or on behalf of, the sovereign, armorial bearings were anciently assumed by local authority, or at will, and were even devised in like manner

to other property. These three last-named methods are not now officially recognized. Mottoes, however, are at the present time treated with far greater latitude.

Heraldic tinctures are metals (e.g. gold) and colours (e.g. gules). Furs include ermine, etc. Chevron, chief, etc., are ordinaries; other charges including lion, fleur-de-lis, hennant, etc. Marks of cadency and difference are employed. Arms may be impaled, the shield being divided vertically to include the arms of a man's wife, or, perhaps, his office, quartered (subdivided, indicating descent from other families) or may display the arms of the wife, if an heiress on an inescutcheon in the centre of the shield. There can be any number of quarterings, though their use is now strictly defined. Dimidiation was virtually the impalement of a half of each of two coats or hedges. Continental heraldry differs considerably from British. See Allusive Arms; Arms; Bar; Bend; Cadency; Chevron; Chief; Ermine; Fess; Garter; Hatchment; Lion; etc.; consult also *The Romance of Heraldry*, C. W. Scott-Giles, 1929.

HERAT. City of Afghanistan, sometimes called the key of India, from its strategic position. It is situated on the Hari Rud, at an altitude of 3,000 ft. about 400 m. almost due W. of Kabul. Founded by Alexander the Great, it is an important centre of roads. It stands in a very fertile district, and manufactures carpets and silks. Pop. 20,000.

HERB. Plant whose stem, from the absence of woody tissue, dies to the ground annually. Herbs, however, may be annual, biennial, or perennial in duration. Annuals spring from the seed, flower, fruit, and die all within one season. Biennials during their first season accumulate a store of food in an underground rootstock which is expended the second season in the production of an aerial stem, flowers and fruit; then they die. Perennials produce annual stems in succession during an indefinite number of years, such stems dying in autumn after their valuable contents have been withdrawn into an underground rootstock, tuber, bulb, or corm. The word is also used, in the plural, by gardeners to indicate those plants, whether herbs or shrubs botanically, which are employed for flavouring in cookery.

A herbarist is one who deals in herbs, especially those useful for medicinal purposes. A herbar is a book in which plants and names are described. A herbarium is a collection of dried plants attached to loose sheets of paper, arranged in general, and these again grouped in natural orders. See Botany.

HERBERT, JOHANN FRIEDRICH (1776-1841). German philosopher and educationist. Born May 4, 1776, while acting as a tutor in Switzerland he made the acquaintance of Pestalozzi, whose system aroused in him an interest in education. In 1805 he became professor of philosophy at Göttingen, and in 1808 succeeded Kant at Königsberg. In 1833, having incurred the displeasure of the Prussian authorities by his advanced ideas, he returned to Göttingen, where he died Aug. 14, 1841.

Herb Bannet. Variant name of the common avens. See Avens.

Herb Christopher. Variant name of the baneberry (*Actaea spicata*). See Bancherry.

HERBERT. Name of a noted English family, now represented by the earls of Pembroke, Powis and Carnarvon, and various other nobles. The family sprang from a landholder in Monmouthshire who lived in the time of Edward III. A descendant became,

Heraldry. Inescutcheon. Method of indicating marriage with an heiress

about 1430, the owner of Raglan Castle, and his sons took the name of Herbert. Sir William Herbert became lord of Pembroke, and in 1468 was made earl of Pembroke. He was killed in 1469, and his earldom died out in 1491. The first earl had an illegitimate son, Richard, who was made marquess of Powis. His son William was made earl of Pembroke in 1551, a title since held by his descendants. See Pembroke; Powis.

HERBERT, ALAN PATRICK (b. 1890). British humorist. Born Sept. 24, 1890, he was educated at Winchester and New College, Oxford, became a barrister, and began to write for Punch. In 1924 he joined that journal's regular staff, and over the initials A. P. H. was one of its most regular contributors. His books include *The Old Flame*; *She Shanties*; *Plain Jane*; *Misleading Cases*; and *The Trials of Topsy*. During the Great War Herbert served with the Royal Naval Division in Gallipoli and France.

HERBERT, GEORGE (1593-1633). English poet and divine. Born April 3, 1593, he was fellow of Trinity College, Cambridge, 1616, and public orator, 1619-27. Disappointed of court preferment, he turned to the study of divinity. He was proband of Leighton Bromswold, Hunts, 1626, and was rector of Fuggleston with Bemerton, near Salisbury, Wilts, 1630-33. He died of consumption, March 3, 1633. Herbert's chief work, *The Temple, Sacred Poems and Private Ejaculations*, was first printed in 1633 and ranks with the best religious verse in the language.

HERBERT OF CHERBURY, EDWARD HERBERT, 1ST BARON (1583-1648). English philosopher, historian, and diplomatist. Born March 3, 1583, he fought with distinction under the prince of Orange in the Netherlands, 1614, and was twice ambassador to Paris. He was rewarded with an Irish peerage and then an English peerage as Baron Herbert of Cherbury. At first a supporter of the royalist party, he subsequently went over to the parliamentarians. He died Aug. 20, 1648. Herbert of Cherbury is usually called the founder of English deism, a system of natural religion. His chief work is *De Veritate* (*On Truth*); 1624. His autobiography was published in 1764.

Herb Mercury. Variant name of the perennial herb dog's mercury (*Mercurialis perennis*). See Dog's Mercury.

HERB PARIS (*Paris quadrifolia*). Perennial herb of the order Liliaceae, a native of Europe and N. and W. Asia. It has a stout creeping rootstock, a round stem, bearing near its summit a single whorl of four large oval leaves, and above them the solitary flower, consisting of four large green sepals and four very narrow yellow petals. The eight or more stamens are continued as long points beyond the anthers. The ovary is purple, very large and shining, and develops into a black four-celled berry. The flower has an offensive odour which attracts flies.

HERB ROBERT (*Geranium robertianum*). Soft, hairy annual herb of the order Geraniaceae, a native of Europe, N. Africa, and W. Asia. Its leaves are divided into five leaflets, which are again finely lobed and divided, smelling disagreeably when bruised. The flowers are pale purple, streaked with red, produced all through the season. The whole plant often turns red.

Herb Robert, leaves and flowers

HERCULANEUM (Gr. Herakleion). Ancient Italian coast town, between Naples and Pompeii, at the foot of Mt. Vesuvius. In Nero's time it was greatly damaged by an earthquake, and in the autumn of 79 was totally destroyed, together with Pompeii, by an eruption of Vesuvius. The villages of

Herculaneum. General view of the excavations looking along one of the streets of the buried Roman city

Portici and Resina were built over the site. The architectural remains are inferior, but the works of art superior, to those of Pompeii. Of the latter, the pictures of Theseus and the Minotaur, the statues of Nero and Germanicus, of members of the Balbus family, and a sleeping Faun, deserve mention. See Pompeii; Vesuvius.

HERCULES (Gr. Heraklēs). Hero in Greek classical mythology. He was the son of Zeus by Alcmene, wife of Amphitryon,

Hercules, Antike colossal statue, the Farnese Hercules. Naples Museum

king of Thebes. The celebrated Twelve Labours of Hercules are: (1) The slaying of the Nemean lion; (2) The destruction of the Hydra of Lerna; (3) The capture of the Arcadian stag; (4) The capture of the Erymanthian boar; (5) The cleansing of the stables of Augeas; (6) The destruction of the Stymphalian birds; (7) The capture of the mad bull of Minos; (8) The capture of the man-eating horses of Diomedes; (9) The taking of the girdle of Hippolyte; (10) The seizure of the oxen of Geryon;

(11) The taking of the three golden apples from the garden of the Hesperides; (12) The bringing of Cerberus from the lower world. Besides these labours Hercules performed many other deeds.

Hercules is the name of a N. constellation between Lyra and Boötes.

Pillars of Hercules is the ancient name for the rocks forming the entrance to the Mediterranean Sea, namely, Calpe (Gibraltar) in Europe, and Abyla (Ceuta) in Africa. Legends describe them as torn asunder by Hercules to admit the Atlantic or as joined together to keep out ocean monsters.

HERCULES BEETLE. Large species of beetle. Belonging to the genus *Dynastes*, it is found in the tropical districts of America. It is often between five and six inches long; and the male has a pair of large horns which somewhat suggest the pincers of a crab.

Hercules Beetle. The male carrying his mate between his horns

HERDER, JOHANN GOTTFRIED VON (1744-1803). German critic and poet. Born Aug. 25, 1744, after early struggles he managed to enter Königsberg University. He became a school teacher and pastor at Riga in 1764, and first preacher at Weimar, 1776. In 1789 Herder was made vice-president of the consistory at Weimar. He died Dec. 18, 1803.

Herder's Ideen zur Philosophie der Geschichte des Menschheit is notable for its anticipation of the evolutionary theory.

HEREDITY. Vital or organic relation between successive generations which secures the general persistence of characteristic resemblances between offspring and parents, and yet allows new ones to emerge. The natural inheritance of an animal includes all that the creature is, or has, to start with, when in the germ cell stage, in virtue of its relation of organic continuity with the germinal material of its parents and ancestry.

The material basis is the germ cell, the special bearers of the factors, or determiners, of hereditary qualities being the rodlets or granules called chromosomes, which are definite in number for each living species.

When the fertilised egg-cell is dividing and re-dividing to form a mass of embryonic cells, out of which tissues and organs are soon formed, some of the original germinal material is kept apart to form the germ cells of the offspring. Thus there is continuity of the germ plasma, and it is on this continuity that the persistence of hereditary characters depends. The main fact of heredity is the persistence of a particular kind of organization and activity from generation to generation. It is useful to distinguish between the persistence of the general fundamental characters, from which there is never much divergence, and the persistence of more superficial and recent features, which is less secure.

In 1865 Mendel stated an important law of heredity, which remained almost unnoticed till 1900. It may be stated thus: Inheritance consists in part of "unit characters" which

Hereford. The 12th cent. cathedral from the south-west. The west front was reconstructed 1800-05

are inherited as a whole or not at all. When two parents differ in respect of two contrasted unit characters these do not blend, but one of them—hence called the dominant—appears more or less in its entirety in the offspring, while its analogue—the recessive—drops more or less out of sight for the time being. In the history of the germ cells

there is a separation of the determiners or factors of the contrasted "unit characters," so that each germ cell is pure as regards the character, either having it or not having it. This is called segregation. See Biology; Cell; Evolution; Mendelism; Variation.

HEREFORD. City and borough of Herefordshire, of which it is the county town. It stands on the Wye, mainly on the left bank, 144 m. from London on the G.W. and L.M.S. Rlys. Notable features of the cathedral are the nave, the lady chapel, the crypt, and the

library with its chained books. Other buildings are the bishop's palace, the beautiful college of the vicars choral, and Coningsby hospital. The cathedral school was founded in 1384. There are a few remains of the castle and of the town walls. Every third year a musical festival of the choirs of Gloucester, Worcester, and Hereford cathedrals is held here. Pop. 23,324.

Hereford is the name of a bardy breed of cattle raised in Herefordshire and neighbouring counties. The body is red, the abdomen white. Pure Herefords are fine beef producers.

EARL OF HEREFORD. English title long borne by the family of Bohun. Miles of Gloucester was made earl of Hereford in 1141, his lands passing later to a daughter, Margaret, wife of Humphrey Bohun. Their grandson, Henry, was made earl of Hereford in 1199, and his descendants held the title until 1373. In 1397 Henry, afterwards Henry IV, was made duke of Hereford.

Viscount Hereford is an English title borne by the family of Devereux since 1550.

HEREFORDSHIRE. County of England. With an area of 842 sq. m., it is fairly level in the centre, but on its borders are the Malvern Hills on the E. and the Black Mountains in the S. The chief river is the Wye, with its tributaries, the Lugg, Arrow, Dore, and Frome. The Teme is a tributary of the Severn. The county town is Hereford; other towns are Leominster, Ledbury, and Ross.

Herefordshire is chiefly noted for cider and cattle. Its sheep, too, have a high reputation. The chief railway in the county is the G.W., but it is also served by the L.M.S. It is in the diocese of Hereford and the Oxford eirenit. Of its many castles, the chief are Richard's Castle, Clifford, Weobley, Hereford, Wilton, Goodrich, and Wigmore. Pop. 113,189.

The Herefordshire regiment now forms part of the Shropshire Light Infantry (q.v.).

HEREROLAND. Country forming part of S.W. Africa, also called Damaland or Damaland. It lies between Great Namaqualand on the S. and Ovamboland on the N. The coastal region is waterless desert; behind is a mountainous district, and beyond this there is good pastoral and agricultural country. The chief towns are Windhoek, Karibib, Rehoboth, Gobabis, Omaruru, and the port of Swakopmund. The only harbour is Walvis Bay.

The Hereros are a nomad pastoral people. In 1884 their country was annexed by Germany. Since the British occupation in 1915 they have been gathered into reservations. See Africa.

HERWARD.

English hero, called the Wake. He held land in Lincolnshire, just before the time of William the Conqueror, and soon after the conquest became associated with those who disliked the Norman rule. He

took part in an attack on Peterborough, and was the leader of those who resisted the king in the Isle of Ely. The story says he escaped when William made his way into the isle, in 1071.

A romance by Charles Kingsley entitled *Hereward the Wake, Last of the English*, sets forth the outlawry, travels, and adventures of the hero Hereward.

HERIOT. The arms of a vassal which on his death were returned to his lord. Later the term denoted something paid in kind or in money in lieu of this, and was applied, where the manorial system prevailed, to a beast or some other portion of the property of a tenant, taken by the lord on the tenant's death.

HERIOT, GEORGE (1563-1624) Founder of Heriot's Hospital, Edinburgh, Scotland. He was goldsmith to Queen Anne, wife of James VI, and jeweller to the king. After James's accession to the throne of England he settled in London in 1603. He left the residue of his property to found the hospital which bears his name. Extensively renovated in 1828, this is now a college with a day school attached, managed by the Heriot Trust, which contributes to the endowment of the Heriot Watt College, named after James Watt, and has founded a number of bursaries for schools in the city.

HERITOR. Term used in Scots law for the owner in fee of heritable property in a parish, i.e. for owners of immovable property. It includes corporations, but excludes titulars of lands or titles, superiors, mine owners and lessees. Replacing the old word parishioners, heritors are responsible for the upkeep of parish churches, etc.

HERKOMER, SIR HUBERT VON (1849-1914). British painter. Born at Waal, Bavaria,

the Dudley Gallery, London, and a contributor of sketches to *The Graphic*. In 1874 his great success, *The Last Muster*, appeared at the Academy. He was elected A.R.A. in 1879, and R.A. in 1890. In 1883 he founded his famous school of art at Bushey, and from 1885-94 was Slade professor at Oxford. Knighted in 1907, he died March 31, 1914.

Sir Hubert Herkomer, British painter
Mills

HERM. One of the Channel Islands. It is 3 m. E. of Guernsey, and is 1½ m. long by ½ m. broad. It is noted for the extraordinary variety of shells on its beach. See Channel Islands.

HERMAE. Small pillars surmounted by a head generally of Hermes. They were set up in large numbers in public places in the towns of Greece. It was the alleged mutilation by Alcibiades (q.v.) of the Hermae of Athens on the eve of the expedition to Sicily in 415 B.C. that led to his disgrace.

HERMAPHRODITE. Biological term for an organism in which the two sexes are combined. Some low species of animals and many plants are normally hermaphrodite. The term is applied in medical science to those cases in which glands corresponding to the male testicles and female ovaries are found in one person; also to the more common cases in which the sex of the individual is doubtful. See Sex.

In Greek mythology Hermaproditus was the son of Hermes and Aphrodite. The nymph of a fountain by Halicarnassus fell in love with the youth, and the two combined to form a being with the characteristics of both sexes.

HERMAS. Early Christian writer. Supposed to have been a brother of Pope Pius I, he appears to have flourished in the first half of the 2nd century, when he wrote an allegorical work, called *The Shepherd*, giving a valuable picture of the state of Christianity at Rome during the period.

HERMES. In Greek mythology, son of Zeus. He became an adept in robbery, stealing the trident of Poseidon, the girdle of Aphrodite, and the sword of Ares. He found favour with Zeus, who took him to be his messenger and ambassador. He became the god of eloquence and good fortune, and the patron of merchants, travellers, and also of thieves. In art Hermes is represented as a handsome youth. He wears the petasos or broad-brimmed hat, bears the caduceus or staff, and has winged sandals.

Hermes was the name of a British cruiser employed as a seaplane carrier. On Oct. 31, 1914, she was sunk by a German submarine in the Strait of Dover as she was returning from Dunkirk to England. Another Hermes is an aircraft carrier built 1918-20.

HERMITAGE. Retreat, cell, or habitation of a hermit or recluse. In modern usage the name is often applied to buildings that have nothing in common with the original meaning, e.g. to a palace of Catherine II in Leningrad, used later as a museum and picture gallery. There was a Hermitage, in the old sense of the term, at Warkworth, Northumber-

Herefordshire. Map of the English border county, famous for its agriculture and orchards, showing the course of the river Wye

Hermes, with the infant Bacchus, from the statue by Praxiteles

Museum, Olympia, Greece

land, and one on S. Herbert's Island, Derwentwater. Hermitage Castle is a ruined Border stronghold in Roxburghshire.

The name Hermitage is given to a French wine grown near Valence, in the Drôme. Red Hermitage resembles Beaune in colour and strength: the white wine is similar to Chablis

HERMIT CRAB. Popular name for a group of small crabs which take up their abode in the empty shells of whelks and other gastropods or in living sponges. The hinder half of the body is not protected by a hard carapace. The abdomen is provided with a pair of grasping appendages by which the crab clings tightly to the shell, from which it is not easily extracted. There are also land crabs with like habits. See Crab.

HERMON. Mt. of Syria. It forms the S. extremity of the Anti-Lebanon range and is now known as the Jebel esh Sheikh. It is 9,380 ft. high, and on its slopes are the ruins of a great temple of Baal. The range called Little Mt. Hermon is 24 m. S.E. of Acre.

HERNE BAY. Urban district and watering place of Kent. It is 12 m. from Margate and 7 m. from Canterbury with a station on the Southern Rly. Attractions include a long esplanade, a pier with a large pavilion, a concert hall, and a winter garden. To the E. is Reculver (q.v.), and inland is the village of Herne, with an old church. Pop. 14,000.

HERNE HILL. District of London, S.E. It lies between Brixton on the W. and Dulwich on the E. and has a station on the Southern Rly. It is in the boroughs of Camberwell and Lambeth. At No. 28, Herne Hill Ruskin lived in 1823-43, and at No. 30 in 1843. Brockwell Park adjoins the district.

HERNIA or **RUPTURE.** Latin name given to the protrusion of an organ or part of an organ through an opening in the cavity which normally contains it. The term, however, is commonly applied to the protrusion of organs in the abdominal cavity through weakened spots in the abdominal wall. Such a hernia consists of a sac formed by the peritoneum, and of the contents of the sac, most frequently a part of the intestine.

HERO OF ALEXANDRIA. Famous Alexandrian mathematician. The exact dates of his life are unknown, but his reputation has survived for several memorable discoveries in mathematics and science. Hero was responsible for a number of mechanical inventions, the chief of which is an automatic fountain working by air pressure. He is also credited with the description of a small stationary steam-engine.

In Greek legend Hero is the name of a priestess of Aphrodite at Sestos, on the Hellespont opposite Abydos. See Leander.

HEROD (74-4 B.C.). King of Judaea, called the Great. The son of Antipater, he was appointed ruler of Galilee at the age of 25. When Palestine was invaded by the Parthians Herod escaped to Rome, where Antony and Octavian made him king of Judaea. He returned to Palestine in 39 B.C. and captured Jerusalem in 37. After the battle of Actium (31) Herod was confirmed in his position by Octavian, and thenceforward he governed Palestine on behalf of Rome.

Herod Antipas, son of Herod the Great, by Malthace, a Samaritan, was made tetrarch of Galilee and Peræa by his father's will. Divorcing his first wife, he married Herodias, wife of his half-brother, by whom he had a daughter, Salomé. Antipas was denounced by John the Baptist, whom Antipas first imprisoned and then, at the instigation of Herodias and Salomé, put to death. Jesus was examined before Herod. Antipas went to Rome c. 38-40, and, being accused of treason, was banished and died in exile.

Herod Agrippa I (d. A.D. 44), grandson of Herod the Great, was made king by Caligula. His son Herod Agrippa II (d. A.D. 100) was the last of the Herodians, as the family of Herods is called. Paul appeared before him in A.D. 60. See Agrippa; Palestine.

HERODOTUS (c. 484-424 B.C.). Greek historian, commonly called the Father of History. Born at Halicarnassus in Asia Minor, the first half of his life was spent in travel. He lived some time at Samos, where he learned the Ionic dialect in which he wrote his history. About 446 B.C. he came to Athens. By the time he reached middle life he had travelled in Persia, Egypt, Italy, and Sicily, and had visited even the N. shores of the Black Sea.

Herodotus, Greek historian
Dust in Naples Museum

The theme of his history, which consists of nine books, is the great struggle between the Persians and the Greeks. The work is virtually a sketch of the history of the world, as then known, with geographical, archaeological, and other digressions, but its veracity has been impeached.

HEROIN or **DIAMORPHINE HYDROCHLORIDE.** Alkaloid obtained by acting on morphine with acetic acid. It is used in medicine to allay cough in phthisis and asthma.

HERON (Ardea). Name given to the birds of the various genera of the family Ardeidae, which includes the herons proper and the bitterns. They are closely related to the storks and ibises, and include some 70 species, widely distributed, but specially numerous in tropical marshes and swamps. They are all carnivorous, feeding mainly on fish, frogs, and insects. All have long legs for wading purposes, long necks, and a long, straight, pointed beak.

Heron. Specimen of the European
Ardea cinerea

The European or common heron (*A. cinerea*) was formerly preserved for hawking. It still breeds in many parts of Gt. Britain, usually in parks. See Boatbill; Egret.

HERRENHAUSEN. Palace just outside the town of Hanover, formerly the residence of the electors and kings of that country. Built just before 1700 by Ernest Augustus, the father of George I, it remained a royal palace until 1866. Around it are gardens laid out in the French style. See Hanover.

HERRICK, ROBERT (1591-1674). English poet. The son of a London goldsmith, after graduating at Cambridge, he returned to London, joined the Jonson circle, and in 1629 became vicar of Dean Prior, near Ashburton, Devonshire. Ejected by the Puritans in 1647,

he returned in 1662, being buried at Dean Prior, Oct. 15, 1674. Described by Swinburne as the greatest song-writer ever born of English race, Herrick lapsed at times into coarseness and monotony, but at their best his Hesperides and Noble Numbers are exceedingly beautiful.

HERRING (*Clupea harengus*). Fish belonging to the same genus as the sprat and pilchard, found near the land in the northern parts of the Atlantic. There are about 60 species. The common herring is found in schools which swim near the surface of the sea, and are constantly moving from place to place following their food—tiny crustaceans. The summer eggs are deposited at some distance from the shore, but the winter ones are usually shed in brackish water about the mouths of rivers. The young fish take two to three years to become adult.

The herring is an important food fish, owing to its nutritious qualities and its great abundance. It is specially numerous in the North Sea and along the E. coast of Scotland. It is taken in drift nets. Yarmouth is a noted centre of the herring curing industry.

HERRINGS, BATTLE OF THE. Fought Feb. 12, 1429, between the English and the French, the latter aided by the Scots. A small force carrying provisions to the English army besieging Orleans was attacked by the French and Scots at Rouvray. The English formed a hollow square, the provision wagons (containing quantities of salt fish for use during Lent) being placed in the centre, and the enemy were beaten off.

HERRIOT, EDOUARD (b. 1872). French statesman. Born July 3, 1872, he was elected mayor of Lyons in 1905. He entered parliament as a senator. At the general election of 1919 he resigned his seat to become a deputy for the Rhône Department. He became leader of the Radical-Socialist party, the victory of which in May, 1924, led to his forming a government. This was defeated in the senate on April 10, 1925, and Herriot resigned. He was again premier for a few days in 1926. From 1926 until Oct., 1928, Herriot was minister of public instruction in the Poincaré cabinet. See Franco.

HERSCHEL, SIR WILLIAM (1738-1822). Astronomer. Born at Hanover, Nov. 15, 1738. He came to England in 1757, teaching music.

In his spare time he studied astronomy, and in 1774 he made his first telescope. Although he did a great deal of work for the improvement of the telescope, his reputation will rest upon his discovery of the planet Uranus in 1781. A physicist and astronomer of the first rank, Herschel was a bly assisted in his researches by his sister, Lucretia Caroline (1750-1848), who discovered five new comets and a number of nebulæ and star clusters. He died Aug. 25, 1822.

Sir William Herschel's only son, John Frederick William (1792-1871), began a systematic study of the heavens in 1822, the whole of the northern hemisphere coming under his survey. In 1834 he established an observatory at the Cape of Good Hope,

northern seas

Sir William Herschel,
English astronomer
After J. Russell, R.A.

in order to survey the southern hemisphere. In 1838 he was created a baronet. He died May 11, 1871.

His son, William James (1833-1917), entered the Indian civil service in 1853, and was appointed to the Hooghli district. He there established a system of finger-print identification, which was introduced for civil purposes in Bengal. He succeeded his father as baronet, 1871, retired in 1878, and died Oct. 24, 1917. See Finger Print.

HERSCHELL, FARRER HERSCHELL, 1st BARON (1837-99). British lawyer and politician. Born Nov. 2, 1837, he was called to the bar in 1860, and in 1872 was made a Q.C. In 1874 he was elected M.P. for Durham, and in 1880 became solicitor-general. He was lord chancellor in 1885-86 and again 1892-95. He died March 1, 1899. Richard, the 2nd baron (1878-1929), was in the diplomatic service.

HERTFORD. Borough, market and eo town of Hertfordshire. It stands on the Lea, 24 m. N. of London, on the L.N.E. Rly. It contains a shire hall, corn exchange, public library, and art school. Here are the Blue Coat girls' school, and a grammar school founded by Richard Hale in 1617. The castle, built by Edward the Elder in 905, and several times reconstructed, is used as municipal offices; the grounds are open to the public. It has a large agricultural trade, and flour milling, brewing, and printing industries. Market day, Sat. Pop. 10,702.

HERTFORD, MARQUESS OF. British title borne since 1793, and also earlier, by the family of Seymour. In 1537 Edward Seymour, afterwards the protector Somerset, was made earl of Hertford. His grandson, William Seymour, was made marquess of Hertford and duke of Somerset, and the two titles remained united until 1675, when the marquessate became extinct. Francis Seymour (1718-94), a descendant of Somerset, was made earl of Hertford, and in 1793 earl of Yarmouth and marquess of Hertford. He was succeeded in 1794 by his son, Francis Ingram Seymour, (1743-1822), as 2nd marquess.

Francis Charles Seymour Conway, 3rd Marquess (1777-1842), only son of the 2nd marquess, was an M.P. before succeeding to the title in 1822. His son, Richard Seymour Conway (1800-70), who became the 4th marquess, was a collector of pictures and works of art, which now form part of the Wallace Collection (q.v.). The 5th marquess was a cousin of the 4th, and from him the title passed to its present holder.

Hertford House, Manchester Square, London, in which the Wallace Collection is housed

HERTFORD HOUSE. Name of two London mansions, both associated with the Seymour family. The house at 105, Piccadilly, became the home of the Isthmian Club, which vacated it in 1920, the mansion being afterwards put up for sale. That in Manchester Square, W., was begun in 1776 by the 4th duke of Manchester. In 1788 it became the Spanish embassy; later it passed to the 2nd

marquess of Hertford. The 4th marquess bequeathed the house and his art treasures to Sir Richard Wallace, whose widow in 1897 bequeathed them, with additions, to the nation. Hertford House was bought by Parliament and opened as a public art gallery in 1900. See Wallace Collection.

HERTFORDSHIRE OR **HERTS**. County of England. It has an area of 632 sq. m. and is bounded N. by Cambridgeshire, S. by Middlesex, E. by Essex, N.W. by Bedfordshire, and S.W. by Buckinghamshire. The more important rivers are the Colne and Lea. Nearly parallel with the Lea is the artificial New River which brings water to London. The Grand Union Canal passes through the county.

Agriculture, market gardening, and the cultivation of fruit for the London market are leading pursuits. The county is served by the L.M.S., L.N.E., and Met. Rlys., and also by the Bakerloo Tube (to Watford). The chief towns include Hertford (eo. town), St. Albans, Watford, Hitchin, Hatfield, and Ware. Pop. 333,195.

LITERARY - ASSOCIATIONS. Bacon lived at Gorhambury, took his title of viscount from St. Albans, and was buried in the church of S. Michael. With St. Albans are associated the names of Matthew Paris, Sir John Mandeville, Dr. Cotton, and the background of Dickens's novel, *Bleak House*. With Charles Lamb are associated Mackery End and Widdford. Hoddesdon has memories of Prior and Izaak Walton.

The Hertfordshire regiment, once a distinct unit, is now included in the Bedfordshire Regiment (q.v.).

HERTZ, HEINRICH RUDOLF (1857-94). German physicist. Born Feb. 22, 1857, his name will always be associated with the discovery of Hertzian waves of wireless telegraphy. In 1880 he became assistant to Helmholtz at the Berlin Institute. On his appointment to the professorship of physics in 1885 at Karlsruhe Polytechnic, he began the study of electro-magnetic waves. Hertz showed the refraction, diffraction, and polarisation of the electric waves and their correspondence with those of light and heat. Till his death, Jan. 1, 1894, Hertz continued to publish regularly papers on his remarkable discoveries. See Wireless Telegraphy.

HERTZOG, JAMES BARRY MUNNIK (b. 1866). South African statesman. He was one of the Boer generals in the war, 1899-1902, afterwards becoming an ardent champion of the nationalists. A member of the Union Cabinet, 1910-12, his animosity against Botha and Smuts and his anti-British views caused his retirement. In the Great War he and ex-president Steyn refused to denounce the rebellion of Beyers and De Wet in 1914. Elected leader of the Nationalist party in

1915, he advocated Dutch supremacy. In June, 1924, as the result of the general election, he became prime minister, being again returned to power after the general election of 1929, with a majority of only eight over all parties.

HERVE, GUSTAVE (b. 1871). French journalist. Born at Brest, Jan. 2, 1871, he became a teacher, but lost his position owing to his attacks on militarism. In 1905 he founded

Hertfordshire. Map of the county to the north of Middlesex famous for its agriculture and market gardening

La Guerre Sociale, in which he expressed advanced opinions, including a general strike and a refusal of military service. The result was a period of imprisonment, and other prosecutions followed. In 1914 Hervé supported the war and renamed his paper *La Victoire*. He wrote for *Le Petit Parisien*, and his books include *La Grande Guerre*, in 10 vols.

HERVIEU, PAUL ERNEST (1857-1915). French dramatist and novelist. Born Nov. 2, 1857, he was called to the bar, and later entered the diplomatic service, but in 1881 he resigned and thenceforward devoted himself to journalism and literature. His first novel, *Diogène-Chien*, 1882, was followed by a collection of journalistic narratives. Having established himself as a novelist, he won fresh fame as a dramatist, among his plays being *L'Enigme*, 1901, produced in English as *Caesar's Wife*; *Le Dédale* perhaps his best, 1903; and *Connais Toi*, 1909. His collected plays were published in 3 vols., 1900-4. Elected to the French Academy in 1900, he died Oct. 25, 1915.

HERZEGOVINA OR **HERCEGOVINA**. District of S.E. Europe. It lies on the N.W. of the Balkan Peninsula, and is surrounded by Bosnia, Serbia, Montenegro, and Dalmatia. It consists of mountains with high forested valleys and cultivated plateaux in between. It is watered by the Narenta, on which is its chief town, Mostar. It produces barley, tobacco, timber, excellent wine and much fruit. Its area is 3,562 sq. m.; pop. 265,330.

After its conquest by the Turks it was a Turkish province. As a result of the Berlin congress, July, 1878, it was handed over, with Bosnia, to Austria, who annexed both and formed them into the provincial governments of Bosnia-Herzegovina in 1908. In 1918-19, after the fall of the Austrian Empire, Herzegovina became a portion of the new kingdom of the Serbs, Croats, and Slovenes. See Austria; Yugoslavia.

J. B. M. Hertzog, S. African statesman

HESHBON. Ancient city of Palestine At the N.E. corner of the Dead Sea, the capital of Sihon, king of the Amorites, it was captured by the Israelites on their way to Canaan (Numb 21, 25)

HESIOD (fl. c. 700 B.C.). Greek didactic poet. He lived at Ascra, at the foot of Mt. Helicon in Boeotia. A farmer by profession, one of his poems, *Works and Days*, is a didactic poem, part of which is largely a manual of agriculture, to which Virgil is much indebted.

Hesiod's other surviving poem, *Theogony*, is an account of the creation of the world, and a history of the gods and demi-gods.

HESPERIDES. In Greek mythology, nymphs who guarded the golden apples of Hera (q.v.). Their gardens were variously fixed in the Far West by different legends. The quest of three of these golden apples was one of the twelve labours of Hercules (q.v.). The name was chosen by Robert Herrick (q.v.) as title for a series of poems

HESS, WILLY (b. 1859). German musical conductor. Born at Mannheim, July 14, 1859, he slowly built up a reputation. In 1903-4 he taught at the Royal Academy of Music, London, and from 1904-10 was concert master of the Boston symphony orchestra. In 1910 he was made head of the state high school in Berlin and leader of the Halin Quartette there

HESSE. State of the German republic, until 1918 a grand duchy. In the west of the country, its area is 2,968 sq. m. It is divided into three provinces, Upper Hesse, Rhenish Hesse, and Starkenburg. Part of Prussia separates Upper Hesse from the others, and the republic has small, isolated pieces of territory elsewhere, one being Wimpfen. The Rhine and the Wetter flow through the state. Darmstadt is the capital, and before 1866, when there were several states of Hesse, the grand duchy was known as Hesse-Darmstadt. Other towns are Mainz, Offenbach, Worms, and Giessen. Agriculture is the main occupation, and coal and iron are mined. The constitution provides for a landtag of 70 members and a small cabinet. Pop. 1,358,445

HESSIAN FLY (*Cecidomyia destructor*). Dipterous insect of the gall midge group. One of the most destructive farm pests in the world, it resembles a minute gnat, not quite $\frac{1}{8}$ in. in length, and deposits its eggs on the leaves of wheat and other cereals. These hatch in a few days, feed on the plant for about three weeks and then pupate and turn into the imago. The adult stage lasts only a few hours, during which time mating takes place and the eggs are deposited.

Hessian Fly. A destructive midge, greatly enlarged

HESSE. Urban district and market town of Yorkshire (E.R.). It stands on the Humber, $\frac{1}{2}$ m. S.W. of Hull, of which it is practically a suburb. It has a station on the L.N.E. Rly. Market day, Thurs. Pop. 8,000.

HEST BANK. Watering place of Lancashire. It stands on Morecambe Bay, $\frac{3}{4}$ m. from Lancaster, and has a station on the L.M.S. Rly. The name of the parish is Slyne with Hest. From here coaches formerly crossed the sands of Morecambe Bay to Kent's Bank, 9 m. away. Pop. 540.

HESTON. Village of Middlesex. It is 12 m. W.S.W. of London on the Metropolitan Dist. Rly. With Isleworth it forms the urban dist. of Heston and Isleworth. In 1928 an aerodrome was opened and this is the alternative airport for London. Pop. urban dist., 46,664.

HETEPHERES. Egyptian queen, mother of Cheops, the Pharaoh of the 4th dynasty who built, it is thought, the great pyramid at Gizeh.

In 1927 her tomb was opened, and the articles found included her alabaster coffin, alabaster vessels, gold cups and implements of gold copper and flint

HETERODYNE RECEPTION OR BEAT RECEPTION A method of receiving continuous wave wireless signals invented in 1906 by Fessenden. Incoming waves are imposed upon waves of a slightly different frequency produced by a local oscillator, the resulting series of low-frequency oscillations being rectified in the usual manner. See Beat.

HETMAN (Ger. *Hauptmann*, head man or captain). Polish military title. In the old kingdom of Poland the head of the army bore the title of great hetman, but after the defeat and disbanding of the army in 1792 the rank ceased to exist. See Cossack.

Hetton. Urban dist. and colliery centre of Durham. It is 7 m. S.S.W. of Sunderland on the L.N.E.R. Pop. 17,279.

HEVER CASTLE. Residence of the Hon. J. J. Astor (q.v.), near Edenbridge, Kent. In Edward III's time a castle was built here by Sir William de Hevre, and in the 15th century a new one was erected by Sir Geoffrey Boleyn. Here his descendant Anne Boleyn lived. The castle fell into decay and was later restored. It was purchased about 1890 and restored by the 1st Viscount Astor and was later the residence of his son, Hon. J. J. Astor.

Hever Castle, Kent, built in the 15th cent. and restored by Viscount Astor

HEWART, GORDON HEWART, 1ST BARON (b. 1870): British lawyer. Born Jan. 7, 1870, after a journalistic career he turned to the law and was called to the bar in 1902, becoming K.C. in 1912. Elected Liberal M.P. for Leicester, 1913, in 1916 he joined the Coalition government as solicitor-general, and in Jan., 1919, was promoted attorney-general. In 1922 he became lord chief justice and was made a peer. His book *The New Despotism*, an attack on bureaucratic tendencies, appeared in 1929.

Baron Hewart, British lawyer

HEXATEUCH (Gr. hex, six; teuchos, volume). Term invented by modern scholars in order to include in the same group as the Pentateuch a sixth book, the Book of Joshua, which is linked closely by its contents and style to the preceding five books and is based upon the same documentary sources See Bible; Pentateuch.

HEXHAM. Market town and urban district of Northumberland. It stands on the S. bank of the Tyne, 20 m. from Newcastle, on the L.N.E.Rly. The chief building is the priory church, known as the abbey, a magnificent Early English building. Other interesting buildings are the old moot hall and the manor office.

Hexham grew up around the church founded in the 7th century, and at one time had its own bishop. After the Norman Conquest the town and district, called Hexhamshire, was a liberty ruled by the bishop and later by the archbishop of York. It was not united with Northumberland until 1572. Market day, Tues. Pop. 8,849.

The battle of Hexham was fought May 15, 1464, between the Lancastrians, led by Henry Beaufort, duke of Somerset, and the Yorkists under Lord Montagu, the latter being victors.

HEYSHAM. Seaport and watering place of Lancashire. On the S. side of Morecambe Bay, 5 m. from Lancaster, on the L.M.S. Rly., it has a good harbour and is a terminus of steamer services to Belfast and Douglas, Isle of Man. In 1928 Heysham was incorporated in the borough of Morecambe.

HEYTHROP. Village of Oxfordshire, 3 m. N.E. of Chipping Norton. It gives its name to a pack of foxhounds. Heythrop House was long the residence of Albert Brassey (1844-1918), master of the pack for over forty years. Near are the Rollright Stones, forming an ancient stone circle. Pop. 247

HEYWOOD. Borough and market town of Lancashire. It is 9 m. N. by E. of Manchester on the L.M.S. Rly. It has cotton and woollen factories, and manufactures of machinery and chemicals. Queen's Park was presented by Queen Victoria. Market day, Fri. Pop. 26,693.

HEYWOOD, THOMAS (d. c. 1650) English actor and dramatist. In 1598 he became an actor in Henslowe's company and, after the accession of James I, a member of the queen's company of players. About 1596 he wrote his first play, *The Four Prentices of London*, and in 1633, in a prefatory address to *The Traveller*, he claimed to have had

"either an entire hand, or at the least a main finger" in 220 plays. Of these pieces only 35 are known to exist. He attempted every kind of drama, and also wrote pageants, poems, translations, and various prose works. Of his plays, *Edward IV*, 1600, and *A Woman Killed With Kindness*, 1603, are perhaps the best examples. His *Life of Queen Elizabeth* appeared, 1631.

HEZEKIAH. King of Judah (2 Kings 16, 18-20; 2 Chron. 29-30). He succeeded his father, Ahaz, at the age of 25, and was a notable reformer, who abolished the centres of idolatrous worship and destroyed the brazen serpent of Moses, which at this time seems to have been regarded as a kind of idol. He also cleansed the Temple and restored the worship of Jehovah. Hezekiah was a man of considerable literary and poetic gifts, and is regarded by the Jews as one of their most famous monarchs.

HIAWATHA. One of the many names of a traditional personage of miraculous birth. He is believed by various tribes of the N. American Indians to have been sent to teach them the arts of peace.

The Song of Hiawatha is an epic poem by H. W. Longfellow, 1855. Taking as model for his verse form the unrhymed Finnish epic of *The Kalevala*, the poet gave the story of Hiawatha from his wondrous birth to his final passing "To the land of the Hereafter" Coleridge-Taylor (q.v.) made a cantata of it.

HIBERNATION (Lat. *hibernare*, to pass the winter). Dormant or torpid condition in which many animals and plants pass through the winter. In the case of animals it may be complete or intermittent. It is not so much caused by cold as by the lack of food which cold produces. Mammals and reptiles, after laying up a store of fat in their tissues, retire into winter quarters and fall asleep. During this period the body temperature falls, the pulse is reduced, respiration is feeble, and other functions are suspended entirely. Among insects hibernation is almost general where the food is vegetation, and it may be passed in any stage of the life cycle—either as egg, larva, pupa, or perfect insect. The phenomenon is quite common among plants, many of the bulbs and underground rhizomes

representing the hibernating condition, while others illustrate the opposite condition—aestivation—when the plant is seeking to avoid the dangers of drought.

HIBERNIA OR **IVERNIA**. Name given to Ireland by Latin writers. See Ireland

HICCUGH. Convulsive action caused by spasmodic contraction and descent of the diaphragm. It is most frequently due to overdistention of the stomach with food or wind, and is sometimes a symptom in more serious diseases. Pron. hiccup.

HICHENS, ROBERT SMYTHE (b. 1864). British novelist. Born at Speldhurst, Nov. 14, 1864, and educated at Clifton, he attracted attention by his story *The Green Carnation*, 1894. He developed his vein of social satire in *The Londoners*, 1897, but the finest and most popular of his books is *The Garden of Allah*, 1905, which has been dramatised. His other novels include *The Call of the Blood*, *Bella Donna*, and *Doctor Artz*. He has also written *The Real Woman* and other plays.

Robert Hichens,
British novelist

In the Wilderness, and Doctor Artz. He has also written *The Real Woman* and other plays.

HICKORY (Carya). Genus of trees of the order Juglandaceae, natives of N. America. The leaves are large, divided into oblong leaflets arranged feather-fashion, like those of the nearly related walnut trees. The flowers, which are without petals, are male or female: the males in hanging catkins, the females in a short spike at the end of the new shoots. The husk of the large fruit splits into four segments, revealing the thin-shelled nut. The timber of the hickory is hard and tough.

Hickory. Leaves and nuts of the N. American tree

HICKS, EDWARD SEYMOUR (b. 1871). British actor. Born Jan. 30, 1871, he first appeared on the stage at the Grand Theatre, Islington. He toured with the Kendalls in England and America. From 1893-98 he was principal light comedian at The Gaiety. He built the Aldwych Theatre, which he opened Dec., 1905, and in Dec., 1906, opened The Hicks (later The Globe) Theatre. In 1902 he married Ellaline Terriss (b. 1872). He published his reminiscences in 1910. Other works are *If I were Your Father*, in 1919, *Difficulties*, in 1922, *Chestnuts Re-roasted*, 1924, and *Hullo, Australians!*, 1925.

HIDALGO (Span. hijo de algo, son of something). Spanish title. It was formerly used of a member of the lower nobility, but now seldom denotes more than gentle birth. The Portuguese form is fidalgo.

HIERO (Gr. Hieron). Name borne by a tyrant and a king of Syracuse. Hiero I was Tyrant of Syracuse, 478-467 B.C. His great exploit was a decisive naval victory over the Etruscans near Cumae in 474. He was a generous patron of art and literature, among the notable men who resided at his court under his patronage being Aeschylus, Pindar, Bacchylides, and Simonides. Hiero II, king of Syracuse, 270-216 B.C., first distinguished himself in the wars against Pyrrhus (q.v.), and eventually received the kingship.

Hiero II
From a coin

HIEROGLYPHS. Name used for the picture characters which the Egyptians used in writing. In ancient texts they are called "the words of the god." Hence Egyptian picture writing was described by classical writers as "Hieroglyphic," i.e., "sacred writing." Three forms are distinguished: 1. hieroglyphic; 2. hieratic; 3. demotic. In the first the characters are all pictures, generally easily recognizable; in the second only the most salient features of the pictures are preserved; in the third the characters are so modified that in many instances they are mere conventional representations of the hieroglyphs. The knowledge of hieroglyphic writing was lost early in the Roman Period, and all attempts to decipher it were unsuccessful until the beginning of the nineteenth century, when Thomas Young (1773-1829) deduced the correct values of several of the characters. Thanks to Zoega (1755-1809), it was known that a king's name was always written within an oblong cartouche

with rounded ends , but it was uncertain at which end the name began. There were two monuments that cleared up this difficulty, viz., the Rosetta Stone in the British Museum, and a stone obelisk from Philae, which now stands in the park at Kingston Lacy, Dorset. Each of these contains a Greek as well as an Egyptian version of the inscription, and as it was customary for kings to publish their edicts in two or more languages, it was held to be certain that the subject matter of the Egyptian and Greek texts on the Rosetta Stone was the same.

On the Rosetta Stone the royal name Ptolemy occurs in these forms:

1. 
2. 

The Greek text shows that the inscription is an edict of the priests of Egypt, assembled in the temple of Pthah in Memphis in March B.C. 196, who decreed that special honours should be paid to Ptolemy V. Epiphanes. There was therefore no doubt that the two cartouches contained the name of Ptolemy, and the Greek text made it clear that the last eight characters in the second cartouche represented titles of the king. The obelisk from Philae mentions two royal names thus:

1. 
2. 

i.e., Ptolemy and Cleopatra.

With the exception of one character, the last, the second cartouche containing Ptolemy's name on the Rosetta Stone is identical with that containing Ptolemy's name on the obelisk. Young then assumed that the names began at the left end of the cartouche, and he called the first sign $\square P$; as this letter occurs in the name of Cleopatra on the obelisk, and it comes in the middle of the name, he was certain of the value of \square . The second sign \bigcirc he guessed was T, and also that \bigcirc , which occurs in the cartouche of Cleopatra as well as in Ptolemy, had the value of U or O. The letter L, which also occurs in both cartouches, was represented by Δ , and the following letter \equiv must be M.

The last letter \parallel must be S, because the Greek form of the name ends in S. The two preceding characters $\eta\eta$, he believed represented some vowel, or combinations of vowels. By examining the variant forms of the names of Ptolemy and Cleopatra in hieroglyphs he

deduced the values of many other signs. The decipherment of the Egyptian hieroglyphs was carried to a triumphant conclusion by J. F. Champollion (1790-1832), on whose work the whole of the modern work on Egyptian is based. See Egypt; Rosetta.

HIGGINS, EDWARD JOHN. General of the Salvation Army. Born at Highbridge, he was educated at Bridge-water. In 1882 he became an officer in the Salvation Army, and soon came to the front in that organization. From 1896 to 1905 he was chief secretary in the United States, and from 1911-19 was at headquarters in London. In 1919 he was made chief of staff, his rank being that of commissioner, and in 1929 he was chosen to succeed William Bramwell Booth (q.v.) as general.

Edward J. Higgins
General of the
Salvation Army

HIGHAM FERRERS. Borough of Northamptonshire. It stands on the Nene, 5 mi from Wellingborough and 63 from London, on the L.M.S. Rly. The making of boots and shoes is the chief industry. S. Mary's is a fine old building. The buildings erected by Archbishop Chichele include the school house and the Bede House. Pop. 2,965

HIGHAMS PARK. Part of Epping Forest, Essex. In 1891 it was bought and added to the forest, and in 1928 a further $7\frac{1}{2}$ acres were added to the original 30. See Epping.

HIGHBURY. District of N. London. It is in the Metropolitan borough of Islington, with a station on the L.M.S. Near the station are Highbury Fields. Here stood the manor house, destroyed in Wat Tyler's rising, 1381. In Aubert Park is the London College of Divinity. Near is the ground of The Arsenal F.C., to the E. of which is Highbury Vale

HIGH COMMISSIONER. Title given to certain representatives of their countries in positions of importance. Canada, Australia, South Africa, Newfoundland, New Zealand, India, and S. Rhodesia are represented in London by high commissioners. Lord Milner was high commissioner in S. Africa, 1897-1905.

It is also the name given to the king's representative at the general assembly of the Church of Scotland held every year in Edinburgh.

HIGH COURT OF JUSTICE. English court of law, a branch of the supreme court of judicature, as established in 1873. It has three divisions: chancery, king's bench, and probate, divorce and admiralty. Each division of the court has its quota of judges, all appointed by the crown on the advice of the lord chancellor, all knighted on appointment, and entitled to a salary of £5,000 a year and a pension on retirement. The lord chancellor is the president of the chancery division; the lord chief justice of the king's bench division, while the probate, divorce and admiralty division has a president. The sittings of the high court, except those of the judges of the king's bench division when on circuit, are held at the royal courts of justice, Strand, W.C. See Chancery; Judge; King's Bench.

HIGHGATE. Suburb of London. The S. part is in the metropolitan borough of St. Paneras and Islington; the N. part, on a summit, 426 ft., E. of its sister height of Hampstead (q.v.), is in the county of Middlesex. There are stations on the L.N.E. and Hampstead (Tube) Rlys.

At the foot of Highgate Hill is Whittington's Stone, and at the foot of the Archway Road are the almshouses, known as Whittington College, removed from the city in 1822. The spire of the Gothic parish church of S. Michael is a conspicuous landmark. Cromwell House,

said to have been built by the Protector for General Ireton, is now a convalescent home for children. The grammar school is now a

Highgate Archway, connecting Highgate with Crouch End. Built in 1900, it replaced an older bridge

public school and possesses an acrodrome. The chapel covering the old burial ground of Highgate Chapel has a crypt containing the grave of S. T. Coleridge.

HIGHLAND LIGHT INFANTRY. Regiment of the British army. Formerly the 71st and 74th Foot, it was first raised in 1777 by Lord Macleod. For bravery at Assaye in 1803 it was presented with a third colour. Further honours were won in the Peninsular War and at Waterloo. Later campaigns were in South Africa, 1851-53, the Crimean War, the Indian Mutiny, the Egyptian War, 1882, and the South African War, 1899-1902.

Highland Light Infantry badge

In the Great War the two regular battalions were early in France. Battalions fought in the first battle of Ypres, 1914; at Loos, 1915, and on the Somme, 1916. In September, 1918, a party of the 15th battalion made a notable stand at Moeuvres. In 1915 other battalions were in Gallipoli. The depot is at Hamilton.

HIGHLANDS, THE. Name given to that part of Scotland N. and W. of a line drawn from Dumbarton on the W. to Stonehaven on the E. It is customary to exclude the coastal parts of Aberdeenshire, Nairn, Moray, Elgin and Banff, and the Orkneys and Shetlands. It thus denotes generally the mountainous parts of the country and those, apart from Caithness and the Orkneys and Shetlands, where the Celtic race and the Gaelic speech predominate.

The spread of education and improved transport facilities have greatly modified the distinctive life of the old Highlanders, but the Celtic customs and folklore are not forgotten, and the Highland gatherings, such as those of Braemar or Blair Atholl, foster the old pipe-music, dances, and sports. The Highland dress was proscribed by Act of Parliament in 1747, but the Act was repealed in 1786. See Bagpipe; Celt; Dirk.

Highland cattle are a breed found mainly in Argyllshire and the Western Islands of Scotland. It is the hardiest of all British breeds, and its beef is of high value. Its long, shaggy coat varies in colour from a creamy yellow to reddish brown and black. See Cattle.

HIGHNESS. Title of honour. In the British royal family, Royal Highness is used for children of the sovereign, and for his or her brothers, sisters, uncles, aunts, grandchildren, if children of sons, and great-grandchildren, if children of the eldest son of a prince of Wales.

HIGH PRIEST. Head or chief priest of the Jewish Church. From Aaron, to whom priestly authority was delegated by Moses, the office descended by primogeniture. There appear to have been about 80 high priests, whose history covers a period of about 1,370 years. Details of their consecration, etc., are given in Exodus, Leviticus, and Numbers. See Aaron; Breastplate; Ephod; Priest.

HIGH SEAS. Name given to the open sea, i.e. those parts of the ocean that are not under any territorial sovereignty, being more than three miles from any shore.

HIGH SHERIFF (A.S. *scire gerefa*, reeve, or officer of the shire). One of the principal subordinate magistrates in England to whom the custody of the county is committed by the crown by warrant under the hand of the clerk of the privy council. In modern times his duties are mainly performed by an under-sheriff, who is usually a solicitor, and the high sheriff is the chief personage of the county who receives the judges on circuit, acts as returning officer at elections, executes civil judgements, and sees to the due carrying out of the death sentence. See Sheriff.

HIGH TOR. Hill near Matlock, Derbyshire. It is on the left bank of the Derwent, between Matlock and Matlock Bath, and is 380 ft. high. On the other side of the pass are the Heights of Abraham. Beneath the hill is the High Tor grotto, famous for its crystallisations. See Matlock.

HIGH WATER. Term used for the normally highest limit of the rise of the tide in the sea or river, and for the time of such rise. High water at any particular place by the sea happens on the average every 12 hrs. 25 mins., so that it becomes 50 mins. later each day. Successive high waters are often not of the same height, and vary considerably at different times of the year according to the lie of the land. High water level in rivers is usually the highest flood level. See River; Tides.

HIGHWAYMAN. Name given to the mounted robbers who infested the public roads in England from the first half of the 17th century until the early 19th. Among knights of the road are Claude Duval (1643-1670); Dick Turpin (1706-1739); John or William Nevison (1639-1684), nicknamed "Swift Nicks" by Charles II; John Cottingham (1611-1656), who held up the army pay wagon on Shotover Hill and decamped with £4,000; Jack Rann (d. 1774), the dandy highwayman; and Louis Jeremiah Abershaw (c. 1773-1795).

HIGHWAY. Main road from one town to another open of right to all passengers. In the United Kingdom every parish is bound of common right to keep in repair the roads that go through it. In 1888 the Local Government Act committed the maintenance of the highways to the county councils, the powers of rural sanitary and highway authorities being afterwards (1894) transferred to the district councils of the rural districts. See Roads.

High Willhays. Mt. of Devon. It is 4 m. S.W. of Okehampton, and is the highest point on Dartmoor, 2,039 ft.

HIGH WYCOMBE or **CHEPPING WYCOMBE.** Borough and market town of Buckinghamshire. Known officially as Chepping Wycombe, it lies at the foot of the Chiltern Hills, 27 m. from Paddington on the G.W. and L.N.E. joint rly. The parish church was founded in the 11th century, has 13-16th century remains, and was restored in 1893. Wycombe Abbey is a girls' school. The little market house dates from 1604, and the guildhall from 1757. High Wycombe is a centre of furniture making, especially chairs. Market day, Fri. Pop. 21,952.

HILARY or **HILARIUS** (c. 300-368). Saint and bishop. Born at Poitiers, France, and converted to Christianity about 350, he was chosen bishop of his native city about 353, and became famous as an opponent of Arianism. He was banished to Phrygia by the Emperor Constantius, 356-360. He died Jan. 13, 368. The name Hilary Sittings, peculiar to the English law courts, is a survival of Hilary

Term, named after the festival of the saint. These sittings begin on Jan. 11 and end on the Wednesday before Easter. In the Inns of Court Hilary is one of the four dining terms, Jan. 11-Feb. 1. Hilary term is the name given at Oxford University to the term which begins on Jan. 14 and lasts until the Saturday preceding Palm Sunday.

HILDA or **HILD** (614-680). English saint and abbess. Daughter of a nephew of King Edwin of Northumbria, she became abbess of Hartlepool, and in 657 founded the Benedictine abbey at Whitby, where, as at Hartlepool, she presided over a community of men and women. Shortly after founding a monastery at Hackness she died at Whitby, Nov. 17, 680.

Hildebrand. Name of Gregory VII (q.v.) before he was chosen pope. It means battle-sword, and appears in the Nibelungen Lied.

HILDESHEIM. City of Germany. It lies 18 m. S.S.E. of Hanover, in the valley of the Innerste. The cathedral, erected in the 11th century and restored in the 18th, contains some good early work and many relics and antiquities. S. Michael's, founded in the 11th century and restored in the 19th, is one of the most beautiful Renaissance churches in Germany. On the ceiling of the nave are paintings illustrating the genealogy of Christ. Interesting secular buildings are the Rathaus (14th century), Kaiserhaus, and Tempelhaus. The restored guildhouse of the butchers is noteworthy, as are the market square of the old town and a fountain. Pop. 58,200.

HILL, ROWLAND HILL, 1ST VISCOUNT (1772-1842). British soldier. Born Aug. 11, 1772, he was a son of Sir John Hill, Bart. He entered the army in 1790, and served in Egypt in 1801 and in the Peninsular War, being one of the five of Wellington's chief officers honoured with a peerage in 1814. He also did notable service at Waterloo. He was commander-in-chief from 1828-42, when he was created Viscount Hill. He died Dec. 10, 1842.

HILL, OCTAVIA (1838-1912). British philanthropist. She received her education at home, and early undertook the management of homes for people in London. Her charitable and social activities were on behalf of university settlements for women, the preservation of public commons and of places of historic interest. She was connected with the Charity Organisation and Kyrle Societies, and was a member of the royal commission on the poor laws, 1905. Among her published works were *Homes of the London Poor*, and *Our Common Land*. She died Aug. 13, 1912.

Octavia Hill, British philanthropist. After Sargent, by courtesy of Charity Organization Society

HILL, SIR ROWLAND (1795-1879). British reformer. He was born at Kidderminster, Dec. 3, 1795. In 1837 he published a pamphlet entitled *Post Office Reform*, in which he advocated a uniform rate of postage at a penny a half ounce prepaid by an adhesive stamp. Despite official opposition a bill to this effect was carried through Parliament in 1839, and on Jan. 10, 1840, penny postage came into force. In 1847 he was made an under-secretary at the post office, and was chief secretary 1854-64. Hill was created a K.C.B. in 1860. He died at Hampstead, Aug. 27, 1879.
